ENCYCLOPÆDIA LONDINENSIS;

OR,

UNIVERSAL DICTIONARY

OF

ARTS, SCIENCES, AND LITERATURE:

COMPREHENDING,

UNDER ONE GENERAL ALPHABETICAL ARRANGEMENT,

ALL THE WORDS AND SUBSTANCE OF

EVERY KIND OF DICTIONARY EXTANT IN THE ENGLISH LANGUAGE:

IN WHICH THE IMPROVED DEPARTMENTS OF

THE MECHANICAL ARTS, THE LIBERAL SCIENCES, THE HIGHER MATHEMATICS, AND THE SEVERAL
BRANCHES OF POLITE LITERATURE,

ARE SELECTED FROM THE

ACTS, MEMOIRS, AND TRANSACTIONS, OF THE MOST EMINENT LITERARY SOCIETIES
IN EUROPE, ASIA, AND AMERICA,

FORMING A COMPREHENSIVE VIEW OF THE RISE, PROGRESS, AND PRESENT STATE, OF HUMAN
LEARNING IN EVERY PART OF THE WORLD.

EMBELLISHED WITH A MOST

MAGNIFICENT SET OF COPPER-PLATE ENGRAVINGS,

ILLUSTRATING, AMONGST OTHER INTERESTING SUBJECTS,

THE MOST CURIOUS, RARE, AND ELEGANT, PRODUCTIONS OF NATURE, IN EVERY PART OF THE UNIVERSE;
AND ENRICHED WITH

PORTRAITS OF EMINENT AND LEARNED PERSONAGES, IN ALL AGES OF THE WORLD.

PROJECTED AND ARRANGED

BY JOHN WILKES, OF MILLAND HOUSE, IN THE COUNTY OF SUSSEX, ESQUIRE;

ASSISTED BY EMINENT SCHOLARS OF THE ENGLISH, SCOTCH, AND IRISH, UNIVERSITIES.

ENCYCLOPÆDIA LONDINENSIS;

OR, AN

UNIVERSAL DICTIONARY

OF

ARTS, SCIENCES, AND LITERATURE.

T I L L O T S O N.

TILLEMONT (Louis Sebastian le Nain de), a French ecclesiastical writer, was born at Paris, in 1637. From early life he devoted himself to the study of ecclesiastical antiquity. Modest and diffident, as well as learned, he deferred taking priests' orders till his 40th year; and having done this, he declined all preferment, and retired first to Port-Royal-des-Champs, and then to Tillemont, near Vincennes, prosecuting his literary labours, and keeping in view his main object: he subjected himself at the same time to very rigid penitentiary discipline. His austerities and intense application debilitated his constitution to such a degree, that he died in 1698, at the age of 61 years.

The plan of his great work comprehended two parts, viz. the secular and the ecclesiastical history of the period of which he proposed to treat. Accordingly, the first part, entitled "Memoires pour servir a l'Histoire Ecclesiastique des six premiers Siècles," was comprised in 16 vols. 4to., of which four volumes were published in his life-time, and twelve more after his death. The other part, entitled "L'Histoire des Empereurs et des autres Princes qui ont regné durant les six premiers Siècles de l'Eglise," consists of 6 vols. 4to., the last being left in MS. and not published till 1738, finishing with the Emperor Anastasius. Dupin, though he disapproves the method of Tillemont, observes, that great instruction may be derived from his history, especially with respect to critical and chronological matters. His style merits no commendation. Gibbon, who often quotes his History of the Emperors, and praises his scrupulous accuracy, finds frequent occasion to censure his bigotry, and remarks, that "he never dismisses a virtuous emperor without pronouncing his damnation." *Moreri. Gen. Biog.*

TILLENDORF, a large village of Prussian Silesia, in the circle of Buntzlau, with 1000 inhabitants.

TILLER, s. Husbandman; ploughman.

The worm that gnaws the ripening fruit, sad guest!
Canker or locust hurtful to infest

The blade; while husks elude the tiller's care,
And eminence of want distinguishes the year.

Prior.

The rudder of a boat. The horse that goes in the thill: properly *thiller*. A till; a small drawer.

Search her cabinet, and thou shalt find
Each *tiller* there with love-epistles lin'd.

Dryden.

A young timber-tree in a growing state: a technical word with woodmen.—This they usually make of a curved *tiller*.
Evelyn.

TILLIERES, a small town in the north of France, on the small river Arve, with 1000 inhabitants, and manufactures of iron; 5 miles north-east of Verneuil, and 22 south of Evreux.

TILLINGHAM, a parish of England, in Essex; 2 miles south-by-west of Broadwell, near the sea. Population 760.

Vol. XXIV. No. 1623.

TILLINGTON, a hamlet of England, in the parish of St. Mary, in Staffordshire.

TILLINGTON, a parish of England, in Sussex, near Petworth. Population 650.

TILLINGTON, a hamlet of England, in Herefordshire; 5 miles north-west-by-north of Hereford.

TILLOUTA, a town of Hindostan, province of Bahar, and district of Rotas. It is pleasantly situated on the north-west bank of the river Soane. Lat. 24. 48. N. long. 84. 15. E.

TILLOTSON (John), a celebrated English prelate, descended from an ancient family in Cheshire, was the son of Robert Tillotson, a clothier at Sowerby, in the parish of Halifax, Yorkshire, where he was born in the year 1630. In 1651, he was elected fellow of Clare-Hall, Cambridge; but retaining his attachment to the Presbyterian form of church government, he was received into the family of Edmund Prideaux, attorney-general to the Protector, as chaplain and tutor. He attended the Savoy conference in July 1661, and preached a sermon (the first which he preached) at their morning exercise in Cripplegate, in the month of September. Under the Act of Uniformity in 1662, to which he submitted, he became curate at Cheshunt, in Hertfordshire. In 1664, he married the daughter of Dr. French, canon of Christchurch, by a sister of Oliver Cromwell; and in 1665, he was appointed lecturer to the parish of St. Lawrence Jewry. His reputation as a preacher was very considerably increased at this time by his printed sermon, "On the Wisdom of being religious." His controversy on Popery commenced with the publication of his "Rule of Faith," in answer to a book written by a convert to the Romish church. In 1666, he took his degree of D.D., and in 1669 he was made a king's chaplain, and was presented to a prebend of Canterbury. When king Charles, in 1672, issued a declaration for liberty of conscience, with a view of favouring the Roman Catholics, the bishops took the alarm, and recommended to the clergy to preach against popery. The king was displeased, and Tillotson, at a meeting of the clergy convoked by the bishop of London, suggested the following apology for their conduct: "That since his majesty professed the Protestant religion, it would be an unprecedented thing that he should forbid his clergy to preach in defence of a faith which they believed, and which he declared to be his own." Soon after this he preached a sermon at Whitehall on the hazard of salvation in the church of Rome; and yet, offensive as this sermon must have been, he was advanced, in 1672, to the deanery of Canterbury, which was followed, in 1673, by a presentation to a prebend of St. Paul's. At this time he published Dr. Wilkins's "Principles of Natural Religion," with a recommendatory preface; and the author, who died in his house, committed to him the disposal of his papers. A similar trust was reposed in him by Dr. Barrow. His dread of popery induced him, in 1680, to preach before the

B

king

king a sermon, afterwards published by the royal command, and entitled "The Protestant Religion vindicated from the Charge of Singularity and Novelty." In this sermon a paragraph was introduced which incurred the charge of intolerance. It was unworthy of Dr. Tillotson, and gave very general offence, both to the established clergy and Presbyterians. Tillotson was an ardent promoter of the Bill of Exclusion, nor would he concur in the address of the London clergy to the king on his declaration that he could not consent to such a bill. In 1682, he took occasion to vindicate the character of Dr. Wilkins from the aspersion of Anthony Wood, by a preface to a volume of sermons, which he published from the doctor's MSS. He was also the editor, in 1683, of Dr. Barrow's sermons, in 3 vols. fol. It has been regretted, as an inconsistency in the character of Tillotson, that when in company with Burnet he attended lord Russel preparatory to his execution, they should urge this martyr to liberty to acknowledge the absolute unlawfulness of resistance, though they were soon after decided friends to the revolution. By a "Discourse against Transubstantiation," and another "Against Purgatory," he commenced a prolonged controversy with the Papists. After the settlement of the Prince of Orange at St. James's, he was instrumental in persuading the princess Anne, who consulted him, to acquiesce in giving up her claim to the crown during the life of William, in case of her sister's dying before him. In 1689, he was appointed clerk of the closet to the king, and permitted to exchange the deanery of Canterbury for that of St. Paul's. He failed in an attempt to introduce a new book of Homilies. In a sermon preached before the queen, against the absolute eternity of hell torments, he excited the resentment and opposition of the orthodox party; but he was consecrated to the archbishopric of Canterbury in May 1691, and also in a little while sworn a member of the privy-council. From this time he became very obnoxious to the high church zealots, who attacked him in a variety of ways.

Among other charges against him, one was his attachment to Socinian principles, which seems to have had no other foundation than his rational defence of Christianity, and his friendship and intercourse with Locke, Limborch, and Le Clerc; and for repelling which, he caused to be republished, in 1693, four of his sermons "On the Divinity and Incarnation of our Saviour." The archbishop's assiduity and zeal in the duties of his exalted station were highly exemplary and laudable. At length the period of his usefulness terminated, in consequence of a paralytic stroke, which seized him, November, 1694, in the chapel of Whitehall, and which, on the fifth day, proved fatal, in the 65th year of his age. He left a widow, but no children; and as he took no pains to accumulate property, his debts could not have been paid, if the king had not remitted his first-fruits. Tillotson's sermons, though surpassed by the correctness and elegance of modern compositions in this department, and less perused than formerly, will not cease to be regarded as a valuable part of English literature. *Gen. Biog.*

TILLY, or **ST. ANTOINE**, a seigniory of Lower Canada, in the county of Buckingham, and on the south side of the St. Lawrence.

TILLYCOUNTRY, a parish of Scotland, in Clackmananshire, of an oblong form; 6 miles long and from 1 to 2 broad. Population 1025.

TILLYCOUNTRY, a village of the above parish, seated at the foot of the Ochil hills, on the road from Stirling to Kinross; 4 miles west of Dollar.

TILLYDUFF POINT, a cape of Scotland, on the north-east coast of the county of Aberdeen; 4 miles north-north-west of Rattery-Head.

TILLYFALLY, or **TILLYVALLEY**, *adv.* [a hunting phrase borrowed from the French, *ty a hillaut et valley*, *Venerie de Jacques Fouilloux*, 1585, fol. 12. *Douce.*] A word used formerly when any thing said was rejected as trifling or impertinent.—Am not I consanguineous? Am not I of her blood? *tillyvalley*, lady! *Shakspeare.*

TIL'MAN, *s.* One who tills; an husbandman.

Good shepherd, good *tilman*, good Jack and good Gil,
Makes husband and huswife their coffers to fil. *Tusser.*

TILMANSTONE, a parish of England, in Kent; 5 miles west-by-south of Deal.

TILNEY ALL SAINTS, a parish of England, in Norfolk; 4 miles west-by-south of Lynn Regis. Population 374.

TILNEY ST. LAWRENCE, a parish in the same county, adjoining to the foregoing. Population 488.

TILSDOWN, a hamlet of England, in the parish of Dursley, Gloucestershire.

TILSHEAD, a parish of England, in Wiltshire; 4 miles south-south-east of East Lavington.

TILSIT, a considerable town of Prussian Lithuania; 56 miles east-north-east of Königsberg. It contains 9000 inhabitants, and stands on the banks of two rivers, the Tilse, a small stream separating the town from the castle, and the Niemen, a great river which flows past the town by the north, and over which it has a bridge of boats. The inhabitants are partly Catholics, but more Protestants. Its chief title to historical notice is from the treaty of peace concluded here on the 1st of July, 1807, between France on the one hand and Prussia on the other; 50 miles south-south-east of Memel. Lat. 55. 4. 30. N. long. 21. 56. 15. E.

TILSOP, a village of England, in Salop; 3 miles from Cleobury Mortimer.

TILSTOCK, a hamlet of England, in Salop; 3 miles south of Whitchurch.

TILSTON, a hamlet of England, in Cheshire; 12½ miles south-south-east of Chester.

TILSTON FERNHALL, a hamlet of England, in Cheshire; 2½ miles south-east of Tarporley.

TILSWORTH, a parish of England, in Bedfordshire; 3 miles north-west-by-west of Dunstable.

TILT HAMMER, is a large and heavy hammer, adapted to be put in rapid motion by the power of a water-wheel or steam-engine.

TILT, a small rapid stream of Scotland, in Perthshire, which rises on the borders of Marr, and falls into the Garry near Blaircastle. It forms several romantic falls, of which that named "the York cascade," particularly attracts attention.

TILT, *s.* [τῦλδ, Saxon; *tiald*, Icel., tentorium tegumentum navis; *tialda*, tentorium figere, auleum extruere. *Serenius.*] A tent; any support of covering overhead.

The roof of linnec,
Intended for a shelter!

But the rain made an ass

Of *tilt* and canvas,

And the snow, which you know is a melter. *Denham.*

The cover of a boat.—It is a small vessel, like in proportion to a Gravesend *tilt* boat. *Sandys.*—A military game at which the combatants run against each other with lances on horseback.

His study is his *tilt*-yard, and his loves

Are brazen images of canonized saints. *Shakspeare.*

A thrust.—His majesty seldom dismissed the foreigner, till he had entertained him with the slaughter of two or three of his liege subjects, whom he very dexterously put to death with the *tilt* of his lance. *Addison.*—Inclination forward: as, the vessel is a *till*, when it is inclined that the liquor may run out. [from *tillen*, Dutch. See the verb.]

To **TILT**, *v. a.* To cover like a tilt of a boat. To point as in tilts.

Ajax interpos'd
His seven-fold shield, and screen'd Laertes' son,
When the insulting Trojans urg'd him sore
With *tilted* spears.

Philips.

[*tillen*, Dutch.] To turn up so as to run out; as, the barrel is *tilted*; that is, leaned forward.

To **TILT**, *v. n.* To run in tilts or tournaments.

To describe races and games,
Or *tilting* furniture, emblazon'd shields.

Milton.

To fight with rapiers.

Friends

Friends all but even now; and then, but now—
Swords out and *tilting* one at other's breasts,
In opposition bloody. *Shakspeare.*

To rush as in combat; to strike as in combat.—Some say the spirits *tilt* so violently, that they make holes where they strike. *Collier.*—To play unsteadily.

The floating vessel swam
Uplifted; and secure with beaked prow
Rode *tilting* o'er the waves. *Milton.*

To fall on one side.—As the trunk of the body is kept from *tilting* forward by the muscles of the back, so from falling backward by those of the belly. *Grew.*

TILTEPEC, a settlement of Mexico, in the intendency of Oaxaca, containing 109 families of Indians. It is also the name of two other inconsiderable settlements in Guatimala.

TILTTER, *s.* One who tilts; one who fights.—A puisny *tilter*, that spurs his horse on one side, breaks his staff like a noble goose. *Shakspeare.*

TILTEY, a parish of England, in Essex; 3 miles south-west of Thaxted.

TILTH, *s.* [tilð, Saxon.] Husbandry; culture; tillage; tilled ground; cultivated land. Dr. Johnson has mistakenly considered the word in Milton as an adjective; which Mr. Mason also has remarked.

Bourn; bound of land, *tilth*, vineyard, none;
No use of metal, corn, or wine, or oil. *Shakspeare.*

TILTIL, a settlement of Chili, in the province of Santiago.

TILTING of *Steel*, the process by which blistered steel, or steel in the raw state, is rendered ductile and fit for the purposes of various manufactures. Tilting consists in hammering or forging the steel by a large hammer called a tilt-hammer.

Steel is formed by two processes: one in which it is made at once from pig or crude iron in the finery, nearly in the same manner as making bar-iron: this is called natural steel. In the second process, malleable iron, in bars, is imbedded in charcoal or other carbonaceous matter, and exposed to a considerable heat, till the carbon is thought to have penetrated sufficiently into the iron to have changed it into steel. This is called converting the iron by cementation with charcoal; and the furnace in which the operation is performed is called a converting furnace.

TILTON, a parish of England, in Leicestershire; 10½ miles east-by-north of Leicester.

TILTS, a township of England, in the West Riding of Yorkshire; 4 miles north-by-west of Doncaster.

TIM, a small town of the central part of Russia, in the government of Kursk, on the river Tim, with 2000 inhabitants; 39 miles east of Kursk.

TIMA, TAIMA, or AL ABLAK, a town of Nedsjed, in Arabia; 180 miles north-north-east of Medina.

TIMAAN, or TIMOAN, a small island, high and woody, situated off the east coast of the Malay peninsula. Lat. 2. 52. N. long. 104. 5. E.

TIMÆUS, the *Locrian*, was a philosopher of the Italic school, and flourished in the time of Plato, who derived from him principally the doctrine of Pythagoras, and whose book, entitled "Timæus," was founded on his book "On the Nature of Things." Proclus preserved a small treatise of Timæus "On the Soul of the World," and it is prefixed to some editions of Plato's Timæus. In this treatise, chiefly Pythagorean, he differs from Pythagoras in the following particulars: viz., that, instead of one whole, or monad, he supposes two independent causes of nature, God and Mind, the source of intelligent nature, and Necessity or Matter, the original of bodies; and that he explains the cause of the formation of the world, from the *external* action of God upon matter, after the pattern or ideas existing in his own mind. Upon a comparison of this piece with Plato's Timæus, it will be found that the Athenian philosopher has obscured the simple doctrine of the Locrian with fancies drawn from his own imagination, or from the Egyptian schools.

TIMAHOE, a small village of Ireland, in Queen's county where an abbey was founded, and where also stands a round tower. In the rebellion of 1641, a sanguinary battle was fought near this village, between the insurgents and the English forces; 42½ miles north-west of Dublin.

TIMANA, a town of New Granada, in the province of Popayan. Lat. 2. 14. N. long. 75. 12. W.

TIMANTHES, a famous Grecian painter, was, as it is said, a native of Cythnos, one of the islands called Cyclades, or of Sicyon, and flourished about the year B. C. 400: *Pliny.*

TIMAR, a tract or portion of land, which the grand signior grants to a person on condition of serving him in war, on horseback.

TIMARIOTS, those who enjoy lands on the footing of timars.

TIMAVO, a river in the north-east of Italy, which rises on the confines of Istria and Friuli, near St. Giovanni, and after a short course, falls into the bay of Trieste, near Diuno.

TIMBER, *s.* [tumben, Sax., from tumbrian, to build; *timbrian*, Goth., the same.] Wood fit for building.

I learn'd of lighter *timber* cotes to frame,
Such as might save my sheep and me from shame. *Spenser.*

The main trunk of a tree.

We take

From every tree, lop, bark, and part o' the *timber*,
And though we leave it with a root thus hackt,
The air will drink the sap. *Shakspeare.*

The main beams of a fabric. Materials, *ironically*.—Such dispositions are the very errors of human nature, and yet they are the fittest *timber* to make politics of, like to knee *timber*, that is good for ships to be tossed, but not for houses that shall stand firm. *Bacon.*

TIMBER is properly that sort of wood produce which is useful and proper for the purposes of building, the construction of tools, implements, carriages, &c.; or such large trees of different sorts as have reached their full or suitable states of growth, and are in condition fit for being cut down for use.

We shall here mention those kinds of timber that are most serviceable, and give a brief view of the uses to which they are applied, referring to their several denominations for a further detail.

Oak will endure all seasons and weathers; there is no wood like it: hence its use in palls, shingles, posts, rails, boards, &c. For water-works, it is second to none; and where it lies exposed both to air and water, there is none equal to it.

Elm felled between November and February, is all spine or heart, and no sap; and is of singular use in places where it either is always wet, or always dry: its toughness likewise makes it of use to wheelwrights, millwrights, &c.

Beech is used in turnery, joinery, upholstery, and the like, as being of a clean, white, fine grain, not apt to bend nor slit: it has been sometimes used for building-timber, and if it lie constantly wet, is judged to outlast oak.

Ash is good for building, or other occasions where it may lie dry: it serves the carpenter, cooper, turner, ploughwright, wheelwright, gardener; it is also used at sea for oars, hand-spikes, &c.

Fir, commonly known by the name of *deal*, is much used in building, especially within doors, for stairs, floors, wainscot, and most works of ornament.

Walnut-tree is of universal use, excepting for the outsides of buildings: none is better for the joiner's use, it being of a curious brown colour, and not subject to worms.

Chesnut-tree, next to oak, is the timber most sought for by joiners and carpenters. It is very lasting.

Service-tree, used in joinery, as being of a delicate grain, and fit for curiosities.

Poplar, abele and aspen, differing very little from one another, are much used instead of fir: they look as well, and are tougher and harder.

Alder is much used for sewers or pipes to convey water: when kept always wet, it grows hard like a stone; but where sometimes wet, and sometimes dry, it rots presently.

The

The uses of timber are so many, and so great, that the procuring of a sufficient supply of it extremely well deserves the care of every state.

In order to the preservation of our growing timber-trees, it has been proposed as a very useful law, that all who cut down any number of oaks, should also leave a number in good condition for after-cutting; and that no timber should be cut down, but at a proper age, in regard to the nature of the soil; since it is certain, that trees grow to their perfection at very different periods of time, in proportion to the depth of soil they have to grow in; and that as it is, on the one hand, not for the interest of the state to suffer trees to be cut till at their perfection for size and soundness, so after they are arrived at their perfection, it is equally certain that they gradually decay.

The quality of the soil the tree stands in may be necessary to be observed to this purpose; but the quantity or depth of it is the great subject of inquiry; and a great number of observations has proved, that the proper season for cutting oaks, in a soil of two feet and a half deep, is at fifty years old; those which stand in a soil of three feet and a half deep, should not be cut down before seventy years; and those which stand in a soil of four feet and a half deep, or more than that, will increase in goodness and in size till they are a hundred years old; and observation has proved, that after these several periods, the trees begin to decay.

Many prudent managers have made fine estates of their coppice-woods, by regularly felling a certain portion every year, and providing for a renewal of the first cutting, against the felling of the last portion, by proportioning the time of growth to the quantity to be cut every year; and there is great interest to be made of a true knowledge of the growth of wood in this manner. Whoever observes the growth of young trees, will find that the second year's growth is much more considerable than that of the first; the third year is more than that of the second, and so on for many years; the yearly growths of young wood greatly increasing every season up to a certain time or age of the tree, after which the increase in bulk, by growth, becomes gradually less. The best time to cut coppice-wood is at the end of the quick growth. Regular observation and experiment alone can ascertain this proper period; but any man who has much coppice-wood upon his estate, may assure himself of it, by cutting a given quantity every year, for ten years successively, and then carefully reviewing the differences of the yearly produce. The raising and culture of every timber-tree will be found under their several names. Mr. Loudon has thrown out some ingenious hints on this point. He says first, that every hedger and forrester knows, that furze and thorns, which have been cultivated in fields or hedges, are of a much softer or wider grain, and are much easier cut over with the hedge-bill, than such as spring up from seed in a wild scenery, and never undergo any sort of pruning or cutting in, nor any kind of culture in any way. They know too, that in a common to be cleared of furze or thorns, or in a hedge to be cut over, there are some parts which require a much slighter stroke of the hedge-bill than others; and that those parts easiest to cut, are uniformly those where the plants have grown the quickest: gardeners experience the same thing in pruning or cutting over fruit-trees or shrubs. Thus the difference between the texture of the cultivated and the wild raspberry is, it is said, striking, though the stem of the one is nearly double the thickness of that of the other. In all the other of these cases, the stems of both are supposed alike in diameter and cleanness, or absence of knots; though the same thing would, it is thought, take place in a considerable degree, even if the stem of the cultivated or quick growing one were thicker than that of the other in the wild state. Supposing that there were no other proofs, this, it is contended, clearly shews that cultivation, or whatever tends to increase the growth of a tree, tends likewise to expand the vegetable fibre. But there are other concurring proofs, it is said, which demonstrate this, and at the same time shew, what few, it is supposed, will doubt, that when the vegetable fibre is expanded, or when the annual ringlets or circles of

wood, produced by a tree, are soft and larger than the general annual increase of such tree, the timber must be less hard, and more permeable by air, water, heat, and other matters, and of course, inferior for all the purposes of timber.

Secondly, that it is well known that the common oak in Italy, where it grows faster than in this country, is comparatively of short duration. And that the oak which grows on the mountains of the Highlands of Scotland is much harder and closer than any produced in England, though on these mountains it seldom attains one-tenth part of the size of English trees.

With respect to cutting out and side-logging the branches, it appears certain that fir-trees, whenever they arrive at a certain age, should be cut or lopped to a certain height; and that for regulating thereof, the simple rule given below is recommended: the cutting-in to commence when the trees are six years old, or when there is discernible five tier of boughs and the shoot; the three lower tier of boughs are then to be taken off. After the first lopping or cutting-in, the trees to be let alone for four or five years, and then, and at every succeeding four or five years, the cuttings-in to be repeated, till the stem of the tree be clear to forty feet high, after which as to such side-logging, it may be left to nature. The rule for the height of thinning and cutting-in, after the first time, to be half the extreme height of the tree, until they attain twenty years' growth, and after that time, half the height of the tree, and as many feet more as it is inches in diameter at four feet from the ground. This cutting-out and retrenching the branches of such trees is known, from repeated observations, it is said, not to be excessive: and that the rule is calculated to check the too tapering top, and for strengthening the slender bottom, by carrying the cutting and retrenching to a greater proportionate degree, in a ratio compounded of the height and bottom bulk; and by this rule, too, it may be observed, that the trees will be at top clothed with somewhat less than half their branches. The proper time for such cutting-in is, it is said, between September and April, and the tool to be employed in the business, the saw.

It is noticed, that orderly thinning the trees at certain periods, when for timber, is the next essential to that of cutting-in and lopping their side branches; and that for this purpose observations have been made on the most orderly and thriving collections of this sort of trees, and the subsequent simple rule is laid down: keep the distance of the trees from each other equal to one-fifth of their height. In the application of this rule to this purpose, it is evident that each individual tree can never be made to comply, for the original distance (even if set out in the most regular order) will allow only for certain modifications, by taking out every other tree, and so on, but even if the obtaining such equal distance were practicable, experience would shew, it is thought, that another way should be preferred, of which the eye must be the judge, by taking out such trees as are least thriving, stand nearest to other good trees, &c. &c. at the same time keeping in view the rule laid down.

The foregoing rules are meant to apply to fir-timber only, but to a certain extent they may be applied to other timber; though by no means in the same degree or age. But if had recourse to as far as the first fourteen years of their growth, and then such cutting and side-logging be altogether omitted, and the thinning out very much increased, any collection of such timber-trees would be rendered much more valuable than if left to nature.

But Mr. Knight told the Royal Society that the solid texture of the wood greatly depends upon the quantity of sap, and on the slowness of its descent. Now both these are, it is contended, materially increased by side-shoots or branches, which retain a large quantity of sap, and by their junction with the stem occasion a contraction and twisted direction of the vessels, that obstructs the progress of this juice.

Thence the necessity of considering fully the propriety of lopping timber trees, because though practical men appear in general to think of no other purpose than how to increase the quantity of timber; yet if solid and durable timber be the object to be gained, these measures must not be carried too far.

The

The best season for felling timber depends much on the species; fir is best felled when it begins to spring, both as it then quits its coat best, and as the wood is by that means rendered wonderfully durable in water. Elm should be felled between November and January, in which case it will be all heart, at least the sap will be very inconsiderable: this is also the only good season for felling ash. Oak from the end of March to the end of May.

There are several different modes made use of in felling or taking down timber, and they must necessarily be somewhat various, according to the nature, extent, and kind, of which the collection may be. Groves of the fir or pine sort, or any single fir-tree of any kind, should at once be taken out by the roots. In woods, any timber-trees that may be cut down, should have their places as nearly as possible supplied by saplings, or any other proper sorts of young timber-trees. However, previous to the work of felling, the trees should be marked by a proper person; in performing which, in a fall of timber, regard is to be had to the relative state of standing in the trees. In close timber-woods, the whole or nearly the whole may be marked and taken down; as if some which appear flourishing be left standing, they will not only be liable and in danger of being hurt in taking the others down; but, in consequence of their situation in regard to exposure being changed, will no longer continue to flourish. As their atmosphere is not only thus altered, and rendered too cool, perhaps, for their acquired habit, by the removal of the adjoining trees; but they thereby get room to throw out side-shoots from their stems; in consequence of which their tops die, and their growth is irrevocably stunted. While, on the contrary, in open woods of the same kind, thin hedges, and other open spaces, such timber-trees only as are ripe for the axe, or are suitable for the intended purpose, should be marked: the youthful growing trees being left to be benefited most probably by an increase of air and head room, in an atmosphere and exposure to which they are habituated and accustomed. On estates that are timbered, it is directed that they should be frequently gone over by proper persons, who, let the price and demand for the timber be what they may, should mark every tree which wears the appearance of decay. Where the demand is brisk, and the price high, he should go two steps further, and mark not only such as are full grown, but such also as are near perfection; for the interest of the money, the disincumbrance of the approaching young timbers, and the comparative advantages of a good market, are not to be bartered for any increase of timber which can reasonably be expected from trees in the last stage of their growth.

In the work of felling timber, three distinct methods are practised and had recourse to in different cases; as, first, that of cutting the trees *above ground*; severing them from their roots, by means of the axe or the saw; leaving what are termed *stools*, to occupy the spots where they stood. Second, that of cutting them, *within the ground*, with the axe and mattock; but leaving the principal parts of the roots in the soil. And third, that of *grubbing* them up by the roots, by the use of the spade and mattock; thus throwing them down with the butts and large roots adhering to the stems. The preference to be given to one or other of the two first modes of taking down timber-trees, rests, it is said, chiefly on the nature of the future application of the land upon which they grow. If it be intended to remain in the state of woodland, the first method, or the second, if too much of the main roots be not cut away, is the best and most eligible. But if the land is to be cleared for the purposes of agriculture, where sufficient hands can be had for dispatching the business, the second is, by far, the best. The last is improper in most cases.

In speaking of oak-timber, the late bishop of Llandaff has given some useful and interesting remarks in regard to the disposal of it, in the introduction to the Agricultural Report of the State of the County of Westmoreland. Where profit is considered, it is said every tree should be cut down and sold, when the annual increase in value of the tree by its

growth, is less than the annual interest of the money it would sell for. This being admitted, it is only necessary to inquire into the annual increase in the value of oaks of different ages. After different statements, thirty-six shillings each are fixed upon as the price of trees that should be cut down and sold; as, if they be cut down before they arrive at that value, or if they be allowed to remain until they will sell for a much higher price, the proprietor of the soil or land on which they grow will be a loser. It is noticed too, as being the general opinion, that it is more profitable to fell and sell oak-wood at fifty or sixty years' growth, than to let it stand for navy timber to eighty or a hundred, owing to the low price that is now paid for oak-trees of large dimensions, either by the Navy Board or the East India Company.

To TIMBER, v. n. To light on a tree. *A cant word.*—The one took up in a thicket of brush-wood, and the other *timbered* upon a tree hard by. *L'Estrange.*

To TIMBER, v. a. To furnish with beams or timber.

TIMBERED, adj. [*timbré, Fr.*] Built; formed; contrived.

His bark is stoutly *timber'd*, and his pilot

Of very expert and approv'd allowance. *Shakspeare.*

TIMBERLAND, a township of England, in Lincolnshire; 8 miles north-west-by-north of Sleaford. Population 370.

TIMBERSCOMBE, a parish of England, in Somersetshire; 3 miles west-south-west of Dunster. Population 388.

TIMBERSOW, s. A worm in wood; perhaps the wood louse.—Divers creatures, though they be loathsome to take, are of this kind; as earth-worms, *timbersows*, snails. *Bacon.*

TIMBIO, a river of New Granada, in the province of Popayan, which enters the Patia. It has a settlement of the same name on its shore.

TIMBLE, GREAT and LITTLE, townships of England, West Riding of Yorkshire; $5\frac{1}{2}$ miles north-by-west of Otley.

TIMBO, a small seaport on the Grain coast of Africa. Lat. 5. 28. N. long. 9. 20. W.

TIMBOI, a small river of the province and government of Buenos Ayres, which runs east, and enters the Uruguay.

TIMBREL, s. [*Timbrel* is perhaps a corruption of *tambour*, or *tambourine*, written also *timburine*. *Todd.*] A kind of musical instrument played by pulsation.

The damsels they delight,

When they their *timbrels* smite,

And thereunto dance and carol sweet.

Spenser.

TIMBRELLED, adj. Sung to the sound of the timbrel.

In vain with *timbrell'd* anthems dark

The sable-stoled sorcerers bear his worshipt ark. *Milton.*

TIMBRIDGE, a hamlet of England, in the parish of Kingsbury Episcopi, Somersetshire.

TIMBURINE. See *TAMBOURINE.*

TIME, s. [*tim, cima, Saxon; tima, Icel.; tym, Erse; timme, Swedish.*] The measure of duration.

Come what come may,

Time and the hour runs through the roughest day.

Shakspeare.

Space of time.—He for the *time* remain'd stupidly good.

Milton.—Interval.—Pomanders, and knots of powders, you may have continually in your hand; whereas perfumes you can take but at *times*. *Bacon.*—Life considered as employed, or destined to employment.—A great devourer of his *time*, was his agency for men of quality. *Fell.*—Season; proper time.

I hope I come in *time*, if not to make,

At least, to save your fortune and your honour. *Dryden.*

A considerable space of duration; continuance; process of time.

Fight under him, there's plunder to be had;

A captain is a very gainful trade:

C

And

And when in service your best days are spent,
In *time* you may command a regiment. *Dryden.*

Age; part of duration distinct from other parts.—The way to please being to imitate nature, the poets and the painters, in ancient *times*, and in the best ages, have studied her. *Dryden.*—Past time.—I was the man in th' moon when *time* was. *Shakspeare.*—Early time. In this sense *time* seems, as Mr. Bagshaw also has observed, barbarously employed like *plenty* for *plentiful*. Ray writes *timely enough*: "Many words, had they come *timely enough*, might have been useful to me." Pref. to his Collect. of Eng. Words.—Stanley at Bosworth field, though he came *time* enough to save his life, yet he staid long enough to endanger it. *Bacon.*—Time considered as affording opportunity.

Time is lost, which never will renew,
While we too far the pleasing path pursue,
Surveying nature. *Dryden.*

Particular quality of some part of duration.

Comets, importing change of *times* and states,
Brandish your crystal tresses in the sky. *Shakspeare.*

Particular time.

Give order, that no sort of person
Have, any *time*, recourse unto the princes. *Shakspeare.*

Hour of childbirth.—She intended to stay till delivered;
for she was within one month of her *time*. *Clarendon.*—
Repetition of any thing, or mention with reference to repetition.—Four *times* he cross'd the car of night. *Milton.*—
Musical measure.

Music do I hear!

Ha, ha! keep *time*. How sour sweet music is
When *time* is broke, and no proportion kept. *Shakspeare.*

To *TIME*, *v. a.* To adapt to the time; to bring or do
at a proper time.—A man's conviction should be strong,
and so well *timed*, that worldly advantages may seem to
have no share in it. *Addison.*—To regulate as to time.

To the same purpose old Epopeus spoke,
Who overlook'd the oars, and *tim'd* the stroke. *Addison.*

To measure harmonically.

He was a thing of blood, whose every motion
Was *tim'd* with dying cries. *Shakspeare.*

TIMEFUL, *adj.* Seasonable; timely; early.—If this
arch-politician find in his pupils any remorse, any feeling of
God's future judgments, he persuades them that God hath so
great need of men's souls, that he will accept them at any
time, and upon any condition; interrupting, by his vigilant
endeavours, all offer of *timeful* return towards God. *Ra-
legh.*

TIMEKEEPER, or *TIMEPIECE*, *s.* A watch or clock
that keeps good time. *Ash.*—Messieurs Wales and Bailey
made observations on Drake's Island to ascertain the latitude
and longitude, and for putting the *time-pieces* or watches in
motion. *Cook.*

TIMELESS, *adj.* Unseasonable; done at an improper
time.

Nor fits it to prolong the heavenly feast
Timeless, indecent, but retire to rest. *Pope.*

Untimely; immature; done before the proper time.
A pack of sorrows, which would press you down,
If unprevented, to your *timeless* grave. *Shakspeare.*

Endless.

[They] headlong rush
To *timeless* night and chaos, whence they rose. *Young.*

TIMELESSLY, *adv.* Before the natural time; unseason-
ably.

O fairest flower, no sooner blown but blasted,
Soft silken primrose, fading *timelessly*. *Milton.*

TIMELINESS, *s.* The state or circumstance of being
timely. *Scott.*

TIMELKAM, a small town of Upper Austria, on the river
Ager; 3 miles west of Vocklabruck.

TIMELY, *adj.* Seasonable; sufficiently early.

The west glimmers with streaks of day,
Now spurs the lated traveller apace
To gain the *timely* inn. *Shakspeare.*

Keeping measure, time, or tune. *Not in use.*
And many bards, that to the trembling chord
Can tune their *timely* voices cunningly. *Spenser.*

TIMELY, *adv.* Early; soon.
The beds i' th' East are soft, and thanks to you,
That call'd me *timelier* than my purpose hither. *Shakspeare.*

TIMEPLEASER, *s.* One who complies with prevailing
opinions whatever they be.

Scandal, the suppliants for the people, call them
Timepleasers, flatterers, foes to nobleness. *Shakspeare.*

TIMERYCOTTA, a town and fortress of the south of
India, province of the Carnatic, and district of Palnaud.
Six miles distant from this place is a cataract of 60 feet high,
from which the water falls into a basin 120 feet in breadth,
the banks of which are ornamented with a number of small
Hindoo temples. Lat. 16. 35. N. long. 79. 25. E.

TIMESERVER, *s.* One who meanly complies with
present power.—That which politics and *time-servers* do for
earthly advantages, we will do for spiritual. *Bp. Hall.*

TIMESERVING, *s.* Mean compliance with present
power.—If such by trimming and *timeserving*, which are
but two words for the same thing, abandon the church of
England; this will produce confusion. *South.*

TIMID, *adj.* [*timidus*, Lat.] Fearful; timorous; want-
ing courage; wanting boldness.—Poor is the triumph o'er
the *timid* hare. *Thomson.*

TIMIDITY, *s.* [*timidite*, Fr.; *timiditas*, Lat.] Fearful-
ness; timorousness; habitual cowardice.

Thus in the field the royal host did stand,
None fainting under base *timiditie*,
But ready bent to use of their running hand
Against the force of forren enemy. *Mir. for Mag.*

TIMISCOUATA, a lake of Canada, in Cornwallis county,
22 miles in length, by the average breadth three quarters of
a mile, encompassed in all directions by lofty mountains
covered with thick wood almost down to its margin. To
this lake there is a portage from the St. Lawrence, by means
of which the communication is carried on between Quebec
and Halifax, a distance of 627 miles.

TIMIST, *s.* One who complies with the times; a time-
server.—A *timist* is a noun adjective of the present tense.
He hath no more of a conscience than fear, and his religion
is not his but the prince's. He reverenceth a courtier's ser-
vant's servant. *Overbury.*—One who keeps time in music.
—Guardini was an excellent *timist*. *Dr. Burney.*

TIMMIA. This name is applied to a genus of mosses by
Hedwig.

TIMMISKAMAIN LAKE, in Lower Canada, is about 30
miles long, and 10 broad, having several small islands. Its
waters empty into Utawas river, by a short and narrow
channel, 30 miles north of the north part of Nepissing lake.
The Indians named Timmisticamaings reside round this
lake.

TIMOLEON, a distinguished example of patriotism and
attachment to liberty, was of noble parentage, and a native
of Corinth. See *CORINTH*.

TIMOLIN, a village of Ireland, in the county of Kildare,
near which are the ruins of Moone abbey; 29 miles south-
west of Dublin.

TIMON, the Philiasian, a disciple of Pyrrho, flourished in
the time of Ptolemy Philadelphus, and lived to the age of
ninety years. At an early age he visited Megara, for the
advantage of Stilpo's instructions in dialectics, and afterwards
removed to Elea, where he became a hearer of Pyrrho. He
first

first professed philosophy at Chalcedon, and afterwards at Athens, where he remained till his death. He took so little pains to invite disciples to his school, that it has been said of him, that as the Scythians shot flying, Timon gained pupils by running from them. This indifference to his profession was probably owing to his love of ease and indulgence; for he was fond of rural retirement, and so much addicted to wine, that he held a successful contest with several celebrated champions in drinking. This disposition probably led him to embrace the indolent doctrine of scepticism. He seems to have treated the opinions and disputes of the philosophers with contempt, for he wrote with sarcastic humour against the whole body. His poem, entitled "Silli," often quoted by the ancients, was a keen satire, abounding with bitter invectives against men and doctrines. The remaining fragments of this poem have been industriously collected by Henry Stephens, in his "Poesis Philosophica." The public succession of professors in the Phyrriac school terminated with Timon. *Brucker by Enfield.*

TIMONEER, or **TIMONIER**, [Fr.] The helmsman.

TIMOPHEEVA, a village of Asiatic Russia, in the government of Irkutsk, on the Ilim; 32 miles north-west of Vercholenk.

TIMOR, the southernmost and largest of the Molucca islands, in the eastern seas. Its extent is more considerable than the charts usually represent it, being little less than 250 miles in a north-eastern direction, by from 30 to 60 in breadth. The interior part is a chain of mountains, some of which nearly equal the peak of Teneriffe in elevation; whilst the shores on the south-east side are exceedingly low, and over-run with mangroves. Gold is said to be contained in the mountains, and to be washed down the streams; but the natives are so jealous of Europeans gaining any knowledge of it, that at a former period, when forty men were sent by the Dutch to make search, they were cut off. There were formerly several Portuguese establishments on the north side of the island, of which Diely and Leffow still remained; but these had all gradually declined, and the governor of Diely was then said to be the sole white Portuguese resident on the island. The Dutch have made some attempts to establish Christianity, but with very little success, the natives mostly remaining in their original ignorance. Lat. 10. 22. S. long. 123. 29. E.

TIMOR LAUT, an island in the Eastern seas; about 70 miles long, by 25 the average breadth. It is situated between the 7th and 8th degrees of south lat. and the 132d and 133d of east long.

TIMOROUS, *adj.* [*timor*, Lat.] Fearful; full of fear and scruple.

The infant flames, whilst yet they were conceal'd
In *tim'rous* doubts, with pity I beheld;
With easy smiles dispell'd the silent fear,
That durst not tell me what I died to hear.

Prior.

TIMOROUSLY, *adv.* Fearfully; with much fear.

We would have had you heard

The traitor speak, and *timorously* confess
The manner and the purpose of his treasons. *Shakspeare.*

TIMOROUSNESS, *s.* Fearfulness.—*Timorousness* and bashfulness hinder their proceedings. *Burton.*

TIMOTEO (Da Urbino), whose real name was T. della Vite, was born at Urbino, in 1470. He received his education as an artist under F. Francia, at Bologna, but at the age of twenty-six returned to his native city, whence he soon after went to Rome to see his countryman, Raphael, and the great works in the Vatican which had recently acquired for him so much renown. Raphael employed him in painting the Sibyls in the church of La Pace, and was satisfied of his ability in the performance: so much so, that he allowed him to retain the cartoons. After this he returned to Urbino, and there executed several great works for the cathedral and other public buildings. His most esteemed works are, the Conception, in the church of the Osservanti,

at Urbino; and Christ appearing to Mary Magdalen, in S. Angeli, at Cagli. He died in 1524, aged 54.

TIMOTHEUS, one of the most celebrated poet-musicians of antiquity, was born at Miletus, an Ionian city of Caria, 246 B. C. He was contemporary with Philip of Macedon, and not only excelled in lyric and dithyrambic poetry, but in his performance upon the cithara. According to Pausanias, he perfected that instrument by the addition of four new strings to the seven which it had before; though Suidas says it had nine before, and that Timotheus only added two, the tenth and eleventh, to that number.

It appears from Suidas, that the poetical and musical compositions of Timotheus were very numerous, and of various kinds. He attributes to him nineteen nomes, or canticles in hexameters; thirty-six proems, or preludes; eighteen dithyrambics; twenty-one hymns; the poem in praise of Diana; one panegyric; three tragedies, the Persians, Phinidas, and Laertes; to which must be added a fourth, mentioned by several ancient authors, called "Niobe," without forgetting the poem on "The Birth of Bacchus."

A musician so long eminent as Timotheus, must have excited great desire in young students to become his pupils; but, according to Bartholinus, he used to exact a *double price* from all such as had previously received instructions from any other master; saying, that he would rather instruct those who *knew nothing*, for *half price*, than have the trouble of *unteaching* such as had already acquired bad habits, and an incorrect and vicious manner of playing.

Timotheus died in Macedonia, according to Suidas, at the age of ninety-seven.

TIMOTI, a river of Darien, which rises in the mountains of the north coast, and running south-west, enters the Chucunaqui.

TIMOUS, *adj.* Early; timely. *Obsolete.*—By a wise and *timous* inquisition, the peccant humours and humourists must be discovered, purged, or cut off. *Bacon.*

TIMPERLEY, a township of England, in Cheshire; 8½ miles north-north-east of Nether Knutsford. Population 624.

TIMSBURY, a parish of England, in Southamptonshire; 2½ miles north-by-west of Romsey.—2. A parish in Somersetshire; 5 miles south-east-by-south of Pensford.

TIMUR-HISSAR, a small town of European Turkey, in Romania, sandgiakat of Salonica, with a strong castle situated on a rock.

TIMWORTH, a parish of England, in Southamptonshire, near Basingstoke.—2. A parish in Suffolk; 4 miles north-by-east of St Edmund's Bury.

TIN, *s.* [*ten*, Dutch.] One of the primitive metals. —Quicksilver, lead, iron, and *tin*, have opacity or blackness. *Peacham.*

The most considerable repository of tin-ore in Europe is that of Cornwall. The greatest part of the tin consumed in Europe is procured from thence; and Camden even supposes this abundance of tin in Cornwall and Devonshire, to have given the original denomination *Britain* to the whole kingdom. In the Syriac language, *varatanac*, or *baratanac*, signifies *land of tin*; from which Bochart derives the name *Britain*.

Tin is found in Europe, Asia, and America, but has not hitherto been discovered in the continent of Africa. This metal is much less generally disseminated than gold, silver, iron, copper, or lead; but where it occurs, it is most frequently in large quantities.

To TIN, v. a. To cover with tin.—To keep the earthen from getting into the vessel, he employed a plate of iron *tinned* over and perforated. *Boyle.*

TINACO, a river of New Granada, in the province of Venezuela, which enters the Portuguesa. It has a settlement of the same name on its banks.

TINAMASAKI, a town of Nippon, in Japan. Lat. 34. 12. N. long. 136. 55. E.

TINAQUILLO, a settlement of the Caraccas, in the province of Venezuela, situated on the shore of the river Caxede, south of the city of Valencia.

TINCA,

TINCA, the Tench, in Ichthyology. See CYPRINUS.
TINCA MARINA, the sea tench, a name given by some authors to the common *turdus*.

TINCAL, *s.* A mineral.—The *tineal* of the Persians seems to be the chrysocholla of the ancients, and what our borax is made of. *Woodward*

TINCHEBRA, a small town in the north of France, department of the Orne, on the river Noireau. Population 3000; 14 miles north of Domfront, and 30 west of Argentan.

To TINCT, *v. a.* [*tinctus*, Lat.; *teint*, Fr.] To stain; to colour; to spot; to die.—Some were *tinced* blue, some red, others yellow. *Brown*.—To imbue with a taste.—We have artificial wells made in imitation of the natural, as *tinced* upon vitriol, sulphur and steel. *Bacon*.

TINCT, *part.* Coloured; stained.—The blue in black, the green in gray, is *tinced*. *Spenser*.

TINCT, *s.* Colour; stain; spot.

That great med'cine hath

With his *tinced* gilded thee *Shakspeare*.

TINCTURE, *s.* [*teinture*, Fr.; *tinctoria* from *tinctor*, Latin.] Colour or taste superadded by something.

Hence the morning planet gilds her horn;

By *tinctor* or reflection they augment

Their small peculiar. *Milton*.

Extract of some drug made in spirits.—In *tinctor* drawn from vegetables, the superfluous spirit of wine distilled off leaves the extract of the vegetable. *Boyle*.

To TINCTURE, *v. a.* To imbue or impregnate with some colour or taste.

The bright sun compacts the precious stone,
Imparting radiant lustre like his own;
He *tinctor* rubies with their rosy hue,
And on the sapphire spreads a heavenly blue. *Blackmore*.

To imbue the mind—Early were our minds *tinctor*ed with a distinguishing sense of good and evil; early were the seeds of a divine love, and holy fear of offending, sown in our hearts. *Atterbury*.

TINCULEN, or TINZULEN, a village of Taflet, in the southern part of Morocco; 120 miles south-west of Taflet.

To TIND, *v. a.* [*tandjau*, M. Goth.; *taenda*, Su. Goth.; *tanban*, Sax., from the Celt and Welsh, *tan*, fire. *Wachter*, and *Serenius*.] To kindle; to set on fire.—As one candle *tindeth* a thousand. *Bp. Sanderson*.

TINDER, *s.* [*τύνθη*, *τενθη*, Saxon.] Any thing eminently inflammable placed to catch fire.

Strike on the *tinder*, ho!

Give me a taper. *Shakspeare*.

TINDERBOX, *s.* The box for holding tinder.

That worthy patriot, once the bellows,
And *tinderbox* of all his fellows. *Hudibras*.

TINDERLIKE, *adj.* Inflammable as tinder.—I am known to be a humorous patrician; hasty and *tinderlike* upon too trivial motion. *Shakspeare*.

TINE, *s.* [*tindr*, Icel.; *tinne*, West Goth. from the Goth. *taunn*, *tenn*, a tooth, *Serenius*; *тинбаг*, Sax., *occa* *rastri*.] The tooth of a harrow; the spike of a fork.—In the southern parts of England they destroy moles by traps that fall on them, and strike sharp *tines* or teeth through them. *Mortimer*.—Trouble; distress. See TEEN.

The tragical effect,

Vouchsafe, O thou the mournful'st muse of nine,

That won't st the tragic stage for to direct,

In funeral complaints and wailful *tine*. *Spenser*.

To TINE, *v. a.* [*τύναν*, Saxon. See To TIND.] To kindle; to light; to set on fire.

The priests with holy hands were seen to *tine*
The cloven wood, and pour the ruddy wine. *Dryden*.

[*τύναν*, Saxon, *to shut*.] To shut; to fence or enclose. *Colles*, and *Grose*.

To TINE, *v. n.* To rage; to smart. *Not now in use*.

Eden though but small

Yet often staid with blood of many band
Of Scots and English both, that *tynd* on his strand. *Spenser*.

TINEDALE, a valley of England, in the county of Northumberland, watered by the North Tyne, which separates it from Redesdale on the North. It was made a barony by Henry I. Several battles have been fought here, whereof memorials remain, both British and Pictish.

TINEN, or THINEH, the ruins of a city in Lower Egypt, situated upon the Pelusiac branch of the Nile. This branch is now reduced to little more than a channel of mud, traversing a smooth, barren, and naked plain. The castle of Thineh, which appears to have been built about the time of the conquest of Selim, is now falling to ruins. Lat. 30. 55. N. long. 32. 30. E.

TINEH, a small town of Tripoli, in Africa, is situated on the gulph of Sidra, or Syrtis. Lat. 30. 5. N. long. 19. 12. E.

TINMAN, or TIENMAN, *s.* Of old a petty officer in the forest, who had the nocturnal care of vert and venison, and other servile employments. *Cowel*.

TINEWALD, the parliament or annual convention of the people of the Isle of Man, of which this account is given:—the governor and officers of that island do usually summon the twenty-four keys, being the chief commons of it, once every year, viz., upon Midsummer-day, at St. John's chapel, to the court kept there, called the tinewald-court; where, upon a hill near the said chapel, the inhabitants of the island stand round about the plain adjoining; and here the laws and ordinances, agreed upon in the chapel of St. John, are published and declared unto them. At this solemnity the lord of the island sits in a chair of state, with a royal canopy over his head, and a sword held before him, attended by the several degrees of the people, who sit on each side of him, &c.

To TING, *v. n.* [from the sound; *tinter*, Fr.] To ring; to sound as a bell. *Cotgrave*, and *Sherwood*.

TING, *s.* A sharp sound: as, the *ting* of a bell. *Sherwood*.—The little bell of a church is in several places called the *ting tang*.

TING, a city of China, of the second rank, in Pe-chee-lee. Lat. 38. 32. N. long. 114. 39. E.

TINGANO, a small river on the eastern coast of Malacca, which falls into the sea of China. Lat. 5. 27. N. long. 103. 9. E.

TING-CHAN, a town of Corea; 30 miles south-east of Haimen.

To TINGE, *v. a.* [*tingo*, Lat.] To impregnate or imbue with a colour or taste.—Sir Roger is something of an humourist; and his virtues as well as imperfections are *tinged* by a certain extravagance which makes them particularly his. *Addison*.

TINGENT, *adj.* [*tingens*, Lat.] Having the power to tinge.—This wood, by the tinctor it afforded, appeared to have its coloured part genuine; but as for the white part, it appears much less enriched with the *tingent* property. *Boyle*.

TINGEWICK, a parish of England, in Buckinghamshire; 2½ miles west-by-south of Buckingham. Population 711.

TING-FAN, a city of China, of the second rank, in Koeitchoo. Lat. 26. 5. N. long. 106. 4. E.

TINGI, a cluster of small islands in the Chinese sea, near the eastern coast of Malacca. Lat. 2. 23. N. long. 104. 21. E.

TINGLASS, *s.* Bismuth.

To TINGLE, *v. n.* [*tingelen*, Dutch.] To feel a sound, or the continuance of a sound, in the ears. This is perhaps rather *tinkle*; which see.—The ears of every one that heareth it shall *tingle*. *I Sam*.—To feel a sharp quick pain with a sensation of motion.—The pale boy senator yet *tingling* stands. *Pope*.—To feel either pain or pleasure with a sensation of motion. The sense of this word is not very well ascertained.—They suck pollution through their *tingling* veins. *Tickell*.

TINGLING, *s.* A kind of pain or pleasure with a sensation of motion; a noise in the ears.—A kind of sleeping in the blood, a whoreson *tingling*. *Shakspeare*.

TINGO,

TINGO, two small settlements of Peru, one in the province of Ica, the other in that of Chachapayas.

TINGORAN, a small island of the Chinese sea, near the eastern coast of Malacca: Lat. 4. 8. N. long. 103. 33. E.

TINGRITH, a parish of England, in Bedfordshire; 4 miles east-by-south of Woburn.

TINGTCHEOU, a city of China, of the first rank, in the province of Fokien, situated among the mountains which separate it from Kiangsee. Some of these are excessively high, and supposed to contain mines of gold, which, however, are not worked. The district yields abundantly all necessaries; but the air is unhealthy. Lat. 25. 48. N. long. 116. 4. E.

TINGUAY, a river of Chili, in the province of Maule which runs west, and enters the Maule.

TINGUINDIN, or TINGUIRINDIN, an inconsiderable settlement of Mexico, in the intendency of Valladolid; 140 miles west-by-south of Mexico.

TINGUIRIRICA, a river of Chili, which joins the river Rapel, 15 miles from its mouth. It is noted for the lamentable accidents which have happened to those who have attempted to cross it when flooded.

TINGWALL, WEISDALE and WHITENESS, united parishes of Scotland, which lie in the mainland of Shetland, and extend 10 miles in length, by 5 in breadth, deeply intersected by the sea. Population 1927.

TINIAN, one of the Landrone islands, in the North Pacific ocean, about 42 miles in circumference first discovered by the crew of a Manilla ship, which was cast away here in the year 1638.

Tinian was once a flourishing island, and contained 30,000 inhabitants. An epidemical disorder having carried off a great proportion of these, the remainder, by the barbarous policy of the Spaniards, were transferred to other islands. The island being thus left desolate, was soon overrun with the luxuriant vegetation of the tropical regions.

TINICUM, a township of the United States, in Delaware county, Pennsylvania, on the Delaware, above Salebury. Population 249.

TINISCHT, a small town in the east of Bohemia; 73 miles east of Prague, and 11 miles south-east of Konigin-gratz, with 1000 inhabitants.

TINJULIEN, a town of Darah, to the south of Morocco, situated on the river Wad Dra; 105 miles south-east of Morocco.

To TINK, *v. n.* [*tinnio*, Lat.; *tincian*, Welsh.] To make a sharp shrill noise.

TINKER, *s.* [from *tinke*, because their way of proclaiming their trade is to beat a kettle, or because in their work they make a *tinkling* noise.] A mender of old tins and coppers.—Am not I old Sly's son, by education a cardmaker, and now by present profession a *tinker*. *Shakspeare*.

TINKER'S CREEK, a river of the United States, in Ohio, which runs into the Cuyahoga; 12 miles above Cleveland.

TINKER'S ISLAND, one of the Elizabeth's islands, in the United States, near the coast of Massachusetts; 3 miles long, and 1½ broad.

To TINKLE, *v. n.* [*tincian*, Welsh, the same; *dinkr*, Icel. sound, noise. *Serenius*.] To make a sharp quick noise; to clink.—Railing and *tinkling* rhimers, whose writings the vulgar more greedily read. *B. Jonson*.—It seems to have been improperly used by Pope.

The wandering streams that shine between the hills,
The grotts that echo to the *tinkling* rills. *Pope*.

To hear a low quick noise.

With deeper brown the grove was overspread,
A sudden horror seiz'd his giddy head,
And his ears *tinkled*, and the colour fled. *Dryden*.

To TINKLE, *v. a.* To cause to clink.—The sexton or bell-man goeth about the streets with a small bell in his hand, which he *tinkleth* all along as he goeth. *Ray*.

TINKLE, *s.* Clink; a quick noise.—The *tinkle* of the

words is all that strikes the ears, and soothes them with a transient and slightly pleasurable sensation. *Mason*.

TINKLETON, a parish of England, in Dorsetshire; 5½ miles east of Dorchester.

TINKLING, *s.* A quick noise.—The daughters of Zion are haughty, and walk with stretched out necks, making a *tinkling* with their feet. *Isaiah*.

TINLEYSVILLE, a post village of the United States, in Goochland county, Virginia; 45 miles west-north-west of Richmond.

TINMAN, *s.* A manufacturer of tin, or iron tinned over.

Did'st thou never pop
Thy head into a *tinman's* shop? *Prior*.

TINMOUTH, a post township of the United States, in Rutland county, Vermont, watered by the Otter creek; 10 miles south of Rutland. Here are iron-works. Population 1000.

TINNER, *s.* [тин, Saxon.] One who works in the tin mines.—The Cornish men, many of them could for a need live under ground, that were *tinners*. *Bacon*.

TINNEVELLY, an extensive district of the south of India, province of the Carnatic; 150 miles in length by 50 in breadth, occupying the south-east extremity of the peninsula, and separated from Ceylon by the gulf of Manaar. Generally speaking, this district may be called an open and level country, although it contains some woods, and several hills. It does not contain any river of magnitude, but is watered by numerous streams flowing from the western mountains; and in favourable seasons, yields abundant crops of rice and cotton. During the war against Tippoo Sultan, the Polygars took advantage of the absence of the army, and broke into rebellion. As soon as a sufficient number of troops could be spared, a large force was sent against them; and before the year 1803, they were all subdued, and the rents, amounting to 70,000 pagodas, or about 23,000*l.* per annum, are now as regularly paid as in other parts of the British conquests. This sum is, however, a very small revenue for so extensive a district.

TINNEVELLY, the capital of the above-mentioned district. Lat. 8. 48. N. long. 71. 1. E.

TINNIS, a small river of Scotland, in Roxburghshire, which joins the Liddel.

TINSIN, a mountain of Scotland, in Roxburghshire.

TINNUNCULUS, in Ornithology, the name of one of the long-winged hawks, called by Linnæus *Falco tinnunculus*; which see.

TINNY, *adj.* Abounding with tin.—Those arms of sea that thrust into the *tinny* strand. *Drayton*.

TINOSO, a cape in the south-east of Spain, on the coast of Murcia. Lat. 37. 30. N. long. 1. 16. W.

TINPENNY, *s.* A certain customary duty anciently paid to the tithingmen. *Bailey*.

TINSEL, *s.* [*etincelle*, Fr.] A kind of shining cloth. A *tinsel* veil her amber locks did shroud,
That strove to cover what it could not hide. *Fairfax*.
Any thing shining with false lustre; any thing shewy and of little value.

For favours cheap and common who would strive;
Yet scatter'd here and there I some behold,
Who can discern the *tinsel* from the gold? *Dryden*.

TINSEL, *adj.* Specious; showy; plausible; superficial.—*Tinsel* affections make a glorious glistening. *Beaum. and Fl.*

To TINSEL, *v. a.* To decorate with cheap ornaments; to adorn with lustre that has no value.

She, *tinsell'd* o'er in robes of varying hues,
With self-applause her wild creation views,
Sees momentary monsters rise and fall,
And with her own fool's colours gilds them all. *Pope*.

TINSLEY, a township of England, West Riding of Yorkshire; 2½ miles south-west-by-west of Rotherham.

TINT, *s.* [*tinta*, Ital.] A dye; a colour.

Whether thy hand strike out some free design,
Where life awakes, and dawns at ev'ry line;
Or blend in beauteous *tint* the colour'd mass,
And from the canvas call the mimic face.

Pope.

To TINT, *v. a.* To tinge; to colour. *Modern.*
No more young Hope tints with her light and bloom
The darkening scene.

Seward.

TINTA, a province of Peru. See CANES and CANCHES.—
The capital of the province has also the same name; and it
is the name of several inconsiderable settlements.

TINTAGELL, a parish of England in Cornwall; 4 miles
from Camelford. Population 730.

TINTAMAR, *s.* [*tintamarre*, old French; from *marre*,
a mattock; "pour houer la vigne, Gr. μαρρον: c'est de là
qu'on fait venir *tintamarre*, à cause du bruit que font quel-
quefois les vigneron en *tintant* sur leur *marre*." *Menage*,
and *Morin*.] A confused noise; a hideous outcry.—Squall-
ing hautboys, false-stopped violoncellos, buzzing bassoons,—
all ill-tuned. The *tintamarre*, which this kind of squeaking
and scraping and grumbling produces, I will not pain my
reader by bringing stronger to his recollection. *Mason*.

TINTERN, a parish of England, in Monmouthshire, con-
taining a considerable manufactory for iron-wire. Tintern
abbey, in this parish, was founded in 1131, for Cistercian
monks; and the ruins of its church still exhibit a fine spec-
imen of its ancient grandeur and noble Gothic architecture;
5 miles north of Chepstow.

TINTERN, a village of Ireland, in the county of Wex-
ford; 85 miles west of Dublin.

TINTINHULL, a parish of England, in Somersetshire;
2 miles south-west of Ilchester.

TINTIPAN, a large island of New Granada, off the
coast of the province of Carthagena.

TINTO, a river of the south-west of Spain, in the province
of Seville, which runs into the Atlantic, to the west of the
Guadalquivir, near the town of Moguer.

TINTO, a ridge of hills in Scotland, in the county of
Lanark; about two miles in length. Near the east end of
the range there is a cairn of a circular form, the top of which
is elevated 2351½ feet above the level of the sea, and 1740
feet above the Clyde.

TINTORETTO (II), the cognomen of a celebrated Venetian
painter, whose real name was Giacopo Robusti. He
was born at Venice, in 1512, the son of a dyer; from whence
he acquired the name of Il Tintoretto. His natural disposi-
tion towards the art of drawing manifested itself very early,
and his father had the wisdom to indulge it; and seeing it
likely to lead to something decisive, caused him to be in-
structed in painting, and finally placed him as a pupil with
Titian, then in the prime enjoyment of his reputation and
power. It is a painful thing to relate, and a severe lesson to
the pride of the most able, that where so much ability, so
much honour and wealth abode, the mean and degrading pas-
sion of jealousy should have found encouragement. Titian,
the great, the honoured Titian, that man who possessed a
mind capable of grasping almost all that the art of painting
required, who was richly and highly honoured, courted, and
employed, is said (and the truth of the story rests upon too
sound authority) to have seen, with the corroding pangs of
jealousy, the early essays of his pupil Tintoretto, and to have
permitted it to operate so strongly upon him, that he ex-
cluded the dreaded object from his house, about ten days
after his admission.

But the aspiring talents of the young painter were not to
be damped by so mean a measure, though even in the power-
ful hands of Titian. To him dismission from the eye of a
master was emancipation. He dared to think for himself,
and boldly aimed at selection in art, and an union unthought
of till then; and as Lanzi says, generously aspired at the
honour of being the founder of a school and style of his
own, by combining the form of the great Florentine, M.
Angelo, with the colour of his former master. To maintain
a due excitation to the performance of so bold an under-

taking, he wrote upon the wall of his study, "Il disegno di
Michel Angelo e il colorito di Tiziano;" and with all the
ardour of an intrepid mind, endeavoured to perfect the task
he had assigned himself, by copying whatever pictures of
Titian he could procure during the day, and drawing by
night from casts taken from the works of M. Angelo, toge-
ther with many others he procured from ancient basso-
relievos and statues. It was doubtless by his studies by night
and the lamp, that he acquired that perfect mastery of chiaro-
scuro, those decided masses of light and shade, which distin-
guish his works, both in their groups and single figures.
Add to these labours, that he modelled in wax and clay,
and clothed his figures studiously, arranging them in dif-
ferent lights, and sometimes hanging them from the ceiling,
to acquire, by drawing from them in that position, the know-
ledge of the *sotto in su*, then much in use for the adornment
of ceilings, and in the houses of the grandees. By these
deep studies, and a perfect knowledge of anatomy, he was
enabled to exert the exuberant and glowing fancy with which
nature had blessed him, in the freest and boldest manner;
and had he always applied his powers with equal intensesness,
with a careful discrimination of what was due to his own
honour, there can be no doubt but that he would have left
a name unrivalled in art. The large picture which lately
adorned the walls of the Louvre, but is now returned to its
original station, the Scuola di S. Marco at Venice, is a work
of this class, which he painted when only 36 years old; and
another is the Crucifixion, in the Scuola di S. Rocco. The
former is known by the name of Il Servo, and represents the
miracle of St. Mark descending, and breaking the bonds of a
slave condemned to death by Turks. Grand but not correct
in its style of design, astonishing the mind by the intrepid
boldness of its colour and execution, it displays more com-
plete mastery of the materials of art than is to be found in
the works of any other painter. If there be any fault in this
astonishing performance, it is that the subject is lost in the
splendour of the execution, the spirit in the matter in which
it is embodied. The same cannot be said of the Crucifixion
above mentioned, in which the lowering, deep, and ominous
tone preserved through the whole, produces the most perfect
unity, gives strength of expression to the picture, and over-
whelms the spectator with terror. All seems to be hushed
in silence round the central figure of the Saviour suspended
on the cross, with his fainting mother, and a group of male
and female mourners at his feet; and though many are the
improprieties of costume and of action, yet all vanish in the
power which compresses them to a single point, and we do
not detect them till we recover from the first impression.
Unhappily for his fame, he was not always so careful in his
labours; and the impetuosity of his mind, or perhaps the
feelings of his employers, who were numerous, did not allow
him sufficient time to do justice to himself; and he permitted
many pictures to leave his easel, possessing only the free-
dom of colour and execution which peculiarly belonged to
his pencil.

Tintoretto was so certain of his execution, that he is said
by Sandrart to have frequently wrought without a previous
sketch, or any preparatory outline, finishing as he went on.
He lived to the great age of eighty-two, and died at Venice in
1594.

TINTO, a river of South America; 20 leagues east of Cape
Honduras.

TINTWISTLE, or TINGETWISSEL, a parish of England,
in Cheshire; 9 miles north-east-by-east of Stockport. Popu-
lation 1346.

TINUL, a small river of the flat country near the river
Amazons, which runs north, and enters that river opposite
the settlement of San Joaquin de los Ormaguas.

TINUS, in Botany, a name in Pliny, book 15, chap. 30,
for what he says is sometimes termed a sort of wild laurel,
and is distinguished by the blue colour of its berries. This
description is universally agreed to apply to our *laurus-tinus*,
viburnum tinus of Linnæus; which see.

TINWALD, a parish of Scotland, in Drumfries-shire,
which

which forms a rectangular figure, six miles long by four broad, containing $51\frac{1}{2}$ square miles. Population 1204.

TINWELL, a parish of England, in Rutlandshire; 10 miles east-north-east of Uppingham.

TINWORM, *s.* An insect. *Bailey.*

TINY, *adj.* [*tint, tynd*, Danish.] Little; small; puny. *A burlesque word.*

When that I was a little *tiny* boy,
A foolish thing was but a toy.

Shakspeare.

TIOGA, a county of the United States, on the north side of Pennsylvania, bounded north by New York, east by Ontario county, south by Lycoming county, and west by Potter county. Population 1687. Chief town, Wellsborough.

TIOGA, a county of the United States, in New York, bounded north by a small angle of Steuben county, and by Seneca and Cayuga counties, east by Broome county, south by the state of Pennsylvania, and west by Steuben county. The agriculture is improving and productive, and population is increasing. Population 7899. Chief town, Spencer.

TIOGA, a post township of the United States, in Tioga county, Pennsylvania. Population 803.

TIOGA, a post township of the United States, in Broome county, New York, watered by the Susquehanna and Owego. The principal village is called Owego. Population 500; 170 miles south-west of Albany.

TIOGA, a river of the United States, which rises among the Alleghany mountains, in about lat. 41. 50. N.

TIONE, a small town of the Austrian states, in Tyrol, on the river Sarca; 19 miles west of Trent.

TIOOKEA, one of King George's islands, in the South Pacific ocean, discovered by commodore Byron.

TIORN, an island on the west coast of Sweden; 18 miles north of Gottenburg. It is about 30 miles in circumference, has good pasturage, and the inhabitants export butter, cheese, and hops. Lat. 58. 0. N. long. 11. 30. E.

TIOUGHNIOGA, a river of the United States, in New York, which rises in the south part of Onondaga county, and flows into the Chenango, in the south-east part of Broome county. Length 55 miles.

TIP, *s.* [*tip, tipken*, Dutch.] Top; end; point; extremity.

The *tip* no jewel need to wear,
The *tip* is jewel of the ear.

Sidney.

I no longer look upon lord Plausible as ridiculous, for admiring a lady's fine *tip* of an ear and pretty elbow. *Pope.*—One part of the play at ninepins.—Down goes his belief for thy homilies and articles, thirty-nine at a *tip*. *Dryden.*

To *TIP*, *v. a.* To top; to end; to cover on the end.—We'll *tip* thy horns with gold. *Shakspeare.*—To give. *This is a low cant term.*

She writes love letters to the youth in grace,
Nay, *tips* the wink before the cuckold's face.

Dryden.

To strike lightly; to tap.—A third rogue *tips* me by the elbow. *Swift.*

To *TIP*, *v. n.* With *off*: to fall off; to die. *A vulgar phrase.*

TIPERA, called by the Mahometans *Roshenabad*, a very extensive district of Bengal. It is situated on the eastern side of the Brahmapootra or Megna river, and between the 22d and 24th degrees of north lat.

By Mahometan historians it is denominated the country of Jagenagur (properly Jehaznagur), which was probably the name of its principal port, subsequently known as Alumgeer-nagur. It was invaded in the year 1279 by Toghrih, the Afghan governor of Bengal, who plundered the inhabitants, and brought away 100 elephants. In 1343, it was again invaded by Ilyas, the second independent sovereign of Bengal, who imitated the conduct of his predecessors. Along with the rest of Bengal, it devolved to the British in 1765. The rajah receives a portion of the revenue, and retains some of the eastern territory. The population has been estimated at 750,000, in an equal proportion of Hindoos and Mahometans.

TIPHIA, in Entomology, a genus of the hymenoptera order of insects, in the Gmelinian system of Linnæus; the characters of which are, that the mouth has a membranaceous roundish jaw, a mandible arched, and acute, a short tridentated lip, and no tongue; the feelers are four, filiform, unequal, stretched out in the middle of the lip; and the antennæ unfiliform and arched. This genus includes the following species:—

1. *Tiphia vespiformis*.—Black, with a ferruginous abdomen, black at the base, and cyaneous wings. The sphæx vespiformis of Fabricius.—Found in Malabar.

2. *Tiphia crassicornis*.—Black, the abdomen with three bands, the legs ferruginous, and the wings cyaneous.—Found in Spain.

3. *Tiphia nigra*.—Black, without spots.—An European insect.

4. *Tiphia femorata*.—Black, with the four hinder thighs angulated and red.—Found in England.

5. *Tiphia histrionica*.—Black, thorax maculated, abdomen with five yellow bands, the two foremost interrupted.—Found in China.

6. *Tiphia quinqueincta*.—Black, thorax spotted, abdomen with five yellow bands, the second interrupted.—Found in England.

7. *Tiphia variegata*.—Thorax black, varied with yellow, abdomen yellow.—A Siberian insect.

8. *Tiphia ciliata*.—Black, the segments of the abdomen yellow, with ciliated margin.—Found in Spain.

9. *Tiphia hæmorrhoidalis*.—Black, the abdomen with five yellow spots on each side, the toes and legs red.—Found in South America.

10. *Tiphia ephippium*.—Black, the thorax with a red dorsal spot.—Found in South America.

11. *Tiphia radula*.—Hairs black, thorax reddish before, the second and third segments of the abdomen yellow.—Found in New Holland.

12. *Tiphia dorsata*.—Black, the second and third segments of the abdomen yellow.—A Coromandel insect.

13. *Tiphia ruficornis*.—Ferruginous, spotted with black, yellow abdomen, and four black bands.—Found in Tranquebar.

14. *Tiphia tricincta*.—Black, the abdomen with three yellow bands, the anus and legs ferruginous.—Found in South America.

15. *Tiphia collaris*.—Black, the thorax on the fore-part cinereous villous, behind retuse, with cinereous wings.—Found in Malabar.

16. *Tiphia morio*.—Black, with brown wings, posterior thighs banded with cinereous.—Found in Spain.

17. *Tiphia pedestris*.—Apterous, black variegated with yellow, thorax compressed.—Found in New Holland.

TIPRIN, a settlement of Carraccas, in the province of Cumana, on the shore of the river Guarapiche.

TIPPACANOE, a river of the United States, in Indiana, which joins the Wabash, about 420 miles from its mouth. Length, about 170 miles.

TIPPERARY, a county of Ireland, in the province of Munster, extending in a very irregular form between the King's and Queen's counties on the north, the latter county and that of Kilkenny on the east, the counties of Waterford and Cork on the south, and those of Limerick, Clare, and Galway, on the west. From the two latter counties the river Shannon forms a natural boundary; as the river Suir does from Waterford for about 15 miles on the south. The length from north to south is $73\frac{1}{2}$ miles, and its breadth $39\frac{1}{2}$. It contains 882,398 acres, or 1420 square miles, including bogs, mountain and waste. The hills near the small town of Silvermines have been marked in some maps as the Silvermines mountains; others have been called the Devil's Bit; and adjoining the Queen's county they take the name of the Sliebh-bloom mountains. Clonmell, on the Suir, and at the southern extremity of the county, is the shire town, and though very inconveniently situated for the assizes, has an excellent jail, court-house, &c. It is a place of considerable trade, and one of the principal inland towns of Ireland. Cashel, Roscrea, Nenagh,

Nenagh, Tipperary, Carrick, and some others mentioned in their proper places, are of respectable size, but none of them distinguished for trade or manufactures, unless we except the manufacture of ratteens at Carrick.

This county is divided into 12 baronies, Lower Ormond, Upper Ormond, Ikerin, Isleagh, Owen and Arra, Kilnelegurty, Kilnemanna, Slewarda and Compsy, Middle Third, Clanwilliam, Iffa and Ofa, and Eligurty; which contain 186 parishes. Population about 200,000.

TIPPERARY, a market town of Ireland, in the above county. It is not large, and appears to be in a ruinous condition, though formerly of sufficient importance to give its name to the county; 87 miles south-west of Dublin, and 20 north-west of Clonmell, on the road to Limerick.

TIPPET, *s.* [tæppet, Saxon.] Something worn about the neck.—His turban was white, with a small red cross on the top: he had also a *tippet* of fine linen. *Bacon.*

To TIPPLE, *v. n.* [tepel, a dug, old Teutonic.] To drink luxuriously; to waste life over the cup.

Let us grant it is not amiss to sit,
And keep the turn of *tipping* with a slave,
To reel the streets at noon.

Shakspeare.

To TIPPLE, *v. a.* To drink in luxury or excess.

To a short meal he makes a tedious grace,
Before the barley-pudding comes in place;
Then bids fall on; himself for saving charges
A peel'd slic'd onion eats, and *tipples* verjuice. *Dryden.*

TIPPLE, *s.* Drink; liquor.—While the *tipple* was paid for, all went merrily on. *L'Estrange.*

TIPPLED, *adj.* Tipsy; drunk.

Merry, we sail from the east,
Half *tippled* at a rainbow feast.

Dryden.

TIPPLER, *s.* A sottish drunkard; an idle drunken fellow.—Gamsters, *tipplers*, tavern hunters, and other such dissolute people. *Harmér.*

TIPPLING-HOUSE, *s.* A house in which liquors are sold; a public-house.—The knave her father — kept a *tippling-house*. *Beaumont and Fl.*

TIPSA, a town of Algiers, in the province of Constantina, the ancient *Tipasa*, of which it still presents most extensive ruins, particularly a large temple and four-faced triumphal arch, of the Corinthian order, in the very best preservation; 85 miles south-east of Constantina.

TIPSTAFF, *s.* An officer with a staff tipped with metal. The staff itself so tipped.—One hand in his had a *tipstaff* of a yellow cane, tipped at both ends with blue. *Bacon.*

TIPSTAVES, officers appointed by the marshal of the King's Bench, to attend the judges with a rod or staff tipped with silver, and take charge of such persons as are either committed, or turned over at the judge's chamber.

TIPSY, *adj.* Drunk; overpowered with excess of drink.

The riot of the *tipsy* bacchanals,
Tearing the Thracian singer in their rage.

Shakspeare.

TIPTOE, *s.* The end of the toe.

Night's candles are burnt out, and jocund day
Stands *tiptoe* on the misty mountains' tops.

Shakspeare.

TIPTON, or TIBBINGTON, a parish of England, in Staffordshire; 2½ miles west-south-west of Wednesbury. Population 8407.

TIPTOP. An expression, often used in common conversation, denoting the utmost degree, excellence, or perfection.—If you love operas, there will be the most splendid in Italy, four *tiptop* voices, a new theatre. *Gray to West.*

TIPUANIS, a river of Peru, which washes the confines of the province of Tarija.

TIPULA, in Entomology, a genus of the diptera order of insects, the characters of which are, that the mouth has a very short proboscis, membranaceous, canaliculated on the back, receiving a bristle; the haustellum short, without a vagina; the feelers two, incurved, equal, filiform, longer than the head: the antennæ are mostly filiform.

The long form of the body, the position of the wings, and the length and position of the legs, are the circumstances that make the resemblance between the gnats and tipulæ; but the structure and organs of the head are alone a very sufficient distinction.

As the tipulæ differ from the gnats in the figure of the mouth, and in being without a trunk, they differ as much from the other flies of that character, by their resembling the gnat in the shape of their body. They differ also in the conformation of the mouth, and its several parts and organs. The opening of the mouth is a slit extending itself from the fore part of the head towards the hinder part, and its lips cannot be called upper and lower; but they are lateral ones. When the body of the creature is pressed, this mouth opens, and shews what seem to be a second pair of lips within. These are more firmly closed than the others, and resemble only certain duplications of the flesh. The exterior lips are cartilaginous, and are furnished with short hairs; the interior are perfectly smooth, and of a fleshy texture. The head of the tipula is of a long and slender figure; the lips are articulated at the extremity of this head, and on each side there stands on the upper part, a sort of beard, which, when minutely examined, is found to be articulated in the manner of the antennæ of insects. These two beards, in their usual position, are placed close together, and bent forwards over the head; their office seems to be the covering of the aperture of the mouth. These seem constantly to be found in all species of the tipulæ, and placed exactly in the same manner.

The largest species of tipulæ are usually found in our meadows, and these are in no danger of being confounded with the gnat kind, their size alone being a sufficient obvious distinction. These are often found of nearly an inch in length from head to tail; but their bodies are very slender, and are composed of only nine rings. The male tipula is easily distinguished, at sight, from the female; it is much shorter in the body, and is thicker at the tail than any where else; this tail also usually turns upwards, whereas that of the female is placed in the same line with the body, and is slender, and composed of several scaly parts, proceeding from the last ring of the body. These creatures are found in our meadows through the whole summer; but the end of September and beginning of October is the time when they are most of all plentiful.

The legs of these creatures are greatly disproportioned to the body, according to the common rules of nature, especially the hinder pair, which are in the larger species usually three times the length of the body.

The large species is a creature of no great beauty; its body is of a brownish colour, and its corcelet is so elevated, that the creature seems hump-backed; the head is small, and the neck very short; the reticulated eyes are so large, that they cover almost the whole surface of the head; these are of a greenish colour, with a cast of purple, when viewed in some lights. Reaumur supposes that two very lucid specks, on the anterior part of the breast, are eyes, though placed in so very singular a manner; the wings of this creature are long, but very narrow, and seem scarcely well proportioned to the size of the animal; they are transparent, but have a slight cast of brown; and their ribs, when viewed by the microscope, appear beset with scales, or feathers, in the manner of those of the gnat kind. Some species of the tipulæ have them also fringed with these scales at the edges; there are no ailérons, or petty wings, at the origin of these, but in the place of them there are two very fine balancers or mallets; these have long pedicles, and roundish or oval heads; the stigmata of the corcelet are four; one pair is placed immediately underneath these balancers, and the other immediately below the first pair of legs; the first pair is very long, the others small, and those on the rings of the body, if there be any, are too small for our sight, even with good glasses. Each ring of the body is composed of two half cylinders, which are joined into one, by means of a membrane, which gives them room to distend or close up at the creature's pleasure. The large tipulæ all carry two antennæ, or horns, upon their

their heads; but these are of no remarkable structure, they are only composed of a great number of joints, each covered with a fine downy hairiness; and at the joining of each to the next, there is a tuft of longer and more stiff hairs. This is the description of the common large tipulæ, which we find in the meadows, and in almost all its parts is applicable to the generality of the larger species of these insects.

The smaller kinds are very numerous, and of great variety. These are frequent in all places, and at all seasons of the year; the spring shews us immense clouds of them, and even the coldest winter's day shews a great number of them in the sun-shine about noon. These creatures fly much better than the larger tipulæ; they seem indeed to be almost continually upon the wing, and their manner of flight is very singular; they are continually mounting and descending again, and that without quitting the direction of the vertical line in which they go forward; this they will often do for many hours together. In tracing these flies from their origin, they are all found to be produced from worms which have no legs, and have a regular scaly head. Those from which the larger tipulæ are produced live under ground; they are most fond of marshy places, but any ground will do that is not often disturbed. They usually are found at about an inch under the surface, and are so plentiful in some places as greatly to injure the herbage.

The numerous species are distributed, by Gmelin, into classes.

I.—With patent wings.

1. *Tipula rivosa*.—With hyaline wings; rivules brown, with a snowy spot.—Frequent in Europe.
2. *Tipula quadrimaculata*.—With wings brown-veiny, margin and four spots brown; abdomen above yellowish. There is a variety denominated *calmariensis*.—Found in the meadows of Europe.
3. *Tipula crocata*.—With wings having a brown spot; abdomen black, yellow bands.—Frequent in the north of Europe.
4. *Tipula oleracea*.—With hyaline wings; the margin of the rib brown.—Found in Europe at the roots of pot-herbs, grain, &c. &c.
5. *Tipula hortorum*.—With hyaline wings; scattered obsolete spots.—Found among the pot-herb plants of Europe.
6. *Tipula variegata*.—Black; base and sides of the abdomen red, spotted with yellow.—Found in the gardens of Europe.
7. *Tipula terrestris*, or crane fly.—With hyaline wings; brown marginal point; back of the abdomen cinereous.—Found in Europe.
8. *Tipula cornicina*.—With hyaline wings, marginal point brown; abdomen yellow; three lines brown.—Found in Europe at the roots of plants.
9. *Tipula nigra*.—With brown wings, and black body.—Found among the plants of Europe.
10. *Tipula albimana*.—Black, with testaceous thighs, and hinder tarsi white.
11. *Tipula costalis*.—Sordidly yellow; with antennæ twice longer than the body; hyaline wings, and brownish costa.—Found in Van Diemen's Land.
12. *Tipula atrata*.—With glaucous wings; marginal point and body black; first segment of the abdomen and feet red.—An European insect.
13. *Tipula bimaculata*.—With hyaline wings; two brown spots; the middle of the abdomen spotted ferruginous; plumose antennæ.—As the former.
14. *Tipula melanocephala*.—Testaceous; head and dorsal line of the thorax black; wings hyaline; three brown streaks.—A Cayenne insect.
15. *Tipula flavescens*.—With unspotted wings; yellow body; brown back.—Found in the fields of Europe.
16. *Tipula ensiformis*.—With lanceolate serrulate antennæ; wings, veins, and spot black.—Found in Sweden.
17. *Tipula regelationis*.—With hyaline glossy wings; cinereous brown body.—Found frequently in Europe.
18. *Tipula pilipes*.—Cinereous; with striated brownish wings; foremost legs hairy.

VOL. XXIV. No. 1624.

19. *Tipula morio*.—Black; with white wings; marginal point brown; pallid feet.

20. *Tipula replicata*.—With hyaline wings; margin slender, recurved; body brown; simple antennæ.—Found in the waters of the north of Europe.

21. *Tipula monoptera*.—Black; with feet and feelers pallid.—North of Europe.

22. *Tipula gigantea*.—With wings brown, hyaline, waved longitudinally in the middle.—Found in the gardens of Austria and France.

23. *Tipula ichneumonia*.—With cinereous thorax; abdomen yellow, depressed; wings yellowish-brown; four marginal spots brown.—An European insect.

24. *Tipula discolor*.—Cinereous; abdomen on both sides yellowish; wings with brown and white spot.—As the former.

25. *Tipula pectinata*.—Black; with antennæ semi-pectinated; glaucous wings; marginal point and apex large; thighs and legs red; apices black.—As before.

26. *Tipula versicolor*.—Yellow; thorax yellow, spotted with black; abdomen and back, beneath and sides cinereous; wings, veins, and spot brown.—As before.

27. *Tipula maculosa*.—Black; bill, legs, and apex of abdomen yellowish; wings with scattered brown spots.—As before.

28. *Tipula lutea*.—Pale yellow; with yellowish wings.—As before.

29. *Tipula fuscipes*.—Black; with two yellowish bands on the abdomen; white wings, spotted with black; yellowish legs, joints and soles; with the toes brown.—As before.

30. *Tipula quadrifasciata*.—Cinereous-yellowish; with grey wings; four yellowish bands, and margin of costa pointed; with yellow legs; black joints.—As before.

31. *Tipula octopunctata*.—With white wings; eight black points; black abdomen; thorax and legs palish.—Found at Paris.

32. *Tipula Parisiensis*.—Green; with hyaline wings; brown band; the two bands of the abdomen and anus black.—As before.

33. *Tipula secalis*.—Cinereous; with ciliated wings; eyes, antennæ annulated with white; the apex of the abdomen and feet black.—Found in fields of rye. Gmelin queries whether the two last species belong to this tribe of insects:

II.—With incumbent wings: "Culiciform."

34. *Tipula plumosa*.—With greenish thorax; white wings; brown point; and plumose antennæ.—In the marshes of Europe.

35. *Tipula fasciculata*.—Black; fore-legs long and motatory; sides of the abdomen spotted with ferruginous.—Found in Germany.

36. *Tipula tendens*.—Ferruginous; with white unspotted wings; fore-legs very long and pale.—In marshes of Denmark.

37. *Tipula vibratoria*.—Fore-legs very large, motatory; white at the apex.—Found in the marshes of Europe.

38. *Tipula varia*.—Brown; fore-legs elongated; abdomen yellowish; wings varied with white and black.

39. *Tipula tremula*.—Fore-legs very long, motatory; black, with white wings.—In the marshes of Sweden.

40. *Tipula flexilis*.—Fore-legs motatory, all pallid; wings with duskyish band.—In the watery places of Europe.

41. *Tipula monilis*.—With white legs, nine black rings; wings varied with white and cinereous.—In the gardens of Europe.

42. *Tipula zonata*.—Pallid; with wings, two bands, and three points brown; thighs with brown angle.—Found in Orford.

43. *Tipula virens*.—Green; with unspotted wings; brown soles.—A Swedish insect.

44. *Tipula viridula*.—Green; with antennæ verticillate, hairy; pallid legs.—North of Europe.

45. *Tipula geniculata*.—Beneath yellowish; lines of the thorax and back of the abdomen black, with white immaculate wings.

46. *Tipula pallipes*.—Smooth-brown; with hyaline unspotted wings, and palish legs.

47. *Tipula macrocephala*.—Greenish; with eyes and back of the thorax black.—In the marshes and moist shores of Europe.

48. *Tipula pusilla*.—Green; with three black spots on the hinder part of the thorax; antennæ of the male plumose.—In the lakes of Europe.

49. *Tipula marci*.—Black, smooth; with blackish wings; fore-thighs furrowed inwards.—In the dunghills and putrescent soil of Europe: probably a variety of *hortulana*.

50. *Tipula thomæ*.—Black, smooth; with black wings; sides of the abdomen marked with a saffron line.—At Upsal.

51. *Tipula chrysanthemii*.—Black, smooth; the abdomen red at the base; the antennæ incrassated, pilose.—On the chrysanthemus *coronarius* of Spain.

52. *Tipula Johannis*.—Black, smooth; white wings; black point; short antennæ; black legs.—In shady parts of Europe.

53. *Tipula pomonæ*.—Black, smooth; hyaline wings; black point; ferruginous thighs.—In the plains of England and Norway.

54. *Tipula forcipata*.—With cylindrical black abdomen; wings brown-hyaline; anus appendiculated.—An English insect.

55. *Tipula vernans*.—Cinereous; thorax black-lineated; white wings spotted with brown.—In meadows of Denmark.

56. *Tipula hortulana*.—With hyaline wings; exterior margin black.—In the flowers of asparagus and apple.

57. *Tipula phalænoides*.—With wings deflexed, cinereous, ovate-lanceolated, ciliated.—In the walls of dunghills in Europe.

58. *Tipula hirta*.—Hairy; with wings deflexed, ovate-ciliated, tessellated with white and black.—In Lapland.

59. *Tipula persicariæ*.—Black; with wings incumbent, subciliated.—Under the leaves of the peach-tree.

60. *Tipula notata*.—Black; with white wings; with a white spot in front of the sides of the abdomen.—In Europe.

61. *Tipula juniperina*.—Cinereous; with white wings; margin villous.—Found in the juniper.

62. *Tipula culiciformis*.—Cinereous; with pallid legs; wings marked with two blackish spots.—At Upsal.

63. *Tipula incarnata*.—Incarnated; with moderate antennæ.—At Upsal.

64. *Tipula bipunctata*.—Brown; wings cinereous; marginal point white.—Found in Europe.

65. *Tipula scricea*.—Black; back black; sides of the thorax bare; balancers yellow.—In Sweden.

66. *Tipula minutissima*.—Yellow; eyes concurring in the vertex black.—In the ditches of Sweden and Austria.

67. *Tipula pulicaris*.—Black; sides of the thorax scutellum, and abdomen yellow.—In the ditches of Europe.

68. *Tipula pennicornis*.—With antennæ bipectinate; black body; halteres, or balancers, white.—In the flowers of *aristolochia clematis*.

69. *Tipula plumicornis*.—Brown; antennæ brownish-plumose; legs yellowish.—As before.

TIPUTINI, a river of Quito, in the province of Mainas. It rises in the province of Quixos and Macas, runs east, and enters the Napo.

TIQUE, a river of the Caraccas, in the province of Cumana, which runs in a serpentine course to the north, and unites itself with the Murichal, to enter the Guarapiche.

TIQUICIO, two inconsiderable settlements of New Granada, in the province of Antioquia.

TIQUILIGASTI, a settlement of South America, in the province of Tucuman, on the shore of the river Salado.

TIQUINA, a settlement of Peru, in the province of Omasuyos, on the south shore of the lake Titicaca.

TIRABOSCHI (Girolamo, Abate), author of the best history of Italian literature which that country, fertile in men of learning, taste, and talents, has produced. He was born at Bergamo, in 1731, and is styled *Cavaliere* by his biographer, and the last editor of his *History*, in a life prefixed to the index of the second edition, published at Modena in 1794. He had his education in the Jesuits' college from

fifteen till the abolition of the order. He was professor of eloquence in the university of Brera at Milan, till the year 1770, when he was appointed præfect of the Este library at Modena, by the interest of count Firmian. He first distinguished himself, after this appointment, by a new edition of the Italian and Latin vocabulary of Mandosio; which work was almost wholly new written by him, and corrected and augmented with the most refined purity of the two languages; and the Latin and Italian orations which he delivered publicly at Milan, two of which were printed, established his reputation for eloquence.

He distinguished himself during the first years of his præfectorship of the duke of Modena's library, by drawing up a new catalogue of the manuscripts, books, medals, gems, and rarities of that celebrated library, and compiled the first volume of his *History of Italian Literature*, published in 1771, which manifested such taste and solid learning as astonished his readers; but the public in general was still more astonished at his finishing the whole work in eleven years, consisting of thirteen large volumes in 4to.; a work which, by its immense erudition, profound critical discussions, and judgment in every kind of literature, acquired him the praise of the whole republic of letters.

Besides this great work, he produced during the same period the life of St. Olympia; a letter on the comparative excellence of Italian and Spanish literature; the life of Fulvio Testi; the two first volumes of the *Biblioteca Modenese*; and all the articles which he furnished to the twenty-three first volumes of the *Giornale di Modena*, a kind of review and history of new books and discoveries in arts and sciences within the year.

He was knighted by the duke of Modena, though a regular ecclesiastic, and ennobled by his fellow-citizens at Bergamo. To enable him to proceed in his great work with more convenience, his patron augmented his appointment, and gave him an assistant in the library.

His correspondence with the learned throughout Europe must have occupied much of his time: as at his decease, among his papers, were found materials for twenty-eight volumes of original letters addressed to him as author of the *Literary History of Italy*, and editor of the *Giornale di Modena*. In his numerous minor productions, as well as in those of greater volume and importance, he discovers himself to have been gifted with a quick penetration, and possessed of great facility in writing, as well as a clear conception of the works of others, which to have acquired, must have been studied with constant application.

This admirable writer died at the age of sixty-two, of a bloody-flux, in 1794.

TIRADE, in French Music, formerly implied what the Greeks meant by *αγωγῶ*, *agogo*, *ductus*, the filling up a wide interval by the intermediate diatonic notes. But, at present, *tirade* seems nearly equivalent to *volata* in Italian; a division, a flight.

TIRAGHT, an island in the Atlantic, near the west coast of Ireland; 8 miles south-west of Dunmore head.

TIRANO, a small town of Austrian Italy, in the Valteline, on the river Adda. Population 3700. It has a large yearly fair; 15 miles east of Sondrio, and 40 north-north-east of Bergamo.

TIRANO, a settlement of New Granada, in the province of Tunja. It contains 400 housekeepers; 38 miles north-east of Velez.

TIRANO, a port of the island of Margarita, on the north coast.

TIRASPOL, a small town of the south-west of European Russia, in the government of Cherson, on the Dniester; 8 miles east of Bender.

TIRE, *s.* [τιερ, Sax.; *apparatus, ordo, series.*] Rank; row. Sometimes written *tier*.

Stood rank'd of seraphim another row,
In posture to displace their second *tire*
Of thunder.

Milton.

Furniture; apparatus.

Saint

Saint George's worth
 Enkindles like desire of high exploits:
 Immediate sieges, and the *tire* of war
 Rowl in thy eager mind.

Philips.

[Corrupted from *tiar* or *tiara*, or from *attire*.] A head-dress.

Here is her picture: let me see;
 If I had such a *tire*, this face of mine
 Were full as lovely as is this of hers.

Shakspeare.

To TIRE, *v. a.* [ṭīpan, ṭīpan, Sax.] To fatigue; to make weary; to harass; to wear out with labour or tediousness.

Tir'd with toil, all hopes of safety past,
 From pray'rs to wishes he descends at last.

Dryden.

It has often *out* added to intend the signification.

A lonely way
 The cheerless Albion wander'd half a day;
Tir'd out, at length a spreading stream he spy'd. *Tickell.*

[from *attire* or *tire*, from *tiara*.] To dress the head.—
 Jezebel painted her face and *tired* her head. *Kings.*

To TIRE, *v. n.* [ṭeopan, Sax.] To fail with weariness.
 A merry heart goes all the day,
 Your sad *tires* in a mile-a. *Shakspeare.*

To TIRE, *v. n.* [ṭīpan, Sax., is found in the same sense.]
 To feed or pray upon. *An old and well authorized verb.*

Whose haughty spirit winged with desire
 Will coast my crown, and like an empty eagle
Tire on the flesh of me and of my son. *Shakspeare.*

TIREDDNESS, *s.* State of being tired; weariness.—It is not through the *tiredness* of the age of the earth, but through our own negligence that it hath not satisfied us bountifully. *Hakewill.*

TIREH, a town of Anatolia, in Asia Minor, on the Meander, in which some important manufactures are carried on. It is remarkable for the siege by Timur, in 1402, when the inhabitants redeemed their lives by the payment of a sum of money; 32 miles south-south-east of Smyrna.

TIREDSOME, *adj.* Wearisome; fatiguing; tedious.—Nothing is so *tiresome* as the works of those critics who write in a dogmatic way, without language, genius, or imagination. *Addison.*

TIREDSOMENESS, *s.* Act or quality of being tiresome.
 TIREWOMAN, *s.* A woman whose business is to make dresses for the head.—Why should they not value themselves for this outside fashionableness of the *tirewoman's* making, when their parents have so early instructed them to do so. *Locke.*

TIREYMEG LAKE, a lake of North America. Lat. 61. 52. N. long. 107.

TIRGOWISCHT. See TERGOVISTA.

TIRHOOT, an extensive district of Hindostan, province of Bahar, situated principally between the 27th and 28th degrees of northern latitude. The population, including Hajypore, is estimated at 2,000,000, in the proportion of three Hindoos to one Mahometan.

TIRING-HOUSE, or TIRING-ROOM, *s.* The room in which players dress for the stage.—This green plot shall be our stage, this hawthorn brake our *tiring-house*. *Shakspeare.*

TIRINIDARO, a settlement of Mexico, in the intendancy of Valladolid, containing 100 families of Indians.

TIRKA, a town of Central Africa, described by the Arabian geographers in the twelfth century, as situated at the eastern extremity of the kingdom of Ghana, on the frontier of Wangara. No accounts have been received, from which we can ascertain whether or not it at present exists.

TIRLEMONT, or TIENEN, an inland town of the Netherlands, in the province of South Brabant, on the small river Geete. It has a population of 8000, is tolerably built, and has considerable manufactures of woollens; also breweries and distilleries; 25 miles east of Brussels.

TIRLEY, a parish of England, in Gloucestershire; 4 miles south-west-by-west of Tewkesbury.

TIROON, a district on the east coast of Borneo, low, and abounding with sago trees. It is watered by numerous rivers, the largest of which is named the Barow or Curan.

TIRRELL, a hamlet of England, in Westmoreland; 2½ miles south-south-west of Penrith.

TIRSCHEN-REUTH, a small town of Germany, in Bavaria, in the upper Palatinate; 33 miles north-north-east of Amberg, and 20 east of Kemnat. Population 1500.

TIRSCHTIGEL, or TRZIEL, a small town of Prussian Poland; 43 miles west of Posen, and 12 east-south-east of Meseritz. Population 1900. The small river Obra divides it into the old and new towns; the former inhabited by Poles, the latter by Germans.

TIRUA, a small island in the Pacific ocean, near the coast of Chili. Lat. 38. 30. N.

TIRUHA, a river of Chili, in the district of Tolten-Baxo, which runs west, and enters the sea near a point of its name.

TIRWIT, *s.* [*vanellus*, Lat.] A bird. *Ainsworth.*

TIRY, one of the Hebrides, on the coast of Scotland, and in the county of Argyle. It is about 13 miles long from south-west to north-east, and of various breadth, from 5 miles to less than 1, as it is much indented by the sea. Altogether it measures 36½ square miles of land, besides lakes, of which there are 24 in the interior, covering 600 acres. Hard whinstone and granite are the principal stones, and there is abundance of ironstone and limestone; which latter, in one quarry, is of the nature of marble. This is of various colours, variegated with beautiful figures, and takes a beautiful polish. It is now come into very general use for inside ornaments in houses. There are many duns or small castles, and other remains of antiquity. The Duke of Argyll is proprietor of the whole island. Population in 1800, 3200, being the greatest to its extent of any of the Hebrides.

'TIS, contracted for *it is*.—'Tis destiny. unshunable. *Shakspeare.*

TISBURY, a village and parish of England, in the county of Wilts, one of the largest in England. Various members of the Arundel family have monuments here; 3½ miles south-east of Hindon. Population 2019.

TISBURY, a township of the United States, in Duke's county, Massachusetts, on the north side of Martha's Vineyard; 8 miles west of Edgartown, and 85 south of Boston. Population, including the Elizabeth islands, 1202.

TISCHINGEN, a small town of Germany, in Wirtemberg; 10 miles north-north-east of Dillingen, and 53 east-by-south of Stuttgart.

TISCHNOWITZ, a small town of the Austrian states in Moravia; 15 miles north-west of Brunn.

TISHEET, a place of the Sahara, in Central Africa, containing a salt mine, whence copious supplies of that article are sent to the countries on the Niger; 150 miles north of Benown.

TISICK, *s.* [corrupted from *phthisick*.] Consumption; morbid waste.

TISICAL, *adj.* [for *phthisical*.] Consumptive.

TISIPHONE, in Mythology, one of the three furies.

TISQUI, a river of Quito, in the province of Esmeraldas, which runs north-west, and empties itself into the Blanco, opposite the mountain of Quindiu, in lat. 21. 30. N.

TISQUIUU LAKE, a lake of North America. Lat. 56. 10. N. long. 95. 45. W.

TISSINGTON, a parish of England, in Derbyshire; 4½ miles north of Ashborne. Population 484.

TISSUE, *s.* [*tissu*, Fr.; ṭīpan, *to weave*, Norman Sax.] Cloth interwoven with gold or silver, or figured colours.

In their glittering *tissues* emblaz'd
 Holy memorials, acts of zeal and love,
 Recorded eminent. *Milton.*

A robe of *tissue*, stiff with golden wire;
 An upper vest, once Helen's rich attire;
 From Argos by the fam'd adulteress brought,
 With golden flowers and winding foliage wrought. *Dryden.*

A medical

A medical term for a web-like structure: as, *the cellular tissue*.

To **TYSSUE**, *v. a.* To interweave; to variegate.—The chariot was covered with cloth of gold *tissued* upon blue. *Bacon*.

Mercy will sit between,
Thron'd in celestial sheen,
With radiant feet the *tissued* clouds down steering. *Milton*.

TISTED, EAST, a parish of England, in Southamptonshire; 5 miles south-by-west of Alton.

TISTED, WEST, a parish in the same county; 5 miles south-east-by-east of New Alesford.

TIT, *s.* [*Tit* signifies *little* in the Teutonic dialects. Thus Kilian, *titje*, Teut., *any small bird*.] A small horse. *Generally in contempt*.

No storing of pasture with baggagely *tit*,
With ragged, with aged, and evil at hit. *Tusser*.

Thou might'st have ta'en example
From what thou read'st in story;
Being as worthy to sit
On an ambling *tit*,
As thy predecessor Dory. *Denham*.

A woman. *In contempt*.

Am I one

Selected out of all the husbands living,
To be so ridden by a *tit* of tenpence?
Am I so blind and bedrid? *Beaum. and Fl.*

A *titmouse* or *tomtit*. [*parus*, Lat.] A bird.

TITA, ST., a small island in the North Pacific ocean. Lat. 68. 51. N. long. 190. 14. E.

TITAN, a small island in the south-east of France, in the Mediterranean, on the coast of Provence, the most eastern of the Hyeres group.

TITANIUM, in Mineralogy, a metal originally discovered by Mr. Gregor of Cornwall, in the grains of a black mineral found in the bed of a rivulet in the valley of Menaian, in that county. See **MINERALOGY**.

TITBIT, *s.* [properly *tidbit*; *tid*, tender, and *bit*.] Nice bit; nice food.—John pampered esquire South with *titbits* till he grew wanton. *Arbutnot*.

TITCHFIELD, a river of England, in Southamptonshire, which falls into the English channel, east of Hamble.

TITCHMARSH, a parish of England, in Northamptonshire; 1½ mile east-north-east of Thrapston. Population 589.

TITCHWELL, a parish of England, in Norfolk; 5 miles west-by-north of Burnham Westgate.

TITHABLE, *adj.* Subject to the payment of tithes; that of which tithes may be taken.—The popish priest shall, on taking the oath of allegiance to his majesty, be entitled to a tenth part or tithe of all things *tithable* in Ireland belonging to the papists, within their respective parishes. *Swift*.

TITHBY, a parish of England, in Nottinghamshire; 2 miles from Bingham.

TITHE, *s.* [τεθοα, Saxon, *tenth*.] The tenth part; the part assigned to the maintenance of the ministry.

Sometimes comes she with a *tithe* pig's tail,
Tickling the parson as he lies asleep,
Then dreams he of another benefice. *Shakspeare*.

The tenth part of any thing.—I have searched man by man, boy by boy; the *tithe* of a hair was never lost in my house before. *Shakspeare*.—Small part; small portion, unless it be misprinted for *titles*.—Offensive wars for religion are seldom to be approved, unless they have some mixture of civil *tithes*. *Bacon*.

To **TITHE**, *v. a.* [τεθοιαν, Saxon.] To tax; to levy the tenth part.

By decimation and a *tithed* death,
If thy revenges hunger for that food
Which nature loaths, take thou the destin'd tenth. *Shakspeare*.

To **TITHE**, *v. n.* To pay tithe.

For lambe, pig, and calf, and for other the like,
Tithe so as thy cattle the lord do not strike. *Tusser*.

TITHENIDIA [τιθηνυδια, Gr.], a Spartan festival. For the ceremonies observed on this occasion, see *Potter, Archaeol. Græc. lib. ii. cap. 20. tom. i. p. 432, seq.*

TITHES, ΤΥΤΗΣ, *Tenths, Decimæ, or Diximes*, the tenth part of the increase, yearly arising and renewing from the profits of lands, the stock upon lands, and the personal industry of the inhabitants; allotted to the clergy for their maintenance.

Tithes essentially differ from offerings, oblations, and obventions, which are the customary payments for communicants at Easter, for marriages, christenings, churching of women, burials, and such like. See **OBLATIONS**.

Tithes, with regard to their several kinds or natures, are personal, predial, and mixt.

TITHES, Personal, are those due or accruing from the profits of labour, art, trade, navigation, and industry of men, and of these, only the tenth part of the clear gains and profits is due; after charges deducted.

TITHES, Predial, are those which arise merely and immediately from the ground; as grain of all sorts, hay, wood, fruits, herbs; for a piece of land or ground, being called in Latin *prædium* (whether it be arable, meadow, or pasture), the fruit or produce of it is called predial.

TITHES, Mixt, are those which arise not immediately from the ground, but from things immediately nourished by the ground, as from beasts, and other animals fed with the fruits of the earth; as colts, calves, lambs, chickens, milk, cheese, eggs.

Tithes, with regard to their value, are divided into great and small.

TITHES, Great, are those of corn, hay, and wood.

TITHES, Small, are the predial tithes of other kinds, together with those that are called mixt and personal. It is said, that this division may be altered by custom, which will make wood a small tithe in the endowment of the vicar; by quantity, which will convert a small tithe into great; and by change of place, which makes the same things, e. g. hops in gardens, small tithes, in fields great tithes. But it has been admitted, that the quantity of land within any parish, that is cultivated for a particular produce, cannot change the nature of the tithe: and, according to this opinion, the law is now settled, that the tithes are to be denominated great or small, according to the nature and quality of them, and not according to the quantity.

Tithe was first legally enjoined by Moses, Lev. xxvii. 30. Numb. xviii. 21. Deut. xiv. 22. That legislator obliged the Israelites to the payment of several kinds of tithes.

Tithes are not established by Jesus Christ, as they were under the old law by the ministry of Moses; the Christian priests, and the ministers of the altar of the new covenant, lived at first wholly upon the alms and oblations of the devout.

In after-times, the laity gave a certain proportion of their revenues to the clergy, but voluntarily, and not out of any constraint or obligation: the first instances we have of this, are in the fourth and fifth centuries.

This gift was called tithe, not that it was really a tenth part of their income, or near so much; but only in imitation of the tithes of the old law.

In the following age, the prelates in their councils, in concert with the princes, made an express law to the purpose; and obliged the laity to give a full tenth part of their revenues, their fruits, &c., to the ecclesiastics.

This the church enjoyed without disturbance for two or three centuries; but in the eighth century the laity got hold of part of these tithes, either by their own authority, or by grants and donations of the princes; and appropriated them to their own uses.

Some time afterwards they restored them, or applied them to the founding of monasteries or chapters, and the church consented

consented, at least tacitly, to this resitution. In 1179, the third council of Lateran, held under Alexander III., commanded the laymen to restore all the tithes they yet held to the church.

In 1215, the fourth council of Lateran, held under Innocent III., moderated the matter a little; and, without saying any thing of the tithes which the laity already possessed, forbade them to appropriate or take any more for the future.

We may observe, that, upon the first introduction of tithes, though every man was obliged to pay tithes in general, yet he might give them to what priests he pleased, which were called arbitrary consecrations of tithes: or he might pay them into the hands of the bishop, who distributed among his diocesan clergy the revenues of the church, which were then in common. But when dioceses were divided into parishes, the tithes of each parish were allotted to its own particular minister; first by common consent, or the appointments of lords of the manors, and afterwards by the written law of the land. However, arbitrary consecrations of tithes took place again afterwards, and became in general use with us till the time of king John. But in process of years, the income of the laborious parish-priests being scandalously reduced by these arbitrary consecrations of tithes, it was remedied by pope Innocent III. about the year 1200, in a decretal epistle, sent to the archbishop of Canterbury, and dated from the palace of Lateran, which enjoined the payment of tithes to the parsons of the respective parishes, where every man inhabited, agreeably to what was afterwards directed by the same pope in other countries. This epistle, being reasonable and just, and correspondent to the ancient law, was allowed of, and became *lex terræ*.

TITHEFREE, *adj.* Exempt from payment of tithe.—All estates subject to tithes were transmitted, or purchased, subject to this incumbrance; for which the purchaser must have paid a greater price, and the farmer a higher rent, if they had been *tithe-free*. *Abp. Hori.*

TITHER, *s.* One who gathers tithes.

TITTHING, *s.* [*tit̩ɪŋ*, Saxon.] *Tithing* is the number or company of ten men with their families knit together in a society, all of them being bound to the king for the peaceable and good behaviour of each of their society: of these companies there was one chief person, who, from his office, was called (toothing-man) tithing-man; but now he is nothing but a constable. *Cowel*.—Poor Tom, who is whipt from *tithing* to *tithing*, and stock punished and imprisoned. *Shakspeare*.—Tithe; tenth part due to the priest.

Though vicar be bad, or the parson evil,
Go not for thy *tithing* thyself to the devil.

Tusser.

Anciently no man was suffered to abide in England above forty days, unless he were enrolled in some tithing.—One of the principal inhabitants of the tithing was annually appointed to preside over the rest, being called the tithing-man, the headborough, and in some countries the borsholder, or borough's elder, being supposed the discreetest man in the borough, town, or tithing. The distribution of England into tithings and hundreds is owing to king Alfred.

TITTHINGMAN, *s.* A petty peace-officer; an under-constable.—His hundred is not at his command further than his prince's service; and also every *tithing-man* may controul him. *Spenser*.

TITHYMAL, *s.* [*tithymalle*, French; *tithymallus*, Lat.] An herb. *Sherwood*.—Rubbing the stem with cowdung, or a decoction of *tithymale*. *Evelyn*.

TITI (Santi di), was born at Citta S. Sepolero, in the Florentine State, in 1538. He first acquired a knowledge of painting under the tuition of A. Bronzino, and afterwards of Bandinelli, but owes the greater part of his fame to his studies at Rome, where he long resided, and from whence, as Lanzi observes, he carried back to his native country a graceful and scientific style of art, not supported by much ideal beauty, but chiefly characterized by the truth and freshness of nature; and in expression he had few superiors in any school, none in his own. He adorned his pictures

with pieces of architecture, which science he in a measure professed, and by its means gave great relief to his figures, and increased the dignity and beauty of his compositions. His principal works are, the Supper at Emmaus, painted for the church of St. Croce, at Florence; the Resurrection of Lazarus, in the Duomo di Volterra; and the Descent of the Holy Spirit, painted for a convent at Citta di Castello. He died at Florence in 1603, aged 65, leaving a son, Tiberio Titi, born at Florence in 1578, who followed the same art with his father, but not with equal success.

TITIAN, the name by which we are acquainted with that great master, who is universally regarded as the head of the Venetian school of painting, *Tiziano Vecelli da Cadore*. This justly distinguished artist was born of noble parents at the castle of Cadore, in Friuli, in 1480, according to Vasari and Sandrart. The education he received, first from Sebastiano Zuccati of Treviso, and afterwards from Giovanni Bellini at Venice, rendered him a diligent and subtle observer of nature. His early works exhibit the greatest correctness of imitation, but in a laboured and minute style, with a finish so highly wrought, that when, at a maturer age, he painted a picture for Ferrara of the tribute-money, in competition with Albert Durer, he excelled in nicety of pencilling that master of minuteness; with this difference, that his finish did not, like the German's, obtrude itself, and impede the general effect, but obtained grandeur by distance. This picture, to which he made no companion, as he soon after changed his style, now adorns the gallery of Dresden, and remains a proof of the sense this great artist entertained of the falsity of that taste, which seeks for gratification in mere finish, and which he deserted for the adoption of a style conveying general character instead of identity. It was from the better taste of his fellow-pupil Giorgione, that Titian imbibed a more exalted view of art, and was induced to quit the meaner and more confined style with which he commenced his practice; and some portraits which he painted about this time are scarcely to be distinguished from those of Giorgione himself. But he seems to have found it not exactly to his mind, and soon discovered a variety of style more congenial to his own feelings; less softened, and perhaps less grand, but more agreeable; a style which delights the spectator less by novelty of effect, than by the exactness of truth. His first work in this style, which is entirely his own, is the archangel Raphael leading Tobiah, painted in his thirteenth year for the sacristy of S. Marziale; and soon after he painted the Presentation of the Virgin, at the Carita; one of the richest of his compositions remaining.

On the death of Giorgione, in 1511, Titian succeeded him in several important commissions, and continuing to increase in renown, was invited to the court of Alfonso, duke of Ferrara, for whom he painted the celebrated picture of Bacchus and Ariadne, now in England. Here he became acquainted with the poet Ariosto, whose portrait he painted, and in return was celebrated by him in his *Orlando Furioso*.

About 1523, Titian produced the work which, above all others, elevates him in the scale of merit among painters; viz., the celebrated picture of the Death of St. Peter the Martyr, for the church of S. Giovanni and S. Paolo at Venice, which has by almost all artists and connoisseurs been considered his chef-d'œuvre in history. This extraordinary picture was one of the first objects of French spoliation at Venice. It was painted originally on wood, but was transferred to canvas in France, in consequence of its having been much blistered from the wood by the effect of sea-water in its voyage to Marseilles; and it is now returned to its original station in a more agreeable, if not more perfect condition, than when it was first removed. The excellence of this picture procured Titian, according to Vasari, a commission from the senate to paint the battle of Cadore between the Venetians and the Imperialists, or the rout of Giaradadda, in which the action proceeded during a tremendous storm of rain. This grand work was destroyed by fire, but the composition is preserved to us by the print engraved by Fontana. Besides these, he painted several other public works, which,

F together

together with the friendly assistance of Pietro Aretino, whose pen delighted to dwell upon the powers of this great artist's pencil, spread his fame in every direction, and he was honoured with a superabundance of employment.

P. Aretino, about 1341, introduced him to Fred. Gonzaga, duke of Mantua, whom he painted, and also, for him, a series of the twelve Cæsars for a saloon in the palace; which have been engraved in this work.

Titian had soon after the honour of painting pope Paul III., when he visited Ferrara in 1543, and was invited by that pontiff to Rome. He arrived there in 1546. Nothing could be more flattering than his reception by the pope, who immediately upon his arrival assigned him apartments in the Palazzo Belvidere, and employed him in painting his portrait at whole length, and those of the cardinal and the duke Otavia, which gave universal satisfaction; but an *Ecce Homo*, which he painted as a present to the pope, was not esteemed by the Roman artists, whose minds were accustomed to the works of Raphael and M. Angelo. The latter is said to have remarked to Vasari, after seeing Titian at work on his *Danæ*, that it was a great pity the Venetian painters applied themselves so little to design, and had not a better mode of study, being so perfectly skilful in colour and imitation. Adding, "if this man were as much aided by art in design as he is by nature, and most particularly so in giving just resemblance of natural objects, he would be perfect; as he has a noble spirit, and a beautiful and lively manner."

He did not remain long in Rome, but on his return to Venice visited Florence, where he beheld with delight the great works of art with which it is adorned.

He received an invitation from Charles V. to visit Spain, and accordingly went to Madrid, where he arrived in 1550. He remained there three years, during which time he painted a great number of portraits and historical pictures. For the portrait which he painted of the emperor, he received 1000 crowns of gold, and was created a knight of the order of St. Jago, and a count palatine of the empire, with a stipend from the treasury of Naples of 200 crowns annually; and to this, Phillip II. added afterwards 200 more, besides paying him munificently for each of his productions. When Charles had devoted his life to the austerities of a convent, he commissioned him to paint a large picture of the Trinity, accompanied by the Holy Virgin, and surrounded by saints and angels, in which the emperor, and the empress his wife, were represented elevated to the heavens, and in the act of adoration. There is a sketch of it in England, and a print has been engraven from the picture, by which it appears to have been a very grand work.

Though Titian had returned to his native place before Philip II. came into possession of the throne, and was as much engaged as he could be, yet that monarch, when he had built the Escorial, and conceived the idea of enriching it with the most splendid materials, resorted to his father's favourite painter to assist him in perfecting it; and though it does not appear that Titian returned to Spain, yet he must have employed his pencil very assiduously in its service, from the very great number of his pictures which are to be found there, many of them among his very finest productions.

Titian was invited by Henry VIII. to England, but his numerous engagements on the continent prevented him from coming. He painted, however, two pictures for Henry, which now adorn the Marquis of Stafford's collection. Their subjects are the Bath of Diana, with the unfortunate intrusion of Acteon, and the Discovery of the crime of Calista; both are exquisite performances, and in tolerably good preservation.

This great painter is one of the happy few, for whom nature and circumstances have combined in fortunate conjunction. "For him," as Vasari justly observes, "health and fortune laboured, and he received of heaven only happiness and blessings." By him, the highest among men, the most learned, and the most beautiful, were proud to have their portraits transmitted to posterity. He was handsome in person and graceful in manners, and lived in a style worthy

of one so honoured and beloved. These blessings he was permitted to enjoy through a very uncommon portion of human existence, which was at length interrupted by the plague in his 96th year.

Perhaps no other production is so perfect in the combination of every requisite quality of a fine painting, as Titian's *Death of S. Pietro Martire* in composition, design, action, expression, *chiaro-scuro*, and colour. The choice of the scene, and the accompaniments, are every way adapted to assist in creating alarm and dismay: the tone of evening or twilight spread over the whole, and contrasted to the brilliant ray of heavenly light from above, aids the impression; and the execution is in every part correspondent to the grandeur of form selected. This picture he painted, as we have said, in the prime of his life, when he was about forty-three; and he continued long after to work in the same style, which is of his own creation, and totally different from both his former laboured one, and his latter loose and vague manner. In this picture every part is wrought to an exact character of representation, though without minuteness, or in any degree trespassing upon the heroic nature of the tragic subject; and there is no introduction of heterogeneous matter, as is too frequently to be found in his historic productions. Here he appears to have caught a glimpse of the grandeur of Michael Angelo's style, and to have employed it more effectually than in any other of his works, except perhaps in the figures on the ceiling of the *Salute*, at Venice, and the *Martyrdom of St. Laurence in the Jesuits*. In general, his selection of form is but little improved upon his model; his male figures being too fleshy for character or action, and his females too full for elegance.

The mind of Titian appears to have been of a sedate and rather serious character. All his compositions are arranged with gravity; even the gay and sometimes licentious subjects which he now and then amused himself with, are conducted with such a scale of *chiaro-scuro* and colour, as gives an air of morality to their effect, which imposes upon the spectator an air of sobriety, and induces him to discard those loose thoughts which the gay luxuriance of the style of Rubens, treating the same compositions, would inevitably excite.

Colouring appears to have been the grand foundation of the success of Titian. He knew better than any other painter the just power of each colour of his palette; and by this knowledge, produced a species of *chiaro-scuro* independent of light and shade, and perfectly distinct from that of Corregio and Lionardo da Vinci, and more immediately imitative of the general effects of nature. Master of the means of imitating the most subtle combinations of colour in visible objects, and fully comprehending the degrees of purity or of tone with which colours might be employed individually or collectively, to assist in projecting or withdrawing the various parts of a picture, he never fails to gratify the eye with a full and true relief, correspondent with the nature of the subject. In this quality he was as much ideal as the Greeks and Florentines were in form; for though the harmony and richness which he produced are to be found occasionally in nature, it is neither her every day attire, nor is it to be comprehended by superficial observers. There is a science of exceeding import to painting in the arrangements of colours, by which a skilful artist will create attraction or disgust, as it pleases him. Change the position of the colours of that most beautiful of nature's works, the rainbow; let the blue and the green occupy the centre, and the red and yellow the edges of it; and judge how far it will decrease in its power of attraction. Of this science, Titian was the first great possessor; and as he possessed the knowledge of the value of colours, so also did he that of the nature of shade; that colour (to the painter at least, though it be the absence of it to the philosopher), which destroys all colours, and renders all alike obscure; and which is the most difficult of attainment in all that relates to the art of colouring. The tone of shade that Titian employed, whatever be the substance which produced it, was used by no other so successfully, except *Tintoretto*.

oretto. It seems in its union with the local colours of objects, to have produced the half tints without further labour; or at least to have laid such a foundation, as to have made that of the subsequent tinting very trifling; and doubtless this mode of proceeding rendered him able to produce such an infinity of works as appear to have issued from his pencil. His errors flowed naturally, from the ease with which he produced the beauties of his style; and as the mind was filled with gratification by the delightful harmony and richness of colour his works presented, so it sought the less for the qualities of expression, and appropriate dress and action in the figures; and would not condemn too rudely the frequent admission of heterogeneous matter.

To the accusations of exhibiting defects like these, the works of Titian are far less justly subject than those of his imitators and successors in the Venetian school of painting; none of whom possessed the taste and judgment of this great master, though many were eminently skilful in their respective departments.

TITIANO (Girolamo Dante), called Il. According to Ridolfi, he was brought up in the school of Titian, and was employed by that master to assist him in several of his works. By frequently painting in conjunction with him, and sometimes copying his works, some of his pictures, retouched by Titian, have passed for originals by that master. He sometimes painted from his own designs, and his picture in the church of St. Giovanni, at Venice, representing S. S. Cosmo and Damiano, is worthy of the school in which he was educated. *Bryan's Dict.*

TITICACA, a lake of South America, formerly in Peru, now in the viceroyalty of Buenos Ayres. It is situated in the plains that lie between the two Cordilleras, in the north-western part of the province of Los Charcas. It is the most considerable of all the lakes of South America. The lake contains several islands, and amongst these that of Titicaca, the supposed residence of Manco Capac, the founder of the Peruvian nation.

TITICACA, a large island in the middle of the above lake. It is three leagues long, one wide, and five in circumference, and about one mile from the shore.

To **TITILLATE**, *v. n.* [*titillo* Lat.] To tickle.

Just where the breath of life his nostrils drew,
A charge of snuff the wily virgin threw;
The gnomes direct to every atom just,
The pungent grains of *titillating* dust.

Pope.

TITILLATION, *s.* [*titillation*, French; *titillatio*, Lat. from *titillate*.] The act of tickling.—Tickling causeth laughter; the cause may be the emission of the spirits, and so of the breath, by a flight from *titillation*. *Bacon*.—The state of being tickled.—In sweets, the acid particles seem so attenuated in the oil as only to produce a small and grateful *titillation*. *Arbuthnot*.—Any slight or petty pleasure.—The delights which result from these nobler entertainments our cool thoughts need not be ashamed of, and which are dogged by no such sad sequels as are the products of those *titillations*, that reach no higher than the senses. *Glanville*.

TITTLARK, *s.* A bird. See **TIT**, and **TITMOUSE**—The smaller birds do the like in their seasons; as the leverock, *tittlark*, and linnet. *Walton*.

TITILE, *s.* [*titul*, Saxon; *titelle*, old Fr.; *titulus*, Lat.] A general head comprising particulars.—Three draw the experiments of the former four into *titles* and tables for the better drawing of observations; these we call compilers. *Bacon*.—An appellation of honour.

To leave his wife, to leave his babes,
His mansion, and his *titles*, in a place
From whence himself does fly.

Shakspeare.

A name; an appellation.

My name's Macbeth.

—The devil himself could not pronounce a *title*
More hateful to mine ear.

Shakspeare.

The first page of a book, telling its name, and generally its subject; an inscription.

This man's brow, like to a *title* leaf,
Foretels the nature of a tragic volume.

Shakspeare.

A claim of right.

'Tis our duty

Such monuments as we can build, to raise;
Lest all the world prevent what we should do,
And claim a *title* in him by their praise.

Dryden.

To **TITILE**, *v. a.* To entitle; to name; to call.

To these, that sober race of men, whose lives
Religious *titled* them the sons of God,
Shall yield up all their virtue, all their fame,
Ignobly!

Milton.

TITILELESS, *adj.* Wanting a name or appellation.
Not now in use.

He was a kind of nothing, *titleless*,
Till he had forg'd himself a name o' th' fire
Of burning Rome.

Shakspeare.

TITILEPAGE, *s.* The page containing the title of a book.—We should have been pleased to have seen our own names at the bottom of the *title-page*. *Dryden*.

TITLEY, a parish of England, in Herefordshire; 3 miles north-east-by-east of Kington.

TITLINGTON, a hamlet of England, in Northumberland; 6½ miles west-by-north of Alnwick.

TITMANING, or **DIETMANING**, a small town of Bavaria, on the river Salza; 23 miles north-north-west of Salzburg, and 50 east of Munich. Population 2200.

TITMEG, a lake of North America. Lat. 62. 15. N. long. 99. W.

TITMOUSE, or **TIT**, *s.* [*tiji*, Dutch, a chick, or small bird; *tittlingier*, Icelandic, a little bird: *tit* signifies *little* in the Teutonic dialects.] A small bird.

The nightingale is sovereign of song,
Before him sits the *titmouse* silent by,
And I unfit to thrust in skilful throng,
Should Colin make judge of my foolerie.

Spenser.

TITSCHEN, **NEW**, a town of the Austrian states, in Moravia; 31 miles east of Olmutz. It contains 4300 inhabitants, and has extensive woollen manufactures.

TITSEY, a parish of England, in Surrey; 5 miles north-east-by-east of Godstone.

TITTENHANGER, a hamlet of England, in Hertfordshire; 2½ miles south-east-by-east of St. Alban's. Population 316.

TITTENLEY, a small village of England, in Cheshire, near Congleton.

TITTENSOR, a hamlet of England, in Staffordshire; 4 miles north-west-by-north of Stone.

To **TITITER**, *v. n.* [formed, I suppose, from the sound. *Dr. Johnson*.—Rather perhaps from *teitr*, Icel. very merry. *Todd*.] To laugh with restraint; to laugh without much noise.

In flow'd at once a gay embroider'd race,
And *titt'ring* push'd the pedants off the place.

Pope.

The swain mistrustless of his smutted face,
While secret laughter *tittler'd* round the place.

Goldsmith.

TITTER, *s.* A restrained laugh.—The belle's shrill *titter*, and the squire's broad stare. *Neville*.—It is doubtful what it signifies in Tusser, unless it be small weeds.

From wheat go and rake out the *titters* or tine,
If eare be not forth, it will rise again fine.

Tusser.

TITTERIE, the central province of the kingdom of Algiers, being that in which the capital is contained. It is about 60 miles long by 40 broad, extending from the coast of the Mediterranean to the plain of the Bled el Jereede, which separates it from the Sahara.

TITTESWORTH, a township of England, in the parish of Leeke, Staffordshire.

TITTING, or **DIETTING**, a small town of Germany, in Bavaria; 8 miles north of Eichstadt, and 36 west of Ra-tisbon.

TITTLE,

TITTLE, *s.* [I suppose from *tit*. *Dr. Johnson*.—German *tüttel*, punctum, apex, ab absoleto Anglo Sax. *tyban*, figere, pungero. *Wachter and Serenius*.] A small particle; a point; a dot.—In the particular which concerned the church, the Scotch would never depart from a *tittle*. *Clarendon*.

Angels themselves disdain
T' approach thy temple, give thee in command
What to the smallest *tittle* thou shalt say
To thy adorers.

Milton.

TITLESHALL, or **TITLESHALL**, a parish of England, in Norfolk; 6 miles south-south-west of Fakenham. Population 417.

TITTLTATTLE, *s.* [A word formed from *tattle* by a ludicrous reduplication.] Idle talk; prattle; empty gabble.

As the foe drew near
With love, and joy, and life and dear,
Our don, who knew this *tittle-tattle*,
Did, sure as trumpet, call to battle.

Prior.

An idle talker. *Sherwood*.—Impertinent *tittle-tattles*, who have no other variety in their discourse than that of talking slower or faster. *Tatler*.

To **TITTLTATTLE**, *v. n.* To prate idly.—You must be *tittle-tattling* before all our guests. *Shakspeare*.

TITLETATTLING, *s.* The act of prating idly.—You are full in your *tittletattlings* of Cupid: here is Cupid, and there is Cupid: I will tell you now what a good old woman told me. *Sidney*.

To **TITUBATE**, *v. n.* [*titubo*, Lat.] To stumble. This is an old verb in Cockeram's vocabulary. *Dr. Johnson* uses it in one of his definitions of *to trip*.

TITUBATION, *s.* [*titubo*, Lat.] The act of stumbling.

TITUL, a large village in the south of Hungary, at the confluence of the Theiss and the Danube, and the chief place of the district belonging to the Tschaikists or Danube pontooneers.

TITULAR, *adj.* [*titulus*, Lat.] Nominal; having or conferring only the title.—They would deliver up the kingdom to the king of England to shadow their rebellion, and to be *titular* and painted head of those arms. *Bacon*.

TITULARITY, *s.* The state of being titular.—Julius, Augustus, and Tiberius, with great humility received the name of imperator; but their successors retain the same even in its *titularity*. *Brown*.

TITULARLY, *adv.* Nominally; by title only.—The church representative is a general council; not *titularly* so, as the conventicle of Trent; but plenarily true, general, and lawful. *Mountagu*.

TITULARY, *adj.* [*titulus*, Lat.] Consisting in a title.—The malecontents of his kingdom have not been base nor *titulary* impostors, but of an higher nature. *Bacon*.—Relating to a title.—William the Conqueror, howsoever he used the power of a conqueror to reward his Normans, yet mixed it with a *titulary* pretence grounded upon the Confessor's will. *Bacon*.

TITULARY, *s.* One that has a title or right.—The persons deputed for the celebration of these masses were neither *titularies* nor perpetual curates, but persons entirely conductitious. *Ayliffe*.

TITUMATI, a river of South America, in the province of Darien, which joins the Chucunaqui.—There is another river of this name in the same province, which enters the sea in the gulf of Tucumari.

TITUS VESPASIANUS, a Roman emperor, was the eldest son of Vespasian, and born A. D. 40. See **ROME**.

TIVDIJA, a small river in the north-west of European Russia, which flows into the lake Onega on the west side. Quantities of fine marble are seen along its banks.

TIVERTON, a market-town and borough of England, in the county of Devon, situated at the confluence of the Axe and Loman rivers, from which circumstance it was anciently called Twyfordtown, or Twofordtown. It stands on the slope of a hill, rising gently towards the north, and formed

at the base triangularly by the courses of the streams. The town extends in length nearly a mile, and in breadth three quarters. The inhabitants have long been characterised for their social intercourse and mutual harmony. Regular assemblies, concerts, and card parties, are frequent in the winter, and many evening clubs and friendly societies have been formed. Tiverton was anciently governed by a portreeve and other officers; but by charter from James I. it was incorporated under a mayor, 12 capital burgesses, and 12 assistants, who elect a recorder. The right of returning two members to parliament was also granted, which has ever since been retained. In consequence of some mistakes in the election of a mayor, in 1724, the town was re-incorporated by charter of the 11th of George I. Tiverton is a place of considerable antiquity. It was a village in the reign of Alfred, and described in the Domesday Survey as lands belonging to the king. 1269 houses, and 6732 inhabitants. Market on Tuesday, and a small one on Saturday; also one on Monday for kerseys, with two annual fairs; 14 miles north of Exeter, and 161 west-by-south of London. Lat. 50. 54. N. long. 3. 29. W.

TIVERTON, a township of England, in Cheshire; 2 miles south of Tarporley. Population 493.

TIVERTON, a post township in the United States, in Newport county, Rhode Island. It is on the mainland, opposite to Portsmouth, with which it is connected by a bridge. Population 2837; 54 miles south-west of Boston.

TIVETSHALL, **ST. MARGARET** and **ST. MARY**, united parishes of England, in Norfolk; 5½ miles north-east of Diss.

TIVIOT, or **CHIVIOT MOUNTAINS**, the high hills on the borders of England and Scotland.

TIVOKEA, an island in the South Pacific ocean. It is low and sandy, of an elliptic form; 18 miles in its longest diameter. There is a lagoon in the centre, which is entered from the south-west end of the island. Trees and shrubs are numerous, but the soil is extremely scanty, consisting of a very thin covering of mould, over a low coral foundation. The inhabitants are stout made, of a dark brown, and puncture or tattoo themselves with the figures of fishes. Their features are not disagreeable; their hair and beards generally black and curling. They go perfectly naked, all except a small piece of cloth around the loins. Lat. 14. 28. S. long. 144. 56. W.

TIVOLI (the *Tibur* of the ancients), a considerable town in the central part of Italy, about 18 miles east-by-north of Rome. It is delightfully situated on an eminence, sheltered on one side by Monte Castali and a circular range of the Sabine mountains, while on the other it commands an extensive prospect over the Campagna di Roma. The sides of the hill on which it stands are covered with olives and fruit trees; but its great attraction now, as in former ages, consists in the falls of the Teverone (the ancient *Anio*), which glides gently through the town, till reaching the brink of a rock, over which it precipitates itself near 100 feet in one mass, and after boiling up in its narrow channel, rushes through a chasm of the rock into a cavern below. On the summit of the steep bank stands a beautiful temple of the Corinthian order, supposed to have been dedicated to Vesta, and built in the Augustan age.

TIVVY, *adj.* [A word expressing speed, from *tantivy*, the note of a hunting-horn.]

In a bright moon-shine while winds whistle loud,

Tivy, tivy, tivy, we mount and we fly,

All rocking in a downy white cloud:

And lest our leap from the sky should prove too far,

We slide on the back of a new-falling star.

Dryden.

TIVY or **TOWEY**, a river of Wales, in the county of Caermarthen, one of the principal in the whole principality. It rises from an extensive morass in the Alpine valley of Berwin, in the county of Cardigan, and runs southwards to Lindover; and being joined by a stream from Brecknockshire, turns towards the west, passes Llangaddock and Llandilovawr, and thence running due west, in a delightful vale, passes Caermarthen,

marthen, and turning towards the south, falls into Caermarthen bay, in a large estuary.

TIXALL, a parish of England, in Staffordshire; $3\frac{1}{2}$ miles east-by-south of Stafford.

TIXENDALE, or **THRIKENDALE**, a township of England, in the parish of Wharram Percy, East Riding of Yorkshire; $8\frac{1}{2}$ miles south-south-east of New Malton.

TIXOVER, a parish of England, in Rutlandshire; $7\frac{1}{2}$ miles east-by-north of Uppingham.

TIXTLAN, a town of Mexico, and capital of a jurisdiction of the same name; situated 30 leagues from the coast of the Pacific ocean.

TIZAPAN, the name of three inconsiderable settlements in Mexico.

TIZE, or **TIZ**, a sea-port of Mekran, in Persia, the *Tiza* of Ptolemy, once important, but now reduced to a miserable village of fifty or sixty huts.

TIZNADOS, a river of the Caraccas, in the province of Venezuela, which enters the Portugueza.

TJERINGKIN, a considerable fishing village on the island of Java, on the west coast. It was formerly a military post, with a block-house, which was burnt by the British ships of war. It is situated at the mouth of a river which is navigable a long way up for small prows; 103 miles west from Batavia.

TJIDANEE, or **TANGERANG**, a river of the island of Java, which falls into the sea of Java, near Batavia bay.

TJIDOVEAN, a river of Java, which runs a northerly course, and falls into the Java sea, in the bay of Bantam. During the rains it is very rapid, and scarcely passable.

TLACOLTEPEC, a settlement of Mexico, in the intendency of Puebla de los Angeles, containing 148 Indian families.

TLACOLULA, a settlement of Mexico, in the intendency of Puebla de los Angeles, containing 262 Indian families.

TLACOLULA, a settlement in the intendency of Mexico, containing 270 Indian families. There are two other inconsiderable settlements of the same name in Mexico.

TLALCHICOMULA, a settlement of Mexico, in the intendency of Puebla de los Angeles, containing 700 families of Indians, Spaniards, mestizoes, and mulattoes.

TLALNEPLANTA, a settlement of Mexico, in the intendency of Mexico, containing 850 Indian families.

TLALPUJAGUA, a town of Mexico, in the intendency of Valladolid; 77 miles west of Mexico.

TLALTIZAPAN, a settlement of Mexico, in the intendency of Mexico, containing 150 Indian families.

TLAMANALCO, a settlement of Mexico, in the intendency of Mexico, containing 1360 families of Indians; 6 miles east of Chalco.

TLAPOYACA, a settlement of Mexico, in the intendency of Oaxaca, which contains 180 families of Indians.—There is another settlement of the same name in the intendency of Valladolid.

TLAXCALLA, or **TLASCALLA**, a government of Mexico, in the intendency of Puebla de los Angeles, which, in 1793, contained 59,177 inhabitants, whereof 21,849 were male, and 21,029 female Indians. It is bounded on the north by Vera Cruz, on the east by Oaxaca or Guaxaca, on the south by the Pacific, and on the west by the province of Mexico; and is about 354 miles in length, and from 40 to 150 in breadth. The soil and productions are nearly the same with Mexico.

TLAXCALLA, the capital of the above province, situated on the side of a high mountain, and on the banks of a small river which runs into the Pacific ocean; 64 miles east of Mexico. Lat. 19. 19. 30. N. long. 98. W.

TLAZASALCA, the capital of a jurisdiction of the same name, in the intendency of Valladolid; 70 miles west-by-north of Mexico.

TLEMSAN, or **TREMECEN**, the most westerly of the three provinces into which the kingdom of Algiers is divided.

TLEMSAN, or **TREMECEN**, a city of Algiers, capital of the province of the same name. It was once an important place, and the metropolis of a kingdom; but in 1670, on

occasion of a revolt of the inhabitants, Hassan, then dey of Algiers, laid it in ruins, so that there does not now remain above one-sixth part of the old city, which, when entire, might have been four miles in circuit. It is plac'd on a rising ground, below some rocky precipices, whence issue a number of springs; 220 miles west-south-west of Algiers, and 50 south-south-west of Oran.

TLETCH, a small town of Tobolsk, in Asiatic Russia, on the Irtysh; 72 miles east-south-east of Tobolsk.

TLUMATSCHAU, or **TLUMASZOW**, a small town of the Austrian states, in Moravia, on the river March; 12 miles east of Hradisch, and 39 east of Brunn. Population 1100.

TO, *adv.* [το, Saxon; *te*, Dutch.] A particle coming between two verbs, and noting the second as the object of the first.—The delay of our hopes teaches us *to* mortify our desires. *Smalridge*.—It notes the intention.

Ambitious fool! with horny hoofs to pass
O'er hollow arches of resounding brass,
To rival thunder.

Dryden.

It notes the consequence.—I have done my utmost to lead my life so pleasantly as *to* forget all misfortunes. *Pope*.—After an adjective, it notes its object.

We ready are *to* try our fortunes
To the last man.

Shakspeare.

Noting futurity.—It is not blood and bones that can be conscious of their own hardness and redness; and we are still *to* seek for something else in our frame that receives those impressions. *Bentley*.

To and again, or *To and fro*, backward and forward.

The spirits perverse
With easy intercourse pass *to and fro*,
To tempt or punish mortals.

Milton.

Quite; entirely; much; very: preceding a verb, participle, or adjective; formerly much in use; *now obsolete*.

Let them all encircle him about,
And, fairy-like, *to* pinch the unclean knight. *Shakspeare*.

TO, *preposition*.—Noting motion *towards*, opposed to *from*.

Tybal't fled;
But by and by comes back *to* Romeo,
And *to't* they go like lightning.

Shakspeare.

Give not over so; *to* him again, entreat him,
Kneel down before him.

Shakspeare.

Noting accord or adaptation.

Thus they with sacred thought
Mov'd on in silence *to* soft pipes.

Milton.

Noting address or compellation.

Now *to* you, Raymond: can you guess no reason
Why I repose such confidence in you?

Dryden.

Noting attention or application.

Turn out, you rogue! how like a beast you lie:
Go buckle *to* the law.

Dryden.

Noting addition or accumulation.

Wisdom he has, and *to* his wisdom courage;
Temper *to* that, and unto all success.

Denham.

Noting a state or place whither any one goes.—Take you some company and away *to* horse. *Shakspeare*.—Noting opposition.

No foe unpunish'd in the fighting field,
Shall dare thee foot *to* foot with sword and shield. *Dryden*.

Noting amount.—There were *to* the number of three hundred horse, and as many thousand foot English. *Bacon*.—Noting proportion.

With these bars against me,
And yet to win her—all the world *to* nothing. *Shakspeare*.

Noting possession or appropriation.—Still a greater difficulty upon translators rises from the peculiarities every language hath to itself. *Felton*.—Noting perception,

The flower itself is glorious to behold,
Sharp to the taste.

Noting the subject of an affirmation.

I trust, I may not trust thee; for thy word
Is but the vain breath of a common man:
Believe me, I do not believe thee, man;
I have a king's oath to the contrary.

Shakespeare.

In comparison of. As far as.—Some Americans, otherwise
of quick parts, could not count to one thousand, nor had
any distinct idea of it, though they could reckon very well to
twenty. *Locke.*—Noting intention.

This the consul sees, yet this man lives,
Partakes the public cares; and with his eye
Marks and points out each man of us to slaughter. *B. Jonson.*

After an adjective it notes the object.

All were attentive to the godlike man,
When from his lofty couch he thus began.

Dryden.

Noting obligation.—Almanzor is taxed with changing
sides, and what tie has he on him to the contrary? He is
not born their subject, and he is injured by them to a very
high degree. *Dryden.*—Respecting.

He's walk'd the way of nature;
And to our purposes he lives no more.

Shakespeare.

Noting extent.—From the beginning to the end all is due
to supernatural grace. *Hammond.*—Towards.—She stretch'd
her arms to heav'n. *Dryden.*—Noting presence.—She still
beareth him an invincible hatred, and reveleth him to his
face. *Swift.*—Noting effect; noting consequence.

Thus, to their fame, when finish'd was the fight,
The victors from their lofty steeds alight.

Dryden.

After a verb to notes the object.

Give me some wine; fill full,
I drink to th' general joy of the whole table,
And to our dear friend Banquo.

Shakespeare.

Noting the degree.—Tell her thy brother languishes to
death. *Addison.*—Before day, to notes the present day;
before *morrow*, the day next coming; before *night*, either
the present night, or night next coming.

Banquo, thy soul's flight,
If it find heav'n, must find it out to night.

Shakespeare.

To day, to night, to morrow, are used, not very properly,
as substantives in the nominative and other cases.

To morrow, and to morrow, and to morrow,
Creeps in this petty pace from day to day;
And all our yesterdays have lighted fools
The way to dusky death.

Shakespeare.

To day is ours, why do we fear?
To day is ours, we have it here;
Let's banish bus'ness, banish sorrow,
To the gods belongs to morrow.

Cowley.

TOA, a river of the island of Porto Rico, which runs into
the harbour of Porto Rico.

TOAD, *s.* [*raße*, Saxon.] A paddock; an animal re-
sembling a frog; but the frog leaps, the toad crawls: the
toad is accounted venomous, but without reason.

From th' extremest upward of thy head,
To the descent and dust below thy foot,
A most toad-spotted traitor.

Shakespeare.

The toad is the *rana bufo* of Linnæus, in Zoology See
RANA.

TO'ADEATER, *s.* A contemptuous term of modern
times for a fawning parasite, a servile sycophant.—I was re-
duced to be as miserable a *toadeater* as any in Great Britain,
which in the strictest sense of a word is a servant, except that
the *toadeater* has the honour of dining with my lady, and
the misfortune of receiving no wages. *Sir C. Hanbury.*

TO'ADFISH, *s.* A kind of sea-fish. See LOFHIUS PIS-
CATRIX.

TO'ADFLAX, *s.* A plant.

TO'ADISH, *adj.* Venomous; like a toad.—A speckled,

Dryden.

toadish, or poison-fish, as the seamen from experience named
it. *Sir T. Herbert.*

TO'ADSTONE, *s.* A concretion supposed to be found in
the head of a toad.—The *toadstone* presumed to be found in
the head of that animal is not a thing impossible. *Brown.*

TO'ADSTOOL, *s.* Probably from a vulgar notion that
the eating of this poisonous fungus, furnished the toad with
his poison.—A plant like a mushroom.

The grisly *toadstool* grown there mought I see,
And loathed paddocks lording on the same.

Spenser.

Another imperfect plant like a mushroom, but sometimes
as broad as a hat, called *toadstool*, is not esculent. *Bacon.*

TOAHOUTA, one of the smaller Society islands, near
Otaha.

To TOAST, *v. a.* [*tostic*, old French, *Lacombe*; *torreo*,
tostum, Latin.] To dry or heat at the fire.—The earth
whereof the grass is soon parched with the sun, and *toasted*, is
commonly forced earth. *Bacon.*—To allure mice I find no
other magic than to draw out a piece of *toasted* cheese.
Brown.—To name when a health is drunk. See the noun.
—Several popish gentlemen *toasted* many loyal healths.
Addison.

We'll try the empire you so long have boasted;
And if we are not prais'd we'll not be *toasted*.

Prior.

To TOAST, *v. n.* To give a toast or health to be drunk.
—Let not both houses of parliament have law dictated to
them by the Constitutional, the Revolution, and the Unitarian
societies. These insect reptiles, whilst they go only caballing
and *toasting*, only fill us with disgust. *Burke.*

TOAST, *s.* Bread dried before the fire.—You are both as
rheumatic as two dry *toasts*; you cannot one bear with
another's infirmities. *Shakespeare.*—Every third day take a
small *toast* of manchet, dipped in oil of sweet almonds new
drawn, and sprinkled with loaf sugar. *Bacon.*—Bread dried
and put into liquor.

Where's then the saucy boat
Co-rival'd greatness? or to harbour fled,
Or made a *toast* for Neptune.

Shakespeare.

Some squire, perhaps, you take delight to rack;
Whose game is whisk, whose treat a *toast* in sack.

Pope.

A celebrated woman whose health is often drunk. *Dr.*
Johnson. This was at first the meaning; the reason of which
is now given in the example from the Tatler. It is now ap-
plied to public characters, or private friends, whose healths
we propose to drink.—It happened that on a public day, a
celebrated beauty of those times [King Charles II.'s] was in
the Cross-Bath, [at Bath,] and one of the crowd of her ad-
mirers took a glass of the water, in which the fair one stood,
and drank her health to the company. There was in the
place a gay fellow half fuddled, who offered to jump in, and
swore though he liked not the liquor, he would have the *toast*.
He was opposed in his resolution; yet this whim gave founda-
tion to the present honour which is done to the lady we
mention in our liquor, who has ever since been called a *toast*.
Tatler.—I shall likewise mark out every *toast*, the club in
which she was elected, and the number of votes that were on
her side. *Addison.*

Say, why are beauties prais'd and honour'd most,
The wise man's passion, and the vain man's *toast*?

Why deck'd with all that land and sea afford,
Why angels call'd, and angel-like ador'd?

Pope.

TO'ASTER, *s.* One who toasts.

We simple *toasters* take delight
To see our women's teeth look white;
And ev'ry saucy ill-bred fellow
Sneers at a mouth profoundly yellow.

Prior.

TOBA, a small island in the Eastern seas, near the west
coast of Aroo. Lat. 5. 8. S. long. 135. 9. E.

TOBA'CCO, *s.* [from *Tobaco* or *Tobago* in America.
It is said not to have been known in Europe before 1500.]
See NICOTIANUM.

And for *tobacco*—who can bear it?
Filthy concomitant of claret.

Prior.

TOBA'CCO

TOBACCO KEY, a small island in the bay of Honduras, near the coast of Yucatan. Lat. 16. 45. N. long. 88. 35. W.

TOBACCO POINT, a cape on the coast of Maryland, in the river Potomack; 37 miles south-south-west of Annapolis.

TOBACCONING, *adj.* Smoking tobacco.—Neither was it any news on this guild-day to have the cathedral, now open on all sides, to be filled with musketeers, waiting for the major's return, drinking and *tobacconing* as freely as if it had been turned ale-house. *Bp. Hall.*

TOBACCONIST, *s.* A preparer and vender of tobacco.—Hence it is, that the lungs of the *tobacconist* are rotted. *B. Jonson.*

TOBACCO-STOPPER, *s.* An instrument to press tobacco down into a pipe.

It is a planet now I see;

And, if I err not, by his proper

Figure, that's like a *tobacco-stopper*.

Hudibras.

TOBAGO, one of the Carribee islands, in the West Indies; about 25 miles in length, from south-east to north-west, and about 12 in its greatest breadth. This island was first discovered by Columbus, in the year 1498; but we know of no settlement that he or any of his countrymen made upon the island. When an adventurous spirit for discoveries prevailed in England under Queen Elizabeth, Sir Robert Dudley, son of the famous earl of Leicester, in an expedition against Trinadada, gave the English governor the first hint of peopling Tobago, which was then uninhabited by any European nation; but this proposal met with small encouragement. William, earl of Pembroke, in the year 1628, obtained a grant of this island, with that of Barbuda and St. Bernard; but his death happening in less than two years after, the design came to nothing. About the year 1632, some Zealanders having fitted out a small squadron for trading to those islands, made such a favourable report of this in particular upon their return home, that the company of merchants to which they belonged, undertook to settle it, and gave it the name of New Walcheren, from one of the islands in Zealand. The new colony, in a short time, increased to about 200, who, finding themselves pestered by the visits of the Carribee Indians, began to erect a fort for their preservation. The Indians had recourse to the Spaniards, who readily granted them assistance. They sent a force upon the island, which demolished the rising fort, and exterminated the new colony. It was probably from some Dutch merchants who travelled to Courland, that James, duke of that country, conceived the design of settling Tobago: being a prince of an active disposition, and finding there was room for such a settlement, he sent over a colony of his own subjects, who settled upon what has since been called Great Courland bay, and erected a small regular fort, with a town, in the neighbourhood; and the duke's title was farther confirmed by a grant from Charles II. king of England, but disputed by the Dutch. Upon the extinction of the Kettler family, dukes of Courland, in the person of Ferdinand, son of duke James, the fief of the island of Tobago reverted to the crown of England, in 1737, and by the definitive treaty concluded at Paris, in 1763, Tobago was ceded in full right to Great Britain.

Tobago possesses almost every kind of plant that grows in the Antilles, and besides, like Trinidad, the greater part of those which are peculiar to Spanish Guiana and Cape de Paria. The most valuable are Indian corn, Guinea corn, peas, beans, French beans, figs, pine-apples, pomegranates, oranges, lemons, limes, plantains, bananas, grapes, guavas, tamarinds, prickly pears, papas, and a variety of other fruits which are not to be found in Europe. Lat. 11. 16. N. long. 60. 30. W.

TOBAGO, LITTLE, a small island, near the east coast of Tobago; about 2 miles long and 1 broad.

TOBAK, a small town of the south-west of European Russia, in Bessarabia; 34 miles north-north-west of Ismail.

TOBATI, a settlement of Indians in the province and government of Paraguay; 30 miles east from Assumption. Lat. 25. 16. S. long. 57. 8. W.

TOBATI-GUAZU, a small river of the province and government of Paraguay, which runs north-north-west, and enters the Iboig.

TOBATI MINI, a river of the province and government of Paraguay, which runs north, and enters the river Grande.

TOBBERCURRY, a small village of Ireland, in the county of Sligo; 103½ miles north-west of Dublin.

TOBED NIGAURLEDEGH, a river of New Brunswick, which runs into the St. John. Lat. 46. 50. N. long. 67. 36. W.

TOBEL, a large village in the south-west of Germany, in Wirtemberg, in the mountainous track called the Black Forest. Population 900.

TOBEL, a small town of the Swiss canton of Thurgau; 6 miles south of Frauerfeld.

TOBERDONNY, a village of Ireland, in the county of Galway; 104 miles west-north-west of Dublin.

TOBERMOREY, a village of Scotland, in the parish of Kilminian, in the island of Mull, in Argyllshire, lately built by the British Society for the Encouragement of Fisheries. It contains about 600 inhabitants.

TOBITSCHAU, or **TOWACZOW**, a small town of the Austrian states, in Moravia; 12 miles south of Olmutz. Population 1100.

TOBLACH, or **DOBBIACO**, a small town of the Austrian states, in Tyrol, near the source of the Drave, and 16 miles east-south-east of Brunecker.

TOBO, a village of Middle Sweden, in the province of Upsal, with large iron works.

TOBOL, a considerable river of Asiatic Russia, which rises near the southern extremity of the Oural mountains. The first considerable stream which it receives is the Oui or Ouk, on its left bank, after the junction with which it becomes navigable.

TOBOLSK, the name of one of the two great governments into which Asiatic Russia is divided, forming the western part of that immense territory. See **RUSSIA**.

TOBOLSK, a large city, capital of the government of the same name, and of Asiatic Russia in general. It is situated on the river Irtysch, close to its junction with the Tobol.

TOBOSO, a town, or rather very large village, in the interior of Spain, in the province of La Mancha. It has 4000 inhabitants; but its chief and almost only title to notice arises from the prominent place given to it in the adventures of Don Quixote; 68 miles south-south-east of Madrid.

TOBRONO, a settlement of the island of Cuba.

TOBULBA, a small sea-port on the eastern coast of Tunis, in Africa.

TOBY, a township of the United States, in Armstrong county, Pennsylvania. Population 611.

TOBY'S CREEK, a river of the United States, in Pennsylvania, which runs into the Allegany, 20 miles below Franklin. It is about 55 miles long, and is navigable for batteaux through a great part of its course.

TOCACHI, a river of Quito, which runs south, and enters the Pisque, in lat. 0. 3. N.

TOCAIGH, a bay on the west coast of the island of Owhyee. Lat. 20. 3. N. long. 204. 4. E.

TOCAIMA, a city of New Granada, in the government of Mariquita, near the Rio Bogota. The city is small, but has a good parish church; 56 miles south-west of Santa Fe, in the high road leading down to Honda, Mariquita, Neiva, and Popayan. Lat. 4. 16. N. long. 74. 59. W.

TOCALON, a settlement of New Granada, in the province of Carthagena, situate on the shore of the Magdalena.

TOCAMA, a settlement of Peru, in the province of Tucuman.

TOCANA, a river of New Granada, in the province of Tunja, which rises east of this city, and enters the Meta.

TOCANTINES, a large river which has its head waters in the interior of Brazil, in the capitania of Goiaz, in lat. about 19. S., and near the sources of the river Parana, which carries its waters into the Plata.

TOCAT, or **TOKAT** a large and commercial city, situated in the interior of Asia Minor, in the pachalic of Sivas. It rises

rises in the form of an amphitheatre, in a deep valley on the banks of the Jekil Irmak, the ancient Iris. The streets, though frequently steep, from the unevenness of the ground, are well paved, which is rare in this country. Tocat is the ancient *Berisa*; 40 miles north-west of Sivas. Lat. 39. 35. N. long. 36. 30. E.

TOCAYA, a village of Brazil, in the district of Minas Novas, situated at the conflux of the Jigitonhonha with the Rio Grande. It is situated in the diamond district, and is chiefly supported by this trade; 35 miles north-east of Tejuco.

TOCCO, a town of Naples, in the Abruzzo Citra, on the river Pescara. Like other places in this part of Italy, it has suffered repeatedly from earthquakes; 24 miles west-south-west of Ortona-a-Mare.

TOCHIMILCO, a town of Mexico, and capital of a district of the same name, in the intendency of Puebla; 60 miles south-east of Mexico. Lat. 19. 10. S. long. 274. 45. W.

TOCKETS, or **Toccories**, a township of England, North Riding of Yorkshire; 1½ mile north of Guisborough.

TOCKHOLES, a township of England, in Lancashire; 4 miles south-south-west of Blackburn. Population 1077.

TOCKWITH, a parish of England, East Riding of Yorkshire; 5½ miles north-east of Wetherby. Population 419.

TOCOME, a river of Guiana, which rises in the country of the Indians, and joins the Hacha.

TOCOTA, a river of Portuguese Guiana, which runs south, and enters, with a large body, into the Parime.

TOCRUR, a kingdom of Central Africa, described by the Arabian writers as situated along the Niger, or, as they termed it, Nile of the Negroes, to the west of Ghana.

TOCSIN, *s.* [*toescin*, old Fr. "cloche d'alarme; de Lat. *tangere signum.*" *Roquefort.*] An alarm-bell.—The priests went up into the steeple, and rang the bells backward, which they call *tockaine*, whereupon the people of the suburbs flocked together. *Fulke.*

TOCSON HOTUN, a town of Western Tartary; 20 miles west-south-west of Turfan.

TOCUYO, a town of South America, in the government of the Caraccas, and in the province of Venezuela, situated near the source of the river of its name. It is built in a valley formed by two mountains. They reckon in the city of Tocuyo 10,200 inhabitants; 270 miles south-west of Caraccas, and 60 north of Truxillo. Lat. 9. 35. N. long. 72. 40. W.

TOCUYO, a river of South America, which has its rise in the vicinity of Lake Maracaibo, on its eastern side; 15 leagues south of Carora, upwards of 60 leagues from the Caribbean sea, into which it is discharged, and 9 leagues east of Coro. It is navigable as far as Banagua, a village situated on its banks at the distance of 40 leagues from its mouth.

TOD, *s.* [Mr. G. Chalmers notices *tod* as Saxon, denoting a quantity of wool.] A bush; a thick shrub. *Obsolete.*

Within the ivie *tod*,
(There shrouded was the little god),
I heard a busy bustling.

Spenser.

A certain weight of wool, twenty-eight pounds.—Every 'leven wether *tods*; every *tod* yields—pound and odd shilling. *Shakspeare.*—A fox: a common word in Scotland. [Mr. Chalmers thinks the animal may have been so named from his bushy tail.]

The wolf, the *tod*, the brock,
Or other vermin.

B. Jonson.

To TOD, *v. n.* To weigh; to produce a *tod*: the word, in the following passage, has been rightly expounded to mean, that the wool of eleven sheep would weigh a *tod*. *Ritson.*—Every 'leven wether *tods*; every *tod* yields—pound and odd shilling. *Shakspeare.*—Dealers in wool say, twenty sheep ought to *tod* fifty pounds of wool. *Dr. Farmer.*

TOD HEAD, a cape on the east coast of Scotland, in the county of Kincardine; 5 miles south of Stonehaven. Lat. 56. 51. N. long. 2. 11. W.

TODEA. See **OSMUNDA.**

TODBERE, a parish of England, in Dorsetshire; 5 miles south-west-by-west of Shaftsbury.

TODBURN, a hamlet of England, in Northumberland; 8½ miles north-west-by-north of Morpeth.

TODD'S FORK, a river of the United States, in Ohio, which joins the Little Miami, 5 miles above Deerfield.

TODDENHAM, a parish of England, in Gloucestershire; 3 miles north-east of Moreton in the Marsh.

TODDINGTON, or **TADDINGTON**, a parish of England, in Bedfordshire. It was formerly a market-town, and has still five annual fairs. Population 1182; 5 miles north-by-west of Dunstable, and 39 north-west-by-north of London.

TODDINGTON, a parish of England, in Gloucestershire; 2½ miles north-by-east of Winchcombe.

To TO'DDLE, *v.* To saunter about: it implies feebleness, quasi *toddle*. North. *Pegge.*

TODDY, *s.* A tree in the East Indies.—The *toddy* tree is not unlike the date or palm. *Sir T. Herbert.*—Liquor extracted from the tree.—The wine, or *toddy*, is got by piercing the tree, and putting a jar or pitcher under, so as the liquor may distil into it. *Sir T. Herbert.*—In low language, a kind of punch, or mixture of spirits and water.

TODERO, **CAPE ST.**, a promontory on the west coast of Sicily. Lat. 37. 57. N. long. 12. 39. E.

TODI, a very lofty mountain of Switzerland, in the canton of Glaris. Its perpendicular elevation is given at 11,700 feet. A road passes over one of its sides, into the country of the Grisons.

TODI, an inland town of Italy, in the State of the Church, near the Tiber. Though small, it is the see of a bishop; 15 miles west of Spoleto, and 58 north of Rome.

TODLAW, the name of a rising ground in England, in the county of Northumberland, near Elsdon, on which are three stone columns, placed in a triangular form 12 feet distant from each other, supposed to have been the sepulchral monument of some eminent Danes. Each column is nearly 12 feet in diameter.

TODMORDEN, a township of England, in Lancashire, being part of the town of Huddersfield; 8½ miles north-north-east of Rochdale. Population 3652.

TODOR NOVI, a small town and castle in the north-west of European Turkey, in Bosnia, on the Save.

TODOS SANTOS, a large and convenient bay on the coast of Brazil, and province of Bahia. It is 37 miles long from north to south; its greatest width from east to west is 27 miles, and its circumference is 36. The eastern part of the bay lies in long. 38. 42. W. lat. 12. 42. S.—It is the name also of several inconsiderable settlements in South America.

TODOS SANTOS, BAY OF, a deep bay on the coast of New California, or New Albion. Point Grajero, its northern promontory, is situated in lat. 31. 43. N. long. 243. 34. E.

TODUS, or **TODY**, in Ornithology, a genus of the order *picæ*, the characters of which are, that the bill is awl-shaped, somewhat depressed, obtuse, straight, and at its base beset with bristles; the nostrils are ovate and small; the feet are formed for walking; and the outer toe is connected at the base to the middle one.

1. *Todus viridis.*—Green, with a red breast: the green *tody*.—Found in the warmer parts of America, and the neighbouring islands.

2. *Todus cinereus.*—Ash-coloured, with the under part yellow: the *tic-tic* of Buffon; the grey and yellow fly-catcher of Edwards.—Found in open places of Surinam and Guiana.

3. *Todus fuscus.*—Ferruginous, under part olive-coloured, spotted with white; the tail ferruginous, and wings crossed with a blackish bar.—Found in South America, less than the green.

4. *Todus ceruleus.*—Bluish, with white throat; temples, throat, and abdomen orange.—Found in America, of the size of the green.

5. *Todus varius.*—Varied with blue, black and green; the bill, head, throat, neck, feet, nails, and tail black; the

margin

TODUS, TRINGA, TROCHILUS, TROGON.

1 *Tod. macrorynchos.* 2 *Trin. leucoptera.* 3 *Trin. pugnax.* 4 *Troc. minimus.*
 5 *Troc. ornatus.* 6 *Troc. juniceus.* 7 *Trog. curucui.*

margin of the tail, and the coverts of the wings, green.—Found in India.

6. *Todus leucocephalus*.—Black, the head subcristated; throat and upper part of the neck white: white-headed tody of Latham.—Found in America.

7. *Todus brachyurus*.—Black, the vertex, neck, back, and short tail black: the short-tailed tody of Latham.—Found in America.

8. *Todus plumbeus*.—Above lead-coloured, hoary, beneath milky; the crown, wing-feathers, and tail black: plumbeous tody of Latham.—Found in Surinam.

9. *Todus obscurus*.—Above brown and black, underneath very sordid white, with pale throat: the dusky tody of Pennant and Latham.—Found in Rhode island.

10. *Todus regius*.—Black and brown; the breast whitish, striated transversely with blackish; the throat and eye-brows white; the abdomen, rump, and tail red; the crest ferruginous at the apex, tipped with black: king tody of Latham.—Found in Cayenne.

11. *Todus paradiseus*.—Crested head black; body white; tail wedge-formed; the intermediate tail-feathers very long: pied bird of paradise of Edwards, and paradise fly-catcher of Latham. It has the following varieties; viz., the tody with wings and tail pale-red; the tody underneath white, the breast from cærulescent to cinereous; and the Brazilian crested tody.—Found in Africa and the island of Madagascar.

12. *Todus ferrugineus*.—Ferruginous-black, underneath ferruginous; wing-feathers marked with a brown bar; cheeks spotted with black and white: the ferruginous-bellied tody of Latham.—Found in Cayenne.

13. *Todus novus*, or *gularis*.—Brown, underneath white; throat white, and breast spotted with brown, above yellow: white-chinned tody of Latham.

14. *Todus platyrhynchos*, or *rostratus*.—Brown-yellowish, beneath yellow, throat whitish; vertex lead-coloured, with a white spot upon it; wings and tail brown; bill very broad: the broad-billed tody of Latham.

15. *Todus macrorhynchos*, or *nasutus*.—Black, bill very broad; chin, sides of the cheeks, abdomen, vent and rump red: the great-billed tody of Latham.

16. *Todus rubecula*.—Cinereous, with orange throat and breast, and white abdomen: the red-breasted tody of Latham.—Native of New Holland.

17. *Todus xanthogaster*, or *flavigaster*.—Brown-cinereous, six inches long; beneath luteous, with pale bill: the yellow-bellied tody of Latham.—Native of New Holland.

18. *Todus cristatus*.—Crest crimson; body brown, spotted with white.—Found in Guinea.

TODWICK, a parish of England, West Riding of Yorkshire; 7½ miles south-east-by-south of Rotherham.

TOE, *s.* [τᾱ, Saxon; teen, Dutch.] The divided extremities of the feet; the fingers of the feet.

Come all you spirits,
And fill me from the crown to the toe, topful
Of direst cruelty.

Shakspeare.

TOE HEAD, a cape of Scotland, on the south-west coast of the island of Lewis, in that part called Harris; 42 miles south-west of Stornoway. Lat. 57. 50. N. long. 7. 5. W.

TOE HEAD, a cape on the south coast of Ireland, in the county of Cork. Lat. 51. 27. N. long. 9. 9. W.

TOELCHUS DE APIE, a district of South America, in the country of Patagonia.

TOELCHUS DE LA CABALLO, a district of South America, in the country of Patagonia.

TOENJOLOKER, a small island in the Eastern Seas. Lat. 5. 30. S. long. 132. 32. E.

TOFO'RE, *adv.* [τοφοριαν, Saxon.] Before. *Obsolete.* It is an epilogue to make plain
Some obscure precedence that hath *tofore* been said.

Shakspeare.

TOFO'RE, *prep.* [τοφορ, Sax.] Before. *Obsolete.*—So shall they depart the manor with the corn and the bacon *tofore* him that hath won it. *Spectator.*

VOL. XXIV. No. 1624.

TOFT, *s.* [*toftum*, low Latin; *toft*, Su. Goth. fundi pars ædificiis occupata; *toft*, Dan. et Scano-Goth. agrorum pars ædificiis vicina. *Serenius.*] A place where a mesuage has stood. *Cowel.*

TOFT, a parish of England, in Cambridgeshire; 5 miles east of Caxton.—2. A hamlet in Cheshire; 1½ mile south of Nether Knutsford.—3. A hamlet in Lincolnshire; 3½ miles west-south-west of Bourne.—4. A parish in Lincolnshire; 4½ miles west of Market Raisen.

TOFT, MONKS, or MONACORUM, a parish of England, in Cambridgeshire; 11 miles south-west of Great Yarmouth.

TOTES, or TOTREES, a parish of England, in Norfolk; 2½ miles south-west of Fakenham.

TOFTS, WEST, a parish of England, in Norfolk; 6½ miles north-north-west of Thetford.

TOFUS. See TOPHUS.

TOGA, in Antiquity, a wide woollen gown, or mantle, without sleeves, used among the Romans, both by men and women.

In process of time, none wore the toga but lewd women: whence that of Horace, in *matrona, ancilla, peccesse togata*. Lib. i. sat. ii. ver. 63.

The toga was of divers colours, and admitted of various ornaments: there was that called *toga domestica*, worn within doors; *toga forensis*, worn abroad; *toga militaris*, used by soldiers, tucked up after the Gabinian fashion; and *toga picta*, or *triumphalis*, wherein the victorious triumphed: this was embroidered with palms; that without any ornaments was called *toga pura*.

Sigonius distinguishes the several togæ, or Roman gowns, into *pura*, or *virilis, candida, pulla, picta, prætexta, trabea, and paludamentum*.

TOGATED, *adj.* [*togatus*, Lat.] Gowned; toged.—They saw a comedy acted in Christ Church-hall;—yet it did not take with the courtiers so well as it did with the *togated* crew. *A. Wood.*

TOGDA, or TODGA, a town or district of Western Africa, in the province of Sigilmessa; 50 miles west of Sigilmessa.

TOGEBAUT, a village of Irak, in Persia, 81 miles north of Isphan.

TOGED, *adj.* [*togatus*, Lat.] Gowned; dressed in gowns.

The bookish theoretic,

Wherein the *toged* consuls can propose

As masterly as he; mere prattle, without practice,

Is all his soldiership.

Shakspeare.

TOGETHER, *adv.* [τοᾱδερ, Saxon.] In company.—We turned o'er many books *together*. *Shakspeare.*—Not apart; not in separation.—That king joined humanity and policy *together*. *Bacon.*—In the same place.

She lodgeth heat and cold, and moist and dry,

And life and death, and peace and war *together*. *Davies.*

In the same time.—While he and I live *together*, I shall not be thought the worst poet. *Dryden.*—Without intermission.—The Portuguese expected his return for almost an age *together* after the battle. *Dryden.*—In concert.—The subject is his confederacy with Henry the Eighth, and the wars they made *together* upon France. *Addison.*—In continuity.

Some tree's broad leaves *together* sew'd,

And girded on our loins, may cover round.

Milton.

TOGETHER *with*. In union with; in a state of mixture with.—Take the bad *together with* the good. *Dryden.*

TOGGENBURG, THE, a long valley in the north of Switzerland, lying between the cantons of Appenzel and Zurich. From these it is separated by mountains, which render it narrow; but in length it exceeds 50 English miles. It is traversed by the river Thur, from which it sometimes takes the name of the Thurthal. It is divided into Upper and Lower.

TOGOMI, a town of Nippon, in Japan; 80 miles north-west of Meaco.

TOGOSOHATCHIE CREEK, a branch of the Oakmulgee river, in the state of Georgia.

TOGSTON, a township of England, in Northumberland; 10 miles south-east-by-south-of Alnwick.

TOHOTCHIE HÖTUN, a town of Chinese Tartary, in the country of Hami; 30 miles north-west of Hami Hotun.

TOIKO, a town of Nippon, in Japan; 80 miles east-south-east of Jedo.

To TOIL, *v. n.* [*tilian*, Saxon; *tuylen*, Dutch.] To labour; perhaps originally, to labour in tillage.

This Percy was the man nearest my soul;
Who, like a brother, *toil'd* in my affairs,
And laid his love and life under my foot. *Shakspeare.*

To TOIL, *v. a.* To labour; to work at.
Toil'd out my uncouth passage, forc'd to ride
The untractable abyss. *Milton.*

To weary; to overlabour.
He, *toil'd* with works of war, retir'd himself
To Italy. *Shakspeare.*

TOIL, *s.* Labour; fatigue.
Not to irksome *toil*, but to delight
He made us. *Milton.*

[*Toile, toiles*, Fr.; *tela*, Lat.] Any net or snare woven or meshed.

She looks like sleep,
As she would catch another Antony
In her strong *toil* of grace. *Shakspeare.*

TO'ILER, *s.* One who toils; one who wears himself. *Sherwood.*

TO'ILET, *s.* [*toilette*, Fr.] A dressing-table.
The merchant from the exchange returns in peace,
And the long labours of the *toilet* cease. *Pope.*

TOILFUL, *adj.* Laborious; full of employment.—The souterly cobbler, and *toilful* labourer. *Florio, Tr.*—Wearisome.

Now the loud tempest of the *toilful* day
Subsides into a calm. *Smollett.*

TOILSOME, *adj.* Laborious; weary.—This were it *toilsome*, yet with thee were sweet. *Milton.*

TOILSOMENESS, *s.* Wearisomeness; laboriousness.

TOJUCA, a river of Brazil, which runs into the Atlantic. Lat. 27. 44. S.

TOKA, a town of Hindostan, province of Aurungabad. It is a place of consequence. The houses are all built of stone, and several storics high. Lat. 19. 25. N. long. 75. 10. E.

TOKAY, a town in the north-east of Hungary, at the confluence of the rivers Bodrog and Theysse. It contains 4200 inhabitants, with 5 churches for as many different sects. It has also two monasteries, and well frequented yearly fairs. This town, though small, has attained great celebrity for its wine, which is among the finest and most expensive in Europe. It owes this superiority partly to the climate, partly to the great care taken in the selection of the grapes, and in the preparation of the wine. The vines are raised on a range of low hills called the Hegyallya, about 20 miles in extent. Throughout this district, the grapes are plucked one by one, after they are perfectly ripe, instead of being gathered green, ripe, and rotten, without distinction, and thrown into the press with the stalks, as in other parts of Hungary. The wine is of three sorts; the essence, or that which runs from the grapes when put into a cask, without artificial pressure. The second sort, called the *Ausbruch*, is obtained by applying a slight pressure to the same grapes; lastly comes the *Maslas*, obtained by greater pressure, but still superior to common wine. The *Ausbruch* and essence are very high priced even at Vienna; but a great part of the wine sold for Tokay is produced in other parts of Hungary. Tokay is situated 114 miles east-north-east of Pest, and 43 north-by-west of Debreczin. Lat. 48. 7. 9. N. long. 21. 24. 5. E.

TOKAY, *s.* [from *Tokay*, in Hungary.] A kind of

wine.—The wine generally known in foreign countries by the name of *tokay*, is a particular kind;—it is here called “ausbruche,” and is made by mixing a portion of luscious half-dried and shrivelled grapes with the common ones. *Townson.*

TO'KEN, *s.* [*taikns*, Goth.; *taen*, Sax.; *teycken*, Dutch.] A sign.—Shew me a *token* for good, that they which hate me may see it. *Psal.*—A mark.—They have not the least *token* or shew of the arts and industry of China. *Heylin.*—A memorial of friendship; an evidence of remembrance.

Here is a letter from queen Hecuba,
A *token* from her daughter, my fair love. *Shakspeare.*

A piece of money current by sufferance, not coined by authority: formerly of very small value; in modern times, for the convenience of change, of higher.—Buy a *token's* worth of great pains. *B. Jonson.*

To TO'KEN, *v. a.* To make known. *Not in use.*

What in time proceeds,
May *token* to the future our past deeds. *Shakspeare.*

TOKEN BESSEYS, a cluster of numerous small rocky islands, lying off the eastern coast of the island of Bouton, in the Eastern seas. They are inhabited. Lat. 5. 40. S. long. 123. 35. E.

TOKENED, *adj.* Having marks or spots.
How appears the fight?—

On our side like the *token'd* pestilence,
Where death is sure. *Shakspeare.*

TOKENHAM, a parish of England, in Wiltshire; 2½ miles south-west of Wotton Bassett.

TOKIS, a town of Nippon, in Japan; 40 miles north-north-east of Meaco.

TOKI-TAO, a small island near the coast of China. Lat. 38. 7. N. long. 120. 39. E.

TOLAGO BAY, a bay on the north-east coast of the northern island of New Zealand, in the South Pacific ocean, discovered by Captain Cook, in the year 1769. It is moderately large, and has from 7 to 13 fathoms, with a clean sandy bottom and good anchorage, and is sheltered from all winds except the north-east. Lat. 38. 22. S. long. 181. 15. W.

TOLAND (John), a writer on subjects of political and religious controversy, was born in the year 1669, in Ireland. Educated in catholic principles, he renounced them before he attained the age of sixteen years, and became a zealous opposer of popery. He completed his education in Scotland, and having spent three years in the university of Glasgow, removed to Edinburgh, where he graduated M.A. in 1690. From Edinburgh he removed to London, and became acquainted with some respectable dissenters, who enabled him to pursue his studies for two years more at Leyden. On his return to London, he visited Oxford, and here he collected materials for the execution of some literary projects: one of which was a dissertation in order to prove that the common narrative of the death of Regulus was a fable. In 1696, he published at London his “Christianity not mysterious; or a Treatise shewing that there is nothing in the Gospel contrary to Reason, or above it; and that no Christian Doctrine can be properly called a Mystery.” This publication caused an alarm among Christians of all denominations, by whom it was regarded as an attempt to overthrow revealed religion, and he was violently persecuted. He then directed his attention to other topics; and in 1698 he published a pamphlet, intitled, “The Militia Reformed,” in which he proposed to substitute that species of armament to a standing army. In the same year he wrote a “Life of Milton,” to be prefixed to an edition of his prose works, and which was also printed separately. In this preface he opposed the notion then prevalent, that the “Icon Basilike” was written by Charles I.; and from the consideration of this imposture, as he pronounced it to be, he digressed to the consideration of the spurious works that had been ascribed to Christ and his apostles. As he was supposed in the discussion of this latter topic to impugn the authenticity of the received canon of Scripture,

Scripture, he drew forth replies from some of the ablest advocates of Christianity, and particularly Mr. (afterwards Dr.) Samuel Clarke.

In 1699, Toland was engaged by the Duke of Newcastle, to publish "Memoirs of Denzil Lord Holles;" and in the following year by Mr. Robert Harley, afterwards Earl of Oxford, then a Whig, to give a new edition of Harrington's "Oceana." When the Act of Succession was passed, on occasion of the death of the Duke of Gloucester, in 1701, he published "Anglia Libera," being an explanation and eulogy of this Act; and he accompanied the Earl of Macclesfield, who was deputed to carry it to Hanover, and had the honour of presenting his book to the Electress Sophia, and of kissing her hand on the occasion. At Berlin, which he visited, he held a dispute, before the Queen of Prussia, with the learned Beausobre, on the authority of the books of the New Testament; an account of which was sent by the latter to the "Bibliothèque Germanique." Upon his return to England, in 1704, he published "Letters to Serena," (meaning the Queen of Prussia,) on the origin and force of prejudices; the history of the soul's immortality among the heathens; the origin of idolatry; and remarks on Spinoza's philosophy. These letters were animadverted upon by Wotton, and by the author of the Divine Legation. In 1708, he published at the Hague, two Latin Dissertations, entitled "Adeisidæmon, sive Titus Livius a Superstitione vindicatus," and "Origines Judaicæ, sive Strabonis de Moyse et Religione Judaica Historia breviter illustrata." In 1718, he published "Nazarenus; or Jewish, Gentile, or Mahometan Christianity," &c., in which he endeavours to shew that the Jewish converts were to observe their own law throughout all generations, &c. Two years afterwards appeared a Latin tract, entitled "Pantheisticon: sive Formula celebrandæ Sodalitatis Socraticæ, &c.;" a work which has subjected its author to the charge of atheism, and in consequence of which he was unjustly accused by Dr. Hare with having composed a profane prayer to Bacchus in his character of Pantheist. In the same year he published his "Tetradymus," on the pillar of cloud and fire that guided the Israelites; on the exoteric and esoteric philosophy of the ancients; on Hypatia, the female philosopher; and a defence of his Nazarenus against Dr. Mangey. To this work he annexed an account of his conduct and sentiments, solemnly professing his preference of the Christian religion, pure and unmixed, to all others.

Toland's life closed on the 11th of March, 1722, in the 53d year of his age. He manifested a considerable degree of resolution and patience during the progress of his illness. His posthumous works were published in 2 vols. 8vo., in 1726, and again in 1747, with an account of his life and writings, by Des Maizeaux. *Biog. Brit.*

TOLATOLA, a town on the north coast of the island of Celebes. It is a considerable place, with a fine harbour, abounding in fish, and surrounded by a plentiful country.

TOLD, *pret.* and *part. pass.* of *tell*. Mentioned; related.

The acts of God to human ears
Cannot, without process of speech, be *told*. *Milton.*

To TOLE, *v. a.* [See the etymology of TOLL.] To train; to draw by degrees; to decoy.

Voices calling me in dead of night
To make me follow, and so *tole* me on,
Through mire and standing pools, to find my ruin. *Fletcher.*

TOLEDO, *s.* [from *Toledo*, in Spain.] A sword of the finest temper.—You sold me a rapier: you told me it was a *toledo*. *B. Jonson.*

TOLEDO, a province in the central part of Spain, in New Castile, situated chiefly to the south of the Tagus. Its area (according to Antillon) is 9240 square miles; its population 371,000. Its surface consists partly of mountain tracks, partly of elevated and extensive plains, the soil of which, however, is frequently sandy or chalky, so that spring water is scarce, and hardly a tree is met with to enliven the prospect or afford a shade. The scarcity of water is a great obstacle to the extension of tillage, and, if the

corn produced be equal, or sometimes more than equal, to the consumption, it is owing to the thinness of the population. But the pasturage is good, at least in particular situations: the flocks of sheep are numerous, and the wool of the best quality. Vines, silk, honey, wax, and fruits, adapted to the temperature, are the farther products of this province.

TOLEDO, an ancient city in the interior of Spain, in New Castile, the chief town of the preceding province, and the see of an archbishop. Toledo is a place of great antiquity, and was successively the seat of government under the Goths, the Moors, and the kings of Castile; 40 miles south-south-west of Madrid, and 290 east-by-north of Lisbon. Lat. 39. 52. 24. N. long. 4. 11. W.

TOLENTINO, a town in the central part of Italy, in the State of the Church, situated on a rising ground, bathed by the river Chiento; 30 miles south-south-west of Ancona, and 92 north-north-east of Rome.

TOLERABLE, *adj.* [*tolerabilis*, Latin.] Supportable; that may be endured or supported.—It shall be more *tolerable* for Sodom in the day of judgment than for that city. *St. Matth.*—Not excellent; not contemptible; passable.—The reader may be assured of a *tolerable* translation. *Dryden.*

TOLERABLENESS, *s.* The state of being tolerable.

TOLERABLY, *adv.* Supportably; in a manner that may be endured.—The pious Christian is the only *tolerably* wise. *Hammond.*—Passably; neither well nor ill; moderately well.—Sometimes are found in these laxer strata bodies that are still *tolerably* firm. *Woodward.*

TOLERANCE, *s.* [*tolerancia*, Lat.; *tolerance*, Fr.] Power of enduring; act of enduring.—Diogenes one frosty morning came into the market-place shaking, to shew his *tolerance*; many of the people came about him, pitying him: Plato passing by, and knowing he did it to be seen, said, "If you pity him indeed, let him alone to himself." *Bacon.*

TOLERANT, *adj.* [*tolerans*, Latin.] Favourable to toleration.—We know and lament his [Gibbon's] eagerness to throw a veil over the deformities of the heathen theology, to decorate with all the splendour of panegyric the *tolerant* spirit of its votaries, to degrade by disingenuous insinuation or by sarcastic satire the importance of revelation, to exhibit in the most offensive features or distortion the weaknesses and the follies of its friends, and to varnish over the cruelties and exalt the wisdom of its merciless and unrelenting enemies. *White.*

To TOLERATE, *v. a.* [*tolero*, Lat.] To allow so as not to hinder; to suffer; to pass uncensured.—We are fully convinced that we shall always *tolerate* them, but not that they will *tolerate* us. *Swift.*

TOLERATION, *s.* [*tolero*, Lat.] Allowance given to that which is not approved.—I shall not speak against the indulgence and *toleration* granted to these men. *South.*

TOLETHORPE, a hamlet of England, in Rutlandshire; 12½ miles east of Oakham.

TOLF, a small town of Italy, in the State of the Church, remarkable on account of its extensive mines of alum; 10 miles east-north-east of Civita Vecchia.

TOLHUYS, a petty town of the Netherlands, in Gelderland, on the Rhine; 6 miles west-south-west of Emmerich.

TOLKEMIT, a small town of West Prussia, near the inlet called the Frische Haff; 12 miles north-east of Elbing, and 44 south-west of Königsberg. Population 1400.

TOLL, *s.* [This word seems derived from *tollo*, Latin; *tol*, Saxon; *tol*, Dutch; *told*, Danish; *toll*, Welsh; *taille*, French.] An excise of goods; a seizure of some part for permission of the rest.—*Toll*, in law, has two significations: first, a liberty to buy and sell within the precincts of a manor, which seems to import as much as a fair or market; secondly, a tribute or custom paid for passage. *Cowel.*—Empson and Dudley the people esteemed as his horse-leaches, bold men, that took *toll* of their master's grist. *Bacon.*—The sound made by the bell being tolled.—The *toll* of a bell is its being lifted up, which causes that sound we call its *toll*. *H. Tooke.*

To TOLL, *v. n.* To pay toll or tallage.—I will buy me a son-in-law in a fair, and *toll* for him: for this, I'll none of him. *Shakspeare*.—To take toll or tallage.

The meale the more yeeldeth, if servant be true,
And miller that *tolleth* takes none but his due. *Tusser*.

To sound as a single bell.

The first bringer of unwelcome news
Hath but a losing office; and his tongue
Sounds ever after as a sullen bell,
Remember'd *tolling* a departed friend. *Shakspeare*.

To TOLL, *v. a.* To make a bell sound with solemn pauses.—Our going to church at the *tolling* of a bell, only tells us the time when we ought to go to worship God. *Stillingfleet*.—To call by sound.

They give their bodies due repose at night:
When hollow murmurs of their evening bells
Dismiss the sleepy swains, and *toll* them to their cells.
Dryden.

To notify by sound.—Slow *tolls* the village clock the drowsy hour. *Beattie*.—To take toll of; to collect.

Like the bee, *tolling* from every flower
The virtuous sweets. *Shakspeare*.

To take away; to vacate; to annul. *A term only used in the civil law; in this sense the o is short, in the former long.*—An appeal from sentence of excommunication does not suspend it, but then devolves it to a superior judge, and *tolls* the presumption in favour of a sentence. *Ayliffe*.—To take away, or perhaps to invite. See To TOLE.—The adventitious moisture which hangeth loose in a body, betrayeth and *tolleth* forth the innate and radical moisture along with it. *Bacon*.

TOLLAND, a parish of England, in Somersetshire; 3 miles north-north-east of Wiveliscombe.

TOLLAND, a county of the United States, in Connecticut, bounded north by Massachusetts, east and south-east by Windham county, south-west by Middlesex county, and west by Hartford county. Population 13,779.

TOLLAND, a village and township of the United States, and capital of Tolland county, Connecticut; 83 miles west-south-west of Boston. Population of the township, 1610.

TOLLAND, a post township of the United States, in Hampden county, Massachusetts; 110 miles west-south-west of Boston. Population 798.

TOLLAND ROYAL, a parish of England, in Wiltshire; 11½ miles south-by-east of Hindon.

TOLLBOOTH, *s.* A prison; a custom-house; an exchange. *Todd*.—Those other disciples were from the fishing-boat; this from the *toll-booth*. *Bp. Hall*.

To TOLLBOOTH, *v. a.* To imprison in a toll-booth.

To these what did he give? why a hen,
That they might *tolbooth* Oxford men. *Corbet*.

TOLLISH, *s.* A vessel by which the toll of corn for grinding is measured.

If thou beest a true man, then quoth the miller,
I swear by my *toll-dish*, I'll lodge thee all night.

Old Ballad.

TOLLENSSEE, a large lake in the north of Germany, in the grand duchy of Mecklenburg. A river of the same name proceeds from this lake, passes by New Brandenburg and Treptow, and flows into the Peene near Demmin.

TOLLER, *s.* One who collects tribute or taxes; a toll-gatherer. *Obsolete*.—One who tolls a bell.

TOLLERDINE, a hamlet of England, in the parish of Warndon, Worcestershire.

TOLLER FRATRUM, or LITTLE TOLLER, a parish of England, in Dorsetshire; 8 miles south-east of Beaminster. It has three annual fairs at Rotter Down.

TOLLER PORCORUM, or GREAT TOLLER, another parish in the above county, adjoining to the foregoing.

TOLLERTON, a hamlet of England, in Gloucestershire, near Minchinghampton.—2. A parish in Nottinghamshire; 4½

miles south-east-by-south of Nottingham.—3. A township in the North Riding of Yorkshire; 4 miles south-south-west of Easingwold. Population 481.

TOLLESBURY, a parish of England, in Essex; 7½ miles east-north-east of Maldon. Population 850.

TOLLESHUNT, DARCY, a parish of England, in Essex; 6 miles north-east-by-east of Maldon. Population 850.

TOLLESHUNT, KNIGHT'S, another parish in the above county; 1 mile north of the foregoing. Population 307.

TOLLGATHERER, *s.* The officer that takes toll.—*Toll-gatherers* are every day ready to search and exact a customary tribute. *Sir T. Herbert*.

TOLLESHUNT, MAJOR, a third parish in the same county; 1 mile west of the preceding. Population 350.

TOLMEZZO, a small town of Austrian Italy, in the Venetian delegation of Udina, with a castle and 3000 inhabitants. It has considerable manufactures of linen; 25 miles north-north-west of Udina.

TOLNA, a county in the south-west of Hungary, lying to the west of the Danube, and to the south of the county of Stuhl-Weissenburg.

TOLNA, a small town of the south-west of Hungary, on the Danube, formerly the capital of the county or palatinate of Tolna; 139 miles south-east of Presburg, and 73 south of Buda.

TOLO BAY, a large bay on the east coast of the island of Celebes, very broad at its entrance, but growing narrower towards the bottom. Lat. 1. 30. to 3. 5. S. long. 121. 18. to 123. E.

TOLOMETA. See PTOLOMETA.

TOLOSA, a town of the north of Spain, in Biscay, and the chief place in the district of Guipuscoa; 13 miles south-south-west of St. Sebastian, and 32 east-by-south of Bilbao.

TOLOSA, LAS NAVAS DE, a great plain in the south-west of Spain, in Andalusia, province of Jaen, remarkable for a victory obtained by the Christians over the Moors in 1212.

TOLPAN, a river of Chili, which runs west, and enters the Vergara.

TOLPIDDLE, a parish of England, in Dorsetshire; 8 miles east-north-east of Dorchester.

TOLSEY, *s.* The same with *tolbooth*. *Dict.*

TOLSKITHY, a hamlet of England, in Cornwall, adjoining to Redruth.

TOLSTONOSKOI, a fort of Asiatic Russia, in the government of Tobolsk, on the Yenisei; 280 miles north-north-west of Turuchansk.

TOLTEN, a river of Chili, which has its rise from a lake. It runs north, and enters the Pacific ocean, after collecting the waters of several other rivers, 7 leagues west of Port Imperial, and forms a bay in lat. 39. 11. S.

TOLU, a seaport town of South America, in the province of Carthagenia, with a harbour open to the Spanish Main; 55 miles south of Carthagenia. Lat. 9. 32. N. long. 75. 30. W.—There is another older settlement of the same name in the same province.

TOLUCA, a regularly built town of Mexico, in the intendancy of Mexico. Lat. 19. 16. N. long. 99. 21. 30. W.

TOLVE, a small town in the south of the kingdom of Naples, province of the Basilicata. Population 3000; 8 miles north-east of Potenza, and 70 east of Salerno.

TOLUIFERA [from *tolu* and *fero*, to bear. Balsam of tolu-tree], in Botany, a genus of the class decandria, order monogynia, natural order of terebintaceæ (*Juss.*)—Generic Character. Calyx: perianth one-leafed, bell-shaped, five-toothed, almost equal, with one angle more remote. Corolla: petals five, inserted into the receptacle; of which four are equal, linear, a little longer than the calyx; the fifth twice as big, obcordate; claw length of the calyx. Stamina: filaments ten, very short. Anthers longer than the calyx. Pistil: germ oblong. Style none. Stigma acute. Pericarp: berry? round, four-celled, four-seeded. Seed single, ovate.—*Essential Character*. Calyx five-toothed, bell-shaped. Petals five, the lowest twice as big, obcordate. Style none.

Toluifera balsamum, or balsam of tolu tree.—This is a tree

tree of large size. The bark is very thick, rough, and of a brown colour. The branches spread out wide on every side. Leaves alternate, oblong-ovate, four inches long, and two inches broad in the middle, rounded at the base, acuminate at the end, smooth, of a light-green colour, on very short strong foot-stalks. The flowers are produced in small axillary racemes or bunches, each on a slender pedicel.—Native of Spanish America, in the province of Tolu, behind Carthagena, whence Dr. Houston sent the seeds to England.

TOLUTATION, *s.* [*toluto*, Lat.] The act of pacing or ambling.—They move *per latera*, that is, two legs of one side together, which is *tolutation* or ambling. *Brown.*

TOLTZ, a small town of Germany, in Bavaria, on the Iser; 26 miles south of Munich. Population 2100.

TOM, or **ТОММ**, a considerable river of Asiatic Russia, which rises in the Altai mountains, in lat. 53. N. on the frontiers of Tartary; and after a course of about 400 miles, falls into the Obi, in lat. 58. N., about 25 miles after passing the city of Tomsk. It furnishes an extraordinary quantity of fish.

TOM, a river of China, which falls into the Heng; 5 miles south of Heng-chan.

TOM'S CREEK, a river of the United States, in New Jersey, which runs between Dover and Shrewsbury.

TOMAHAWK, an island on the east coast of Patagonia; 24 miles north-east of Seal's bay.

TORMAN, or **ТОУМАН**, a kind of imaginary money used among the Persians in the keeping of their accounts, and to facilitate the reduction of money in the payment of considerable sums.

TOMANI, a small kingdom of Western Africa, situated on the northern bank of the river Gambia, to the west of Kantore.

TOMANISI, a town of Nippon, in Japan; 75 miles west of Meaco.

TOMASWALDE, a village of Prussian Silesia, in the circle of Bunzlau, with 8000 inhabitants.

TOMASZOW, a small town in the south of Poland, on the San; 52 miles south-south-east of Lublin.

TOMB, *s.* [*tumba*, low Lat.] A monument in which the dead are enclosed.

Methinks, I see thee, now thou art below,
As one dead in the bottom of a *tomb*. *Shakspeare.*

To **TOMB**, *v. a.* To bury; to entomb.

Souls of boys were there,
And youths, that *tomb'd* before their parents were. *May.*

TOMBA, a river of Peru, which runs into the Pacific ocean, in Lat. 17. 15. S.

TOMBALY POINT, a cape on the western coast of Africa. Lat. 10. 48. N. long. 4. 36. W.

TOMBELAINE, a petty island of France, on the coast of Normandy, in a small bay between Avranches and St. Maloes.

TOMBIGBEE, or **TOMBECKBEE**, a river of the United States, in the Alabama territory, which rises within a few miles of the Muscle Shoals, flows southerly near the line between Mississippi state and the Alabama territory, joins the Alabama 45 miles above the head of Mobile bay, and 75 above the gulf of Mexico, to form the river Mobile.

TOMBLESS, *adj.* Wanting a tomb; wanting a sepulchral monument.

Lay these bones in an unworthy urn,
Tombless, with no remembrance over them. *Shakspeare.*

TOMBOY, *s.* [*Tom* a diminutive of *Thomas*, and *boy*. *Dr. Johnson.*—Verstegan derives it from *tumbe*; [*tumbepe*, Sax, a *dancer*;] hereof we yet call a wench, that skippeth or leapeth like a boy, a *tomboy*.] A mean fellow; oftener a wild coarse girl.

A lady
Fasten'd to an empery, to be partner'd
With *tomboys*, hir'd with that self-exhibition
Which your own coffers yield! *Shakspeare.*

VOL. XXIV. No. 1625.

TOMBSTONE, *s.* A stone laid over the dead; a stone placed in memory of the dead.

The secret wound with which I bleed,
Shall lie wrapt up ev'n in my herse;
But on my *tombstone* thou shalt read
My answer to thy dubious verse.

Prior.

TOMBSTONE, a post village of the United States, in Bertie county, North Carolina.

TOMBUCTOO, a large city of Africa, which has for many centuries been the grand emporium of the interior trade of that great continent. This circumstance, ever since the rise of discovery and commercial enterprise, has excited in Europe an eager desire to visit and establish an intercourse with it. Although, however, it be reached by native caravans from every extremity of the continent, all attempts made during 300 years by European merchants and travellers, have been completely baffled. We have been able to obtain only shreds and fragments of information, and are unable to form any distinct idea of this great emporium of Africa. The latest account of Tombuctoo is that collected by Captain Lyon during his residence in Fezzan. From the description given to him by the merchants, it did not appear so large a town as had been supposed; and some represented it as not more extensive than Mourzouk. It is walled, the houses very low, and with the exception of one or two small streets, built irregularly. Many of the habitations are mere huts, composed of mats. The immense population which some have ascribed to it is accounted for by supposing that they included the Kafilas, who arrived there in great numbers, and being often obliged to remain during the rainy season, erected temporary huts. Cabra, its port, was described as rather a collection of storehouses than a town. The Nile, or Goulbi (*Jolibai*), is there very broad; and though in the dry season it may be forded by a camel, after the rains it becomes deep, rapid, and dangerous. The king is hereditary, but has little power. The trade consists in gold (brought from Jenne), cotton cloths, leather, and arms manufactured in Tombuctoo, and the neighbouring villages. There exists, to the south, a nation of Jews, who, from their colour, and difference in customs from the Moors, have sometimes been supposed to be Christians. Tombuctoo has a language peculiar to itself.

Such are the meagre and imperfect notices with which we must be content, until some fortunate adventurer shall reach this great centre of African trade. It is impossible even to fix its precise position. Our maps usually place it in about lat. 17. N. long. 1. 20. E.; about 1100 miles in the interior, from the mouth of the Senegal.

TOMDORF, a large village of the Prussian states, in Upper Lusatia, near Gorlitz.

TOME, *s.* [French; *τομος*, Gr.] One volume of many; a book.—All those venerable books of Scripture, all those sacred *tomes* and volumes of holy writ, are with such absolute perfection framed. *Hooker.*

TOME, ST., a settlement of Indians in the province of Buénos Ayres, on the west bank of the Uruguay. Lat. 28. 32. S. long. 55. 57. W.

TOMEFOBOI, a lake of Canada, in the county of Richlieu, which extends in length about 8 miles. The banks are beautiful and picturesque, with landscape and woodland scenery as romantic as the most fertile genius of an artist could well imagine. It abounds with excellent fish of many sorts, and is the resort of innumerable wild-fowl of various descriptions, as indeed are all the smaller ones. Many roads lead to the adjacent townships, and also communicate with the main ones, leading into the states of Vermont and New Hampshire.

TOMEION [formed from *τομη*, *section*], a general name used to express any sharp or cutting instrument, used either in surgery or in the mechanic arts.

TOMENTUM, properly signifies flocks or locks of wool, but by botanists is used for that soft downy matter which grows on the leaves of some plants.

TOMENTUM CEREBRI, in Anatomy, the flocculent internal surface of the pia mater, with its waving productions belonging to the intervals of the convolutions.

TOMEPEÑA, a settlement of Quito, in the province of Jaen de Bracamoros. It abounds in tobacco, cotton, honey, &c., and is surrounded with thick woods. Lat. 5. 33. S.

TOMEX [from *tomentum*, the whole plant having a nap upon it], in Botany, a genus of the class dodecandria, order monogynia.—Generic Character. Calyx: involucre universal, five-leaved, five-flowered, permanent; leaflets ovate, very concave, externally tomentose, very blunt, unequal, imbricate; outer smaller. Perianth proper five-leaved, permanent; leaflets lanceolate, externally villose, from upright spreading. Corolla none, unless the proper perianth be considered as such. Nectary; scales five, between the interior stamens, plaited, crenate, smooth, length of the filaments. Stamina: filaments twelve, filiform, unequal; exterior five, length of the perianth; interior seven, shorter. Anthers twin. Pistil: germ three-sided, smooth, superior. Style none. Stigma awl-shaped. Pericarp: berry. Seed one.—*Essential Character*. Involucre four or five-leaved. Calyx none. Corolla five-petalled. Nectary; scales five, between the lower stamens. Berry one-seeded.

1. *Tomex Japonica*, or Japanese tomex.—Floscules corolled; leaves tomentose beneath. Stem arboreous, lofty, branched, more than a fathom in height. Branches and branchlets tomentose, knobbed; the end ones angular.—Native of Japan; where it flowers in October and November.

2. *Tomex tetranthera*, or laurel-leaved tomex.—Floscules corolled; leaves smooth.—Native of China.

3. *Tomex sebifera*, glutinous tomex, or tallow tree.—Floscules apetalous; leaves smooth. The tallow tree is a large tree, with round knobbed branches, covered with a yellow shining bark: the branchlets are covered with a fine down.—Native of China and Cochinchina, in woods.

The wood, which is light and of a pale colour, is used for rafters, studs, &c., in building. The leaves and twigs abound in a viscid juice, and being bruised and macerated in water, render it glutinous; for this reason the natives work up their plaster with it, to render it more tenacious and that it may last the longer. A great quantity of a thick white oil is extracted from the berries, of which common candles are made, resembling spermaceti or wax candles, but having an unpleasant smell.

TOMIAS [τομιας, Gr.], in Antiquity, an appellation given to the sacrifice offered at the ratifications of solemn leagues. It was so called because they cut out the testicles of the victim, and took the oath standing upon them.

TOMIEH, a small and pleasant market town of Upper Egypt; 15 miles south of Siout.

TOMIEH, a large village of Egypt, near Fayoum.

TOMINA, a district or province of South America, in the viceroyalty of Buenos Ayres. It is about 18 leagues south-east of La Plata, and borders eastward on the Chiriguano, a nation of independent Indians.

TOMINA, the capital of the above province, is an inconsiderable place; 55 miles east from Chuquisaca.

TOMINIE BAY, or **GOONUNG TELLU BAY**, a great bay which indents the eastern coast of the island of Celebes. It abounds in rocky islands and rocky shoals.

TOMISCANING, **TOMMIS KAMAIN**, or **TEMISCAMING**, a lake of North America, which sends its waters south-eastward, through Ottawas river, into lake St. Francis, in St. Lawrence river.

TOMISVAR, a small seaport of European Turkey, in Bulgaria, situated on an arm of the Black sea. It has a harbour with a little trade, and is supposed to be the ancient Tomi, the scene of Ovid's exile; 40 miles east-by-north of Hirshova.

TOMMANAMAH, an eastern branch of Lewis's river, in North America. It is about 150 yards wide; its banks for the most part formed of solid perpendicular rocks, rising to a great height.

TOMOGUY, an island in the Eastern seas, about two miles round, shaped like a horse-shoe, the hollow forming a bay. Three-fourths of this island are occupied by a hill about 150 feet high, abounding in fruit and roots. Lat. 0. 15. S. long. 127. 4. E.

TOMORINDSCHA, a small town of European Turkey, in Macedonia, situated in the mountains between the towns of Prespa, Dibra, and Elbassan. It is inhabited by Albanians.

TOMOS, a village and mountain pass between Transylvania and Wallachia, to the south of Cronstadt. It is defended by a redoubt.

TOMPKINS, a county of the United States, in New York, formed in 1817, from a part of the counties of Seneca and Cayuga, bounded north by Seneca and Cayuga counties, east by Courtland county; south by Tioga county, and west by Seneca lake. Chief town, Ithaca.

TOMPKINS, a post township of the United States, in Delaware county, New York, on the Delaware; 27 miles south-west of Delhi, and 100 south-west of Albany. Population 996.

TOMSEH, a village of Diarbekir, in Asiatic Turkey, on the Euphrates; 70 miles west of Diarbekir.

TOMSK, a considerable city of Asiatic Russia, capital of an extensive district. It is situated on the right bank of the Tom, about 25 miles from its junction with the Obi. Within some years, Tomsk is stated to have been erected into the capital of a government, which comprehends a great part of the countries situated on the Obi, and most of those on the Yenisei. Lat. 56. 30. N. long. 84. 10. E.

TOMTIT, *s.* A titmouse; a small bird.—You would fancy him a giant when you looked upon him, and a *tomtit* when you shut your eyes. *Spectator*.

TOMU, a seaport of Nippon, in Japan; 115 miles south-west of Meaco.

TON, or **TUN**. In the names of places, are derived from the Saxon *tun*, a *hedge* or *wall*, and this seems to be from *sun*, a *hill*, the towns being anciently built on hills for the sake of defence and protection in times of war. *Gibson's Camden*.

TON, *s.* [tonne, Fr. See **TUN**.] A measure or weight.—Spain was very weak at home, or very slow to move, when they suffered a small fleet of English to fire, sink, and carry away, ten thousand *ton* of their great shipping. *Bacon*.

TON, or **TONCHUN**, a city of China, of the second rank, in Yunan. Lat. 26. 39. N. long. 100. 23. E.

TONAGAYON BAY, a bay in Lake Ontario, near the east end of Amherst island.

TONALA, a town of Mexico, in the intendency of Guadalupe. There is another inconsiderable settlement of the same name in Valladolid. There is also a river of the same name in the province of Tabasco.

TONAMY, a town of Nippon, in Japan; 155 miles north-west of Jedo.

TONAYAN, a settlement of Mexico, in the intendency of Vera Cruz, containing 273 Indian families.

TONDA, or **TONRA**, sometimes called **KHUASPORE TONDA**, an ancient town of Bengal, situated opposite to the ruins of Gour, but divided from them by the Bogarutty river.

TONDELO, a river of Mexico, which runs into the bay of Campeachy, and is navigable for barges of from 50 to 60 tons.

TONDERN, a district or bailiwick of Denmark, in the western division of the duchy of Sleswick, contains upwards of 40,000 inhabitants.

TONDERN, a small town of Denmark, in the duchy of Sleswick, the capital of the above district. It is tolerably well built. Population 2600; 37 miles south-west of Sleswick.

TONDI, a seaport town of the south of India, province of the Carnatic, district of Marawas. Lat. 9. 43. N. long. 76. 5. E.

TONDIMAN, a small district of the south of India, province of the Carnatic, situated about the 10th degree of northern latitude, and between the 78th and 79th degrees of eastern longitude. This district takes its name from its zemindar

mindar or possessor, who is frequently mentioned in Orme's history as one of the British allies.

TONDERAY, one of the Shetland islands, about six miles in circumference, near the west coast of Shetland. Lat. 60. 9. N. long. 1. 30. W.

TONE, a river of England; in Somersetshire, which rises about 6 miles north of Wiveliscombe, passes by Taunton, and runs into the Parrot, near Petherton Park, between Langford and Bridgewater.

TONE, a township of England; in Northumberland; 12 miles north-by-west of Hexham.

TONE, *s.* [*ton*, Fr.; *tonus*, Lat.] Note; sound.—The strength of a voice or sound makes a difference in the loudness or softness, but not in the *tone*. Bacon.—Accent; sound of the voice.

Palemon replies;
Eager his *tone*, and ardent were his eyes.

Dryden.

A whine; a mournful cry.
Made children, with your *tones*, to run for't,
As bad as bloody-bones, or Lunsford.

Hudibras.

A particular or affected sound in speaking; elasticity; power of extension and contraction.—Drinking too great quantities of this decoction may weaken the *tone* of the stomach. *Arbutnot.*

TONE is a property by which it comes under the regulation of grave and acute. See SOUND.

To TONE, *v. a.* To utter in an affected tone.—Shutting the eyes, distorting the face, and speaking through the nose, cannot so properly be called preaching, as *toning* of a sermon. *South.*

TONED, *adj.* Having tone.

An animal ovation! such as holds
No commerce with our reason, but subsists
On juices, through the well-toned tubes well strain'd.

Young.

TONG, a township of England, West Riding of Yorkshire; 4 miles east-north-east of Bradford. Population 1505.

TONG, a city of China, of the second rank, in Pe-che-lee, on the river Peiho. Extensive magazines are kept here, containing grain for the supply of the capital during several years; 10 miles east of Peking. Lat. 40. 56. N. long. 116. 20. E.

TONG, a city of China, of the second rank, at the mouth of the Yangtsekiang. Lat. 32. N. long. 120. 19. E.

TONG, a city of China, of the second rank, in Chan-si. Lat. 34. 32. N. long. 109. 30. E.

TONG, *s.* The catch of a buckle. This word is usually written *tongue*, but, as its office is to hold, it has probably the same original with *tongs*, and should therefore have the same orthography.

Their hilts were burnish'd gold, and handle strong
Of mother pearl, and buckled with a golden *tong*. *Spenser.*

TONGA ISLANDS. See FRIENDLY ISLANDS.

TONGATABOO ISLAND, one of the Friendly islands, in the South Pacific ocean, first discovered by Tasman, who called it Amsterdam; seen by Captain Cook in the year 1773, and visited by him again in 1777. Tongataboo or Tonga is about 60 miles in circuit, somewhat oblong, though by much the broadest at the east end, and its greatest length from east to west. The inhabitants usually go unarmed, but they have weapons of a very formidable nature, their spears being barbed in a dangerous manner, and their clubs very curiously carved. Their war weapons consist of the bow and arrow, spear and club. Their canoes are numerous, and variously constructed; those used for the ordinary purposes of ferrying and fishing are small, but dexterously managed; and their war boats, which possess much regularity of form, are very large and commodious. One of these was launched during the short period of the Union's stay, and was reported to be capable of carrying 300 men. Lat. 21. 11. S. long. of the middle of the island, 175. W.

TONGE, a village of England, in Kent; 1½ mile east of Milton. Here are the ruins of a castle, which is said to have been built in the year 450 by Hengist the Saxon general,

pursuant to a grant from Vortigern, of as much ground to build a seat or castle on, as he could inclose with an ox's hide, which he therefore cut into small thongs.

TONGE, a hamlet of England, in Lancashire; 2 miles north-east of Great Bolton. Population 1226.

TONGE, a township of England, in the same county; 5½ miles north-north-east of Manchester. Population 1402.

TONGE, a hamlet of England, in Leicestershire; 5½ miles north-east of Ashby-de-la-Zouch.

TONGE, a parish of England, in Salop; 4 miles east-by-south of Shiffnall. Population 468.

TONGE, OLD and NEW, two villages in the south of Holland, in the island of Overflakke; the former containing 1400, the latter 600 inhabitants; 4 miles south-east of Sommeldyk.

TONGE CASTLE, a parish of England, in the county of Salop; 3 miles from Shiffnall.

TONGELRE, an inland village of the Netherlands, in North Brabant. Population 800; 2 miles north-east of Eyndhoven, and 18 south-south-east of Bois le Duc.

TONGERLOO, a petty town of the Netherlands; 22 miles west-south-west of Antwerp. Population nearly 1000.

TONGERN, or TONGRES, an inland town of the Netherlands, in the province of Limburg, situated on the small river Jaar. Lat. 50. 47. 7. N. long. 5. 27. 43. E.

TONG-GIN, a city of China, of the first rank, in Koeichoo, on the borders of Houquang; 850 miles south-south-west of Peking. Lat. 27. 39. N. long. 108. 37. E.

TONGHAM, a township of England, in Surrey; 4 miles north-east-by-east of Farnham.

TONGHO, an extensive and fertile district of the Birman empire, constituting the principality of one of the king's sons. It is situated about the 19th degree of northern latitude, and between the 96th and 98th degrees of eastern longitude.

TONGHO, a celebrated fortress, and capital of the above district. Lat. 18. 50. N. long. 96. 40. E.

TONGKEEL, one of the Sooloo islands. Lat. 6. 2. N. long. 121. 50. E.

TONG-KIN-TSIN-FOU, a town of Corea; 48 miles west-south-west of King-ki-tao.

TONG-LAI, a town of Corea; 70 miles south of Koang-tcheou.

TONG-LAN, a town of China, of the second rank, in Quang-see. Lat. 24. 27. N. long. 106. 26. E.

TONGOI-PATCHI, a town of Tibet; 30 miles north of Oramtchi Hotun.

TONG-PIN, a city of China, of the second rank, in Shan-tung, on the river Ta-tsin; 190 miles south of Peking. Lat. 36. 6. N. long. 115. 56. E.

TONG-TCHANG, a city of China, of the first rank, in Shan-tung, on the grand canal. It carries on a great trade, and abounds in grain and fruits; 212 miles south of Peking. Lat. 36. 34. N. long. 115. 40. E.

TONG-TCHOUEN, a city of China, of the second rank, in Sechuen. Lat. 31. 6. N. long. 114. 44. E.

TONG-TCHOUEN, a city of China, of the first rank, in Sechuen. Lat. 26. 20. N. long. 103. 2. E.

TONG-TCHUEN, a town of Corea; 85 miles east-north-east of King-ki-tao.

TONGLAND, or TONGUELAND, a parish of Scotland, in the stewardry of Kirkcudbright, of a triangular figure; 8 miles long and 4 broad. Population 802.

TONGOI, a river of Chili, in the province of Coquimbo, which is small and shallow. It rises in the Cordillera, and runs south into the Pacific ocean. At its mouth is a port. Lat. 30. 17. S.

TONGORA, a small unsheltered port of Peru, and of shallow bottom, on the coast of the province of Pieura; 5 leagues west-south-west from Sechura. Lat. 5. 41. S.

TONGS, *s.* [*tanx*, Saxon; *tang*, Dutch. An instrument by which hold is taken of any thing; as of coals in the fire.

Another did the dying brands repair
With iron *tongs*, and sprinkled oft the same
With liquid waves.

Spense
TONGUE;

TONGUE, a parish of Scotland, in Sutherland; 11 miles long, and nearly of the same breadth. Population 1493.

TONGUE, *s.* [tʊnz, Saxon; *tonghe*, Dutch; from *dingen*; Wachter notices an assertion that the Latin *lingua*, was anciently *dingua*. Others cite the Gr. *φθόγγος*, a voice, a sound, from *φθεγγωαι*, to speak.] The instrument of speech in human beings.

My conscience hath a thousand several *tongues*,
And ev'ry *tongue* brings in a sev'ral tale,
And ev'ry tale condemns me for a villain. *Shakspeare.*

The organ by which animals lick.
They hiss for hiss return'd with forked *tongue*
To forked *tongue*. *Milton.*

Speech; fluency of words.
First in the council-hall to steer the state,
And ever foremost in a *tongue* debate. *Dryden.*

Power of articulate utterance.
Parrots, imitating human *tongue*,
And singing birds in silver cages hung. *Dryden.*

Speech, as well or ill used.—Give me thy hand; I am sorry I beat thee: but, while thou liv'st, keep a good *tongue* in thy head. *Shakspeare.*—A language.

With wondrous gifts endu'd,
To speak all *tongues* and do all miracles. *Milton.*

Speech as opposed to thoughts or action.—Let us not love in word, neither in *tongue*, but in deed and in truth. 1 *John.*—A nation distinguished by their language. *A scriptural term.*—Every kindred, and *tongue*, and people, and nation. *Rev.*—A bay. [*tang*, Swed.] The Lord shall destroy the *tongue* of the Egyptian sea. *Isaiah.*—A small point: as, the *tongue* of a balance.—To hold the **TONGUE**. To be silent.

'Tis seldom seen that senators so young
Know when to speak, and when to hold their *tongue*.
Dryden.

To **TONGUE**, *v. a.* To chide; to scold.
But that her tender shame
Will not proclaim against her maiden loss,
How might she *tongue* me. *Shakspeare.*

To strike a wind instrument with the tongue.
To **TONGUE**, *v. n.* To talk; to prate.
'Tis still a dream; or else such stuff, as madmen
Tongue, and brain not. *Shakspeare.*

TONGUED, *adj.* Having a tongue.—*Tongu'd* like the night crow. *Donne.*

TONGUELESS, *adj.* Wanting a tongue; speechless.—What *tongueless* blocks, would they not speak? *Shakspeare.*—Unnamed; notspoken of.
One good deed, dying *tongueless*,
Slaughters a thousand waiting upon that. *Shakspeare.*

TONGUEPAD, *s.* A great talker.—She who was a celebrated wit at London, is, in that dull part of the world, called a *tonguepad*. *Tatler.*

TONGUE RIVER, a river of North America, which, after a course of about 500 miles, falls into the Yellowstone.

TONGUETHWAITE, a hamlet of England, in the parish of Westward, Cumberland.

To **TONGUETIE**, *v. a.* To render unable to speak.—That extreme modesty, and bashfulness, which ordinarily *tongueties* us in all good company. *Goodman.*

TONGUETIED, *adj.* Having an impediment of speech.—They who have short tongues, or are *tonguetied*, are apt to fall short of the applause of the tongue to the teeth, and oftener place it on the gums, and say *t* and *d* instead of *th* and *dh*; as moder for mother. *Holder.*—Unable to speak freely from whatever cause.

Love, and *tonguetied* simplicity,
In least speak most to my capacity. *Shakspeare.*

TONIATA, a small island of the St. Lawrence. Lat. 44. 30. N. long. 75. 53. W.

TONIBAI, a port of Mexico, in the province of Sonora, very dangerous, and of difficult access.

TONIC, or **TONICAL**, *adj.* [*tonique*, Fr.; *τενω*, Gr.] Being extended; being elastic; relating to tones or sounds.—To the judicious performance upon this solemn instrument, [the organ,] my observations now naturally recur. In point of *tonic* power, I presume it will be allowed preferable to all others. *Mason.*—*A ternu not at present used.*

TONICS, *s.* Medicines to strengthen the tone.
TONIC [*τονικός*, Gr., formed from *τενω*, to stretch], in Medicine, is applied to a certain motion of the muscles, in which the fibres being extended, continue their extension to a certain degree. It is also applied to such medicines as were supposed to produce this tonic state.

TONIKAKY, an island in the Eastern seas, near the north coast of Celebes. Lat. 5. 31. N. long. 99. 31. E.

TONISKA, a village of Irkoutsk, in Asiatic Russia; 40 miles east-south-east of Stretensk.

TONK RAMPOORA, a town of Hindostan, province of Ajmeer, formerly belonging to the Mahrattá chief Jeswunt Row Holkar. Lat. 26. 12. N. long. 75. 38. E.

TONNA. See **GRAFENTOUNA**.
TONNANCOUR, or **POINT DU LAC**, a seigniory of Lower Canada, in the county of St. Maurice, with Lake St. Peter, and the St. Lawrence in front.

TONNAGE, *s.* A custom or impost due for merchandise brought or carried in tons from or to other nations, after a certain rate in every ton. *Cowel.*

TONNAY BOUTONNE, a small town in the west of France, department of the Lower Charente, situated on the small river Boutonne. Population 900; 9 miles west of St. Jean d'Angely.

TONNAY CHARENTE, a small town in the west of France, department of the Lower Charente, situated on the right bank of the river of that name; 4 miles east of Rochefort.

TONNEINS, a considerable town in the south-west of France, department of the Lot and Garonne, situated on the Garonne, and containing upwards of 6000 inhabitants; 55 miles south-east of Bourdeaux.

TONNERRE, MONT, a great mountain in the west of Germany, on the left bank of the Rhine; 10 miles from Worms, and 25 from Mentz. It is nearly 2300 feet above the level of the Rhine, and has, about half way up its side, a village called Donnersfield.

TONNERRE, a town in the central part of France, department of the Yonne, situated on the Armencon. It is still surrounded with a rampart, and has a population of 4400; 20 miles east-by-north of Auxerre.

TONNEWANTA, a river of the United States, in New York, which runs west, and enters Niagara river, opposite Grand island; 10 miles north of Black Rock. It is 90 miles long, and is navigable for boats 30 miles.

TONNINGEN, a small town of Denmark, in Sleswick, near the mouth of the Eyder. It contains only 2000 inhabitants, but has become, since the termination of the canal of Kiel, a place of uncommon activity, being the harbour where all vessels stop at the western extremity, as Kiel at the eastern; 46 miles east-by-north of Heligoland, and 30 west-south-west of Sleswick. Lat. 54. 19. 25. N. long. 8. 48. 45. E.

TONNOMAIA, one of the smaller Friendly Islands; 11 miles south of Annamooka.

TONORA, a small river of the Caraccas, which runs east, and enters the Guanipa.

TONORIUM, the Roman orators, though not constantly accompanied by a flute, had their voices frequently regulated by an instrument which Quinctilian calls a *tonorium*, Cicero, a *fistula*, and Plutarch, *σφύριγγον*, or *syrinx*, which is the same thing; and this instrument served as a kind of pitch-pipe. Both Cicero (*De Orat. lib. iii*), and Plutarch (*In Vit. C. Gracch.*), relate the well-known story of the voice of the furious tribune, Caius Gracchus, being brought down to its natural pitch, after he had lost it in a transport of passion, by means of a servant placed behind him with one

of those instruments. Cicero tells us that this *tibicen*, with his flapper, qui staret occulte post ipsum, and was not seen by the people, does not confine his employment to appeasing the passion of his master; he was, upon occasion, to incite it: "Qui infaret celeriter eum sonum, quo illum aut remissum exciterat aut a contentione revocaret." It is not easy, however, to conceive of what use this expedient could be, unless rhetorical tones were regulated by those of music.

TONORU, an ancient city of the south of India, province of Mysore. Some parts of the fortification still remain.

TONQUIN. See TUNQUIN.

TONROQUINO, a small river of Guiana, which runs north, and enters the Paraguay.

TONSBERG, a town of Norway, in the province of Aggerhuus, situated on a bay of the Baltic; 42 miles south of Christiania. Lat. 59. 23. N. long. 10. 12. E.

TONSE, a river of Hindostan. It rises in the mountains of Bogilcund, and running to the east, falls into the Ganges below Allahabad.

TONSELLA, in Botany, a genus of the class triandria, order monogynia.—Generic Character. Calyx: perianth one-leaved, bell-shaped, permanent, five-parted; segments ovate, acute. Corolla: petals five, ovate, rude, permanent, inserted into the receptacle, longer than the calyx. Nectary pitcher-shaped, quite entire, surrounding the germ. Stamina: filaments three, inserted into the inner wall of the nectary, after flowering spreading. Anthers roundish. Pistil: germ roundish, surrounded by the nectary. Style short. Stigma simple. Pericarp: berry spherical, one-celled, accompanied by the calyx and corolla. Seeds four.—*Essential Character*. Calyx five-parted. Petals five. Nectary pitcher-shaped. Berry one-celled, four-seeded.

1. *Tonsella scandens*, or climbing *tonsella*.—Leaves quite entire, acuminate. This is a tree with round branches, hairy at top, and covered with a purplish somewhat rugged bark.—Found in Guiana, and the island of Trinidad.

2. *Tonsella Africana*, or African *tonsella*.—Leaves obtuse, glandular-toothed.—Native of Guinea.

TONSIL, *s.* [*tonsille*, Fr.; *tonsille*, Lat.] *Tonsils* or almonds are two round glands placed on the sides of the basis of the tongue. *Quincy*.

TONSILE, *adj.* [*tonsilis*, Lat.] That may be clipped.

On the green,

Broider'd with crisped knots, the *tonsile* yews
Wither and fall.

Mason.

TONSURE, *s.* [*tonsura*, Lat.] The act of clipping the hair; the state of being shorn.—The vestals, after having received the *tonsure*, suffered their hair to come again, being here full grown, and gathered under the veil. *Addison*.—The tonsure was anciently a mark of infamy in France; insomuch that, when they would render any prince incapable of succeeding to the crown, they cut off his hair and shaved him.

TONTI, or TONTY, a river of Canada, which runs into Lake Erie, not far from the Orwell.

TONTYNE, *s.* [from *Tonti*, an Italian, who is said to have first formed the scheme of these life-annuities.] Annuity on survivorship. *Chambers*.

TON-TING, a large lake of China, in the province of Houquang, about 60 miles long and from 17 to 25 broad. It is connected at its southern point with the great river Yang-tse-kiang; and two other great streams in the province pass through it.

TONTORAL, a cape on the coast of Chili. Lat. 27. 27. S.

TONVORE, a cape of Scotland, on the north-west of the island of Ilay. Lat. 55. 51. N. long. 6. 27. W.

TONUSCO, a river of New Granada, in the province of Antioquia, which runs east to enter the Cauca.

TONY, *s.* A simpton: a ludicrous word.

A companion fit

For all the keeping *tonies* of the pit.

Dryden.

TONY'S ISLANDS, a cluster of small islands in the
Vol. XXIV. No 1625.

Eastern Seas, near the south-west coast of the island of Celebes. Lat. 5. 31. S. long. 119. E.

TOO, *adv.* [to, Sax.] Over and above; overmuch; more than enough. It is used to augment the signification of an adjective or adverb to a vicious degree.

Your father's rough and stern,

His will *too* strong to bend, *too* proud too learn. *Cowley*.

It is sometimes doubled to increase its emphasis; but this reduplication always seems harsh, and is therefore laid aside.—Oh, that this *too too* solid flesh would melt. *Shakspeare*.

Likewise; also.

See what a scourge is laid upon your hate;

And I, for winking at your discords *too*,

Have lost a brace of kinsmen.

Shakspeare.

TOOBAE, some very low islets connected by a reef in the North Pacific Ocean, and about five leagues north of Bola-bola, one of the Society islands.

TOOBIGAN, a small island in the Sooloo Archipelago. Lat. 6. 14. N. long. 120. 44. E.

TOOBOUAI ISLAND, one of the Society islands, in the South Pacific ocean. Its greatest extent, in any direction, exclusive of the reef, is not above five or six miles. According to the information of some men whom Captain Cook saw in the canoes, their island is stocked with hogs and fowls, and produces the several roots and fruits that are found at the other islands in this part of the Pacific ocean. The language is the same as that spoken at Otaheite. Lat. 23. 25. S. long. 210. 37. E.

TOOFOA, one of the Friendly islands, visible from An-namooka, by means of its height, and a volcano, which almost constantly emitted smoke, and sometimes threw up stones. Its shores are steep, and covered with black sand. The rocks are hollow, and in some places of a columnar form. The mountain, except in spots that appear to have been recently burned, is covered with verdure, shrubs and trees. The coast is about five leagues in circuit.

TOOK, the preterite, and sometimes the participle passive of *take*.

Thy soldiers

All levied in my name, have in my name

Took their discharge.

Shakspeare.

TOOKE (John Horne), the third son of a poulterer in Newport-market, was born in Newport-street, Westminster, in June, 1736, and having spent some years at Westminster and Eton schools, was admitted into St. John's college, Cambridge, in 1755, where he took the degree of B. A. After officiating for some time as an usher in a school at Blackheath, he took deacon's orders, in compliance with the wishes of his father, and served as a curate in Kent. But the law being the object of his choice, he entered in the Inner Temple in 1756. Nevertheless, in 1760, he was ordained as a priest, and inducted into the chapelry of New Brentford, purchased for him by his father. But as he entered very deeply and warmly into the political disputes of the period in which he lived, he ceased officiating as a clergyman, and took an active part in the transactions of that period. When Wilkes returned from his exile to France, and became a candidate for the representation of the county of Middlesex, Horne was his zealous adherent, and was thought to have contributed to the success of his election. It is said, that it was by his instigation that Mr. Beckford, lord mayor in 1770, made a verbal reply to his Majesty's answer to a remonstrance from the city of London; and that he drew up that reply as inscribed on the pedestal of Mr. Beckford's statue in Guildhall. He is regarded also as the principal founder of the "Society for supporting the Bill of Rights," of which he was an active member; and by his exertions Bingley, a printer, who had been committed to prison by lord Mansfield for refusing to appear for the purpose of answering to interrogatories, was at length liberated. In the years 1770 and 1771, a quarrel took place between Wilkes and Horne, in the prosecution of which the

K

latter

latter lost popularity, without incurring any just charge against his political integrity. In 1771, he took his degree of M. A., though opposed by some members, among whom was Mr. Paley. To him it was owing, that the publication of the debates in the House of Commons has been continued without interruption. At this time he had a literary controversy with Junius, in which he was thought to have the advantage. In 1773, he threw off his clerical garb, and proposed to resume his legal studies with a view to the profession. But at this time an incident occurred, which was of material importance with respect to his future fortune. Mr. Tooke of Purley, in Surrey, had ineffectually opposed an inclosure bill, which was likely to be detrimental to his estate, and as this bill was passing rapidly through the Commons, he applied to Horne for advice. After some deliberation he proposed to Mr. Tooke a remedy, which was to commence with a libel on the Speaker, which he would undertake to write. Accordingly he stated the case, accompanying the statement with some severe reflections, and sent it to the Public Advertiser. When the paragraph was next day reported to the House and read, it occasioned great irritation, and a motion was made for calling the printer before the House. Mr. Horne, as the acknowledged writer, was called to the bar; he immediately obeyed the summons, and in a respectful manner confessed, that through hatred to oppression, and zeal to serve a friend, he had been urged beyond the bounds of discretion. After a long debate, he was remanded from the bar in custody of the serjeant-at-arms, and upon being brought up some days after, he was, by the good offices of some friends, discharged upon paying his fees. His purpose was answered: time was thus given for reconsidering the obnoxious bill, and the exceptionable clauses were either altered or withdrawn.

Mr. Horne was an ardent opposer of the American war; and when the news of the battle of Lexington arrived, the Constitutional Society voted 100l. to the widows and children of the Americans who had fallen in it; and the resolution to this purpose, printed in the public papers, was signed John Horne. In this resolution, the sufferers were denominated "Englishmen, who, preferring death to slavery, were, for that reason only, inhumanly murdered by the King's troops at Lexington." For this paragraph, he was prosecuted, and tried at Guildhall, in July, 1777, and pleaded his own cause. Notwithstanding the spirit and acuteness with which he defended himself, he was sentenced to twelve months' imprisonment, and to pay a fine of 200l. In the course of this trial, he first appeared before the public as a grammatical critic; and in 1778, he printed a letter to Mr. Dunning, which discussed the force and meaning of certain conjunctions and prepositions employed in his indictment, and which was the foundation of a larger work afterwards published. In the following year, he was disappointed in his expectation of being called to the bar; for though he was eminently qualified for the profession to which he aspired, he was rejected under the pretext of his being still a clergyman. This he felt as a very grievous disappointment, and with a mind not a little exasperated, he devoted himself to politics. Accordingly, in 1780, he published a pamphlet, entitled "Facts," keenly reviewing lord North's administration, and containing two chapters on Finance, supplied by Dr. Price. Soon after the termination of the American war, parliamentary reform became a popular topic; and in 1782, Horne published a letter to Mr. Dunning (lord Ashburton), under the title of "A Letter on Parliamentary Reform, containing the Sketch of a Plan;" of which we shall merely say, that he disapproved of universal suffrage. Mr. Pitt was at this time a fellow-advocate in the same cause. Horne now avowed himself the friend of Mr. Pitt, in opposition to Mr. Fox, whose coalition with lord North he very much disapproved. In 1786, Mr. Horne, having assumed the name of his friend Mr. Tooke, published his "*Epica Pteroaenta*, or *Diversions of Purley*," so called from the country residence of his friend. Of this work, founded on his letter to Mr. Dunning already mentioned, the most prominent subject of discussion was the deriva-

tion of conjunctions and prepositions from verbs and nouns. This work attracted the notice of philologists, and gave to the author a high rank among writers on the philosophy of language. Politics, however, diverted his attention from subjects of this nature; and in 1788, he published "Two Pair of Portraits," the figures in which were the two Pitts, and the two Foxes, of the past and present generations. The first name was strongly illuminated, and the latter thrown into a dark shade. He might probably, however, at a later period, have adopted a different mode of colouring. In 1790, he opposed Mr. Fox and lord Hood at the election of representatives in parliament for Westminster; and professing himself unconnected with party, and determined neither to open a house, nor to give away a single cockade, he polled near 1700, without solicitation or corruption. On occasion of his defeat, he presented a petition to the House, in support of which he freely indulged himself in very bitter sarcastic invectives. In the year 1794, he was brought to a trial, under the charge of high treason. During the progress of this trial, he maintained the most perfect composure and self-possession; and as he had little to apprehend after the previous acquittal of Hardy, the jury brought in their verdict of "not guilty," after being only eight minutes out of court. In consequence, however, of this trial, he became more cautious in his conduct, and declined the visits at Wimbledon, where he resided, of persons known to be violent in their principles and conduct. Upon the death of Mr. Tooke, of Purley, he inherited, in consequence of a previous agreement, half of the property left by that gentleman to his nephew. In 1796, he offered himself again as a candidate for Westminster, and suffered a second defeat, after having polled 2819 votes. He was chargeable, however, with some inconsistency in the acceptance of a seat, in 1801, for the noted borough of Old Sarum, on the nomination of lord Camelford. Some attempts were made to exclude him, under the plea of his being a clergyman; but a compromise being proposed by the minister, Mr. Addington, by determining the future ineligibility of persons in holy orders, he retained his seat till the dissolution of parliament. Having published by subscription a second edition, in 4to., of his "*Diversions of Purley*," a second part in 4to., appeared in 1805, in which he chiefly adverted to etymology, and to adjectives and participles, and their formation, intermixing satirical strictures upon some literary characters of note. From this time his bodily infirmities, occasioned by a disorder to which he had been long subject, increased, though he retained his faculties in full vigour, and continued to enjoy life. His temper was little affected by mental or physical evil, and "no one more strenuously maintained," says one of his biographers, "the balance of good in human existence."—"His latter days," says the same writer, "were cheered by easy circumstances, and the attention of many friends, whom he entertained with great hospitality, and amused by his conversation, which was singularly pleasant and lively. With an unaltered brow, he could be either facetious or sarcastic, and his features seldom disclosed what was passing within. His manners were polished, and his appearance was that of a gentleman of the old school." His life at length terminated by tedious and continued decay, in March, 1812, in the 77th year of his age. As he was never married, his property was bequeathed to his natural children. *Stephen's Memoirs of John Horne Tooke.*

TOOL, s. [tol, tool, Sax.] Any instrument of manual operation.

Arm'd with such gardening *tools* as art, yet rude,
Guiltless of fire, had formed.

Milton.

A hireling; a wretch who acts at the command of another.
He'd choose
To talk with wits in dirty shoes;
And scorn the *tools* with stars and garters,
So often seen caressing Chartres.

Swift.

TOOLEY, a township of England, in Leicestershire; 5 miles north-east-by-north of Hinchley.

TOOLJAPOOR,

TOOKE.

For the Encyclopædia Londinensis, 1728.

TOOLJAPOOR, a town of Hindostan, province of Aurungabad, belonging to the Nizam. Lat. 18. 17. N. long. 76. 27. E.

TOOLOMBAH, a town of Hindostan, province of Moultan, belonging to the Afghans. Lat. 30. 58. N. long. 72. 13. E.

TOOLSYPORE, a town of Hindostan, province of Oude, belonging to the Nabob. Lat. 27. 29. N. long. 82. 17. E.

TOOLUMBO, a village of Central Africa, in Bambarra, on the northern bank of the Niger; 50 miles south-east of Bambarra.

TOOM, *adj.* [*tom*, Dan and Swed. the same.] Empty: still a northern word. *Wieliffe*, *toom* or *tume*.—A *toom* purse makes a bleit merchant. *Yorkshire Proverb*.

TOOMAVARA, a small village of Ireland, in the county of Tipperary, which exhibits such vestiges of ancient buildings as prove that it was formerly a place of some consequence. Here are the ruins of a preceptory, founded by the knights templars; 169 miles south-west of Dublin.

TOOMBUDDRA, a celebrated river of the south of India. It takes its name from the junction of the *Toom* and *Bhadra*, which have their sources in the Western mountains. After the junction it continues its course to the north-east, and falls into the *Kistna* below *Rachore*.

TOOMISH, a town of Ireland, in the county of Kerry; 14 miles south of *Tralea*.

TOOMOON, a town of Hindostan, province of Malwah, belonging to the *Mahrattas*. It is situated on the banks of the river *Batmah*, and contains a very ancient temple. Lat. 25. 8. N. long. 78. 35. E.

TOOND, a river of Ireland, which runs into the *Lee*; 15 miles west of *Cork*.

TOORDA, a village of *Kaarta*, in Central Africa; 24 miles north of *Kemmoo*.

TOOREYPOOR, a town of the south of India, province of the *Carnatic*, and district of *Trichinopoly*. Lat. 11. 11. N. long. 78. 48. E.

TOORMOOZ, **TIRMOZ**, or **TERMED**, a city of independent Tartary, situated to the north of the *Oxus*, near its junction with the *Hissaur* river; 50 miles north of *Bulkh*.

TOOS, a small town of *Korassan*, in *Persia*; 25 miles south of *Mesched*.

TOOSI, a town on the southern coast of *Nippon*, in *Japan*; 84 miles south-south-east of *Meaco*.

TOOSI, one of a cluster of small islands, situated near the north-west coast of *Nippon*, in *Japan*. Lat. 40. 40. N. long. 140. 40. E.

To TOOT, *v. n.* [perhaps *totan*, Saxon, contracted from *to-pitan*, to know, or examine. *Dr. Johnson*.—Mr. Mason objects to this, and gives *to-tean*, to attract, as the origin; supporting it by a remark, that tradesmen at *Tunbridge Wells*, meeting company on their way thither, to solicit their custom, were called *tooters*. But, says *Todd*, it may surely be referred to the Saxon *totian*, *eminere tanquam cornu in fronte*.] To pry; to peep; to search narrowly and slyly; to look about. *Obsolete*.

I cast to go a shooting,
Long wand'ring up and down the land,
With bow and bolts on either hand,

For birds in bushes *tooting*

Spenser.

Also to sound; to make a noise. [*tuta*, Su. Goth.; *tuyten*, Teut. the same; *tuyte*, a horn.] That wiseacre deserves of all other to wear a *toting* horn. *Howell*.—To stand out; to be prominent.—Though perhaps he had never a shirt to his back, yet he would have a *toting* huge swelling ruff about his neck. *Howell*.

To TOOT, *v. a.* To look into; to see.—Then turned I agen, when I had all *ytoted*. *Pierce*.—To sound.

Jockie, say what might he be
That sits on yonder hill,

And *tooted* out his notes of glee?

W. Browne.

TO'OTER, *s.* One who plays on a pipe or horn.

Come father *Rosin*, with your fiddle now,

And two tall *toters*: Flourish to the masque. *B. Jonson*.

TOOTH, *s.* plural *teeth*. [*tunthus*, M. Goth.; *τοδ*, Sax.; *Vox antiquissima*, et plurimis linguis communis. *Serenius*.] The hardest and smoothest bones of the body, set in the edges of the jaws. *Quincy*.

Avaunt, you curs!

Be thy mouth or black or white,
Tooth that poison if it bite.

Shakspeare.

Taste; palate.

These are not dishes for thy dainty *tooth*;
What, hast thou got an ulcer in thy mouth?
Why stand'st thou picking?

Dryden.

A tine, prong, or blade, of any multifid instrument.—The priest's servant came while the flesh was in seething, with a flesh hook of three *teeth*. *Sam*.—The prominent part of wheels, by which they catch upon correspondent parts of other bodies.—In clocks, though the screws and *teeth* be never so smooth, yet if they be not oiled will hardly move, though you clog them with never so much weight; but apply a little oil, they whirl about very swiftly with the tenth part of the force. *Ray*.

TOOTH and nail. With one's utmost violence; with every means of attack or defence.—A lion and bear were at *tooth and nail* which should carry off a fawn. *L'Estrange*.

To the TEETH. In open opposition.

It warms the very sickness in my heart,
That I shall live and tell him *to his teeth*,
Thus diddest thou.

Shakspeare.

To east in the TEETH. To insult by open exprobation.—A wise body's part it were not to put out his fire, because his fond and foolish neighbour from whom he borrowed wherewith to kindle it, might *east* him therewith in the *teeth*, saying, Were it not for me thou would'st freeze, and not be able to heat thyself. *Hooker*.

In spite of the TEETH. Notwithstanding threats expressed by shewing teeth; notwithstanding any power of injury or defence.—The guiltiness of my mind drove the grossness of the foppery into a received belief, *in despite of the teeth* of all rhyme and reason, that they were fairies. *Shakspeare*.

To shew the TEETH. To threaten.

When the law shews her *teeth*, but dares not bite,
And South-Sea treasures are not brought to light. *Young*.

To TOOTH, *v. a.* To furnish with teeth; to indent.—Then saws were *tooth'd*, and sounding axes made. *Dryden*.—To lock in each other.—It is common to *tooth* in the stretching course two inches with the stretcher only. *Moxon*.

TO'OTH-ACHE, *s.* Pain in the teeth.

There never yet was the philosopher
That could endure the *tooth-ache* patiently,
However at their ease they talk'd like gods. *Shakspeare*.

TO'OTH-DRAWER, *s.* One whose business is to extract painful teeth.

TO'OTHED, *adj.* Having teeth. Sharp like a tooth. *Prompt. Parv*.

So I charm'd their ears,
That calf-like, they my lowing follow'd, through
Tooth'd briers, sharp furzes, pricking goss, and thorns.

Shakspeare.

TO'OTHFUL, *adj.* Toothsome: not in use, but the true word in *Massinger*, as Mr. Gifford has observed.

What dainty relish on my tongue
This fruit hath left! some angel hath me fed:
If so *toothful*, I will be banqueted.

Massinger.

TO'OTHLESS, *adj.* [*τοδλεαρ*, Saxon.] Wanting teeth: deprived of teeth.

Deep dinted wrinkles on her cheeks she draws,
Sunk are her eyes, and *toothless* are her jaws.

Dryden.

TO'OTHPICK, or **TO'OTHPICKER**, *s.* An instrument by which the teeth are cleansed from any thing sticking between

between them.—I will fetch you a *toothpicker* from the farthest inch of Asia. *Shakspeare.*

TO'OTHSOME, *adj.* Palatable; pleasing to the taste.—Some are good to be eaten while young, but nothing *toothsome* as they grow old. *Carew.*

TO'OTHSOMENESS, *s.* Pleasantness to the taste.

TO'THWORT, *s.* [*dentaria*, Lat.]. A plant. *Miller.*

TO'O'THY, *adj.* Toothed; having teeth.—The woof and warp unite press'd by the *toothy* slay. *Crowall.*

TOOTING, a parish of England, in Surrey. It has a church of a remarkable circular form, with a low spire; and in the neighbourhood are many handsome houses. Population 1626; $7\frac{1}{2}$ miles south-south-west of London.

TOOTING, UPPER, a hamlet in the above county, adjoining the foregoing parish, nearer London, on the road from Southwark to Epsom.

TOP, a lake in the north-west of European Russia, in the government of Olonetz, about 44 miles in length, and 8 in breadth; 256 miles north-north-west of Petrosavodsk.

TOP, *s.* [τοπι, Saxon; *top*, Dutch and Danish; *toppr*, a crest, Icelandic.] The highest part of any thing.

I should not see the sandy hour-glass run,
But I should think of shallows and of flats,
And see my wealthy Andrew dock'd in sand,
Vailing her high *top* lower than her ribs. *Shakspeare.*

The surface; the superficies.

Shallow brooks that flow'd so clear,
The bottom did the *top* appear. *Dryden.*

The highest place.—He that will not set himself proudly at the *top* of all things, but will consider the immensity of this fabric, may think, that in other mansions there may be other and different intelligent beings. *Locke.*

The highest person.

How would you be,
If he which is the *top* of judgment, should
But judge you as you are? *Shakspeare.*

The utmost degree.—The *top* of my ambition is to contribute to that work. *Pope.*—The highest rank.—Take a boy from the *top* of a grammar school, and one of the same age bred in his father's family, and bring them into good company together, and then see which of the two will have the more manly carriage. *Locke.*—The crown of the head. The hair on the crown of the head; the forelock.

Let's take the instant by the forward *top*;
For we are old, and on our quick'st decrees
The inaudible and noiseless foot of time
Steals, ere we can effect them. *Shakspeare.*

The head of a plant.—[*top*, Danish.] An inverted conoid which children set to turn on the point, continuing its motion with a whip.

As young striplings whip the *top* for sport
On the smooth pavement of an empty court,
The wooden engine flies and whirls about,
Admir'd with clamours of the beardless rout. *Dryden.*

Top is sometimes used as an adjective to express lying on the top, or being at the top.—The *top* stones laid in clay are kept together. *Mortimer.*

To TOP, *v. n.* To rise aloft; to be eminent.—Those long ridges of lofty and *topping* mountains which run east and west, stop the evagation of the vapours to the north and south in hot countries. *Derham.*—To predominate.—The thoughts of the mind, and powers of the body, are uninterruptedly employed that way by the determinations of the will, influenced by that *topping* uneasiness while it lasts. *Locke.*—To excel.

But write thy best and *top*, and in each line
Sir Formal's oratory will be thine. *Dryden.*

To TOP, *v. a.* To cover on the top; to tip; to defend or decorate with something extrinsic on the upper part.

The glorious temple rear'd
Her pile, far off appearing like a mount
Of alabaster, *topp'd* with golden spires. *Milton.*

To rise above.—A gourd planted by a large pine, climbing by the boughs twined about them, till it *topped* and covered the tree. *L'Estrange.*—To outgo; to surpass.

He's poor in no one fault, but stor'd with all.

—Especially in pride.

—And *topping* all others in boasting. *Shakspeare.*

To crop.—*Top* your rose trees a little with your knife near a leaf-bud. *Evelyn.*

To rise to the top of.

If ought obstruct thy course, yet stand not still,
But wind about till thou hast *topp'd* the hill. *Denham.*

To perform eminently: as, he *tops* his part. This word, in this sense, is seldom used but on light or ludicrous occasions.

TOPACURO, a small river of Brazil, in the province of Seara, which runs north, and enters the Atlantic, between the Josavi and the Iguarasu.

TOPANA, a river of Peru, in the province of Canete, which runs west, and enters the Pacific.

TOPARCH, *s.* [*toparque*, old French; τωπος and αρχη, Gr.] The principal man in a place.—They are not to be conceived potent monarchs, but *toparchs*, or kings of narrow territories. *Brown.*

TOPARCHY, *s.* [*toparchie*, old French.] Command in a small district.—Four several kings swaying their ebony sceptres in each *toparchy*. *Sir T. Herbert.*

TOPAZ, *s.* [*topazius*, low Lat.] A yellow gem.—With light's own smile the yellow *topaz* burns. *Thomson.*

The Topaz was so called from Topazos, a small island in the Red Sea, where the Romans formerly obtained a stone called by them the topaz, but which is the chrysolite of the moderns. The topaz is said to have been first found by Juba, king of Mauritania; but it was known to the Hebrews before, as appears from the 118th Psalm. The most valued topazes are those of Saxony, Siberia, and Brazil. For its composition, see MINERALOGY.

TOPCLIFFE, a village and parish of England, North Riding of Yorkshire, situated on a considerable ascent, on the banks of the river Swale. It has a fair for cattle, which commences on 17th July, and continues three days: it contains 341 houses, and 1327 inhabitants; $5\frac{1}{2}$ miles south-south-west of Thirsk, and 24 north of the city of York.

TOPCROFT, a parish of England, in Norfolk; $4\frac{1}{2}$ miles east-by-south of St. Mary Stratton.

To TOPE, *v. n.* [*topff*, German, an earthen pot; *toppen*, Dutch, to be mad. Skinner prefers the latter etymology; *tope*, Fr.] To drink hard; to drink to excess.

If you *tope* in form and treat,
'Tis the sour sauce to the sweet meat,
The fine you pay for being great. *Dryden.*

TO'PER, *s.* A drunkard.

But I no *topers* envy; for my mien
Is always gay, and my complexion green. *Cowley.*

TOPESFIELD, a parish of England, in Essex; 4 miles west-north-west of Castle Hedingham. Population 712.

TOPFUL, *adj.* Full to the top; full to the brim.

'Tis wonderful
What may be wrought out of their discontent;
Now that their souls are *topful* of offence. *Shakspeare.*

TOPGALLANT; *s.* The highest sail; it was proverbially applied to any thing elevated, or splendid.—A rose grew out of another, like honeysuckles, called *top* and *topgallants*. *Bacon.*

TOP-GALLANT ISLES, a high and rocky island of little extent, with three rocks near it, lying off the southern coast of New Holland, between 134. and 135. east long.

TOPH, or TO'PHUS, *s.* [*tophus*, Latin.] A kind of sandstone.

A native arch she drew
With pumice and light *tofusses*, that grew. *Sandys.*

TOPHUS, a kind of node, or swelling of the periosteum. Also, the sort of concretion found in the joints of gouty persons.

persons. Also, a species of sand-stone, called also *porus*, mostly of a grey colour; but it is also found of other colours, as whitish, brownish, &c., according to the soil in which it is imbedded.

TOPHA'CEOUS, *adj.* [*tophus*, Lat.] Gritty; stony.—Acids mixed with them precipitate a *tophaceous* chalky matter, but not a cheesy substance. *Arbutnot.*

TOPHE'AVY, *adj.* Having the upper part too weighty for the lower.—A roof should not be too heavy nor too light; but of the two extremes a house *topheavy* is the worst. *Wotton.*

Topheavy drones, and always looking down,
As over-ballasted within the crown,
Muttering betwixt their lips some mystic thing. *Dryden.*

TOPHET, *s.* [תפת, Heb. *a drum.*] Hell: a *scriptural name.*

The pleasant valley of Hinnom, *tophet* thence
And black Gehenna call'd, the type of hell. *Milton.*

TOPIARY, *adj.* [*topiarius*, Lat.] Shaped by cutting or clipping.

No *topiary* hedge of quickset
Was e'er so neatly cut or thickset. *Butler.*

TOPIC, *s.* [*topique*, Fr.; *τοπος*, Gr.] Principle of persuasion.—I might dilate on the difficulties, the temper of the people, the power, arts, and interest of the contrary party; but those are invidious *topics*, too green in remembrance. *Dryden.*—A general head; something to which other things are referred.—All arts and sciences have some general subjects, called *topics*, or common places; because middle terms are borrowed, and arguments derived from them for the proof of their various propositions. *Watts.*—Things as are externally applied to any particular part.—In the cure of strumæ, the *topics* ought to be discutient. *Wiseman.*

TOPICAL, *adj.* [from *τοπος*, Gr.] Relating to some general head; local; confined to some particular place.—*Topical* or probable arguments, either from consequence of Scripture, or from human reason, ought not to be admitted or credited, against the consentient testimony and authority of the ancient Catholic church. *White.*—Applied medicinally to a particular part.—A woman with some unusual hemorrhage, is only to be cured by *topical* remedies. *Arbutnot.*

TOPICALLY, *adv.* With application to some particular part.—This *topically* applied becomes a phænigmus, or rubifying medicine, and is of such fiery parts, that they have of themselves conceived fire and burnt a house. *Brown.*

TOPINHAM BARANAS, a town of Brazil, in the government of Para, on the river of the Amazons; 80 miles south-west of Pauxis. Lat. 2. 42. S.

TOPINAMBES, a large island of the river Amazons, inhabited by a nation of Indians of the same name; it is 60 leagues in length.

TOPINO, a small river in the central part of Italy, which runs into the Tiber; 5 miles south of Perugia.

TOPKNOT, *s.* A knot worn by women on the top of the head.—This arrogance amounts to the pride of an ass in his trappings; when 'tis but his master's taking away his *topknot* to make an ass of him again. *L'Estrange.*

TOP'LESS, *adj.* Having no top.
He sent abroad his voice,
Which Pallas far off echo'd; who did betwixt them hoise,
Shrill tumult to a *topless* height. *Chapman.*

Supreme; sovereign.
Sometime, great Agamemnon,
Thy *topless* deputation he puts on. *Shakspeare.*

TOPLITZ, or **TOEPLITZ**. See **TEPLITZ**.
TOPMAN, *s.* The sawyer at the top.—The pit-saw enters the one end of the stuff, the *topman* at the top, and the pitman under him, the *topman* observing to guide the saw exactly in the line. *Moxon.*

Vol. XXIV. No. 1625.

TOPMOST, *adj.* [An irregular superlative formed from *top*.] Uppermost; highest.

From steep to steep the troops advanced with pain,
In hopes at last the *topmost* cliff to gain;
But still by new ascents the mountain grew,
And a fresh toil presented to their view. *Addison.*

TOPO, a river of Quito, in the province of Quixos and Macas, which runs south, and enters by the north point into the Pastaza.

TOPOCALMA, a large river of Chili, in the province of Santiago, which enters the Pacific ocean near Valparaiso, in lat. 33. 31. S.

TOPO'GRAPHER, *s.* [τοπος and γραφω, Gr.] One who writes descriptions of particular places.—Although one should read all the *topographers* that ever writ of, or anatomized, a town or country. *Howell.*

TOPOGRAPHICAL, or **TOPOGRA'PHIC**, *adj.* Describing particular places.—It were requisite to have a book of the *topographical* description of all places through which he passeth. *Howell.*

TOPO'GRAPHY, *s.* [*topographie*, Fr.; *τοπος* and *γραφω*, Gr.] Description of particular places.—That philosophy gives the exactest *topography* of the extramundane spaces. *Glanville.*

TOPOLAIS, a lake of Greece, in the province of Livadia.

TOPORCZ, a petty town in the north-west of Hungary; 26 miles east of Neusohl. Population 1200, chiefly Lutherans.

TOPOROW, a small town of Austrian Poland; 40 miles north-east of Lemberg.

TOPPING, *adj.* Fine; noble; gallant. *A low word.*—The *topping* fellow I take to be the ancestor of the fine fellow. *Tatler.*

TOPPINGLY, *adj.* Fine; gay; gallant; shewy. *An obsolete word.*

These *toppinglie* ghests be in number but ten,
As welcome to dairie as beares among men. *Tusser.*

TOPPINGLY, *adv.* Splendidly; nobly. *A low word.*
TO'PPLE, *v. n.* To fall forward; to tumble down.

Though bladed corn be lodged and trees blown down;
Though castles *topple* on their warders heads. *Shakspeare.*

TO'PPLE, *v. a.* To throw down.

Unruly wind—
Shakes the old beldame earth, and *topples* down
Steeple and moss-grown towers. *Shakspeare.*

TOP-PROUD, *adj.* Proud in the highest degree.

This *top-proud* fellow,
By intelligence I do know
To be corrupt and treasonous. *Shakspeare.*

TOP'SAIL, *s.* The highest sail.
Strike, strike the *topsail*; let the main sheet fly,
And furl your sails. *Dryden.*

TOPSAIL INLET, a channel between two small islands on the coast of North Carolina. Lat. 34. 18. N. long. 77. 48. W.

TOPSCHAU, or **DOBSINA**, a small town in the north of Hungary, on a river of the same name. Population 4000; 109 miles north-north-east of Buda, and 25 north of Gomer.

TOPSFIELD, a post township of the United States, in Essex county, Massachusetts; 20 miles north-east of Boston, Population 815.

TOPSHAM, a market town and sea-port of England, in the county of Devon, situated at the confluence of the rivers Clyste and Exe, which almost encompass it, though it chiefly extends along the eastern banks of the latter. It is, properly speaking, the port town of Exeter, where all the large ships lie, and are loaded and unloaded; and here the captains, ship-carpenters, &c., with the officers of customs, reside. Most of the inhabitants are employed in the ship-

L fair;

ping business. Market on Saturday, and one annual fair; $3\frac{1}{4}$ miles south-south-east of Exeter, and 170 south-west of London. Lat. 50. 40. N. long. 3. 27. W.

TOPSHAM, a township of the United States, in Orange county, Vermont; 12 miles west of Newbury, and 25 east-north-east of Montpelier. Population 814.

TOPSHAM, a township of the United States, in Lincoln county, Maine, on the north side of the Androscoggin, opposite Brunswick; 19 miles west of Wiscasset, and 140 north-east of Boston. Population 1271.

TO'PSYTURVY, *adv.* [This Skinner fancies to *top* in *turf*.] With the bottom upward.

If we without his help can make a head
To push against the kingdom; with his help
We shall o'erturn it *topsyturvy* down.

Shakspeare.

TOQUERAGUA, a river of New Granada, in the province of San Juan de los Llanos, which runs south-south-east, and enters the Casanare.

TOR, *s.* [*top*, Saxon.] A tower; a turret.—I visited the *tor*, which is nothing but the steeple of an ancient church. *Ray*.—A high pointed rock or hill, whence *tor* in the initial syllable of some local names.

This haughty mountain, by indulgent fame
Preferr'd to a wonder, Mam *tor* has to name.

Cotton.

TOR, an ancient town of Arabia, situated near the head of the Red sea. It was once a place of great importance, when a great part of the merchandize was landed here, and conveyed to Syria and India. The coast is remarkable for the variety of madrepore and other species of coral. Lat. 28. 19. N. long. 33. 28. E.

TOR, a village of Western Africa, in the country of the Foulahs. Lat. 16. 30. N.

TOR BRYAN, a parish of England, in Devonshire; 4 miles south-west-by-south of Abbot's Newton.

TOR MOHAM, a parish of England, in Devonshire, near the sea and Torbay. Population 1350; $2\frac{1}{2}$ miles west of Torbay.

TORA, a village of Egypt, on the Nile; 8 miles south of Cairo.

TORACA, a small town in the south-west of the kingdom of Naples, in the Principato Citra. Population 1300; 8 miles east of Policastro.

TORAL, *EL*, a port of Chili. Lat. 27. 55. S.

TORBALA, a town of Hindostan, province of Lahore, district of Pukely. Lat. 34. 12. N. long. 72. 45. E.

TORBALE, a small town of Asia Minor, built in a valley between two high mountains; 30 miles south-east of Nicomedia.

TORBAY, a fine and commodious bay of the English channel, on the coast of Devonshire, situated five miles north-east of Dartmouth, and formed by two capes called Berry Point or Head, and Bob's Nose. It is about 12 miles in compass. It forms the general rendezvous of the British navy. Berry-head flag-staff is in lat. 50. 24. N. long. 3. 28. 14. W.

TORBAY, a bay of the North Atlantic, on the east coast of Newfoundland. Lat. 47. 48. N. long. 52. 20. W.

TORBAY, a town and bay on the south coast of Nova Scotia. Lat. 45. 8. N. long. 61. 15. W.

TORBIA, a small town in the north of Italy, in Piedmont, called by the Romans *Tropæ Augusti*.

TORBIDO (Francesco), called *Il Moro*, was born about the year 1500, at Verona, and perhaps rather before it, as he is said to have had, for a short time, the advantage of receiving instruction from Giorgione. He afterwards became the pupil of Liberale, and his own style is a compound of those of his masters, partaking of the glow of the former, with the elaborate finish of the latter. His principal occupation was in portrait, yet he left several historical pictures of considerable merit. Amongst them are some frescoes, representing the life of the Virgin, in the cathedral at Verona; and a picture in oil of the Transfiguration, in the

church of S. Maria Maggiore, at Venice. He died at the age of 81, but the exact date is unknown.

TORC, a mountain of Ireland, in the county of Kerry, on the south side of Lough Lane, whence the southern part is called Lough Torc.

TORCAL, *EL*, a remarkable collection of rocks in the south of Spain, in an inland district between Antequera and Alora. The scenery in the neighbourhood is extremely wild and romantic.

TORCE, a small town in the west of France, department of the Mayenne. Population 1100.

TORCE, a town of Hindostan, province of Bahar. It is the capital of a small district of the same name. Lat. 23. 42. N. long. 85. 2. E.

TORCELLO, a considerable town of Austrian Italy, in the delegation of Venice, situated on an island of the same name, in the marshy district called the Lagunes. It has a population of 9000; 7 miles north of Venice.

TORCH, *s.* [*torche*, French; *torcia*, Italian; *intortium*, low Latin.] A wax light, generally supposed to be bigger than a candle.

Here lies the dusky *torch* of Mortimer,
Choak'd with ambition of the meaner sort.

Shakspeare.

TORCHBEARER, *s.* One whose office is to carry a torch.—He did in a genteel manner chastise their negligence, with making them, for that night, *torchbearers*.

Sidney.

TORCHER, *s.* One that gives light.

Ere the horses of the sun shall bring

Their fiery *torch* his diurnal ring.

Shakspeare.

TORCHES, a small river of Portuguese Guiana, which falls into the sea.

TORCHILLI (Jonas), the descendant of a respectable family in Iceland, was born in the district of Gulbringe, in 1697, and sent, in 1718, to the university of Copenhagen; from whence he proceeded to Holstein, completing his studies at the university of Kiel. Torchilli died at Copenhagen, in 1759. His works, besides some others, are:—“*Biblia Islandica ab eo Mendis Typographicis purgata*,” Havn. 1746; “*An Appendix to Anderson's Account of Iceland, in Danish*,” 1748, 8vo.; “*A Supplement to Runolf Jonæ's Icelandic Grammar*,” “*Lexicon Islandico-Latinum*.” *Gen. Biog.*

TORCHLIGHT, *s.* Light kindled to supply the want of the sun.

If thou like a child didst fear before,

Being in the dark, where thou didst nothing see;

Now I have brought thee *torchlight* fear no more.

Davies.

TORCHWORT, *s.* The name of a plant.—A stately stalk shot up of *torchwort* high.

More.

TORCULAR HEROPHILL, a name given to one of the sinuses of the brain. See ANATOMY.

TORCZYN, a small town in the south-west of European Russia, in the government of Volhynia; 11 miles west of Luck, and 41 north-by-west of Brody, in Galicia.

TORDEHAMOS, a small town in the north-west of Spain; 21 miles west-north-west of Valladolid, and 19 north-north-west of Tordesillas.

TORDESILLAS, a town in the north-west of Spain, in the province of Leon, on the right bank of the Douro, over which there is a very fine bridge. It has 4000 inhabitants. This is one of the most ancient towns in the province of Leon, and stands 25 miles west-south-west of Valladolid.

TORDYLIIUM [of Pliny. *Τορδύλιον*, Gr. of Dioscorides], in Botany, a genus of the class pentandria, order digynia, natural order of umbellatæ or umbelliferæ.—Generic Character. Calyx: umbel universal, unequal, manifold. Partial unequal, manifold, very short, flat. Involucre universal of slender undivided leaflets, commonly the length of the umbel. Partial halved, outwardly longer than the umbellet. Perianth proper five, toothed. Corolla: universal difform, radiate. Florets all fertile. Proper of the disk of five equal inflex-cordate petals. Proper of the ray similar, but the outmost

outmost petal very large and two-parted. Stamina: all with five capillary filaments. Anthers simple. Pistil: all with a roundish inferior germ. Styles two, small. Stigmas obtuse. Pericarp: fruit suborbicular, compressed, crenulate at the edge, bipartite. Seeds two, roundish, almost flat, with a raised crenulate margin. *Tordylium anthriscus* has a sub-radiate umbel, and the florets of the disk male: it is therefore now removed to the genus *caucalis*.—*Essential Character*. Corolla radiate, all hermaphrodite. Fruit suborbicular, notched at the edge. Involucres long, undivided.

1. *Tordylium Syriacum*, or Syrian hartwort.—Involucres longer than the umbel. This is a low plant, the stalks seldom rising a foot high. The lower leaves are composed of two pairs of ovate leaflets terminated by a large one; they are hairy and slightly crenate. The stalks branch out into two or three divisions, and are terminated by umbels of white flowers, which have large involucres, for the most part trifid.—Native of Syria.

2. *Tordylium officinale*, or officinal hartwort.—Involucres length of the flowers; leaflets ovate, gashed, crenate; stem pubescent. Root annual. Stem almost upright, branched, leafy, round, grooved, villose with soft short deflected hairs.—Native of the south of France, Italy, and Sicily. Very doubtful whether it be indigenous of England.

3. *Tordylium peregrinum*.—Seeds grooved, wrinkled, plaited; universal involucre one-leaved, subtrifid. Stem smooth, branched.—Native of the Levant.

4. *Tordylium Apulum*, Apulian, or small hartwort.—Umbels remote; leaves pinnate; pinnae roundish, lacinate.—Native of Italy in Apulia.

5. *Tordylium maximum*, or great hartwort.—Umbels clustered, radiate; leaflets lanceolate, gash-serrate; stem rough, with deflexed bristles.—Native of Germany, Switzerland, Austria, France, Italy and England.

6. *Tordylium filifolium*.—Umbels clustered, radiate; leaflets angular, toothed, pubescent.—Native of Carniola.

7. *Tordylium Secacul*, or Arabian hartwort.—Umbels remote; leaves doubly pinnate; pinnae gashed, tomentose.—Native of Syria, especially about Aleppo, where it is known by the name of *Secacul*, and is eaten crude by the inhabitants.

TORÉ, *prct.* and sometimes participle passive of *tear*.

Upon his head an old Scotch cap he wore,

With a plume feather all to pieces *tore*. Spenser.

TORÉ, *s.* [probably from *tear*.] The dead kind of grass that remains on the ground in winter. *Ash*.—Proportion according to rowen or *tore* upon the ground; the more *tore* the less hay will do. *Mortimer*.

TORÉLLA, a small town of the south of Italy, in the central part of the kingdom of Naples, in the Principato Ultra. Population 3300; 3 miles west-north-west of Conza.

TORÉNIA [so named by Linnæus, from Olef Toreen, a Swedish clergyman, who discovered this with other plants in China], in Botany, a genus of the class didynamia, order angiospermia, natural order of personatæ, scrophulariæ (*Juss.*)—*Generic Character*. Calyx: perianth one-leaved, tubular, angular, permanent, bifid: upper lip three-cusped; lower narrower, quite entire. Corolla one-petalled, ringent: upper lip entire; lower trifid, the middle segment more produced. Stamina: filaments four: the two upper simple; the two lower two-parted, the lower branchlet shorter and barren. Anthers twin, contiguous by pairs. Pistil: germ oblong. Style filiform, thicker above. Stigma bifid, acute. Pericarp: capsule oblong, two-celled. Seeds very many.—*Essential Character*. Calyx two-lipped: upper lip three-cusped. Filaments, the lower with a sterile branchlet. Capsule two-celled.

1. *Torenia Asiatica*, or smooth torenia.—Smooth; stem creeping; leaves ovate, emarginate, on long petioles. The whole plant is smooth. Flowers larger than in the next species.—Native of India and China.

2. *Torenia hirsuta*, or hairy torenia.—Hirsute; stem erect;

leaves very short, petioled. Flowers small on one-flowered axillary and terminating peduncles.—Native of the East Indies.

3. *Torenia cordifolia*, or heart-leaved torenia.—Somewhat hairy; erect; leaves heart-shaped, on short petioles. This is a small herbaceous plant.—Native of Coromandel; in moist pasture lands about Samulcotah.

TORÉUTICE [*τορευτική*, formed from the Greek *τορος*, *lath*, of *τορεω*, *terebro*, *perforo*], that part of sculpture called *turning*.

TORFÆUS, THORMODUS, or THORMOD TORVESEN, an eminent historian, was born in a small island, called Engoe, on the southern coast of Iceland. In 1719 he died. Torfæus was a man of considerable learning, and particularly conversant with ancient history and antiquities; and he was much respected by the northern sovereigns, Frederick III., Christian V., and Frederick IV. His works, actually published and left in MS., were very numerous. The collection of his MSS., relating more especially to the history of Iceland, amounts to several volumes folio, and is preserved in the king's library at Copenhagen. *Gen. Biog.*

TORFAUE, a district of Siwah, in Africa, on the caravan route from thence to Fezzan.

TORGAU, a town of Prussian Saxony, in the government of Merseburg, on the Elbe; 46 miles north-west of Dresden, and 65 south-by-west of Berlin.

TORGEISKOI, a village of Irkoutsk, in Asiatic Russia; 24 miles north-north-west of Mertschinsk.

TORGELOW, a small town in the north of the Prussian states, in Pomerania, on the river Ucker; 9 miles north of Passewalk.

TORIESDALE HEAD, a cape on the north coast of Scotland. Lat. 58. 30. E. long. 4. 10. W.

TORIGNY, a small town in the north-west of France, department of La Manche. Population 1600; 9 miles south-east of St. Lo, and 22 east of Coutances.

TORIN ROCKS, a cluster of rocks near the south-west coast of the Island of Mull. Lat. 56. 16. N. long. 6. 28. W.

TORISA, a river of European Turkey, which joins the Maritza (the ancient Hebrus) at Adrianople.

TORKINGTON, a township of England, in Cheshire; 3 miles south-east of Stockport.

TORKSEY, a parish of England, in Lincolnshire, situated near the confluence of the Ees-Dyke into the Trent; 7 miles east of Gainsborough.

TORLEUM, a mountain of Scotland, in Perthshire, 1400 feet above the level of the sea.

TORMARTON, a parish of England, in Gloucestershire; 4 miles south-east-by-east of Chipping Sodbury.

To TORMENT, *v. a.* [*tourmenter*, Fr.] To put to pain; to harass with anguish; to excruciate.

No sleep close up that deadly eye of thine,
Unless it be while some *tormenting* dream
Affrights thee with a hell of ugly devils. Shakspeare.

To tease; to vex with importunity.—To put into great agitation. [*tormente*, Fr. a great storm; *tormentare*, Ital. to agitate.]

They, soaring on main wing,
Tormented all the air. Milton.

TORMENT, *s.* [*tourment*, Fr.] Any thing that gives pain, as disease.—They brought unto him all sick people that were taken with divers diseases and *torments*, and he healed them. *St. Matthew*.—Pain; misery; anguish.

The more I see
Pleasures about me, so much more I feel
Torment within me. Milton.

Penal anguish; torture.

No prisoners there, enforc'd by *torments*, cry;
But fearless by their old tormentors lie. Sandys.

[*tormentum*, Lat.] An engine of war to cast stones or darts. *Not in use*.—All *torments* of war, which we call engines,

gines, were first invented by kings or governors of hosts.
Sir T. Elyot.

TORMENTER, or **TORMENTOR**, *s.* One who torments; one who gives pain.—He called to me for succour, desiring me at least to kill him, to deliver him from those *tormentors*. *Sidney.*—One who inflicts penal tortures.—The ancient martyrs passed through such new inventions and varieties of pain as tired their *tormentors*. *Addison.*

TORMENTIL, *s.* [*tormentilla*, Lat.] Septfoil. A plant.—The root of *tormentil* has been used for tanning of leather, and accounted the best astringent in the whole vegetable kingdom. *Miller.*

TORMENTILLA [Dimin. from *tormenta* or *tormina*; being supposed to cure the diseases of the bowels], in Botany, a genus of the class icosandria, order polygynia, natural order of senticosæ, rosaceæ (*Juss.*)—Generic Character. Calyx: perianth one-leafed, flat, eight-cleft; the alternate segments smaller and more acute. Corolla: petals four, obcordate, flat, spreading, inserted by their claws into the calyx. Stamina: filaments sixteen, awl-shaped, shorter by half than the corolla, inserted into the calyx. Anthers simple. Pistil: germs eight, small, converging into a head. Styles filiform, length of the stamens, inserted into the side of the germ. Stigmas obtuse. Pericarp none. Receptacle of the seeds very small, loaded with seeds, inclosed within the calyx. Seeds eight, roundish, naked. *Tormentilla* differs from *potentilla* in number only: hence the two genera might be combined; and accordingly are so by Schreber and others.—*Essential Character.* Calyx eight-cleft, inferior. Petals four. Seeds roundish, naked, wrinkled, fastened to a small juiceless receptacle.

1. *Tormentilla erecta*, or common tormentil.—Stem somewhat upright, branched; leaves sessile. Root remarkably large and woody, brown on the outside, red within.—Native of Europe, in dry pastures, especially on heaths, among small shrubs; flowering in June and July.

2. *Tormentilla reptans*, or trailing tormentil.—Stem prostrate, simple; leaves petioled. Root perennial, small and slender.—Native of Germany and England.

TORMES, a river of Spain, which rises among the mountains in the south of the province of Salamanca, crosses the province of Leon, passes the towns of Alva de Tormes, Salamanca, &c.; and falls into the Douro on the borders of Portugal.

TORN, *part. pass. of tear.* Ye shall not eat any flesh that is *torn* of beasts. *Exod.*

TORNA, a palatinate in the north-west of Hungary, situated between those of Gomer and Zyps, and now subject to the same palatine as Aba-Ujvar, which lies on its south-east frontier. It has an area of 210 square miles, and about 20,000 inhabitants. The title of upper palatine is hereditary in the family of Reglewicz.

TORNA, the chief town of the above palatinate, is a small place situated on the river Torna; 19 miles south-west of Caschau, and has 1300 inhabitants.

TORNA'DO, *s.* [*tornado*, Span.] A hurricane; a whirlwind.

Nimble coruscations strike the eye,
And bold *tornados* bluster in the sky.

Garth.

It is a sudden and violent gust of wind rising suddenly from the shore, and afterwards veering round all points of the compass like a hurricane; very frequent on the coast of Guinea. These winds frequently shift suddenly from one quarter of the horizon to another, and then come again to the former point. Before a tornado comes, it calms the constant easterly winds; and when they are past, the easterly wind gathers force again, and the weather clears up fair.

TORNARSUK, an island near the west coast of West Greenland. Lat. 61. 50. N. long. 47. 30. W.

TORNAVACCAS, a mountain range in the west of Spain, which extends northward from the Tagus along the borders of Portugal, till it reaches the province of Leon, where it joins the Sierra de Guadarrama, or Castilian mountains.

TORNEA, a small but remarkable town on the north of Finland, at the north extremity of the gulf of Bothnia. It stands on a small island in the large river Tornea, and having been built by order of government (in 1620), is regular in its streets; but the houses being widely separated, the population does not exceed 700. Lat. 65. 50. 50. N. long. 24. 6. 15. E.

TORNEA LAPPMARK, the most northern of the six provinces of Swedish Lapland, lying between the river Tornea, Lulea Lappmark, and Norwegian Lapland. The part of it to the east of Tornea, was ceded to Russia in 1809.

TORNEA, a river of Sweden, which issues from the lake Kipis, in lat. 69. 0. N. long. 20. 40. E.; forms the boundary between Russian and Swedish Lapland, and falls into the gulf of Bothnia, below Tornea.

TORNESE, a cape of the Morea, forming the north-west point of that peninsula, opposite to the Ionian island of Zante.

TORNESE, a small town of the Morea, situated near the promontory of the same name.

TORNESS, a cape on the south coast of the island of Stronsa. Lat. 58. 56. N. long. 2. 29. W.

TORO, a small inland town of Italy, in the north of the kingdom of Naples. Population 2400; 15 miles south-east of Molise.

TORO, the name of three districts, all situated in the north of Spain, but at a considerable distance from each other. They are termed respectively the *partidos* or divisions of Toro, Carrion, and Reynosa; the first situated on the Douro, near the province of Valladolid; the second to the north, on the river Carrion; the third further to the north, in the mountains of Biscay, between Burgos and Santillanos.

TORO, a city in the north-west of Spain, in the province of Leon, and the chief place of the preceding district; 17 miles east of Zamora, and 105 north-west of Madrid. Lat. 41. 45. N. long. 5. 37. W.

TORO, an island in the Baltic, near the coast of Sweden. Lat. 58. 49. N. long. 17. 40. E.—2. A small island in the Mediterranean, near the south coast of Sardinia. Lat. 39. N. long. 8. 34. E.—3. An islet in the Mediterranean, near the coast of Majorca.—4. A settlement of Peru, in the province of Chumbivilcas. It is also the name of a settlement in Mexico, in the province of Cinaloa, and of another in Chili, in the province of Maule.—5. A large and capacious bay in the province of Veragua, to the west of the bay of Almirante.

TORO, SAN ANTONIO DEL, a city of New Granada, in the province of Carthegena.

TOROELLA, a small town of Spain, in Catalonia, near the mouth of the river Ter; 17 miles south-south-east of Figueras.

TOROFF, a town of Bengal, district of Silhet. Lat. 24. 20. N. long. 91. 18. E.

TOROGAY, one of the smaller Hebrides, in the sound of Harris.

TOROK-BETSE, or **TURKISH BETSCHE**, a very large village of Hungary, on the Theyss; 28 miles north-north-east of Peterwaradein.

TORON, a small town of European Turkey, in Macedon, situated on a neck of land which projects into the Archipelago, between the gulfs of Monte Santo and Cassandro; 70 miles south-east of Salonki.

TORONDI, a river of the Caraccas, in the province of Maracaibo, which runs north and afterwards turning to the west, enters by the east into Lake Maracaibo.

TORONTAL, a county in the south of Hungary, including the western part of the Banat of Temisvar, lying along the east bank of the Theyss, and intersected by the Bega. It forms a dead flat of 2800 square miles in extent, and contains nearly 210,000 inhabitants.

TOROPALCA, a settlement of Peru, in the province of Porco; 19 leagues from Potosi.

TOROPEZ, a considerable town in the north-west of European Russia, in the government of Pskov, situated on the

the river Oropa, and the lake Solomino. It has a cathedral and 13 parish churches, two monasteries, and a population of between 7000 and 8000. Toropez is 156 miles south-east of Pskov, and 245 south of St. Petersburg. Lat. 56. 29. 30. N. long. 30. 46. 15. E.

TOROSAY, a parish of Scotland, in Argyllshire, in Mull, on the east side of the island, along the sound of Mull. It extends 12 miles in every direction. Population 2114.

TOROTZKO, a small town situated on a hill in Transylvania; 19 miles north of Weissenburg.

TOROX, a small town in the south of Spain, on the coast of Granada; 25 miles east of Malaga, and 12 east of Almunecar.

TORPEDO, *s.* [Latin.] A fish which while alive, if touched even with a long stick, benumbs the hand that so touches it, but when dead is eaten safely.—The *torpedo*, or cramp-fish, came to hand; a fish, if Pliny writes truth, that by hiding itself with mud and dirt catches lesser fish very strangely; for by his frigidty he benumbs such fish as swim over or lodge near him, and so preys upon them. *Sir T. Herbert.*

The Torpedo, called also the *cramp fish*, or *electric ray*, is the *raia torpedo* of Linnæus, in Ichthyology, a sea-fish, famed, both among the ancient and modern naturalists, for a remarkable numbness with which it strikes the arm of such as touch it. See *RAIA TORPEDO*.

TORPENHOW, a township of England, in Cumberland; 8 miles north-east-by-north of Cockermouth.

TORPENT, *adj.* [*torpens*, Lat.] Benumbed; struck motionless; not active; incapable of motion.—Let the earth be still and stupid;—anon an universal soil flow into this *torpent* mass. *More.*—A comprehensive expedient to assist the frail and *torpent* memory through so multifarious an employment. *Evelyn.*

TORPE'SCENT, *adj.* [*torpescens*, Latin.] Becoming torpid.

Their *torpescient* soul
Clenches their coin.

Shenstone.

TORPHICHEN, a parish of Scotland, in Linlithgowshire; 9 miles long, and 2½ broad on an average. The general appearance is hilly. Population 1131.

TORPHICHEN, a decayed village in the above parish, which contains about 300 inhabitants; 4 miles south-west of Linlithgow, and 3 north-west of Bathgate.

TORPID, *adj.* [*torpidus*, Lat.] Numbed; motionless; sluggish; not active.—The sun awakes the *torpid* sap. *Thomson.*

TORPIDITY, *s.* Torpor; state of being torpid.—Sir W. Bellers happened to stop at a fisherman's house in Cornwall, whose net had been much torn by a large clod of earth, which, upon being examined, was very full of swallows, that awaked from their *torpidity* upon being brought near the fire. *Daines Barrington.*

TORPIDNESS, *s.* The state of being torpid.—Though the object about which it is exercised be poor, little, and low, yet a man hath this advantage by the exercise of this faculty about it, that it keeps it from rest and *torpidness*, it enlargeth and habituates it for a due improvement even about nobler objects. *Hale.*

TORPITUDE, *s.* State of being motionless; numbness; sluggishness.—Some, in their most perfect state, subsist in a kind of *torpitude* or sleeping state. *Derham.*

TORPOR, *s.* [Latin.] Dulness; numbness; inability to move; dulness of sensation.—Motion discusses the *torpor* of solid bodies, which, beside their motion of gravity, have in them a natural appetite not to move at all. *Bacon.*

TORQUAY, a small village of England, in Devonshire, situated in a retired cove of Torbay; about two miles from the extreme point of Hope's Ness: 18½ miles south-by-east of Exeter, and 195 west-south-west of London.

TORQUEMADA, a small town in the north-west of Spain, in Leon, with 2300 inhabitants; 12 miles east-by-north of Palencia.

TORQUILLA, a river of South America, in the province

of Darien, which enters Tarena, just before the latter enters the sea.

TORRE (John Maria de la), a celebrated Italian Philosopher, was born at Rome, in 1710, studied at the Clementine College, and was elected professor of mathematics and philosophy in the College of Ciudad, in the Frioul; and afterwards removed to Naples, where he taught the same sciences in the archiepiscopal seminary. In 1754 he was appointed librarian to the King of Naples, superintendent of the royal printing-house, and conservator of the museum. In the construction of microscopes he is said to have made considerable improvements. He was a member of the principal academies in Italy, and a correspondent of those of Paris and Berlin, and of the Royal Society of London. He died in March, 1782. His works, besides a Treatise on Arithmetic, are, "The Science of Nature," Naples, 1749, 2 vols. 4to.; Venice, 1750, 4to.; "Elementa Physicæ," Naples, 1767, 8vo.; "History of the Phenomena of Vesuvius," *ibid.*, 1755, 4to.; "Microscopic Observations," *ibid.*, 1776.

TORRE, a small town of Italy, in Piedmont, situated in the angle formed by the junction of the rivers Angrogna and Felice. It has a population of 2100; 6 miles south-west of Pinerolo.

TORRE, a small town in the north of Italy, in Piedmont. Population 1600; 6 miles south-south-west of Mondovi.

TORRE. See CASERTA.

TORRE, a small river in the north-east of Italy, in Friuli, which falls into the Lisonzo, at Gradisca.

TORRE DEL GRECO, a considerable town of Italy, situated on the sea coast, at the foot of Vesuvius. It contains a population of 16,000, employed for the most part in fishing, navigation, and the culture of the vine; 9 miles east-south-east of Naples.

TORRE LAGUNA, a small town in the central part of Spain, in New Castile. It is remarkable chiefly as the birth-place of Cardinal Ximenes; 26 miles north-north-east of Madrid, and 22 north-west of Guadalaxara.

TORRE DI NOGARA, a small town of Austrian Italy, in the delegation of Verona; 11 miles east of Mantua.

TORRE DELLA NUNCIATA, or TORRE DELL'ANNUNCIATA, a small town of Italy, situated on the sea-coast, near the foot of Vesuvius; 12 miles east-south-east of Naples. Its population, amounting to 3500, is employed chiefly in trade and navigation.

TORRE DE MONCORVA, a small town in the north of Portugal, province Traz-os-Montes, with 2000 inhabitants; 87 miles east of Oporto.

TORRE DE OLIVETO, a small town of the island of Sicily, in the Val di Demona.

TORRE DE LA SALINAS, a petty town in the south-east of Spain, in the province of Valencia; 20 miles south-east of Orihuela.

TORRE VELHA, a fort in Portugal, at the mouth of the Tagus, on the south side of the river.

TORRE LA VIEJA, a small town of the north of Spain, in the province of Burgos, on the Resaya; 16 miles south-west of Santander.

TORREFACTION, *s.* [*torrefaction*, Fr., *torrefacio*, Lat.] The act of drying by the fire.—Here was not a scorching and blistering, but a vehement and full *torrefaction*. *Bp. Hall.*

To TORREFY, *v. a.* [*torrefacio*, Lat.] To dry by the fire.—In the sulphur of bodies *torrefied* consist the principles of inflammability. *Brown.*

TORRELLA DE MONGRI, a small town in the north-east of Spain, in Catalonia; 18 miles east of Gerona.

TORRENT, *s.* [*torrens*, Lat.] A sudden stream raised by showers.

The near in blood,

Forsake me like the *torrent* of a flood.

Sandys.

A violent and rapid stream; tumultuous current.—Not far from Caucasus are certain steep falling *torrents*, which wash down many grains of gold, as in many other parts of the world; and the people there inhabiting used to set many fleeces of

wool in these descents of waters, in which the grains of gold remain, and the water passeth through, which Strabo witnesseth to be true. *Raleigh.*

TORRENT, *adj.* [*torrens*, Lat.] Rolling in a rapid stream.

Fierce Phlegeton,
Whose waves of *torrent* fire inflame with rage. *Milton.*

TORRENTE, a town on the east coast of Spain, with 5400 inhabitants; 5 miles south-west of Valencia.

TORRES, a cape in the north of Spain, on the coast of Asturias. Lat. 43. 37. N. long. 5. 44. W.

TORRES, a river of Paraguay, which enters the Parana.
TORRES VEDRAS, a very old town of Portuguese Estremadura. It has 2300 inhabitants, four churches, an hospital, a castle, and four convents; 25 miles north-north-west of Lisbon.

TORRE XIMENO, an inland town in the south of Spain, in Andalusia. It has 4000 inhabitants, and is situated at the junction of cross roads from Jaen to Andujar and Alcala la Real; 10 miles west of Jaen.

TORRI, a little state of Western Africa, bordering on Adrah, of which it is independent.

TORRICELLA, a small town in the north of the kingdom of Naples, in the Abruzzo Citra. Population 3000; 6 miles north of Lanciano.

TORRICELLA, a small town of Italy, in the duchy of Parma, situated at the conflux of the Taro and the Po; 10 miles north-by-west of Parma; and 25 east of Piacenza.

TORRICELLI (Evangelista), a very distinguished mathematician and philosopher, was born at Faenza in 1608, and at the age of eighteen he went to Rome to complete his education, and particularly to extend his acquaintance with mathematics, under the instruction of Benedetto Castelli, who was professor of mathematics in that city. After the perusal of Galileo's "Treatise on Motion," he composed a work of a similar kind, which being shewn to Galileo by Castelli, excited his admiration, and induced him to invite the young author to his house. But as Galileo died three months after his arrival, he proposed to return to Rome; he was diverted, however, from his purpose, by being appointed mathematician and philosopher to the grand duke Ferdinand II., who also advanced him to the mathematical chair at Florence. In this honourable station he assiduously prosecuted his speculations and experiments, till death prematurely deprived the world of the benefit which could not fail to result from them, in the year 1647, at the age of 39 years. His "Treatise on Motion," already mentioned, was published in a "Collection of his Mathematical Works" in 1644. But Torricelli's fame is sufficiently established by his discovery of the true principle upon which the barometer is constructed. Torricelli was no less celebrated for his mathematical knowledge, evinced by his improvement of the science of indivisibles discovered by Cavalieri, and for his acquaintance with the principles of optics, by which he was led to improve the construction of telescopes and microscopes. His discoveries, by which his name is immortalized among the promoters of useful sciences, are recorded in his "Lezioni Accademiche," published at Florence in 1715, 4to. by Buonaventuri, with the life of Torricelli prefixed. The style with which he wrote his native language was pure and elegant, and his general character was such as to command the respect and esteem of all who knew him.

TORRID, *adj.* [*torride*, Fr.; *torridus*, Lat.] Parched; dried with heat.—Galen's commentators mention a twofold dryness; the one concomitated with a heat, which they call *torrid* tabes; the other with a coldness, when the parts are consumed through extinction of their native heat. *Harvey.*
—Burning; violently hot.

This with *torrid* heat,
And vapours as the Libyan air adust,
Began to parch that temperate clime. *Milton.*

It is particularly applied to the regions or zone between the tropics.

Columbus first

Found a temperate in a *torrid* zone;
The feverish air fann'd by a cooling breeze. *Dryden.*

TORRIGLIA, a small town and castle of the Sardinian states, in the duchy of Genoa; 10 miles north-east of Genoa.

TORRIMORE HEAD, a cape of Scotland, on the east coast of the island of Skye. Lat. 57. 22. N. long. 6. 2. W.

TORRIN-BEG, a rock on the south-west of the island of Mull. Lat. 56. 19. N. long. 6. 20. W.

TORRINGFORD, a post village of the United States, in Litchfield county, Connecticut.

TORRINGTON, or **GREAT TORRINGTON**, a market town of England, in the county of Devon, so termed to distinguish it from a village of the same name. This town is beautifully situated, partly on the summit, and partly on the declivity of a noble eminence, which forms the eastern bank of the river Torridge, over which there is a stone bridge of four arches. Market on Saturday, and four annual fairs; 10 miles south-by-west of Barnstaple, and 194 west-by-south of London. Lat. 50. 56. N. long. 4. 8. W.

TORRINGTON, BLACK, another parish in the same county; 5 miles west-by-north of Hatherleigh. Population 754.

TORRINGTON, EAST and WEST, two parishes of England, in Lincolnshire; 4 miles north-east of Wragby.

TORRINGTON, GREAT and LITTLE, a parish and hamlet of England, in Herefordshire; 6 miles from Ledbury. Population 488.

TORRINGTON, LITTLE, a parish of England, in Devonshire; 2 miles south of Great Torrington. Population 481.

TORRINGTON, a post township of the United States, in Litchfield county, Connecticut; 7 miles north of Litchfield. Population 1586.

TORRISDALE, a village of Scotland in Sutherlandshire. The river Torrisdale, which rises from Loch Laoghail or Loyal, falls into the north sea at this village, where there is a valuable salmon fishery.

TORRISDALE BAY, a bay on the north coast of Scotland, in the county of Sutherland.

TORRISHOLME, a township, of England, in Lancashire; 2 miles north-west of Lancaster.

TORRYBURN, a parish of Scotland, in Fifeshire, formed by the union of the baronies of Torry and Crombie. It is about 5 miles in length, and 2 in breadth. Population 1461.

TORRYBURN, a village of Scotland, in the above parish; 9 miles west of North Ferry, 4 south-west of Dunfermline, and 2 east of Culross.

TORSAAS, a small town of the south of Sweden, in the province of Smaland, at the source of a river which also bears the name of Torsaa; 18 miles south-south-west of Calmar.

TORSAKER, a small town in the central part of Sweden, province of Angermanland; 27 miles north of Hernosand.

TORSE, *s.* [In heraldry.] A wreath.

TORSEL, *s.* [*torse*, Fr.] Anything in a twisted form.—When you lay any timber on brickwork, as *torsels* for mantle trees to lie on, or lintols over windows, lay them in loam. *Moxon.*

TORSHELLA, a petty town in the central part of Sweden, in Sudermania, on a river which runs into the Malar lake. It has only 500 inhabitants; 46 miles west of Stockholm.

TORSHOK, a considerable town of the interior of European Russia, government of Tver, on the river Tverza. Its situation on an eminence is picturesque, and it is divided into parts by the river, which flows between steep banks, and is crossed by a bridge of boats. Population 10,000; 45 miles north-west of Tver. Lat. 57. 2. 9. N. long. 34. 5. 30. E.

TORSION, *s.* [*torsio*, Lat.] The act of turning or twisting.

TORSTASSELLER-HEAD, a cape of Scotland, on the east coast of the island of Lewis.

TORT,

TORT, *s.* [*tortum*, low Lat.] Mischief; injury; calamity. *Obsolete.*

Then gan triumphant trumpets sound on high,
That sent to Heaven the echoed report
Of their new joy, and happy victory
Against him that had been long opprest with *tort*,
And fast imprisoned in sieged fort. *Spenser.*

TORTHORWALD, a parish of Scotland, in Dumfriesshire, containing about 8½ square miles, 900 acres of which are included in Lochar Moss.

TORTHERWALD, a village in the above parish. Population 932.

TORTILE, *adj.* [*tortilis*, Lat.] Twisted; wreathed.

TORTINGTON, a parish of England in Sussex; 3 miles south-west-by-west of Arundel.

TORTION, *s.* [*tortus*, Lat.] Torment; pain. *Not in use.*—All purgers have a raw spirit or wind, which is the principal cause of *tortion* in the stomach and belly. *Bacon.*

TORTIOUS, *adj.* Injurious; doing wrong.

Ne ought he cared whom he endamaged
By *tortious* wrong, or whom bereaved of right. *Spenser.*

TORTIVE, *adj.* [*tortus*, Lat.] Twisted; wreathed.

Knots by the conflux of meeting sap,
Infect the sound pine, and divert his grain
Tortive and errant from his course of growth. *Shakspeare.*

TORTOISE, *s.* [*tortue*, Fr.] An animal covered with a hard shell; there are *tortoises* both of land and water.

In his needy shop a *tortoise* hung,
An alligator stuff. *Shakspeare.*

A form into which the ancient soldiers used to throw their troops, by bending down and holding their bucklers above their heads so that no darts could hurt them.
Their targets in a *tortoise* cast, the foes
Secure advancing, to the turrets rose. *Dryden.*

TORTOLA, a small town of the interior of Spain, in New Castile, on the river Henares; 7 miles above Guadalaxara.

TORTONA, a town of Italy, in the Sardinian states, the capital of a province of the same name. It is the see of a bishop; 22 miles south-south-west of Pavia, and 56 east-south-east of Turin. Lat. 44. 53. 26. N. long. 8. 56. 32. E.

TORTONA, a province of the Sardinian states, formed of a part of the duchy of Milan, and comprising 220 square miles, with a population of nearly 40,000.

TORTORICI, a small town in the island of Sicily, in the Val di Demona. Population 2800; 20 miles south-west of Melazzo, and 40 west-south-west of Messina.

TORTOSA, a considerable town in the north-east of Spain, in the province of Catalonia, on the left bank of the Ebro. It is the see of a bishop, has a population of 11,000, and is divided into the old and new towns, both surrounded with walls; 93 miles south-east of Saragossa, and 92 west-by-south of Barcelona.

TORTOSA, a sea-port of Syria, formerly called *Orthosia*, supposed to be built about the fifth or sixth century; 35 miles north of Tripoli. Lat. 34. 55. N. long. 35. 58. E.

TORTOSA, CAPE, a promontory of Spain, on the coast of Catalonia. Lat. 40. 40. N. long. 0. 47. E.

TORTUE, a river of America, which runs into the Wabash. Lat. 39. 30. N. long. 87. 55. W.

TORTUE, LA, a small river of Lower Canada, which falls into the St. Lawrence from the south, about 4 miles above Montreal.

TORTUES, a river of the United States, in Louisiana, which runs into the Missouri. Lat. 38. 26. N. long. 94. 24. W.

TORTUGA SALADA, an island in the Caribbean sea, about 36 miles in circumference. The east end is full of rugged and broken rocks, which stretch themselves a little way out to sea. At the south-east part is an indifferent good road for shipping. The turtles come into the sandy bays to lay their eggs, and from hence the island has

its name. There is no anchoring anywhere but in the road where the salt ponds are, or in the harbour. It is uninhabited, and is 95 miles east-north-east of the port of La Guaira. Lat. 11. 7. N. long. 64. 30. W.

TORTUGA, an island of the North Atlantic ocean, about six miles from the north coast of the island of Hispaniola. It is about 60 miles in circumference. It is surrounded by rocks on the north and west side, and the bottom on the east is not only difficult to find, but very dangerous, through shoals and rocks of sand. It is fertile, and abundant in tobacco, palms, sandal wood, resin, China root, aloes, sugar, indigo, cotton, and all sorts of tropical fruits. It is scarce of water. It abounds in wild boars. It has only one convenient port, the entrance into which forms two channels. Lat. 20. 4. N. long. 72. 44.

TORTUGA, a small island in the North Atlantic ocean, near the coast of the province of Honduras.

TORTUGA, a small island on the coast of the province and government of Carthagena, in the new kingdom of Granada, on the side of the entrance of the mouth of the river San Juan.

TORTUGA, a small island in the gulf of California, lying in the centre, about an equal distance from the coast of California and that of Mexico.

TORTUGA, a port of Peru, in the province of Santa.

TORTUGA, PUNTA DE, a cape on the coast of Brazil. Lat. 3. S. long. 41. W.

TORTUGAS, DRY, shoals to the westward, a little southerly from Cape Florida, or the south point of Florida, in South America. They are 134 leagues from the bar of Pensacolo, and in lat. 24. 32. N. and long. 83. 40. W.

TORTUGAS, POINT, the south point of the port of Coquimbo, on the coast of Chili. The road or harbour is well sheltered, but will not contain above 20 or 30 vessels safely. Lat. 29. 37. S.

TORTUGILLA, a small island in the Spanish Main, near the coast of South America. Lat. 8. 45. N. long. 76. 20. W.

TORTUGUITAS, some small islands in the gulf of California, situate one at the bay of Conception, and the other within the same.

TORTULA, a genus of mosses, in Hedwig's fundam. 2. 92. comprehending some species of mnum and bryum.

TORTUOSITY, *s.* Wreath; flexure.—These the midwife contriveth unto a knot close unto the body of the infant, from whence ensueth that *tortuosity*, or complicated nodosity, called the navel. *Brown.*—Crookedness; depravity.—He discerneth the uprightness of godliness, and the *tortuosity* of wickedness. *Granger.*

TORTUOUS, *adj.* [from *tortuosus*, *tortus*, Lat.] Twisted; wreathed; winding.

So vary'd he, and of his *tortuous* train
Curl'd many a wanton wreath. *Milton.*

Aqueous vapours, like a dry wind, pass through so long and *tortuous* a pipe of lead. *Boyle.*—Mischievous.

What *tortuous* planets, or malevolent
Conspiring power? *Lodge.*

TORTURA, a small sea-port of Palestine, called in Scripture, Dor and Nephath. The environs are very fertile; 15 miles south of Acre.

TORTURE, *s.* [*torture*, Fr.; *tortura*, Lat.] Torments judicially inflicted; pain by which guilt is punished, or confession extorted.

Hecate
Then led me trembling through those dire abodes,
And taught the *tortures* of th' avenging gods. *Dryden.*

Pain; anguish; pang.
Better be with the dead,
Than on the *torture* of the mind to lie
In restless extasy. *Shakspeare.*

To **TORTURE**, *v. a.* To punish with tortures.
Hipparchus my enfranchis'd bondman,
He may at pleasure whip, or hang, or *torture*. *Shakspeare.*
To

To vex; to excruciate; to torment.
Still must I cherish the dear, sad remembrance,
At once to *torture*, and to please my soul. *Addison.*

To keep on the stretch.—The bow *tortureth* the string continually, and thereby holdeth it in a continual trepidation. *Bacon.*

TORTURER, *s.* He who tortures; tormenter.
I play the *torturer* by small and small,
To lengthen out the worst that must be spoken. *Shakspeare.*

TORTURINGLY, *adv.* So as to torment or punish.
An host of furies
Could not have baited me more *torturingly*. *Beaumont and Fl.*

TORTUROUS, *adj.* Tormenting, occasioning torture.
TORTWORTH, a parish of England, in Gloucestershire; 3½ miles west-by-north of Wootton-under-Edge.

TORVAKAIRY, a town of the south of India, province of Mysore. Lat. 13. 10. N. long. 76. 43. E.

TORVER, a township of England, in Lancashire; 5½ miles west-south-west of Hawkshead.

TORVITY, *s.* [*torvitas*, Lat.] Sourness; severity of countenance. *Not used.* *Cockeram.*

TORVOUS, *adj.* [*torvus*, Lat.] Sour of aspect; stern; severe of countenance. *Not used.*—That *torvous* sour look produced by anger, and that gay and pleasing countenance accompanying love. *Derham.*

TORWOOD, a forest of Scotland, in Stirlingshire, noted for having given shelter to Sir William Wallace.

TORWORTH, a hamlet of England, in Nottinghamshire; 5 miles north-west-by-north of East Retford.

TORY, *s.* Opposed to a *whig*.—The knight is more a *tory* in the country than the town, because it more advances his interest. *Addison.* See *WHIG*.

TORY, an island in the Atlantic ocean, about seven miles north from Bloody Farland Point, on the north coast of Ireland, about three miles long, and hardly one broad. Lat. 55. 16. N. long. 8. 7. W.

TORY. See *TAVAI POENAMMOO*.
TORYISM, *s.* The notions of a tory.—Nothing would illustrate the subject better than an inquiry into the rise and progress of our late parties; or a short history of *toryism* and whiggism from their cradle to their grave, the introductory account of their genealogy and descent. *Bolingbroke.*

TORZELO, a small island of Italy; 6 miles from Venice.

TOSA, a river in the north of Italy, which rises in the mountain de la Fourche, and falls into the Lago Maggiore, in the duchy of Milan.

TOSA, a small town in the north-east of Sicily, in the Val di Demona, at the mouth of the river Polina; 12 miles east of Cefalu.

TOSA, a sea-port town in the north-east of Spain, in Catalonia, on a promontory of the same name, with 2400 inhabitants; 23 miles south-south-east of Gerona.

TOSA, a town on the southern coast of Xicoco, in Japan, capital of a province. Lat. 33. 40. N. long. 134. 50. E.

TOSAGUA, an abundant river of Quito, in the province of Esmeraldas, which runs south-south-west, and unites itself with the Chones, in lat. 32. 30. S.—There is a settlement of the same name on its shores.

TOSANLU, a river of Asia Minor, the ancient *Lycus*, which rises in the mountains of Armenia, and after running about 200 miles almost due west, falls into the Jekil Irmak; about 30 miles north of Amasia.

TOSCANELLO, a small town of Italy, in the State of the Church. It is the see of a bishop; 20 miles north of Civita Vecchia, and 43 north-west of Rome.

TOSCOLANO, a small town of Austrian Italy, in the Milanese, delegation of Brescia. Population nearly 3000; 6 miles east-north-east of Salo.

To TOSE, *v. n.* [of the same original with *tease*.] To comb wool.

TOSELAND, a parish of England, in Huntingdonshire; 4 miles north-east-by-east of St. Neots.

TOSINO, a river of the central part of Italy, which

crosses the marquisate of Ancona, and falls into the Adriatic, in Lat. 42. 57. N.

TOSNA, a river in the north of European Russia, which joins the Neva at Pella, in the government of Petersburg.

TOSO, a river of Quito, in the province of Esmeraldas, which runs north-west, and enters the Juli, in lat. 13. S.

TOSQUIATOSSY CREEK, one of the head branches of the Allegany river.

To TOSS, *v. a.* [*tassen*, Dutch; *tasser*, French, to accumulate; *Minsheu*. *Θεωσαι*, Gr. to dance; *Meric Casaubon*. *Tosen*, German, to make a noise; *Skimmer*: perhaps from *to us*, a word used by those who would have any thing thrown to them.] Pret. *tossed* or *tost*; part. pass. *tossed* or *tost*.—To throw with the hand, as a ball at play.

With this she seem'd to play, and, as in sport,
Toss'd to her love in presence of the court. *Dryden.*

To throw with violence.—Back do I *toss* these treasons to thy head. *Shakspeare*.—To lift with a sudden and violent motion.

Behold how they *toss* their torches on high,
How they point to the Persian abodes. *Dryden.*

To agitate; to put into violent motion.—I have made several voyages upon the sea, often being *tossed* in storms. *Addison*.—To make restless; to disquiet.

She did love the knight of the red cross,
For whose dear sake so many troubles her did *toss*. *Spenser.*

To keep in play; to tumble over.—That scholar should come to a better knowledge in the Latin tongue than most do, that spend four years in *tossing* all the rules of grammar in common schools. *Ascham.*

To TOSS, *v. n.* To fling; to winch; to be in violent commotion.

And thou, my sire, not destin'd by thy birth,
To turn to dust and mix with common earth,
How wilt thou *toss* and rave, and long to die,
And quit thy claim to immortality! *Addison.*

To be tossed.
Your mind is *tossing* on the sea,
There where your argosies
Do overpeer the petty traffickers. *Shakspeare.*

To Toss up. To throw a coin into the air, and wager on what side it shall fall.

I'd try if any pleasure could be found,
In *tossing up* for twenty thousand pound. *Bramston.*

TOSS, *s.* The act of tossing.—The discus that is to be seen in the hand of the celebrated Castor at Don Livio's is perfectly round; nor has it any thing like a sling fastened to it, to add force to the *toss*. *Addison*.—An affected manner of raising the head.

His various modes from various fathers follow;
One taught the *toss*, and one the new French wallow;
His sword-knot this, his cravat that designed. *Dryden.*

TO'SSEL, *s.* See *TASSEL*.—Tie at each lower corner a handful of hops with a piece of packthread to make a *tossel*, by which you may conveniently lift the bag when full.—*Mortimer.*

TO'SSER, *s.* One who throws; one who flings and writhes.—Whoever or whatever agitates.

I did expect,
Instead of Mars, the storm-goaler Eolus,
And Juno proffering her *Deiopeia*
As satisfaction to the blustering god
To send his *tossers* forth. *Beaumont and Fl.*

TOSSIA, a town of Asia Minor, situated on the Kisil Irmak, and on the route from Amasia to Constantinople. Lat. 40. 20. N. long. 34. 10. E.

TOSSIDE, a hamlet of England, West Riding of Yorkshire; 7 miles south-west-by-south of Settle.

TOSSIGNANO, a small town of Italy, in the Ecclesiastical States; 13 miles west of Ferrara.

TO'SSING,

TOSSING, *s.* Violent commotion.

Dire was the *tossing*; deep the groans: Despair
Tended the sick, busiest from couch to couch. *Milton.*

TOSSPOT, *s.* A toper and drunkard.—*Tossspots* still
had drunken head. *Shakspeare.*

TOST, preterite and part. pass. of *toss*.—In a troubled
sea of passion *tost*. *Milton.*

TOST, or TOSCHEK, a small town of Prussian Silesia; 28
miles south-east of Oppeln, and 20 west-north-west of Beu-
then. Population 800.

TOSTA, a river of Guatimala, in the province of Nicara-
gua, which enters the Pacific ocean, in lat. 12. 30. S.

TOSTAR, a name sometimes given to Suster, or Shuster;
which see.

TOSTO, a cape on the north coast of Spain. Lat. 43.
13. N. long. 9. 10. W.

TOSZ, a small but rapid river of the Swiss canton of
Zurich, which falls into the Rhine; 2 miles south-east of
Eglisau. On its banks stands a large village of the same
name.

TOTA, a lake of New Granada, in the province of Tunja,
on the top of a mountain desert. It is of a circular figure,
and nearly six leagues in circumference.

TOTA, a settlement of New Granada, in the province of
Tunja, containing 300 families, and 200 Indians.

TOTAL, *adj.* [*totus*, Lat.; *total*, Fr.] Whole; com-
plete; full.

They set and rise;
Lest *total* darkness should by night regain
Her old possession, and extinguish life. *Milton.*

Whole; not divided.

Either to undergo

Myself the *total* crime; or to accuse
My other self, the partner of my life. *Milton.*

TOTALITY, *s.* [*totalité*, Fr.] Complete sum; whole
quantity.—Identity, diversity; possibility, act; *totality*,
parts, &c., are but wise cautions against ambiguities of
speech. *Bacon.*

TOTALLY, *adv.* Wholly; fully; completely.—The
sound interpreters expound this image of God, of natural
reason; which, if it be *totally* or mostly defaced, the right
of government doth cease. *Bacon.*

TOTALNESS, *s.* Entireness.

TOTANA, a town of the south-east of Spain, in Murcia.
It is situated on the great road through Murcia, leading from
Andalusia into Valencia, and contains 8200 inhabitants; 15
miles east-north-east of Lorca. Lat. 37. 45. N. long. 1.
16. W.

TOTAVIMANCHA, a small river of Brazil, in the pro-
vince of Pernambuco, which enters the Atlantic.

To TOTE. See To TOOT.

TOTEOLMALOYA, a settlement of Mexico, in the in-
tendancy of Mexico, containing 128 families of Indians.

TOTHAN, GREAT and LITTLE, adjoining parishes of
England, in Essex; 3 miles north-north-east of Maldon.
Population 788.

TOTHEA, a river of Wales, in Cardiganshire, which runs
into the Pescotter, in Rescob forest.

T'OTHER, contracted for *the other*.—As bad the one
as *t'other*. *Farnaby.*

TOTHIL, a parish of England, in Lincolnshire; 3½ miles
north-west of Alford.

TOTILA, king of the Ostrogoths in Italy, was a com-
mander of the Gothic garrison at Treviso, and upon the
deposition and murder of his uncle Eraric, was chosen to
succeed him A.D. 541. See GOTH.

TOTLEY, a township of England, in Derbyshire; 8 miles
north-west-by-north of Chesterfield.

TOTMA, a small town in the north-east of European
Russia, in the government of Vologda, on the river Suchona.
It contains 2400 inhabitants; 92 miles north-east of Vologda.
Lat. 60. 8. N. long. 42. 41. 15. E.

TOTNELL, a hamlet of England, in the parish of Yet-
minster, Dorsetshire.

Vol. XXIV. No. 1626.

TOTNES, a market town of England, in the county of
Devon, beautifully situated on the river Dart, from the bridge
over which it extends up a hill, three quarters of a mile in
length, stretching along its brow, and commanding a fine
view of the winding stream and the country in its vicinity,
but sheltered at the same time by higher grounds on every side.
Many of the houses have piazzas in front, and the higher
stories project over the lower ones, according to the fashion
of ancient times. The town was formerly surrounded by a
wall, and had four gates; the east and north gateways are
now standing. The corporation consists of a mayor, recorder,
13 burgomasters or assistants, and about 70 common-council-
men. It sends two members to parliament, and the first re-
turn was made in the 23d of Edward I. The right of elec-
tion is vested in the corporation. There is only one weekly
market held here, on Saturday; and in lieu of the weekly
market on Tuesday, a monthly market is established the first
Tuesday in every month, which market is considered the
finest for cattle in the west of England. Totnes had origi-
nally four chartered annual fairs; but two only are now
held, viz., on the 12th of May and the 28th of October.
The town contains 356 houses, and 3125 inhabitants; 24
miles south-south-west of Exeter, and 196 west-by-south of
London. Lat. 50. 25. N. long. 3. 40. W.

TOTOLTEPEC, a settlement of Mexico, in the intenden-
dancy of Mexico, containing 233 Indian families.

TOTOLZINTLA, a settlement of Mexico, containing 120
Indian families.

TOTOMEHUACAN, a settlement of Mexico, in the in-
tendancy of Puebla de los Angeles, containing 460 families
of Indians, and 60 of Spaniards, mulattoes, &c.

TOTON, or TOUETON, a hamlet of England, in Notting-
hamshire; 5 miles south-west-by-west of Nottingham.

TOTAL, a lake of Quito, in the province of Quito,
and near the lake of the same name.

TOTAL, an island on the coast of Chili, in the pro-
vince of Coquimbo. Lat. 29. 20. S.

TOTAL, a town of South America, in the province of
Cordova; 54 miles north of Cordova.

TOTAL, a small island in the Pacific ocean, near the
coast of Chili. Lat. 29. 20. S.

TOTORKOW, or TUTURKAI, a small town of European
Turkey, in Romania, with a small castle on a hill, on the
Danube; 24 miles west of Silistria.

TOTRUSCH, a small town of European Turkey, in Mol-
davia, situated on the river Totrusch; 110 miles south of
Jassy.

TOTTENHAM, a populous village in Middlesex.

TOTTENHILL, a parish of England, in Norfolk; 6 miles
north-north-east of Market Downham.

To TOTTER, *v. n.* [*touteren*, Teut. *to tremble*: *tittra*,
Icel. the same.] To shake so as to threaten a fall; to stagger.

What news, in this our *tottering* state?

—It is a reeling world indeed, my lord;

And I believe will never stand upright. *Shakspeare.*

TOTTERIDGE, a parish of England, in Hertfordshire,
situated on the ridge of a hill; 11 miles north-north-west of
St. Paul's, London.

TOTTERNHOE, or TOTERNAL, a parish of England,
in Bedfordshire; 2 miles west-south-west of Dunstable.

TOTTERY, or TOTTY, *adj.* Shaking; unsteady;
dizzy. Neither of these words is used, except in vulgar
language: as *totty-headed* for *giddy-headed*.

Siker thy head very *tottie* is,

So on thy corbe shoulder it leans amisse. *Spenser.*

TOTTINGTON, HIGH and LOW, adjoining townships
of England, in Lancashire; 5 miles north-north-west of Bury.
Population of the former, 1556; of the latter, 5917.

TOTTINGTON, a parish of England, in Norfolk; 4
miles south-south-west of Watton.

TOVARRA, a small town in the south-east of Spain, si-
tuated in a fertile valley, and containing 3000 inhabitants;
53 miles north-north-west of Murcia.

TOUBANG, a large and populous town on the north coast of the island of Java. It has an ancient mosque, and is 470 miles east from Batavia.

To TOUCH, *v. a.* [*toucher*, Fr., doubtless from the M. Goth. *tekan*, to touch.] To perceive by the sense of feeling.—Nothing but body can be *touch'd* or *touch*. *Creech*.—To handle slightly, without effort or violence.—In the middle of the bridge there is a draw-bridge made with such artifice, that the sentinel discovering any force approaching, may by only *touching* a certain iron with his foot, draw up the bridge. *Brown*.—To reach with any thing, so as that there be no space between the thing reached and the thing brought to it.

Him thus intent, Ithuriel with his spear
Touch'd lightly.

Milton.

To come to; to attain.

Their impious folly dar'd to prey
On herds devoted to the god of day;
The god vindictive doom'd them never more,
Ah, men unblest'd! to *touch* their natal shore.

Pope.

To try as gold with a stone.

When I have suit,
Wherein I mean to *touch* your love indeed,
It shall be full of poise and difficulty,
And fearful to be granted.

Shakspeare.

To relate to.

The quarrel *toucheth* none but us alone;
Betwixt ourselves let us decide it then.

Shakspeare.

To meddle with; not totally to forbear.

He so light was at legerdemain,
That what he *touch'd* came not to light again.

Spenser.

To affect.

What of sweet
Hath *touch'd* my sense, flat seems to this.

Milton.

To move; to strike mentally; to melt.

The tender sire was *touch'd* with what he said,
And flung the blaze of glories from his head,
And bid the youth advance.

Addison.

To delineate or mark out.

Nature affords at least a glimm'ring light:
The lines, though *touch'd* but faintly, are drawn right.

Pope.

To censure; to animadvert upon. *Not used*.—Dr. Parker, in his sermon before them, *touch'd* them for their living so near, that they went near to *touch* him for his life. *Hayward*.—To infect; to seize slightly.—Pestilent diseases are bred in the summer; otherwise those *touch'd* are in most danger in the winter. *Bacon*.—To bite; to wear; to have an effect on.—Its face must be very flat and smooth, and so hard, that a file will not *touch* it, as smiths say, when a file will not eat or rase it. *Mozon*.—To strike a musical instrument.—They *touch'd* their golden harps, and praised. *Milton*.—To influence by impulse; to impel forcibly.

No decree of mine,

To *touch* with highest moment of impulse
His free will.

Milton.

To treat of perfunctorily.—This thy last reasoning words
touch'd only. *Milton*.

To TOUCH up. To repair, or improve by slight strokes, or little emendations.—What he saw was only her natural countenance *touch'd up* with the usual improvements of an aged coquette. *Addison*.

To TOUCH, v. n. To be in a state of junction so that no space is between them; as, two spheres *touch* only at points.—To fasten on; to take effect on.—Strong waters pierce metals, and will *touch* upon gold that will not *touch* upon silver. *Bacon*.

To TOUCH at. To come to without stay.—Civil law and history are studies which a gentleman should not barely *touch at*, but constantly dwell upon. *Locke*.

To TOUCH on. To mention slightly.—The shewing by what steps knowledge comes into our minds, it may suffice to have only *touch'd on*. *Locke*.

To TOUCH on or upon. To go for a very short time.

Which monsters, lest the Trojan's pious host
Should bear, or *touch upon* th' enchanted coast,
Propitious Neptune steer'd their course by night. *Dryden*.

To TOUCH on or upon. To light upon in mental inquiries.—It is impossible to make observations in art or science which have not been *touch'd upon* by others. *Addison*.

TOUCH, s. Reach of any thing so that there is no space between the things reaching and reached.

No falsehood can endure
Touch of celestial temper, but returns
Of force to its own likeness.

Milton:

The sense of feeling.

O dear son Edgar,
Might I but live to see thee in my *touch*,
I'd say, I had eyes again.

Shakspeare.

The fifth sense is *touch*, a sense over the whole body.
Locke.—The act of touching.

With one virtuous *touch*
The archchemic sun produces precious things.

Milton.

State of being touched.

The time was once when thou unurg'd wou'dst vow,
That never *touch* was welcome to thy hand,
Unless I *touch'd*.

Shakspeare.

Examination, as by a stone. *Dr. Johnson*.—A common kind of black marble, frequently made use of in ornaments, was formerly called *touch*. From its solidity and firmness it was also used as the test of gold; and from this use of it the name itself was taken. It seems to be the same with that anciently called basalt. *Rev. Mr. Whalley's* note on the following passage in B. Jonson's Forest, II. "Show of *touch* or marble."—So Fuller. Worth. in Yorksh. "Vulgar eyes confound black marble, polished to the height, with *touch*, geat (jet), and ebony." Hence perhaps the phrase, as true as *touch*. "She—though true as *touch*, though daughter of a king," &c. *Spenser*.—See TOUCHSTONE.

To-morrow, good Sir Michael, is a day
Wherein the fortune of ten thousand men
Must bide the *touch*.

Shakspeare.

Test; that by which any thing is examined.—The law-makers rather respected their own benefit than equity, the true *touch* of all laws. *Carew*.—Proof; tried qualities.

Come, my sweet wife, my dearest mother, and
My friends of noble *touch*! when I am forth,
Bid me farewell and smile.

Shakspeare.

[*Touche*, Fr.] Single act of a pencil upon the picture.

Artificial strife
Lives in those *touches*, livelier than life.

Shakspeare.

Feature; lineament.

Thus, Rosalind, of many parts
By heav'nly synod was devis'd;
Of many faces, eyes and hearts,
To have the *touches* dearest priz'd.

Shakspeare.

Act of the hand upon a musical instrument.

Here let the sounds of music
Creep in our ears; soft stillness and the night
Become the *touches* of sweet harmony.

Shakspeare.

Power of exciting the affections.

Not alone
The death of Fulvia, with more urgent *touches*,
Do strongly speak to us.

Shakspeare.

Something of passion or affection.

He loves us not:
He wants the natural *touch*.

Shakspeare.
Particular

Particular relation.—Speech of *touch* towards others should be sparingly used; for discourse ought to be as a field, without coming home to any man. *Bacon*.—[*Touche*, Fr.] A stroke.—Another smart *touch* of the author we meet with in the fifth page, where, without any preparation, he breaks out all on a sudden into a vein of poetry. *Addison*.—Animadversion; censure.

Soon mov'd with *touch* of blame, thus Eve,
What words have pass'd thy lips, Adam, severe. *Milton*.

Exact performance of agreement.—He was not to expect that so perfidious a creature should keep *touch* with him. *L'Estrange*.—A small quantity intermingled.

Madam, I have a *touch* of your condition,
That cannot brook the accent of reproof. *Shakspeare*.

A hint; slight notice given.—The king, your master, knows their disposition very well; a small *touch* will put him in mind of them. *Bacon*.—A cant word for a slight essay.—Print my preface in such a form as, in the booksellers' phrase, will make a sixpenny *touch*. *Swift*.

TOUCHABLE, *adj.* Tangible; that may be touched.

TOUCHAN, a city of China, of the second rank, in Koeitchoo. Lat. 25. 46. N. long. 107. 3. E.

TOUCHE (Claude Guymond de la), a French poet, was born in 1719, and entered among the Jesuits; but a comedy, acted in 1748, occasioned his alienation from their fraternity. The slight of this body was resented by him in a poetical epistle published in 1766, and entitled "Les Soupçons du Cloître, ou le Triomphe du Fanatisme," in which he has exhibited the Jesuits in the blackest colours. Upon abandoning their society, he attached himself to the theatre; and in 1757 introduced on the stage his tragedy "Iphigénie en Tauride," the subject of which he borrowed from Euripides. This play, though chargeable with many defects, was well received, and has retained its reputation. Whilst he was preparing another tragedy on the story of Regulus, he fell a sacrifice to a pulmonary disorder in 1760. Among his MSS. was found his "Épître de l'Amitié," which has been read with pleasure. *Nouv. Dict. Hist.*

TOUCHE, a small river of Martinique, which enters the sea in the bay of its name.

TOUCH-HOLE, *s.* The hole through which the fire is conveyed to the powder in the gun.—In a piece of ordnance, if you speak in the *touch-hole*, and another lay his ear to the mouth of the piece, the sound is far better heard than in the open air. *Bacon*.

TOUCHINESS, *s.* Peevishness; irascibility.—My friends resented it as a motion not guided with such discretion as the *touchiness* of those times required. *King Charles*.

TOUCHING, *prep.* [This word is originally a participle of *touch*.] With respect, regard, or relation to. It has often the particle *as* before it, of which there seems to be no use. *Touching* is now obsolete, though more concise than the mode of speech now adopted.

Touching our person, seek we no revenge;
But we our kingdom's safety must so tender,
Whose ruin you three sought, that to her laws
We do deliver you. *Shakspeare*.

TOUCHING, *adj.* Pathetic; affecting; moving.

TOUCHINGLY, *adv.* With feeling emotion; in a pathetic manner.—This last fable shows how *touchingly* the poet argues in love affairs. *Garth*.

TOUCHMENOT, *s.* [*cucumis agrestis*, Lat.] An herb. *Ainsworth*.

TOUCHSTONE, *s.* [*picrre de touche*, French.] Stone by which metals are examined.—Chilon would say, that gold was tried with the *touchstone*, and men with gold. *Bacon*.—Any test or criterion.—Time is the surest judge of truth: I am not vain enough to think I have left no faults in this, which that *touchstone* will not discover. *Dryden*.

TOUCHWOOD, *s.* Rotten wood used to catch the fire struck from the flint.—To make white powder, the powder of rotten willows is best; spunk, or *touchwood* prepared, might make it russet. *Brown*.

TOUCHY, *adj.* Peevish; irritable; irascible.—Was ever such a *touchy* man heard of? *Beaumont and Fl.*

TOUCY, a small town in the central part of France, department of the Yonne. Population 1900; 15 miles west-by-south of Auxerre.

TOUGET, a small town in the south-west of France, department of the Gers, near the river Macaoue. Population 1800; 17 miles north-east of Auch.

TOUGH, a parish of Scotland, in Aberdeenshire; 5 miles long, and 3 broad. Population 589.

TOUGH, *adj.* [toh, Sax. from the Goth. *tihan*, ducere. *Serenius*.] Yielding to flexure or extension without fracture; not brittle.—Of bodies some are fragile, and some are *tough*, and not fragile. *Bacon*.—Stiff; not easily flexible.

The bow he drew,
And almost join'd the horns of the *tough* eugh. *Dryden*.

Not easily injured or broken.

O sides you are too *tough*!
Will you yet hold? *Shakspeare*.

Viscous; clammy; ropy; tenacious. Difficult: this is an ancient usage of the word, and is still a colloquial one; as, a *tough* piece of business.—If that I speke of love, or make it *tough*. *Chaucer*.

To TOUGHEN, *v. a.* To make tough.

To TOUGHEN, *v. n.* To grow tough.—Hops off the kiln lay three weeks to cool, give and *toughen*, else they will break to powder. *Mortimer*.

TOUGHNESS, *s.* [tohnneſſe, Sax.] Not brittleness; flexibility.

A well-temper'd sword is bent at will,
But keeps the native *toughness* of the steel. *Dryden*.

Viscosity; tenacity; clamminess; glutinousness.—In the first stage the viscosity or *toughness* of the fluids should be taken off by diluents. *Arbutnot*.—Firmness against injury.—I confess me knit to thy deserving with cables of perdurable *toughness*. *Shakspeare*.

TOUINCHOSE, a post in the eastern part of Chinese Tartary. Lat. 41. 40. N. long. 111. 14. E.

TOVIS, or DREIKIRCHEN, a small town of Transylvania, in the county of Lower Weissenburg, near the Marosch.

TOUKIE, a city of China, of the second rank, in Quangsee. Lat. 23. 10. N. long. 106. 49. E.

TOUL, a town in the north-east of France, in the department of the Meurthe. It is situated on the Moselle, in a fertile valley, and surrounded by a chain of hills, covered with vineyards. Population about 7000; 14 miles west of Nancy, and 40 south-south-west of Metz. Lat. 48. 40. 32. N. long. 5. 53. 16. E.

TOULON, a small town in the east of France, department of the Saone and Loire, on the river Arroux. It is joined to a village of the same name on the other side of the river, by a bridge of thirteen arches. Population 1600; 20 miles west-by-north of Charolles, and 22 south-south-west of Autun.

TOULON, a well known sea-port in the south-east of France, situated in the department of the Var, on a bay of the Mediterranean. It is built at the foot of a ridge of lofty, and in general arid mountains, which shelter it from the north. Its environs yield vines, figs, and other products of a warm latitude. Viewed from a distance, Toulon presents nothing remarkable.

TOULOUSE, a large town in the south of France, formerly the capital of Upper Languedoc, now of the department of the Upper Garonne, situated on the right bank of the Garonne. In a historical sense it acquired an unfortunate title to notice, by an obstinate battle fought on 10th April 1814, between the British under Lord Wellington, and the French under Soult; neither commander having been apprised of the abdication of Buonaparte. The British troops were successful, but suffered severely: their loss in killed and wounded was between 4000 and 5000 men. The climate of Toulouse is warm for a northern constitution. The environs produce maize, wheat, vines, and other fruits of a southern

southern latitude; 150 miles south-east of Bourdeaux, and 420 south-by-west of Paris. Lat. 43. 35. 46. N. long. 1. 26. 36. E.

TOUMANDI DAGHI, a mountain of Anatolia, part of the ancient Olympus; 20 miles south-east of Boursa.

TOUMEN, a town of Mantchoo Tartary; 608 miles east-north-east of Pekin.

TOUMEN, a river of Corea, which falls into the sea of Japan. Lat. 42. 30. N. long. 130. 34. E.

TOUMET, a post in the eastern part of Chinese Tartary. Lat. 41. 7. N. long. 110. 49. E.

TOUN, a town of Korassan, in Persia; 90 miles north-west of Herat.

TOUNA, the ruins of a considerable town of that name in Upper Egypt, now surrounded and formed into an island by the waters of Lake Menzaleh.

TOUP (Jonathan), a learned critic, was born at St. Ives, in Cornwall, in the year 1713, and entered at Exeter-college, Oxford, where he took a bachelor's degree. After being presented to the rectory of St. Martin, Cornwall, he took the degree of M. A. at Cambridge, in 1756. His "Emendationes in Suidam" introduced him to the learned world: it was published successively in three parts, the first in 1760, the second in 1764, and the third in 1766. The learning of this writer recommended him to the notice and patronage of bishop Warburton, whose positive and contemptuous manner he too much resembles; and for which he received merited castigation. In 1769, he published "Epistola Critica ad Virum celeberrimum Gul. Episc. Glocestr.," which contains remarks on the Greek writers. Warton's edition of Theocritus, which appeared in 1770, was accompanied with valuable corrections and annotations by Toup; and in 1772, he published, in a separate work, "Curæ posteriores, sive Appendicula Notarum atque Emendationum in Theocritum, Oxonii nuperrime publicatum," 4to. His treatment of Reiske, on account of his edition of Theocritus, drew upon him the very severe animadversion of that learned writer. By the recommendation of Warburton to Keppel, bishop of Exeter, Mr. Troup obtained a prebend in the church of Exeter, and the vicarage of St. Martin. In 1775, he printed "Appendicula Notarum in Suidam;" and in 1778, his "Longini omnia quæ extant; Gr. et Lat., &c." This latter work was well received, and a second edition was printed in Svo.

He died in January, 1785, in his 72d year. *Nicholl's Anec. Gen. Biog.*

TOUPE'E, or *TOUPET*, *s.* [*toupet*, French.] A kind of foretop; natural or artificial hair particularly dressed on the forehead.—Remember second-hand *toupees* and repaired ruffles. *Swift*.—I see nothing but red heels below, high *toupees* and largely aspiring curls above, accompanied with the scent of amber. *Hist. of Duelling.*

TOUQUES, a petty town in the north of France, department of Calvados, situated near the small river of the same name. It has a castle, a population of 1100, a small harbour, and a considerable fishery; 6 miles north-west of Pont l'Eveque, and 25 north-east of Caen.

TOUR, a small town in the central part of France, department of the Puy de Dome. Population 1700; 25 miles west of Issoire.

TOUR, *s.* [*tour*, French.] Ramble; roving journey.—I made the *tour* of all the king's palaces. *Addison*.—Turn; revolution. In both these senses it is rather French than English. First Ptolemy his scheme celestial wrought, And of machines a wild provision brought; Orbs centric and eccentric he prepares, Cycles and epicycles, solid spheres In order plac'd, and with bright globes inlaid, To solve the *tours* by heavenly bodies made. *Blackmore.*

In Milton it is probably tower; elevation; high flight. The bird of Jove, stoop'd from his airy *tour*, Two birds of gayest plume before him drove. *Milton.*

Turn; cast; manner.—The whole *tour* of the passage is his: a man given to superstition can have no security, day or night, sleeping or waking. *Bentley.*

TOUR and TAXIS, or THURN and TASSIS, the name, in a former age, of two small counties of Italy, in the Milanese. The title of prince of Tour and Taxis is still held by a German family of rank, remarkable for having established the use of posts in the empire. They are still at the head of the post-office in several states of Germany.

TOUR DES BALEINES, LA, a tower and light-house in the west of France, on the western extremity of the isle of Rhe.

TOUR LANDRY, a small town in the west of France, department of the Maine and Loire. Population 1700; 9 miles north-east of Cholet, and 22 south-south-west of Angers.

TOUR DE PEIL, LA, a small town in the west of Switzerland, on the lake of Geneva, near Vevay. Population 700.

TOUR DU PIN, LA, a small town in the south-east of France, department of the Isere. It is situated on the Bourbre, and has a population of 1600; 22 miles west-south-west of Chamberri.

TOUR DE ROUSSILLON, a small town in the south of France, in the Eastern Pyrenees, on the river Gly. It has a population of 900; 3 miles east of Perpignan.

TOUR LA VILLE, a small town in the north-west of France, department of La Manche. Population 3400; 4 miles from Cherbourg.

TOUR LA VILLE, or TOUR DE TREME, a small town of Switzerland, in the canton of Friburg; 2 miles north of Gruyeres.

TOURA, a town of Upper Egypt, anciently called *Troja*.

TOURADJA, an extensive inland district of Celebes, inhabited by mountaineers, and also by a race of people called Biajoos, who are itinerant fishermen.

TOURAIN, an inland province of France, bounded by the provinces Maine, the Orleanois, Berri, Poitou, and Anjou. It is watered by the Loire, the Cher, the Indre, and the Vienne. Tours is the capital.

TOURATTEA, a country of Celebes, extending from the river Tjeeko along the sea coast, to the south and east, to the river Tino.

TOURBE, a small river in the north-east of France, department of the Marne. It falls into the Aisne near Servan.

TOURINA, CAPE, a promontory in the north-west of Spain, on the west coast of Galicia. Lat. 43. 3. N. long. 9. 20. W.

TOURIST, *s.* One who makes a tour or ramble. *A modern word.*

TOURMALET, one of the passes of the Pyrenees, in the central part, near Bareges.

TOURMALINE, in Mineralogy, a stone sometimes used as a gem by jewellers, and particularly remarkable for exhibiting electricity by heat or friction. See MINERALOGY.

TOURMENTE, CAPE, a bold bluff point on the north bank of the river St. Lawrence, rising more than 1800 feet above the river. It is 7 miles below the island of Orleans.

TOURN, *s.* The sheriff's turn, or court.—The sheriff's *turn* decided in all affairs, civil and criminal. *Burke*.—A spinning-wheel. Exmore dialect. *Grose.*

TOURNAGHAUT, a celebrated pass of the south of India, leading from the western coast called the Concan, into the interior of the country. Lat. 17. 47. N. long. 73. 25. E.

TOURNAMENT, or TOURNEY; *s.* [*toirnementum*, low Latin; *τερνεμεντα*, *torneamenta*, hastiludia: Occurrit apud Cantacuzenum, lib. i. cap. 42. Meursii Gloss. Græco-Barb.] Tilt; joust; military sport; mock encounter.

He liv'd with all the pomp he could devise, At tilts and *tournaments* obtain'd the prize, But found no favour in his lady's eyes. *Dryden.*

Milton uses it simply for encounter; shock or battle.

With cruel *tournament* the squadrons join!
Where cattle pastur'd late, now scatter'd lies
With carcasses, and arms, the ensanguin'd field. *Milton.*

TOURNANS, a small town in the north of France department of the Seine and Marne, with 1600 inhabitants; 14 miles

14 miles north-by-east of Melun, and 17 south-south-west of Meaux.

TOURNAY, a small town in the south-west of France, department of the Upper Pyrenees. Population 800; 12 miles south-east of Tarbes.

TOURNAY, a large town of the Netherlands, the chief place of a district in the province of Hainault. It adjoins the frontier of French Flanders, and is traversed by the Scheldt, which has here more the appearance of a canal than a river. On one side of it is a broad and handsome quay, almost the only embellishment of the town, which in general is ill built and gloomy.

TOURNEFORT (Joseph Pitton de), the great leader of the French school of botany, and one of the three most distinguished systematic writers of the age preceding Linnæus, was born at Aix, in Provence, in 1656. Being destined by his parents for the church, he was educated at the Jesuits' college of his native town; but he soon imbibed a taste for natural knowledge, which led him at the age of 21, on the death of his father, to change his original destination, for the profession of physic. This latter indeed was but subservient to a most ardent devotion for botanic science, which ever after made the object and the happiness of his life. Having soon exhausted the botanical riches of a physic-garden at Aix, and of the circumjacent fields, he extended his researches to the neighbouring Alps, and afterwards to the Pyrenees, where his hardy frame of body, and his observing enterprising mind, rendered easy to him the acquisition of the principal vegetable stores of those romantic and fertile regions. Even the thievish and lawless hordes, which then abounded in the Pyrenean fastnesses, were scarcely formidable to a traveller, whose only riches were dried plants, and whose ostensible provision for his journey consisted of a little black bread, in which he concealed his money. The intermediate winters between his several visits to Dauphiny, Savoy, Catalonia, the Pyrenees, &c., were spent in the university of Montpellier, where he first entered in 1679; but he is said to have taken his doctor's degree at Orange. At Montpellier he enjoyed the intimacy of Magnol.

The merits of Tournefort, as a botanist, soon became conspicuous at Paris, and, aided by a fortunate introduction, procured him the especial favour of professor Fagon, then chief physician to the queen, who resigned in his favour the superintendance of the royal garden. In this school he was soon attended by a numerous throng of students, eager to follow him in his excursions round Paris, and to profit by his practical remarks.

The subject of our memoir now became desirous of further examining the productions of other countries than his own, in their native situations. For this purpose he travelled, in 1688, to Spain and Portugal, afterwards into Holland and England; enriching by these means his own collection of dried plants, as well as the living collections of the Parisian garden, and procuring the acquaintance and correspondence of all the most eminent cultivators of the science in which he excelled.

The studies and labours of Tournefort were facilitated and encouraged by a royal pension, which could certainly not come under the opprobrious denomination of a sinecure. In 1692, he became a member of the Academy of Sciences, and in 1694 published in French his "*Elements de Botanique*," making three octavo volumes, dedicated to Louis XIV.—This was but a prelude to his immortal work, the "*Institutiones Rei Herbariæ*," of which the first edition, in three quarto volumes, with 476 plates, appeared in 1700. The second, which, with a reference to the "*Elements*," is called the third, was published by Anthony de Jussieu, at Lyons, in 1719, with the "*Corollarium*," composed of the author's Oriental discoveries. In 1698, when he was admitted a member of the Medical Faculty at Paris, he published a little duodecimo volume, "*Histoire des Plantes qui naissent aux Environs de Paris*," afterwards translated by professor Martyn into English. The reputed virtues of the plants are subjoined to their synonyms and descriptions.

VOL. XXIV. No. 1626.

The arrangement is alphabetical; the style desultory, nor is this one of the best books of its kind.

We know not at what period Tournefort received the order of St. Michael, but that he was decorated therewith appears by his portrait, published by Dr. Thornton, from an original picture; and the circumstance is alluded to by Haller, *Bibl. Bot.* v. 2, 3.

At the earnest recommendation of his friend Fagon, Tournefort was dispatched, under royal patronage, on a voyage to the Levant, the avowed object of which was to investigate the plants of ancient writers, as well as to make new discoveries. He was accompanied by a German physician, named Andrew Gundelscheimer, and by Claude Aubriet, one of the most exquisite botanical painters that the world ever saw. These travellers left Paris on the 9th of March, 1700, and embarking at Marseilles the 23d of April, anchored nine days afterwards in Crete. The investigation of the Archipelago, Greece, the shores of the Euxine, the countries of Bithynia, Cappadocia, Iberia, Armenia, Georgia, Galatia, Lydia, &c., occupied two years, and our adventurers returned in safety to Marseilles, on the 3d of June, 1702. Tournefort's account of this expedition, written in French, and published soon after his decease, is one of the most agreeable, intelligent, and valuable books of travels extant. The work is addressed, in the form of letters, to the comte de Pontchartrain, secretary of state. On arriving at Paris, it was his design to have turned to advantage the connections and reputation he had acquired, by devoting himself to the practice of physic. His time, however, was incessantly occupied; and the preparation of his "*Voyage du Levant*" for publication, which, considering the books necessary to be consulted, was no light or speedy task, led him too often to encroach on the night, after the superabundant labours of the day. His health became impaired, but this could not relax his ardour. His fate, however, was precipitated by the accident of a carriage in the street, which crushed his breast, and even threatened him with instant death, from which he was rescued by the exertions of a friend near at hand. He languished for a few months only after this event, and died December 28, 1708, in the fifty-third year of his age. We find no mention of his place of burial, nor of any monument erected to his memory. He was never married. He left his collection of plants to the king, who bestowed a pension of a thousand livres on his nephew, as an avowed return for this legacy, and a testimony of royal esteem for the deceased. Of Tournefort's system of classification, we have given an account in the article Botany.

TOURNEFORTIA [so named by Linnæus, in memory of Joseph Pitton Tournefort, the famous author of an elegant arrangement of plants, under the title of *Institutiones Rei Herbariæ*], in Botany, a genus of the class pentandria, order monogynia, natural order of asperifoliæ, borraginæ (*Juss.*)—Generic Character. Calyx: perianth five-parted, small; segments awl-shaped, permanent. Corolla one-petalled, funnel-form; tube cylindrical, globular at the base; border half-five-cleft, spreading; segments acuminate, horizontal, gibbous in the middle. Stamina: filaments five, awl-shaped, at the throat of the corolla. Anthers simple, in the throat, converging, acuminate. Pistil: germ globular, superior. Style simple, length of the stamens, club-shaped. Stigma circumcised, entire. Pericarp: berry globular, two-celled, perforated by two pores at top. Seeds four, subovate, separated by pulp.—*Essential Character*. Berry two-celled, two-seeded, superior, perforated at top by two pores.

1. *Tournefortia serrata*, or serrate-leaved *tournefortia*.—Leaves ovate, serrate; petioles spinescent; spikes terminating, recurved.—This, and most of the other species, are natives of South America.

2. *Tournefortia hirsutissima*, or hairy *tournefortia*.—Leaves ovate-petioled, acuminate; stem hirsute; spikes branched, terminating; berries hirsute.—Native of the islands in the West Indies.

3. *Tournefortia volubilis*, or climbing *tournefortia*.—Leaves ovate,

ovate, acuminate, smooth; petioles reflexed; stem twining. This has a twining woody stalk, which twists about the neighbouring trees for support, and rises to the height of ten or twelve feet, sending out several slender woody branches.—Native of Jamaica.

4. *Tournefortia syringæfolia*, or lilac-leaved tournefortia.—Leaves subcordate-ovate, acuminate, smooth; spikes branched.—Found in Cayenne.

5. *Tournefortia foetidissima*, or fetid tournefortia.—Leaves ovate-lanceolate, rough-haired; peduncles branched; spikes pendulous.

6. *Tournefortia humilis*, or dwarf tournefortia.—Leaves lanceolate, sessile; spikes simple, recurved, lateral.

7. *Tournefortia bicolor*, or two-coloured tournefortia.—Leaves ovate, acuminate, smooth, somewhat wrinkled above; spikes cymed, erect, recurved.

8. *Tournefortia cymosa*, or broad-leaved tournefortia.—Leaves ovate, quite entire, naked; spikes cymed.

9. *Tournefortia argentea*, or silvery tournefortia.—Leaves ovate, obtuse, tomentose-silky; spikes terminating, compound.

10. *Tournefortia sericea*, or silky tournefortia.—Leaves ovate-lanceolate, beneath tomentose-silky; spikes lateral and terminating, dichotomous-panicled.

11. *Tournefortia suffruticosa*, or hoary-leaved tournefortia.—Leaves sublanceolate, hoary; stem suffruticose.

Propagation and Culture.—These plants are propagated by seeds, which must be procured from the countries where they grow naturally; these should be sown in small pots filled with light earth, and plunged into a hot-bed of tanners bark.

TOURNETTE, a mountain of the Alps, in Savoy, near Annecy. Its height is nearly 7200 feet above the level of the sea.

To TOURNEY, v. n. To tilt in the lists.

An elfin born of noble state,
Well could he *tourney*, and in lists debate. *Spenser.*

TOURNIQUET, s. A bandage used in amputations, straitened or relaxed by the turn of a handle.—If the orifice does not readily appear, loosen the *tourmiquet*, and the effusion of blood will direct you to it. *Sharp.*

TOURNON, a small town in the south-east of France, department of the Ardeche, situated on a declivity near the Rhone. It has a population of 3500. On the opposite bank of the Rhone is cultivated the well known wine called hermitage; 12 miles north-by-west of Valence, and 60 south-east of Lyons.

TOURNON, a small town in the south-west of France, department of the Lot and Garonne, with 1100 inhabitants; 14 miles of Villeneuve, and 22 north-east of Agen.

TOURNUS, a small town in the east of France, department of the Saone and Loire, situated on the Saone. Population 5200; 17 miles south of Chalons, and 20 north of Macon.

TOUROUVRE, a small town in the north of France, department of the Orne. Population 1700; 7 miles north-east of Mortagne.

TOURRETTIA [so named by Dombey from Mons. de la Tourrette, author of *Chloris Lugdunensis*, and *Botanicæ Scholæ Veterinariæ Lugd. prælectiones*], in Botany, a genus of the class didynamia, order angiospermia, natural order of personatæ, bignonix (*Juss.*)—Generic Character. Calyx: perianth one-leaved, tubular, before flowering coloured, two-lipped; upper lip acute, lower indistinctly four-toothed, having a membrane internally; permanent. Corolla one-petalled; tube compressed, length of the calyx; upper lip galeate, compressed, with the margins converging; lower lip none, but in place of it a double toothlet. Stamina: filaments four, filiform, concealed under the upper lip, two of them shorter. Anthers two-lobed. Pistil: germ oblong, somewhat four-cornered, tubercled. Style filiform, length and situation of the lip. Stigma bifid. Pericarp: capsule oblong, coriaceous, muricate with spines, (some of which are hooked,) four-celled, two-valved. Seeds few

(four to six) in each cell, subtriquetrous, ovate, girt with a membranaceous margin, emarginate and crenulate at the base, covered with a common membrane.—*Essential Character.* Calyx two-lipped. Corolla: lower lip none, but two toothlets instead of it. Capsule echinate, four-celled, two valved.

Touretteia lappacea. Root annual. Stem scandent, four-cornered, fistulous, branched. Leaves opposite the primordial ones ternate, lateral leaflets two-parted, at the next knot double-ternate without a tendril, at the upper knots of the stem ternate-decompound or pedate, with the common petiole growing out into a convoluted branched tendril. Flowers in a naked terminating raceme, of a dusky violet colour. At the base of the peduncles, which are alternate and very short, there is a bristle-shaped bracte.—Native of Peru.

TOURS, a small town in the central part of France, department of the Puy de Dome. Population nearly 2000; 25 miles east-by-south of Clermont.

TOURS, a considerable town in the central part of France, the capital of the department of the Indre and Loire. It is situated in a delightful plain, in one of the finest parts of France. It stands on the south or left bank of the Loire, a little above the spot where that river is joined by the Cher. The climate is considerably warmer than in Britain during summer; the winters are not long, but at intervals sharp. Tours being the capital of a department, contains a prefecture, and the different offices connected with it. Its environs contain a greater number of neat country houses than is common in French towns; 70 miles east of Angers, and 145 south-south-west of Paris. Lat. 47. 23. 46. N. long. 0. 40. 38. E.

TOURTERELLES, a cluster of small islands in the Indian sea, near the eastern coast of Africa. Lat. 11. 50. N.

TOURVES, a town in the south-east of France, department of the Var. Population nearly 3000; 22 miles north of Toulon.

TOURVILLE, a small town in the north of France, department of the Eure. Population 1100; 10 miles west of Louviers.

To TOUSE, v. a. [probably of the same original with *taw, tease, tose.*] To pull; to tear; to haul; to drag: whence *touser*, or *towzer*, the name of a mastiff.

Take him hence; to the rack with him:
We'll *towse* you joint by joint,
But we will know his purpose. *Shakespeare.*

To towze such things as flutter,
To honest Bounce is bread and butter. *Swift.*

To disorder the hair. *Cotgrave, and Sherwood.*—It is yet used, in some places, for disordering the dress.

To TOUSE, v. n. To tear; to rave.

She, struggling still with those
That 'gainst her rising pain their utmost strength oppose,
Starts, tosses, tumbles, strikes, turns, *touses*, spurns, and
sprawls,
Casting with furious limbs her holders to the walls. *Drayton.*

To TOUSLE, v. a. The diminutive of *touse* in the second sense: a *low expression.*

TOUSSAINT, a river of North America, which enters Lake Erie; 20 miles east of the Miami.

TOUTTI, a small town of Nubia, on the western bank of the Nile; 90 miles north of Sennar.

TOUVET, a large village in the south-east of France, near the river Isere. Population 1100; 18 miles north-east of Grenoble.

TOUVRE, a small but navigable river in the west of France, which falls into the Charente, near Angouleme.

TOU-YANG, a town of China, of the second rank, in Quang-see. Lat. 23. 18. N. long. 107. 4. E.

TOU-YUN, a city of China, of the first rank, in the province of Koeitchoo, separated only by a hill from the territory of a people called the Miaose, a barbarous race, whom the Chinese have never been able to subdue. Lat. 26. 12. N. long. 107. 2. E.

TOW,

TOW, *s.* [τοπ, Sax.] Flax or hemp beaten and combed into a filamentous substance.—*Tow* twisted round the handle of an instrument makes it easier to be held. *Sharp.*

To TOW, *v. a.* [τεον, τεοχαν, Sax., *to lead; toghen*, old Dutch.] To draw by a rope, particularly through the water.

Thou knew'st too well
My heart was to thy rudder ty'd by the string,
And thou should'st tow me after. *Shakspeare.*

TO'WAGE, *s.* [toiage, Fr.] The act of towing. *Cotgrave, and Sherwood.*—Money paid for towing. *Bailey.*

TOWAHNAHOOKS, a river of North America, which falls into the Columbia, about 275 miles before the latter empties itself into the Pacific ocean. Its banks are chiefly inhabited by the Snake Indians, who live principally on salmon, with which the river abounds.

TOWAMENSING, a township of the United States, in Montgomery county, Pennsylvania. Population 488.

TOWAR, a small island near the north coast of Celebes, in the Eastern seas. Lat 1. 18. N. long. 124. 25. E.

TOWARD, or **TOWARDS**, *prep.* [τοπαριδ, τοπαριδε, Sax.] In a direction to.—He set his face *toward* the wilderness. *Num.*—With local tendency to.

The currents drive,
*Tow'rd*s the retreating sea, their furious tide. *Milton.*

Near to: as, the danger now comes *towards* him.—With respect to; touching; regarding.

Repent you not,
As that the sin hath brought you to this shame,
Which sorrow's always *tow'rd*s ourselves, not heaven?
Shakspeare.

With ideal tendency to.—This was the first alarm England received *towards* any trouble, after it had enjoyed for so many years the most uninterrupted prosperity. *Clarendon.*—Nearly; little less than.—I am *towards* nine years older since I left you. *Swift.*—This word used sometimes to have its two syllables separated from each other, and the noun governed put between them. *Mason.*

Whose streams run forth there to the salt sea-side,
Here back return, and *to* their spring *ward* go. *Fairfax.*

TO'WARD, or **TO'WARDS**, *adv.* [It is doubtful whether in this use the word be adverb or adjective.] Near; at hand; in a state of preparation.—We have a foolish trifling banquet *towards*. *Shakspeare.*

TO'WARD, *adj.* Ready to do or learn; not froward.—Why, that is spoken like a *toward* prince. *Shakspeare.*

TOWARD, **POINT**, a cape of Scotland, at the south end of the county of Argyle, on the Clyde; 24 miles south of Inverary. Lat. 55. 52. N. long. 4. 42. W.

TO'WARDLINESS, *s.* Docility; compliance; readiness to do or to learn.—The beauty and *towardliness* of these children moved her brethren to envy. *Ralegh.*

TO'WARDLY, *adj.* Ready to do or learn; docile; compliant with duty.—Some young *towardly* noblemen or gentlemen were usually sent as assistants or attendants. *Bacon.*

TO'WARDNESS, *s.* Docility.—Parents will not throw away the *towardness* of a child, and the expense of education upon a profession, the labour of which is increased, and the rewards are vanished. *South.*

TOWCESTER, a market town of England, in the county of Northampton, situated on two streams, into which the little river Tove or Wedon is here divided, and which encompasses the town. Over these there are three bridges. The town is handsome, and consists chiefly of one long and very broad street. Towcester is a place of considerable antiquity, and during the time of the Saxons was a place of great strength, a castle having been built by them, of which there are still some vestiges on the north-west side of the town. The famous military road called the Watling-street runs through the town, and appears plainly in the road to Stoney Stratford. Horseley places here the Roman station *Lactoduro*. Towcester contains 471 houses, and 2245 inhabitants. Market on Tues-

day, and three annual fairs; 8 miles south-west of Northampton, and 60 north-west of London.

TOWEDNACK, a parish of England, in Cornwall; 3 miles south-west-by-west of St. Ives. Population 532.

TO'WEL, *s.* [touaglio, Italian.] A cloth on which the hands are wiped.

The attendants water for their hands supply,
And having wash'd, with silken *towels* dry. *Dryden.*

TO'WER, *s.* [τοπ, Sax.; turris, Lat.] A high building; a building raised above the main edifice.

He them beholding, soon
Comes down to see their city, ere the *tower*
Obstruct heaven-towers. *Milton.*

A fortress; a citadel.—A strong *tower* from the enemy. *Psalms.*—A high head-dress.

Lay trains of amorous intrigues
In *towers*, and curls, and periwigs. *Hudibras.*

High flight; elevation.
To TO'WER, *v. n.* To soar; to fly or rise high.

No marvel
My lord protector's hawks do *tower* so well. *Shakspeare.*

TOWER HILL, the name of a hill and village in the United States, in South Kingston, Rhode Island.

TOWER ISLAND, a small island in the Eastern seas, near the south coast of the island of Flores. Lat. 9. 2. S. long. 124. 44. E.

TO'WERED, *adj.* Adorned or defended by towers.

Might she the wise Latona be,
Or the *tow'red* Cybele. *Milton.*

TOWERIDGE, a river of England, in the county of Devon. It rises about 4 miles from Hartland Point, near the source of the Tamar, and enters the Severn at Barnstaple bay, about 2 miles below Appledore, where it is joined by the Tav.

TOWERMUIR, the name of a tower in England, in the county of Lincoln, situated between Tattershall and Horn-castle.

TO'WERMUSTARD, *s.* [turritis, Lat.] A plant. *Miller.*

TOWERSEY, a parish of England, in Buckinghamshire; 9 miles south-west of Aylesbury.

TO'WERY, *adj.* Adorned or guarded with towers.

Rise, crown'd with lights, imperial Salem rise!
Exalt thy *tow'ry* head, and lift thy eyes! *Pope.*

TOWIE, or **TOWIE KINBATTOCK**, a parish of Scotland, in Aberdeenshire, about 3½ miles long, and 2 broad, watered by the Don. Population 585.

TO'WLINE, *s.* [toh-line, Sax.] The rope or chain used in towing.

TOWLSTON, a township of England, West Riding of Yorkshire; 2 miles west of Tadcaster.

TOWN, *s.* [tun, Sax.; tuyn, Dutch, from tynan, Sax. *to shut in.*] Any walled collection of houses.

When Alexandria was besieg'd and won,
He pass'd the trenches first, and storm'd the *town*. *Betterton.*

Any collection of houses larger than a village.—Before him *towns*, and rural works between. *Milton.*—In England, any number of houses to which belongs a regular market, and which is not a city or the see of a bishop.—The inhabitants of a town.

To the clear spring cold Artæa went;
To which the whole *towne* for their water sent. *Chapman.*

The court end of London.
A virgin whom her mother's care
Drags from the *town* to wholesome country air. *Pope.*

The people who live in the capital.
He, all at once let down,
Stuns with his giddy larum half the *town*. *Pope.*

It is used by the inhabitants of every town or city: as we say, a new family is come to *town*.—There is some new dress
or

or new diversion just come to town *Law*.—It is used emphatically for the capital: as he lives six months in *town*, and six in the country.

TO'WNCLERK, *s.* An officer who manages the public business of a place.—The *townclerk* appeased the people. *Acts*.

TO'WNCRIER, *s.* An officer in a town, whose business is to make proclamations.—Speak thy speech trippingly on the tongue: but if you mouth it, as many of our players do, I had as lieve the *town-crier* had spoke the lines. *Shakspeare*.

TOWNHOUSE, *s.* The hall where public business is transacted.—A *townhouse* built at one end will front the church that stands at the other. *Addison*.—A house in opposition to a house in the country, where a person has both.

TO'WNISH, *adj.* Appertaining to those who live in a town.

On *townish* men, (though happy they
Appear to open sight,
Yet many times unhappie haps
And cruel chances light.

Turberville.

TO'WNLESS, *adj.* Without towns; deprived of towns.—They of the religion are now *townless* and armless; and so are her greatest peers, most of them out of office, and provincial command. *Howell*.

TOWNSHEND, a post township of the United States, in Middlesex county, Massachusetts; 44 miles north-west of Boston. Population 1246.

TOWNSHEND, a post township of the United States, in Windham county, Vermont; 40 miles south-south-west of Windsor. Population 1115.

TOWNSHEND, CAPE, a cape on the north-east coast of New Holland. Lat. 22. 15. S. long. 209. 43. W.

TOWNSHEND ISLAND, an island on the east coast of New Holland. Lat. 22. 13. S. long. of the cape, 159. 29. E.

TOWNSHEND, POINT, a cape on the south-east coast of Admiralty island, in the north Pacific ocean. Lat. 57. 7. N. long. 225. 57. E.

TO'WNSHIP, *s.* The corporation of a town; the district belonging to a town.—I am but a poor petitioner of our whole *township*. *Shakspeare*.

TO'WNSMAN, *s.* An inhabitant of a place.
Here come the *townsmen* in procession,
Before your highness to present the man. *Shakspeare*.

One of the same town.

TOWNSTALL, a parish of England, in Devonshire, near Dartmouth. Its church is situated on a hill, and has a tower 69 feet high, which serves as a landmark at sea. Population 987.

TOWNTALK, *s.* Common prattle of a place.—If you tell the secret, in twelve hours it shall be *towntalk*. *L'Estrange*.

TO'WNTOP, *s.* A large top. Formerly one of these was kept in every village, to be whipped in frosty weather, that the peasants might be kept warm by exercise, and out of mischief, while they could not work. *Steevens*.—It is now a term only among boys.—To sleep like a *towntop*, is a proverbial expression: a top is said to sleep, when it turns round with great velocity, and makes a smooth humming noise. *Blackstone*.

TOWTHORPE, or TOUTHORPE, a township of England, East Riding of Yorkshire; 9½ miles west-north-west of Great Driffield.—A township in the North Riding of the same county; 5 miles north-by-east of York.

TOWTON, a village of England, in the West Riding of Yorkshire; 3 miles south-east of Tadcaster. It is famous for a sanguinary battle fought here between the forces of the houses of York and Lancaster, on Palm Sunday, 1461. The Yorkists gained a complete victory; and 36,000 men, of whom nine were noblemen, besides many knights and esquires, fell in the battle and in the pursuit.

TOWYN, a parish of Wales in the county of Merioneth,

situated on the river Towynmy; 11 miles from Barmouth, and 217¼ from London. Population 1941.

TOWYNNY, a river of Wales, in Montgomeryshire, which runs into the Dowy; 5 miles north-east of Machynleth.

TO'XICAL, *adj.* [*toxicum*, Lat.] Poisonous; containing poison.

TOXOTÆ [*τοξοται*, Gr.], among the Athenians, bowmen, a sort of inferior officers, or rather servants, who attended the *lexiarchi*. They were much like the Roman *licitors*: there were a thousand of them in the city of Athens, that lived in tents, erected first in the forum and afterwards in the *areopagus*.

TOXTETH PARK, a township of England, in Lancashire; 3 miles south-east of Liverpool. Population 5864.

TOY, *s.* [*toyen*, *toighen*, to dress with many ornaments, Dutch.] A petty commodity; a trifle; a thing of no value:

Because of old

Thou thyself doat'st on womankind, admiring
Their shape, their colour, and attractive grace:
None are, thou think'st, but taken with such *toys*. *Milton*.

A plaything; a bauble.—What a profusion of wealth laid out in coaches, trappings, tables, cabinets, and the like precious *toys*. *Addison*.—Matter of no importance.

'Tis a cockle or a walnut shell,

A knack, a *toy*, a trick, a baby's cap. *Shakspeare*.

Folly; trifling practice; silly opinion.—The things which so long experience of all ages hath confirmed and made profitable, let us not presume to condemn as follies and *toys*, because we sometimes know not the cause and reason of them. *Hooker*.—Play; sport; amorous dalliance.

So said he, and forbore not glance or *toy*
Of amorous intent. *Milton*.

Odd story; silly tale,

I never may believe

These antic fables, nor these fairy *toys*. *Shakspeare*.

Slight representation.—Shall that which hath always received this construction, be now disguised with a *toy* of novelty? *Hooker*.—Wild fancy; irregular imagery; odd conceit.

The very place puts *toys* of desperation,
Without more motive, into every brain,
That looks so many fathoms to the sea,
And hears it roar beneath. *Shakspeare*.

To TOY, *v. n.* To trifle; to dally amorously; to play.—To *toy*, to wanton, dally, smile and jest. *Shakspeare*.

To TOY, *v. a.* To treat foolishly.—They must have oyle, candels, wine and water, flower, and such other things, trifled and *toyed* withal. *Dering*.

TO'YER, *s.* One who toys; one who is full of tricks.

Wanton Cupid, idle *toyer*,

Pleasing tyrant, soft destroyer! *Harrison*.

TO'YFUL, *adj.* Full of tricks.—It quicken'd next a *toyful* ape. *Donne*.

TO'YISH, *adj.* Trifling; wanton.—Your ringing of bells, your burning of lights in the open daylight, with I wot not how many other *toyish* devices. *Crowley*.

TO'YISHNESS, *s.* Nugacity; wantonness.—Your society will discredit that *toyishness* of wanton fancy, that plays tricks with words, and frolics with the caprices of frothy imagination. *Glanville*.

TO'YMAN, *s.* A seller of toys.

But what in oddness can be more sublime,
Than S——, the foremost *toyman* of his time? *Young*.

TOYNTON, HIGH and LOW, adjoining parishes of England, in Lincolnshire; 2 miles east of Horncastle.

TOYNTON, ALL SAINTS, and ST. PETER'S, adjoining parishes in the above county; 2½ miles south of Spilsby.

TO'YSHOP, *s.* A shop where playthings and little nice manufactures are sold.—Fans, silks, ribbands, laces, and gewgaws,

gewgaws, lay so thick together, that the heart was nothing else but a *toyshop*. Addison.

To TOZE, *v. a.* [See *To TOUSE* and *TEASE*.] To pull by violence or importunity.—Think'st thou, for that I insinuate, or *toze* from thee thy business, I am therefore no courtier. *Shakspeare*.

TOZER, a large village of the Bled-el Jereede, to the south of Tunis. It is the ancient *Tisurus*; 50 miles south-south-west of Gafsa.

TOZZIA [so named by Micheli in honour of Bruno Tozzi, Abbot of Vallumbrosa, F. R. S.], in Botany, a genus of the class didynamia, order angiospermia, natural order of personatæ, *lysimachia* (*Juss.*)—Generic Character. Calyx: perianth one-leaved, tubular, very short, five-toothed, permanent. Corolla one-petalled, ringent; tube cylindrical, longer than the calyx; border spreading; upper lip bifid; lower trifid; segments all nearly equal, rounded. Stamina: filaments four, concealed beneath the upper lip. Anthers roundish. Pistil; germ ovate. Style filiform, situation and length of the stamens. Stigma headed. Pericarp: capsule globular, one-celled, one-valved. Seed single, ovate.—*Essential Character*. Calyx five-toothed. Capsule one-celled, globular, one-seeded.

Tozzia alpina.—Root formed of roundish scales. Stem square, branched. The whole habit tender and succulent. Leaves round, bluntly notched, pale. Peduncles axillary, short, one-flowered. Flowers yellow, with the three lower segments spotted of a deeper yellow, serrate. Fruit globular, drawn out into a conical point.—Native of the mountains of Switzerland, Austria, South of France, Italy, and the Pyrenees, in rough moist places.

TRAARBACH, a small town of the Prussian province of the Lower Rhine, on the Moselle; 24 miles north-east of Treves.

TRABA, a small sea-port of European Turkey, in the island of Candia.

TRACADUCHE, or **CARLETON**, a settlement on the north side of Chaleur bay, in lower Canada.

TRACE, *s.* [*trace*, French; *traccia*, Italian.] Mark left by any thing passing; footsteps.

These as a line their long dimension drew,
Streaking the ground with sinuous *trace*.

Milton.

Remain; appearance of what has been.

The shady empire shall retain no *trace*
Of war, of blood, but in the Sylvan chace.

Pope.

Track; path.

This like monk let olde thinges pace,
And held after the newe world the *trace*.

Chaucer.

[From *tirasser*, French; *tirasses*, traces.] Harness for beasts of draught.

Her waggon spokes made of long spinner's legs;

The cover, of the wings of grasshoppers;

The *traces*, of the smallest spider's web. *Shakspeare*.

To TRACE, *v. a.* [*tracer*, French; *tracciare*, Italian.] To follow by the footsteps, or remaining marks.—To this haste of the mind a not due *tracing* of the arguments to their true foundation is owing *Locke*.—To follow with exactness.

That servile path thou nobly dost decline,

Of *tracing* word by word, and line by line. *Denham*.

To mark out.—He allows the soul power to *trace* images on the brain, and perceive them. *Locke*.—To walk over.—We do *trace* this alley up and down. *Shakspeare*.

To TRACE, *v. n.* To walk; to travel.—Thus long they *trae'd* and *travers'd* to and fro. *Spenser*.

TRACEABLE, *adj.* That may be traced.—The boundaries of the ancient *Citium* are not *traceable*. *Drummond*.

TRACER, *s.* One that traces.—Pliny, the only man among the Latins who is a diligent and curious *tracer* of the prints of nature's footsteps. *Hakewill*.

TRACERY, *s.* Ornamental stonework.—Some modern moulding or ornament will here and there unfortunately be

detected in the moulding of an arch, the *tracery* of a niche, or the ramifications of a window. *Warton*.

TRACHEA, in Anatomy, the wind-pipe (from *τραχεια αρτηρια*, Gr.), a rough tube containing air (rough from its cartilaginous rings), whence the Latin *asperia arteria*. It is the tube conveying air into the lungs, and commencing at the root of the tongue.

TRACHEÆ is the appellation given by Malpighi, Grew, &c., to the large spiral-coated vessels of plants; which, being generally found filled with air only, are likewise termed air-vessels. The discoveries of Dr. Darwin, Mr. Knight, and others, have shewn them rather to be sap-vessels, and that the empty state in which they are usually found, is owing to their contents having been expelled on dissection, by the elasticity and irritability of their coats. Such is known to be the fact with regard to the arteries of animals.

TRACHELIUM [from *τραχηλος*, the neck], in Botany, a genus of the class pentandria, order monogynia, natural order of campanacæ, campanulacæ (*Juss.*)—Generic Character. Calyx: perianth five-parted, very small, superior. Corolla one-petalled, funnel-form; tube cylindrical, very long, very slender; border patulous, small, five-parted; segments ovate, concave. Stamina: filaments five, capillary, length of the corolla. Anthers simple. Pistil: germ three-sided-roundish, inferior. Style filiform, twice as long as the corolla. Stigma globular. Pericarp: capsule roundish, obtusely three-lobed, three-celled, opening by three holes at the base. Seeds numerous, very small.—*Essential Character*. Corolla funnel-form. Stigma globular. Capsule three-celled, inferior.

1. *Trachelium cæruleum*, or blue throatwort.—Branched, erect; leaves ovate, serrate, flat. Root perennial, fleshy, tuberous, sending out many fibres which spread wide on every side.—Native of Italy and the Levant.

2. *Trachelium diffusum*, or spreading throatwort.—Very much branched, diffused; branches divaricating, recurved; leaves awl-shaped.

3. *Trachelium tenuifolium*, or fine-leaved throatwort.—Nearly upright; leaves linear, ciliate, hispid.—This and the preceding are natives of the Cape of Good Hope.

Propagation and Culture.—This plant is propagated by seeds, which should be sown in autumn when they are ripe. When the plants come up, they should be kept clean from weeds, and as soon as they are big enough to remove, they should be transplanted on an east-angled border of light undunged earth, placing them in rows six inches apart, and four inches distant in the rows, shading them from the sun till they have taken new root; after which they require no other care but to keep them clean from weeds till autumn, when they may be transplanted into the borders of the flower-garden, where they will flower the following summer.

TRACHENBERG, a small town of Prussian Silesia; 24 miles north of Breslau.

TRACHEOTOMY [from *τραχεια*, Gr., the *wind-pipe*, and *τεμνω*, to cut], denotes the operation of making an opening into the wind-pipe. See *SURGERY*.

TRACHICHTHYS, a genus of fishes, first described by Dr. Shaw, the characters of which are as follow: head rounded in front; eye large, mouth wide, toothless, descending. Gill-membrane furnished with eight rays, of which the four lowermost are rough on the edges. Scales rough; abdomen mailed with large carinated scales. There is one species, viz. :—

Trachichthys Australis, or Southern *trachichthys*.—With mailed abdomen; a native of the coast of New Holland. Its colour is a bright pink-ferruginous, or fair reddish-brown. The middle part of all the fins of a deeper colour than the rest of the animal, and the edges lighter, or of a yellowish tinge.

TRACHINUS, in the Linnæan system of Ichthyology, the name of a genus of fish of the order of the jugulars: the characters are, that the head is compressed and not smooth; the membrane of the gills has six rays, and the lower lamina of the opercula is serrated; and the anus is

near the breast. Linnæus mentions one species, viz., the draco. Artdi refers the uranoscope also to this genus.

The name is originally Greek, the word *τραχέειος* signifying rough, sharp, or prickly. It was given to this fish from the rays of its back-fin being remarkably rigid, and sharp like prickles.

TRACHURUS *Brasiliensis*, a name given by Mr. Ray to a fish of the scomber kind, the scomber cordyla of Linnæus, known among writers on these subjects by its Brazilian name guaratereba.

TRA'PING, *s.* Course; path; regular track.

Not all those precious gems in heaven above
Shall yield a sight more pleasing to behold,
With all their turns and tracings manifold. *Sir J. Davies.*

TRACK, *s.* [*traccia*, Italian; *taracq*, Arab.; *drach*, Heb.] Mark left upon the way by the foot or otherwise.

Hung by the neck and hair, and dragg'd around,
The hostile spear yet sticking in his wound,
With tracks of blood inscrib'd the dusty ground. *Dryden.*

A road; a beaten path.

Behold Torquatus the same track pursue,
And next, the two devoted Decii view. *Dryden.*

To TRACK, *v. a.* To follow by the footsteps or marks left in the way.—He was not only a professed imitator of Horace, but a learned plagiarist in all the others; you track him every where in their snow. *Dryden.*

TRACK, one of the Nicobar islands. Lat. 7. 30. N. long. 94. 6. E.

TRACKEHNEN, a village of Prussian Lithuania, with a large stud of horses belonging to government; 15 miles south-south-west of Gumbinnen.

TRACKLESS, *adj.* Untrodden; marked with no footsteps.

Lost in trackless fields of shining day,
Unable to discern the way,
Which Nassau's virtue only could explore. *Prior.*

TRAC'KSCOUT, *s.* [*treck-schuyt*, Dutch; *trekken*, to draw.] A passage boat, in Holland, usually towed or drawn by a horse.—It would not be amiss if he travelled over England in a stage-coach, and made the tour of Holland in a trackscoute. *Arbuthnot and Pope.*

TRACT, *s.* [*tractus*, Latin.] Any kind of extended substance.

Heaven hides nothing from thy view,
Nor the deep tract of Hell. *Milton.*

A region; a quantity of land.—Only there are some tracts which, by high mountains, are barred from air and fresh wind. *Raleigh.*—Continuity; any thing protracted, or drawn out to length.—The myrtle flourisheth still; and wonderful it is that for so long a tract of time she should still continue fresh. *Howell.*—Course; manner of process: unless it means, in this place, rather, discourse; explanation.

The tract of every thing
Would, by a good discourser, lose some life
Which action's self was tongue to. *Shakspeare.*

It seems to be used by Shakspeare for track.
The weary sun hath made a golden set,
And by the bright tract of his fiery car,
Gives signal of a goodly day to-morrow. *Shakspeare.*

[*Tractatus*, Lat.] A treatise; a small book.—The church clergy at that time writ the best collection of tracts against popery that ever appeared. *Swift.*

To TRACT, *v. a.* To trace out. *Obsolete.*
Streight gan he him revyle, and bitter rate,
As shepherdes curre, that in darke eveninges shade
Hath tracted forth some salvage beast's trade. *Spenscr.*

An ancient abbreviation of *retract* and *protract*: as, to tract and speak of a thing again, retractare," *Huloet*; "to tract the time." *Barret.*

TRACTABILITY, *s.* [*tractabilité*, old French.] Capability of being managed.

TRA'CTABLE, *adj.* [*tractabilis*, Lat.] Manageable; docile; compliant; obsequious; practicable; governable.

If thou dost find him tractable to us,
Encourage him, and tell him all our reasons;
If he be leaden, icy, cold, unwilling,
Be thou so too. *Shakspeare:*

Palpable; such as may be handled.—The other measures are of continued quantity visible, and for the most part tractable; whereas time is always transient, neither to be seen nor felt. *Holder.*

TRA'CTABLENESS, *s.* The state of being tractable; compliance; obsequiousness.—It will be objected, that whatsoever I fancy of children's tractableness, yet many will never apply. *Locke.*

TRA'CTABLY, *adv.* In a tractable manner; gently.

TRA'CTATE, *s.* [*tractatus*, Lat.] A treatise; a tract; a small book.—We need no other evidence than Glanville's tractate. *Hale.*

TRACTA'TION, *s.* [*tractatio*, Lat.] Discussion of a subject.—A fit task for him, that intended a full tractation of the points controverted. *Bp. Hall.*

TRA'CTILE, *adj.* [*tractus*, Lat.] Capable to be drawn out or extended in length; ductile.—The consistencies of bodies are very divers; fragile, tough; flexible, inflexible; tractile, or to be drawn forth in length, intractile. *Bacon.*

TRACTILITY, *s.* The quality of being tractile.—Silver, whose ductility and tractility are much inferior to those of gold, was drawn out to so slender a wire, that a single grain amounted to twenty-seven feet. *Derham.*

TRACTION, *s.* [*tractus*, Lat.] The act of drawing; the state of being drawn.—The malleus being fixed to an extensible membrane, follows the traction of the muscle, and is drawn inwards to bring the terms of that line nearer in proportion as it is curved, and so gives a tension to the tympanum. *Holder.*

TRACTORLÆ, among the Romans, were diplomas or tickets given by the Emperor to such as he sent into, or called out of, the provinces; by which they were entitled to the use of the public post, and to be maintained at the expense of the government.

TRACTRIX, in Geometry, a curve line, called also catenaria.

TRACY'S LANDING, a post village of the United States, in Ann Arundel county, Maryland.

TRADATE, a small town of Austrian Italy, in the Milanésé; 20 miles north-west of Milan.

TRADE, *s.* [*tratta*, Ital.] Traffic; commerce; exchange of goods for other goods, or for money.—Whosoever commands the sea, commands the trade; whosoever commands the trade of the world, commands the riches of the world, and consequently the world itself. *Raleigh.*—Occupation; particular employment, whether manual or mercantile, distinguished from the liberal arts or learned professions.

How dizzy! half way down
Hangs one that gathers samphire, dreadful tradc. *Shakspeare.*
Instruments of any occupation.

The shepherd bears
His house and household gods, his trade of war,
His bow and quiver, and his trusty cur. *Dryden.*

Any employment not manual; habitual exercise.—Call some of young years to train them up in that trade; and so fit them for weighty affairs. *Bacon.*—Custom; habit; standing practice.—Thy sin's not accidental, but a trade. *Shakspeare.*—Formerly trade was used of domestic, and traffic of foreign commerce.

To TRADE, *v. a.* To traffic; to deal; to hold commerce.—He commanded these servants to be called, to know how much every man had gained by trading. *St. Luke.*—To act merely for money.

TRACHINUS AND TRICHECUS.

J. Fass sc.

1. *Tr. Esoc* 2. *A variety* 3. *Trichechus Rosmarus* 4. *Tr. Manatus*.

Saucy and overbold! how did you dare
To trade and traffic with Macbeth,
In riddles and affairs of death?

Shakspeare.

Having a trading wind.—They on the *trading* flood ply
toward the pole. *Milton.*

To TRADE, *v. a.* To sell or exchange in commerce.—
They were thy merchants: they *traded* the persons of men
and vessels of brass in thy market. *Ezek.*

TRADE-WIND, *s.* The monsoon; the periodical wind
between the tropics.

Thus to the eastern wealth through storms we go,
But now, the Cape once doubled, fear no more;
A constant *trade-wind* will securely blow,
And gently lay us on the spicey shore.

Dryden.

TRADED, *adj.* Versed; practised.

Trust not those cunning waters of his eyes;
For villainy is not without such rheum:
And he long *traded* in it makes it seem
Like rivers of remorse and innocence.

Shakspeare.

TRA'DEFUL, *adj.* Commercial; busy in traffic.

Ye *tradeiful* merchants that with weary toil
Do seek most precious things to make your gain,
And both the Indies of their treasure spoil,
What needeth you to seek so far in vain.

Spenser.

TRADER, *s.* One engaged in merchandise or com-
merce.—Pilgrims are going to Canterbury with rich offerings,
and *traders* riding to London with fat purses. *Shakspeare.*

One long used in the methods of money getting; a prac-
titioner.

TRADESCANT (John), one of the fathers of natural history in England, having been the first who made any considerable collection of natural productions, as well as one of the earliest cultivators of exotic plants in this country, is reported by Anthony Wood to have been a Dutchman. Dr. Pulteney thinks he was not settled in England during the life of Gerarde, though often mentioued in the second edition of that author's Herbal, by its editor Johnson, as well as in Parkinson's Works. He is recorded to have been for a considerable time in the service of the lord-treasurer Salisbury, and Lord Wooton. He travelled into various parts of Europe, even as far as Russia, and was on board a fleet sent against the Algerines in 1620. He brought home plants and other curiosities from these various excursions; but it does not appear what was their primary object. About the year 1629, he obtained the title of gardener to King Charles I., and about that time, or before, was settled at Lambeth, where his own garden was situated. Some remains of this were traced out by Sir William Watson, 120 years afterwards. Tradescant's Ark, or Museum; became very famous as a collection of natural rarities. It was much visited by the great, and even by the royal family, all of whom took pleasure in enriching it, as in later times their descendants have done to other such collections. A catalogue of the Museum Tradescantium, in 12mo., appeared in 1656, with portraits of the owner and his son, engraved by Hollar. By this catalogue, the museum appears to have been furnished, not only with birds, quadrupeds, fish, shells, insects, minerals, fruits, &c., but also with warlike instruments, habits, utensils, coins, and medals. There is annexed a catalogue in English and Latin of the plants cultivated in the author's garden. His portrait represents him as greatly advanced in age at this period, but the time of his death is not known. His son, of the same name, visited Virginia, and returned with several new plants; amongst others the original Tradescantia, hereafter mentioned. The son inherited his father's collections, and dying in 1662, bequeathed them to Mr. Elias Ashmole, so that they may be said to have laid the foundation of the Ashmolean Museum at Oxford, in which they, like the name of their original owner, are now sunk.

TRADESCANTIA [so named by Ruppilius, in his Flora Jenensis, from John Tradescant, who first introduced it in Europe], in Botany, a genus of the class hexandria, order

monogynia, natural order of ensatae, junci (*Juss.*)—Generic Character. Calyx: perianth three-leaved; leaflets ovate, concave, spreading, permanent. Corolla: petals three, orbicular, flat, spreading very much, large, equal. Stamina: filaments six, filiform, length of the calyx, erect, villose, with jointed hairs. Anthers kidney-form. Pistil: germ ovate, obtusely three-cornered. Style filiform, length of the stamens. Stigma three cornered, tubulous. Pericarp: capsule ovate, covered by the calyx, three-celled, three-valved. Seeds few, angular.—*Essential Character.* Calyx three-leaved. Petals three. Filaments equal, with jointed hairs. Capsule three-celled.

1. Tradescantia Virginica, or common Virginian spiderwort.—Erect; leaves lanceolate, smooth; flowers heaped in an umbel, terminating.—Native of Virginia and Maryland.

2. Tradescantia crassifolia, or thick-leaved spiderwort.—Erect; leaves ovate, woolly at the edge and beneath; flowers heaped in umbels, terminating.—Native of Mexico.

3. Tradescantia erecta, or upright spiderwort.—Erect; leaves ovate, narrowed at the base, smooth; peduncle terminating, naked, bifid, racemed.—Native of Mexico.

4. Tradescantia Zanonica, or gentian-leaved spiderwort.—Erect; leaves broad-lanceolate; peduncles lateral, solitary, jointed in the middle, many-flowered; bractes in pairs.—Native of the southern parts of Jamaica, in mountain woods, flowering in the spring months.

5. Tradescantia discolor, or purple-leaved spiderwort.—Stemless; even bractes equitant, compressed; leaves lanceolate, coloured underneath.—Native of South America on the Mosquito shore.

6. Tradescantia Malabarica, or grass-leaved spiderwort.—Erect; even; peduncles solitary, very long.—Native of the East Indies.

7. Tradescantia nervosa, or nerve-leaved spiderwort.—Scape one-flowered.—Supposed to be a native of Suratte. From Mutis.

8. Tradescantia divaricata, or straddling spiderwort.—Stem dichotomous; leaves ovate-lanceolate, smooth; sheaths villose; flowers paniced; filaments smooth.—Found on the banks of rivers in Guiana and Cayenne.

9. Tradescantia geniculata, or knotted spiderwort.—Procumbent, hirsute.—Native of South America, Martinico, in moist hedges.

10. Tradescantia monandra, or one-stamened spiderwort.—Diffused; leaves ovate-acuminate; peduncles axillary, many-flowered; flowers one-stamened.—Native of the western part of Hispaniola, in mountain woods.

11. Tradescantia multiflora, or many-flowered spiderwort.—Erect; branched; leaves cordate, ciliate on the edge and sheaths; peduncles clustered, axillary; flowers three-stamened.—Native of Jamaica, in mountain woods.

12. Tradescantia cordifolia, or heart-leaved spiderwort.—Creeping, filiform; leaves cordate; peduncles terminating, solitary, many-flowered.—Native of Jamaica, in moist, shady, grassy parts of high mountains; flowering in autumn.

13. Tradescantia procumbens, or trailing spiderwort.—Stem procumbent, rooting; leaves ovate, ciliate at the base, sheathing; peduncles cymed, axillary; stamens unequal.—Native of the Caraccas. Perennial.

14. Tradescantia axillaris, or axillary spiderwort.—Stem branched; flowers sessile, lateral.—Native of the East Indies, where cattle are very fond of it. Annual.

15. Tradescantia formosa, or handsome spiderwort.—Leaves opposite, connate.—Native of the Cape of Good Hope. Thunberg.

16 Tradescantia crestata, or crested spiderwort.—Creeping, even; spathes two-leaved, imbricate.—Native of Ceylon.

17. Tradescantia papilionacea, or papilionaceous spiderwort.—Creeping, even; spathes three-leaved, imbricate.—Native of the East Indies.

18. Tradescantia tuberosa, or tuberous-rooted spiderwort.—Roots tuberous; joints of the stem radical; bractes in two rows, falcate, ciliate.

19. Tradescantia paniculata, or paniced spiderwort.—Stems creeping; panicle terminating, many-flowered.—This and

and the one preceding are both natives of Coromandel, in moist vallies.

Propagation and Culture.—Virginian spiderwort multiplies so fast by its roots, as also from the seeds, if permitted to fall, that it must be yearly reduced, to keep it within bounds. The best time to remove and part the roots is in the autumn. The other species from the East and West Indies, require the heat of a stove, in which some of them may be abundantly increased both by seeds and offsets. Some of the species are annual, and can be propagated only by seeds; but the greater part is perennial. *Tradescantia formosa*, being a native of the Cape of Good Hope, requires only the protection of the dry stove.

TRADES FOLK, s. People employed in trades.—By his advice victuallers and *tradesfolk* would soon get all the money of the kingdom into their hands. *Swift*.

TRADESMAN, s. A shopkeeper. A merchant is called a *trader*, but not a tradesman.

Boastful and rough, your first son is a squire;
The next a *tradesman*, meek and much a liar.

Pope.

TRADITION, s. [*traditio*, Lat.] The act or practice of delivering accounts from mouth to mouth without written memorials; communication from age to age.—To learn it we have *tradition*; namely, that so we believe, because both we from our predecessors, and they from theirs, have so received. *Hooker*.—Any thing delivered orally from age to age.—It is well known to have been a general *tradition* amongst these nations, that the world was made and had a beginning. *Wilkins*.—Traditional practice; old custom.

Throw away respect,

Tradition, form, and ceremonious duty. *Shakspeare.*

The act of giving up; delivery: a *latinism*.—A deed takes effect only from the *tradition* or delivery. *Blackstone*.

TRADITIONAL, adj. Delivered by tradition; descending by oral communication; transmitted by the foregoing to the following age.—If there be any difference in natural parts, it should seem the advantage lies on the side of children born from wealthy parents, the same *traditional* sloth and luxury which render their body weak, perhaps refining their spirits. *Swift*.—Observant of traditions, or idle rites. *Not used, nor proper.*

God forbid

We should infringe the holy privilege
Of sanctuary!

You are too senseless obstinate, my lord;
Too ceremonious and *traditional*.

Shakspeare.

TRADITIONALLY, adv. By transmission from age to age.—There is another channel wherein this doctrine is *traditionally* derived from Saint John, namely, from the clergy of Asia. *Burnet*.—From tradition without evidence of written memorials.—It crosseth the proverb, and Rome might well be built in a day, if that were true which is *traditionally* related by Strabo, that the great cities Anchiale and Tarsus were built by Sardanapalus both in one day. *Brown*.

TRADITIONARY, adj. Delivered by tradition; transmissive; handed down from age to age.—Oral tradition is more uncertain, especially if we may take that to be the *traditionary* sense of texts of Scripture. *Tillotson*.

TRADITIONER, or TRADITIONIST, s. One who adheres to tradition.—We are not able to ascertain who the Masorites or *traditionists* were, that settled the present standard of the Hebrew Scriptures. *Pilkington*.

TRADITIVE, adj. [*trado*, Lat.] Transmitted or transmissible from age to age.

Suppose we on things *traditive* divide,
And both appeal to Scripture to decide.

Dryden.

TRADITORES, a name given in the first ages of the church to such Christians as, in times of persecution, to avoid death and martyrdom, delivered up the sacred writings to the persecutors.

To TRADUCE, v. a. [*traduco*, Lat.] To censure; to condemn; to represent as blameable; to calumniate; to

decry.—From that preface he took his hint; though he had the baseness not to acknowledge his benefactor, but instead of it to *traduce* me in libel. *Dryden*.—To propagate; to increase or continue by deriving one from another.—Some believe the soul is made by God, some by angels, and some by the generant: whether it be immediately created or *traduced* hath been the great ball of contention to the latter ages. *Glanville*.

TRADUCEMENT, s. Censure; obloquy.

Rome must know

The value of her own: 'twere a concealment

Worse than a theft, no less than a *traducement*,

To hide your doings.

Shakspeare.

TRADUCER, s. A false censorer; a calumniator.—St. Austin tells the *traducers*, that 'tis for want of a serious and solid casuistry, that they plunge themselves into such gross misrepresentations. *Biblioth. Bibl.*—One who derives.

TRADUCIBLE, adj. Such as may be derived.—Though oral tradition might be a competent discoverer of the original of a kingdom, yet such a tradition were incompetent without written monuments to derive to us the original laws, because they are of a complex nature, and therefore not orally *traducible* to so great a distance of ages. *Hale*.

To TRADUCT, v. a. [*traduco*, *traductum*, Lat.] To derive. *Not now in use*.—Consider our nature, as it is now depraved in us, and by the corrupt conduct of our sinful parents *traducted* unto us. *Fotherby*.

TRADUCTION, s. [*traductio*, Lat.] Derivation from one of the same kind; propagation.—The patrons of *traduction* accuse their adversaries of affronting the attributes of God; and the asserters of creation impeach them of violence to the nature of things. *Glanville*.—Tradition; transmission from one to another.—Touching traditional communication and *traduction* of truths connatural and engraven, I do not doubt but many of them have had the help of that derivation. *Hale*.—Conveyance; act of transferring.—Since America is divided on every side by considerable seas, and no passage known by land, the *traduction* of brutes could only be by shipping; though this was a method used for the *traduction* of useful cattle from hence thither, yet it is not credible that bears and lions should have so much care used for their transportation. *Hale*.—Transition.—The reports and fugues have an agreement with the figures in rhetoric of repetition and *traduction*. *Bacon*.

TRADUCTIVE, adj. Derivable; deducible.—It will consist only of a number of instances of similar customs of a striking nature, which all would judge imitations and *traductive*, if that system be true. *Warburton*.

TRADEWATER, a river of the United States, in Ohio, which has its rise in Christian county, and running a north-west course, falls into the Ohio 200 miles below the mouth of Green river. It is about 70 yards wide at its mouth, and 80 miles long.

TRAETH BICHAN, a bay of the Irish sea, on the west coast of Wales, in the county of Merioneth; 2 miles north of Harlech.

TRAETH MAWER, a bay of the Irish sea, on the west coast of Wales, between the counties of Merioneth and Caernarvon; 4 miles north of Harlech.

TRAETTA, a small town of Italy, in the north-west part of the kingdom of Naples, in the Terra di Lavoro. It has 3500 inhabitants, and stands on the river Garigliano, occupying the site of the ancient Minturna.

TRAFALGAR, a cape of Spain, on the coast of Andalusia, at the entrance of the straits of Gibraltar, opposite to cape Esparte, on the coast of Africa. On the 21st of October 1805, the British fleet, commanded by Lord Nelson, obtained a complete victory over the combined fleets of France and Spain off this cape. Lat. 36. 10. N. long. 68. W.

TRAFFICK, s. [*traffique*, Fr.; *traffico*, Italian.] Commerce; merchandizing; large trade; exchange of commodities. *Traffic* was formerly used of foreign commerce in distinction

distinction from *trade*.—As he was, for his great wisdom, stiled the English Solomon, he followed the example of that wise king in nothing more than by advancing the *traffic* of his people. *Addison*.—Commodities; subject of traffic.

You'll see a draggled damsel
From Billingsgate her fishy *traffic* bear.

Gay.

To **TRAFFIC**, *v. n.* [*traficquer*, French; *trafficare*, Italian.] To practise commerce; to merchandize; to exchange commodities.—They first plant for corn and cattle, and after enlarge themselves for things to *traffic* withal. *Bacon*. To trade meanly or mercenarily.

How hast thou dar'd to think so vilely of me,
That I would condescend to thy mean arts,
And *traffic* with thee for a prince's ruin?

Rowc.

To **TRAFFIC**, *v. a.* To exchange in traffic.—If in our converse we do not interchange sober useful notions, we shall at the best but *traffic* toys and baubles, and most commonly infection and poison. *Gov. of the Tongue*.

TRAFFICABLE, *adj.* Marketable.—Money itself—is in some cases a *trafficable* commodity. *Bp. Hall*.

TRAFFICKER, *s.* [*traficquer*, Fr.] Trader; merchant.

Your Argosies with portly sail,
Like signiors and rich burghers on the flood,
Do overpeer the petty *traffickers*
That curtsy to them.

Shakspeare.

TRAFFORD, BRIDGE, a township of England, in Cheshire; 4½ miles north-east-by-east of Chester.

TRAFFORD, MICKLE, a township in the same county; 3 miles north-east of Chester.

TRAFFORD, WIMBOLDS, another township of England, in Cheshire; 6 miles north-east-by-north of Chester.

TRA'GACANTH, *s.* [*tragacantha*, Latin.] A gum which proceeds from the incision of the root or trunk of a plant so called. *Trevour*.

TRAGARTH, a river of Wales, in Brecknockshire, which runs into the Melta, above Istradwelthy.

TRAGE'DIAN, *s.* [*tragædus*, Lat.] A writer of tragedy.—Many of the poets themselves had much nobler conceptions of the Deity, than to imagine him to have any thing corporeal; as in these verses out of the ancient *tragedian*. *Stillingfleet*.—An actor of tragedy.

I can counterfeit the deep *tragedian*;
Speak, and look back, and pry on ev'ry side,
Tremble and start at wagging of a straw,
Intending deep suspicion.

Shakspeare.

TRAGEDY, *s.* [*tragædia*, Lat.] A dramatic representation of a serious action.—All our *tragedies* are of kings and princes; but you never see a poor man have a part unless it be as a chorus, or to fill up the scenes, to dance, or to be derided. *Bp. Taylor*.—Any mournful or dreadful event.

I shall laugh at this,
That they, who brought me in my master's hate,
I live to look upon their *tragedy*.

Shakspeare

TRAGEN, a place of Fezzan, in Africa; 25 miles east of Mourzouk.

TRAGHAN, a town of Fezzan, in Africa, once considerable, but now reduced to 500 or 600 inhabitants.

TRAGIA [so named by Plumier, in memory of Hieronymus Tragus, whose real name was Jerome Bock, a German divine and physician], in Botany, a genus of the class monoecia, order triandria, natural order of tricocceæ, euphorbiæ (*Juss.*)—Generic Character. Male flowers.—Calyx: perianth three-parted; segments ovate, acute, flat, spreading. Corolla none. Stamina: filaments three, length of the calyx. Anthers roundish. Females on the same plant.—Calyx: perianth five or six-parted; leaflets ovate, concave, acute, permanent. Corolla none. Pistil: germ roundish, three-grooved. Style single, erect, longer than the calyx. Stigma trifid, spreading. Pericarp: capsule tricococcus, roundish, three-celled, hispid; each cell marked on the outside at the base with two dots. Seeds solitary, globular.—*Essential*

VOL. XXIV. No. 1627.

Character. Male.—Calyx three-parted. Corolla none. Female.—Calyx five-parted. Corolla none. Style trifid. Capsule tricococcus, three-celled. Seeds solitary.

1. *Tragia volubilis*, or twining *tragia*.—Leaves cordate-ovate, acuminate; stem twining. Stem suffrutescent, loose, round, stinging with its bristles; branches filiform, all directed one way, simple.—Native of the East and West Indies.

2. *Tragia cordifolia*, or heart-leaved *tragia*.—Leaves cordate; stem twining; female bractes five-leaved, pinnatifid. Stem shrubby, twining, hispid, as is the whole plant.

3. *Tragia involucrata*, or involucred *tragia*.—Leaves lanceolate; female bractes five-leaved pinnatifid.—Native of the East Indies.

4. *Tragia mercurialis*, or ovate-leaved *tragia*.—Leaves ovate.—An American plant.

5. *Tragia urens*, or stinging *tragia*.—Leaves lanceolate, obtuse, somewhat toothed. This is an annual plant.—Native of Virginia.

6. *Tragia chamaëlea*, or lance-leaved *tragia*.—Leaves lanceolate, obtuse, quite entire.—Native of the East Indies.

7. *Tragia cannabina*, or hemp-leaved *tragia*.—Leaves three-parted.—Native of Malabar.

8. *Tragia corniculata*, or horn-fruited *tragia*.—Leaves subcordate-ovate, attenuated, almost quite entire; valves of the capsules two-horned.—Found in the island of Trinidad.

Propagation and Culture.—These plants being of no great beauty, are seldom preserved, except in the stoves of botanic gardens. Sow the seeds on a hot-bed early in the spring; when the plants are in a proper state transplant each into a separate pot, plunge the pots into a hot-bed of tanner's bark, and treat them in the same manner as other tender plants, which require to be kept in the bark stove.

TRA'GICAL, or **TRA'GICK**, *adj.* [*tragicus*, Lat.; *tragique*, Fr.] Relating to tragedy.

The root and *tragical* effect,
Vouchsafe, O thou the mournfull'st muse of nine,
That won't the *tragic* stage for to direct,
In funeral complaints and wailful time
Reveal to me.

Spenser.

Mournful; calamitous; sorrowful; dreadful.

A dire induction I am witness to;
And will to France, hoping the consequence
Will prove as bitter, black, and *tragical*.

Shakspeare.

TRA'GICALLY, *adv.* In a tragical manner; in a manner befitting tragedy.—Juvenal's genius was sharp and eager; and as his provocations were great, he has revenged them *tragically*. *Dryden*.—Mournfully; sorrowfully; calamitously.—Many complain and cry out very *tragically* of the wretchedness of their hearts. *South*.

TRA'GICALNESS, *s.* Mournfulness; calamitousness.—Like bold Phaëton we despise all benefits of the Father of Light, unless we may guide his chariot; and we moralize the fable as well in the *tragicalness* of the event as in the insolence of the undertaking. *Dec. of Chr. Piety*.

TRAGICO'MEDY, *s.* [*tragicomedie*, Fr.] A drama compounded of merry and serious events.

On the world's stage, when our applause grows high,
For acting here life's *tragi-comedy*,
The lookers on will say we act not well,
Unless the last the former scenes excel.

Denham.

TRAGICO'MICAL, *adj.* [*tragicomique*, Fr.] Relating to *tragi-comedy*.—The whole art of the *tragi-comical* farce lies in interweaving the several kinds of the drama, so that they cannot be distinguished. *Gay*.—Consisting of a mixture of mirth with sorrow.

TRAGICO'MICALLY, *adv.* In a tragicomical manner.

Laws my Pindaric parents matter'd not,
So I was *tragicomically* got.

Bramston.

TRAGONISI, a small uninhabited island of European Turkey, in the Grecian archipelago; 2 miles from Myconi.

TRAGOPOGON [of Pliny; *Τραγοπωγων* of Dioscorides; from *τραγος*, a goat, and *πωγων*, a beard; on account of the

the large down to the seed], in Botany, a genus of the class syngenesia, order polygamia æqualis, natural order of compositæ semiflosculosæ, cichoraceæ. (*Juss.*)—Generic Character. Calyx: common simple, eight-leaved; leaflets lanceolate, equal, alternately interior, all united at the base. Corolla: compound imbricate, uniform; corollets hermaphrodite, many, exterior ones a little longer. Proper: one-petalled, ligulate, truncate, five-toothed. Stamina: filaments five, capillary, very short. Anther cylindrical, tubulous. Pistil: germ oblong. Style filiform, length of the stamens. Stigmas two, revolute. Pericarp none. Calyx converging, acuminate, length of the seeds, ventriculose, at length reflexed. Seeds solitary, oblong, attenuated to both ends, angular, rugged, terminated by a long awl-shaped down-bearing stipe. Down feathered, flat, with about thirty-two rays. Receptacle naked, flat, rugged—*Essential Character*. Calyx simple: down feathered: receptacle naked,

1. *Tragopogon pratensis*, or common yellow goat's-beard.—Calyxes nearly equal to the ray of the corollas; leaves entire, keeled, acuminate, dilated at the base; peduncle round. Root biennial. Flowers large and handsome, opening at day-break, and closing before noon, unless the weather be cloudy.—Native of Europe and Siberia. Not unfrequent in Britain among grass; flowering in June.

2. *Tragopogon mutabilis*, or changeable goat's-beard.—Calyxes eight-leaved, equalling the ray of the corolla; leaves entire, stiff, lanceolate-acuminate. Root biennial.—Native of Siberia.

3. *Tragopogon undulatus*, or wave-leaved goat's-beard.—Calyxes equalling the ray of the corolla; leaves entire, sub-linear, those on the stem waving very much.

4. *Tragopogon Orientalis*, or Oriental goat's-beard.—Calyxes shorter than the ray of the corolla; leaves entire, somewhat waved.—Native of the Levant.

5. *Tragopogon major*, or great yellow goat's-beard.—Calyxes longer than the ray of the corolla; leaves entire, stiff; peduncles thickened at top; corollets rounded at the end.—Native of several parts of Europe.

6. *Tragopogon porrifolius*, or purple goat's beard.—Calyxes half as long again as the ray of the corollas; leaves entire, stiff; peduncle thickened at top.

7. *Tragopogon crocifolius*, or crocus-leaved goat's-beard.—Calyxes longer than the ray of the corolla; leaves entire; root-leaves and peduncles villose at the base.—Native of Italy and the south of France. Biennial.

8. *Tragopogon villosus*, or hairy goat's beard.—Calyxes half as long again as the ray of the corolla; stem and leaves villose. Root biennial.—Native of Spain and Siberia.

9. *Tragopogon Dalechampii*, or great-flowered goat's-beard.—Calyxes one-leaved, shorter than the corolla, unarmed; leaves runcinate. Root perennial, thick and succulent.—Native of Spain, the south of France, and Barbary.

10. *Tragopogon picroides*, or prickly-cupped goat's-beard.—Calyxes one-leaved, shorter than the corolla, prickly; leaves runcinate, toothletted.—Native of the South of Europe.

11. *Tragopogon asper*, or rough goat's-beard.—Calyxes shorter than the corolla, hispid; leaves entire; stem-leaves oblong.—Native of Montpellier.

12. *Tragopogon dandelion*, or dandelion goat's-beard.—Leaves ensiform, entire, even; scapes radical.—Native of Virginia.

13. *Tragopogon lanatus*, or woolly goat's-beard.—Leaves ensiform, waved, villose; scapes radical.—Native of Palestine.

14. *Tragopogon Virginicus*, or Virginia goat's-beard.—Radical-leaves lyrate, rounded; stem-leaves undivided.—Native of Virginia and Canada.

Propagation and Culture.—These plants are propagated from seeds, which should be sown in April upon an open spot of ground, in rows about nine or ten inches distance, and when the plants are come up, they should be hoed out, leaving them about six inches asunder in the rows.

TRAHIGUERA, a small town of the east of Spain, in Valencia, with 2000 inhabitants; 16 miles north-west of Peniscola.

TRAHONA, a small town of Austrian Italy, in the Valte-line. It is situated in a valley, to which it gives name; 12 miles south of Chiavenna.

TRAJAN (M. Ulpius Trajanus), a Roman emperor. See ROME.

To TRAJE'CT, *v. a.* [*trajectus*, Latin.] To cast through; to throw.—If the sun's light be *trajected* through three or more cross prisms successively, those rays which in the first prism are refracted more than others, are in the following prisms refracted more than others in the same proportion. *Newton*.

TRAJ'E'CT, *s.* [*trajectus*, Lat.] A ferry; a passage for a water-carriage.

What notes and garments he doth give thee,
Bring to the *traject*, to the common ferry,
Which trades to Venice.

Shakspeare.

TRAJE'CTION, *s.* [*trajectio*, Lat.] The act of darting through.—Later astronomers have observed the free motion of such comets as have, by a *trajection* through the æther, wandered through the celestial or interstellar part of the universe. *Boyle*.—Emission.—The *trajections* of such an object more sharply pierce the martyred soul of John, than afterwards did the nails the crucified body of Peter. *Brown*.—Transposition.—The *trajection* is so familiar, that I cannot but wonder that any should scruple at it. *Knatchbull*.

TRAJE'CTORY, *s.* The orbit of a comet.—I might preface to you in the words of Sir Isaac Newton, when he found out the *trajectory* of a comet. *Harris*.

To TRAIL, *v. a.* [*trailer*, Fr.] To hunt by the track; to draw along the ground.

Beat thou the drum, that it speak mournfully;
Trail your steel pikes.

Shakspeare.

To draw a long floating or waving body.
What boots the regal circle on his head,
That long behind he *trails* his pompous robe,
And, of all monarchs, only grasps the globe?

Pope.

[*Treglen*, Dutch.] To draw; to drag.
Because they shall not *trail* me through their streets
Like a wild beast, I am content to go.

Milton.

To TRAIL, *v. n.* To be drawn out in length.—Swift men of foot, whose broad-set backs their *trailing* hair did hide. *Chapman*.

TRAIL, *s.* Scent left on the ground by the animal pursued; track followed by the hunter.

I do think, or else this brain of mine
Hunts not the *trail* of policy so sure
As I have us'd to do, that I have found
The very cause of Hamlet's lunacy.

Shakspeare.

Any thing drawn to length.
From thence the fuming *trail* began to spread,
And lambent glories danc'd about her head.

Dryden.

Any thing drawn behind in long undulations.
A sudden star it shot through liquid air,
And drew behind a radiant *trail* of hair.

Pope.

TRAILFLAT, a parish of Scotland, united to Tinwald in 1650; which see.

To TRAIN, *v. a.* [*trainer*, French, from the German *tragen*, to draw.] To draw along.

In hollow cube
Training his devilish enginery.

Milton.

To draw; to entice; to invite; to allure.

If but twelve French
Were there in arms, they would be as a call
To *train* ten thousand English to their side.

Shakspeare.

To draw by artifice or stratagem.

Oh *train* me not, sweet mermaid, with thy note!
To drown me in thy sister's flood of tears.

Shakspeare.

To draw from act to act by persuasion or promise.

We

We did *train* him on,
And his corruption being ta'en from us,
We as the spring of all shall pay for all. *Shakspeare.*

To educate; to bring up: commonly with *up*.

I can speak English,
For I was *train'd up* in the English court. *Shakspeare.*

To exercise, or form to any practice by exercise.—Abram armed his *trained* servants born in his house, and pursued. *Gen.*

TRAIN, *s.* [*train*, Fr.] Artifice; stratagem of enticement.

Their general did with due care provide,
To save his men from ambush and from *train*. *Fairfax.*

The tail of a bird.—Costly followers are not to be liked, lest while a man makes his *train* longer he makes his wings shorter. *Bacon.*—The part of a gown that falls behind upon the ground.

A thousand pounds a-year, for pure respect!
That promises more thousands: honour's *train*
Is longer than his fore skirts. *Shakspeare.*

A series; a consecution: either local or mental.—Distinct gradual growth in knowledge carries its own light with it, in every step of its progression, in an easy and orderly *train*. *Locke.*—Process; method; state of procedure.—If things were once in this *train*, if virtue were established as necessary to reputation, and vice not only loaded with infamy, but made the infallible ruin of all men's pretensions, our duty would take root in our nature. *Swift.*—A retinue; a number of followers or attendants.

My *train* are men of choice and rarest parts,
That in the most exact regard support
The worships of their names. *Shakspeare.*

An orderly company; a procession.
Fairest of stars, last in the *train* of night,
If better thou belong not to the dawn. *Milton.*

The line of powder leading to the mine.
Since first they fail'd in their designs,
To take in heaven by springing mines;
And with unanswerable barrels
Of gunpowder, dispute their quarrels;
Now take a course more practicable,
By laying *trains* to fire the rabble. *Hudibras.*

TRAIN of artillery. Cannons accompanying an army.—With an army abundantly supplied with a *train of artillery*, and all other provisions necessary, the king advanced towards Scotland. *Clarendon.*

TRAINA, an inland town in the north-east of Sicily, in the Val di Demona, situated on the river Traina; 30 miles west-north-west of Catania, and 60 south-west of Messina.

TRAINABLE, *adj.* That may be trained.—Youth [is] by grace and good counsell *trainable* to vertue. *Old Morality.*

TRAINBANDS, *s.* [Perhaps for *trained band*.] The militia; the part of a community trained to martial exercise.—He directed the *trainbands*, which consisted of the most substantial householders, to attend. *Clarendon.*

TRAINBEARER, *s.* One that holds up a train.

TRAINED, *adj.* Having a train.

He swooping went
In his *train'd* gown about the stage. *B. Jonson.*

TRAINEL, a small town in the north-east of France, department of the Aube, with 1100 inhabitants; 6 miles south of Nogent-sur-Seine, and 27 west of Troyes.

TRAINER, *s.* One who trains up; an instructor. *Ash.*

TRAINING, *s.* The act of forming to any exercise by practice.—Such superficial *trainings* as were used by the lieutenants of the several counties here in England. *Sanderson.*

TRAINO'IL, *s.* Oil drawn by coction from the fat of the whale.

TRAINY, *adj.* Belonging to train oil. *A bad word.*
Here steams ascend,
Where the huge hogsheads sweat with *trainy* oil. *Gay.*

To TRAIPISE, *v. a.* [*A low word.* See TRAPE.] To walk in a careless or sluttish manner.

Two slip-shod muses *traipse* along,
In lofty madness, meditating song. *Pope.*

TRAIT, *s.* [*trait*, Fr.] A stroke; a touch.—By this single *trait* Homer marks an essential difference between the Iliad and Odyssey; that in the former the people perished by the folly of their kings; in this by their own folly. *Broome.*

TRAITOR, *s.* [*traditor*, Lat.] One who being trusted betrays.—There is no difference, in point of morality, whether a man calls me *traitor* in one word, or says I am one hired to betray my religion, and sell my country. *Swift.*

TRAITOR, *adj.* Treacherous.—Each rebel wish, each *traitor* inclination. *Johnson.*

TRAITORS' COVE, a harbour on the western side of the island of Revilla Gigedo, in the North Pacific ocean, so called by Captain Vancouver, from his having here been exposed to an attack of the natives, who resisted all his efforts to conciliate them. Lat. 55. 40. N. long. 228. 31. E.

TRAITORS' HEAD, the north-east point of Erromango, one of the New Hebrides, so called by Captain Cook in 1774, from the treacherous conduct of its inhabitants. Lat. 18. 43. S. long. 169. 28. E.

TRAITORS' ISLANDS, a cluster of small islands in a bay of the Pacific ocean, on the coast of New Guinea. Lat. 1. 12. S. long. 137. E.

TRAITORS' ISLAND, an island in the Pacific ocean, discovered by Le Maire and Schouten, in 1616, and so called from an attempt made by the natives to seize the vessel. It belongs to the Friendly islands, and is called by the natives Neoota-bootaboo. Lat. 15. 55. N. long. 173. 48. W.

TRAITORLY, *adj.* Treacherous; perfidious.—These *traitorly* rascals' miseries are to be smil'd at, their offences being so capital. *Shakspeare.*

TRAITOROUS, *adj.* Treacherous; perfidious; faithless.—More of his Majesty's friends have lost their lives in this rebellion than of his *traitorous* subjects. *Addison.*

TRAITOROUSLY, *adv.* In a manner suiting traitors; perfidiously; treacherously.—They had *traitorously* endeavoured to subvert the fundamental laws, deprive the king of his regal power, and to place on his subjects a tyrannical power. *Clarendon.*

TRAITOROUSNESS, *s.* Perfidiousness; treachery. *Scott.*

TRAITRESS, *s.* A woman who betrays.

By the dire fury of a *traitress* wife,
Ends the sad evening of a stormy life. *Pope.*

TRAJANOPOLI, a considerable town of European Turkey, in Romania, situated on the right bank of the Maritza, the ancient *Hebrus*, about 30 miles from its mouth. It is the see of a Greek archbishop, and contains about 15,000 inhabitants; but being at some distance from the most frequented roads, it is little visited by travellers; 35 miles south of Adrianople, and 140 west of Constantinople. Lat. 41. 19. N. long. 26. 20. E.

TRAKENBURG, a market town of Austria, in Styria, with an iron mine and manufactures of glass; 19 miles south-east of Cilley.

TRAKOSKIN, a small town of Austrian Croatia; 19 miles west-by-south of Warasdin.

TRALATION, *s.* [*tralatio*, Lat.] The using of a word in a less proper but more significant notion.—According to the broad *tralatation* of his rude Rhemists. *Bp. Hall.*

TRALATI'TIOUS, *adj.* [*tralatitius*, Lat.] Metaphorical; not literal.—Unless we could contrive a perfect set of new words, there is no speaking of the Deity without using our old ones in a *tralatitious* sense. *Stackhouse.*

TRALATI'TIOUSLY, *adv.* Metaphorically; not literally; not according to the first intention of the word.—Language properly is that of the tongue directed to the ear
by

by speaking; written language is *tralatitiously* so called, because it is made to represent to the eye the same words which are pronounced. *Holder.*

TRALEE, a town of Ireland, in the county of Kerry, near a small river which discharges itself into a large bay of the Atlantic, measuring two leagues by three, called the bay of Tralee. This town was destroyed in the rebellion of 1641; it also suffered severely in the wars carried on in Ireland, in the time of James II. The entrance into Tralee bay is between two small islands called the Sampier isles. Vessels of light burdens can sail up to the town at high water. Prodigious quantities of herrings are taken in this bay in the fishing season. Tralee returns one member to the imperial parliament; 144½ miles north-west of Dublin, 50 south-west of Limerick, and 45 north-west of Cork. Lat. 52. 16. N. long. 9. 35. W.

To TRALINEATE, v. n. To deviate from any direction. If you *tralineate* from your father's mind, What are you else but of a bastard kind? Do then, as your progenitors have done, And by their virtues prove yourself their son. *Dryden.*

TRALLES (Balthasar-Lewis), an eminent physician, was born at Breslau, in 1708, and having studied medicine at Hall, under Frederic Hoffman, settled in his native city, where he gained great reputation. His works were numerous and valuable, and caused him to be admitted into the Imperial Academy at Vienna, and the Royal Society of Berlin. But his most celebrated work was that on opium, entitled "Usus Opii salubris et noxius in Morborum Medela, solidis et certis principiis superstructus," 1757-1762, 2 vols. 4to.

TRALLONG, a parish of Wales, in Breconshire; 5 miles from Brecon.

TRALUCENT, adj. [*traluens*, Lat.] Clear; translucent.—The clouds were of relieve, embossed and *tralucent*. *B. Jonson.*

TRAMANDI, a settlement of Brazil, on a river of the same name which runs into the Atlantic. Lat. 27. 15. S.

TRAMEYES, a small town in the east of France, department of the Saone and Loire. Population 1800; 9 miles west of Macon.

TRAMEZZO, a village of Austrian Italy, in the Milanese, situated on the right bank of the lake of Como. It is beautifully situated, and contains a number of villas and country-houses.

TRAMMEL, s. [*trama*, *tragula*, Lat.] A net in which birds or fish are caught.—The *trammel* differeth not much from the shape of the bunt, and serveth to such use as the wear and haking. *Carew.*—Any kind of net.

Her golden locks she roundly did uptry
In braided *trammels*, that no looser hairs
Did out of order stray about her dainty ears. *Spenser.*

A kind of shackles in which horses are taught to pace.—I may go shufflingly at first, for I was never before walked in *trammels*; yet I shall drudge at constancy, till I have worn off the hitching in my pace. *Dryden.*

To TRAMMEL, v. a. To catch; to intercept.

If the assassination
Could *trammel* up the consequence, and catch
With its surcease success. *Shakespeare.*

TRAMONTANE, s. [*tramontani*, Ital. "those folks that live beyond the mountains!" *Florio.*] A foreigner; a stranger; a barbarian. The Italians gave this name, by way of contempt, to all who lived beyond the Alps.—A happiness those *tramontanes* ne'er tasted. *Massinger.*

TRAMONTANE, adj. Strange; foreign; barbarous.

When virtue is so scarce,
That to suppose a scene where she presides,
Is *tramontane*, and stumbles all belief. *Cowper.*

TRAMONTI, a small town of Italy, in the west of the kingdom of Naples, in the Principato Citra. Population 2900.

TRAMORE, a neat, regular, well built village of Ireland, in the county of Waterford, situated on a broad, open, and dangerous bay in St. George's channel, often fatally mistaken for Waterford harbour in hazy weather, to the utter destruc-

tion of both vessel and mariners; 80½ miles south-south-west of Dublin, and 6 south-west of Waterford.

To TRAMP, v. a. [*trampa*, Su. Goth.; *trampen*, Dutch.] To tread.—It is like unto the camamele; the more ye tread it and *trampe* it, the sweeter it smelleth, the thicker it groweth, the better it spreadeth. *Stapleton.*

To TRAMP, v. n. To travel on foot: a vulgar expression.

TRAMP, or TRAMPER, s. A stroller; one who travels on foot; a beggar. *Tramp* is the Sussex term, according to Grose: *tramp* is a common vulgar word in many parts of England.—We shall be pestered with all the *trampers* that pass upon the road.—*Trampers* indeed! I would have you to know his worship could have rode upon as good a gelding as any one in the country. *Graves.*

To TRAMPLE, v. a. [*trampa*, Su. Goth.; *trampen*, Dutch. See *To TRAMP.*] To tread under foot with pride, contempt, or elevation.—My strength shall *trample* thee as mire. *Milton.*

To TRAMPLE, v. n. To tread in contempt.

Your country's gods I scorn,
And *trample* on their ignominious altars. *Rowe.*

To tread quick and loudly,
I hear his thundering voice resound,
And *trampling* feet that shake the solid ground. *Dryden.*

TRAMPLER, s. One that tramples.

TRAMUTOLA, a town of Italy, in the south-west part of the kingdom of Naples, in the Basilicata. It contains 4000 inhabitants, but is in other respects a place of little interest; 28 miles north-east of Policastro, and 58 east-south-east of Salerno.

TRAN, a small town of the north-east of Spain, in the province of Biscay, and district of Guipuscoa, near the river Bidasoa.

TRANA'TION, s. [*trano*, Lat.] The act of swimming over.

TRANCE, s. [*transe*, Fr.; *transitus*, Lat. It might therefore be written *transe*. *Dr. Johnson.* See *TRANSE.*] An extasy; a state in which the soul is rapt into visions of future or distant things; a temporary absence of the soul from the body.

Rapt with joy resembling heavenly madness,
My soul was ravish't quite as in a *trance*. *Spenser.*

To TRANCE, v. a. To entrance.

Would she but shade her tender brows with bay,
That now lie bare in careless wilful rage;
And *trance* herself in that sweet extacy,
That rouseth drooping thoughts of bashful age! *Bp. Hall.*

TRANCED, adj. Lying in a trance or extacy.

His grief grew puissant, and the strings of life
Began to crack. Twice then the trumpets sounded,
And there I left him *trane'd*. *Shakespeare.*

TRANCOSO, a small town in the north of Portugal, in the province of Beira; 9 miles west of Pinhel. Population 2000.

TRANEKIAR, an ancient and strong fortress of Denmark, on the east side of the island of Langeland. It is situated on a hill, 9 miles from Rudkioping.

TRANENT, a parish of Scotland, in Haddingtonshire, about 6 miles long and 3 broad, lying on the frith of Forth. The battle of Preston was fought partly in this parish, the scene of action lying about half a mile north of the church. Population 3036.

TRANENT, a town of Scotland, in the above parish; 9 miles east of Edinburgh, and 7 west of Haddington; through which the great east road to Dunbar, Berwick, &c. passes. It contains about 1400 inhabitants, who are mostly employed about the collieries, and in rural occupations.

TRANFRANT, a small seaport of Algiers; 30 miles south-west of Oran.

TRANGRAM, s. An odd intricately contrived thing.—What's the meaning of all these *trigrams* and gimcracks? What are you going about, jumping over my master's hedges, and running your lines cross his grounds? *Arbutnot.*

TRANI,

TRANI, a considerable town of Italy, in the east of the kingdom of Naples, province of Bari, situated on the Adriatic. Its population is computed at 14,000. It is the see of an archbishop, and is situated 23 miles west-by-north of Bari, and 125 east-by-north of Naples. Lat. 41. 19: N. long. 16. 28. E.

TRANMORE, a township of England in Cheshire; 7 miles north-by-east of Great Neston.

TR'ANNEL, *s.* A sharp pin. Perhaps from *trennel*.—With a small *trannel* of iron, or a large nail ground to a sharp point, they mark the brick. *Moxon*.

TRANQUEBAR, a seaport town of the south of India, province of the Carnatic, and district of Tanjore, situated at one of the mouths of Caveri river. The population is estimated at 20,000. The fort, which is called Danebourg, is kept in very neat order; and the buildings being all white, are seen from a great distance at sea. Lat. 11. N. long. 79. 55. E.

TRANQUIL, *adj.* [*tranquillus*, Lat.] Quiet; peaceful; undisturbed.

I had been happy
So I had nothing known. Oh now, for ever
Farewell the *tranquil* mind! farewell content! *Shakspeare*.

TRANQUILLITY, *s.* [*tranquillitas*, Lat.] Quiet; peace of mind; peace of condition; freedom from perturbation.

Leave off,
To let a weary wretch from her due rest,
And trouble dying souls' *tranquillity*. *Spenser*.

To **TRANQUILLIZE**, *v. a.* [*tranquilliser*, Fr.] To compose; to render calm. *Coles*.—The music employed ought to be of a kind which experience has proved to be most efficacious in soothing and *tranquillizing* the spirits. *Mason*.

TRANQUILLY, *adv.* In a tranquil state or manner.
TRANQUILLNESS, *s.* State of being tranquil.
To **TRANSACT**, *v. a.* [*transactus*, Lat. *Dr. Johnson*. In our language, *transact* is not ancient.] To manage; to negotiate; to conduct a treaty or affairs. To perform; to do; to carry on.—It cannot be expected they should mention particulars which were *transacted* amongst some few of the disciples only, as the transfiguration and the agony. *Adison*.

To **TRANSACT**, *v. n.* To conduct matters; to treat; to manage.—It is a matter of no small moment certainly for a man to be rightly informed, upon what terms, and conditions, he is to *transact* with God, and God with him, in the great business of his salvation. *South*.

TRANSACTION, *s.* [*transactio*, Fr.] Negotiation; dealing between man and man; management; affairs; things managed.—It is not the purpose of this discourse to set down the particular *transactions* of this treaty. *Clarendon*.

TRANSACTIONS, PHILOSOPHICAL, are a kind of journal of the principal things that come before the Royal Society of London. The *Transactions* contain the several discoveries and histories of nature and art, made by the members of the Society, or communicated by them from their correspondents, with the several experiments, observations, &c. made by them, or transmitted to them, &c.

They were first set on foot in 1665, by Mr. Oldenburg, secretary of the Society, and were continued by him till the year 1677. Upon his death, they were discontinued till January 1678, when Dr. Grew resumed the publication of them, and continued it for the months of December 1678, and January and February 1679, after which they were intermitted till January 1683. During this last interval, they were supplied in some measure by Dr. Hooke's Philosophical Collections. They were also interrupted for three years, from December 1687 to January 1691; besides other smaller interruptions amounting to near one year and a half more, before October 1695, since which time the *Transactions* have been regularly carried on.

They were for many years published in numbers, and the printing of them was always, from time to time, the single
VOL. XXIV. No. 1627.

acts of the respective secretaries, till the year 1752, when the Society thought fit that a committee should be appointed to reconsider the papers read before them, and to select out of them such as they should judge most proper for publication in the future *Transactions*. The members of the council constitute a standing committee for this purpose. They meet on the first Thursday of every month, and no less than seven members of the committee (of which number the president, or, in his absence, a vice-president, is always to be one) are allowed to be a quorum, capable of acting in relation to such papers. The question, with regard to the publication of any paper, is always decided by the majority of votes taken by ballot.

They are published annually in two parts, at the expence of the Society, and each fellow is entitled to receive one copy *gratis*, of every volume published after his admission into the Society.

The Philosophical *Transactions*, to the end of the year 1700, were abridged in three volumes, by Mr. John Lowthorp; those from the year 1700 to 1720 were abridged in two volumes, by Mr. Henry Jones; those from 1719 to 1733 were abridged in two volumes, by Mr. John Eames and Mr. John Martyn. Mr. Martyn continued the abridgment of those from 1732 to 1744, in two volumes; and those from 1743 to 1750, in two volumes. At the beginning of the present century, a complete abridgment from 1665 to 1800, was published by Dr. Hutton and others, in 18 vols. 4to.

TRANSACTOR, *s.* One who manages; one who conducts affairs.—God, who knows and governs all things, is the sovereign director and *transactor* in matters that so come to pass, [the fulfilling of prophecies]. *Derham*.

TRANSA'LPINE, *adj.* Situate beyond the Alps; barbarous. See **TRAMONTANE**.—Travellers, that know *transalpine* garbs. *Beaum. and Fl.*

To **TRANSA'NIMATE**, *v. a.* [*trans* and *anima*, Lat.] To animate by the conveyance of one soul from another.—Not men; for what spark of humanity? nor dogs;—but, by the strangest *μετεμψυχοσις* that ever was feigned by poets, very incarnated, *transanimated* devils. *Dean King*.

TRANSANIMA'TION, *s.* Conveyance of the soul from one body to another.—They believe the *transanimation* of souls into beasts and vegetables. *Sir T. Herbert*.

To **TRANSCEND**, *v. a.* [*transcendo*, Lat.] To pass; to overpass.—It is a dangerous opinion to such popes, as shall *transcend* their limits and become tyrannical. *Bacon*.—To surpass; to outgo; to exceed; to excel.

This glorious piece *transcends* what he could think;
So much his blood is nobler than his ink. *Wallcr*.

To surmount; to rise above.—Make disquisition whether these unusual lights be meteorological impressions not *transcending* the upper region, or whether to be ranked among celestial bodies. *Howell*.

To **TRANSCEND**, *v. n.* To climb. *Not in use*.—To conclude, because things do not easily sink, they do not drown at all, the fallacy is a frequent addition in human expressions, which often give distinct accounts of proximity, and *transcend* from one unto another. *Brown*.—To surpass thought.—The consistence of grace and free will, in this sense, is no such *transcending* mystery, and I think there is no text in Scripture that sounds any thing towards making it so. *Hammond*.

TRANSCENDENCE, or **TRANSCENDENCY**, *s.* Excellence; unusual excellence; supereminence.—In a most weak and debile minister great power, great *transcendence*. *Shakspeare*.—Exaggeration; elevation beyond truth.—It is true greatness to have in one the frailty of a man, and the security of a God: this would have done better in poesy, where *transcendencies* are more allowed. *Bacon*.

TRANSCENDENT, *adj.* *transcendens*, Lat.; *transcendant*, Fr.] Excellent; supremely excellent; passing others.

If thou beest he—But O! how fall'n, how chang'd
From him who in the happy realms of light,

Cloth'd with *transcendent* brightness, didst outshine
Myriads, though bright. *Milton.*

TRANSCENDENTAL, *adj.* [*transcendentalis*, low Lat.] General; pervading many particulars.—Others differ as to species, but as to genus are the same: such are man and lion. There are others again, which differ as to genus, and coincide only in those *transcendental* comprehensions of eas, being, existence, and the like: such are quantities and qualities, as for example an ounce, and the colour white. *Harris.*—Supereminent; passing others.—Though the Deity perceiveth not pleasure nor pain, as we do; yet he must have a perfect and *transcendental* perception of these, and of all other things. *Grew.*

TRANSCENDENTLY, *adv.* Excellently; supereminently.—The law of Christianity is eminently and *transcendently* called the word of truth. *South.*

TRANSCENDENTNESS, *s.* Supereminence; unusual excellence.—I cannot attain the measure of your *transcendentness*, but confess my disability and imperfection. *Montagu.*

To TRANSCOLATE, *v. a.* [*trans* and *colo*, Lat.] To strain through a sieve or colander; to suffer to pass, as through a strainer.—The lungs are, unless pervious like a sponge, unfit to imbibe and *transcolate* the air. *Harvey.*

To TRANSCRIBE, *v. a.* [*transcribo*, Lat.] To copy; to write from an exemplar.—He was the original of all those inventions from which others but *transcribe* copies. *Clarendon.*

TRANSCRIBER, *s.* A copier; one who writes from a copy.—A coin is in no danger of having its characters altered by copiers and *transcribers*. *Addison.*

TRANSCRIPT, *s.* [*transcriptum*, Lat.] A copy; any thing written from an original.—The Grecian learning was but a *transcript* of the Chaldean and Egyptian; and the Roman of the Grecian. *Glanville.*

TRANSCRIPTION, *s.* [*transcription*, Fr.; *transcriptus*, Lat.] The act of copying.—The corruptions that have crept into it by many *transcriptions* was the cause of so great difference. *Brewerwood.*

TRANSCRIPTIVELY, *adv.* In manner of a copy.—Not a few *transcriptively* subscribing their names to other men's endeavours, transcribe all they have written. *Brown.*

To TRANSCUR, *v. n.* [*transcurro*, Lat.] To run or rove to and fro.—By fixing the mind on one object, it doth not spatiate and *transcur*. *Bacon.*

TRANSCURSION, *s.* [*transcursus*, Lat.] Ramble; passage through; passage beyond certain limits; extraordinary deviation.—In a great whale, the sense and the affects of any one part of the body instantly make a *transcursion* throughout the whole. *Bacon.*

TRANSE, *s.* [*transe*, Fr. See **TRANCE**.] A temporary absence of the soul; an extasy.

Abstract as in a *transe*, methought I saw,
Though sleeping, where I lay, and saw the shape
Still glorious before whom awake I stood. *Milton.*

TRANSELEMENTATION, *s.* Change of one element into another.—Rain we allow; but if they suppose any other *transelementation*, it neither agrees with Moses's philosophy, nor St. Peter's. *Burnet.*

TRANSEPT, *s.* [*trans* and *septum*, Lat.] A cross aisle.—The pediment of the southern *transept* is pinnacled, not inelegantly, with a flourished cross. *Warton.*

TRANSEXION, *s.* [*trans* and *sexus*, Lat.] Change from one sex to another.—It much impeacheth the iterated *transexion* of hares, if that be true which some physicians affirm; that transmutation of sexes was only so in opinion, and that those transfeminated persons were really men at first. *Brown.*

To TRANSFER, *v. a.* [*transfero*, Lat.] To convey; to make over from one to another: with *to*, sometimes with *upon*.—By reading we learn not only the actions and the sentiments of distant nations, but *transfer to* ourselves the knowledge and improvements of the most learned men. *Watts.*—To remove; to transport.—The king was much

moved with this unexpected accident, because it was stirred in such a place where he could not with safety *transfer* his own person to suppress it. *Bacon.*

TRANSFER, *s.* A change of property; a delivery of property to another.—Whether the bank of Amsterdam, where industry had been for so many years subsisted and circulated by *transfers* on paper, doth not clearly decide this point? *Bp. Berkeley.*

TRANSFERABLE, *adj.* That may be transferred.

TRANSFERER, *s.* One who transfers.

TRANSFIGURATION, *s.* [*transfiguration*, Fr.] Change of form.—In kinds where the discrimination of sexes is obscure, these transformations are more common, and in some without commixture; as in caterpillars or silkworms, wherein there is a visible and triple *transfiguration*.—The miraculous change of our blessed Saviour's appearance on the mount.

Did Raphael's pencil never chuse to fall?
Say, are his works *transfigurations* all? *Blackmore.*

To TRANSFIGURE, *v. a.* [*trans* and *figura*, Lat.] To transform; to change with respect to outward appearance.

The nuptial right his outrage strait attends,
The dower desir'd is his *transfigur'd* friends:

The incantation backward she repeats,
Inverts her rod, and what she did defeats. *Garth.*

To TRANSFIX, *v. a.* [*transfixus*, Latin.] To pierce through.

With linked thunderbolts
Transfix us to the bottom of this gulph. *Milton.*

To TRANSFORM, *v. a.* [*trans* and *forma*, Lat.] To metamorphose; to change with regard to external form.

Love is blind, and lovers cannot see
The pretty follies that themselves commit;
For if they could, Cupid himself would blush
To see me thus *transformed* to a boy. *Shakespeare.*

To TRANSFORM, *v. n.* To be metamorphosed.
His hair *transforms* to down, his fingers meet
In skinny films and shape his oary feet. *Addison.*

TRANSFORMATION, *s.* Change of shape; act of changing the form; state of being changed with regard to form; metamorphosis.

Something you have heard
Of Hamlet's *transformation*; so I call it,
Since not th' exterior, nor the inward man,
Resembles that it was. *Shakespeare.*

TRANSFRETATION, *s.* [*trans* and *fretum*, Lat.] Passage over the sea.—Since the *transfretation* of King Richard the Second, the crown of England never sent over numbers of men sufficient to defend the small territory. *Davies.*

To TRANSFUND, *v. a.* [*transfundo*, Lat.] To transfuse. *Not in use.*—The best instrument of gratitude is speech, that most natural, proper, and easy mean of conversation, of signifying our conceptions, of conveying, and, as it were, *transfunding* our thoughts and our passions into each other. *Barrow.*

To TRANSFUSE, *v. a.* [*transfusus*, Lat.] To pour out of one into another.—Where the juices are in a morbid state, if one could suppose all the unsound juices taken away and sound juices immediately *transfused*, the sound juices would grow morbid. *Arbutnot.*

TRANSFUSIBLE, *adj.* That may be transfused.

TRANSFUSION, *s.* [*transfusus*, Lat.] The act of pouring out of one into another.—Something must be lost in all *transfusion*, that is, in all translations, but the sense will remain. *Dryden.*

TRANSFUSION OF THE BLOOD, in Physiology, the transfer of the blood of one animal into the vascular system of another, by means of a tube connected with a vein of the receiving animal, and an artery of the other. A vein is first opened, to allow the efflux of the animal's own blood, and thus to make room for the fresh supply. This preliminary evacuation

evacuation produces syncope; the animal ceases to move, and appears dead: but when the end of the tube connected with the artery of the other animal is introduced into the vein, and the stop-cock is turned, the current of arterial blood produces reanimation; the power of motion and the former strength are restored.

The experiments on this subject were first tried in England, where T. Clarke failed in his attempts in the year 1657; Phil. Trans. N^o 35. Lower succeeded in 1665, and communicated his success to the Royal Society; Phil. Trans. N^o 30. This was on dogs: Th. Coxe did it on pigeons; Birch, vol. ii. p. 50. Coxe and King exhibited the experiment on dogs before the Society, transfusing the blood from vein to vein; *ibid.* p. 123: Phil. Trans. N^o 19, 20, 25, 27. It was again performed from a sheep to a dog; Birch, p. 133; and the experiment was afterwards frequently repeated; Birch, vol. ii. pp. 162, 179, 190, 191. It was also performed in France and other countries.

The first proceedings in this matter seem to have been investigated merely by curiosity, or at least by a disposition to inquire into the powers of the animal economy. But higher views soon opened themselves: it was conceived that inveterate diseases, such as epilepsy, gout, and others, supposed to reside in the blood, might be expelled with that fluid, while, with the blood of a sheep or calf, the health and strength of the animal might be transferred to the patient. The most sanguine anticipations were indulged on the occasion, and the new process was almost expected to realize the alchemical reveries of an elixir of life and immortality. The experiment was first tried in France, where the blood of a sheep was transfused into the veins of a stupid youth, with the effect, as was asserted, of sharpening his wits. (Phil. Trans. 27, 32.) And a similar experiment was made without injury in a healthy man. (*Ibid.*) Lower and King transferred blood from a sheep into the system of a literary man, who had offered himself for the experiment, at first without inconvenience, but afterwards with a less favourable result; the Royal Society still recommending perseverance in the trials. Birch, vol. ii. pp. 216, 225, 227, 312. Phil. Trans. N^o 30.

These events were not calculated to keep up the expectations that had been raised, of brilliant results; and other occurrences produced still more severe disappointment. The French youth first mentioned, died lethargic soon after the second transfusion: the physicians incurred great disgrace, and were judiciously prosecuted by the relations. (Phil. Trans. 28, 32, 36, 37, 54.) Not however discouraged by this unlucky case, they soon after transfused the blood of a calf into a youth related to the royal family, who died soon after with the intestines inflamed. (Phil. Trans. 28, 30.) The parliament of Paris now interfered, and proscribed the practice. (Du Hamel, Hist. Acad. Reg. Societ. p. 21, 22.) Two persons having died after transfusion at Rome, the pope also issued a prohibitory edict. (Eph. Nat. Cur. Dec. I, ann. 1, obs. 149. Merclin de Transfus. Sanguinis, p. 25, 85.) The practice has recently been revived by Dr. Blundell in cases of death from intense hæmorrhage; and with much success.

To TRANSGRE'SS, v. a. [*transgressus*, Lat.] To pass over; to pass beyond.

Long stood the noble youth, oppress'd with awe,
And stupid at the wondrous things he saw,
Surpassing common faith, *transgressing* nature's law.

Dryden.

To violate; to break.—This sorrow we must repeat as often as we *transgress* the divine commandments. *Wake.*

To TRANSGRE'SS, v. n. To offend by violating a law.—I would not marry her, though she were endowed with all Adam had left him before he *transgressed*. *Shakspeare.*

TRANSGRE'SSION, s. [*transgression*, Fr.] Violation of a law; breach of a command.

Shall I abuse this consecrated gift
Of strength, again returning with my hair

After my great *transgression*: so requite
Favour renew'd, and add a greater sin?

Milton.

Offence; crime; fault.

Teach us, sweet madam, for our rude *transgression*

Some fair excuse.

Shakspeare.

TRANSGRE'SSIVE, adj. Faulty; culpable; apt to break laws.—Though permitted unto his proper principles, Adam perhaps would have sinned without the suggestion of Satan, and from the *transgressive* infirmities of himself might have erred alone, as well as the angels before him. *Brown.*

TRANSGRE'SSOR, s. Lawbreaker; violator of command; offender.—He intended the discipline of the church should be applied to the greatest and most splendid *transgressors*, as well as to the punishment of meaner offenders. *Clarendon.*

TRANSIENT, adj. [*transiens*, Lat.] Soon past; soon passing; short; momentary; not lasting; not durable.

How soon hath thy prediction, seer blest!

Measur'd this *transient* world, the race of time,

Till time stand fix'd.

Milton.

TRANSIENTLY, adv. In passage; with a short passage; not with continuance.—I touch here but *transiently*, without any strict method, on some few of those many rules of imitating nature which Aristotle drew from Homer. *Dryden.*

TRANSIENTNESS, s. Shortness of continuance; speedy passage.—It were to be wished that all words of this sort, as they resemble the wind in fury and impetuosity, so they might do also in *transientness* and sudden expiration. *Dec. of Chr. Piety.*

TRANSILIENCE, or TRANSILIENCY, s. [*transilio*, Lat.] Leap from thing to thing.—By unadvised *transiliency* leaping from the effect to its remotest cause, we observe not the connection of more immediate casualties. *Glanville.*

TRANSIT, s. [*transitus*, Lat.] In Astronomy the passing of any planet just by or under any fixed star; or of the moon covering or moving close by any other planet. *Harris.*

TRANSITION, s. [*transitio*, Lat.] Removal; passage from one to another.—Heat and cold have a virtual *transition*, without communication of substance, but moisture not. *Bacon.*—Change; made of change.—The spots are of the same colour throughout, there being an immediate *transition* from white to black, and not declining gradually, and mixing as they approach. *Woodward.*—[*transition*, Fr.] Passage in writing or conversation from one subject to another.—He with *transition* sweet new speech resumes. *Milton.*

TRANSITION ROCKS, in Geology, a name introduced by Werner, to designate those rocks which, on account of their containing few organic remains, and lying immediately over other rocks which contain none, are supposed by him to have been formed when the world was passing from an uninhabitable to a habitable state. See *MINERALOGY, GEOLOGY, and ROCKS.*

TRANSITIVE, adj. [*transitivus*, Lat.] Having the power of passing.—One cause of cold, is the contact of cold bodies; for cold is active and *transitive* into bodies adjacent, as well as heat. *Bacon.*—[In grammar.] A verb *transitive* is that which signifies an action, conceived as having an effect upon some object; as *fero terram*, I strike the earth. *Clarke.*

TRANSITORILY, adv. With speedy evanescence; with short continuance.

TRANSITORINESS, s. Speedy evanescence.—The worldly man is at home in respect of his affections; but he is, and shall be, a mere sojourner in respect of his *transitoriness*. *Bp. Hall.*

TRANSITORY, adj. [*transitorius*, from *transeo*, Lat.] Continuing but a short time; speedily vanishing.—O Lord, comfort and succour all them who in this *transitory* life are in trouble. *Comm. Prayer.*

TRANSLA'TABLE, adj. Capable of being translated.

To

To TRANSLATE, *v. a.* [*translater*, old French; to remove from one place to another, as well as to interpret in another language. *Cotgrave*.—[*Translatus*, Latin.] To transport; to remove.—By faith Enoch was translated that he should not see death. *Heb.*—It is particularly used of the removal of a bishop from one see to another.—Fisher, Bishop of Rochester, when the king would have translated him from that poor bishopric to a better, he refused, saying, he would not forsake his poor little old wife, with whom he had so long lived. *Camden*.—To transfer from one to another; to convey.—I will translate the kingdom from the house of Saul, and set up the throne of David. *2 Sam.*—To change.

Happy is your grace,
That can translate the stubbornness of fortune
Into so quiet and so sweet a style. *Shakspeare.*

To interpret in another language; to change into another language retaining the sense.

Were it meant that in despite
Of art and nature such dull clouds should write,
Bavius and Mævius had been sav'd by fate
For Settle and for Shadwell to translate. *Duke.*

To explain. *A low colloquial use.*
There's matter in these sighs, these profound heavens
You must translate; 'tis fit we understand them. *Shakspeare.*

TRANSLATION, *s.* [*translatio*, Latin.] Removal; act of removing.—His disease was an asthma; the cause a metastasis or translation of humours, from his joints to his lungs. *Harvey*.—The removal of a bishop to another see.—If part of the people be somewhat in the election, you cannot make them nulls or cyphers in the privation or translation. *Bacon*.—The act of turning into another language; interpretation.—A book of his travels hath been honoured with translation into many languages. *Brown*.—Something made by translation; version.—Of translations, the better I acknowledge that which cometh nearer to the very letter of the very original verity. *Hooker*.—Tralation; metaphor.—Metaphors, far-fet, hinder to be understood; and, affected, lose their grace; or when the person fetcheth his translations from a wrong place. *B. Jouson*.

TRANSLATI'VE, *adj.* [*translatice*, Fr.] Translative; transposed. *Cotgrave* and *Sherwood*.—Transported from a foreign land. *Mason*.—I have frequently doubted whether it be a pure indigence, or translative. *Evelyn*.

TRANSLA'TIVE, *adj.* [*translativus*, Lat.] Taken from others.

TRANSLA'TOR, *s.* [*translateur*, old French.] One that turns any thing into another language.
A new and nobler way thou dost pursue,
To make translations and translators too. *Denham.*

TRANSLA'TORY, *s.* Transferring.—The translatory is a lie that transfers the merits of a man's good action to another more deserving. *Arbutnot*.

TRANSLOCA'TION, *s.* [*trans* and *locus*, Latin.] Removal of things reciprocally to each other's places.—There happened certain translocations at the deluge, the matter constituting animal and vegetable substances being dissolved, and mineral matter substituted in its place, and thereby like translocation of metals in some springs. *Woodward*.

TRANSLU'CENCY, *s.* Diaphaneity; transparency.—Lumps of rock crystal heated red hot, then quenched in fair water, exchanged their translucency for whiteness, the ignition and extinction having cracked each lump into a multitude of minute bodies. *Boyle*.

TRANSLU'CENT, or TRANSLU'CID, *adj.* [*trans* and *lucens*, or *lucidus*, Latin.] Transparent; diaphanous; clear; giving a passage to the light.—In anger the spirits ascend and wax eager; which is seen in the eyes, because they are translucid. *Bacon*.—The quarry has several other translucent stones, which want neither beauty nor esteem. *Sir T. Herbert*.

TRANSMARINE, *adj.* [*transmarinus*, Latin.] Lying on the other side of the sea; found beyond sea.—She might have made herself mistress of Timaurania, her next transmarine neighbour. *Howell*.

To TRANSMIEW, *v. a.* [*transmulo*, Latin.] To transmute; to transform; to metamorphose; to change. *Obsolete*.

When him list the rascal routs appall,
Men into stones therewith he could transmew,
And stones to dust, and dust to nought at all. *Spenser.*

TRANSMIGRANT, *adj.* [*transmigrans*, Latin.] Passing into another country or state.—Besides an union in sovereignty, or a conjunction in pacts, there are other implicit confederations, that of colonies or transmigrants towards their mother nation. *Bacon*.

To TRANSMIGRATE, *v. n.* [*transmigro*, Latin.] To pass from one place or country into another.—This complexion is maintained by generation; so that strangers contract it not, and the natives which transmigrate, omit it not without commixture. *Brown*.

TRANSMIGRATION, *s.* [*transmigration*, French; from *transmigrate*.] Passage from one place or state into another.—From the opinion of metempsychosis, or transmigration of the souls of men into the bodies of beasts, most suitable unto their human condition, after his death, Orpheus the musician became a swan. *Brown*.

TRANSMIGRATOR, *s.* One who passes from one place or country into another.—Whenever we find a people begin to revive in literature, it was owing to one of these causes; either to some transmigrators from those parts coming and settling among them, or else to their going thither for instruction. *Ellis*.

TRANSMI'SSION, *s.* [*transmissus*, Latin.] The act of sending from one place to another, or from one person to another.—In the transmission of the sea-water into the pits, the water riseth; but in the transmission of the water through the vessels it falleth. *Bacon*.

TRANSMI'SSIVE, *adj.* [*transmissus*, Lat.] Transmitted; derived from one to another.

Itself a sun; it with transmissive light
Enlivens worlds deny'd to human sight. *Prior.*

To TRANSMIT, *v. a.* [*transmitto*, Lat.] To send from one person or place to another.—He sent orders to his friend in Spain to sell his estate, and transmit the money to him. *Addison*.

TRANSMI'TTAL, *s.* The act of transmitting; transmission. Besides the transmittal to England of two-thirds of the revenues of Ireland, they make our country a receptacle for their supernumerary pretenders to offices. *Swift*.

TRANSMI'TTER, *s.* One that transmits.
He lives to build, not boast, a generous race,
No tenth transmitter of a foolish face. *Savage.*

TRANSMI'TTIBLE, *adj.* That may be transmitted; that may be conveyed from one place to another.—A transmittible gallery over any ditch or breach in a town-wall, with a blind and parapet cannon-proof. *Marg. of Worcester*.

TRANSMU'TABLE, *adj.* [*transmutable*, Fr.] Capable of change; possible to be changed into another nature or substance.—It is no easy matter to demonstrate that air is so much as convertible into water; how transmutable it is unto flesh may be of deeper doubt. *Brown*.

TRANSMU'TABLY, *adv.* With capacity of being changed into another substance or nature.

TRANSMUTA'TION, *s.* [*transmuto*, Lat.] Change into another nature or substance; an alteration of the state of a thing. The great aim of alchemy is the transmutation of base metals into gold.—Am not I old Sly's son, by birth a pedlar, by education a cardmaker, by transmutation a bear herder. *Shakspeare*.—Successive change. *Not proper*.—The same land suffereth sundry transmutations of owners within one term. *Bacon*.

To TRANSMUTE, *v. a.* [*transmutō*, Lat.] To change from one nature or substance to another.—That metals may be *transmuted* one into another, I am not satisfied of the fact. *Ray*.

TRANSMUTER, *s.* One that transmutes.

TRANSOM, *s.* [*transenna*, Lat.] A thwart beam or lintel over a door.—[Among mathematicians.] The vane of an instrument called a cross staff, being a piece of wood fixed across with a square socket upon which it slides. *Bailey*.

TRANSPARENCY, *s.* [*transparence*, Fr.] Clearness; diaphaneity; translucence; power of transmitting light.—A poet of another nation would not have dwelt so long upon the clearness and *transparency* of the stream; but in Italy one seldom sees a river that is extremely bright and limpid, most of them being muddy. *Addison*.

TRANSPARENT, *adj.* [*trans* and *appareo*, Lat.] Per-vious to the light; clear; pellucid; diaphanous; translucent; not opaque.

Nor shines the silver moon one half so bright,
Through the *transparent* bosom of the deep,

As doth thy face through tears of mine give light,
Thou shin'st in every tear that I do weep. *Shakspeare*.

TRANSPARENTLY, *adv.* Clearly; so clearly as to be seen through.—Bodies almost *transparently* fair. *Whitlock*.

TRANSPARENTNESS, *s.* The state or quality of being transparent. *Ash*.

To TRANSPASS, *v. a.* To pass over.—The river Hyp-phasis, or, as Ptolemy calleth it, Bipasis, was Alexander's non ultra; which yet he *transpassed*, and set up altars on the other side. *Gregory*.

To TRANSPASS, *v. n.* To pass by; to pass away.—Not so proper as the verb active.

Which shall so soon *transpass*,

Though far more fair than is thy looking-glass. *Daniel*.

TRANSPICUOUS, *adj.* [*trans* and *specio*, Lat.] Trans- parent; pervious to the sight.

What if that light,
Sent from her through the wide *transpicuous* air,
To the terrestrial moon, be as a star? *Milton*.

To TRANSPIERCE, *v. n.* [*transpercer*, Fr.] To pe- netrate; to make way through; to permeate.

A mind, which through each part infus'd doth pass,
Fashioned and works, and wholly doth *transpierce*
All this great body of the universe. *Raleigh*.

TRANSPIRABLE, *adj.* [*transpirabile*, Fr.] Capable of transpiring. *Cotgrave* and *Sherwood*.

TRANSPIRA'TION, *s.* [*transpiration*, Fr.] Emission in vapour.—The *transpiration* of the obstructed fluids is imagined to be one of the ways that an inflammation is removed. *Sharp*.

To TRANSPIRE, *v. a.* [*transpiro*, Lat.] To emit in vapour.

To TRANSPIRE, *v. n.* [*transpirer*, Fr.] To be emitted by insensible vapour.—The nuts fresh got are full of a soft pulpy matter, which in time *transpires*, and passes through the shell. *Woodward*.—To escape from secrecy to notice.—If they have raised a battery, as I suppose they have, it is a masked one, for nothing has *transpired*. *Ld. Chesterfield*.

To TRANSPLA'CE, *v. a.* To remove; to put into a new place.—It was *transplac'd* from the left side of the Vatican unto a more eminent place. *Wilkins*.

To TRANSPLA'NT, *v. a.* [*trans* and *planto*, Lat.] To remove and plant in a new place.

The noblest fruits *transplanted* in our isle,
With early hope and fragrant blossoms smile. *Roscommon*.

To remove and settle.—If any *transplant* themselves into plantations abroad, who are schismatics or outlaws, such are not fit to lay the foundation of a new colony. *Bacon*.—To remove.

Vol. XXIV. No. 1627.

Of light the greater part he took

Transplanted from her cloudy shrine, and plac'd
In the sun's orb. *Milton*.

TRANSPLANTA'TION, *s.* The act of transplanting or removing to another soil.—It is confessed, that love changed often doth nothing; nay, it is nothing; for love, where it is kept fixed to its first object, though it burn not, yet it warms and cherishes, so as it needs no *transplantation*, or change of soil, to make it fruitful. *Suckling*.—Conveyance from one to another.—What noise have we had for some years about *transplantation* of diseases, and transfusion of blood. *Baker*.—Removal of men from one country to another.—This appears a replication to what Menelaus had offered concerning the *transplantation* of Ulysses to Sparta. *Broome*.

TRANSPLAN'TER, *s.* One that transplants.

TRANSPLE'NDENCY, *s.* Supereminent splendour.—The supernatural and unimitable *transplendency* of the Di- vine Presence. *More*.

TRANSPLE'NDENT, *adj.* Supereminently splendid.

TRANSPLE'NDENTLY, *adv.* With supereminent splen- dour.—The divinity, with all its adorable attributes, is hypostatically, vitally, and *transplendently* residing in this hu- manity of Christ. *More*.

To TRANSP'ORT, *v. a.* [*trans* and *porto*, Latin.] To convey by carriage from place to place.

Why should she write to Edmund! might not you
Transport her purposes by word? *Shakspeare*.

To carry into banishment, as a felon.—We return after being *transported*, and are ten times greater rogues than be- fore. *Swift*.—To sentence as a felon to banishment. To hurry by violence of passion.

You are *transported* by calamity

Thither where more attends you, and you slander
The helms o' th' state. *Shakspeare*.

To put into extasy; to ravish with pleasure.—Here *trans- ported* I behold, *transported* touch. *Milton*.

TRANSPORT, *s.* Transportation; carriage; convey- ance.—The Romans neglected their maritime affairs: for they stipulated with the Carthaginians to furnish them with ships for *transport* and war. *Arbuthnot*.—A vessel of car- riage; particularly a vessel in which soldiers are conveyed.

Nor dares his *transport* vessel cross the waves,
With such whose bones are not compos'd in graves. *Dryden*.

Rapture; extasy.—A truly pious mind receives a tem- poral blessing with gratitude, a spiritual one with extasy and *transport*. *South*.—A felon sentenced to exile.

TRANSPORTANCE, *s.* Conveyance; carriage; re- moval.

O, be thou my Charon;

And give me swift *transportance* to those fields,
Where I may wallow in the lily beds
Propos'd for the deserver! *Shakspeare*.

TRANSPO'RTANT, *adj.* Affording great pleasure.—So rapturous a joy, and *transportant* love. *More*.

TRANSPORTA'TION, *s.* Conveyance; carriage.—Cottington and Porter had been sent before to provide a vessel for their *transportation*. *Wotton*.—Transmission or conveyance.—Some were not so solicitous to provide against the plague, as to know whether we had it from the malignity of our own air, or by *transportation*. *Dryden*.—Banish- ment for felony.—Extatic violence of passion.—All pleasures that affect the body must needs weary, because they trans- port, and all *transportation* is a violence; and no violence can be lasting but determines upon the falling of the spirits. *South*.

TRANSPO'RTEDLY, *adv.* In a state of rapture.

TRANSPO'RTEDNESS, *s.* State of rapture.—What a mean opinion doth this imply,—that we who are old men, christian philosophers, and divines, should have so little government of ourselves as to be puffed up with those poor accessions of titular respects, which those, who are really and

hereditarily possessed of, can wield without any such taint or suspicion of *transportedness*. *Bp. Hall.*

TRANSPORTMENT, *s.* Transportation or conveyance in ships.

You,—

Your last *transportment* being assail'd by a galley,
Hid yourself i' the cabin. *Beaum. and Fl.*

TRANSPORTER, *s.* One that transports.—The pilchard merchant may reap a speedy benefit by dispatching, saving, and selling to the *transporters*. *Carew.*

TRANSPOSAL, *s.* The act of putting things in each other's place. *Swift.*

To **TRANSPOSE**, *v. a.* [*transpositum*, Lat.] To put each in the place of other.—*Transpose* the propositions, making the medius terminus the predicate of the first and the subject of the second. *Locke.*—To put out of place; to remove.

That which you are my thoughts cannot *transpose*;
Angels are bright still, though the brightest fell. *Shakspeare.*

TRANSPPOSITION, *s.* [*transposition*, Fr.] The act of putting one thing in the place of another.—Perspicuity of style is often hindered by the ornaments of speech;—by too curious a *transposition* of words from their natural place; by using too many metaphors. *Instr. for Oratory.*—The state of being put out of one place into another.—The common centre of gravity in the terraqueous globe is steady, and not liable to any accidental *transposition*, nor hath it ever shifted its station. *Woodward.*

TRANSPPOSITIONAL, *adj.* Relating to transposition.—The most striking and most offensive error in pronunciation among the Londoners, I confess, lies in the *transpositional* use of the letters *w* and *v*, ever to be heard where there is any possibility of inverting them. Thus they always say, *weal*, instead of *veal*; *wicked*, for *wicked*. *Pegge.*

To **TRANSSHAPE**, *v. a.* To transform; to bring into another shape.—I'll tell thee how Beatrice prais'd thy wit: I said thou hadst a fine wit; right, said she, a fine little one; nay, said I, he hath the tongues; that I believe, said she; for he swore a thing to me on Monday night which he forswore on Tuesday morning; there's a double tongue: thus did she *transshape* thy particular virtues. *Shakspeare.*

TRANSTRUM, a term used to express a sort of cross or transverse seats that were placed in the polycrote galleys of ancient times, and served for the places of several of the rows of men, who could move and work their oars under the seats of the other or lateral rowers of the next tire.

Meibomius, who has written expressly on the naval architecture of the ancients, has better understood the places and use of these transtra, than any other author of late times; by a proper arrangement of these seats, and the lateral ones above and below each, he has taken off greatly from the height allowed by Scaliger, and others, to the polycrote vessels.

To **TRANSUBSTANTIATE**, *v. a.* [*transubstantier*, Fr.] To change to another substance.

Nor seemingly, but with keen dispatch
Of real hunger, and concoctive heat,
To *transubstantiate*; what redounds, transpires
Through spirits with ease. *Milton.*

TRANSUBSTANTIATION, *s.* [*transubstantiation*, Fr.] A miraculous operation believed in the Romish church, in which the elements of the eucharist are supposed to be changed into the real body and blood of Christ.—How is a Romanist prepared easily to swallow, not only against all probability, but even the clear evidence of his senses, the doctrine of *transubstantiation*? *Locke.*

TRANSUBSTANTIATOR, *s.* One who maintains the Romish notion of transubstantiation.—It may serve to guard us from diverse errors,—such as that of the Roman *transubstantiators*, who affirm that the body of our Lord is here upon earth at once present in many places, namely, in every place where the host is kept, or the eucharist is celebrated. *Barrow.*—There were in the primitive times some heretics,

who thought those words of Christ concerning the eating his flesh, and drinking his blood, were to be understood grossly and literally of oral eating, just as the *transubstantiators* at this day pretend. *Dr. Potter.*

TRANSUDATION, *s.* The act of passing in sweat, or perspirable vapour, through any integument.—The drops proceeded not from the *transudation* of the liquors within the glass. *Boyle.*

To **TRANSUDE**, *v. n.* To pass through in vapour.—Purulent fumes cannot be transmitted throughout the body before the maturation of an aposthem, nor after, unless the humour break; because they cannot *transude* through the bag of an aposthem. *Harvey.*

TRANSVERSAL, *adj.* [*trans* and *versalis*, Lat.] Running crosswise.—An ascending line, direct, as from son to father, or grandfather, is not admitted by the law of England; or in the *transversal* line, as to the uncle or aunt, great-uncle or great-aunt. *Hale.*

TRANSVERSALLY, *adv.* In a cross direction.—There are divers subtle inquiries and demonstrations concerning the several proportions of swiftness and distance in an arrow shot vertically, horizontally, or *transversally*. *Wilkins.*

To **TRANSVERSE**, *v. a.* [*transversus*, Lat.] To change; to overturn.—Nothing can be believed to be religion by any people, but what they think to be divine; that is; sent immediately from God: and they can think nothing to be so, that is in the power of man to alter or *transverse*. *Leslie.*

TRANSVERSE, *adj.* [*transversus*, Lat.] Being in a cross direction.

His volant touch
Fled and pursu'd *transverse* the resonant fugue. *Milton.*

TRANSVERSELY, *adv.* In a cross direction.—At Stonehenge the stones lie *transversely* upon each other. *Stillingfleet.*

To **TRANSUME**, *v. a.* [*transumo*, Lat.] To take from one thing to another; to convert one thing into another.

Bread and wine
Transum'd, and taught to turn divine. *Crayshaw.*

TRANSMUMPT, *s.* [*transumpt*, old Fr.; *transumptum*, Lat.] An exemplification or copy of a record. *Cotgrave.*—The pretended original breve was produced, and a *transumpt* or copy thereof offered them. *Ld. Herbert.*

TRANSMUPTION, *s.* The act of taking from one place to another.—Having by a kind of *transumption* and accommodation borrowed those former words of his. *South.*

TRANSYLVANIA, a large province of the Austrian empire, bounded by Hungary on the north and west, and by European Turkey on the east and south. It lies between 45. 33. and 47. 37. of N. lat. and between 22. 46. and 26. 3. of E. long. Its form is oblong: its territorial extent about 23,700 square miles; and its population is computed at somewhat more than 1,600,000.

Political Divisions.—Transylvania, like Hungary, is divided into civil and military: the former consists of three large districts or provinces, called from the earliest settlers, the lands of the Hungarians, the Saxons, and the Szeklers. The land of the Hungarians was divided into counties, and the others into districts, called in Latin *Sedes*. Joseph II. abolished this distinction, and introduced that of the three circles of Hermanstadt, Fogaras, and Clausenburg. The old division has been restored since his death. The chief towns are—

	<i>Inhabitants.</i>
Cronstadt	24,000
Clausenburg (the capital)	20,000
Hermanstadt	16,000
Maros Vasarhely	9500
Vasarhely	6000
Udvarhely	6000
Schesburg	6000

Face of the Country, Rivers, and Climate.—The Carpathian mountains surround Transylvania on the east, the south, and partly on the north; and as lateral chains branch-

ing

ing off from this range cross the country in every direction, the greatest part of it consists of alternate mountains and valleys, with few extensive plains. Many of these mountains are romantic, and contain a number of caverns, presenting a wide field of examination for the botanist, the geologist, and the metallurgist; but are often of such height and steepness, that none but the most intrepid hunters or the Walachian shepherds can venture to explore them. The most mountainous parts are to the east and north: the south presents hills of little elevation, intermixed with plains, interrupted here and there by marshes or small lakes. These eminences are commonly covered with vineyards; the higher elevations with forests; but almost all contain mines. These mountains form a natural defence of the country against invasion, presenting only very narrow passages into the neighbouring provinces of Walachia, Moldavia, and the Bukowine. The principal rivers of Transylvania are the Maros, the Samos, and the Aluta; the Aranyos, the Lapos, the Sajo, and the two Kokels, are of inferior size. All these rivers have their source within the country, and their direction is in general from east to west. The two first flow towards the Theys, the Aluta towards the Danube. The lakes, like those of Switzerland, Scotland, and other countries where the water is inclosed by mountains, are of great depth. The climate of Transylvania is cold, considering its latitude. The valleys are hot in summer, but subject to sudden changes of temperature, and to cold at night. On the whole, this province is healthy, though not unfrequently visited by the plague, in consequence of its vicinity to Turkey.

Manufactures and Trade.—This country, like Hungary and Slavonia, is extremely backward, the Austrian government having taken no effectual steps for promoting productive industry, till within the last half century. Woollens are wrought at particular places, such as Cronstadt and Hermanstadt; and fabrics of cottons have also been established. The blue stuff used in the dress of women, and formerly brought from Turkey, is now made at home. Hats are manufactured of a coarse quality; and as to glass, Transylvania is now no longer dependent on Bohemia. The exports of the country are timber, metals, and a few of the manufactures just mentioned; the imports are wool, cotton, skins, and a variety of manufactured articles from Vienna. Here are no canals, and hardly any navigable rivers. A few great roads have been of late finished at the public expence, but the cross roads are wretched. The only dealers in the country entitled to the name of merchants, are Greeks and Armenians.

Inhabitants.—No country, not even Hungary, contains a greater variety of tribes of different origin: a circumstance owing to the arrival at different periods of new settlers, and to their remaining comparatively unmixed in a country so thinly peopled, with so few towns, and so little commercial intercourse. The Magyar bears here the same character as in Hungary, attached to the chase and to war, possessing considerable intelligence, but ill fitted for whatever requires continued application. The Szecklers occupy the mountains, and have been from time immemorial the guardians of the frontiers; they bear a considerable resemblance to the Highlanders of Scotland, and in nothing more than in seldom carrying their industry beyond the rearing of the necessaries of life. Settlers from Germany were first introduced in the middle of the 12th century, having been brought originally from Flanders and the south of Germany, and being subsequently reinforced by Protestant emigrants from the Austrian states. The name of Saxon is given to them merely because in a remote age all Germans were styled Saxons by their neighbours. They are in general careful and industrious. Their habitations are neater than those of the rude tribes around them. The language they speak is a dialect of German.

These three nations possess the chief political privileges; in particular, that of sitting at the national diet. But in point of number, they are greatly surpassed by the descendants of the Walachians, who form half the population of the principality. Like the Slowacs in Hungary, or the Irish peasantry, the Walachian cottagers find, in the midst

of filth and poverty, the means of rearing families. They are employed chiefly as common labourers, as shepherds, or as waggoners.

Transylvania was known to the Romans by the title of *Dacia Consularis Mediterranea*. It was conquered by Trajan, who settled a colony there. On the irruption of the northern hordes, it became subject successively to the Goths, the Huns, the Alans, the Sclavi, the Avari, and finally to the Magyars. During some time it was ruled by a prince of its own, but it fell under the power of the kings of Hungary, and was governed by a deputy, who, when he happened to be of the royal family, had the title of prince, but otherwise of waiwode, a title commonly translated palatine, but which means general or duke. In 1541, Transylvania was again separated from Hungary, and remained an independent province till 1699, when its last prince gave it up to Austria. During the interval it appears to have seldom enjoyed any long period of tranquillity. Placed between rude and ambitious neighbours, it was alternately exposed to the incursions of the Hungarians and the Turks; while the internal disputes about the election of its rulers, who were never hereditary, always supplied them with pretexts for their inroads.

The name of Transylvania is derived from the Hungarians, who called the woody country to the east of the Theys, *Silagy* or *Sylvania*, and the territory to the east of these woods *Terra ultra Sylvas partes Transylvanæ*, or *Transylvanenses*. Erdely, the name given to this country, in common Hungarian, has the same signification.

TRANTERS, s. Men who carry fish from the sea-coasts to sell in the inland countries. *Bailey*.—Country people, amongst whom alone this word is current, extend its meaning to all those who purchase any kind of provisions in order to sell them again. *Mason*.

TRANWELL, a hamlet of England, in Northumberland; 2 miles south-south-west of Morpeth.

TRAP, s. [trap, trapp, Sax.; *trape*, Fr.; *trappola*, Ital.] A snare set for thieves or vermin.—The trap springs and catches the ape by the fingers. *L'Estrange*.—An ambush; a stratagem to betray or catch unawares.

God and your majesty
Protect mine innocence, or I fall into
The trap is laid for me.

Shakspeare.

A play at which a ball is driven with a stick.—Unruly boys learn to wrangle at trap, or rook at span-farthing. *Locke*.

To TRAP, *v. a.* [trappan, Sax.] To ensnare; to catch by a snare or ambush; to take by stratagem.

My brain more busy than the lab'ring spider,
Weaves tedious snares to trap mine enemies. *Shakspeare.*

[See TRAPPING.] To adorn; to decorate.

The steed that bore him
Was trapp'd with polish'd steel, all shining bright,
And covered with th' achievements of the knight. *Spenser.*

TRAP, a post township of the United States, in Montgomery county, Pennsylvania; 27 miles north-west of Philadelphia.

TRAP, a village of the United States, in Frederick county, Maryland; 7 miles south-west of Frederickstown.

TRAPA [from *trapæa*, *calco*], in Botany, a genus of the class tetrandria, order monogynia, natural order of hydrocharides. (*Juss.*)—Generic Character. Calyx: perianth one-leafed, four-parted, acute, permanent, growing to the base of the germ; leaflets two, lateral, and two at the angles of the germ. Corolla: petals four, obovate, larger than the calyx. Stamina: filaments four, length of the calyx; anthers simple. Pistil: germ ovate, two-celled; style simple, length of the calyx. Stigma headed, emarginate. Pericarp: none. Seed: nut ovate-oblong, one-celled, armed with four spines, in the middle of the side, opposite, spreading, (which were the leaves of the calyx,) acute, thick.—*Essential Character*. Calyx four-parted. Corolla four-petalled. Nut girt with four opposite spines, which were the leaves of the calyx.

1. *Trapa natans*, or four-horned water caltrops.—Nuts four-horned;

four-horued; spines spreading. The immersed leaves are multifid and capillary, like those of *myriophyllum*: the floating leaves are rhomb-shaped, with bladdery petioles. The four leaves of the calyx surround the germ, two at the sides, and two at the angles of it, whence the horns of the fruit.—Native of Europe and Asia.

2. *Trapa bicornis*, or two-horned water caltrops.—Nuts two-horned. The nut of this is woody-coriaceous, black-brown, inversely pyramidal.—Native of China. The Chinese cultivate the plant in their most barren marshes for the food of the inhabitants.

To TRAPAN, *v. a.* [τρεππαν, Saxon. Dr. Johnson notices this word as *trepan*; but the more proper way of writing it seems to be *trapan*, as distinguishing it from the verb *trepan* of a very different meaning. *Todd.*] To lay a trap for; to ensnare.

Forthwith alights the innocent *trapan*'d;
One leads his horse, the other takes his hand.

Cotton.

TRAPAN, *s.* A cheat; a stratagem; a snare.—Nothing but gins, and snares, and *trapans* for souls. *South.*

TRAPANI, the ancient *Drepanum*, a considerable town in the west of Sicily, in the Val di Mazzara, situated on a tongue of land, projecting into the sea, and forming a large and commodious harbour. This place is of importance, both as a naval, military, and commercial position. Its population is about 20,000. It is in general better built than most towns of the island. Trapani is a fortified place; and some additions were made to its works during the occupancy of Sicily by the British troops. In the neighbourhood are the remains of a temple of Venus; 24 miles north of Mazzara, and 40 west of Palermo. Lat. 38. 5. N. long. 12. 30. E.

TRAPANI, CAPE, a promontory on the north coast of the island of Candia, called by the ancients *Promontorium Drepanum*; 14 miles west of Retimo.

TRAPAN'NER, *s.* A deceiver.—The insinuations of that old pander and *trapanner* of souls. *South.*

TRAPANO, a small town of Greece, on the west coast of the Morea.

TRAPDO'OR, *s.* A door opening and shutting unexpectedly.—The arteries which carry from the heart to the several parts have valves which open outward like *trapdoors*, and give the blood a free passage; and the veins, which bring it back to the heart, have valves and *trapdoors* which open inwards, so as to give way unto the blood to run into the heart. *Ray.*

To TRAPE, *v. a.* [Commonly written *to traipse*: probably of the same original with *drab*.] To run idly and sluttishly about. It is used only of women.

TRAPES, *s.* An idle slatternly woman.

He found the sullen *trapes*

Posset with th' devil, worms, and claps.

Hudibras.

TRAPEZIUM, *s.* [τραπεζιον, Gr.; *trapeze*, French.] A quadrilateral figure, whose four sides are not equal, and none of its sides parallel.—Two of the lateral *trapezia* are as broad. *Woodward.*

TRAPEZO'ID, *s.* [τραπεζιον and ειδος, Gr.; *trapesoide*, Fr.] An irregular figure, whose four sides are not parallel.—Some have used *trapezium* for a square, and *trapezoid* for a figure approaching a square.

TRAPPE, a post township of the United States, in Talbot county, Maryland; 6 miles east-south-east of Oxford.

TRAPPE, *Monks of La*, monks of the Cistercian order, belonging to an abbey beautifully situated on a large valley in the province of Le Perche, on the confines of Normandy, in France. The abbey was founded in 1140, by Rotrou, Count of Perche, and dedicated under the name of the Blessed Virgin, in 1214, by Robert, Archbishop of Rouen. The abbey was subjected to a very rigorous discipline by the Abbé d'Rance, in 1664.

TRAPPINGS, *s.* [This word Minshew derives from *drap*, French, *cloth*.] Ornaments appendant to the saddle.

Caparisons and steeds,

Bases and tinsel *trappings*, gorgeous knights
At joust and tournament.

Milton.

Ornaments; dress; embellishments; external, superficial, and trifling decoration.

These indeed seem,

But I have that within which passeth shew;
These but the *trappings* and the suits of woe. *Shakspeare.*

TRAPRENE LAW, a small conical hill of Scotland, in East Lothian, in the parish of Prestonkirk; about 1½ mile north-west from the village of Whittingham.

TRAPSTICK, *s.* A stick with which boys drive a wooden ball.—A foolish swoop between a couple of thick bandy legs and two long *trapsticks* that had no calfs. *Spectator.*

TRAQUAIR, a parish of Scotland, in the county of Peebles, lying on the south bank of the Tweed, and watered by the river Quair. It is nine miles long, and from four to five in breadth, containing 17,290 acres, of which about 4000 are arable. Population 621.

TRASARTS, called by Golberry TRARSHAZIANS, a powerful tribe of Moors, who roam over the territory situated to the north of the Senegal. They are in possession of an extensive forest of white gum.

TRASH, *s.* [*tros*, Icelandic; *drusen*, German.] Any thing worthless; dross; dregs.

Who steals my purse, steals *trash*; 'tis something, nothing;
'Twas mine, 'tis his; and has been slave to thousands.

But he that filches from me my good name,
Robs me of that which not enriches him,
And makes me poor indeed.

Shakspeare.

A worthless person.

I suspect this *trash*

To be a party in this injury.

Shakspeare.

Matter improper for food, frequently eaten by girls in the green sickness.—O that instead of *trash* thou'dst taken steel.

Garth.—Among hunters, a piece of leather, a couple, or any other weight fastened round the neck of a dog, when his speed is superior to the rest of the pack.—See the third sense of *To TRASH*; and notes on *Shakspeare's Tempest*.—Johnson believed that the original signification of *trash*, was the loppings of trees, from the verb.—Huts of trees and *trash*. *Carleton.*

To TRASH, *v. a.* To lop; to crop. *Warburton.*—To crush; to humble; to clog; to encumber; to impede the progress of.

Being once perfected how to grant suits,

How to deny them; whom to advance, and whom

To *trash* for over-topping.

Shakspeare.

To TRASH, *v. n.* To follow, with bustle, as if beating down every thing in the way; to trample.—A guarded lackey to run before it, and py'd liveries to come *trashing* after it.

The Puritan.

TRASHY, *adj.* Worthless; vile; useless.—A judicious reader will discover in his closet that *trashy* stuff, whose glittering deceived him in the action. *Dryden.*

TRAU, a small town of Austrian Dalmatia, with a small harbour on the coast of the Adriatic. It stands on an islet, having on the one side the mainland, on the other the island of Bua; 14 miles west-by-north of Spalatro.

TRAVAGLIATO, a small inland town of Austrian Italy, in the Milanese. Population 2000; 4 miles west of Brescia.

To TRA'VAIL, *v. n.* [*travailler*, Fr.] To labour; to toil.—Obey our will, which *travails* in thy good. *Shakspeare.*—To be in labour; to suffer the pains of childbirth. —I *travail* not, nor bring forth children. *Isaiah.*

To TRA'VAIL, *v. a.* [*travagliare*, Ital.] To harass; to tire.

A gleam of light turn'd thitherward in haste

His *travell'd* steps.

Milton.

TRA'VAIL, *s.* Labour; toil; fatigue.—As every thing of price, so this doth require *travail*. *Hooker.*—Labour in childbirth.—To procure easy *travails* of women, the intention is to bring down the child, but not too fast. *Bacon.*

TRAVALLA, a small sea-port town of Celebes, on the west coast, situated on a small creek at the head of a little inlet or bay. It contains only about 200 inhabitants; 9 miles south of Dungally. Lat. 1. 10. S.

TRAVANCORE,

TRAVANCORE, a province situated at the south-west extremity of Hindostan, between the 8th and 10th degrees of north latitude. To the north it is bounded by the territories of the Cochin rajah, on the south and west by the sea, and on the east by a range of woody mountains which divide it from the British district of Tinnevely. Its length may be estimated at 140 miles, by 40 in breadth.

TRAVANCORE, the ancient capital of the above mentioned province. The ancient name of this town was Malara. Lat. 8. 25. N. long. 77. 22. E.

TRAVAY BAY, a bay on the south-west coast of Tiree, one of the Western islands of Scotland. Lat. 56. 31. N. long. 6. 48. W.

TRAUCHBURG, or **TRAUENBURG**, a petty town of Germany, in Bavaria; 12 miles west-south-west of Kempen. It gives name to a small county.

TRAVE, a river of Denmark, in the duchy of Holstein, which passes Lubeck, and falls into the Baltic, near the small town of Travemunde.

TRAVE, or **TRA'VIS**, *s.* [*travail*, Fr.] A wooden frame for shoeing unruly horses.—She sprong as a colt doth in a *trave*. Chaucer.—[*trabs*, Lat.] A beam; a lay of joists; a traverse.—On the right side of the choir was made a *travys* for her to say her prayers. A. Wood.

To TRAVEL, *v. n.* [This word is generally supposed originally the same with *travail*, and to differ only as particular from general: in some writers the word is written alike in all its senses; but it is more convenient to write *travail* for labour, and *travel* for journey.] To make journeys: it is used for sea as well as land, though sometimes we distinguish it from *voyage*, a word appropriated to the sea.

I've watch'd and *travell'd* hard;
Some time I shall sleep out, the rest I'll whistle. Shakspeare.

To pass; to go; to move.
By th' clock 'tis day;
And yet dark night strangles the *travelling* lamp. Shakspeare.

To make journeys of curiosity.—Nothing tends so much to enlarge the mind as *travelling*, that is, making a visit to other towns, cities, or countries, beside those in which we were born and educated. Watts.—To labour; to toil. This should be rather *travail*.—If we labour to maintain truth and reason, let not any think that we *travel* about a matter not needful. Hooker.

To TRAVEL, *v. a.* To pass; to journey over.—Thither to arrive—I *travel* this profound. Milton.—To force to journey.—There are other privileges granted unto most of the corporations, that they shall not be charged with garrisons, and they shall not be *travelled* forth of their own franchises. Spenser.

TRAVEL, *s.* [*travail*, Fr.] Journey; act of passing from place to place.

Love had cut him short,
Confin'd within the purlieu of his court.
Three miles he went, nor farther could retreat,
His *travels* ended at his country seat. Dryden.

Journey of curiosity or instruction.
Let him spend his time no more at home,
Which would be great impeachment to his age,
In having known no *travel* in his youth. Shakspeare.

Labour; toil. This should be *travail*, as in Daniel.
He wars with a retiring enemy,
With much more *travail* than with victory. Daniel.

Labour in childbirth. This sense belongs rather to *travail*.
Thy mother well deserves that short delight,
The nauseous qualms of ten long months and *travel* to requite. Dryden.

TRAVELS. Account of occurrences and observations of a journey into foreign parts.—A book of his *travels* hath been honored with the translation of many languages. Brown.

TRAVELLED, *adj.* Having made journeys.—It began from a *travelled* doctor of physic, of bold spirit, and of able elocution. Wotton.

TRAVELLER, *s.* [*travailleur*, Fr.] One who goes a journey; a wayfarer.

The weary *traveller* wand'ring that way,
Therein did often quench his thirsty heat. Spenser.

One who visits foreign countries.—Farewell monsieur *traveller*; look you lisp and wear strange suits, and disable all the benefites of your own country. Shakspeare.

TRAVELLER'S REST CREEK, a fine creek of clear water, about 20 yards wide, so called by Captains Lewis and Clarke in 1806, in their journey across the American continent, because they rested here before they proceeded farther to explore their adventurous route towards the Pacific ocean. It falls into the main branch of Clarke's river on the west, in lat. 46. 48. 28. N.

TRAVELTAINTED, *adj.* Harrassed; fatigued with travel.—I have foundered nine score and odd posts; and here, *traveltainted* as I am, have, in my pure and immaculate valour, taken Sir John Coleville. Shakspeare.

TRAVEMUNDE, a small town in the north of Germany, at the mouth of the Trave, belonging to the city of Lubeck, to which it serves as a port; 8 miles north east of Lubeck. Lat. 53. 57. 46. N. long. 10. 51. 40. E.

TRAVENDAHL, a castle and bailiwick of Denmark, in the duchy of Holstein, noted in Danish history for the treaty negotiated and concluded here in 1700, between the king of Denmark and duke of Holstein; 2 miles south-west of Segeberg.

TR'EVERS, *adv.* [Fr.] Athwart; across. *Not used.*—He swears brave oaths, and breaks them bravely, quite *travers*, athwart the heart of his lover. Shakspeare.

TR'EVERS, **VAL DE**, a district of the Swiss canton of Neufchatel, consisting of a romantic valley among the Jura mountains, watered by the Reuse. It contains six villages, with about 4000 inhabitants, a number of whom are lace knitters, watch-makers, or stocking weavers. The chief place is the village of Travers; 11 miles west of Neufchatel. Rousseau resided here during three years.

TR'EVERSABLE, *adj.* Liable to legal objection.—But whether that presentment be *traversable*, vide *Stamf. Hale*.

TR'EVERSE, *adv.* [*a travers*, Fr.] Crosswise, athwart.—Bring water from some hanging grounds, in long furrows; and from those drawing it *traverse* to spread. Bacon.

TR'EVERSE, *prep.* Through crosswise.
He through the armed files
Darts his experienc'd eye, and soon *traverse*
The whole battalion views their order due. Milton.

TR'EVERSE, *adj.* [*transversus*, Lat.; *traverse*, Fr.] Lying across; lying athwart.—The paths cut with *traverse* trenches much encumbered the carriages until the pioneers levelled them. Hayward.

TR'EVERSE, *s.* Any thing laid or built cross; any thing hung across.—Presently the *traverse* wrought with pearls was opened, and the caliph himself discovered. Fuller.—Something that thwarts, crosses, or obstructs; cross accident; thwarting obstacle. This is a sense rather French than English. Dr. Johnson.—It means nothing but *turn*; and was formerly used without any reference to cross or *adverse*.—He sees no defect in himself, but is satisfied that he should have carried on his designs well enough, had it not been for unlucky *traverses* not in his power. Locke.—A flexure; a turning.—We soon came to a high hill, which we mounted by a military road, cut in *traverses*. Johnson.—Subterfuge; trick.—Many shifts and subtle *traverses* were overwrought by this occasion. Proceed against Garnet.—An indictment traversed; a legal objection. See the third sense of **To TR'EVERSE**.—They usually give security to the Court, to appear at the next assizes or sessions, and then and there try the *traverse*. Blackstone.

To TR'EVERSE, *v. a.* [*traverser*, Fr. *It was anciently accented on the last syllable.*] To cross; to lay athwart.

Myself, and such
As slept within the shadow of your power,
T Have

Have wander'd with our *travers'd* arms, and breath'd
Our sufferance vainly. *Shakspeare.*

To cross by way of opposition; to thwart with obstacles.
—John Bull thought himself now of age to look after his
own affairs; Frog resolved to *traverse* this new project; and
to make him uneasy in his own family. *Arbutnot.*—To
oppose; to cross by an objection. *A law term.*

You save th' expence of long litigious laws,
Where suits are *travers'd*, and so little won,
That he who conquers is but last undone. *Dryden.*

To wander over; to cross.—He that shall *traverse* over
all this habitable earth, with all those remote corners of it,
reserved for the discovery of these later ages, may find some
nations without cities, schools, houses, garments, coin; but
not without their God. *Wilkins.*—To survey; to examine
thoroughly.—My purpose is to *traverse* the nature, prin-
ciples, and properties of this detestable vice, ingratitude.
South.

To TRA'VERSE, *v. n.* To use a posture of opposition
in fencing.—To see thee fight, to see thee *traverse*, to see
thee here, to see thee there. *Shakspeare.*

TRAVERSE BAY, GRAND, a bay on the east-side of
Lake Michigan. Lat. 44. 45. N. long. 85. W.

TRAVERSE ISLANDS, a chain of islands at the east end
of Noquet's Bay, in Lake Michigan. On one of the largest
is a town of the Ottoway Indians.

TRAVESIA, a river of Quito, in the province of Moxos,
which communicates with the Mato, and runs north.

TRAVESTED, *adj.* [*travesti*, Fr.; *travistito*, Ital.]
Dressed in the clothes of another; disguised.—I see poor
Lucan *travested*, not apparelled in his Roman toga, but
under the cruel sheers of an English tailor. *Bentley.*

TRA'VESTY, *adj.* Dressed so as to be made ridiculous;
burlesqued.

TRA'VESTY, *s.* A burlesque performance; a work *trav-*
estied.—A work grave, serious, and even respectable for its
poetry, in the reign of Edward the sixth, at length in a cul-
tivated age has contracted the air of an absolute *travestie*.
Warton.

To TRA'VESTY, *v. a.* To turn into burlesque and ridi-
cule.—One would imagine, that John Dennis, or some hero
of the Dunciad, had been here attempting to *travesty* this
description of the restoration of Eurydice to life. *Dr.*
Warton.

TRA'ULISM, *s.* [*traulizo*, Lat., from the Gr., to *stutter*.]
A stammering repetition of syllables.—As for *a w a*, &c. I
know not what other censure to pass on them, but that they
are childish and ridiculous *traulisms*. *Dalgarno, Deaf*
and Dumb Man's Tut.

TRAUMATIC, *adj.* [*τραυματικός*, Gr.] Vulnerary;
useful to wounds.—I deterged and disposed the ulcer to in-
carn, and to do so I put the patient into a *traumatic* decoc-
tion. *Wiseman.*

TRAUMA'TICS, *s.* Vulneraries; medicines good to
heal wounds. *Chambers.*

TRAUN, a navigable river of upper Austria, which rises
in Styria, and after flowing through the lakes of Hallstadt
and Traun, runs into the Danube.

TRAVNICK, a town in the north-west of European Tur-
key, in Bosnia, situated at the foot of a chain of mountains,
between the rivers Bosnia and Verbacz; 70 miles west-by-
south of Isvornick, and 74 north-by-east of Spalatro.

TRAUNKIRCHEN, a small town of Upper Austria, on
the west side of the lake of Traun; 11 miles south-south-east
of Vocklabruck.

TRAUNSTEIN, a small town of Bavaria, on the Traun.
It contains 2500 inhabitants; 48 miles east-by-south of Mun-
ich, and 18 west of Salzburg. See REICHENHALL.

TRAUNSTEIN, a mountain of Upper Austria, among the
Noric Alps, on the east side of the lake of Traun, about
5600 feet in height.

TRAUNSTEIN, a small town of Lower Austria; 63
miles west-by-north of Vienna, and 11 south-west of Zwell.

TRAUNVIERTEL, (i. e. Quarter of the Traun,) a dis-

trict of Upper Austria, lying along the river Traun, from the
Danube to the borders of Styria. It has a territorial extent
of 1955 square miles, with 170,000 inhabitants.

TRAVO, a small town of Italy, in the duchy of Parma,
district of Piacenza, on the river Trebia.

TRAUTENAU, a small town of Bohemia; 22 miles north
of Koniggratz, and 72 east-north-east of Prague. Popula-
tion 2100.

TRAUTMANNSDORF, a lordship of Lower Austria,
from which a family of princes and counts, well known in
Germany, take their title.

TRAWDEN FOREST, a township of England, in Lan-
cashire; 2 miles south-east of Colne. Population 1941.

TRAWSFYNN, a parish of Wales, in Merionethshire,
between Llanelltyd and Maentwrog; 223 miles from Lon-
don. Population 1481.

TRAY, *s.* [*traeg*, Su. Goth.; *trua*, Lat. *Serenius*.] A
shallow wooden vessel.

No more her care shall fill the hollow *tray*,
To fat the guzzling hogs with floods of whey. *Gay.*

TRAYTRIP, *s.* A play, I know not of what kind. *Dr.*
Johnson.—Some game at tables or draughts. *Tyrwhitt.*—
From *trey*, or *trea*, *three*. Written also *trea-trip*.—I shall
play my freedom at *traytrip*, and become thy bond slave.
Shakspeare.

TRAZ OZ MONTES, a large province occupying the
north-east of Portugal, and extending in a form nearly square,
having to the south the course of the Douro, to the north the
Spanish province of Galicia. Its territorial extent is about
5500 square miles, equal to four of our average counties:
its population, much more thinly spread, hardly exceeds
350,000.

TREA'CHER, TREA'CHETOUR, or TREA'CHOUR, *s.*
[*tricheur*, Fr.] A traitor; one who betrays; one who vio-
lates his faith or allegiance. *Not in use.*

Good Claudius with him battle fought,
In which the king was by a *treachetour*
Disguised slain. *Spenser.*

Where may that *treachour* then be found,
Or by what means may I his footing tract? *Spenser.*

Play not two parts,
*Treach*er and coward both. *Beaum. and Fl.*

TRE'ACHEROUS, *adj.* Faithless; perfidious; guilty of
deserting or betraying.

Desire in rapture gaz'd awhile,
And saw the *treacherous* goddess smile. *Swift.*

TREACHEROUS BAY, a dangerous bay, as its name
imports, in the Eastern seas, in Gaspar's strait.

TRE'ACHEROUSLY, *adv.* Faithlessly; perfidiously; by
treason; by dishonest stratagem.

Thou hast slain
The flower of Europe for his chivalry,
And *treacherously* hast thou vanquish'd him. *Shakspeare.*

TRE'ACHEROUSNESS, *s.* The quality of being *treach-*
erous; perfidiousness.

TRE'ACHERY, *s.* [*tricherie*, Fr., from *triengen*, Germ.,
to *deceive*, to *betray*. See TRICK.] Perfidy; breach of
faith.—And Joram said to Ahaziah, there is *treachery*, O
Ahaziah. *2 Kings.*

TRE'ACLE, *s.* [*triacle*, Fr.; *triackle*, Dutch; *theriaca*,
Lat.; *triacle*, old Engl.] A medicine made up of many
ingredients.—The physician that has observed the medicinal
virtues of *treacle*, without knowing the nature of each of the
sixty odd ingredients, may cure many patients with it. *Boyle.*
—Melasses; the spume of sugar.—Any sovereign remedy
was at this time [in the 13th century] called *treacle*. Venice
treacle is still in some repute. The sirop of the sugar-bakers,
now called *treacle*, cannot have been known so early. *Ellis.*

To TREAD, *v. n.* pret. *trod*, *trode*; part. pass. *trod-*
den. [*trudan*, Gothic; *træðan*, Saxon; *treden*, Dutch.]
To set the foot.—Where'er you *tread* the blushing flowers
shall

shall rise. *Pope*.—To trample; to set the feet in scorn or malice.

Thou

Must, as a foreign recreant, be led
With manacles along our street, or else
Triumphantly tread on thy country's ruin,
And bear the palm.

Shakspeare.

To walk with form or state.

When he walks, he moves like an engine,
And the ground shrinks before his treading.

Shakspeare.

To copulate as birds.

They bill, they tread, Alcione compressed,
Seven days sits brooding on her floating nest.

Dryden.

To TREAD, *v. a.* To walk on; to feel under the foot.

Would I had never trod this English earth,
Or felt the flatteries that grow upon it!

Shakspeare.

To press under the foot.—Tread the snuff out on the floor
to prevent stinking. *Swift*.—To beat; to track.

Full of briars is this working world.

— They are but burs: if we walk not in the trodden paths,
our very petticoats will catch them. *Shakspeare.*

To walk on in a formal or stately manner.—Methought
she trod the ground with greater grace. *Dryden*.—To crush
under foot; to trample in contempt or hatred.—Through
thy name will we tread them under that rise against us.
Psal.—To put in action by the feet.—They tread their
wine-presses and suffer thirst. *Job*.—To love as the male
bird the female.—He feather'd her and trod her. *Dryden.*

TREAD, *s.* Footing; step with the foot.

The quaint mazes in the wanton green,
For want of tread, are undistinguishable.

Shakspeare.

Way; track; path.

Cromwell is the king's secretary; further
Stands in the gap and tread for more preferment.

Shakspeare.

The cock's part in the egg.

TRE'ADER, *s.* He who treads.—The treaders shall
tread out no wine in their presses. *Isa.*

TREADHAVEN, or THIRDHAVEN, a river of the United
States, in Maryland, which passes by Easton, flows south-
west, and runs into the Choptank, east of Benoni's point.

TRE'ADLE, *s.* A part of an engine on which the feet
act to put it in motion.—The farther the fore-end of the
treadle reaches out beyond the fore-side of the lathe, the
greater will the sweep of the fore-end of the treadle be, and
consequently the more revolutions are made at one tread.
Moron.—The sperm of the cock.—At each end of the egg
is a treadle, formerly thought to be the cock's sperm. *Der-
ham.*

TREADMILL, *s.* An instrument of prison discipline
of recent invention. It is composed of a large revolving cy-
linder, having ledges or steps fixed round its circumference;
the prisoners walk up these ledges, and their weight revolves
the cylinder. It is an excellent exercise, highly conducive
to health, and a great improvement on our old system of
beating hemp. It is to be regretted, however, that it is not
applied to some use, nothing being easier.

TREGUE, *s.* [*treuga*, Germ.; *triggwo*, Goth.] A
truce. *Obsolete.*

Which to confirme, and fast to bind their league,
After their weary sweat and bloody toile,
She them besought, during their quiet tregue
Into her lodging to repaire a while,
To rest themselves, and grace to reconcile.

Spenser.

TREALES, a township of England, in Lancashire; 1½
mile north-east of Kirkham. Population 671.

TRE'ASON, *s.* [*trahison*, Fr.] An offence committed
against the dignity and majesty of the commonwealth: it is
divided into high treason and petit treason. High treason
is an offence against the security of the commonwealth, or
of the king's majesty, whether by imagination, word, or

deed; as to compass or imagine treason, or the death of the
prince, or the queen consort, or his son and heir-apparent;
or to deflower the king's wife, or his eldest daughter unmar-
ried, or his eldest son's wife; or levy war against the king
in his realm, or to adhere to his enemies by aiding them; or
to counterfeit the king's great seal, privy seal, or money; or
knowingly to bring false money into this realm counter-
feited like the money of England, and to utter the same; or
to kill the king's chancellor, treasurer, justice of the one
bench, or of the other; justices in eyre, justices of assize,
justices of oyer and terminer, when in their place and doing
their duty; or forging the king's seal manual, or privy
signet; or diminishing or impairing the current money:
and, in such treason, a man forfeits his lands and goods to
the king: and it is called treason paramount. Petit treason
is when a servant kills his master, a wife her husband, a
secular or religious man his prelate: this treason gives for-
feiture to every lord within his own fee: both treasons are
capital. *Cowel*.—He made the overture of thy treasons to
us. *Shakspeare.*

TRE'ASONABLE, or TRE'ASONS, *adj.* Having the
nature or guilt of treason. *Treasonous* is out of use.

Him by proofs as clear as founts in July
I know to be corrupt and treasonous.

Shakspeare.

Most men's heads had been intoxicated with imaginations
of plots, and treasonable practices. *Clarendon.*

TRE'ASONABLENESS, *s.* State or quality of being
treasonable. *Ash.*

TRE'ASONABLY, *adv.* In a treasonable manner; with
a treasonable view.

TRE'ASURE, *s.* [*tresor*, French; *thesaurus*, Latin.]
Wealth hoarded; riches accumulated.—He used his laws as
well for collecting of treasure, as for correcting of manners.
Bacon.

To TRE'ASURE, *v. a.* To hoard; to deposit; to lay
up.

No, my remembrance treasures honest thoughts,
And holds not things like thee; I scorn thy friendship.

Rowe.

TRE'ASURER, *s.* [*tresorier*, French.] One who has
care of money; one who has charge of treasure.

This is my treasurer, let him speak
That I have reserved nothing.

Shakspeare.

TRE'ASURERSHIP, *s.* Office or dignity of treasurer.—
He preferred a base fellow, who was a suitor for the treasurer-
ship, before the most worthy. *Hakevill.*

TRE'ASUREHOUSE, *s.* Place where hoarded riches
are kept.—Let there be any grief or disease incident to the
soul of men, for which there is not in this treasurehouse
a present comfortable remedy to be found. *Hooker.*

TRE'ASURESS, *s.* She who has charge of treasure.—
Do they not call the virgin Marie the queen of heaven, the
gate of Paradise, the treasure of grace? *Dering.*

TRE'ASURY, *s.* [*tresorerie*, French.] A place in which
riches are accumulated.

And yet I know not how conceit may rob
The treasury of life, when life itself
Yields to the theft.

Shakspeare.

It is used by Shakspeare for treasure.

Thy sumptuous buildings
Have cost a mass of public treasury.

Shakspeare.

TREASURY ISLANDS, a small group, of very unequal
size, forming part of Solomon's islands. They are low,
covered with trees of agreeable appearance. That on the
north is the lowest; its middle lies in lat. 7. 23. 30. S.
and long. 155. 29. 30. E. They are five or six, or perhaps
more, in number, and at a distance appear as only one.
The group occupies a circuit of about ten leagues.

To TREAT, *v. a.* [*traiter*, French; *tracto*, Lat.] To
negotiate; to settle.

To treat the peace, a hundred senators
Shall be commissioned.

Dryden.
[tracto,

[*tracto*, Latin.] To discourse on; to use in any manner, good or bad.—He *treated* his prisoner with great harshness. *Spectator*.—To handle; to manage; to carry on.—Zeuxis and Polygnotus *treated* their subjects in their pictures, as Homer did in his poetry. *Dryden*.—To entertain without expence to the guest.

To TREAT, *v. n.* [*traiter*, French; *τραχητιαν*, Saxon.] To discourse; to make discussions.—Of love they *treat* till the evening star appear'd. *Milton*.—To practice negotiation.—The king *treated* with them. *2 Mac*.—To come to terms of accommodation.

You Master Dean frequent the great,
Inform us, will the emperor *treat*?

Swift.

To make gratuitous entertainments.—If we do not please, at least we *treat*. *Prior*.

TREAT, *s.* An entertainment given.

This is the ceremony of my fate;
A parting *treat*, and I'm to die in state.

Dryden.

Something given at an entertainment.

Dry figs and grapes, and wrinkled dates were set,
In canisters t' enlarge the little *treat*.

Dryden.

TREATABLE, *adj.* [*traitable*, French.] Moderate; not violent; tractable.—A virtuous mind should rather wish to depart this world with a kind of *treatable* dissolution, than be suddenly cut off in a moment, rather to be taken than snatched away. *Hooker*.

TREATABLY, *adv.* Not with violence; moderately.—In the meanwhile there will be always some skilful persons, which can teach a way how to grind *treatably* the church with jaws that shall scarce move, and yet devour in the end more than they that come ravening with open mouth, as if they would worry the whole in an instant. *Hooker*.

TREATER, *s.* One who discourses.—Speeches better becoming a senate of Venice, where the *treaters* are perpetual princes. *Wotton*.—One who gives an entertainment.

TREATISE, *s.* [*tractatus*, Latin.] Discourse; written tractate.

The time has been my fell of hair
Would at a dismal *treatise* rouse, and stir
As life were in't.

Shakspeare.

TREATISER, *s.* One who writes a treatise. *Not in use*.—I tremble to speak it in the language of this black-mouthed *treatiser*. *Featley*.

TREATMENT, *s.* [*traitment*, French.] Usage; manner of using good or bad.—I speak this with an eye to those cruel *treatments*, which men of all sides are apt to give the characters of those who do not agree with them. *Addison*.—Entertainment.—Accept such *treatment* as a swain affords. *Pope*.

TREATY, *s.* [*traite*, French.] Negotiation; act of treating.

She began a *treaty* to procure
And establish terms betwixt both their requests.

Spenser.

A compact of accommodation relating to public affairs.—A peace was concluded, being rather a bargain than a *treaty*. *Bacon*.—[For *entreaty*.] Supplication; petition; solicitation.

I must

To the young man send humble *treaties*, dog,
And palter in the shift of lowness.

Shakspeare.

Treatise. *Obsolete*.—The Scotch have *tretie* in this sense. See *Jamieson*.—In the first part of this *treaty* of obedience of subjects to their princes. *Homily against Rebellion*.

TREBBI, or TREPPIN, a small town of the Prussian province of Brandenburg, on the river Rude, surrounded by morasses. It has 1200 inhabitants, and is 22 miles south-by-west of Berlin, and 16 south-south-east of Potsdam.

TREBEL, a small river on the confines of Mecklenburg and Pomerania, which falls into the Peene at Demmin.

TREBELLIANICA, or TREBELLIAN FOURTH, in the Roman Jurisprudence, a right belonging to an heir instituted by testament. If the testator, after appointing a full and

general heir, spent and disposed of all his effects in legacies; or if he went *ultra dodrantem*, beyond three-fourths thereof; in that case, the heir was allowed to retrench and detain one fourth part of the legacies to his own use. This was called the *trebellianica*.

In like manner, if the testator charges his heir with a feoffment of trust, and to restore the inheritance to another; in that case the heir might likewise retain a fourth of the whole succession, that the quality of heir might not be rendered wholly vain and fruitless.

TREBELLIVS (Pollio), a Latin historian, flourished about the year 298 of the vulgar era. According to Vopiscus, he wrote the lives of the Roman Emperors from the two Philips to Claudius; but we have extant only the latter part of the reign of the elder Valerian, that of his son, the lives of the two Gallieni, those of the thirty tyrants, and that of Claudius. He is reckoned one of the "Historiæ Augustæ Scriptores," and praised by Vopiscus for his exactness, which applies only to some dates, as in other points he is very incorrect. His style is somewhat superior to that of the other historians. *Vossius*.

TREBES, a small town in the south of France, department of the Aude, near the canal of Languedoc; 6 miles south-east of Carcassonne.

TREBIA, or TREBBIA, a river in the north of Italy, in the duchy of Parma, which rises among the Appennines, and falls into the Po above Piacenza.

TREBIGH, or TURBIGH, a hamlet of England, in Cornwall; 4½ miles west-south-west of Collington.

TREBISOND, a considerable city of Asia Minor, on the coast of the Black Sea. It is very ancient, and is mentioned by Xenophon, under the appellation of *Trapezus*, as forming the termination of the retreat of the Ten Thousand. At the southern extremity of the town is the citadel, which commands a full view of the city and environs. Mountains rise behind Trebisond, but of less elevation than along the rest of the neighbouring coast of Asia Minor; and they are in a very high state of cultivation, producing barley, flax, and wine. Lat. 37. 23. N. long. 39. 43. E.

TREBITSCH, or TREBITZ, a small town of the Austrian states, in Moravia, on the Iglawa. It contains 3700 inhabitants, of whom a number are Jews; 20 miles east-south-east of Iglau.

TREBLE, *adj.* [*triple*, French; *tripulus*, *triplex*, Lat.] Threefold; triple.

All his malice served but to bring forth
Infinite goodness, grace and mercy shewn
On man by him seduc'd; but on himself
Treble confusion, wrath and vengeance pour'd. *Milton*.

Sharp of sound. *A musical term*.—The sharper or quicker percussion of air causeth the more *treble* sound, and the lower or heavier the bass sound. *Bacon*.

To TREBLE, *v. a.* [*triplico*, Latin; *tripler*, French.] To multiply by three; to make thrice as much.

I would not be ambitious in my wish,

To wish myself much better; yet for you,
I would be *trebled* twenty times myself,

A thousand times more fair.

Shakspeare.

To TREBLE, *v. n.* To become threefold.—Whoever annually runs out, as the debt doubles and *trebles* upon him, so doth his inability to pay it. *Swift*.

TREBLE, *s.* [The chorister or boy who usually carried the *thurible* or incense-pot, in the devotions of the church of Rome, was called *puer thuribularis*; and I have heard it a happy conjecture of a most ingenious friend, that a *treble* voice in music was owing to the small and shrill tone of the *thuribular* or incense-boy: as the said boy, carrying a little tinkling bell in one hand, might possibly give the name of *treble*, to the least bell. *Cowel*.] The highest or acutest part of music; the smallest of a ring of bells; a sharp sound.—The *treble* cutteth the air so sharp, as it returneth too swift to make the sound equal; and therefore a mean or tenor is the sweetest. *Bacon*.

TREBLENESS, *s.* The state of being treble.—The just proportion

proportion of the air percussed towards the baseness or *trebleness* of tones, is a great secret in sounds. *Bacon*.

TREBLY, *adv.* Thrice told; in threefold number or quantity.—The seed being so necessary for the maintenance of the several species, it is in some doubly and *trebly* defended. *Ray*.

TREBNITZ, a small town of Prussian Silesia, in the principality of Oels, containing 1500 inhabitants; 14 miles north of Breslau, and 15 west-north-west of Oels.

TREBOROUGH, a parish of England, in Somersetshire; 5 miles south-by-east of Dunster.

TREBUCHET, a machine for throwing stones, for which purpose a sling was sometimes fixed to it: it acted by means of a great weight fastened to the short arm of a lever, which being let fall, raised the end of the long arm with a great velocity.

TRECASI, a small town of Italy, in the south-east of the kingdom of Naples, in the Terra d'Otranto. It has a small harbour; and is 4 miles east of Alessano.

TRECASTLE, a parish of Wales, in Brecknockshire, on the road from Brecon to Llandovery; 179 miles from London.

TRECENTO, a small town in the north of Italy, in the States of the Church; 12 miles west-north-west of Ferrara.

TRECHEDIPNA [*τρεχεδιπνα*, Gr., formed of *τρεχω*, *I run*, and *διπνον*, *a supper*], in Antiquity, a kind of livery, or distinguishing habits worn by parasites; the wearing of which was a sufficient passport to the tables of their patrons whose livery it was.

TREDINGTON, a parish of England, in Gloucestershire; 2 miles south-east-by-east of Tewkesbury.—Also, a parish in Worcestershire; 2 miles north of Shipton-upon-Stour.

TREDONOCK, a parish of England, in Monmouthshire; 3 miles from Caerleon. Here is preserved an entire monument of a Roman soldier of the second legion, which was found by the sexton, in digging a grave, about a hundred years ago. It is particularly described by Dr. Gibson, in his additions to Camden.

TREE, *s.* [*triu*, M. Goth.; *trie*, Icelandic; *tree*, Dan.] A large vegetable, rising with one woody stem, to a considerable height.—It is pleasant to look upon a *tree* in summer covered with green leaves, decked with blossoms, or laden with fruit, and casting a pleasant shade: but to consider how this *tree* sprang from a little seed, how nature shaped and fed it till it came to this greatness, is a more rational pleasure. *Burnet*.—Wood, simply. See **TREEN**.—Not only vessels of gold and silver, but also of *tree* and of *erthe*. *Wieliffe*.—Any thing branched out.

Vain are their hopes who fancy to inherit,
By *trees* of pedigree, or fame or merit:
Though plodding heralds through each branch may trace
Old captains and dictators of their race. *Dryden*.

TREE, GERMANDER, *s.* A plant.
TREE OF LIFE, *s.* [*lignum vite*, Lat.] An evergreen: the wood is esteemed by turners. *Miller*.

TREE, PRIMROSE, *s.* A plant.
TREE ISLAND, a rock in the East Indian ocean, in Gaspar strait.

TREE ISLAND, a small island in the Indian sea, near the eastern coast of Africa. Lat. 17. 10. N.

TREEN, old. plur. of *tree*.
Well run greenhood, got between
Under the sand-bag he was seen;
Lowting low like a for'ster green,
He knows his tackle and his *treen*. *B. Jonson*.

TREEN, *adj.* [*treopern*, Sax.] Wooden; made of wood. *Treen ware* is still a phrase among country people.—Give it a horn spoon, and a *treen* dish. *B. Jonson*.

TREETON, a township of England, West Riding of Yorkshire; 4 miles south-by-east of Rotherham.

TREFDRAETH, a parish of Wales, in Anglesey; 8 miles from Bangor. Population 497.

Vol. XXIV. No. 1628.

TREFEGLYS, a parish of Wales, in Montgomeryshire; 7 miles from Newton. Population 1654.

TREFFILAN, a parish of Wales, in Cardiganshire; 4 miles from Llansantfraed.

TREFFURT, a small town of Prussian Saxony, situated on a hill near the river Werua; 29 miles south-south-east of Göttingen.

TREFOIL, *s.* [*trifolium*, Lat.] A plant. *Miller*.—Some sow *trefoil* or rye-grass with their clover. *Mortimer*.

TREFONTI, the name of three small islands belonging to Sicily, and situated on the coast of the Val di Mazzara.

TREFORT, a large village in the east of France, department of the Ain, situated on a mountain called Revermont. It contains, with the eleven adjacent hamlets, about 2300 inhabitants; 11 miles north-east of Bourg.

TREFRIEU, a parish of Wales, in Carnarvonshire, near the river Conway; 2 miles from Llanwrst.

TREGANNON, **TREGARON**, or **CAIRNESTOWN**, a town of Wales, in the county of Cardigan, situated on the river Berwin, which joins the Tive a little lower down.

TREGANON, a parish of Wales, in Montgomeryshire; 8 miles from Montgomery. Population 658.

TREGARE, a township of England, in Monmouthshire; 1½ mile north of Ragland.

TREGAYON, a hamlet of Wales, in Anglesea; 12 miles from Bangor.

TREGONY, a market town and very decayed borough of England, in the county of Cornwall, situated on the banks of the river Fal. It consists chiefly of one long street. The old town was situated on the low ground, at the bottom of the hill on which the present one is built. The right of election is vested in the townsmen who are housekeepers, and the number of voters may amount to about 180. The chief interest in the borough is now possessed by Lord Darlington, and contains 923 inhabitants. Market on Saturday, and five annual fairs; 8 miles south-east of Truro, and 248 west-south-west of London.

TREGUIER, a town of France, in Brittany, department of the Cotes du Nord, situated on a peninsula. It contains 2100 inhabitants; has a secure harbour, which can admit vessels of 200 tons; 11 miles north-east of Lannion, and 50 north-west of St. Brieux. Lat. 48. 46. 54. N. long. 3. 13. 35. W.

TREGUNNO, a hamlet of England, in the parish of St. Breage, near Helstone.

TREIGNAC, a small town in the south of France, department of the Correze, with 2600 inhabitants; 22 miles north of Tulle.

TREIGNY, a small town in the central part of France, department of the Yonne; 9 miles south-east of St. Fargeau. Population 1800.

TRE'ILLAGE, *s.* [French.] A contexture of palés to support espalliers, making a distinct inclosure of any part of a garden. *Trevour*.—There are as many kinds of gardening as of poetry: makers of flower-gardens are epigrammatists and sonneteers; contrivers of bowers, grottoes, *treillages*, and cascades, are romance writers. *Spectator*.

TREIS, a small town of the Prussian province of the Lower Rhine, near the confluence of the Moselle and the Deim, with 1100 inhabitants; 16 miles south-west of Coblenz.

TREISAM, one of the ten circles into which the grand duchy of Baden was divided in 1810. It extends along the river Treisam, from the Rhine to the circle of the Danube, and thus includes the middle part of the Brisgau, and almost the whole district of Hochberg. It is populous, and of great fertility, containing 126,000 inhabitants. The chief town is Freyburg.

TREISAM, a small river in the west of Germany, in the Brisgau, which rises in the Black Forest, and falls into the Rhine below Freyburg.

TREISHINISH, or **TRESHUNISH ISLES**, a cluster of small islands of Scotland, in the Hebrides, belonging to Argyllshire, lying about four leagues west of the island of Mull. None

of the Treishnish isles are inhabited. Lat. 56. 30. N. long. 6. 25. E.

TRELLECK, a parish of England, in Monmouthshire, in which there is a mineral spring; 3 miles south of Monmouth. Population 823.

TRELLECK, or TRILLECH GRANGE, a hamlet in the above county; 6 miles north-west-by-west of Chepstow.

TRELLIS, *s.* [French.] Is a structure of iron, wood, or osier, the parts crossing each other like a lattice. *Trevoux*.—Gardens full of orange and cypress trees, fountains, and *trellis* work covered with vines. *Gray*.

TRELLISED, *adj.* Having trellises.—The windows are large, *trellized*, and neatly carved. *Sir T. Herbert*.

TRELON, a small inland town of French Flanders, with 1000 inhabitants; 9 miles south-east of Avesnes.

TREMADOCK, a market town of Wales, in the county of Caermarthen, recently built. It contains a neat market-house, and a small church, with a chapel for Protestant dissenters; 20 miles from Caernarvon.

TREMAIN, a post village in the United States, in Ulysses, New York; 11 miles north-west of Ithica.

TREMAN, a town of the south of India, province of the Carnatic, situated on the north bank of the Coleroon river. Lat. 11. 1. N. long. 79. 20. E.

TREMATON, a village of England, in the parish of St. Stephen's, county of Cornwall; 1 mile west of Saltash, situated on the river Lyner, which falls into the Tamar.

TREMAYNE, a parish of England, in Cornwall; 6½ miles west-north-west of Launceston.

TREMBLADE, a small town in the south-west of France, department of the Lower Charente, with 2500 inhabitants. Its harbour receives vessels of 600 tons; 4 miles south-by-west of Marenes.

To TREMBLE, *v. n.* [*tremo*, Lat.] To shake as with fear or cold; to shiver; to quake; to shudder.

My compassionate heart

Will not permit my eyes once to behold

The thing, whereat it trembles by surmise. *Shakspeare*.

To quiver; to totter.—We cannot imagine a mass of water to have stood upon the middle of the earth like one great drop, or a *trembling* jelly, and all the places about it dry. *Burnet*.—To quaver; to shake as a sound.—Winds make a noise unequally, and sometimes when vehement *tremble* at the height of their blast *Bacon*.

TREMBLE, POINT AU, a cape on the coast of Canada, in the river St. Lawrence; 12 miles above Quebec.

TREMBLER, *s.* One who trembles.—Those base submissions that the covetous mammonist, or cowardly *trembler*, drudges under. *Hammond*.

TREMBLEY (Abraham), an eminent naturalist, was born at Geneva, in 1710, and having finished his own education in Holland, he undertook that of the children of M. Bentinck. He thence went to London, and had the charge of the young Duke of Richmond. In the course of these employments he travelled into various parts, and directed his attention to various objects, particularly of natural history. His discovery with regard to the propagation of the fresh-water polypes, engaged general attention, and he gave an account of it in his work printed at Leyden in 1744, and entitled "Memoir pour servir à l'Histoire Naturelle d'un Genre de Polypes d'eau douce a Bras en Forme de Cornes." His papers on other subjects of natural philosophy, as electricity, geology, &c., are printed in the Transactions of the Royal Society, of which he was a member. He died at Geneva, highly esteemed and respected, in 1784. *Haller*.

TREMBLING, *s.* Tremour.—When he heard the king, he fell into such a *trembling* that he could hardly speak. *Clarendon*.

TREMBLINGLY, *adv.* So as to shake or quiver.

Tremblingly she stood

And on the sudden dropt.

Shakspeare.

TREMBOWLA, or TRENBOWLA, a town of Austrian Poland; 18 miles south of Tarnopol.

TREMELLA [Dimin. from *tremo*, to tremble], in Botany; a genus of the class cryptogamia, order algæ.—Generic Character. Substance uniform, membranaceous, gelatinous, pellucid. Eleven species are enumerated in the fourteenth edition of *Systema Vegetabilium*: nine by Relhan: and nineteen by Withering. *Tremella nostoc* is not uncommon after rain in grass-fields, and on gravel walks; and is vulgarly supposed to be the remains of a meteor or fallen star. It is somewhat gelatinous, consisting of several leaves variously lobed and waved, slightly adhering to the ground by a central root; the substance very thin. It varies in colour, but is usually some shade of olive. When dry, it is of a dark brown and brittle. Micheli describes the seeds as lying in the form of little strings of beads coiled up within the folds of the plant, and only to be discovered by the microscope. This and three other species, viz. *granulata*, *mesenterica*, and *sabinæ*, are figured in English Botany.

TREMELLIUS (Emanuel), an excellent Hebrew scholar, was the son of a Jew at Ferrara, and born there about the year 1510. He died at Metz, in 1580. All Tremellius's writings related to the Oriental languages; and of these were Hebrew, Chaldaic, and Syriac grammars, a Hebrew Catechism, and Commentaries on the Prophecy of Hosea. Of his version of the Bible, F. Simon says, that it is not much esteemed by the Protestants; and that the writer's Judaism has given him a singularity of manner, which makes him often wander from the true sense of a passage, and moreover that his Latin style is affected and inaccurate. *Simon*.

TREMENTINE, a small town in the west of France, department of the Maine and Loire, with 1700 inhabitants; 25 miles south-west of Angers.

TREMENDOUS, *adj.* [*tremendus*, Lat.] Dreadful; horrible; astonishingly terrible.—There stands an altar where the priest celebrates some mysteries sacred and *tremendous*. *Tatler*.

TREMENDOUSLY, *adv.* Horribly; dreadfully.

TREMENDOUSNESS, *s.* State or quality of being tremendous. *Scott*.

TREMITI ISLANDS, called by the ancients *Diomedis Insula*, three petty islands in the Adriatic, distant about 15 miles from the province of Capitanata, in the kingdom of Naples. They are situated in lat. 42. 10. N. long. 15. 30. E.

TREMLES, or STRIMLOW, a small town in the south-east of Bohemia; 71 miles south-south-east of Prague. Population 1000.

TREMOLETO, a small town in the north of Italy, in Tuscany, district of Leghorn.

TREMOLITE, in Mineralogy, a mineral which received its name from Tremola, a valley in the Alps, where it was discovered. See MINERALOGY.

TREMOUILLE, a small town in the west of France, department of La Vendee. Population 800; 32 miles east-by-south of Poitiers.

TREMOUR, *s.* [*tremor*, Lat.] The state of trembling.—He fell into an universal *tremour* of all his joints, that when going his legs trembled under him. *Harvey*.—Quivering or vibratory motion.—These stars do not twinkle when viewed through telescopes which have large apertures: for the rays of light which pass through divers parts of the aperture tremble each of them apart, and by means of their various, and sometimes contrary *tremours*, fall at one and the same time upon different points in the bottom of the eye. *Newton*.

TREMULOUS, *adj.* [*tremulus*, Lat.] Trembling; fearful.—The tender *tremulous* Christian is easily distracted and amazed by them. *Dee of Chr. Piety*.—Quivering; vibratory.—Breath vocalized, that is, vibrated or undulated, impresses a swift *tremulous* motion in the lips, tongue, or palate, which breath passing smooth does not. *Holder*.

TREMULOUSLY, *adv.* With trepidation.

TREMULOUSNESS, *s.* The state of quivering.

TREMSBUTTEL, a large village of Denmark, in the duchy of Holstein; 18 miles north-east of Hamburg, and 18 west-south-west of Lubeck.

TREMUDA,

TREMUDA, a river of Guatimala, which runs north, and enters the sea opposite the island of Roatan.

TREN, a small river of Denmark, in the duchy of Sleswick. It falls into the Eyder at Friedrichstadt.

TREN, *s.* A fish spear. *Ainsworth.*

To **TRENCH**, *v. a.* [*trancher*, Fr.] To cut.

Safe in a ditch he bides,

With twenty *trenched* gashes on his head. *Shakspeare.*

To cut or dig into pits or ditches.—*Trench* the ground, and make it ready for the Spring. *Evelyn.*—To fortify by earth thrown up.

Pioneers with spades and pickax arm'd,
Forerun the royal camp to *trench* a field. *Milton.*

To **TRENCH**, *v. n.* To encroach.—We are said to have *trenched* upon the liberty of subjects and property of goods. *Bp. Hall.*

TRENCH, *s.* [*tranche*, Fr.] A pit or ditch.

On that coast build,

And with a *trench* enclose the fruitful field. *Dryden.*

Earth thrown up to defend soldiers in their approach to a town, or to guard a camp.

The citizens of Corioli have issued forth
And given to Lartius and to Marcius battle:

I saw our party to the *trenches* driven,
And then I came away. *Shakspeare.*

TRENCHAND, or **TRENCHANT**, *adj.* [*trenchant*, Fr.] Cutting; sharp.

Against a vanquish'd foe, their swords
Were sharp and *trenchant*, not their words. *Hudibras.*

TRENCHER'S ISLAND, or **HILTON HEAD**, an island of the United States, near the coast of South Carolina; 25 miles long. Lat. 32. 13. N. long. 80. 68. W.

TRENCHER-MONT RIVER, a small river of the island of St. John's, in the gulf of St. Lawrence. It empties into the sea three or four leagues to the westward of the eastern extremity of the island.

TRENCHER, *s.* [*trenchoir*, Fr.] A piece of wood on which meat is cut at table.

No more

I'll scrape *trencher*, nor wash dish. *Shakspeare.*

The table.

How often hast thou,

Fed from my *trencher*, kneel'd down at the board,
When I have feasted? *Shakspeare.*

Food; pleasures of the table.—It could be no ordinary declension of nature that could bring some men, after an ingenious education, to place their *summum bonum* upon their *trenchers*, and their utmost felicity in wine. *South.*

TRENCHERFLY, *s.* One that haunts tables; a parasite.—He found all people came to him promiscuously, and he tried which of them were friends, and which only *trencherflies* and spongers. *L'Estrange.*

TRENCHERFRIEND, *s.* A parasite; a trenchermate.—You fools of fortune, *trencherfriends*, time's flies. *Shakspeare.*

TRENCHERMAN, *s.* A cook. *Obsolete.*—Palladius assured him, that he had already been more fed to his liking than he could be by the skilfullest *trenchermen* of Media. *Sidney.*—A feeder; an eater.—You had musty victuals and he hath help to eat it: he's a very valiant *trencherman*; he hath an excellent stomach. *Shakspeare.*

TRENCHERMATE, *s.* A table companion; a parasite.—Because that judicious learning of the ancient sages doth not in this case serve the turn, these *trenchermates* frame to themselves a way more pleasant; a new method they have of turning things that are serious into mockery, an art of contradiction by way of scorn. *Hooker.*

TRENCK (Frederic, Baron von), an adventurer, was descended from a noble Prussian family, and born at Konigsberg, in 1726. Having been much indulged in his youth, and losing his father when he was twelve years of age, he

became ungovernable, and the sport of his own impetuous passions. In 1742, at the age of sixteen years, he entered into the Prussian guards, then quartered at Potsdam. In 1744, at the commencement of the second Silesian war, he attended the king as an aid-de-camp; but being suspected of a traitorous correspondence, he was arrested, and confined in the prison of Glatz, and failing in his first attempt to make his escape from prison, he at length succeeded by bribery, and got safe to Bohemia, and afterwards to Elbing, in Polish Prussia, in March, 1747. After various adventures he arrived at Moscow, where he insinuated himself into the good graces of the lady of the grand chancellor Bestuchef, the favourite of Elizabeth. From Moscow he made a circuitous tour to Vienna, with a view of recovering some contested property; and dissatisfied with the reception he found at the Austrian court, he determined to return again to Russia; but in passing through Dantzic, he was arrested at the request of the Prussian resident, and committed to prison at Magdeburg, where he remained ten years. Here he amused himself, during a tedious and rigorous imprisonment, in writing verses; which, long after his release in 1763, he published at Frankfort-on-the-Mayne, in 1769. He published some other works at Aix-la-Chapelle, where he became editor of a gazette, and married a lady of respectable character and connections. Finding the occupation of a gazette-writer tiresome and not lucrative, he began business as a wine-merchant; but the wine-trade not answering his expectations, he disappeared about the year 1783. In 1792, he edited a journal at Hamburg and Altona, and from the latter place he removed to France, where he lost his life by the guillotine in the month of July, 1794. The Memoirs of his own Life appeared at Berlin in 1787, in two parts 8vo. Of the authenticity of the facts stated in these memoirs, great doubts have been entertained. His life, translated into French by himself, was published at Paris in 1789, 3 vols. 8vo. A new edition of his "Macedonian Hero," was printed in 1788, Franckfort and Leipsic, 8vo. *Gen. Biog.*

To **TREND**, *v. n.* To tend; to lie in any particular direction. *Dr. Johnson.*—The word, Mr. Mason says, is merely *nautical*: "To *trend*, to run off in a certain direction."—On one side, the vast range of the Pyrenees *trend* away till lost in remoteness. *Young.*

TRENDELBURG. See **DRENNELBURG**.

TRENDING, *s.* A particular direction.

The scouts to several parts divide their way,
To learn the natives' names, their towns explore,
The coasts and *trendings* of the crooked shore. *Dryden.*

TRENDLE, *s.* [*trpenbel*, Sax.] Any thing turned round. Now improperly written *trundle*.

TRENDLE, a hamlet of England, in the parish of Pitminster, Somersetshire.

TRENEGLOS, a parish of England, in Cornwall; 7½ miles north-east-by-east of Camelford.

TRENO, a small town of Austrian Italy; 4 miles north-west of Milan.

TRENT, a river of England, which has its rise in Staffordshire, from three springs to the west of Leek. It soon becomes a pretty large river, coming down from the hills with a very rapid current; and being augmented in the flat country by the accession of other rivers, it flows past Trentham, to which it gives name, and from thence to Burton in Derbyshire, when it first becomes navigable. It soon after enters Nottinghamshire near Radcliffe-upon-Soar, in a clear stream, and bold rapid current; thence flowing past the groves of Clifton, it winds round the town of Nottingham, giving fertility to an immense range of meadows studded with villas, villages, and comfortable farms, in some places sweeping over fertile plains, in others reflecting on its glossy surface, high swelling knolls, and green feathered cliffs that add to the sublimity of the scene. Its scenery round Holme Pierpoint and Radcliffe is pleasing in the extreme. It then proceeds with rather a tortuous course through a highly cultivated country towards Newark, where it suddenly takes a bend towards the north, and pursues that route as far as Clifton-upon-Trent,

Trent, where it becomes the boundary between Nottingham and Lincolnshire, and passes Gainsborough, but does not leave that county until it reaches Heck Dyke, from whence it proceeds, after a course of near 200 miles, to the Humber. At Gainsborough, about eight miles before its leaving the county, it loses the influence of the tide, which flows up so far, and is no longer navigable for vessels of any great burden; but vessels of a flatter construction are constantly occupied in it as high up as Burton. Its navigation is indeed of such importance to the country at large, in consequence of the numerous communications which it forms with other rivers and canals, that every means have been taken to afford it all the facilities possible. For this purpose it has a side cut of ten miles in length, in order to avoid 21 shoals, which occur in little more than 13 miles of its course between Trent bridge at the commencement of the Nottingham canal, and Sawley Ferry at the commencement of the Trent and Mersey canal. It has a communication by canals with Mersey, the Severn, and the Thames.

TRENT, a parish of England, in Somersetshire; 3 miles north-east-by-east of Yeovil.

TRENT, a circle of the Austrian states, in the Tyrol, which includes the eastern part of the Italian confines, and the chief part of the ancient bishopric of Trent.

TRENT, a city of Austria, in the Tyrol, on the Adige, not far from the borders of Italy. It stands in a small but delightful valley among the Alps, but its climate is subject to great extremes, being intensely cold in winter, while the reflection of the heat from the surrounding mountains, makes it as intensely hot in summer. Though surrounded with walls, it is not capable of sustaining a siege. Its population, about 10,000 in number, are employed partly in the manufacture of silk, partly in the culture of vines and tobacco. Their bishopric was included among the secularizations of 1802, given at first to the grand duke of Tuscany, and afterwards to Bavaria, but restored after 1815 to Austria.

The great feature in the history of Trent is its council or assemblage of Catholic prelates from all parts of Europe, opened in 1545, after the reformation had acquired a considerable degree of consistency, and continued with more or less of interruption during 18 years; 85 miles south of Innsbruck, and 70 north-west of Venice. Lat. 46. 6. 26. N. long. 11. 3. 45. E.

TRENT, a river of the United States, in North Carolina, which runs into the Neuse at Newbern.

TRENT, a river of Upper Canada, which rises out of Rice Lake, and is the channel by which a chain of shallow lakes connected with Lake Huron are brought into Lake Ontario.

TRENTALS, *s.* [*trente*, Fr.] *Trentals* or *trigintals* were a number of masses, to the tale of thirty, said on the same account, according to a certain order instituted by Saint Gregory. *Ayliffe*.—Their diriges, their *trentals*, and their shrifts. *Spenser*.

TRENTHAM, a township of England, in Staffordshire, situated upon the river Trent; 3 miles south-south-east of Newcastle-under-Lyne. Population 555.

TRENTISHOE, a parish of England, in Devonshire; 9 miles east-by-north of Ilfordcombe.

TRENTON, a post township of the United States, in Hancock county, Maine, at the mouth of the Union river; 275 miles north-east of Boston. Population 501.

TRENTON, a post township of the United States, in Oneida county, New York; 12 miles north of Utica. Population 1548.

TRENTON, a town of the United States, and the capital of the state of New Jersey, in Hunterdon county, situated on the east bank of the Delaware, opposite the falls. At the foot of the falls there is an elegant covered bridge across the river. Population 3003; 10 miles south-west of Princeton, 30 north-east of Philadelphia, and 60 south-west of New York. Lat. 40. 13. N. long. 75. 48. W.

TRENTON, a post town of the United States, and capital of Jones county, North Carolina, on the Trent.

TRENTON, New, a post township of the United States, in Franklin county, Indiana.

TRENTSCHIN, or TRENTSIN, a palatinate occupying the north-west corner of Hungary, and adjacent to Galicia, Silesia, and Moravia. Its area is 1650 square miles, and its population 250,000, partly of Slowae, partly of Magyar descent. Situated among the Carpathians, this country abounds in timber.

TRENTSCHIN, or TRENTSIN, a small town of Hungary, near the Waag, and the chief place of the above palatinate; 87 miles north-east of Vienna, and 54 south-east of Olmutz. Lat. 48. 53. 50. N. long. 18. 1. 35. E.

TREPAN, *s.* [*trepan*, Fr. from *τρῆπα*, Gr. *to pierce*.] An instrument by which chirurgeons cut out round pieces of the skull.—A snare; a stratagem by which any one is ensnared.

But what a thoughtless animal is man,

How very active in his own *trepan*?

Roscommon.

To TREPAN, *v. a.* [*trepanner*, Fr.] To perforate with the trepan.—Few recovered of those that were *trepanned*. *Arbuthnot*.—To catch; to ensnare.

They *trepan'd* the state, and fac'd it down

With plots and projects of our own.

Hudibras.

TREPASSE BAY, or TREPASSE HARBOUR, a bay on the south coast of Newfoundland. The harbour is large and well secured; the ground is good to anchor in; and the shores of the bay are bold and rugged. Lat. 46. 50. N. long. 53. W.

TREPHINE, *s.* A small trepan; a smaller instrument of perforation managed by one hand.—I shewed a trepan and *trephine*, and gave them liberty to try both upon a skull. *Wiseman*.

TREPIDATION, *s.* [*trepidatio*, Lat.] The state of trembling, or quivering.

They pass the planets seven, and pass the fix'd,

And that crystalline sphere whose balance weighs

The *trepidation* talk'd, and that first mov'd.

Milton.

State of terror.—Because the whole kingdom stood in a zealous *trepidation* of the absence of such a prince, I have been the more desirous to research the several passages of the journey. *Wotton*.

TREPORT, a small town in the north of France, department of the Lower Seine, at the mouth of the small river Bresle. It has a population of 2000. It has a harbour and a good fishery; 17 miles north-east of Dieppe. Lat. 50. 4. N. long. 1. 26. E.

TREPRENAL, a township of England, in Salop; 5 miles south of Oswestry.

TREPTOW, OLD, a small town of Prussia, in Pomerania, on the Tollen-see, with 2000 inhabitants; 55 miles west-north-west of Old Steffin, and 42 south of Stralsund. Lat. 53. 39. N. long. 13. 10. E.

TREPTOW, CIRCLE. See DEMMIN.

TREPTOW AM REGA, or NEW TREPTOW, a small town of Prussia, in Pomcrania, or the river Rega, which is made navigable to this place. Population 3400; 15 miles south-south-west of Colberg, and 53 north-north-east of Steffin. Lat. 54. 5. N. long. 15. 25. E.

TRES HERMANOS, three small islands in the bay of Honduras, near the coast. Lat. 19. 20. N. long. 88. 50. W.

TRES ISLAS, three small islands of the Atlantic ocean, opposite the entrance of the river Essequibo. Lat. 6. 50. N.

TRES MONTES, CAPE, on the coast of Chili. Lat. 45. 11. S.

TRES PIES, small islands of the Pacific ocean, so called from their number, three. They are barren and desert, abounding only in marine wolves. Lat. 20. 47. S.

TRESA, a river of Austrian Italy, in the Milanese, which unites the Lake Maggiore with the Lake Lugano.

TRESCAW, one of the Scilly islands, situated to the west of Annet. It contains about 40 families, and is extremely fertile. Near the landing place are the remains of a castle built on a rock.

TRESCORIO, a small town of Austrian Italy, in the Milanese delegation of Bergamo.

TRESHAM,

TRESHAM, a parish of England, in Gloucestershire; 3 miles south-east-by-east of Wotton-under-Edge.

TRESKELLY, a hamlet of England, in the parish of St. Germans, Cornwall.

TRESKOWITZ, or **TRESKOTOWICE**, a petty town of the Austrian states, in Moravia; 20 miles south of Brunn. Population 900.

TRESMERE, a parish of England, in Cornwall; 6 miles west-by-north of Launceston.

To TRESPASS, *v. n.* [*trespasser*, Fr.] To transgress; to offend.—They not only contradict the general design and particular expresses of the gospel, but *trespass* against all logic. *Norris*.—To enter unlawfully on another's ground.

Their morals and economy,
Most perfectly they made agree:
Each virtue kept its proper bound,
Nor *trespass'd* on the other's ground.

Prior.

TRESPASS, *s.* [*trespas*, Fr.] Transgression; offence.

Your purpos'd low correction
Is such, as basest, and the meanest wretches,
For pilferings, and most common *trespass*,
Are punish'd with.

Shakspeare.

Unlawful entrance on another's ground.

TRESPASSER, *s.* An offender; a transgressor.—The court had power to correct the *trespasser* with stripes.

Addison.—One who enters unlawfully on another's ground.—If I come upon another's ground without his licence, or the licence of the law, I am a *trespasser*, for which the owner may have an action of trespass against me. *Walton*.

TRESPASSES, **BAYE DE**, a bay of the Atlantic, on the coast of France, in the province of Brittany. Lat. 48. 3. N. long. 4. 37. W.

TRESS, *s.* [*tresse*, Fr., a *twist*; *treccia*, Ital.] A lock; a curl of hair; a gathering of hair. Dr. Johnson gives *tresses* only, observing that it is without a singular; but it is not so.

Hung be the heavens with black, yield day to night!
Comets, importing change of times and states,
Brandish your crystal *tresses* in the sky.

Shakspeare.

TRESSED, *adj.* Knotted; curled; having the hair in a tress; having *tresses*.—He, plung'd in pain, his *tressed* locks doth tear. *Spenser*.

TRESSSEL. See **TRESTLE**.

TRESSON, a small town in the north-west of France, department of the Sarthe, on the small river Etangsort; 17 miles south-east of Le Mans. Population 1200.

TRESSURE, *s.* In heraldry, a kind of border.—The arms are a lion with a border, or *tressure*, adorned with flower-de-luces. *Warton*.

TRESTLE, *s.* [*resteau*, Fr.] In some parts of the north called *trest*; in other parts of England, *tressel*. The frame of a table; a movable form by which any thing is supported; a three-legged stool.—This is not for an unbuttoned fellow to discuss in the garret at his *trestle*. *Milton*.

TRESWELL, or **TRUSWELL**, a parish of England, in Nottinghamshire; 5 miles east-by-south of East Retford.

TRET, *s.* [Probably from *tritus*, Lat.] An allowance made by merchants to retailers, which is four pounds in every hundred weight, and four pounds for waste or refuse of a commodity. *Bailey*.

TRETHINGS, *s.* [*trethingi*, low Latin, from *trethu*, Welsh, *to tax*.] Taxes; imposts.

TRETS, a small town in the south-east of France, department of the Mouths of the Rhone, with 2900 inhabitants; 20 miles north-east of Marseilles.

TRETTO, a village of Austrian Italy, in the territory of Venice, situated on a hill, with considerable iron and silver mines.

TRETYRE, a parish of England, in Herefordshire; 6 miles west of Ross.

TREVALGA, a parish of England, in Cornwall; 1½ mile north-east-by-east of Bossiney.

TREVANNION, **CAPE**, the north-west extremity of the island of Trevannion. Lat. 10. 39. S. long. 164. 52. E.

VOL. XXIV. No. 1628.

TREVANNION'S ISLAND, a small triangularly shaped island in the South Pacific ocean, one of the group called Queen Charlotte's islands. It is said to be very populous. Lat. 10. 43. S. long. 163. 43. E.

TREUCHTLINGEN, a petty town of Germany, in Bavaria, on the Altmuhl; 14 miles west-north-west of Eichstadt. Population 800.

TREUEN, a small town of Saxony; 4 miles west-north-west of Auerbach, and 66 west-south-west of Dresden. Population 1500.

TREVENNEN'S ISLAND, the southernmost of the Marquesas, in the South Pacific ocean. Near the south-eastern point of the coast is a rock resembling a church with a spire. Several small bays are formed in the southern side, the best of which is terminated by the south-western point of the island. It was named Friendly Bay, from the conduct of the inhabitants, of whom more than a hundred peaceably surrounded the ship with their canoes, and bartered fruits for beads and other trifles. Lat. 9. 14. S. long. 220. 21. E.

TREVES, a district or government of the Prussian states, comprising the south-west part of the province of the Lower Rhine. It consists of part of the old electorate of Treves, and a small portion of the duchy of Luxemburg, along with some other petty districts in the county of Sponheim, the principality of Saarbruck, and the bishopric of Metz. The area of the whole is 2480 square miles; the population 290,000. It is divided into the eleven circles of—Daun, Pruyrn, Bittburg, Wittlich, Berncastel, Town of Treves, Country of Treves, Saarburgh, Merzig, Saarbruck, Ottweiler. This country, situated at a considerable distance from the Rhine, is watered by the Moselle, which, though not in the last part of its course, is here a considerable river.

TREVES, or **TRIERS**, the most ancient, and one of the most celebrated cities in Germany, the capital formerly of an electorate and archbishopric, now of a Prussian government in the province of the Lower Rhine. There is here, under the direction of a society, a good collection of antiquities and natural curiosities; 22 miles east-north-east of Luxemburg, and 70 west-by-south of Mentz. Lat. 49. 46. N. long. 6. 38. E.

TREVES, a small town in the west of France, department of the Maine and Loire, situated on the Loire; about 9 miles north-west of Saumur.

TREVET, *s.* [*trjette*, Sax.; *trepied*, Fr.] Any thing that stands on three legs: as, a stool.

TREVETHIN, a parish of England, in Monmouthshire 6½ miles west-north-west of Usk. Population 2423.

TREVI, a small town in the central part of Italy, in the States of the Church, situated on a mountain in the delegation of Spoleto.

TREVICO, a small inland town of Italy, in the central part of the kingdom of Naples, in the Principato Ultra, with 2500 inhabitants.

TREVIERES, a small town in the north of France, department of Calvados, with 1000 inhabitants. This is a pasturage district, and exports large quantities of excellent butter; 9 miles west of Bayeux, and 26 north-west of Caen.

TREVISANI (Francesco), a native of Treviso, was initiated in the art of painting by Zanchi at Venice, where, in contradistinction of Angiolo, his relative, he was called Roman. At Rome he formed himself on the best styles of the day, but an unbounded talent for mimicking every manner, from Correggio to Cignani, never suffered him to persist long in the imitation of one model. Rome is gorged with his pictures: they often possess elegance of choice, a finished pencil, and a general strength of tone. His St. Joseph, in the church of the Collegio Romano, is a distinguished performance. He died in 1746, aged 90. *Fuseli's Pilkington*.

TREVISANI (Angiolo), was born and resided at Venice. His inventive power is proved at the Carita and other churches of that capital, but his real merit lay in portraits. By persevering in that study, he acquired a style not sublime indeed, but natural, select, and adapted to the times. The diligence and dexterity of his tool greatly assisted him

in the management of his chiaro-scuro. He was living in 1753.

TREVISO, a considerable town of Austrian Italy, and capital of the delegation of the same name, situated on the rivers Sile and Piavesella, at their confluence. It is the see of a bishop, and contains 12,000 inhabitants; 20 miles north-by-west of Venice, and 140 east of Milan. Lat. 45. 42. N. long. 12. 9. E.

TREVISO, a delegation or province of Austrian Italy, in the government of Venice. It has a mild climate and fertile soil, with a superficial extent of only 1310 square miles. It has a population of nearly 300,000.

TREVOUX, a small town in the east of France, department of the Ain. It is built in the form of an amphitheatre, on the declivity of a small hill, on the left bank of the Soaue. It contains a population of 2800; 14 miles north of Lyons.

TREW (Christopher James), a physician and naturalist, was born at Lauffen, in Franconia, in 1695, and settled at Nuremberg, where he was made director of the academy "Naturæ Curiosorum." He also contributed much towards establishing a society under the title of "Commercium Litterarium Noricum ad Rei Medicæ et Scientiæ Naturalis Incrementum institutum," which published its memoirs. To these societies he communicated several papers, and he also published several splendid works on anatomy and botany. Among others, we may enumerate the following: "De Differentiis quibusdam inter Hominem natum et nascendum intercedentibus," 1736, 4to.; "Epistola ad Alb. Hallerum de Vasis Linguae salivalibus et sanguiferis," 1734, 4to.; "Tabulæ Osteologicæ Corporis Humani," fol. max. with coloured plates, 1767. In 1750 he commenced his publication of one of the most splendid of the imitations of Flora, under the title of "Plantæ selectæ, quarum Imagines pinxit G. Dionysius Elret." To the incomparable designs of Elret, Trew added descriptions and remarks; and the work appeared in decades, seven of which were completed. In the same year he began a similar publication of garden flowers, intitled "Amœnissimæ Florum Imagines," which was carried on to six decades. He also published an improved edition of Blackwell's Herbal, in English and German, with an addition of some plants. Being in possession of Gesner's wooden plates, he gave an impression of 216 figures of plants from them, intitled "Icones posthumæ Gesnerianæ," 1748. Trew died in 1769. *Haller.*

TREWIA [so named by Linnæus in honour of the above-mentioned Trew, in Botany, a genus of the class polyandria, order monogynia.—Generic Character. Calyx: perianth three-leaved; leaflets ovate, reflexed, coloured, permanent. Corolla: none, unless the calyx be taken for it. Stamina: filaments numerous, capillary, length of the calyx; anthers simple. Pistil: germ inferior; style simple, length of the stemens; stigma simple. Pericarp: capsule turbinate, three-sided, crowned, three-celled, three-valved. Seeds solitary, convex on one side, angular on the other.—*Essential Character.* Calyx three-leaved, superior. Corolla none. Capsule tricocous.

Trewia nudiflora.—This is a lofty tree, with a trunk as thick as a man can embrace, covered with an ash-coloured bark; leaves on long round petioles, a span and more in length, and almost two hands wide, oblong-ovate, cordate, attenuated at the point, thin and soft, dusky green on the upper surface, but brighter on the lower; flowers on round pale-green peduncles, axillary, of an herbaceous colour, void of smell.—Native of the East Indies.

TREWALCHMAI, a township of Wales, in Anglesey; 10 miles from Bangor. Population 485.

TREWEN, a parish of England, in Cornwall; 5 miles west-by south of Launceston.

TREWHET, **HIGH** and **LOW**, adjoining townships of England, in the parish of Rothbury, Northumberland; 13 miles west-south-west of Alnwick.

TREWICH, a hamlet of England, in the parish of Bolam, Northumberland; 6 miles from Morpeth.

TREXTON, or **THREXTON**, a parish of England, in Norfolk; 2½ miles west-by-south of Watton.

TREY, *s.* [*tres*, Lat.; *trois*, Fr.] Any three at cards. White-handed mistress, one sweet word with three. —Honey, milk, and sugar; there are three. —Nay then, two *treys*; methegrin, wort, and malmsey. *Shakspeare.*

TREYDER AA, a small river in the north-west of Russia, in Livonia, which falls into the gulf of Riga.

TREYFORD, a parish of England, in Sussex; 4½ miles west-south-west of Midhurst.

TREYM, or **TOUR DE TREME**, a small town of the Swiss canton of Freyberg; 2 miles north of Gruyeres.

TREYSA, an old town of the west of Germany, in Hesse-Cassel, on the river Schwalm, and the capital of the county of Ziegenhayn. It contains 1900 inhabitants; 30 miles south-west of Cassel, and 18 east-north-east of Marburg.

TREYSA ON THE LUMBDE, a village of Germany, in Hesse-Cassel, province of Upper Hesse. Population 1200.

TRIABLE, *adj.* Possible to be experimented; capable of trial.—For the more easy understanding of the experiments *triable* by our engine, I insinuated that notion, by which all of them will prove explicable. *Boyle.*—Such as may be judicially examined.—No one should be admitted to a bishop's chancellorship without good knowledge in the civil and canon laws, since divers causes *triable* in the spiritual court are of weight. *Ayliffe.*

TRIAD, *s.* [*trias*, Lat.] Three united. In music, the harmonic triad, 1. 3. 5.—Ahad, Æon, Psyche, the Platonical *triad.* *More.*

TRIADELPHIA, a post township of the United States, in Montgomery county, Maryland.

TRIAL, *s.* [*trial*, old French; "preuve par temoins ou autrement; jugement rendu sur enquête et preuves. Les Anglois servent encore de ce mot, qui leur a été transmis par Guillaume le Batârd." *Lacombe.*] Test; examination. With *trial* fire touch me his finger end; If he be chaste the flame will back descend, And turn him to no pain; but if he start, It is the flesh of a corrupted heart. *Shakspeare.*

Experiment; act of examining by experience.

I leave him to your gracious acceptance,
Whose *trial* shall better publish his commendation.

Shakspeare.

Experience; experimental knowledge.—Others had *trial* of cruel mockings and scourgings. *Heb.*—Judicial examination.

He hath resisted law,
And therefore law shall scorn him further *trial*.
Than the severity of public power. *Shakspeare.*

Temptation; test of virtue.
Lest our *trial*, when least sought,
May find us both perhaps far less prepar'd
The willing I go. *Milton.*

State of being tried.
Good shepherd, tell this youth what 'tis to love.
—It is to be all made of sighs and tears;
It is to be made all of faith and service,
All humbleness, all patience and impatience;
All purity, all *trial*, all observance. *Shakspeare.*

TRIAL POINT, a cape on the south-east coast of the island of Jura. Lat. 55. 54. N. long. 5. 52. W.

TRIALITY, *s.* Three united; state of being three.—There may be found very many dispensations of *triality* of benefices. *Wharton.*

TRIANA, SANTA CRUZ DE, a town of Chili, and capital of the province of Rancagua. It has a parish church, and two chapels; 53 miles south of Santiago. Lat. 34. 19. S.

TRIANCOURT, a small town in the north-east of France, department of the Maese. Population 900; 17 miles north of Bar-sur-Ornain.

TRIANGLE, *s.* [*triangulum*, Lat.] A figure of three angles.—The three angles of a *triangle* are equal to two right ones. *Locke.*

TRIALING

TRIANGLE ISLAND, an island of South America, in the mouth of the Orinoco.

TRIANGLE ISLAND, one of the smaller Bahama islands. Lat. 20. 51. N. long. 69. 53. W.

TRIANGLED, *adj.* Having three angles.

TRIANGLES, a dangerous shoal in the Eastern seas, near the north coast of the Præcel, or Prasil.

TRIANGLES, NORTHERN, a reef of rocks in the bay of Honduras. Lat. 18. 50. N. long. 87. 50. W.

TRIANGLES, SOUTHERN, a reef of rocks and islets in the bay of Honduras. Lat. 17. 5. N. long. 111. 59. W.

TRIANGULAR, *adj.* [*triangularis*, Lat.] Having three angles.—Though a round figure be most capacious for the honey, and convenient for the bee; yet did she not chuse that, because there must have been *triangular* spaces left void. *Ray.*

TRIANGULARLY, *adv.* After the form of a triangle.—A portico formed circularly, a plain cut *triangularly*. *Harris.*

TRIANTHEMA [three-flowered], in Botany, a genus of the class decandria order digynia, natural order of succulentæ, portulacæ (*Juss.*)—Generic Character. Calyx: perianth five-leaved; leaflets oblong, coloured within, mucronate below the tip, permanent. Corolla none, unless the calyx formed of a calyx and corolla together be so called. Stamina: filaments ten (in some five to twelve), capillary, length of the calyx; anthers roundish. Pistil: germ rather superior, oblongish, retuse; style one or two, filiform, length of the stamens, hispid on one side; stigmas simple. Pericarp: capsule oblong, truncate, retuse, cut round; cells two, superior, and two inferior. Seeds solitary or two, subovate. The number of stamens and styles in distinct species is different.—*Essential Character.* Calyx mucronate below the tip. Corolla none. Stamina five or ten. Germ retuse. Capsule cut round.

1. *Trianthea monogyna*.—Flowers five-stamened, one-styled. This sends out many trailing branches which lie flat on the ground, spreading two feet or more each way, and having much the appearance of purslane; with fleshy succulent leaves almost oval; the flowers come out from the joints of the stalks, they are somewhat of a purple colour.—It grows naturally in most of the islands in the West Indies, and is often a troublesome weed there.

2. *Trianthea crystallina*.—Flowers five-stamened, one-styled, heaped; leaves oval; stem shrubby.—Native of Arabia and the East Indies.

3. *Trianthea pentandra*.—Flowers five-stamened, two-styled.—Native of Arabia.

4. *Trianthea fruticosa*.—Shrubby, one-styled; alternate filaments anther-bearing.—Native of the kingdom of Tunis.

5. *Trianthea humifusa*.—One-styled; leaves lanceolate; stem frutescent, round.—Native of the Cape of Good Hope.

6. *Trianthea anceps*.—One-styled; leaves lanceolate; stem frutescent, ancipital.—Native of the Cape of Good Hope.

7. *Trianthea decandra*.—Flowers ten-stamened, two-styled.—Native of the East Indies.

Propagation and Culture.—Sow the seeds on a good hot-bed in the spring, and when the plants are fit to remove, plant them on another hot-bed, to bring them forward, otherwise the seeds will not ripen. In June they may be transplanted into a warm border, where they will grow until the frost in autumn kills them.

TRIARIAN, *adj.* [*triarii*, Lat., old soldiers, placed as a reserve.] Occupying the third post or place. *Not in use.*

Let our week days lead up the van,
Let the brave second and *triarian* band
Firm against all impression stand:

The first we may defeated see;
The virtue and the force of these are sure of victory. *Cowley.*

TRIBAU, BOHEMISCHE or BOHEMIAN, a petty town in the east of Bohemia; 90 miles east-by-south of Prague, and 6 west of Landskron. It contains 900 inhabitants.

TRIBAU, MAHRISCH, or MORAWSKA TRZEBOWA, a small town of the Austrian states, in Moravia, on the

Trzebowka; 28 miles north-west of Olmutz. Population 3100.

TRIBE, *s.* [*tribus*, Lat. The word is from the Gr. *τριβος*, or *τριβος*, a third part, by changing the *t* into *b*; whence the Lat. *tribus*, which originally meant a third part of the people. *Thes. Gr. and Morin.*] A distinct body of the people as divided by family or fortune, or any other characteristic.

Who now shall rear you to the sun, or rank
Your *tribes*, and water from th' ambrosial fount. *Milton.*

It is often used in contempt.
Folly and vice are easy to describe,
The common subjects of our scribbling *tribe*. *Roscommon.*

To TRIBE, *v. a.* To divide into tribes or classes.—Our fowl, fish, and quadrupeds, are well *tribed* by Mr. Willughby and Mr. Ray. *Bp. Nicolson.*

TRIBESEES, or TRIBSEES, a town of Prussia, in Pomerania, on the Trebel, with 1400 inhabitants; 12 miles east-by-south of Rostock.

TRIBLET, or TRI'BOULET, *s.* A goldsmith's tool for making rings. *Ainsworth.*

TRIBOLI, or TEREBOLE, a town of Asia Minor, on the coast of the Black sea, situated at the extremity of the cape, bounding a deep bay of the same name. The town is supposed to contain 400 families, and has two handsome khans. There is a port, where small vessels may ride securely in stormy weather; 72 miles east of Trebisond.

TRIBOMETER [formed of *τριβω*, *I rub*, and *μετρον*, *I measure*], in Mechanics, a term applied by Muschenbroeck to an instrument invented by him for estimating the friction of metals. It consists of an axis formed of hard steel, passing through a cylindric piece of wood: the ends of the axis, which are highly polished, are made to rest on the polished semicircular cheeks of various metals, and the degree of friction is estimated by means of a weight suspended by a fine silken string or ribband over the wooden cylinder. For a farther description and figure of this instrument, and the result of various experiments performed with it, see Muschenb. *Int. ad Phil. Nat. vol. i. p. 151, &c.*

TRIBONIANUS, or TRIBONIAN, an eminent jurist, was a native of Side, in Pamphylia, and richly furnished with Greek and Roman literature, so that he composed works on a great variety of subjects. But as he principally devoted himself to the study of civil law, he excelled in this department, and rose to some of the highest posts in the empire. In the office of questor, to which he was advanced, his avarice led to such a degree of oppression, that in the sedition of Constantinople, A. D. 532, his removal was one of the demands of the people. His influence, however, was such, that he was soon restored, and he continued on account of his talents and by means of his servile adulation, to enjoy the favour and confidence of his sovereign for twenty years. He was elevated to the dignities of consul and master of the offices, and was consulted on all important occasions. He has been charged with enmity to the Christian faith, and he has been under the inconsistent imputations of Atheism and Paganism. Whether charges of this kind be true or false, he was notorious for his avarice and want of integrity; and from the contrast presented by his heart and his understanding, Gibbon has drawn an unjust parallel between him and our great Bacon. His death is placed about the year 546, *Anc. Un. Hist. Gibbon.*

TRIBSTADT, or TRIPSTADT, a petty town of the Bavarian province of the Rhine; 6 miles south of Kaiserslautern.

TRIBULATION, *s.* [*tribulation*, Fr.] Persecution; distress; vexation; disturbance of life.

The just shall dwell,
And after all their *tribulations* long,
See golden days, fruitful of golden deeds. *Milton.*

TRIBULATION, CAPE, a cape on the north-east of New Holland. Lat. 16. 6. S. long. 145. 21. E.

TRIBULUS [*Τριβυλος*, of Dioscorides. *Tribulus* of Virgil; a triplici cuspidate; *ετι τρεις βολαις εχει*, from its having three

three spikes to the fruit], in Botany, a genus of the class decandria, order monogynia, natural order of grinales. Rutaceæ. (*Juss.*)—Generic Character. Calyx: perianth five-parted, acute, a little shorter than the corolla. Corolla: petals five, oblong, obtuse, spreading. Stamina: filaments ten, awl-shaped, very small; anthers simple. Pistil: germ oblong, length of the stamens. Style none. Stigma headed. Pericarp roundish, prickly, of five or ten capsules, gibbous on one side, often armed with three or four dagger-points, angular on the other, converging, with transverse cells. Seeds many, turbinate, oblong.—*Essential Character.* Calyx five-parted. Petals five, spreading. Style none. Capsules five, gibbous, spiny, many-seeded.

1. *Tribulus inaximus*, or great caltrops.—Leaves about four-paired; outer leaflets larger; pericarps ten-seeded, awnless. This is an annual plant, with pretty thick, compressed, channelled stalks, which trail upon the ground, and are near two feet long.—Native of Jamaica, and some of the other islands in the West Indies.

2. *Tribulus lanuginosus*, or woolly caltrops.—Leaves about five-paired; leaflets almost equal; seeds two-horned. Stems ascending, long, round, hairy, jointed.—Native of Ceylon.

3. *Tribulus terrestris*, or small caltrops.—Leaves six-paired, almost equal; seeds four-horned.—Native of most of the hot and temperate parts of the world; as the south of Europe, Barbary, Siberia, the coast of Coromandel, China, Cochinchina, and the West Indies.

4. *Tribulus cistoides*.—Leaves eight-paired; leaflets almost equal.—Native of South America and the West India islands. Houston found it at the Havanna. Miller cultivated it before 1773.

Propagation and Culture.—Sow the seeds of *tribulus terrestris* where they are intended to stand. The other sorts being natives of hot countries, are very tender, and the seeds must be sown on a hot-bed early in the spring. When the plants come up, transplant each into a separate pot, filled with rich light earth, plunge them into the tan-pit, and treat them in the same manner as other tender exotic plants; being careful to bring them forward as early as possible in the summer, otherwise they will not perfect their seeds in this country.

TRIBUT'NAL, *s.* [*tribunal*, Lat. and Fr.] The seat of a judge.

I' th' market-place, on a *tribunal* silver'd,
Cleopatra and himself in chairs of gold
Were publicly enthron'd.

Shakspeare.

A court of justice.

Summoning arch-angels to proclaim
Thy dread *tribunal*.

Milton.

TRIBUNE, *s.* [*tribun*, *tribunus*, Lat.] An officer of Rome chosen by the people.

These are the *tribunes* of the people,
The tongues o' the common mouth: I do despise them.

Shakspeare.

The commander of a Roman legion.

The tribunes of the people were first established in the year of Rome 260. The first design of the creation was to shelter the people from the cruelties of usurers, and to engage them to quit the Aventine mount, whither they had retired in displeasure.

The tribunes were, as it were, the heads and guardians of the people. They called assemblies of the people when they pleased; and in those assemblies they frequently annulled the decrees of the senate. Nothing could be concluded without their consent, which they expressed by subscribing the letter T at the bottom of the decree. They had it also in their power to prevent the execution of any decree, without giving any reason for it, and merely by subscribing *Veto*. This interposition was called *intercessio*. They sometimes even called the consuls and dictator to account for their conduct before the people. The tribunes of the people, by virtue of their office, claimed and exercised a power of sum-

moning the senate at any time, whenever the affairs of the people required it, though the consuls themselves were in the city. It has been taken for granted, on the authority of Valerius Maximus, that the tribunes of the people, on their first creation, were not admitted into the senate, but had seats placed for them before the door in the Vestibule.

A. Gellius says that they were not made senators before the law of Atinius, who is supposed to be C. Atinius Labeo, tribune of the people, A. U. 623; but that cannot possibly be true, since it is evident from the authority of Dionysius, that near four-centuries before, the tribunes, by the mere weight and great power of their office, had gained an actual admission into the senate, within two years after their first creation; in which we find them debating and enforcing, with great warmth, the demands of the commons, for a liberty of intermarriages with the nobles, and the choice of a plebeian consul. So that the intent of this Atinian law could not be, as it is commonly understood, that the tribunes should be senators in virtue of their office, for that they had been from the beginning; but that for the future they should always be chosen out of the body of the senate, or, which is the same thing, out of those who had already borne the office of quæstor. A. Gell. xiv. 8. Vide Pighil. *Annales*, A. U. 623. Dionys. lib. x. 11. Dionys. xi. 57. Middleton of Rom. Sen. p. 45.

Sylla the dictator, was the first who presumed to put a stop to the encroachments of the tribunes, A. U. 672; but under Cotta, the consul, they recovered part of their power, A. U. 679; and in 683, Pompey the Great re-established them in the possession of their ancient privileges. Their power subsisted till the time of Julius Cæsar. And in the year of Rome 731, the senate by a decree transferred the whole authority of tribunes of the people to Augustus and his successors, so that they had little more than the name and form of magistrates; whence the emperors were said to be *tribunitia potestate donati*. Accordingly, Augustus himself was tribune for thirty-seven years; Tiberius assumed the same quality; as likewise did his successor; signifying the year of their tribunate on their medals and coins; but their design in it was only to possess themselves of all the authority, that there might be nobody to oppose them.

TRIBUTESHIP, *s.* The office of a tribune.—What am I the wiser for knowing that Trajan was in the fifth year of his *tribuneship*, when he entertained the people with such a horse-race or bull-baiting? *Addison.*

TRIBUT'NIAL, or TRIBUT'NIOUS, *adj.* [*tribunitius*, Lat.] Suiting a tribune; relating to a tribune.—Let them not come in multitudes, or in a *tribunitious* manner; for that is to clamour counsels, not to inform. *Bacon.*

TRIBUR, a small town of the west of Germany, in Hesse Darmstadt; 7 miles south-east of Mentz, and 30 north of Mannheim. Population 1300.

TRIBUTARIOS, Los, an island of the Atlantic ocean, situated near the north coast of Cuba.

TRIBUTARY, *adj.* [*tributaire*, Fr.; *tributarius*, Lat.] Paying tribute as an acknowledgment of submission to a master.

Whilst Malvern, king of hills, fair Severn overlooks,
Attended on in state with *tributary* brooks. *Drayton.*

Subject; subordinate.

These he, to grace his *tributary* gods,
By course commits to several government,
And gives them leave to wear their sapphire crowns,
And wield their little tridents. *Milton.*

Paid in tribute.—Nor flattery tunes these *tributary* lays.
Concannon.

TRIBUTARY, *s.* One who pays a stated sum in acknowledgment of subjection.—All the people therein shall be *tributaries* unto thee, and serve thee. *Deut.*

TRIBUTE, *s.* [*tribut*, Fr.; *tributum*, Lat.] Payment made in acknowledgment; subjection.—They that received *tribute* money said, Doth not your master pay *tribute*? *St. Matt.*

To TRIBUTE, *v. a.* To pay as tribute.—An amorous trifler,

trifler, that spendeth his forenoons on his glass and barber, his afternoons with paint or lust, *tributing* most precious moments to the sceptre of a fan! *Whitlock.*

TRICALA, or TRIKALA, anciently called *Tricea*, a considerable town of European Turkey, in Romania, the capital of a sandgiacat or district comprising a considerable part of Thessaly; 30 miles west of Larissa, and 33 east-by-south of Joannina.

TRICALA, a small town of European Turkey, in the Morea, about 18 miles distant from Corinth. There is likewise in this quarter a mountain of the same name, commanding a very extensive view.

TRICARICO, a small town of Italy, in the south part of the kingdom of Naples, in the province of Basilicata, on the river Basiento. It is the see of a bishop; 19 miles east of Potenza, and 75 east of Salerno.

TRICE, *s.* [from *thrice*, that is, while one can count three: "All sodenly, as who saith *treis*." *Gower*, Conf. Am. b. i.] A short time; an instant; a stroke.—If they get never so great spoil at any time, the same they waste in a *trice*, as naturally delighting in spoil, though it do themselves no good. *Spenser.*

TRICERA [from *τρεις* and *κερας*, a horn. Three-horned; so named from its capsule], in Botany, a genus of the class monoecia, order tetrandria, natural order of tricocœæ, euphorbiæ (*Juss.*)—Generic Character. Umbel simple, with the male florets peduncled; and a female in the middle, sessile. Involucre none.—Males. Calyx: perianth one-leaved, four-parted to the base; segments lanceolate, acute, erect, permanent, coloured. Corolla none. Stamina: filaments four, erect, longer than the calyx, ovate. Anthers sitting on the top of the filaments, lanceolate, acute, channelled in the middle, after flowering recurved.—Female. Calyx: perianth five-leaved; leaflets ovate, acute, erect, coloured. Corolla none. Pistil: germ subtrigonal. Styles three, short, roundish, conical, after flowering bipartite. Stigmas longer than the styles, recurved, patulous, channelled, permanent. Pericarp: capsule oblong, trigonal, three-horned, three-celled, three-valved. Seeds in pairs, oblong, obtuse.—*Essential Character.* Male.—Calyx four-leaved. Corolla none. Filaments ovate.—Female. Calyx: five-leaved. Corolla none. Styles conical. Capsule three-horned, three-celled.

Tricera lævigata.—This is a branching shrub, two or three feet high. Branches almost simple, long, spreading, four-cornered, leafy, even. Leaves on short round petioles, opposite, ovate-lanceolate, quite entire, veined above, marked with lines at the edge, veinless beneath, stiffish, very smooth. Flowers in simple, axillary, opposite umbels; the common peduncle four-cornered, three-times shorter than the leaves.—Native of Jamaica in mountain coppices in the western parts of the island; flowering in the spring months.

TRICERO, a small walled town in the north-west of Italy, in Piedmont. Population 900; 10 miles west-north-west of Casale.

TRICESIMO, a small town of Austrian Italy, in the Venetian delegation of Udina. It is situated to the north of Udinar.

TRICHECHUS, a genus of the order of bruta, and class of mammalia, in the Linnæan system: the characters of which are, that it has no fore-teeth in the full-grown animal, either above or below; that it has solitary tusks in the upper jaw; that the grinders on both sides are formed of a rugged bony substance; that the lips are geminated or doubled; and the hinder feet, at the extremity of the body, united into a fin.

This genus is altogether marine, comprehending few species. Gmelin, in his edition of the Linnæan System, enumerates the three following species and varieties:—

1. *Trichechus rosmarus*, the *rosmarus* of Johnston, the *morse* of Buffon, the *sea-horse* of Ray and Ellis, and the *Arctic walrus* of Pennant and Cook's last voyage. It is characterised by its distant, exerted tusks. It inhabits the

Northern seas, and chiefly within the arctic circle. It grows to a large size, having been found 18 feet long, and 12 feet in girth round the body. Its form is inelegant; having a small head, short neck, thick body, and short legs; the lips thick, and the upper one cleft into two large rounded lobes, the surface having numerous semi-transparent bristles of a yellowish tinge, and about the size of a straw in diameter, and three inches long, pointed at their extremities; the eyes small; round orifices instead of ears; the skin thick and wrinkled, and scattered over with short brownish hairs; with five toes on each foot, connected by webs; the hind-feet broader than the fore-feet, and the tail very short. In the upper jaw are two long tusks, sometimes two feet but generally about one foot in length, without cutting teeth, and with four roundish grinders.—These animals are found about the northern parts of America, in the gulf of St. Lawrence, between 47° and 48° lat., in Davis's Straits, and within Hudson's Bay in lat. 62°; in great numbers about Spitzbergen, also on the coast of Greenland and of Nova Zembla, and on the headlands extending towards the north pole. They are gregarious, produce their young, one at a time, early in the spring, and feed on sea-plants, shell-fish, &c.

Unprovoked the walrus is harmless, otherwise furious and vindictive. The female, when surprised on the ice, flings its young into the sea, plunges after it, and having carried it to a safe distance, returns with great rage to revenge the injury. They sometimes fasten their teeth in the boats, to sink them, or crawl under them, to overset them, indicating, by gnashing their teeth and roaring frightfully, great tokens of rage. Their attachment to one another is very strong; for a wounded walrus plunges to the bottom, and rises again suddenly with a number of attendants to attack the boat whence they received insult. They are said to lie on the ice in herds of many hundreds, loudly roaring, and giving notice of ice in the night or in a fog, when it could not be seen: some of the herd are always on the watch, who, on the approach of danger, awake the rest. They are soon frightened by a flash in the musket-pan, and plunge into the deep; but the female will defend the young to the last, on the ice or in the water; nor will the young one quit the dam, though she be dead. In the gulf of St. Lawrence, this animal is called a sea-cow, and it is said to resemble a cow much more than a horse, which name may probably be a corruption of the Russian name *morse*. The teeth of the walrus are used for ivory: the animals are killed chiefly for the sake of the oil; and it is said that a very strong and elastic leather may be prepared from the skin.

2. *Trichechus dudong*, the dugon of Buffon, and the Indian walrus of Pennant, with approximate, exerted tusks.—This animal inhabits the seas about the Cape of Good Hope and the Philippine Islands.

3. *Trichechus manatus*, the manati or sea-cow of Ray, and lamantin of Buffon; without tusks, slightly hairy; with a horizontal tail in place of hind-feet.—Found in the larger rivers as well as seas of Guiana, and growing to the length of 16 or 18 feet; the skin being dark-brown, with scattered hairs upon it; the feet with five toes; the body nearly of the same thickness to the tail, when it suddenly narrows; the tail flat, of the shape of a spatula, thicker in the middle, and thinner towards the edges.

The *trichechus Clusii*, or *Clusius's manati*, is supposed to be a variety: it grows to an enormous size in the South American rivers. As an article of food, it is said to be superior to any other animal of this genus, particularly the young. It is taken by means of harpoons. The Indians take great numbers, by making dams across the mouths of the shallow lakes formed by the floods. Dr. Shaw mentions a manati, called by the inhabitants of the country, on account of its gentle nature, "*Matum*," which, at the time of the arrival of the Spaniards, was kept by a prince of Hispaniola in a lake adjoining to his residence: it hated the Spaniards, but would offer itself to its Indian favourites, and carry over the lake ten at a time, singing and playing on its back. The *trichechus*

Y hydropethicus,

hydropithecus, or sea-ape manati of Pennant, is only known from the description of Steller, who, near the coast of America, saw a singular animal which he named a sea-ape, and which Pennant supposes to belong to this genus. It was an animal that delighted in frolic, and sported like a monkey.

Trichechus Australis, the variety α of *trichechus manatus*, according to Gmelin's Linnæus, but a distinct species in Shaw's Zoology; hairy, with four-toed unguiculated feet, or with a horizontal tail in place of hind-feet; the round-tailed manata of Pennant; growing to the length of 14 or 15 feet, and found in the rivers of Africa, particularly in the Senegal. It is about six feet and a half long, and three feet eight inches in circumference in the thickest part of the body, and in the thinnest part near the tail about two feet two inches. The flesh of this animal is said to resemble veal; but it is chiefly killed by the negroes for the sake of its blubber or fat.

Trichechus borealis, a variety of *trichechus manatus* in Gmelin's edition of Linnæus, but a distinct species in Shaw's Zoology; the whale-tailed manata of Pennant. It approaches nearly to the whale tribe; it never goes ashore, nor attempts to climb the rocks, like the walrus and the seal. It brings forth in the water, and, like the whale, suckles its young in that element. It inhabits the seas about Bering's and the other Aleutian islands, but never appears off Kamtschatka, unless blown thither by a tempest. It is the same species that inhabit near Rodriguez, or Diego Reys, an island east of the Mauritius, and probably extending to New Holland. These animals live perpetually in the water, but in calm weather frequent the mouths of rivers in great numbers, and approach in time of flood so near the land, that they will suffer themselves to be stroked by the hand; but if hurt, swim out to the sea, presently returning again. They live in families, one near another; each consisting of a male, a female, a half-grown young one, and a very small one. The affection between the male and the female is so great, that if the latter is attacked, the former will defend her to the utmost; and if she is killed, will follow her carcase to the shore, and for some days swim near the place where it was landed. They are very voracious, and when full of the fuci that grow in the sea, fall asleep on their backs. The back and sides are generally above water, and gulls are found perching on their backs, in order to pick up the insects which they find upon them. They are taken by harpoons fixed to a strong cord; but when struck, it requires the force of 30 men to draw them on shore. When a manati is struck, its companions swim to its assistance, and make many efforts to overturn the boat, or break the rope of the harpoon, and others will strike at the harpoon with their tails. They make a noise, by loud breathing, like the snorting of a horse. Their size is enormous, some being 28 feet long, and 800 lbs. in weight. The circumference of the body near the shoulders is 12 feet, about the belly 20, near the tail 4 feet 8 inches, the head 31 inches, the neck near seven feet; and hence we may infer the deformity of the animal. Near the shoulders are two feet, or rather fins, two feet two inches long, without fingers or nails; beneath they are concave, and covered with hard bristles; the tail is thick, strong, and horizontal, terminating in a stiff black fin, and resembling the substance of whale-bone; the skin is thick, hard, and black, unequal on its surface, like the bark of oak, so hard as scarcely to be cut with an axe, and without hair; beneath the skin is a thick blubber, tasting like oil of almonds. The flesh is coarser than beef, and will not soon putrify; that of the young ones has the taste of veal. The skin is used for shoes, and for covering the sides of boats. The Russians call this animal "Morskaja Korowa," or sea-cow, and "Kapustnik," or eater of herbs. *Pennant's Quadrupeds.*

TRICHERLÆ, the name of a genus of fossils, of the class of fibrariæ; the characters of which are, that they are not elastic, and are composed of straight and continuous filaments.

TRICHESTRUM, the name of a genus of fossils; of the

class of the selenites, but differing extremely in figure and structure from the common kinds.

TRICHIASIS [derived from $\tau\rho\iota\chi\eta$, *the hair*], sometimes also named *entropæon*, denotes a faulty inclination of the eye-lashes, inwards against the globe of the eye. See **SURGERY**.

TRICHILIA, in Botany, a genus of the class decandria, order monogynia, natural order of trihilatæ, meliæ (*Juss.*) —Generic Character. Calyx: perianth one-leaved, tubular, mostly five-toothed, short. Corolla: petals five, lanceolate, spreading. Nectary cylindrical, tubular, with a ten-toothed mouth, shorter than the petals, connate of ten filaments. Stamina: filaments none. Anthers ten, erect, rising from the margin of the tube of the nectary, deciduous. Pistil: germ obovate, subtrilobate. Style short. Stigma headed, three-toothed. Pericarp: capsule roundish, subtrigonal, three-celled, three-valved. Seeds solitary, berried. —*Essential Character.* Calyx mostly five-toothed. Petals five. Nectary toothed, cylindrical, bearing the anthers at the top of the teeth. Capsule three-celled, three-valved. Seeds berried.

1. *Trichilia hirta*.—The trees of this genus vary in height, from ten to thirty feet high. Leaves pinnate; leaflets few, elliptic, acuminate, smooth; racemes clustered.—Native of Jamaica.

2. *Trichilia spondioides*.—Leaves unequally pinnate, sub-hirsute; pinnae numerous; the lower ones larger; racemes axillary. This is a small tree, ten feet high or much lower, with an upright stem, and divided into very few branches.—Native of Jamaica, St. Domingo, and Carthage, flowering there principally in November.

3. *Trichilia emetica*.—Leaves pinnate, villose underneath; leaflets elliptic.—Native of Arabia Felix, on mountains.

4. *Trichilia glabra*.—Leaves pinnate, smooth; outmost leaflets larger.—Native of the Havannah, in mountain woods.

5. *Trichilia pallida*.—Leaves unequally pinnate, membranaceous; racemes axillary and terminating; flowers eight-stamened; capsules two-valved.—Native of the West Indies, flowering in February and March.

6. *Trichilia moschata*.—Leaves alternately pinnate; racemes axillary; flowers subdecandrous, one-petalled; capsules one-seeded.—Native of Jamaica, where it is called by the title of musk-wood, on account of the smell of every part of the plant when rubbed. Flowers in May.

7. *Trichilia spectabilis*.—Leaves pinnate; leaflets obovate; racemes axillary, compound.—Native of New Zealand.

8. *Trichilia alliacea*.—Leaves pinnate; leaflets lanceolate, acute; racemes axillary, superdecompound.—Native of the island of Namoka.

9. *Trichilia heterophylla*.—Leaves pinnate and ternate; leaflets ovate, acuminate; racemes axillary; flowers eight-stamened.—Native of Madagascar.

10. *Trichilia trisoliata*.—Leaves ternate; leaflets obovate, shining.—Native of Curaçao, in dry pastures, and on the neighbouring continent; flowering in April and May.

11. *Trichilia nervosa*.—Leaves ternate; leaflets ovate.—Native of Java.

12. *Trichilia spinosa*.—Leaves simple, ovate, emarginate; branches thorny.—Native of the East Indies.

Propagation and Culture.—These trees and shrubs being natives of hot countries, cannot be preserved in England but in a stove. They may be propagated by seeds sown in pots, and plunged into a hot-bed; when the plants are fit to remove, plant each in a separate small pot, plunged again into the hot-bed, and shade them until they have taken new root. They may also be increased by cuttings during any of the summer months. In their native countries they thrive best in a dry gravelly soil.

TRICHINOPLY, a celebrated city and fortress of the south of India, and capital of a district of the same name. It is advantageously situated on the south bank of the river Cavery, opposite the island of Seringham, famous for its magnificent Hindoo temples. Lat. 10. 50. N. long. 78. 50. E.

TRICHIURUS,

TRICHIURUS, a genus of the order of Apodes; the characters of which are, that the head is extended, with lateral opercula or gill-covers; that the teeth are ensiform, and semi-sagittated at the apex or tips; that it has seven branchiostegous or gill-membrane rays; that the body is compressed and ensiform, and the tail subulated, without any fin: whence it is called *lepturus*, and in English needle-tail. There are two species.

1. *Trichiurus lepturus*, or *argenteus*; silvery trichiurus.—With the lower jaw longer than the upper; and equally distinguished by the singularity of its shape, and brilliancy of its colour; the body very compressed, tapering towards the extremity, and terminating in a fine point; the whole body, except the fins, of a bright silver-colour; the head narrow, and the mouth wide; the lateral line of a gold-colour, commencing at the gills and continued to the tip of the tail; the dorsal fin moderately wide, transparent, and of a yellowish tinge, commencing almost behind the head, and terminating near the end of the tail in a mere membrane, the other parts being strongly radiated; the pectoral fins small and of an oval shape; without any direct vent-fin, but having a series of very small naked spines or rays, about 110 in number, continued from the vent, which is situated about the middle of the body, to nearly the tip of the tail. Its general length is from two to three feet; it is said to be very voracious, swims with rapidity, and in the pursuit of its prey sometimes leaps into small vessels, which happen to be sailing by it.—It is a native of the rivers and larger lakes of South America, and is considered as an eatable fish; it is also found in some parts of India and in China.

2. *Trichiurus Indicus*, or *electricus*, or *fuscus*; brown trichiurus.—With jaws of equal length; nearly equal in size to the preceding, but different in the conformation of the jaws, which are of equal length, and in the form of its teeth, which are very minute; the tail, less slender and sharp, and the colour of the whole fish pale brown, variegated with spots of a deeper cast.—A native of the Indian seas, and possessing a degree of electrical power.

TRICHOCARPUS [from *τριχ*, *τριχος*, a hair, and *καρπος*, a fruit. Hairy-fruited], in Botany a genus of the class polyandria, order digynia.—Generic Character. Calyx: perianth one-leaved, four or five parted; segments ovate, acute, spreading, permanent. Corolla none. Stamina: filaments very many (sixty to seventy), capillary, longer than the calyx, inserted into the receptacle. Anthers small, roundish. Pistil: germ ovate, villose. Styles two, long, bifid at the top. Stigmas obtuse. Pericarp: capsule ovate-four-cornered, bristly; bristles long, rigid, deciduous; one-celled, four-valved. Seeds numerous, small, fastened to a free, ovate-oblong receptacle, involved in a viscid membrane.—*Essential Character*. Calyx four or five-parted. Corolla none. Styles two, bifid. Capsule bristly, four-valved, many-seeded.

Trichocarpus laurifolia.—This is a tree growing to the height of fifty feet. Leaves scattered, coriaceous, oblong, acute, quite entire, veined, smooth, petioled. Corymbs few-flowered, subdichotomous, lateral.—Native of the woods of Guiana.

TRICHOCEPHALUS, a genus of the Intestina order of Vermes; the characters of which are, that the body is elastic and contorted, the hinder part thick and elevated, the anterior capillary and of double length, sometimes terminating knotty. Of this genus there are six species, distributed into two classes: viz.

I.—With simple head.

1. *Trichocephalus hominis*.—Above subcrenated, beneath smooth, forepart very subtilely striated; two inches long.
2. *Trichocephalus equi*.—Two inches and a half long.
3. *Trichocephalus Apri*.—With tail on both sides furnished with crenated scales; equal to the human.
4. *Trichocephalus muris*.—With the head three-knotted.—Found in the intestine of the mouse, between the duodenum and rectum.
5. *Trichocephalus vulpis*.—With an acute head; neck

transversely striated, and unilateral vesicles.—Found in the cœcum of the fox.

II.—With uncinated or hooked head.

6. *Trichocephalus lacertæ*.—With a tail on both sides scaly.—Found in the intestines of the lizard.

TRICHODA, a genus of the Infusoria order of Vermes; the characters of which are, that the worm is inconspicuous with the naked eye, pellucid, and hairy on the other part. Gmelin's edition of Linnæus comprehends forty-seven species, of which we select these:—

I.—Without a tail.

1. *Trichoda patella*.—Univalve; before and behind furnished with extended unequal bristles.—Found in the marshes of Denmark.

2. *Trichoda ursula*.—Smooth, elongated, equal, on the fore-part hairy.—Found in putrid infusions of hay and other vegetables.

3. *Trichoda linter*.—Ovate-oblong, somewhat prominent at both ends.—Found by the Greenlanders in water, in which the lichen *coriarius* has been infused.

4. *Trichoda pubes*.—Ovate oblong, gibbous, on the fore-part depressed.—Found in duck-weed water.

5. *Trichoda Cypris*.—Obovate, above sinuated towards the hinder part, on the fore-part hairy.—Found in water covered with duck-weed.

6. *Trichoda silurus*.—Oblong, hairy before and behind, with a ciliated back.—Found in water abounding with conferva.

7. *Trichoda mytilus*.—Subclavated, at both ends wider, green and ciliated.—Found in marsh-water.

8. *Trichoda urnula*.—Pitcher-shaped; before hairy.—Found rarely in water covered with duck-weed.

9. *Trichoda lynceus*.—Subquadrate, with hooked beak and hairy mouth.

10. *Trichoda semiluna*.—Semi orbicular, on the fore-part below hairy.—Found in duck-weed water.

11. *Trichoda orbis*.—Orbicular, emarginated and hairy on the fore-part.

12. *Trichoda cimex*.—Above convex, below smooth and hairy.—Found in vegetable infusions.

13. *Trichoda camelus*.—Hairy on the fore-part, thickish in the middle; and on both sides emarginated.—Found as the last.

14. *Trichoda acarus*.—Piriform, on the fore part below hairy, behind pedated.—In water covered with duck-weeds.

15. *Trichoda bomba*.—Mutable, on the fore-part furnished with scattered hairs.—As the last.

16. *Trichoda ciliata*.—Ventricose, behind pectinated with hairs.—Found in muscle-water.

17. *Trichoda sulcata*.—With ovate ventricose apex, acuminate, ventral furrow, and on both sides hairy.—As before.

II.—With tail.

18. *Trichoda transfuga*.—Broadish, before hairy, behind bristly, sinuated on one side, mucronated on the other.—Found in sea-water for some time kept.

19. *Trichoda ludio*.—Cirrated, above hairy, with an extended tail.—Found rarely in the grove-waters of Denmark.

20. *Trichoda pupa*.—Aculeated, hairy in front, with a bent tail.—Found in duck-weed water.

21. *Trichoda clava*.—Clavated, hairy in front, with a reflexile tail.—Found rarely in the marshy waters of Denmark.

TRICHOMANES [*Τριχομανες*, of Dioscorides. From *τριχ*, *τριχος* hair, and *μανια*, madness. From the hairiness of the fern, and its supposed efficacy in mania], in Botany, a genus of the class cryptogamia, order filices, natural order of filices or ferns.—Generic Character. Fructifications inserted into the margin of the frond, separate. Involucres urn-shaped, undivided, opening outwards. Columns extending beyond the involucres, like styles.

I.—With a simple frond.

1. *Trichomanes membranaceum*.—Fronds simple, oblong, lacerated.—Native of South America and Jamaica.

2. *Trichomanes*

2. *Trichomanes pusillum*.—Fronds simple, linear, gashed; shoot creeping.—Native of Jamaica.
3. *Trichomanes crispum*.—Fronds pinnatifid, lanceolate; pinnae parallel, subserrate.—Native of Martinico.
4. *Trichomanes reptans*.—Fronds cuneate-ovate; gash-pinnatifid; shoot creeping.—Native of Jamaica.
5. *Trichomanes asplenoides*.—Fronds pendulous, lanceolate, pinnatifid, very smooth; segments two-lobed; lobes obtuse; fructifications two-valved.—Native of Jamaica.
6. *Trichomanes polypodioides*.—Fronds lanceolate, pinnatifid, repand; flowers solitary, terminating.—Native of the East Indies.

II.—With a compound frond.

7. *Trichomanes crinitum*.—Fronds subpinnate, hairy; pinnae ovate, pinnatifid; segments bifid; subdivisions blunt; fructifications bristle-bearing, on an upright rough-haired stipe.—Native of Jamaica.
8. *Trichomanes lucens*.—Fronds bipinnatifid, pendulous, lanceolate, hirsute, shining; pinnae parallel; segments roundish, subserrulate; stipe extremely hirsute.—Native of Jamaica.
9. *Trichomanes hirsutum*.—Fronds pinnate; pinnae alternate, pinnatifid, hairy.—Native of America, Japan and Cochinchina.
10. *Trichomanes sericeum*.—Fronds bipinnatifid, pendulous, lanceolate, tomentose; pinnae alternate; segments linear, obtuse, entire; the lower ones bifid; fructifications terminating, hirsute.—Native of Jamaica.
11. *Trichomanes pyxidiferum*.—Fronds subbipinnate; pinnae alternate, clustered, lobed, linear.—Native of America.
12. *Trichomanes Tunbrigense*.—Fronds pinnate; pinnae oblong, dichotomous, decurrent, toothed.—It was first discovered near Tunbridge, in moist clefts of rocks and stony places.
13. *Trichomanes adiantoides*.—Fronds pinnate; pinnae ensiform, acuminate, gash-serrate; serratures bifid.—Native of the East Indies and of Africa.
14. *Trichomanes fucoides*.—Fronds bipinnatifid, ovate, smooth; pinnae ovate; segments two-parted; subdivisions serrate, obtuse; fructifications two-valved, inserted above the base of the pinnae.—Native of Jamaica.
15. *Trichomanes ciliatum*.—Fronds erect, bipinnatifid, deltoid; pinnae ovate; segments linear, obtuse, ciliate; fructifications terminating, bivalved, rough-haired; stipe margined.—Native of Jamaica.
16. *Trichomanes lineare*.—Fronds subbipinnate, pendulous, lanceolate, smooth; leaflets remote; pinnules linear, two-parted; fructifications terminating, two-valved; stipe capillary.—Native of Jamaica.
17. *Trichomanes strigosum*.—Fronds bipinnate; pinnules rhomboid, hairy, serrate; fructifications solitary below the serratures.—Native of Japan.

III.—With a superdecompound frond.

18. *Trichomanes undulatum*.—Fronds tripinnatifid, or bipinnatifid, pendulous, lanceolate; leaflets and pinnae alternate, decurrent; segments linear, retuse, crenulate-waved; fructifications terminating, two-valved.—Native of Jamaica.
19. *Trichomanes scandens*.—Fronds superdecompound; leaflets alternate; pinnae alternate, oblong, serrate.—Native of America, common in the woods of Jamaica.
20. *Trichomanes Chinense*.—Fronds superdecompound; leaves and pinnae alternate, lanceolate; segments of the pinnae wedge-shaped.—Native of China, where it was found by Osbeck.
21. *Trichomanes rigidum*.—Fronds four-times pinnatifid, erect, deltoid; leaflets spreading; pinnae lanceolate; segments linear, gashed at the end; fruit-bearing cups pedicelled, axillary.—Native of Jamaica.
22. *Trichomanes polyanthos*.—Fronds four times pinnatifid, deltoid, erect; pinnae and pinnules decurrent; segments linear, obtuse; fructifications two-valved, numerous; stipe margined.—Native of Jamaica.
23. *Trichomanes clavatum*.—Fronds four times pinnatifid, oblong-lanceolate, loose; pinnae and pinnules decurrent;

- segments linear, emarginate; fructifications terminating, two-valved, roundish; stipe roundish.—Native of Jamaica.
24. *Trichomanes Canariense*.—Fronds superdecompound, three-parted; leaflets alternate; pinnae alternate, pinnatifid.—Native of the Canary Islands, and also of the sides of mountains in Portugal.
25. *Trichomanes Japonicum*.—Fronds superdecompound; pinnules gash-trifid, acute.—Native of Japan.
26. *Trichomanes capillaceum*.—Fronds superdecompound; pinnae filiform, linear, one-flowered.—Native of South America.

27. *Trichomanes aculeatum*.—Fronds superdecompound, scandent, very much branched; leaflets palmate; segments linear, obtuse; stipe prickly.—Native of Jamaica.

Propagation and Culture.—See *acrostichum* and *adiantum*. Most of the species are stove plants.

TRICHOPUS, a new genus of fishes, described by Cepad; the characters of which are, that the body is compressed, and that the ventral fins have an extremely long filament. These fishes are natives of the Indian seas and rivers, and are distinguished, one species excepted, by the remarkable length of one ray of the ventral fins, which extends the whole length of the body, or even beyond it.

1. *Trichopus goramy*, or rufescent trichopus.—With a silvery cast on the sides, and the second ray of the ventral fins extremely long.—Native of the fresh waters of China, where it is greatly esteemed as an article of food, and known by the name of "Goramy." It is a prolific species, and easily introduced into new situations; having been imported into Java, and many other of the eastern islands.

2. *Trichopus Arabicus*, or greenish trichopus.—The *labrus gallus* of Linnæus. See *LABRUS GALLUS*.

3. *Trichopus satyrus*.—With sinking forehead, projecting chin, and extremely long, single-rayed ventral fins. This fish is known in some countries by the name of "Goramy," or "Gouramy."

4. *Trichopus pallasii*, or brown trichopus.—With pale undulations; a black spot on each side of the body and tail; and long single-rayed ventral fins. Described by Dr. Pallas as a species of *labrus*, and by Kolreuter, in the *Petersburg Transactions*, as a sparus. See *LABRUS TRICHOPTERUS*.

5. *Trichopus monodactylus*, or silvery trichopus.—With brownish back; and short, single-rayed, rigid ventral fins.

TRICHOSANTHES [from *τριχ*, hair, and *ανθος*, a flower], in Botany, a genus of the class monoecia, order syngenesia, natural order of cucurbitaceæ.—Generic Character. Male flowers.—Calyx: perianth one-leafed, club-shaped, very long, smooth; mouth five-toothed, reflexed, small. Corolla five-parted, growing to the calyx, flat, spreading; segments ovate-lanceolate, ciliate; with very long branching hairs. Stamina: filaments three, very short, at the top of the calyx. Anther a cylindrical erect body, covered on all sides with a fariniferous line, creeping up and down. Pistil: styles three, very small, growing to the tube of the calyx. Females on the same plant with the males.—Calyx: perianth as in the male, superior, deciduous. Corolla as in the male. Pistil: germ oblong, slender, inferior. Style filiform, length of the calyx. Stigmas three, oblong, awl-shaped, gaping. Pericarp: pome oblong, three-celled; cells remote. Seeds many, compressed, obtuse, coated.—*Essential Character*. Calyx five-toothed. Corolla five-parted, ciliate. Male.—Filaments three. Female.—Style trifid. Pome oblong.

1. *Trichosanthes anguina*, or snake gourd.—Pomes round, oblong, curved in. Stem obtusely five-cornered, rough-haired, climbing by tendrils.—Native of China.

2. *Trichosanthes nervifolia*.—Pomes ovate, acute; leaves cordate-oblong, three-nerved, toothed.—Native of the East Indies.

3. *Trichosanthes cucumerina*.—Pomes ovate, acute; leaves cordate, angular.—Native of the East Indies, Japan and Cochinchina.

4. *Trichosanthes amara*.—Pomes tubinate-ovate.—Native of the island of Dominica; annual, flowering there in December.

5. *Trichosanthes*

5. *Trichosanthes pilosa*.—Stem and leaves hairy; spikes axillary; bracts lanceolate, serrate; pomes ovate, acute.—Native of Cochinchina.

6. *Trichosanthes tricuspidata*.—Pomes ovate, acute, leaves three-cusped, smooth, many-nerved; stipules roundish, thick, crenate; spikes axillary.—Native of Cochinchina.

7. *Trichosanthes scabra*.—Pomes roundish; leaves roundish, rugged, very much wrinkled; peduncles one-flowered.—Native of Cochinchina.

Propagation and Culture.—Sow the seeds on a hot-bed early in the spring; and treat the plants in the same way as cucumbers and melons.

TRICHOSTEMA [from the Gr. *τριχος*, *trichos*, hair, and *σθημων*, *sthemon*, hairy-stamened], in Botany, a genus of the class didynamia, order gymnospermia, natural order of verticillata or labiata.—Generic Character. Calyx: perianth one-leafed, two-lipped; upper lip twice as large, trifold, equal, acute; lower two-parted, acute. Corolla one-petalled, ringent; tube very short; upper lip compressed, sickle-shaped; lower three-parted, the middle segment very small, oblong. Stamina: filaments four, capillary, very long, curved in; two of them a little shorter. Anthers simple. Pistil: germ four-cleft. Style capillary, length and figure of the filaments. Stigma bifid. Pericarp none. Calyx larger, reflexed, so that the upper lip becomes the lower, ventricose, converging. Seeds four, roundish.—*Essential Character*. Corolla: upper lip sickle-shaped. Stamina very long.

1. *Trichostema dichotoma*.—Stamens very long; standing out. This is an annual plant, which rises about six or eight inches high, dividing into small branches.—Native of Virginia and Pennsylvania.

2. *Trichostema brachiata*.—Stamens short; included. This has an herbaceous branching stalk, which rises from nine inches to a foot high.—Native of Virginia.

3. *Trichostema spiralis*.—Stems very long; spiral. Stem herbaceous, four feet high, erect. Flowers white-violet, in long terminating spikes.—Native of Cochinchina.

Propagation and Culture.—Sow the seeds in autumn, in pots filled with light earth: in winter place the pots under a frame, to shelter them from severe frost, but expose them to the open air at all times when the weather is mild. In the spring transplant them on to a bed of light earth; shading them from the sun till they have taken new root, and keep them clean from weeds.

TRICHOSTOMUM. (Hairy-mouthed.) One of Hedwig's genera of mosses, including some of Linnæus's bryums. One of them, namely, *Trichostomum capillaceum*, is figured in t. 1152, of English Botany.

TRICHOTOMY, *s.* [*τριχοτομια*, Gr.] Division into three parts.—Some disturb the order of nature by dichotomies, *trichotomies*, sevens, twelves: let the subject with the design you have in view determine the number of parts into which you divide it. *Watts*.

TRICK, *s.* [*triche*, old Fr.; *tresk*, Dutch; from *triegen*, Germ., to deceive.] A sly fraud.—Sir Thomas Moor said, that a *trick* of law had no less power than the wheel of fortune, to lift men up, or cast them down. *Raleigh*.—A dexterous artifice.

Gather the lowest and leaving the top,
Shall teach thee a *trick* for to double thy crop. *Tusser*.

A vicious practice.
Suspicion shall be stuck full of eyes:
For treason is but trusted like a fox,
Who ne'er so tame, so cherish'd and lock'd up,
Will have a wild *trick* of his ancestors. *Shakspeare*.

A juggle; an antic; any thing done to cheat jocosely, or to divert.

A reverend prelate stopp'd his coach and six,
To laugh a little at our Andrew's *tricks*. *Prior*.

An unexpected effect.
So felless foes who broke their sleep,
To take the one the other, by some chance,
Some *trick* not worth an egg, shall grow dear friends.
Shakspeare.

A practice; a manner; a habit. We still say, he has a *trick* of winking with his eyes, of speaking loud, &c.—I spoke it but according to the *trick*: if you'll hang me, you may. *Shakspeare*.—A number of cards laid regularly up in play: as, a *trick* of cards.—A plait or knot of hair. [*Trica*, low Lat. See the second meaning of *To TRICK*.]—I prefer that kind of tire:—it stirs me more than all your court-curles, or your spangles, or your *tricks*: I affect not these high gable-ends, these Tuscan tops. *B. Jonson*.

To TRICK, *v. a.* [*tricher*, Fr.; *triegen*, Germ.] To cheat; to impose on; to defraud.—It is impossible that the whole world should thus conspire to cheat themselves, to put a delusion on mankind, and *trick* themselves into belief. *Stephens*.—To dress; to decorate; to adorn; properly to knot.—They turned the imposture upon the king, and gave out, that to defeat the true inheritor he had *tricked* up a boy in the likeness of Edward Plantagenet. *Bacon*.—To perform with a light touch: though it may mean here to dress. [*Trycka*, Swed.] It is a term of heraldry; as, to *trick* arms.—They are blazoned there; there they are *tricked*, they and their pedigrees. *B. Jonson*.

To TRICK, *v. n.* To live by fraud.
Thus they jog on, still *tricking*, never thriving,
And murdering plays, which still they call reviving. *Dryden*.

TRICKER, *s.* [this is often written *trigger*.] The catch which being pulled disengages the cock of the gun, that it may give fire.

As a goose
In death contracts his talons close;
So did the knight, and with one claw
The *tricker* of his pistol draw. *Hudibras*.

TRICKERY, *s.* Act of dressing up; artifice.—You taught us to set a just value upon the eccentricities of impetuous and untutored genius, by giving us an opportunity to compare them with the *trickeries* of cold and systematic refinement. *Dr. Parr*.

TRICKING, *s.* Dress; ornament.—Get us properties and *tricking* for our fairies. *Shakspeare*.

TRICKISH, *adj.* Knavishly artful; fraudulently cunning; mischievously subtle.—All he says is in a loose, slippery, and *trickish* way of reasoning. *Atterbury*.

To TRICKLE, *v. n.* [Of this word there is no etymology that seems well authorized or probable. *Dr. Johnson*.] To fall in drops; to rill in a slender stream.

Imbrown'd with native bronze, lo! Henly stands,
Tuning his voice and balancing his hands:
How fluent nonsense *trickles* from his tongue!
How sweet the periods, neither said nor sung. *Pope*.

TRICKMENT, *s.* Decoration.
No tomb shall hold thee;
But these two arms; no *trickments* but my tears
Over thy hearse. *Beaumont and Fl.*

TRICKSTER, *s.* One who practises tricks.—Another of these *tricksters* wrote and published a piece entitled, *The Assembly Man*. *Robinson*.

TRICKSY, *adj.* Pretty; dainty; neat; briskly; lively; merry. *Still used in some parts of the north*.

The fool hath planted in his memory
An army of good words; and I do know
A many fools that stand in better place,
Garnish'd like him, that for a *tricksy* word
Defy the matter. *Shakspeare*.

TRICKTRACK, *s.* [*trictrac*, French.] A game at tables.—Loitering in sloth and idleness, cross-legged like so many taylors, the Turk wastes almost his whole time, lolling on these cushions or sophas, smoaking tobacco, and drinking coffee or sherbet, without either diversion or amusement, but playing with shells, or at *trick-track*, or the goose. *Memoirs of P. H. Bruce*.

TRICOLOOR, a town of the south of India, province of the Carnatic. Lat. 11. 59. N. long. 79. 20. E.

TRICORPORAL, *adj.* [*tricorpus*, Lat.] Having three bodies.

TRICOT, a small town in the north of France, department of the Oise, with 1200 inhabitants; 6 miles south of Montdidier, and 25 north-east of Beauvais.

TRIDACTYLIA, in Ornithology, a genus of birds, separated by Dr. Shaw from *picus*, on account of the number of toes; this having but three, whereas the genuine pice are all furnished with four. Its Generic Characters are:—beak many-sided, straight, wedge-shaped at the tip; nostrils covered with setaceous recumbent feathers; and feet with only three toes, placed two before and one behind. The species are the following:—

1. *Tridactylia hirsuta*.—Downy, varied with black and white. See *PICUS TRIDACTYLUS*.

2. *Tridactylia undulata*.—Waved, varied with black and white, beneath white. The southern three-toed woodpecker of Latham. First described by Brisson, and by him said to inhabit Cayenne.

TRIDAX [*Θριδαξ*, Gr., is the name of some pot-herb in Dioscorides], in Botany, a genus of the class syngenesia, order polygamia superflua, natural order of compositæ oppositifoliæ, corymbiferæ (*Juss.*)—Generic Character. Calyx: common cylindrical, imbricate; scales ovate-oblong, obscurely acute, erect. Corolla: compound radiate; corollets hermaphrodite, tubular in the disk; female in the ray. Proper in the hermaphrodites funnel-form, five-toothed, erect;—in the females ligulate, three-parted; segments equal, the middle one narrower. Stamina in the hermaphrodites; filaments five, capillary, very short. Anther cylindrical, tubular. Pistil in the hermaphrodites: germ oblong. Style bristle-shaped, length of the stamens. Stigma obtuse;—in the females, germ oblong. Style filiform, length of the corollet. Stigma obtuse. Pericarp none. Calyx unchanged. Seeds in the hermaphrodites solitary, oblong; down many-rayed, simple, a little longer than the calyx;—in the females, very like the others. Receptacle chaffy, flat; chaffs lanceolate, shorter than the seed.—*Essential Character*. Calyx imbricate, cylindrical. Corollets of the ray three-parted. Down many-rayed, simple. Receptacle chaffy.

Tridax procumbens.—Stalks trailing and emitting roots at the joints, herbaceous and hairy. Leaves placed by pairs, rough, hairy, about an inch and half long, and three quarters of an inch broad, ending in acute points, and acutely jagged on the edges. The flowers are produced upon long naked peduncles which terminate the branches. The florets are of a pale copper colour, inclining to white.—Native of America.

Propagation and Culture.—Sow the seeds in pots plunged into a hot-bed. When the plants are fit to remove, put each into a small pot, filled with light earth: plunge the pots into the tan-pit; shading them from the sun till they have taken new root, and then treating them as other tender plants from the West Indies, placing them in autumn in the bark-stove, where they should constantly remain.

TRIDE, *adj.* [among Hunters; *tride*, French.] Short and ready. *Bailey*.

TRIDENT, *s.* [*tridens*, Latin.] A three-forked sceptre of Neptune.

His nature is too noble for the world.
He would not flatter Neptune for his *trident*. *Shakspeare*.

TRIDENT, or **TRIDENTED**, *adj.* Having three teeth.
Neptune—

Held his *tridented* mace upon the south:
The winds were whist, the billows danc'd no more. *Quarles*.

TRIDING, *s.* [*tridunga*, Saxon; rather *trithing*.] The third part of a county or shire. This division is only used in Yorkshire, where it is corrupted into *riding*.

TRIDUAN, *adj.* [from *triduum*, Lat.] Lasting three days.—Happening every third day.

TRIE, a small town in the south-west of France, department of the Upper Alps, with 800 inhabitants; 13 miles east-north-east of Tarbés.

TRIEBEL, a small town of the Prussian states, in Lower Lusatia, near the river Neisse, containing 1000 inhabitants; 47 miles south of Frankfort on the Oder.

TRIEDROSTYLA [derived from the Gr. *τρις*, *thrice*, *εδρα*, a *side*, and *στυλος*, a *column*], in Natural History, the name of a genus of spars.

TRIEL, a small town in the north of France, department of the Seine and Oise, and adjacent to the Seine. Population 1900; 20 miles west-by-north of that capital.

TRIEMERUS, the **THREE-DAY FLY**, a fly somewhat like the butterfly; it has four large yellowish wings, and a long body, with a head furnished with long antennæ, large eyes, and a spiral trunk.—It is found among the nettles and mallows.

TRIEMMERIS [*τριμημερις*, Gr., *semitemernaria*], a kind of cæsura in Latin verse, in which, after the first foot of the verse, there remains an odd syllable, which helps to make up the next foot.

As in, *Ille latus niveum molli fultus hyacintho*.

TRIENAGH BAY, a bay on the west coast of Ireland. Lat. 54. 53. N. long. 8. 15. W.

TRIE'NNIAL, *adj.* [*triennis*, Lat.] Lasting three years.—Richard the third, though he came in by blood, yet the short time of his *triennial* reign he was without any, and proved one of my best lawgivers. *Howell*.—Happening every third year.—To the bishop for procurations, on account of his *triennial* visitation, three shillings and eight pence. *Warton*.

TRIENS, in Antiquity, a copper money, of the value of one-third of an *as*, which on one side bore a Janus's head, and on the other a water-rat.

TRIENTALIS [so named from its small size], in Botany, a genus of the class heptandria, order monogynia, natural order of rotacææ, lysimachiaæ (*Juss.*)—Generic Character. Calyx: perianth seven-leaved; leaflets lanceolate, acuminate, spreading, permanent. Corolla stellate, flat, octepetalled, equal, seven-parted, very slightly cohering at the base; segments ovate-lanceolate. Stamina: filaments seven, capillary, inserted into the claws of the corolla, patulous, length of the calyx. Anthers simple. Pistil: germ globular. Style filiform, length of the stamens. Stigma headed. Pericarp: berry capsular, juiceless, globular, one-celled, covered with a very thin crust, opening by various sutures. Seeds some, angular. Receptacle very large, hollowed out for the seeds.—*Essential Character*. Calyx seven-leaved. Corolla seven-parted, equal, flat. Berry juiceless.

Trientalis Europæa, or chickweed winter-green.—Root perennial, somewhat tuberous, creeping. Stem simple, erect, a span high, almost naked at bottom, leafy at top. Leaves clustered, spreading, lanceolate, quite entire, smooth, veined. Peduncles terminating, aggregate, one-flowered, spreading. Flowers snow-white, very elegant.—Native of the northern parts of Europe, Canada, and Siberia, in woods on the sides of mountains, and on turf heaths; in Yorkshire and Northumberland. It is more plentiful in Scotland.

TRIER, *s.* One who tries experimentally.—The ingenious *triers* of the German experiment found, that their glass vessel was lighter when the air had been drawn out than before by an ounce and very near a third. *Boyle*.—One who examines judicially.—Courts of justice are bound to take notice of acts of parliament, and whether they are truly pleaded or not; and therefore they are the *triers* of them. *Hale*.—Test; one who brings to the test.

You were used

To say, extremity was the *trier* of spirits;
That common chances common men could bear.

Shakspeare.

TRIESCH, or **TZESZTE**, a small town of the Austrian states, in Moravia; 6 miles south-west of Iglau. Population 2900.

TRIESTE, **GOVERNMENT OF**, a province of the Austrian empire, containing the southern half of the kingdom of Illyria, and bordering on the Adriatic, Croatia, and the government of Laybach. Its territorial extent is 5020 square miles, and its population 540,000. The province is divided into the four circles of Trieste, Goritz, Fiume, and Carlstadt. See farther, **ILLYRIA**, **ISTRIA**, and **GORITZ**.

TRIESTE, a circle of the government of the same name, in

in Illyria. It contains 1440 square miles, with 176,000 inhabitants, and is divided into the four arrondissements of Trieste, Duins, Capo d'Istria, and Rovigno.

TRIESTE, a large and thriving sea-port of the Austrian dominions, the capital of a district in the Illyrian territory. It is situated near the north-west extremity of the gulph of Venice, and is divided into the old and new town. It is almost the only sea-port for a very large track of country, the south of Germany, the Illyrian provinces, and part of the Slavonian; in short, for the long track of Austrian territory extending from Tyrol to Transylvania. The territory belonging to the town comprises 170 square miles, and a population of nearly 9000. Trieste belonged to France during five years, from 1809 to 1814; 212 miles south-south-west of Vienna, and 69 east-north-east of Venice. Lat. 40. 43. N. long. 12. 58. 30. E.

TRIESTE ISLAND, a small island at the bottom of the gulf of Campeachy, westward of Port Royal Island, about 3 leagues from east to west. The creek which separates it from Port Royal Island is scarcely broad enough to admit a canoe. Good fresh water will be got by digging 5 or 6 feet deep in the salt sand: at a less depth it is brackish and salt, and at a greater depth than 6 feet it is salt again.

TRIESTY, mountains of Ireland, in the county of Mayo; 21 miles west of Killala.

TRIETERICAL, *adj.* [*trietericus*, Latin.] Triennial; kept every third year.—The *trieterial* sports, I mean the orgia, that is the mysteries of Bacchus. *Gregory*.

TRIETERIS [*τρίηρης*, Gr.], a cycle of three years.

Thales, it is said, observing that the lunar revolution never exceeded thirty days, appointed twelve months of thirty days each; so that the year consisted of three hundred and sixty days: and in order to reduce these months to an agreement with the revolution of the sun, he intercalated thirty days at the end of every two years, whence that space of time was called a *period of three*, because the intercalation was not made till after the expiration of full two years, though really it was only a period of two years; as we are informed by Censorinus, De Die Natali.

TRIEWALD (Martin), an eminent mathematician and engineer, was born at Stockholm, in 1691, and being intended for trade, he travelled to England for information and improvement on subjects that concerned his commercial pursuits. Disappointed in prospects of this kind, he changed his object; and was fortunately engaged by the proprietor of some coal-mines, near Newcastle, to superintend the machinery of his works. This situation corresponded to his genius and inclination; and he was thus led to pay particular attention to mechanics, both in theory and practice. In 1726 he returned, after an absence of ten years, to his native country, where he constructed a steam-engine, and read lectures in philosophy, illustrated by a course of experiments, similar to those of Desaguliers, which he had attended in London. He thus attracted the notice of the king and of the States, who conferred upon him a pension, with the title of Director of Machinery. He also proposed some improvements in the manufacture of iron and steel. Thus diligently and actively employed for the benefit of his country, he received a commission as captain of engineers and inspector of fortifications; and he invented various machines connected with those offices, models of which are preserved in the Academy of Sciences at Stockholm, and also in the Academy of Lund. Diving was also an object of his attention, and on this subject he wrote a treatise, entitled "Konst at lefwa under Watnet, or the Art of living under Water," Stockholm, 1741, 4to. For this invention he received honorary rewards both from his own sovereign and the king of France. In 1729 he was elected a member of the Society of Upsal; and the same honour was conferred upon him by the Royal Society of London and other learned bodies. Triewald died suddenly in 1747. He communicated various papers to the Academy of Sciences at Stockholm, which appear in its Memoirs for the years 1739, 1740, and 1747. *Beckman's Hist. of Inventions. Desaguliers' Philos. Gen. Biog.*

To **TRIFALLOW**, *v. a.* [*tres*, Latin, and *pealga*, Saxon, a harrow.] To plow land the third time before sowing. *Bailey*.—The beginning of August is the time of *trifallowing*, or last plowing, before they sow their wheat. *Mortimer*.

TRIFID, *adj.* Cut or divided into three parts. *Bailey*.

TRIFISTULARY, *adj.* [*tres* and *fistula*, Lat.] Having three pipes.—Many of that species whose *trifistulary* bill or cranny we have beheld. *Brown*.

To **TRIFLE**, *v. n.* [*tryfelen*, Dutch.] To act or talk without weight or dignity; to act with levity; to talk with folly.—When they say that we ought to abrogate such popish ceremonies as are unprofitable, or else might have other more profitable in their stead, they *trifle* and they beat the air about nothing which toucheth us, unless they mean that we ought to abrogate all popish ceremonies. *Hooker*.—To mock; to play the fool.

Do not believe,
That, from the sense of all civility,
I thus would play and *trifle* with your reverence.

Shakspeare.

To indulge light amusement; as, he *trifled* all his time.—Whatever raises a levity of mind, a *trifling* spirit, renders the soul incapable of seeing, apprehending, and relishing the doctrines of piety. *Law*.—To be of no importance.—'Tis hard for every *trifling* debt of two shillings to be driven to law. *Spenser*.

To **TRIFLE**, *v. a.* To make of no importance. *Not in use*.

Threescore and ten I can remember well,
Within the volume of which time I've seen
Hours dreadful and things strange; but this sore night
Hath *trifled* former knowings.

Shakspeare.

TRIFLE, *s.* A thing of no moment.

Brunetta's wise in actions great and rare,
But scorns on *trifles* to bestow her care:
Thus every hour Brunetta is to blame,
Because the occasion is beneath her aim.
Think nought a *trifle*, though it small appear;
Small sands the mountain, moments make the year;
And *trifles* life. Your care to *trifles* give,
Or you may die, before you truly live.

Young.

TRIFLER, *s.* [*trifelaar*, Dutch.] One who acts with levity; one that talks with folly.

Shall I, who can enchant the boist'rous deep,
Bid Boreas halt, make hills and forests move,
Shall I be baffled by this *trifler*, love?

Granville.

TRIFLING, *adj.* Wanting worth; unimportant; wanting weight.—To a soul supported with an assurance of the divine favour, the honours or afflictions of this life will be equally *trifling* and contemptible. *Rogers*.

TRIFLINGLY, *adv.* Without weight; without dignity; without importance.—Those who are carried away with the spontaneous current of their own thoughts, must never humour their minds in being thus *triflingly* busy. *Locke*.

TRIFLINGNESS, *s.* Lightness; emptiness; vanity.—The *triflingness* and petulance of this scruple I have represented upon its own proper principles. *Bp. Parker*.

TRIFOLIATE, *adj.* [*tres* and *folium*, Latin.] Having three leaves.

Trifoliata cytissus restrained its boughs
For humble sheep to crop, and goats to brouze.

Harte.

TRIFOLIUM [*Τριφυλλον* of Hippocrates and Dioscorides], in Botany, a genus of the class diadelphia, order decandria, natural order of papilionacæ or leguminosæ.—Generic Character. Calyx: umbellet or head with the common receptacle. Perianth one-leaved, tubular, five-toothed, permanent. Corolla papilionaceous, commonly permanent, shrivelling. Banner reflected. Wings shorter than the banner. Keel shorter than the wings. Stamina: filaments diadelphous (simple and nine-cleft.) Anthers simple. Pistil: germ subovate. Style awl-shaped; ascending. Stigma simple.

ple. Pericarp: legume scarcely longer than the calyx, one-valved, not opening, deciduous. Seeds very few, roundish. It is very difficult to give a complete character of this genus, with its true and essential mark. The appearance and various attributes of the species prove this genus to be natural: nor have they discovered the limits who have attempted to divide it.—*Essential Character.* Flowers in a head. Legume scarcely longer than the calyx, not opening, deciduous.

I.—Melilots. Legumes naked, many-seeded.

1. *Trifolium cæruleum*, or blue melilot trefoil.—Racemes ovate; legumes half-naked, mucronate; stem erect; spikes oblong. This is an annual plant.—Native of Germany.

2. *Trifolium Indicum*, or Indian melilot trefoil.—Legumes racemed, naked, one-seeded; stem erect.—Native of the East Indies, China, Africa, and Italy, if the plant be the same in all these countries. There are several varieties.

3. *Trifolium massanense*, or Sicilian melilot trefoil.—Legumes racemed, naked, one-seeded, bow-striated, semi-ovate, acute; stem erect.—Native of Sicily, Italy, and Barbary.

4. *Trifolium Polonicum*, or Polonian melilot trefoil.—Legumes racemed, naked, two-seeded, lanceolate; stem erect. This differs from the next species, in having the stem altogether round.—Native of Poland.

5. *Trifolium officinale*, or common melilot trefoil.—Legumes racemed, naked, two-seeded, wrinkled, acute; stem erect. Root annual, strong, woody. Stem upright, grooved, yellowish-green, two feet high or more, with spreading alternate branches.—Common melilot grows wild in most parts of Europe, in corn-fields, pastures, and by way-sides.

6. *Trifolium Italicum*, or Italian melilot trefoil.—Legumes racemed, naked, two-seeded, wrinkled, obtuse; stem erect; leaflets entire.—Native of Italy.

7. *Trifolium Creticum*, or Cretan melilot trefoil.—Legumes racemed, naked, two-seeded, membranaceous; stem nearly upright.—Native of Candia and Algiers.

8. *Trifolium ornithopodioides*, or bird's-foot melilot trefoil.—Legumes naked, eight-seeded, about three together, twice as long as the calyx; stems declined.—Native of Denmark, France and Britain, on dry gravelly heaths and pastures, among short grass, flowering in June and July.

II.—Lotoid. Legumes covered, many-seeded.

9. *Trifolium lupinaster*, bastard lupine, or trefoil.—Heads halved; leaves quinate, sessile; legumes many seeded.—Native of Siberia.

10. *Trifolium reflexum*, or reflex-headed trefoil.—Fruiting heads bent back; legumes three-seeded.—Native of Virginia.

11. *Trifolium strictum*, or upright trefoil.—Heads globular; legumes two-seeded; calyxes length of the corolla; leaflets serrulate; stipules rhombed. Root annual.—Native of Italy and Spain, in pastures.

12. *Trifolium hybridum*, or mule trefoil.—Heads umbelled, legumes four-seeded; stem ascending.—Native of several parts of Europe.

13. *Trifolium repens*, creeping white trefoil, or Dutch clover.—Heads umbelled; legumes four-seeded; stem creeping. Root perennial, fibrous. Stems numerous, prostrate, creeping, extending, white, branched at the base, leafy, smooth. Leaves on long petioles. White clover is common in pastures through the greater part of Europe; flowering from the end of May to September. There are many varieties, depending on richness or poverty of soil. Haller has noticed no less than eleven.

14. *Trifolium comosum*.—Heads globular, umbelled, imbricate; banners bent down, permanent; legumes four-seeded.—Native of America.

15. *Trifolium alpinum*, or alpine trefoil.—Heads umbelled, scape naked; legumes two-seeded, pendulous; leaflets linear-lanceolate. Root very large.—Native of the Alps, Pyrenees, Monte Baldo, &c.

III.—Lagopuses: with villose calyxes.

16. *Trifolium subterraneum*, or subterranean trefoil.—Heads villose, four-flowered or thereabouts; with a central

reflexed, rigid, stellate involucre wrapping up the fruit.—Root annual.—Native of France, Italy, Spain, and England.

17. *Trifolium globosum*, or globular trefoil.—Heads villose, globular; upper calyxes destitute of a floret.—Native of Arabia, Syria and China.

18. *Trifolium cherleri*, or hairy trefoil.—Heads villose, globular, terminating, solitary; all the calyxes fertile; stems procumbent; leaves obcordate. This is allied to the next, but the whole calyxes are hairy.—Native of France, Italy, and the hills about Algiers.

19. *Trifolium lappaceum*, or bur trefoil.—Spikes subovate; calycine teeth setaceous, hispid; stem patulous; leaves ovate.—Native of France, Spain, and Italy.

20. *Trifolium rubens*, or long spiked trefoil.—Spikes villose, long; corollas one-petalled; stem erect; leaves serrulate. This is a large elegant trefoil.—Native of the south of Europe, and about Algiers in Africa.

21. *Trifolium pratense*, common purple trefoil, or honey-suckle trefoil.—Spike dense; stems ascending; corollas unequal; calycine teeth four, equal; stipules awned. Root perennial, striking almost right down, and scarcely creeping, branching, granulated, ash-coloured. Spikes of flowers terminating, ovate, obtuse, solitary, sometimes peduncled, but commonly sessile between two opposite erect floral leaves. Besides the principal use to which clover is applied, for feeding cattle, it may be mentioned that the heads are used in Sweden to dye woollen green. With alum they give a light, and with copperas a dark green. The seeds also yield a dye. There are several varieties.

22. *Trifolium medium*, or zigzag trefoil.—Spikes loose; stems flexuose, branched; corollas nearly equal; stipules subulate-linear.—It is found in chalk and in gravel with a clay bottom; in many parts of Europe, in Great Britain, Sweden, Denmark, Austria, Carniola, Piedmont, Holland, Switzerland, and many parts of Germany.

23. *Trifolium alpestre*, or alpine trefoil.—Spikes dense; corollas nearly equal; stipules setaceous, diverging; leaflets lanceolate; stem stiff and quite simple.—Native of Britain, but is found in dry mountainous woody places, in Hungary, Austria, Bohemia, Moravia, Stiria and Piedmont. Several varieties.

24. *Trifolium pannonicum*, or Hungarian trefoil.—Spikes villose, long; corollas one-petalled; leaves quite entire; stem erect; both extremely villose.—Native of Lower Hungary, in the neighbourhood of Schemnitz, in moist meadows.

25. *Trifolium squarrosum*, or round-leaved trefoil.—Spikes oblong, somewhat hairy; the lowest teeth of the calyxes reflexed; stem herbaceous, erect.—Native of Spain.

26. *Trifolium incarnatum*, or crimson trefoil.—Spikes villose, oblong, obtuse leaflets. This is an annual trefoil, and of the largest and most showy.—Native of Italy, the south of France, and of Barbary, about Algiers.

27. *Trifolium ochroleucum*, pallid or sulphur-coloured trefoil.—Head villose; stem erect, pubescent; lowest leaflets obcordate; lowest calycine tooth very long.—Native of France, Switzerland, Austria, Silesia, Italy and England.

28. *Trifolium angustifolium*, or narrow-leaved trefoil.—Spikes villose, conic-oblong; calycine teeth setaceous, almost equal; leaflets linear.—Native of Germany, the South of France, Italy, Spain, Carniola, Barbary, and the Island of Madeira.

29. *Trifolium arvense*, or hare's-foot trefoil.—Spikes extremely villose, subcylindrical; calycine teeth setaceous, longer than the corolla; leaflets obovate-linear. Root small and annual. The whole plant villose. Stem mostly erect, much branched, round, firm, changing its direction from joint to joint.—Native of Europe and Barbary, in barren sandy pastures and fields; flowering in July and August.

30. *Trifolium maritimum*, or teal-headed trefoil.—Spikes hairy, globular; calycine teeth leafy, finally spreading; stipules lanceolate; leaflets obovate.—It grows in salt-marshes and meadows near the sea in various parts of England, from Norfolk all along the south and west coast to Wales.

31. *Trifolium stellatum*, or star-headed trefoil.—Spikes hairy

hairy; calyxes spreading; stem diffused; leaflets obcordate.—Native of the South of France, Carniola, Italy, Sicily and Barbary.

32. *Trifolium clypeatum*, or oriental trefoil.—Spikes ovate; calyxes patulous; lowest segment largest, lanceolate; leaflets ovate.—Native of Italy and the Levant.

33. *Trifolium scabrum*, or rough trefoil.—Heads sessile, lateral, ovate; calycine teeth unequal, permanent, rigid, recurved.—Native of several parts of Europe, as Germany, Switzerland, Carniola, South of France, Italy, Britain; also of the hills about Algiers in Barbary.

34. *Trifolium glomeratum*, or round-headed trefoil.—Heads hemispherical, sessile lateral, smooth; calycine teeth cordate, reflexed, veined.—Native of England, Spain, Italy; also Barbary, about Algiers.

35. *Trifolium striatum*, or soft knotted trefoil.—Heads sessile, lateral and terminating, ovate; calyxes elliptic, hirsute, grooved; teeth setaceous.—Native of Britain, Germany, France, Spain and Italy, in dry barren pastures.

36. *Trifolium suffocatum*, or suffocated trefoil.—Heads sessile, lateral, roundish, smoothish; calycine teeth lanceolate, acute, recurved, longer than the corolla.—Native of Sicily.

37. *Trifolium Alexandrinum*, or Egyptian trefoil.—Heads oblong, peduncled; stem erect; leaves opposite.—Native of Egypt.

38. *Trifolium uniflorum*, or one-flowered trefoil.—Stemless; peduncles trifid and subtriflorous, shorter than the stipule.—Native of Syria, Judea, Arabia, abundant about Constantinople, and Candia.

IV.—Bladdery, with inflated ventricose calyxes.

39. *Trifolium spumosum*, or bladdered trefoil.—Spikes ovate; calyxes inflated, smooth, five-toothed; general involucre five-leaved.—Native of France and Italy.

40. *Trifolium resupinatum*.—Spikes subovate; corollas turned upside down; calyxes inflated, gibbous at the back; stems prostrate.—Native of Belgium, Silesia, the South of France and Italy.

41. *Trifolium tomentosum*, or woolly trefoil.—Spikes sessile, globular, tomentose; calyxes inflated, obtuse.—Native of the South of Europe and of Barbary.

42. *Trifolium hispdatum*, or shaggy trefoil.—Heads involucred, terminating; calycine teeth setaceous, villose; shorter than the corolla; leaflets obovate.—Native of Barbary near Mascar.

43. *Trifolium sphærocephalon*, or globular trefoil.—Villose; heads round, involucred; segments of the calyx setaceous, longer than the corolla; leaflets obcordate.—Native of Barbary near Mascar.

44. *Trifolium fragiferum*, or strawberry trefoil.—Heads roundish; calyxes inflated, two-toothed, reflexed; stems creeping.—Native of all parts of Europe, flowering in July and August.

V.—Hop trefoils, with the banner of the corolla bent in.

45. *Trifolium montanum*, or mountain trefoil.—Spikes subimbricate, about three; banners awl-shaped, shrivelling; calyxes naked; stem erect.—Native of many parts of Europe, on very dry hills, from Sweden to Spain.

46. *Trifolium agrarium*, or upright hop trefoil.—Spikes oval, imbricate; banners bent down, permanent; calyxes naked; stem erect. Root annual.—Native of many parts of Europe, in pastures.

47. *Trifolium spadicum*, or bay-flowered trefoil.—Spikes oval, imbricate; banners bent down, permanent; calyxes hairy; stem erect.—Native of several parts of Europe, in dry pastures.

48. *Trifolium procumbens*, or procumbent hop trefoil.—Spikes oval, many-flowered; banners grooved; stems procumbent; common petiole elongated at the base.

49. *Trifolium filiforme*, or least trefoil.—Spikes few-flowered, loose; peduncles flexuose; banners smooth; stem prostrate; all the leaflets subsessile.

50. *Trifolium minus*, or small yellow trefoil.—Spikes in hemispherical heads; peduncles stiff; banners smoothish; stems prostrate; common petiole very short at the base.

VOL. XXIV. No. 1627.

51. *Trifolium biflorum*, or two-flowered trefoil.—Spikes two-flowered, sessile; involucre hispid, funnel-form; leaves lanceolate.—Native of Virginia and Canada.

Propagation and Culture.—If the seeds of the melilots, which are annual plants, be permitted to scatter, the plants will rise without care, and require no other culture but to be kept clean from weeds, and to be thinned where they grow too close.

White or Dutch clover grows naturally in most of the pastures in England, and is generally known among the country people by the title of white honeysuckle. The seed of this white Dutch clover is annually imported from Flanders, by the way of Holland, from whence it received the name of Dutch Clover.

Since the red clover has been cultivated in England, there has been great improvement made of the clay lands, which before produced little but rye-grass, and other coarse bents; which, by being sown with red clover, have produced more than six times the quantity of fodder they had formerly on the same land, whereby the farmers have been enabled to feed a much greater stock of cattle than they could before, which has enriched the ground, and prepared it for corn; and where the land is kept in tillage, it is the usual method now among the farmers, to lay down their ground with clover, after having had two crops of corn, whereby there is a constant rotation of wheat, barley, clover, or turnips on the same land.

The clover-seed is always sown with barley in the Spring, and when the barley is taken off, the clover spreads and covers the ground, and this remains two years, after which the land is plowed again for corn.

When clover is to be saved for seed, a common custom is to feed it down close until the end of May, which early feed is a vast advantage for ewes, lambs, &c. as it comes in before the natural grasses.

These are the common advantages derived from clover; but a greater benefit may be obtained by cutting it green, as often as it attains a sufficient growth, and soiling horses and cattle with it, in racks and cribs. In this manner it will support more than twice the stock it would do if fed off the ground; besides the additional quantity of manure, that will be made in the stables and yards, if they are kept littered with straw, fern, &c. which increase of manure will fully compensate the farmer for his expense in cutting and bringing the clover into the yards. The quick growth of clover after mowing shades the ground, and prevents the sun from exhaling the moisture of the land, so much as it would if fed bare; consequently it continues to spring with more vigour; and the moment one crop is off, another begins to shoot up. Whereas when cattle feed it, they frequently destroy as much as they eat; and besides, break the necks of the roots with their feet, which prevents the clover from springing so freely as it does after a clean cut by the scythe. In hot weather, which is the common season for feeding clover, the flies are generally so troublesome to the cattle, that they are continually running from hedge to hedge, to brush them off, by which it is inconceivable what injury they do to the crop. But when they are fed in stables and yards, they are more in the shade, they thrive better, and consume the whole of what is given to them without waste.

In some countries, the yellow trefoil is sown after the same manner as the common red clover, especially on chalky ground, where it will thrive, and produce a better crop than clover.

Trifolium filiforme and *minus* grow naturally among grass in most of the upland pastures in this country; and the seeds of the former are frequently sold in the shops by the name of hop-clover, and are by many mixed with other sorts of clover and grass seeds, for laying down ground to pasture.

As to the other species, which are mostly preserved in botanic gardens, they are easily propagated by seeds, sown in an open bed of ground, either in autumn or spring.

TRIFOLY, *s.* [*trifolium*, Lat.] Sweet trefoil. *Mason*.

—She was crowned with a chaplet of *trifoly*. *B. Jonson*.

TRIFORM, *adj.* [*triformis*, Latin.] Having a triple shape.

The moon her monthly round
Still ending, still renewing through mid heaven,
With borrow'd light her countenance *triform*
Hence fills, and empties, to enlighten the earth. *Milton.*

TRIFORMIUM, the gallery which usually goes round a church of the pointed style, over the side-aisles, so called by Gervasius and other ancient writers.

TRIFORMIS, an epithet given to Diana.

To TRIG, *v. a.* [perhaps from *τρῖζ*, Sax. *alveus*.] To fill; to stuff. This is still a northern verb; and *trig* is also there used as an adjective for *full*.—By how much the more a man's skin is full *trig'd* with flesh, blood, and natural spirits. *More.*

To TRIG, *v. a.* [*trega*, Goth., *tardare*. *Serenius*.—See TRIGGER.] To stop a wheel; to catch a wheel so as to prevent it from going backward or forward. *Bailey.*

TRIG, *adj.* Full. See To TRIG.—Trim; neat. [perhaps from *To trick*, to dress.] Used in some parts of the north, and in Scotland.

TRIGA, a kind of car, or chariot, with three horses.

TRIGAMY, *s.* [*τρεις* and *γαμος*, Gr.] State of being married three times; state of having three husbands or wives at one time.—They marry oft-times at nine or twelve years of age; the laity twice, ecclesiastics but once; *trigamy* to all is hateful. *Sir T. Herbert.*

TRIGARDON, a small place of European Turkey, on the coast of the ancient *Ætolia*. It occupies the site of the ancient town of *Æniades*, at the mouth of the large river *Achelous*, now the *Aspro-Patamo*. It was once commercial and populous, but from the accumulation of sand, vessels cannot now approach it.

TRIGAULT (Nicholas), a Jesuit missionary, was born at Douay, in 1577, and having entered into the Society of Jesus, was sent, in 1610, on a mission to the East Indies. After a year's residence in China, he came to Europe for a recruit of missionaries, and returned with forty-four associates. At length his life and labours terminated at Nanking, in 1628. Of his works, which were numerous, we shall only mention his treatise, entitled "De Christiana Expeditione apud Sinas ex Mathei Ricci Commentariis," 1615, 4to. This work, composed from the memoirs of Ricci, contains a description of the manners, laws, and customs of the empire of China, with an account of the acts of the Jesuits in that country. "A Chinese Dictionary," 3 vols. printed in China. *Moreri.*

TRIGEMINI NERVI, the nerves of the fifth pair of the head.

TRIGGER, *s.* [from *trigue*, Fr.; from *intricare*, Latin.] A catch to hold the wheel on steep ground. The catch that being pulled looses the cock of the gun.—The pulling the *trigger* of the gun with which the murder is committed, has no natural connection with those ideas that make up the complex one, murder. *Locke.*

TRIGINTALS, *s.* [from *triginta*, Latin.] Trentals or *trigintals* were a number of masses to the tale of thirty, instituted by Saint Gregory. *Ayliffe.*

TRIGLA, or GURNARD, a genus of fish of the order of the Thoracici; the characters of which are, that the head is large, mailed, and marked by rough lines; the eyes large and round at the vertex; the mouth large; the palate and mandibles armed with sharpened teeth; and the nostrils double; the aperture of the branchiæ or gills large; the gill-cover spiny, and the gill membrane seven-rayed; the body covered with scales, wedge-formed; the back straight, with a longitudinal furrow on both sides, spinous; the lateral line near the back, straight; the abdomen thick, the ventral and pectoral fins large, and, in some species, near the pectoral fins are finger-shaped processes.

1. *Trigla cataphracta*, or red gurnard.—With double fingers; forked elongated snout, and octagonal mailed body: its length is about twelve inches: the longitudinal rows or divisions of the body are marked by twelve serrated or

aculeated lines; beneath the throat is a pair of ramified cirri; the pectoral fins and tail are pale-brown; the other fins pale-yellow, and nearly transparent; rays of the first dorsal fin running out beyond the membrane.—A native of the Mediterranean.

2. *Trigla lyra*, or red gurnard.—Silvery beneath, with triple fingers, and bifid denticulated snout. This is the piper of the British Zoology. Its length is from one to two feet or more; its lateral line formed of small scales; its scales are small, pectoral fins large, slightly tinged with dull blue; tail of like colour; the other fins yellowish, with red rays.—Native of the European seas, and considered as an excellent fish for the table.

3. *Trigla gurnardus*, or grey gurnard.—With triple fingers, and lateral line mailed with rounded whitish scales: length the same as that of the former; colour above deep grey, with blackish and red spots, beneath silvery; scales small, lateral line strongly marked with a series of larger, rounded, whitish scales, with a dusky central spot.—Native of the European seas, and not uncommon about our own coasts, feeding on worms, insects, &c.

4. *Trigla cuculus*, or red cuckow gurnard.—Silvery beneath, with triple fingers, and first dorsal fin marked by a black spot; an elegant species, about a foot in length, of a more slender shape than the last; colour on the upper parts a beautiful red, more or less distinctly marked by whitish transverse bars; scales extremely small; lateral line composed of pointed white scales edged with black, and a similar row on each side of the back; fins transparent; the first dorsal marked on the edge by a black spot, the second tinged near its edge with yellow.—Native of the European seas, and esteemed as a food.

5. *Trigla lucerna*.—With triple fingers, sub-bifid snout, and lateral line bifid at the tail.—Native of the Northern seas, and conjectured to be a variety of the *trigla hirundo*.

6. *Trigla hirundo*, or grey-brown gurnard.—Silvery beneath, with triple fingers, and very large olivaceous pectoral fins spotted with blue: the Sapphiric gurnard of the British Zoology; and stock-fish of Willughby. Of the same size with the grey gurnard; scales middle-sized, lateral line rough, pectoral fins very large, of a violaceous olive, sometimes richly edged and spotted with blue.—Native of the European seas, occasionally springing out of the water to some distance by means of its large pectoral fins.

7. *Trigla lineata*, or red gurnard.—Marked above by dusky-sanguine spots, with the body crossed on each side by numerous perpendicular lines: the streaked gurnard of the British Zoology. Size and habit of *trigla cuculus*; colour bright-red, abdomen silvery; on each side of the back, close to the base of the dorsal fin, a row of broad, serrated, short processes of a yellow colour; lateral line formed by a row of similar ones; scales small, sides above and below the lateral line marked into very numerous, narrow perpendicular divisions; pectoral fins large, rounded, of a dusky-brown, spotted with black; rest of the fins yellowish, with a tinge of red, especially the tail, which is slightly lunated.—Native of the Mediterranean sea.

8. *Trigla Asiatica*, or silvery gurnard.—With quadruple fingers; body smooth, snout smooth and prominent; anterior gill-covers serrated; pectoral fins falcated.—Native of the Indian seas.

9. *Trigla evolans*, or springing gurnard.—With triple fingers, and three serrated spines between the dorsal fins; allied to the *trigla volitans*, but finished with three separate pectoral processes; the pectoral fins very large, but less than those of the next species; the pectoral fins blackish.—Native of the American seas.

10. *Trigla volitans*, or red gurnard.—With aculeated scales, very large pectoral fins spotted with blue, and sextuple fingers connected by a membrane; the milvus of Salvian, *Aldrovandus*, *Willughby*, &c. This is a highly singular and beautiful species; length about twelve inches; colour crimson above, pale or whitish beneath; head blunt, armed on each side with two very strong large spines, pointing backwards; the whole body covered with very strong carinated

and sharp-pointed scales, hardly separable; first dorsal fin pale violet, crossed with deeper lines, and at its origin two separate rays longer than the rest; second dorsal fin pale, with the rays barred by brown; pectoral fins very large, transparent, of an olive-green, richly varied with numerous bright-blue spots, six pectoral processes, not separate, but united, and appearing like a small fin on each side of the thorax; tail pale violet, with the rays crossed by dusky spots, and strengthened on each side of the base by two obliquely transverse bony ribs or bars.—Native of the Mediterranean, Atlantic, and Indian seas, where it swims in shoals, and is often seen flying out of the water to a considerable distance.

11. *Trigla Japonica*, or alata; the Japanese gurnard.—With eleven fingers on each side, palmated by a membrane. About four inches in length; head angular; lower jaw and hinder margin of the gill-covers furnished with two strong spines.—Native of the Japanese sea.

12. *Trigla Adriatica*.—With the body verticillated by scales, and aculeated lateral line; pectoral fins black beneath, and triple fingers; supposed to be a variety of *trigla lineata*, and differing from it by being varied with bands of black spots, and having the spots of the pectoral fins disposed into two transverse bands, the edges being marked beneath by a row of blue spots.—Observed in the Adriatic sea.

13. *Trigla minuta*.—With triple fingers, and bicarinated black. A small species: head hard and rough, emarginated and denticulated in front, and furnished with two spines above the eyes; posterior gill-covers spiny; pectoral and ventral fins very sharp-pointed; tail rounded.—Native of the Indian seas.

14. *Trigla Carolina*, or whitish gurnard.—Speckled with red, with triple fingers, and brown pectoral fins transversely banded with black; length about ten inches; dorsal fins pale orange spotted with brown. the first fin marked by a black spot; tail slightly rounded at the end, and crossed by three or four rows of brown spots.—Native of the American seas.

15. *Trigla cavillone*, or red gurnard.—With a single spine above each eye, and six on each side of the back of the head. Length about three inches; body covered with small denticulated, rough scales; colour red; pectoral fins white above, and dark-green or olive beneath.—Native of the Mediterranean, and known on the French coasts by the appellation of Cavillone.

16. *Trigla punctata*, or rose-red gurnard.—With blood-red specks, and broad obtuse head, spined on the hind-part. Length about eight inches; head broad, obtuse, and furnished behind with strong spines; scales middle-sized; pectoral fins very large, rounded, and of a dusky-blue colour, speckled with red, and inclining to yellow towards their tips; rest of the fins and tail yellow speckled with red.—Native of the American seas.

17. *Trigla pini*, or red gurnard.—With triple fingers, and body marked on each side by numerous transverse convex lines. Similar in habit to that of *trigla piper*, but in other respects much allied to *trigla lineata*; colour red, with yellowish abdomen; scales small; dorsal and lateral line aculeated, from which pass perpendicular convex lines terminating rather obtusely above and below, and bearing some resemblance to pine-leaves; fins and tail yellowish; ventral fins red, with an obscure bluish cast.—Native region unknown.

18. *Trigla chabrontera*.—With the body mailed beneath, and red fins. Allied to the *trigla cataphracta*, but differing by not having the body marked by an octagonal form; the under parts only being furnished with bony divisions: above the snout are several spines pointing backwards; and above and below the tail are also placed three spines: all the fins, except the tail, are of a bright red.—Native of the Mediterranean. *Shaw's Zoology*.

TRIGLA, the name of a divinity among the Germans with three heads, which was probably Diana Trivia, or Hecate.

TRIGLOCHIN [from *τρεις*, three, and *γλωχιν*, a point: the capsule opening in three points, like the barbs of an arrow], in Botany, a genus of the class hexandria, order trygynia, natural order of tripetaloidæ, junci (*Juss.*)—Generic Character. Calyx: perianth three-leaved; leaflets roundish, obtuse, concave, deciduous. Corolla: petals three, ovate, concave, obtuse, like the calyx. Stamina: filaments six, very short. Anthers as many, shorter than the corolla. Pistil: germ large. Styles none. Stigmas three or twice as many, reflexed, feathered. Pericarp: capsule ovate-oblong, obtuse; cells as many as there are stigmas, opening at the base by acute valves. Seeds solitary, oblong.—*Essential Character*. Calyx three-leaved. Petals three, calyx-form. Style none. Capsule opening at the base.

1. *Triglochis palustre*, or marsh arrow-grass.—Capsules three-celled, even, linear, attenuated at the base. Root fibrous, tufted, perennial. Leaves radical, sheathing, bifarious, linear, channelled.—Native of Europe, Siberia and Barbary, in wet boggy meadows, flowering in July.

2. *Triglochis bulbosum*, or bulbous arrow-grass.—Capsules three-celled, even, linear, attenuated at the top. Root bulbous, covered with bristles, heaped into a tufted bundle.—Native of the Cape of Good Hope.

3. *Triglochis maritimum*, or sea arrow-grass.—Capsules six-celled, grooved, ovate. Scape scarcely longer than the leaves, inclining at the base, terminating in a dense spike of greenish-purple flowers, on short flower-stalks. Leaves wider and more fleshy than in the *palustre*, with which it agrees in habit.—Native of most parts of Europe, and of Siberia, in salt-marshes, and in the ouze of large rivers, where the tide flows; flowering throughout the summer. All domestic cattle being very fond of this plant, it may deserve the notice of such as possess salt-marshes.

TRIGLYPH, *s.* [*τρεις* and *γλυφη*, Gr.; *triglyphe*, Fr.] In architecture. A member of the frieze of the Doric order set directly over every pillar, and in certain spaces in the intercolumniations. *Harris*.—The Doric order has now and then a sober garnishment of lion's heads in the cornice, and of *triglyphs* and metopes always in the frieze. *Wotton*.

TRIGNO, a river of Italy, in the north of the kingdom of Naples, in the province of Molise. It rises near Carovilli, and falls into the Adriatic at Vasto.

TRIGON, *s.* [*τριγωνον*, Gr.] A triangle. A term in astrology.—The astronomers tell of a watery *trigon*. *Harington*.

TRIGONAL, *adj.* Triangular; having three corners.—A spar of a yellow hue shot into numerous *trigonal* pointed shoots of various sizes, found growing to one side of a perpendicular fissure of a stratum of free-stone. *Woodward*.

TRIGONELLA [dimin. from *trigona* (corolla)]; so named from its three-cornered corolla, in Botany, a genus of the class diadelphia, order decandria, natural order of papilionaceæ, or leguminosæ.—Generic Character. Calyx: perianth one-leaved, bell-shaped, half-five-cleft; toothlets awl-shaped, nearly equal. Corolla papilionaceous, as it were three-petalled; banner subovate, obtuse, reflex-spreading. Wings two, ovate-oblong, outwardly reflex-spreading, so that the banner with the wings constitutes as it were a regular three-petalled corolla. Keel very short, obtuse, occupying the navel of the flower. Stamina: filaments diadelphous (simple and nine-cleft) short, rising. Anthers simple. Pistil: germ ovate-oblong. Style simple, rising. Stigma simple. Pericarp: legume ovate-oblong, compressed, covered. Seeds many, roundish. From the form of the corolla only this becomes a distinct genus.—*Essential Character*. Banner and wings nearly equal, spreading, in form of a three-petalled corolla.

1. *Trigonella ruthenica*, or small fenugreek.—Legumes peduncled, heaped, pendulous, linear, straight; leaflets sub-lanceolate.—This is a biennial plant; the roots decaying soon after the seeds are ripe.—Native of Siberia.

2. *Trigonella platycarpus*, or round-leaved fenugreek.—Legumes peduncled, heaped, pendulous, oval, compressed; stem

stem diffused, leaflets roundish. Root biennial.—Native of Siberia.

3. *Trigonella striata*.—Legumes peduncled, nearly upright, distant; peduncles larger than the leaf.—Native of Abyssinia.

4. *Trigonella polycerata*, broad-leaved, or Spanish fenugreek.—Legumes subsessile, heaped, erect, nearly straight, long, linear; peduncles awnless.

5. *Trigonella hamosa*, or Egyptian fenugreek.—Legumes peduncled, racemed, declined, hooked round; peduncles spiny, longer than the leaf. Annual.—Native of Egypt.

6. *Trigonella spinosa*, or thorny fenugreek.—Legumes subpeduncled, heaped, declined, sickle-shaped, compressed; peduncles thorny, very short.—Native of the island of Candia.

7. *Trigonella corniculata*, or horse-shoe fenugreek.—Legumes peduncled, heaped, declined, somewhat sickle-shaped; peduncle long, somewhat spiny; stem erect.—Native of the South of Europe.

8. *Trigonella monspeliaca*, or trailing fenugreek.—Legumes heaped, sessile, bowed, divaricated, inclined, short; peduncle mucronate, unarmed.—Native of France, Italy, and Algiers.

9. *Trigonella laciniata*, or jagged fenugreek.—Legumes peduncled, subumbelled, elliptic; leaflets wedge-form, toothed; stipules laciniated.—Native of Egypt.

10. *Trigonella fœnum-græcum*, or common fenugreek.—Legumes sessile, strict, nearly erect, somewhat sickle-shaped, acuminate; stem erect. Leaflets oblong, oval, indented on their edges, on broad furrowed foot-stalks. The flowers come out singly at each joint from the axils; they are white, and sit very close to the stalk.—Native of France, the county of Nice, Spain, Germany and Barbary. The wild plant differs, in having long runners next the root, all pressed close to the ground, the stem only being upright; leaflets obovate, not obtusely lanceolate; with the joints of the leaves purple. Legumes more hairy.

11. *Trigonella Indica*, or Indian fenugreek.—Legumes sessile, subsolitary, subfalcate; leaflets quite entire; stem diffused.—Native of the East Indies.

12. *Trigonella pinnatifida*.—Stem prostrate, four-cornered legumes linear, compressed, erect, sessile.—Native of Spain, in the neighbourhood of Madrid.

Propagation and Culture.—Sow the seeds where the plants are designed to stand, for they will not bear transplanting. If they are sown in autumn, the plants will come earlier to flower, and good seeds may be obtained with more certainty than from spring plants. All the culture they require, is to thin them where they stand too close, and to keep them clean from weeds.

TRIGONIA [so named from the form of the fruit], in Botany, a genus of the class diadelphia, order decandria, natural order of malpighiæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, turbinate; border five-cleft, the two upper segments more deeply separated, erect, diverging. Corolla papilionaceous; five-petalled: banner erect, flat, clawed. Wings reflexed, longer, narrower. Keel two-petalled, converging. Stamina: filaments ten, connected into a sheath, distinct at top, some (3, 5, 7,) often barren. Anthers oblong. Pistil: germ ovate, small. Style short, ascending. Stigma headed, flat, girt with a membranaceous margin. Pericarp: capsule oblong, three-cornered, three-grooved, acute, one-celled, three-valved; valves boat-shaped, doubled; outer coriaceous, inner membranaceous, woolly within. Seeds very many, roundish, involved in long wool, fastened to three threads uniting the valves.—*Essential Character*. Calyx five-parted. Petals five, unequal, uppermost foveolate at the base within. Nectary: two scales at the base of the germ. Filaments: some barren. Capsules leguminose, three-cornered, three-celled, three-valved.

1. *Trigonella villosa*.—Leaves obovate beneath, tomentose, hoary. Branches round, smooth below, villose above; branchlets hoary-tomentose. Leaves on the younger branchlets petioled, opposite, two or three inches long, ovate. Racemes from the last axils quite simple, terminating, com-

posed; branches opposite, spreading very much, decreasing upwards. Pedicels opposite or alternate, spreading very much, with a yellowish down on them like the peduncles.—Native of Cayenne.

2. *Trigonella lævis*.—Leaves oblong on both sides, smooth shining.—Native of Guiana.

TRIGONOMETRICAL, *adj.* Pertaining to trigonometry.

TRIGONOMETRICALLY, *adv.* According to the rules of trigonometry.—In the years 1741 and 1742, Mr. J. Rennshaw, my agent, went round the coast of England, and surveyed it *trigonometrically*. *Whiston*.

TRIGONOMETRY, *s.* [from the Gr. *τριγωνος*, a triangle, and *μετρον*, a measure.] The science of determining the sizes and proportions of the parts of triangles. This branch of geometry being available to measure many inaccessible dimensions from some known parts, is the foundation of many of the important conclusions in the sciences of astronomy, navigation, &c. Strictly speaking, however, trigonometry has a still more extensive signification; for the laws deducible from measuring the angles of three-sided figures are applicable to the analysis of angles in general, and this again to the determination of the sizes and proportion of other figures. Trigonometry is of two kinds, *plane* and *spherical*. We shall commence with a brief account of the former, referring those who are desirous of going deeper to the numerous and well-known elaborate treatises on the subject.

DEF. I. *The tangent of an arch, or angle*, is that portion of the geometrical tangent at one extremity of the arch, which is intercepted between the sides of the corresponding angle. Thus in plate 1. fig. 1., AH is the tangent to the arch AD , or to the angle ACD .

II. *The secant of an arch, or angle*, is that portion of a geometrical secant through one extremity of the arch, which is intercepted between a tangent at the other and the centre. Thus in fig. 1., CH is a secant of the arch AD or of the angle ACD .

III. *The complement of an arch, or angle*, is the difference between it and a quadrant, or right angle. Thus DB is the complement of the arch AB , and the angle DCB the co. of the angle DCA .

IV. *The sine of an arch, or angle*, is the perpendicular drawn from one extremity of the arch to the opposite side of the angle. Thus (fig. 1.) DG is the sine of the arch AD , or the angle ACD .

V. *The versed sine of an arch, or angle*, is the intercept of the diameter between the sine and tangent. Thus GA is the versed sine of the arch AD or angle ACD .

VI. *The supplement of an arch, or angle*, is the difference between it and a semicircumference, or two right angles. Thus the arch DA is the supplement of the arch DE , and the angle DCA the supplement to the angle DCE .

These definitions being understood, we proceed to make the following assertions.

1. The square of the secant of an angle is equal to the sum of the squares of the tangent and of the radius.

2. The rectangle under the tangent and cotangent of an arch, or angle, is equal to the square of the radius.

3. The square of the radius is equal to the sum of the squares of the sine and cosine of an arch or angle.

4. The ratio of the sine to the cosine of an angle is the same as that of the tangent to the radius.

5. The rectangle under the secant and cosine of an angle is equal to the square of the radius.

6. The sine of an angle is equal to the sine of its supplement.

7. The sine of an angle is equal to half the chord of twice the corresponding arch.

8. The rectangle under the radius and the sine of twice an angle is equal to twice the rectangle under its sine and cosine.

9. The rectangle under the radius and the cosine of twice an angle is equal to the difference between the square of the radius and twice the square of the sine of the angle.

10. Let

10. The tangent of half a right angle is equal to the radius.

11. The sine is equal to the cosine of half a right angle, and the square of each is equal to half the square of the radius.

12. The cosine of an angle equal to one-third of two right angles is equal to half the radius.

13. The square of the sine of an angle equal to one-third of two right angles is equal to three-fourths of the square of the radius.

14. The sine of an angle equal to one-third of a right angle is equal to half the radius.

15. The square of the cosine of an angle equal to one-third of a right angle is equal to three-fourths of the square of the radius.

16. In a triangle the sides are to each other as the sines of their opposite angles.

17. In a triangle the tangent of half the sum of any two angles is to the tangent of half their difference, as the sum of the opposite sides is to their difference.

18. In a triangle the cosine of any angle multiplied by twice the product of the sides which contain it, is equal to the sum of the squares of those sides diminished by the square of the third side.

19. In a right-angled triangle given the two sides containing the right angle, the triangle itself may be determined.

20. In a right-angled triangle given the side opposite the right angle and one of the remaining sides, the triangle itself may be determined.

21. In a right-angled triangle given the side opposite the right angle, and one acute angle, the triangle itself may be determined.

22. In a right-angled triangle given either side about the right angle, and either acute angle, the triangle itself may be determined.

23. In any triangle given two sides and the included angle, the triangle itself may be determined.

24. Given two angles of a triangle, and the side opposite either of them, the triangle itself may be determined.

25. Given two angles of a triangle, and the side between them, the triangle itself may be determined.

26. Given the three sides of a triangle, the triangle itself may be determined.

27. Given two sides of a triangle, and the angle opposite either of them, the triangle itself may be in some cases determined.

We proceed now to the proofs, which will be numbered in the same way.

1. Let A C D (fig. 1.) be any angle represented by A. Then if we use R to represent A C the sec. $\sec^2 A = \tan^2 A + R^2$, the proof being exactly the same as in 111, in the article Geometry, where it was shewn that in every right-angled triangle the square of the side subtending the right angle = the sum of the squares of the two sides containing that angle.

2. Let A C D (fig. 1.) be any angle represented by A. Then $\tan A \times \cotan A = R^2$. For the angles H A C, A C B, C B K, being all right angles, A H is parallel to C B, and A C to B K. Now (by 95 Geom.) the angle A C H = the angle C K B, and the angle A H C = the angle H C B. Therefore, (by 99 Geom.) A H : B C :: A C : B K, . . . (by 162 Geom.) A H \times B K = B C \times A C = A C². Q.E.D.

3. Let A C D (fig. 1.) be the angle represented by A. Then $R^2 = \sin^2 A + \cos^2 A$. For by 111, Geometry, C D² = D C² + C G². Q.E.D.

4. Let A C D (fig. 1.) be the angle, represented by A. Then, $\frac{\sin A}{\cos A} = \frac{\tan A}{R}$, which is plainly deducible from Geometry, 98.

Obs: Hence, if the complementary angle B C D be called B, it follows by this Art., that

$$\frac{\sin B}{\cos B} = \frac{\tan B}{R};$$

i. e. As the sine, cosine, and tangent of B are respectively the cosine, sine, and cotangent of A,

$$\frac{\cos A}{\sin A} = \frac{\cotan A}{R}.$$

5. Let A C D (fig. 1.) be the angle, represented by A. Then $\sec A \times \cos A = R^2$. For by 99 Geom., C H : C D :: C A : C G; . . . by 162 Geom., C H \times C G = C D \times C A = C A². Q. E. D.

Hence it follows that, representing the angle B C D by B,

$$\sec B \times \cos B = R^2;$$

i. e. as the secant and cosine of B are respectively the cosecant and sine of A,

$$\text{cosec } A \times \sin A = R^2.$$

It will easily be perceived that all the above definitions of goniometrical lines are applicable, whatever be the magnitude of the given angle, although we appear to have considered those only, such as A C D, which are less than a right angle.

Thus in fig. 2, if A C D' be the given angle, A H' will be its tangent, according to Def. I.; because A H' is "that portion of the geometrical tangent intercepted between the two sides" C A, C D', (the latter being produced backwards through C, in order to meet the geometrical tangent at H'). Also B C D' being the difference between the angle A C D' and a right angle, is the complement of the former, by Def. III., and therefore B K' is the cotangent of A C D'.

Again: C H' is the secant of A C D', according to Def. II.; and C K', its cosecant.

Finally: D' G' is the sine of A C D' C G' its cosine, A G' its versed sine, according to Def. IV. and Obs., and Def. V.

And not only may the definitions given above be extended to the cases of such angles as A C D', but likewise the assertions made hitherto.

Thus: C H'² = A H'² + A C², that is, $\sec^2 A C D' = \tan^2 A C D' + R^2$.

$$(1). \quad A H' : B C :: A C : B K', \quad \dots \quad \tan A C D' \times \cotan A C D' = R^2.$$

$$(2). \quad D' G'^2 + C G'^2 = R^2, \quad \dots \quad \sin^2 A C D' + \cos^2 A C D' = R^2.$$

$$(3). \quad D' G' : A H' :: C G' : A C, \quad \dots \quad \frac{\sin A C D'}{\cos A C D'} = \frac{\tan A C D'}{R}. \quad (\text{Art. 4.})$$

$$D' I : B K' :: C I : C B \quad \dots \quad \frac{\cos A C D'}{\sin A C D'} = \frac{\cotan A C D'}{R}.$$

$$(\text{Obs. 4.}) \quad C H' : C D :: C A : C G', \quad \dots \quad \sec A C D' \times \cos A C D' = R^2.$$

$$(5). \quad C K' : C D' :: C B : C I \quad \dots \quad \text{cosec } A C D' \times \sin A C D' = R^2.$$

$$(5. \text{ Obs.})$$

6. This is evident; for if A C D be any angle, then A' C D is its supplement, and these angles have both the same sine D G.

7. Let A C D (fig. 3.) be any angle, and let the arch D A D' be twice the arch D A, then the sine of A C D is equal to half the chord D D'.

Draw C D'. Inasmuch as the arch A D = the arch A D', the angle A C D = the angle A C D', by 99 and 100 Geom. Likewise in the triangles A C D, A C D', the side C D = C D', and the side C E is common. Therefore, the side D E = E D'. But as the angle C E D = C E D', D E is perpendicular to C A, and . . . is the sine of A C D (Def. IV.): hence $\sin A C D = \frac{D D'}{2}$. Q.E.D.

8. Let A C D (fig. 4.) be any angle represented by A; and let D C D' = 2 A. Then $R \times \sin 2 A = 2 \sin A \times \cos A$.

Join D' D, and draw D G perpendicular to C D'. As in the preceding C E D' is a right angle, and . . . = to D G D'. Likewise the angle D D' C is common to the two triangles D D' G, E D' C; and . . . these triangles are equiangular to each other. Consequently, by Prop. 4, Euclid, C D' : D D' :: C E : C G; but "if 4 right lines be proportionate, the rectangle under the extremes is equal to the rectangle under the means." . . . C D' \times D G = D D' \times C E = 2 D E \times C E. But C D' is the radius, D G is the sine of D C D' or twice A C D, D E is the sine of A C D, and C E is the cosine of A C D; hence $R \times \sin 2 A = 2 \sin A \times \cos A$. Q.E.D.

9. Let ACD be any angle, represented by A ; and let $DCD' = 2A$. Then, $R \times \cos 2A = R^2 - 2 \sin^2 A$.

By the preceding,

$$R \times \sin 2A = 2 \sin A \times \cos A.$$

$$\therefore R^2 \times \sin^2 2A = 4 \sin^2 A \times \cos^2 A;$$

but, by 3, $\sin^2 2A = R^2 - \cos^2 2A$, and $\cos^2 A = R^2 - \sin^2 A$,

$$\therefore R^2 \times (R^2 - \cos^2 2A) = 4 \sin^2 A \times (R^2 - \sin^2 A),$$

$$\therefore R^4 - R^2 \times \cos^2 2A = 4 \sin^2 A \times (R^2 - \sin^2 A),$$

$$\therefore R^2 \times \cos^2 2A = R^4 - 4 \sin^2 A \times (R^2 - \sin^2 A),$$

$$= R^4 - 4 \sin^2 A \times R^2 + 4 \sin^4 A,$$

$$= (R^2 - 2 \sin^2 A)^2,$$

\therefore rooting both sides, $R \times \cos 2A = R^2 - 2 \sin^2 A$. Q. E. D.

If the angle A were divided into two equal parts, we should have, by the preceding formula,

$$R \times \cos 2 \left(\frac{A}{2} \right) = R^2 - 2 \sin^2 \left(\frac{A}{2} \right);$$

$$\text{i. e. As } 2 \left(\frac{A}{2} \right) = A,$$

$$R \times \cos A = R^2 - 2 \sin^2 \frac{A}{2};$$

in other terms, *the rectangle under the radius and cosine of an angle is equal to the difference between the square of the radius and twice the square of the sine of half the angle*; which is, in fact, only the preceding theorem in another form of expression.

By the preceding formula, inasmuch as

$$\sin^2 \frac{A}{2} = R^2 - \cos^2 \frac{A}{2}, \text{ (by 3), we have}$$

$$R \times \cos A = R^2 - 2 \left(R^2 - \cos^2 \frac{A}{2} \right)$$

$$= 2 \cos^2 \frac{A}{2} - R^2,$$

$$\therefore R^2 + R \times \cos A = 2 \cos^2 \frac{A}{2};$$

in other terms, *twice the square of the cosine of half an angle is equal to the square of the radius, together with the rectangle under the radius and the cosine of the angle*.

10. Let ACD (fig. 5.) be $= 45^\circ$, i. e. half a right angle. Then, $\tan 45^\circ = R$.

In the triangle HAC the angle HAC is a right one, AH being a tangent of the circle at A ; and HCA is given half a right angle. Consequently, since by 96 Geom. "the three angles of any triangle are equal to two right angles," the angle AHC must be half a right angle. Hence, by 104 Geom., the side AH is equal to the side AC ; but AH is the *tan* of ACD , and AC is the radius. Q. E. D.

11. In the fig. above mentioned, let ACD be $= 45^\circ$. Then, $\sin 45^\circ = \cos 45^\circ$, and $\sin^2 45^\circ = \cos^2 45^\circ = \frac{R^2}{2}$.

Now draw DG perpendicular to AC ; and for the same reasons as above, $DG = CG$. Likewise, by 111 Geom., $CD^2 = DG^2 + CG^2$; that is, $CD^2 = 2DG^2$. Hence, $DG^2 = CG^2 = \frac{CD^2}{2}$. But DG is the sine, and CG the cosine of ACD , and CD is the radius. Q. E. D.

12. Let ACD (fig. 6.) be $= 60^\circ$, i. e. one-third of two right angles. Then, $\cos 60^\circ = \frac{R}{2}$.

Now join AD . The three angles of the triangle ACD are equal to two right angles, by 96 Geom.; but the angle ACD is given equal to one-third of two right angles, therefore the remaining angles ADC and DAC must be together equal to two-thirds of two right angles. Wherefore, as $CD = CA$, the angle $ADC =$ the angle DAC , and each of them is equal to one-third of two right angles. Consequently, since "every triangle which has its three angles equal, has its sides equal," the three sides AC , CD , DA , are equal; and therefore, by 103 Geom., the side CA is equally divided at the point G , by the perpendicular DG , i. e. $CG = \frac{CA}{2}$. But CA is the radius, and CG the cosine of ACD . Q. E. D.

13. In the figure above mentioned, let $ACD = 60^\circ$. Then $\sin^2 60^\circ = \frac{3R^2}{4}$.

$$\text{Now } \sin^2 60^\circ + \cos^2 60^\circ = R^2 \text{ by 3;}$$

$$\therefore \sin^2 60^\circ + \frac{R^2}{4} = R^2, \text{ by the preceding.}$$

$$\therefore \sin^2 60^\circ = R^2 - \frac{R^2}{4} = \frac{3R^2}{4} \quad \text{Q. E. D.}$$

14. Let ACD , (fig. 7.) be $= 30^\circ$, i. e. one-third of a right angle. Then, $\sin 30^\circ = \frac{R}{2}$.

Now since the angle ACD is one third of a right angle, the angle BCD is two thirds of a right angle; that is, BCD is one third of two right angles. Consequently (by 12,) $\cos BCD = \frac{R}{2}$; but "the cosine of an angle is the sine of the complement of the angle," therefore, $\cos BCD = \sin ACD$.

$$\text{Hence, } \sin ACD = \frac{R}{2}.$$

15. In the figure above, let ACD be $= 30^\circ$. Then $\cos^2 30^\circ = \frac{3R^2}{4}$.

$$\sin^2 30^\circ + \cos^2 30^\circ = R^2 \text{ (by 3.)}$$

$$\therefore \frac{R^2}{4} + \cos^2 30^\circ = R^2 \text{ (by 14.)}$$

$$\therefore \cos^2 30^\circ = R^2 - \frac{R^2}{4} = \frac{3R^2}{4} \quad \text{Q. E. D.}$$

If we consider only such angles as are less than a right angle, it follows from the preceding propositions, that we can determine the magnitude of an angle in some cases, by knowing certain of its goniometrical lines. Thus, if we know that the tangent of an angle is equal to the radius, or that its sine or cosine is to the radius as $1 : \sqrt{2}$, the angle must necessarily be equal to half a right angle, by 10 and 11, respectively. If we know that the cosine of an angle is equal to half the radius, or that its sine is to the radius as $\sqrt{3} : 2$, the angle must necessarily be equal to one-third of two right angles, by 12 and 13 respectively. If we know that the sine of an angle is equal to half the radius, or that its cosine is to the radius as $\sqrt{3} : 2$, the angle must necessarily be equal to one-third of a right angle by 14 and 15 respectively. But there are certain other angles immediately determinable from their goniometrical lines, which we proceed to enumerate. It appears from 6, that the magnitude of an angle is not generally determinable from the ratio of its *sine* to the radius, inasmuch as the same sine corresponds to two angles, viz., those which are *supplementary* one to the other. But in order to prevent the same ambiguity with regard to the other goniometrical lines, mathematicians have recourse to the following expedient: All perpendiculars to the diameter AA' , fig. 8, such as DG , BC , at the *upper* side of AA' are affected with the sign $+$; and those, such as AH' , CB' , at the *under* side of AA' , are affected with the sign $-$. Likewise: all perpendiculars to the diameter BB' , such as DR , CG , at the right side of BB' , are affected with the sign $+$; and those such as $D''I'$, CA' , at the *left* side of BB' , are affected with the sign $-$. Thus, AH' is written $-AH'$, which distinguishes it from $+AH$, to which it may be equal in length; and $D''I'$ is written $-D''I'$, which distinguishes it from $+DI$, to which it may be equal in length. It is, however, only necessary to write the *minus* signs to their corresponding lines, the others being always understood to have the sign $+$.

Now, if the radius CD (fig. 8.) be supposed to revolve round the point c , so as to form with its first position CA , angles of increasing magnitude, it is plain that the sine DG beginning from nothing (when CD coincides with CA), will continually augment, as at D , till CD reaches the point B , where it will be equal to CB the radius; thenceforward it will continually diminish till it vanishes at the point A' into nothing. Hence at the three remarkable points A , B , A' the magnitude of the sine will be thus expressed algebraically:

TRIGONOMETRY.

J. Pass sc.

$\sin 0^\circ = 0$, meaning that 0 is the limit of size from which the sine begins, the revolving radius setting out from A.

$\sin 90^\circ = R$.

$\sin 180^\circ = 0$, meaning that 0 is the limit to which the sine approaches, the revolving radius coming to A'.

Again, on the same supposition, it appears that the cosine CG, beginning from equality with the radius (when CD coincides with CA), will continually diminish, as at D, till CD reaches B, where it will vanish; thenceforward it will continually augment till it again becomes equal to the radius, when CD coincides with CA'. Hence at the same remarkable points A, B, A', the magnitude of the cosine will be thus expressed algebraically:

$\cos 0^\circ = R$, meaning that the radius is the limit from which the cosine begins, the revolving radius setting out from A.

$\cos 90^\circ = 0$, meaning that 0 is the limit to which the cosine approaches, the revolving radius coming to B.

$\cos 180^\circ = -R$, meaning that the left-hand radius is the limit to which the cosine approaches, the revolving radius coming to A'.

Finally, on the same supposition it appears that the tangent Ah beginning from nothing (when CD coincides with CA), will continually augment, as at D', and become at length indefinitely great, when CD is at the point B; for then the geometrical tangent AH being parallel to one side, CB, of the angle ACB, the portion of it intercepted between both sides will be immeasurably great. When the revolving radius gets beyond B, as at D'', then the intercepted portion above mentioned will be AH' contained between the sides CA and CD'', the latter been produced backwards through C, so as to meet the geometrical tangent at H'. When the radius comes to A', the tangent again vanishes. Hence, at the same remarkable points A, B, A', the magnitude of the tangent will be thus expressed algebraically:

$\tan 0^\circ = 0$, meaning that 0 is the limit from which the tangent begins, the revolving radius setting out from A.

$\tan 90^\circ = \infty$, meaning that a quantity indefinitely great is that to which the tangent approaches, the revolving radius coming to B.

$\tan 180^\circ = 0$, meaning that 0 is the limit to which the tangent approaches, the revolving radius coming to A'.

The preceding formulæ may be registered thus:

$$\tan 45^\circ = R \sin 45^\circ = \frac{R}{\sqrt{2}} \quad \cos 45^\circ = \frac{R}{\sqrt{2}} \quad \cos 60^\circ =$$

$$\frac{R}{2} \quad \sin 60^\circ = \frac{\sqrt{3}}{2} \cdot R \quad \sin 30^\circ = \frac{R}{2} \quad \cos 30^\circ = \frac{\sqrt{3}}{2} \cdot R$$

$$\sin 0^\circ = 0, \cos 0^\circ = R, \tan 0^\circ = 0 \quad \sin 90^\circ = R, \cos 90^\circ = 0, \tan 90^\circ = \infty, \sin 180^\circ = 0, \cos 180^\circ = -R, \tan 180^\circ = 0.$$

From the above table we have a ready means of determining the magnitude of such angles as have any of the sines, cosines, or tangents, there registered. For example, if it be required to find the magnitude of the acute angle (fig. 10.), bac , upon being given that the intercept ab , between the perpendicular from one of its sides on the other, is half the distance ca ; this angle is plainly equal to one-third of two right angles. Because, taking in the goniometric circle, a cosine CG (fig. 9.), equal half the radius, the triangle GCD will be equiangular to bac (99 and 101 Geometry) inasmuch as the angles at G and b are equal, and $CG : CD :: ba : ac$. Consequently the angle $bac =$ the angle GCD ; but the angle GCD is $= 60^\circ$, because its cosine $= \frac{R}{2}$, and therefore also the angle $bac = 60^\circ$.

But these formulæ would suffice to determine the magnitude of but very few angles. It therefore becomes an object to construct a table in which the sines, cosines, &c., of many different angles shall be registered; so that whatever be the ratio of the three lines ab, ac, cb , amongst each other, we may find it in the table opposite some angle which

will therefore be equal to the angle bac , whose magnitude is thereby determined.

If in the formula (9) $R \times \cos 2A = R^2 - 2 \sin^2 A$, we take $A = 30^\circ$, then $\cos A = \frac{R \cdot \sqrt{3}}{2}$, and the formula becomes

$$R \times \frac{R \sqrt{3}}{2} = R^2 - 2 \sin^2 15^\circ,$$

$$\therefore 2 \sin^2 15^\circ = R^2 - R^2 \frac{\sqrt{3}}{2},$$

$$\begin{aligned} \therefore \sin 15^\circ &= \sqrt{\frac{R^2 - R^2 \frac{\sqrt{3}}{2}}{2}} \\ &= R \sqrt{\frac{1}{2} - \frac{\sqrt{3}}{4}}. \end{aligned}$$

We have thus found the value of the sine of an angle $= 15^\circ$; and by help of the same formula, we may find, in the same manner, the value of the sines of angles equal respectively to $7^\circ 30', 3^\circ 45', \&c., \&c.$, each successive angle being half the preceding. Likewise, inasmuch as the sine of an angle is equal to the cosine of its complement, the values thus found for the sines of angles equal respectively to $15^\circ, 7^\circ 30', 3^\circ 45', \&c. \&c.$, will be the values for the cosines of angles equal respectively to $75^\circ, 82^\circ 30', 86^\circ 15', \&c. \&c.$, which are the complements of the former. We might therefore register these two series of sines and cosines, which would enable us to determine the magnitude of several angles. By a similar process we might compute the values of the sines, cosines, tangents, &c., of innumerable angles, and these values being registered, serve likewise to the above purpose.

Now we may facilitate very much our operations by using a certain number to express a given radius, and using numbers bearing relation therewith, to express the sine cosine, &c. Thus substituting 1 for R , we may change the preceding formulæ thus:—

$$\tan 45^\circ = 1, \sin 45^\circ = \frac{1}{\sqrt{2}}, \cos 45^\circ = \frac{1}{\sqrt{2}}, \cos 60^\circ = \frac{1}{2},$$

$$\sin 60^\circ = \frac{\sqrt{3}}{2}, \sin 30^\circ = \frac{1}{2}, \cos 30^\circ = \frac{\sqrt{3}}{2} \quad \sin 0^\circ$$

$$= 0, \cos 0^\circ = 1, \tan 0^\circ = 0, \sin 90^\circ = 1, \cos 90^\circ = 0, \tan 90^\circ = \infty, \sin 180^\circ = 0, \cos 180^\circ = -1, \tan 180^\circ = 0.$$

The sines, cosines, &c., heretofore spoken of, are now seldom registered in mathematical tables; instead of them we register their logarithms, which is found to be more convenient in practice. The logarithms of the sines, cosines, &c. of angles, are called the logarithmic sines, cosines, &c., of these angles; and being put opposite their corresponding angles in the tables, are used instead of the natural sines, &c.

We may calculate the logarithms of the natural sines, &c., from these sines themselves; but for this purpose it is found most eligible to take the numeral radius $= 10,000,000,000$, or 10^{10} , instead of 1, and to consider the natural sines, &c., as made up of submultiple parts of this numeral radius, in the same manner as we before considered them as made up of submultiple parts of 1. In fact, 10^{10} , or any other number, may be looked upon as the unit or whole represented by 1.

16. Let ABC (fig. 11.) be any triangle, of which the three sides are represented severally by a, b, c , and the three corresponding opposite angles by A, B, C . Then

$$\begin{aligned} a : c &:: \sin A : \sin C, \\ \text{and } a : b &:: \sin A : \sin B, \\ \text{and } b : c &:: \sin B : \sin C. \end{aligned}$$

Now represent the perpendicular from the vertex of any angle B on the opposite side by y . Then

$$\frac{y}{c} = \sin A,$$

$$\frac{y}{a} = \sin C.$$

$$\therefore \sin A : \sin C :: \frac{y}{c} : \frac{y}{a} :: ay : cy :: a : c.$$

In like manner it is shown that $\sin A : \sin B :: a : b$, and $\sin B : \sin C :: b : c$, by drawing perpendiculars from the vertices of the other angles C and A to the other sides c and a . Q. E. D.

17. Let ABC (fig. 12), be a triangle, whose sides and angles are represented, as above, by a, b, c , and A, B, C . Then

$$\tan \left(\frac{A+C}{2} \right) : \tan \left(\frac{A-C}{2} \right) :: a+b : a-b.$$

Produce BA , which is not the greater of the two sides under consideration, until it be equal to the other BC ; join CD , and let fall on it the perpendicular BE , which divides it equally at E . The angle $BDC = BDC$; therefore, because "a triangle that has two sides equal, has also its angles opposite the equal sides equal;" $BDC = BCA + ACD$. But, by 95 Geom. $BAC = BDC + ACD$, $\therefore BAC = BCA + 2ACD$, $\therefore ACD = \frac{BAC - BCA}{2} = \frac{A-C}{2}$. Likewise,

as $BAC = BDC + ACD$, adding the angle BCA to both, we get $BAC + BCA = BDC + ACD + BCA = 2BDC = 2BCD$
 $\therefore BCD = \frac{BAC + BCA}{2} = \frac{A+C}{2}$.

Again: $AD = BD - BA = BC - BA$; \therefore if AD be equally divided at F , $AF = \frac{AD}{2} = \frac{BC - BA}{2} = \frac{a-c}{2}$; and $2BF = 2BA + 2AF = BD + BA = BC + BA$, $\therefore BF = \frac{BC + BA}{2} = \frac{a+c}{2}$.

Finally: Joining FE , FE is parallel to AC , by 2d of 6th of Euclid: consequently $BE : bE :: BF : AF$, by the same; that is, representing the perpendiculars BE and bE respectively by y and y' , as also the line EC by x , we have

$$y : y' :: BF : AF, \\ \therefore \frac{y}{x} : \frac{y'}{x} :: BF : AF :: \frac{a+c}{2} : \frac{a-c}{2} :: a+c : a-c.$$

But, $\frac{y}{x} = \tan BCD = \tan \frac{A+C}{2}$, and $\frac{y'}{x} = \tan ACD = \tan \frac{A-C}{2}$; hence

$$\tan \frac{A+C}{2} : \tan \frac{A-C}{2} :: a+c : a-c.$$

In like manner it is shown that $\tan \frac{A+B}{2} : \tan \frac{A-B}{2} ::$

$a+b : a-b$; and that $\tan \frac{B+C}{2} : \tan \frac{B-C}{2} :: b+c : b-c$. Q. E. D.

18. Let ABC (fig. 13.) be a triangle, whose sides and angles are represented as above by a, b, c , and A, B, C . Then $\cos A \times 2bc = b^2 + c^2 - a^2$.

Represent the perpendicular BD by y , and dividing AC equally at E , represent the intercept AD by x . The intercept DC will be represented by $(b-x)$. Then by Geom. 111,

$$c^2 = y^2 + x^2, \text{ and } a^2 = y^2 + (b-x)^2, \\ \therefore c^2 - x^2 = a^2 - (b-x)^2, \\ \therefore c^2 - a^2 = x^2 - (b-x)^2 = -b^2 + 2bx, \\ \therefore 2bx = b^2 + c^2 - a^2,$$

$$\therefore 2bc \times \frac{x}{c} = b^2 + c^2 - a^2,$$

that is, as $\cos A = \frac{x}{c}$,

$$\cos A \times 2bc = b^2 + c^2 - a^2,$$

or, in another form,

$$\cos A = \frac{b^2 + c^2 - a^2}{2bc}. \text{ Q. E. D.}$$

Obs. We are now in a condition to proceed to the measurement of *triangles*, or *Trigonometry*, properly so called.

In a triangle there are three sides and three angles: certain of these being given in magnitude, determine the triangle both in form and magnitude. For,

1^o. Two sides and the included angle being given, the triangle can be of but one form and magnitude, by 99 Geom.

2^o. Three sides being given, the triangle can be of but one form and magnitude, by 101 Geom.

3^o. Two angles and a side being given, the triangle can be of but one form and magnitude, by 101 Geom.

3^o. Two angles and a side being given, the triangle can be of but one form and magnitude, by 102 Geom.

There are no other three of the above six parts which will absolutely and completely determine the triangle. For if the three *angles* be given, the triangle is determined indeed as to *form*, inasmuch as all triangles with three such angles must by 167 Geom. have their sides respectively proportional to each other, and therefore be similar in figure. Thus, if figs. 14 14 ABC, abc , be two triangles having the three angles at A, B, C , equal respectively to those at a, b, c ; then, $AB : ab :: BC : bc$, and $AC : ac$; and $BC : bc :: AC : ac$; so that, having their angles equal and their sides proportional, these triangles are similar in form. But they are, or at least may be, very unequal in *magnitude*, and therefore a triangle is not determinable from such data, completely as to form and magnitude, but partially as to form alone.

So also if two sides and an angle *opposite* one be given, the triangle may be determinable neither as to form nor magnitude.

Two sides and an angle opposite one being given, the triangle can be of but of one, or a second, form and magnitude.

91. Let a, b, c , (fig. 16.) be respectively the three sides of the right-angled triangle; A, B, C , the corresponding opposite angles, A being the right one. Then, b, c, A , being given or known, a, B, C , may be determined.

DEM. For $a = \sqrt{b^2 + c^2}$; $\tan B = \frac{b}{c}$; and $\tan C = \frac{c}{b}$. Q. E. D.

Thus, suppose it were given that the two sides, b and c , about the right-angle of a right-angled triangle were respectively equal to 3 and $3\sqrt{3}$ (feet, inches, or any other linear unit); then, we should have

$$b^2 = 3^2 = 9, \\ c^2 = (3\sqrt{3})^2 = 27, \\ \therefore a = \sqrt{9 + 27} = 6.$$

Likewise

$$\tan B = \frac{1}{\sqrt{3}}, \tan C = \sqrt{3}$$

Here we have determined the third side, a , to be 6 (feet, inches, or whatsoever was the linear unit chosen). The two acute angles are also determined; because to find them from having their tangents, we have only to consult a trigonometrical table, and whatever angles in it have tangents of the values found, are equal to the angles computed. Thus,

if 1 be the tabular radius, we shall see $\frac{1}{\sqrt{3}}$ registered as the tangent of 30° , and $\sqrt{3}$ as the tangent of 60° ; for \tan

$$30^\circ = \frac{\sin 30^\circ}{\cos 30^\circ} = \frac{1}{\sqrt{3}}, \text{ and } \tan 60^\circ = \frac{\sin 60^\circ}{\cos 60^\circ} = \sqrt{3}.$$

Obs. 1. As the angles B and C are together equal to a right angle, having determined either, we may obtain the other immediately; for $c = 90^\circ - B$. Thus, if we find that B is $= 30^\circ$, C must be $= 90^\circ - 30^\circ = 60^\circ$.

Obs. 2. Instead of looking in a trigonometrical table for angles corresponding to the tangents so found, we more frequently take the logarithms of those values found for the tangents, and then consult a table. Thus, if the sides of the above triangle were $b = 43$, and $c = 55$, we should have (using the tabular radius $r = 10^{10}$),

$$\tan B = r \cdot \frac{b}{c},$$

$\therefore \log.$

$$\begin{aligned} \therefore \log. \tan B &= \log. r + \log. \frac{b}{c} \\ &= \log. r + \log. b - \log. c. \\ &= \log. 10^{10} + \log. 43. - \log. 55. \end{aligned}$$

But in a logarithmic table whose base = 10,
 $\log. 10^{10} = 10$
 $\log. 43 = 1,6334685$

$$\therefore \log. 10^{10} + \log. 43 = 11,6334685$$

and, $\log. 55 = 1,7403627$

$\therefore \log. 10^{10} + \log. 43 - \log. 55 = 9,8931058$,
 which logarithm corresponds to an angle = $38^{\circ} 1' 8''$, $\therefore B = 38^{\circ} 1' 8''$, and $\therefore c = 51^{\circ} 58' 52''$.

Again,

$$a = \sqrt{b^2 + c^2};$$

therefore a may be found by extracting the square root of $42^{\circ} + 55^{\circ}$. It is easier, however, to find the value of a by logarithms, to which the preceding formula is not adapted, being unresolvable into factors, and thereby preventing us from substituting the sum of their two logarithms for the logarithm of their product. We must, therefore, obtain the value of a by means of some other formula, viz.;

$$\cos B = r \frac{c}{a}.$$

$$\therefore a = r \frac{c}{\cos B}.$$

$$\begin{aligned} \therefore \log. a &= \log. r + \log. \frac{c}{\cos B}, \\ &= \log. r + \log. c - \log. \cos B, \\ &= 10 + 1,7403627 - \log. \cos 38^{\circ} 1' 8''; \end{aligned}$$

but, in the table of logarithmic cosines, 9,8964202 corresponds to an angle of $38^{\circ} 1' 8''$, and therefore we have
 $-\log. a = 10 + 1,7403627 - 9,8964202$,
 $= 1,8439425$;

and, as 1,8439425 is the logarithm of the number 69, 81, &c., we find

$$a = 69, 81, \&c.$$

20. a, b, A , (fig. prec.) being given, c, B, C , may be determined.

DEM. For $c = \sqrt{a^2 - b^2}$, by 111 Geom.; and $\sin B = \frac{b}{a}$,

$$\cos C = \frac{b}{a},$$

In logarithms, as

$$\sqrt{a^2 - b^2} = \sqrt{(a+b) \cdot (a-b)} = (a+b)^{\frac{1}{2}} \cdot (a-b)^{\frac{1}{2}}, \therefore$$

$$\log. c = \log. (a+b)^{\frac{1}{2}} \cdot (a-b)^{\frac{1}{2}} = \log. (a+b)^{\frac{1}{2}} + \log. (a-b)^{\frac{1}{2}}; \therefore \log. c = \frac{1}{2} \log. (a+b) + \frac{1}{2} \log. (a-b).$$

And,

$$\begin{aligned} \log. \sin B &= \log. b - \log. a, \\ \log. \cos C &= \log. b - \log. a. \end{aligned}$$

Q. E. D.

21. a, B, A, C , (fig. prec.) being given, b, c , may be determined.

DEM. For, $\sin B = \frac{b}{a}$, $\therefore b = a \cdot \sin B$; and $\frac{c}{a} = \cos B$,

$$\therefore c = a \cdot \cos B.$$

In logarithms,

$$\begin{aligned} \log. b &= \log. a + \log. \sin B, \\ \text{and, } \log. c &= \log. a + \log. \cos B. \end{aligned}$$

Q. E. D.

22. Representing the sides and angles as above, then b, A, B, C , being given, a, c , may be determined.

DEM. For $\sin B = \frac{b}{a}$, $\therefore a = \frac{b}{\sin B}$; and $\frac{b}{c} = \tan B$,

$$\therefore c = \frac{b}{\tan B}.$$

In logarithms,

$$\begin{aligned} \log. a &= \log. b - \log. \sin B, \\ \text{and, } \log. c &= \log. b - \log. \tan B. \end{aligned}$$

VOL. XXIV. No. 1630.

Q. E. D.

Triangles which are not right-angled may be solved, that is, determined from certain data, with little less facility than the above.

23. Let a, b, c , (fig. 17.) be respectively the three sides of the triangle, A, B, C , the opposite corresponding angles. Then, any two sides, as a, b , and the included angle C , being known, the third side c , and the remaining angles A, B , may be determined.

DEM. (By 17.)

$$\tan \left(\frac{A+B}{2} \right) = \tan \left(\frac{A+B}{2} \right) \frac{a-b}{a+b};$$

but as $A+B+C = 180^{\circ}$, $\therefore A+B = 180^{\circ} - C$, $\therefore \frac{A+B}{2} = 90^{\circ} - \frac{C}{2}$. Consequently, subtracting half the given angle

C from a right angle, we obtain $\frac{A+B}{2}$, and therefore can find its tangent in the tables. Hence, as a and b are likewise given, we obtain the whole value of $\tan \frac{A+B}{2}$, from whence

we get the corresponding angle $\frac{A-B}{2}$ by the tables. But

from half the sum $\frac{A+B}{2}$, and half the difference $\frac{A-B}{2}$, of the two angles A and B , we can determine both separately; as we have only to add half the difference to half the sum for the greater, and to subtract half the difference from half the

sum of the lesser. Thus, if $C = 40^{\circ}$, then $\frac{A+B}{2} = 90^{\circ} - \frac{C}{2} = 70^{\circ}$; and if, from the above method of computation, we find, by the tables, that $\frac{A-B}{2} = 10^{\circ}$, then

$$\frac{A+B}{2} + \frac{A-B}{2} = A = 70^{\circ} + 10^{\circ} = 80^{\circ},$$

$$\text{and, } \frac{A+B}{2} - \frac{A-B}{2} = B = 70^{\circ} - 10^{\circ} = 60^{\circ}.$$

Again: having thus computed A and B , we may find c For, (by 16.)

$$\frac{c}{a} = \frac{\sin C}{\sin A}, \therefore c = a \cdot \frac{\sin C}{\sin A}.$$

from which formula for c its value may be determined, as a , $\sin C$ and $\sin A$, are known quantities.

In logarithms,

$$\log. c = \log. a + \log. \sin C - \log. \sin A.$$

Q. E. D.

24. Representing the sides and angles as above, then any two angles, as A, B , and a side, as a , opposite either of these angles, A , being given, the third angle, C , and the remaining sides, b, c , may be found.

DEM. The third angle, C , is found by subtracting the sum of A and B from 180° ; for $A+B+C = 180^{\circ}$, $\therefore C = 180^{\circ} - (A+B)$. Likewise, by (16.)

$$\frac{b}{a} = \frac{\sin B}{\sin A}, \therefore b = a \cdot \frac{\sin B}{\sin A};$$

$$\text{and, } \frac{c}{a} = \frac{\sin C}{\sin A}, \therefore c = a \cdot \frac{\sin C}{\sin A}.$$

Hence, b and c are found in terms either given as a , or easily computable from trigonometrical tables, as $\sin A, \sin B, \sin C$.

In logarithms,

$$\begin{aligned} \log. b &= \log. a + \log. \sin B - \log. \sin A, \\ \text{and, } \log. c &= \log. a + \log. \sin C - \log. \sin A. \end{aligned}$$

This, &c.

25. For two angles being given the third is determinable, as in the prec.; and the solution of this question will be thus reduced to the last.

26. Representing the sides and angles as above, then a, b, c being given, A, B, C may be found.

2 C

DEM

DEM. (By 18.)

$$\cos A = \frac{b^2 + c^2 - a^2}{2bc}.$$

From which value, in known terms, for $\cos A$, we may find A itself from the tables. Hence, the triangle may be determined 23, by as we know one of its angles and the including sides. Q. E. D.

Obs. We may determine B and C without the help of 23, as we determined A , namely by the formulæ 20.

$$\cos B = \frac{a^2 + c^2 - b^2}{2ac},$$

$$\cos C = \frac{a^2 + b^2 - c^2}{2ab}.$$

27. Representing the sides and angles as above, then any two sides, as a, b , and the angle, as A , opposite either of them, a , being given, the triangle itself may be determined in two cases, viz., 1°, if the given side *not* opposite the given angle be less than the other given side; 2°, if the given side *not* opposite the given angle be less than the third side.

DEM. (By 18.)

$$\frac{\sin B}{\sin A} = \frac{b}{a}, \therefore \sin B = \frac{b}{a} \cdot \sin A.$$

In logarithms,

$$\log. \sin B = \log. \sin A + \log. b - \log. a.$$

Consequently $\sin B$ is determined, the quantities b, a , and $\sin A$ being known. But as, (by 6), the sine is the same for two supplementary angles, we cannot determine to which of these the sine found belongs, unless, in some cases, from other considerations.

1°. If b (fig. 18.) be less than a , then B will also be less than A . Therefore, if A be acute, B will likewise be acute; and if A be not acute, B will be acute. Hence, in this case B must be that supplementary angle, which is less than 90° .

Thus, if $b : a :: 1 : 2$, and $\sin A = \sqrt{3}$; then, $\sin B = \frac{\sqrt{3}}{2}$, which is the sine either of an angle equal 60° , or 120° ; but as b is less than a the angle B must be acute, and therefore must be the lesser of these supplementary angles, i. e. 60° .

2°. If b be less than c , then by GEOM. 106, B will be also less than C . Therefore, if C be acute, B will be likewise acute; and if C be not acute, B will be acute by 197 GEOM. Hence, as before, though the value we find for $\sin B$ belongs indifferently to two supplemental angles, as we know from other considerations that B is acute, we know that it must be the lesser of these supplementary angles, and therefore can determine it.

Again: having computed B , we obtain C , because $C = 180^\circ - (A + B)$; and having thus found C , we may obtain the third side c , of the triangle; for

$$\frac{c}{a} = \frac{\sin C}{\sin A}, \therefore c = a \cdot \frac{\sin C}{\sin A}.$$

In logarithms,

$$\log. c = \log. a + \log. \sin C - \log. \sin A.$$

Q. E. D.

We now proceed to the consideration of *spherical* trigonometry.

DEF. I. A right line is perpendicular to a plane when perpendicular to all the straight lines in that plane which pass through the point where the line meets the plane.

DEF. II. When two planes cut each other, the *angle between them*, or their mutual inclination, is measured by the angle between two right lines drawn in those planes from the same point of their line of intersection, and perpendicular to it.

DEF. III. Two planes are *perpendicular to each other* when the angle between them is measured by a right angle.

DEF. IV. Any figure made where a solid is cut by a surface, is called a *Section* of that solid.

DEF. V. A *sphere* is a solid figure bounded by one sur-

face, such, that all right lines drawn from it to one and the same point within the figure are equal to one another.

DEF. VI. In a sphere, the point from which the surface is every where equally distant is called the *centre* of the sphere.

DEF. VII. A right line drawn from the centre of a sphere, and terminated in the surface, is called a *Radius* of the sphere.

DEF. VIII. A right line drawn through the centre of a sphere, and terminated both ways in the surface, is called a *Diameter* of the sphere.

DEF. IX. A *great* circle of a sphere is that made by a plane passing through the centre of the sphere.

DEF. X. A *lesser* circle of a sphere is that made by a plane which does not pass through the centre of the sphere.

DEF. XI. A *spherical triangle* is a spherical surface bounded by three arcs of great circles.

α . The three arcs which bound a spherical triangle are called its *sides*; and are usually considered to be each less than a semi-circumference.

β . The three angles contained between the planes of the three great circles whose arcs form a spherical triangle, are called the *angles of the triangle*.

γ . A spherical triangle is said to be *right-angled* when any of its angles is a right angle. But, unlike a plane right-angled triangle, it may have two or three of its angles each a right angle.

1. One portion of a right line cannot be in a plane, and another portion out of it.

2. Three right lines which meet one another are in the same plane.

3. If two planes cut one another, their line of intersection will be a right one.

4. If at the point where two right lines intersect a right line stand perpendicular to both, it shall also be perpendicular to the plane in which they lie.

5. Every section of a sphere, made by a plane, is a circle.

6. All great circles of the same sphere are equal to each other.

7. Two great circles on the same sphere divide each other into two equal parts.

8. All small circles equally distant from the centre of the sphere are equal to each other.

9. In any right-angled spherical triangle, the product of the sine of the side opposite the right angle and the sine of either remaining angle is equal to the sine of the side opposite the latter angle.

10. In any right-angled spherical triangle, the tangent of either side adjacent to the right angle is equal to the product of the tangent of the side opposite the right angle and the cosine of the angle between these sides.

11. In any right-angled spherical triangle, the eosine of the side opposite the right angle is equal to the product of the cosines of the remaining sides.

(1.) Let ACB (fig. 19.) be a right line, one part of which, AC , is in the plane $DEFG$. Then, no other part of the line can be out of the plane $DEFG$.

DEMONSTRATION.—Suppose the part CB to lie out of the plane $DEFG$. Produce the right line AC , in the plane $DEFG$, to any point I , and let a plane pass through the points A and I . Then the line AI is in this plane. Also let this plane be turned about AI until it pass through the point B ; and as the points C, B , are in this new plane, the right line CB is also in this plane. Now draw CH in this plane, making, with CI , a greater angle than BCI : consequently, by Geom. 91, the angles ACH and HCI are together = to two right angles. But as the line ACB is likewise supposed a right one, the angles ACH and HCB together would be also equal to two right angles. Therefore the angle HCI would be equal to the angle HCB , the greater to the less,—which is impossible. Hence the above supposition is false; CB does not lie out of the plane $DEFG$. Q. E. D.

(2.) Let the three right lines MN, OP, QR , (fig. 20.) meet one another in the points A, B, C . Then, these three right lines are in one and the same plane.

Conceive any plane passing through the line BC to be so turned

turned about BC, so as to pass through the point A; the right lines BA, CA, having respectively the two points B and A, C and A, in this plane, must themselves lie in it. Hence, the three right lines BC, BA, CA, being in the same plane, the three right lines MN, OP, QR, would likewise be in it, by the preceding. Q.E.D.

(3.) Let ABCD, EFGH, (fig. 21.) be two planes cutting one another in the line MN. Then, this line MN is a right one.

Suppose the line MN, which is common to the two planes, not to be a right line. In this case the points M and N might be joined by a right line MM' in the plane ABCD; and, as this right line is supposed different from MN, it is not in the plane EFGH, and there might be another right line, M'ON', drawn in the plane EFGH, between the same points M and N. Consequently, on this supposition, the two right lines MM', M'ON', would enclose a space, which is impossible. Hence, the supposition is false; that is, the line of intersection MN is a right one. Q.E.D.

(4.) Let AB (fig. 22.) be a right line perpendicular to both the right lines GH, IK, at their point of intersection, B. Then, AB is perpendicular to the plane CDEF, in which these lines GH, IK, lie.

Through the point B draw any right line LM, in the plane CDEF. Take the portions BG, BI, BH, BK, equal to each other; and draw the right lines AG, AI, AH, AK. In the four triangles thus formed, ABG, ABI, ABH, ABK, the four angles ABG, ABI, ABH, ABK, are granted equal, being all right angles. Likewise the side AB is common, and therefore as the sides BG, BI, BH, BK, have been taken equal, the four bases AG, AI, AH, AK, are equal by Geom. 99; and as the sides BI, BG, are equal respectively to the sides BH, BK, and the contained angles IBG, HBK, being vertically opposite, are also equal, therefore the angles BIL, BKM, are equal; and also the bases IG, HK. Consequently, the three sides AG, AI, IG, of the triangle AIG having been proved respectively equal to the three sides AH, AK, HK, of the triangle AHK, the angle AIL opposite AG is equal to the corresponding angle AKM opposite AH. But in the triangles IBL, KBM, the vertically opposite angles IBL, KBM, are equal; as also the angles BIL, BKM; and the sides BI, BK: therefore, by Geom. 99, IL=KM, and BL=BM. Thus, in the triangles AIL, AKM, we have shown that AI=AK, IL=KM, and the angle AIL=AKM; wherefore, by Geom. 99, AL=AM. Hence, as in the triangles ABL, ABM, it has been proved that AL=AM, and BL=BM, the side AB being common, we have the angle ABL=ABM, by 101 Geom.; that is, AB is perpendicular to LM. In the same manner it may be demonstrated that AB is perpendicular to every other right line in the plane CDEF; whence, by Def. I. AB is perpendicular to the plane itself. Q.E.D.

(5.) Let ADDEA, (fig. 23.) be a plane section of a sphere. Then, ADDEA is a circle.

DEM. First: If the plane pass through the centre, c, of the sphere as in figure 23. Draw right lines, CD, CE, CB, &c., from the centre to all points, D, E, B, &c., of the boundary of the section; and as all these right lines are drawn from the centre to the surface of the sphere, they are all equal, by Def. VII. Then ADDEA is a circle.

Secondly: If the plane do not pass through the centre, c, of the sphere, as in figure 24. Draw the right line CF perpendicular to the plane of the section ADDEA; and also a right line, CD, CE, to any points, D, E, &c., of the boundary of the section. Join FD and FE. By Def. II. CF is perpendicular to FD and FE; therefore, by 111 Geom., $CD^2 = CF^2 + FD^2$, and also $CE^2 = CF^2 + FE^2$. Consequently, as $CD = CE$ by Def. VI, $CF^2 + FD^2 = CF^2 + FE^2$, $\therefore FD^2 = FE^2$, $\therefore FD = FE$. Hence, all the right lines, such as FD, FE, &c., drawn from the point F to the boundary of the section, being equal, this boundary is a circle. Q.E.D.

(6.) Because their respective radii, being all radii of the same sphere, are equal.

(7.) The intersection of the planes of two great circles is a diameter of the sphere, and a common diameter of both circles; it therefore divides both into equal parts.

(8.) Let ABD, GHI, (fig. 25.) be two small circles equally distant from the centre c (that is, having the perpendiculars CF, CE, drawn to them from the central, equal). Then, the circle ABD, GHI, are equal to each other.

DEM. Draw CB, CG, from the centre c, to any points B, G, in the circumferences ABD, GHI; and join FB, EG. Consequently, as CF, CE, are, by Def. I. perpendicular to FB, EG, we have, by Geom. 111, $CB^2 = CF^2 + FB^2$, and also $CG^2 = CE^2 + EG^2$. But $CB = CG$, being radii of the sphere, $\therefore CF^2 + FB^2 = CE^2 + EG^2$, or as $CF = CE$, $\therefore FB = EG$. Hence, as the radii of the two circles ABD, GHI, are equal, the circles themselves must be equal. Q.E.D.

(9.) Let ABC be a triangle, formed on the surface of a sphere whose centre is o, by the planes ABO, ACO, CBO, of three great circles, whose arcs AB, AC, CB, form the three sides of the triangle. Also, let the planes ABO, ACO, be perpendicular, that is, let the angle BAC of the triangle be a right one. Then, calling the three angles, BAC, ABC, ACB, of the triangle (that is, the three angles under the planes ABO and ACO, ABO and CBO, ACO and CBO), A, B, C, respectively, and the sides BC, AC, AB, opposite these angles respectively, a, b, c; we shall have

$$\sin a \times \sin B = \sin b, \text{ and } \sin a \times \sin C = \sin c.$$

DEM. From the vertex of the angle c draw the right line CD perpendicular to OA; and from the point D draw the right line DE perpendicular to OB. Join EC by a right line. Now, CD being perpendicular to OA, is perpendicular to the plane ABO; because drawing in this plane the right line DF at right angles to OA, CD will then be perpendicular to DO by construction, and to DF, by Def. III., inasmuch as the planes ABO, ACO, are perpendicular to each other: consequently (by I.) CD is perpendicular to the plane ABO. But CD being perpendicular to the plane ABO must be also perpendicular to the line DE, by Def. I.; and therefore CDE is a right-angled triangle. Hence, in the right-angled triangles CDO, DEO, CDE, we have, (by the 47 of the 1st of Euclid.)

$$OC^2 = OD^2 + CD^2;$$

$$\text{and } OD^2 = OE^2 + DE^2;$$

$$\text{and } EC^2 = ED^2 + CD^2, \therefore EC^2 - ED^2 = CD^2.$$

Putting the values for OD^2 and CD^2 found from the last two equations into the first, we get

$$OC^2 = OE^2 + EC^2;$$

consequently, by the triangle OEC is also right-angled at E. Thus, DE and CE being drawn respectively in the planes ABO, CBO, perpendicular to OB, the intersection, we have the angle DEC equal to the angle between the planes, by Def. II. that is to the angle B. Likewise, in the right-angled triangle CDE,

$$\sin DEC = \sin B = \frac{CD}{CE}. \text{ But, } \frac{CD}{CO} = \sin DOC = \sin (\text{of}$$

corresponding arch) $AC = \sin b, \therefore CD = CO \times \sin b$; also $\frac{CE}{CO} = \sin COE = \sin (\text{of corresponding arch}) BC = \sin a,$

$$\therefore CE = CO \times \sin a. \text{ Hence, } \sin B = \frac{CD}{CE} = \frac{CO \times \sin b}{CO \times \sin a}$$

$$\therefore \sin a \times \sin B = \sin b.$$

Instead of beginning with the vertex of angle c, we might as well have begun from that of angle B, and the process would have been exactly similar, only that for angle B we should have had angle c, and for b the side opposite B, we should have had c the side opposite c. Making these substitutions in the above formula, we obtain, without going through another demonstration, $\sin a \times \sin C = \sin c$. Q. E. D.

(10.) In the preceding figure, representing the sides and angles as before, we shall have

$$\tan c = \tan a \times \cos B, \text{ and } \tan b = \tan a \times \cos C.$$

DEM. In the right-angled triangle CDE, $\cos DEC$, or $\cos B,$

$$= \frac{DE}{CE}. \text{ But, } \frac{DE}{OE} = \tan DOE = \tan (\text{of arch}) BA = \tan c,$$

$$\therefore DE = OE \times \tan c; \text{ also, } \frac{CE}{OE} = \tan COE = \tan (\text{of arch})$$

$$BC =$$

$BC = \tan a$, $\therefore CE = OE \times \tan a$. Hence, $\cos B = \frac{OE \times \tan c}{OE \times \tan a}$, $\therefore \tan c = \tan a \times \cos B$.

As explained in last Article, had we begun the construction in the figure from B instead of C , we should have obtained an exactly similar formula to the above, the angle C taking the place of B , and the side b that of c ; that is to say, without further demonstration, $\tan b = \tan a \times \cos C$. Q. E. D.

(11.) In the last figure, retaining the same notation, we shall have

$$\cos a = \cos b \times \cos c.$$

DEM. $\cos a = \cos$ (of arch) $BC = \cos BOC = \frac{OE}{OC}$. But $\frac{OE}{OD} = \cos DOE = \cos$ (of arch) $BA = \cos c$, $\therefore OE = OD$

$\times \cos c$; also, $\frac{OD}{OC} = \cos DOC = \cos$ (of arch) $AC = \cos b$, $\therefore OC = \frac{OD}{\cos b}$. Hence, $\cos a = \frac{OD \times \cos c}{\cos b} = \cos b \times \cos c$.

Q. E. D.

The application of trigonometry to practical purposes, has already been sufficiently shewn in the articles ASTRONOMY, NAVIGATION, OPTICS, &c., to which we refer our readers.

TRIGONUM, an ancient musical instrument. One of this kind was taken from an ancient painting in the museum of the king of Naples, in which it is placed on the shoulder of a little dancing Cupid, who supports the instrument with his left hand, and plays upon it with his right. The trigonum is mentioned by Athenæus, lib. iv. and by Julius Pollux, lib. iv. cap. 9.

TRIGUERA [so named by Cavanilles, from a Spanish botanist], in Botany, a genus of the class pentandria, order monogynia, natural order of luridæ, solonææ (Juss.)—Generic Character. Calyx: perianth one-leaved, half-five-cleft, permanent; segments unequal, acute. Corolla one-petalled, bell-shaped. Tube very short. Border ventricose, plaited, five-cleft, longer than the calyx; the two upper segments reflexed. Nectary membranaceous, short, five-toothed, surrounding the germ. Stamina: filaments five, very short, inserted outwardly into the teeth of the nectary. Anthers sagittate, converging. Pistil: germ roundish, two-grooved. Style filiform, straight, a little longer than the stamens. Stigma obtuse. Pericarp: a dry berry, subglobular, grooved, four-celled. Seeds two in each cell, roundish, compressed, rugged; one above the other.—*Essential Character*. Corolla bell-shaped, with an unequal border. Nectary short, five-toothed, surrounding the germ. Filaments inserted into the nectary. Berry four-celled, with two seeds in each cell.

1. *Triguera ambrosiaca*.—Stem grooved and winged; upper leaves obovate, toothed, pubescent. Stem angular; somewhat winged. Radical leaves obovate, quite entire; stem-leaves toothed, hairy. Peduncles axillary, in pairs. Corolla resembling that of *hyoscyamus* or *henbane*, of a violet colour.

2. *Triguera inodora*.—Leaves ovate-lanceolate, quite entire, smooth. This is scarcely winged, the leaves little or not at all running down the stalk; they are also smooth, and not toothed.—Both are annual plants, natives of Andalusia, in Spain.

TRILATERAL, *adj.* [*tres* and *latus*, Lat.] Having three sides.

TRILITERAL, *adj.* [*tres* and *litera*, Lat.] Consisting of three letters.—This name is *triliteral*:—it consists of three letters, *thau*, *beth*, and *he*; all which are here symbolical. *Biblioth. Bibl.*

TRILIX [a tissue of three threads of different colours], in Botany, a genus of the class polyandria, order monogynia.—*Generic Character*. Calyx: perianth three-leaved; leaflets ovate, acute, spreading, flat, permanent. Corolla: petals three, lanceolate, acute, less than the calyx. Stamina: filaments numerous, capillary, length of the corolla. An-

thers roundish, twin, minute. Pistil: germ five-cornered. Style cylindrical. Stigma simple. Pericarp: berry subpentagonal, five-celled, covered with the calyx. Seeds numerous, roundish, minute.—*Essential Character*. Calyx three-leaved. Corolla three-petalled. Berry five-celled, many-seeded.

Trilix lutea.—This is a shrub ten or twelve feet high, and very much branched. Branches round and somewhat rugged. Leaves alternate, petioled, subpeltate, cordate-ovate, serrate, acuminate, veined, pubescent. Petioles round, smooth. Flowers yellow (not from the corolla but the anthers). Peduncles mostly terminating. Pedicels alternate, one-flowered, round, pubescent.—Native of Carthage, in America.

TRILL, *s.* [*trillo*, Ital.; *drilla*, Su. Goth., to utter quavering; *tralla*, to sing.] Quaver; tremulousness of music.—I have often pitied in a winter night a vocal musician, and have attributed many of his *trills* and quavers to the coldness of the weather. *Tatler*.

To TRILL, *v. a.* [*drilla*, *tralla*, Su. Goth. See the noun.] To utter quavering.

Through the soft silence of the listening night
The sober-suited songstress *trills* her lay.

Thomson.

To shake. *Obsolete*.

What hast thou to do, and I lose my cote?

I will *trill* the bones while I have one grote. *Old Morality*.

To TRILL, *v. n.* [*trilla*, Swed. See To TRICKLE.] To trickle; to fall in drops or slender streams.

Aye, she took 'em; read em' in my presence;

And now and then an ample tear *trill'd* down

Her delicate cheek.

Shakspeare.

To play in tremulous vibrations of sound.

Am I call'd upon the grave debate,

To judge of *trilling* notes and tripping feet.

Dryden.

TRILLION, *s.* [A word invented by Locke.] A million of millions; a million twice multiplied by a million.

TRILLIUM, in Botany, a genus of the class hexandria, order trigynia, natural order of samentaceæ, asparagi (Juss.)—*Generic Character*. Calyx: perianth three-leaved, spreading; leaflets ovate, permanent. Corolla: petals three, subovate, a little bigger than the calyx. Stamina: filaments six, awl-shaped, shorter than the calyx, erect. Anthers terminating, oblong, length of the filaments. Pistil: germ roundish. Styles filiform, recurved. Stigmas simple. Pericarp: berry roundish, three-celled. Seeds many, roundish.—*Essential Character*. Calyx three-leaved. Corolla three-petalled. Berry three-celled.

1. *Trillium cernuum*, or drooping trillium.—Flowers peduncled, drooping. Root perennial, tuberous. Stem erect, a foot high, smooth. Leaves three together, terminating. Flower solitary, among the leaves, without bracts.—It grows naturally in the woods, in many parts of North America.

2. *Trillium erectum*, or upright trillium.—Flower peduncled, erect. This has a taller stalk. The three leaves are placed at a distance from the flower, which stands upon a long foot-stalk, and is erect; the petals are purple, larger, and end with sharper points.—Native of Virginia, Canada, and other parts of North America.

3. *Trillium sessile*, or sessile-flowered trillium.—Flower sessile, erect. Stalk purple. The three leaves grow at the top like the first; but they are much longer, and end in acute points. The leaves are mottled.—It grows in shady thickets in Carolina and Virginia.

Propagation and Culture.—These plants are propagated by seeds, which should be sown upon a shady border soon after they are ripe, and then the young plants will come up the next spring; but if the seeds are sown in the spring, they will remain in the ground a year. When the plants come up, keep them clean, and in autumn, after their leaves decay, transplant the roots to a moist shady place, where they are to remain.

TRILLO, a small town of the interior of Spain, in the province

vince of Madrid, situated on the Tagus; 68 miles east-north-east of Madrid, and 26 south-by-west of Siguença.

TRILU'MINAR, or TRILU'MINOUS, *adj.* [*triluminaris*, Lat.] Having three lights. *Dict.*

TRIM, *adj.* [ἄετρίμμεδ, Sax., *completed*; τριύμαν, τριύμαν, *to prepare, to dispose or set out.*] Nice; snug; dressed up. *It is used with slight contempt.*

A trim exploit, a manly enterprize,
To conjure tears up in a poor maid's eyes
With your derision. *Shakspeare.*

TRIM, *s.* Dress; geer; ornaments. *It is now a word of slight contempt.*

They come like sacrifices in their trim,
And to the fire-ey'd maid of smoky war,
All hot, and bleeding, will we offer them. *Shakspeare.*

Trimming.—The gold, that was laid upon the trim of vests, was in perfect lustre. *Sir T. Herbert.*

To TRIM, *v. a.* [τριύμαν, Saxon, *to prepare.*] To fit out.

Malicious censurers ever,
As rav'nous fishes do a vessel follow
That is new trimm'd. *Shakspeare.*

To dress; to decorate.
Our youth got me to play the woman's part,
And I was trimm'd in madam Julia's gown. *Shakspeare.*

To shave; to clip.—Mephibosheth had neither dressed his feet, nor trimmed his beard. *2 Sam.*—To make neat; to adjust.

I found her trimming up the diadem
On her dead mistress. *Shakspeare.*

To balance a vessel.—Sir Roger put his coachman to trim the boat. *Spectator.*—To lose in fluctuating between two parties.

He who would hear what every fool could say,
Would never fix his thoughts, but trim his time away.
Dryden.

It has often up emphatical.
He gave you all the duties of a man,
Trim'd up your praises with a princely tongue,
Spoke your deservings like chronicle. *Shakspeare.*

To TRIM, *v. n.* To balance; to fluctuate between two parties.—If such by trimming and time-serving, which are but two words for the same thing, betray the church by nauseating her pious orders, this will produce confusion. *South.*

TRIM, a town of Ireland, in the county of Eastmeath, on the river Bayne. It is the county town, and before the union sent two members to the Irish parliament. It is governed by a sovereign recorder, and town clerk; 20 miles south-west of Drogheda, and 23 north-west of Dublin. Lat. 53. 32. N. long. 6. 48. W.

TRIMAPORE, a town of the south of India, province of the Carnatic. Lat. 10. 20. N. long. 78. 55. E.

TRIMBUCK, a strong fortress of Hindostan, province of Aurangabad, situated near the source of the river Godavery, which in 1818 surrendered to the British after a short bombardment. Lat. 20. 1. N. long. 73. 42. E.

TRIMDON, a township of England, in the county of Durham; 8 miles south-east of Durham.

TRIMETER, *adj.* [τριμετρος, Gr.; *trimetre*, Fr.] Consisting of three poetical measures, forming an iambic of six feet.—Though the iambic verse consists of six feet, yet it is called trimeter, two feet being joined together in scanning. *Roscommon.*

TRIMMINGHAM, a parish of England, in Norfolk; 5 miles south-east-by-east of Cromer.

TRIMLEY, ST. MARTIN'S, a parish of England, in Suffolk; 8½ miles south-east-by-east of Ipswich.

TRIMLEY, ST. MARY, another parish in the above county, adjoining the foregoing.

TRIMLY, *adv.* Nicely; neatly.
Her yellow golden hair
Was trimly woven, and in tresses wrought. *Spenser.*
VOL. XXIV. No. 1630.

TRIMMER, *s.* One who changes sides to balance parties; a turncoat.

To confound his hated coin,
All parties and religions join,
Whigs, tories, trimmers. *Swift.*

A piece of wood inserted.—Before they pin up the frame of ground-plates, they must fit in the summer and the girders, and all the joists and the trimmers for the stair-case. *Moxon.*

TRIMMING, *s.* Ornamental appendages to a coat or gown.—Judgment without vivacity of imagination is too heavy, and like a dress without fancy; and the last without the first is too gay, and but all trimming. *Garth.*

TRIMNESS, *s.* Neatness; petty elegance of dress. *Sherwood.*

TRIMPLEY, a hamlet of England, in the parish of Kidderminster; 2 miles north of Bewdley.

TRINIAL, *adj.* [*trinus*, Lat.] Threefold.
That far-beaming blaze of majesty,
Wherewith he wont at heaven's high council-table
To sit the midst of trinal unity,
He laid aside. *Milton.*

TRINCO, a small pleasant town, with a church, on a mountain torrent of the same name, situated on the great road from Buenos Ayres to Potosi; 1000 miles from the former place.

TRINCOMALEE, a town, fortress, and excellent harbour of Ceylon. It is situated on the north-east side of the island. The town is of greater extent than Columbo, but contains fewer houses, and much less population. The fort is very strong, and commands the principal bays, particularly the entrance to the harbour. It has also a citadel called Fort Ostenburgh, erected on a cliff which projects into the sea, and which cannot be attacked till after the capture of the lower fort. Lat. 8. 31. N. long. 81. 23. E.

TRINDELEN, a rock in the Scaggerac, almost equally distant from the coasts of Jutland and Norway; 7 miles north-north-east from the island of Lessee. Lat. 67. 27. N. long. 11. 1. E.

TRINDLE, *s.* See TRUNDLE.
TRINE, *s.* [*trinus*, Lat.] An aspect of planets placed in three angles of a trigon, in which they are supposed by astrologers to be eminently benign.

To the other five,
Their planetary motions, and aspects,
In sextile, square, and trine, and opposite,
Of noxious efficacy. *Milton.*

TRINE, *adj.* [*trinus*, Lat.] Threefold; thrice repeated.—In other parts trine immersion most commonly prevailed, as it does in the Greek church to this very day. *Wheatley.*

To TRINE, *v. a.* To put in a trine aspect.
This advantage age from youth has won,
As not to be outridden, though outrun;
By fortune he was now to Venus trin'd,
And with stern Mars in Capricorn was join'd. *Dryden.*

TRINESIA, or TRINASUS, a small town of European Turkey, in the Morea, at the bottom of the gulf of Kolokythia, situated to the right of the mouth of the Eurotas. Near it are the ruins of Gythium, the military fort of the Lacedæmonians; 22 miles south of the ruins of Sparta.

TRING, a market town of England, in the county of Hertford, situated on the borders of Buckinghamshire, near the Brawnstone canal. The town is very neat, and contains many handsome houses. At Little Tring, a neighbouring village in this parish, rises one of the heads or branches of the Thames, which leaving the county at Puttenham, runs by Aylesbury to Thame. Tring was anciently a considerable town, and gave name to the hundred. Population 1847; 22 miles west of Hertford.

TRING, a township of Lower Canada, in the district of Quebec, and county of Buckingham.

TRINGA, or SAND-PIPER, the name of a distinct genus of birds, of the order of the Grallæ; the distinguishing characters of which are, that the beak is roundish, and of the length

length of the head; the nostrils linear; and that the feet have each four toes, the outmost being generally connected at bottom by a small membrane. The species are numerous, and as follow.

1. *Tringa pugnax*.—With red bill and legs; three lateral tail-feathers unspotted, and face granulated with fleshy papillæ.

2. *Tringa vanellus*.—With red legs, dependent crest, and black breast. This is the lapwing or bastard plover of Ray, Willughby, Pennant, &c.

3. *Tringa gambetta*.—With red bill and feet; body variegated with yellow and cinereous; beneath white. This is the *totanus ruber* of Brisson, the *totanus alter* of Willughby and Ray, and gambet of Pennant and Latham.

4. *Tringa interpres*.—With red legs; black body, varied with white and ferruginous; and white breast and abdomen. This is the *arenaria* of Brisson, the Hebrid sand-piper of Pennant, the turnstone or sea-dotterel of Ray, Willughby, Latham, &c.

The *morinella*, or *tringa* with red feet, blackish tail-feathers, white at the base, grey body, and black breast; or *arenaria cinerea* of Brisson, is a variety.

5. *Tringa striata*.—With base of bill and legs red; tail-feathers white with bands of brown, and many white tail-feathers. This is the *totanus striatus* of Brisson, and striated sand-piper of Pennant, &c. The *totanus nævius* of Brisson is a variety.

6. *Tringa bononiensis*.—With ochraceous legs; long head and neck; body above black, and beneath white; throat and breast marked with ferruginous spots: the greater lapwing of Latham.

7. *Tringa macularis*.—With base of bill and legs incarnated; body spotted; eye-brows and double band of the wings white. This is the *turdus aquaticus* of Brisson, the spotted *tringa* of Edwards, and the spotted sand-piper of Pennant.

8. *Tringa lobata*.—With subulate bill, bent at the apex; pinnated legs, and white undulated breast: the grey coot-footed *tringa* of Edwards, and grey phalarope of Pennant and Latham. Of this there is a variety, white beneath, black above, with yellowish longitudinal streaks; the band of the wings white; and legs lobated.

9. *Tringa hyperborea*.—With subulate bill, bent at the apex; pinnated legs; cinereous breast, and sides of the neck ferruginous: the cock-coot-footed *tringa* of Edwards, the small cloven-footed gull of Willughby, and red phalarope of Pennant and Latham.

10. *Tringa erythropus*.—With red legs, front, rump and tail red and white; the body above and wings cinereous-brown; the abdomen ferruginous: the red-legged sand-piper of Latham.

11. *Tringa alpina*.—Testaceous-brown, with blackish breast; tail-feathers cinereous, whitish; legs brownish.

12. *Tringa Helvetica*.—With black bill and legs; beneath black; white vent; tail-feathers white with black bands: the Swiss sand-piper of Pennant.

13. *Tringa ochropus*.—With the apex of the bill pointed; legs greenish; black brown and green: abdomen and outermost tail-feathers white: the *cinclus tertius* of Aldr., Ray, and Will., the *ocrophus medius* of Gesner, and green sand-piper of Pennant and Latham. Of this there is a variety, viz. *littorea*, with smooth bill, cinereous legs, and brown tail-feathers: the shore sand-piper of Pennant; and also another variety, with the back and wings cinereous, with obsolete whitish spots.

14. *Tringa hypoleucos*.—With smooth bill; livid legs; body cinereous with black streaks; beneath white: the common sand-piper of Ray, Willughby, and Pennant.

15. *Tringa canutus*.—With smooth bill; cinereous legs; first tail-feathers serrated; and the outer white unspotted. This is the knot of Pennant, &c.

16. *Tringa arenaria*.—With black bill and legs; grey body; under and whole face white; collars grey.

17. *Tringa fasciata*.—With bill, vertex, hind part of the head, spot near the eyes, and abdomen, black; front and rounded tail white; back cinereous; seven first tail-feathers white.

18. *Tringa cinclus*.—With bill and legs black; collars

white; tail and rump grey and brown. This is the least snipe of Ray and Sloane, the wagtail of Brown, the sanderling of Albinus, and the purre of Pennant. The *cinclus* with brown legs is a variety.

19. *Tringa calidris*.—With bill and legs blackish; body beneath olivaceous; and rump variegated: the dusky sand-piper of Latham.

20. *Tringa pusilla*.—With brown bill and legs; body beneath reddish; outer tail-feathers with a white shaft, and variegated rump: the little sand-piper of Pennant.—Found in St. Domingo, north of Europe, and rarely in England.

21. *Tringa glareola*.—With smooth bill; greenish legs; body punctated brown and white; breast whitish: the wood sand-piper of Pennant and Latham.—Found in Sweden.

22. *Tringa ruficollis*.—With black legs; head above and neck striated with ferruginous and black: and ferruginous throat: the red-necked purre of Latham.

23. *Tringa squatarola*.—With black bill; greenish legs; grey body, beneath whitish: the grey plover of Ray, &c. and grey sand-piper of Pennant and Latham. Of this there is a variety, with black bill and legs; body brown, variegated with white: tail-feathers white with brown bands.

24. *Tringa Islandica*.—With brown bill and legs; body beneath ferruginous; secondary tail-feather with a white margin: the red sand-piper of Pennant.

25. *Tringa cinerea*.—Cinereous; beneath white; legs obscurely green; head with black spots; neck obscurely virgated: the ash-coloured sand-piper of Pennant and Latham.

26. *Tringa atra*.—With black head and neck; back and wings brownish, mixed with black; breast and abdomen cinereous; rump cinereous, undulated with white and black.

27. *Tringa noveboracensis*.—Obscure, beneath white; breast spotted with brown; tail cinereous: New York sand-piper of Pennant and Latham.

28. *Tringa virgata*.—Obscure, beneath white; with yellowish legs; head and neck obscurely striated lengthwise with white: streaked sand-piper of Latham.

29. *Tringa borealis*.—With brown bill and legs; body above cinereous, beneath white; tail and tail-feathers obscure.

30. *Tringa novæ-terre*.—Above black, beneath ash-white; bill, spurious wings, tail-feathers, and tail, black; with cinereous legs: Newfoundland sand-piper of Latham.

31. *Tringa variegata*.—Above varied with brown, black, and red; front and throat pale; neck and breast streaked with whitish and black longitudinally; abdomen white; bill and legs obscure: variegated sand-piper of Latham.

32. *Tringa glacialis*.—With pinnated yellowish legs; apex of black bill dilated; cheeks and throat testaceous; body above obscure, beneath white: plain phalarope of Pennant.

33. *Tringa fusca*.—With bill, vertex, and legs pinnated and black; body above brownish and cinereous, beneath white; throat cinereous, tintured with red: the coot-footed *tringa* of Edwards, and brown phalarope of Pennant and Latham.

34. *Tringa cancellatus*.—With upper feathers brown, white at the margin; lower white lineated transversely obscurely; pinnated legs obscure.

35. *Tringa leucoptera*.—Black, beneath red, with cinereous bill, green legs, white wings and yellow vent: the white-winged sand-piper of Latham.

36. *Tringa maritima*.—Above varied with grey and white; beneath white, with yellow legs; middle of the back violet; throat and tail obscure: the selinger sand-piper of Latham.

37. *Tringa undata*.—Obscure, undulated with yellow and white; the rump, the tip of the secondary tail-feathers, and wing-coverts, white; tail cinereous, white at the apex: the waved sand-piper of Pennant and Latham.

38. *Tringa uniformis*.—Wholly dilutely cinereous, with a short black bill: uniform sand-piper of Pennant and Latham.

39. *Tringa Australis*.—Above cinereous, spotted brown; beneath reddish; abdomen and rump whitish; tail and tail-feathers obscure; bill and legs black: southern sand-piper of Latham.

40. *Tringa Nævia*.—With obscure bill; legs greenish; body above cinereous, spotted with red and black; beneath reddish

reddish and white, spotted with obscure or bay: the freckled sand-piper of Pennant and Latham.

41. *Tringa grisea*. With black bill and legs; body above grey, beneath white; primary tail-feathers brown; tail grey and white at the margin; a band obscurely grey parallel to the margin: the grised sand-piper of Latham.

42. *Tringa keptuschca*.—With cinereous body; black vertex; abdomen blackish, terminating reddish.

TRINGLE, in Architecture, a name common to several little square members, or ornaments; as reglets, listels, and platbands.

TRINIDAD, an island of the Atlantic ocean, opposite the coast of Cumana, from which it is separated by the gulf of Paria, which varies in its breadth, being on an average about 75 miles. At its southern and northern extremities, however, Trinidad approaches to within 10 or 11 miles of the American land. The island is of an irregular square form, having two points stretching to the west from its north and south corners. Its longest lines are from Cape Galera on the north-east, to Point Ycaque or Icaque on the south-west, 79 miles, and from Cape Galeota on the south-east to Cape Blanca on the north, 56 miles.

Trinidad is the largest, most fertile, and most beautiful of all the Leeward islands. It is full of forests, abounding in the finest woods, of large dimensions, fit for ship-building, while others again are equally well adapted to ornamental purposes. The climate is less moist than that of Guiana, and not so dry as that of Cumana. The winter or rainy season begins there in June, and ends in October, as in all the islands of the Carribean sea.

Trinidad was discovered by Columbus on the 31st July 1498. The labours of the Indians soon fertilised the land of which they had been masters, for the benefit of their conquerors. Some negroes were afterwards taken there, and united in the work of the natives. Sir Walter Raleigh, who visited Trinidad when attracted by the chimera of El Dorado in 1593, relates that the inhabitants then cultivated excellent tobacco and the sugar cane. The Spaniards assured him that the rivers were full of gold dust. The full importance of this colony, however, was not discovered till the year 1783, when every measure was adopted for its rapid settlement. An edict was issued, permitting all foreigners professing the Roman Catholic religion to establish themselves in this colony. It protected, at the same time, for a period of five years, those new inhabitants from debts contracted in the countries they had quitted. It invited, in short, all the traders and navigators of the nations which were at peace with Spain, to frequent the island, placing but a few restrictions on its commerce, and these such as could be easily eluded. In consequence of this liberal policy, crowds of new colonists crowded from Europe, and from the British and French possessions, bringing with them their industry and capitals. The inhabitants increased so rapidly, that, though in 1783 the whole amounted only to 2763, they were estimated six years afterwards at 18,918. In 1797, the island capitulated to a British force under the command of Sir Ralph Abercrombie, without any resistance. From this period till the peace of Amiens in 1802, the population increased from 18,918 to 24,239 inhabitants: the produce of sugar had also greatly increased, being almost doubled. In 1783 the tonnage of the vessels employed in the commerce of Trinidad was only 150 tons; in 1802, 60 vessels were employed, whose tonnage amounted to 60,000 tons. The emigration which took place from St. Domingo and the British colonies, to Trinidad, after the peace of Amiens, had increased its population in 1807 to 31,000, of which 21,000 were slaves. Trinidad has since this period remained in the hands of the British. The north-east point of the island is in lat. 10. 51. N. long. 60. 55. 25. W.

TRINIDAD, an island in the Straits of Magellan. It is low and desert, but covered with trees.

TRINIDAD, a city of the island of Cuba, situate on the south side of the island, and on the shore of a river of the same name, with a celebrated port, at which is carried on a traffic in sugar and tobacco, both of excellent quality. Its natives, who are much given to seafaring,

are good mariners. This city lies in lat. 21. 42. N. long. 80. 6. W.

TRINIDAD, a city of Guatemala, on the shore of the river Belen, in the province of Costa Rica, three leagues distant from the sea, but by an intransitable route. It is 82 miles east-south-east from Guatemala, in lat. 13. 46. N. long. 90. 15. W.

TRINIDAD, a town of the kingdom of Guatemala, in the province of Sonsonate, situate near a bay on the coast of the Pacific ocean.

TRINIDAD, a missionary settlement of Indians, in Paraguay, on the west bank of Parana. Lat. 27. 7. S. long. 55. 44. W.—It is the name of several other settlements in South America, mostly inconsiderable.

TRINIDAD, LA, a settlement of Veragua, on a river which runs into the gulf of Mexico; 18 miles south-east of La Conception.

TRINIDAD, a river of South America, in the province of Parana, which enters the Chagre.—2. A river of Brazil, in the province of San Vicente, which enters the sea.—3. A river of Terra Firma, in the province of Veragua, which runs south, and enters the large river Martin, before it falls into the sea.—4. A river of Peru, in the province of Patoz, which enters the Guallaga at its source.

TRINITA, a small town in the north-west of Italy, in Piedmont, province of Mondovi. Population 2500.

TRINITARIAN, *s.* A believer of the Trinity.—They make a difference between nominal and real *trinitarians*. *Swift*.—One of a monastic order, instituted in honour of the Trinity. The order came into England about the middle of the fourteenth century.

TRINITARIAN is however a term used very variously, and arbitrarily: frequently it stands as a common name for all persons who have sentiments on the mystery of the Trinity, different from those of the Catholic church.

Sometimes it is more immediately restrained to some one or other particular class of such persons.

TRINITE, or CAPE ST. MICHAEL, a seignory of Lower Canada, in the county of Surrey.

TRINITY, *s.* [*trinitas*, Lat.; *trinité*, Fr.] The incomprehensible union of the three persons in the Godhead.—Touching the picture of the *Trinity*, I hold it blasphemous and utterly unlawful.—*Peachment*.

TRINITY, or TRINIDADO, a river of Mexico, which takes its rise in Louisiana, in lat. 34. N. long. 99. W. It enters the province of San Luis Potosi, and discharges itself into Galvestan's bay, in lat. 29. 30. N.

TRINITY, or LA TRINITE, a seaport town of the island of Martinco. The harbour is formed on the south-east side by the Point Caravelle, which is two leagues in length; and on the other side by a very high hill, about 350 or 400 paces in length, which only joins to the mainland by an isthmus not above 200 feet broad. During the hurricane season, ships have a safe station in this port. Another advantage they have here is, that when they set out for Europe, they are to the windward of all the islands, and save about 300 leagues in their passage, which they would find by the way of St. Domingo or Porto Rico. Lat. 14. 53. N. long. 61. 8. W.

TRINITY BAY, a large bay on the east coast of Newfoundland. Lat. 48. N. long. 53. 10. W.

TRINITY BAY, a large but not a very deep bay of the South Pacific ocean, on the north-east coast of New Holland, between Cape Grafton and Cape Tribulation.

TRINITY, CAPE, a low point on the south coast of the islands of Kodiak, in the north Pacific ocean. Lat. 56. 45. N. long. 154. 26. W.

TRINITY-GASK, a parish of Scotland, in Perthshire, in Stratherne, which stretches for several miles on both sides of the Erne. Population 740.

TRINITY-HOUSE, is a kind of college at Deptford, belonging to a society of seafaring persons, founded for the regulation of seamen, and security and convenience of ships and mariners on our coasts.

This society was incorporated by Henry VIII. in 1515, who

who confirmed to them not only all the ancient rights and privileges of the mariners of England, but also their several possessions: which, together with various grants of queen Elizabeth and king Charles II., were confirmed by letters patent of the 1st of James II. in 1685; under the name of the master, wardens, and assistants of the guild or fraternity of the most glorious and undivided Trinity, and of St. Clement in the parish of Deptford Strand, in the county of Kent.

This corporation is governed by a master, four wardens, eight assistants, and eighteen elder brethren: the inferior members of the fraternity, denominated younger brethren, and chosen among the masters and mates expert in navigation, are of an unlimited number, and serve for supplying vacancies among the thirty-one elder brethren. The master, &c. of this corporation, are invested by charter with a power to examine the mathematical children of Christ's Hospital; to examine the masters of his Majesty's ships; to appoint pilots for conducting ships in and out of the river Thames; and to amerce such as shall act as masters or pilots without their approbation in a fine of 20*l.*; to settle the several rates of pilotage, and erect light-houses, and other sea-marks, on the several coasts of the kingdom, for the security of navigation; to prevent aliens from serving on board English ships, without their licence, under penalty of 5*l.* for each offence; to punish seamen for desertion or mutiny in the merchant service; to hear and determine the complaints of officers and seamen in this service, under an appeal to the Court of Admiralty; and to grant licences to poor seamen (non-freemen) to row on the river Thames.

To this company belongs the ballast-office, for cleaning and deepening the river Thames, by taking from it a sufficient quantity of ballast for the supply of all ships that sail out of the river; in which service sixty barges, of the burden of thirty tons, and two men each, are constantly employed: all ships taking in ballast pay to them 12*d.* a ton.

This corporation is empowered by charter to purchase lands, &c. to the amount of 500*l.* per annum, and also to receive charitable benefactions to the like amount. They have also light-houses, to which all ships pay a halfpenny per ton.

Out of the income of this corporation, about three thousand poor seamen, their widows and orphans, are annually relieved, at the expense of about 6000*l.*

The house in which the brethren of this corporation usually meet for the dispatch of business, is on Tower-Hill. They have three hospitals, two at Deptford, and one at Mile-End, which last is designed for decayed sea-officers, masters of vessels, pilots, and their widows.

TRINITY INLET, a bay of the North Pacific ocean, on the west coast of North America; 30 miles south of Queen Charlotte's Sound.

TRINITY ISLAND, an island in the North Pacific ocean, discovered by Captain Cook, situated in lat. 56. 33. N. long. 206. 47. E.

TRINKET, *s.* [*trinquetum*, a game at tables, as trick-track, draughts, or chess; whence *trinquet* or *trinket*, might be applied to one of the marks or figures used in the game, and thence to any toy.] Toys; ornaments of dress; superfluities of decoration.—They throng who should buy first, as if my *trinkets* had been hallowed. *Shakspeare*.—Things of no great value; tackle; tools.—Go with all your servants and *trinkets* about you. *L'Estrange*.

To TRINKET, *v. n.* To give trinkets.—By their tricks and *trinketing* between party and party, and their intriguing it with courtiers and court-ladies, they had upon the matter set the whole court together by the ears. *South*.

TRINO, a town in the north-west of Italy, in Piedmont, situated on the Po, at the confluence of the small river Astura. Its population is about 5500, and its only buildings worth notice are the churches; 10 miles east-by-north of Casale, and 28 east-north-east of Turin.

TRINOBANTES, TRINOANTES, or TRINOVANTES, in Ancient Geography, were inhabitants of Britain, situated

next to the Cantii northward, and occupied, according to Camden and Baxter, that country which now composes the counties of Essex and Middlesex, and some part of Surrey. But if Ptolemy be not mistaken, their territories were not so extensive in his time, as London did not then belong to them. The name of this British nation seems to be derived from the three following British words; *Tri, Now, Hant*, which signify the inhabitants of the new city. This name was perhaps given them by their neighbours, on account of their having newly come from the continent into Britain, and having there founded a city called Tri-Now, or the New City, the most ancient name of the renowned metropolis of Britain. The Trinobantes had come so lately from Belgium, that they seem hardly to have been firmly established in Britain, at the time of the first Roman invasion. For their new city, which soon after became so famous, was then so inconsiderable, that it is not mentioned by Cæsar, though he must have been within sight of the place where it was situated. They were then at war with their neighbours, the Cattivellauni, whose king, Cassibelanus, commanded the confederated Britons against the Romans; and, on this account, the Trinobantes were amongst the first of the British states who deserted that confederacy and submitted to Cæsar. They submitted again to the Romans, on their next invasion in the reign of Claudius, with the same facility, and almost for the same reason. For, in the interval between the invasion of Julius and that of Claudius, the Cattivellauni had reduced them under their obedience; and, in order to emancipate themselves from this subjection to their neighbours, they put themselves under the protection of the Romans. But the Trinobantes soon became weary of their obedience to their new masters. For the Roman colony at Camulodunum, which was within their territories, depriving some of them of their estates, and oppressing them several other ways, they joined in the great revolt of the Britons under Boadicea, and shared very deeply in the miseries of that revolt. From that time the Trinobantes remained in peaceable subjection to the Romans, as long as they continued in Britain. The country of the Trinobantes was greatly valued and much frequented by the Romans, on account of the excellence of its soil and climate, and the many advantages of its situation. That sagacious people soon fixed their eyes on the new town of the Trinobantes; and observing its admirable situation for health, for pleasure, and for trade, great numbers of them settled in it, and giving it the name of Londinium from its situation, and of Augusta from its grandeur, it became in a little time the largest and most opulent city in this island. In the reign of Nero, as Tacitus informs us, London was become a city highly famous for the great conflux of merchants, her extensive commerce, and plenty of all things. No fewer than seven of the fourteen journeys of Antoninus begin or end at London; a plain proof, among many others, that this city was the capital of Britain in the Roman times, as it is at present the great and flourishing metropolis of the British empire. Camulodunum, now Malden in Essex, was the seat of the first Roman colony in Britain, and a place of great beauty and magnificence in these times; though at present few or no vestiges of its ancient grandeur remain. Cæsariomagus, from its pompous name, was probably a place of some note in the Roman times; but it is now so entirely ruined, that it is difficult to discover the ground where it once stood; some of our antiquaries placing it at Chelmsford, and others at Dunmow. The Colonia of Antoninus was probably Colchester, and Duroilitum, as some think, Leiton, but, according to others, Waltham. But though the county of Essex was certainly very much frequented by the Romans, who erected many noble works in it, yet time, cultivation, and various accidents, have made so great a change in the face of that country, that very few vestiges of these works are now remaining. The territories of the Trinobantes were included in that Roman province which was called Britannia Prima.

TRINOMALEE, a town and fortress of the south of India, province of the Carnatic. It is situated on a mountain,

tain, and contains a Hindoo temple of great reputed sanctity. Lat. 12. 16. N. long. 79. 10. E.

TRINO'MIAL, or TRINO'MINAL, *adj.* [*tres* and *nomen*, Lat.] In mathematics, consisting of three parts or monomes.

TRIO, *s.* [*terzetto*, Ital.] A piece of music in three parts; three principal parts. *Mus. Dict.*

TRIO'BOLAR, or TRIO'BOLARY, *adj.* [*triobolaris*, Lat.] Vile; mean; worthless.—Turn your libel into verse, and then it may pass current amongst the ballad-mongers for a *tribular* ballad. *Cheyne.*

TRIONTO, a small river of Italy; in the south of the kingdom of Naples, in Calabria Citra. It falls into the gulf of Tarento; 10 miles east of Rossano.

TRIONTO, a cape of Italy, on the coast of Naples, in the gulf of Tarento. Lat. 39. 48. N. long. 16. 57. E.

TRIOPTERIS [from *τρεις* and *πτερον*, *triplex ala*, three-winged. The fruit having three membranes], in Botany, a genus of the class *dicandria*, order *trigynia*, natural order of *trihilatæ*, *malpighiæ* (*Juss.*)—Generic Character. Calyx: perianth five-parted, very small, permanent. Corolla: petals (wings of the seeds) six, ovate, from erect spreading, equal, permanent. Three others smaller, but equal among themselves, stand round the former. Stamina: filaments ten, capillary (united at the base), placed on the outside of the petals (so called); the outer ones shorter. Anthers simple. Pistil: germ trifid. Styles three, erect. Stigmas obtuse. Pericarp: capsules erect, keeled at the back, each having a single wing at the base, and a double expanded one at the top, not opening. Seeds solitary, roundish.—*Essential Character.* Calyx five-parted, with two honey pores at the base on the outside. Petals roundish, clawed. Filaments cohering at the base. Capsules three, one-seeded, three or four-winged.

1. *Triopteris Jamaicensis.*—Leaves oblong, acuminate, veined, shining; racemes compound, terminating, loose; fruits three-winged. This is a climbing shrub.—Native of Jamaica and Hispaniola.

2. *Triopteris Indica.*—Leaves roundish-ovate, subcordate, acuminate, shining, smooth; racemes compound, terminating; fruits three-winged. This is a large twining shrub.—Native of the East Indies, in mountain forests.

3. *Triopteris ovata.*—Leaves ovate, bluntish, subcordate, smooth, petioles biglandular; racemes compound, terminating; fruits three-winged. Stem shrubby.—Native of the island of Dominica.

4. *Triopteris rigida.*—Leaves roundish, acute, margined; marked with lines, coriaceous; racemes compound, axillary; fruits three-winged. Stem shrubby, twining.—Native of Hispaniola.

5. *Triopteris acutifolia.*—Leaves ovate-lanceolate, acute, smooth; panicle terminating; fruits four-winged; wings equal. Branches round, woody, smooth, as is the whole plant.—Native of Cayenne.

6. *Triopteris acuminata.*—Leaves oblong, acuminate, smooth; umbels panicled, terminating; fruits four-winged; wings in pairs, the lower ones shorter.—Native of Cayenne.

7. *Triopteris buxifolia.*—Leaves oblong, bluntish, smooth; umbel terminating; fruits four-winged; wings almost equal.—Native of the Antilles.

8. *Triopteris citrifolia.*—Leaves ovate-oblong, acute, smooth; umbels axillary, peduncled; fruits four-winged; wings in pairs; the lower ones shorter.—Native of South America, Jamaica, and Dominica.

TRIOSTEUM [so named from the fruit containing three seeds of a bony substance], in Botany, a genus of the class *pentandria*, order *monogynia*, natural order of *aggregatæ*, *caprifolia* (*Juss.*)—Generic Character. Calyx: perianth five-parted, superior, spreading, length of the corolla; leaflets lanceolate, permanent. Corolla one-petalled, tubular; border shorter than the tube, five-parted, erect; lobes rounded, the lower ones smaller. Stamina: filaments five, filiform, length of the corolla. Anthers oblong. Pistil: germ roundish, inferior. Style cylindrical, length of the stamens. Stigma thickish. Pericarp: berry obovate, sub-

Vol. XXIV. No. 1630.

trigonal, three-celled. Seeds solitary, bony, obtusely three-cornered, obtuse, grooved.—*Essential Character.* Calyx length of the corolla. Corolla one-petalled, almost equal. Berry three-celled, inferior. Seeds solitary.

1. *Triosteum perfoliatum.*—Leaves connate; flowers sessile, in whorls. This has a perennial root composed of thick fleshy fibres, which are contorted and rough.—Native of North America.

2. *Triosteum angustifolium.*—Leaves connate; peduncles opposite, one-flowered. The roots of both these plants are used indiscriminately in North America, as an emetic, for *Ipecacuhana*.

3. *Triosteum triflorum.*—Peduncles opposite, three-flowered; leaves petioled.—Native of Madagascar.

Propagation and Culture.—The two first sorts are hardy enough to thrive in the open air, but should be planted on a moist light soil; on dry ground they must be watered constantly in dry weather.

Sow the seeds in a border of light earth, where the morning sun only comes; if they be sown in the spring, they will remain in the ground a whole year, during which time the border must be constantly kept clean; the following spring when the plants appear, water them duly in dry weather; but if they be sown in autumn, they will come up the following spring.

TO TRIP, *v. a.* [*treper*, Fr.; *trippen*, Dutch.] To supplant; to throw by striking the feet from the ground by a sudden motion.

He conjunct
Tripp'd me behind.

Shakspeare.

To strike from under the body.—*I tript up thy heels and beat thee.* *Shakspeare.*—To catch; to detect.

These women
Can *trip* me, if I err; who, with wet cheeks,
Were present when she finish'd.

Shakspeare.

TO TRIP, *v. n.* To fall by losing the hold of the feet; to fail; to err; to be deficient.—*Virgil* is so exact in every word, that none can be changed but for a worse: he pretends sometimes to *trip*, but it is to make you think him in danger when most secure. *Dryden.*—To stumble; to titubate.—I may have the idea of a man's drinking till his tongue *trips*, yet not know that it is called drunkenness. *Locke.*—To run lightly.

In silence sad,
Trip we after the night's shade.

Shakspeare.

To take a short voyage.

TRIP, *s.* A stroke or catch by which the wrestler supplants his antagonist.

O thou dissembling cub! what wilt thou be,
When time hath sow'd a grizzle on thy case?
Or will not else thy craft so quickly grow,
That thine own *trip* shall be thine overthrow? *Shakspeare.*

A failure; a mistake.

He saw his way, but in so swift a pace,
To choose the ground might be to lose the race:
They then, who of each *trip* th' advantage take,
Find but those faults which they want wit to make. *Dryden.*

A short voyage or journey.—I took a *trip* to London on the death of the queen. *Pope.*

TRIP, *s.* [*thyrpa*, Icel. caterva.] A flock or herd of goats. *Bullockar*, and *Cockeram.*—A *trip* of sheep, i. e. few sheep: Norfolk. *Ray.*—A small flock of sheep has the same name in some parts of the north.

TRIP, a hamlet of England, in the parish of Bridgewater, Somersetshire.

TRIPALL, or TRIPPALL, a river of England, in Northumberland, which runs into the South Tyne, at Bellister Castle; 7 miles west of Hexham.

TRIPARTITE, *adj.* [*tripartite*, French; *tripartitus*, Latin.] Divided into three parts; having three correspondent copies; relating to three parties.—Our indentures *tripartite* are drawn. *Shakspeare.*

TRIPARTITION, *s.* A division into three parts. *Ash.*
 TRIPATORE, a town of the south of India, province of the Carnatic, and district of Tanjore. Lat. 10. 10. N. long. 78. 40. E.

TRIPATORE, a town of the south of India, district of Baramahal. This place was frequently taken and retaken during the wars with Hyder Aly. Lat. 12. 32. N. long. 78. 42. E.

TRIPLE, *s.* [*tripe*, French; *trippa*, Italian and Spanish.] The intestines; the guts.

How say you to a fat *tripe* finely broil'd?

—I like it well.

Shakspeare.

It is used in ludicrous language for the human belly.

TRIPEDAL, *adj.* [*tres* and *pes*, Latin.] Having three feet.

TRIPERSONAL, *adj.* [*tres*, Latin; and *personal*.] Consisting of three persons.—Thou, that sittest in light and glory unapproachable, Parent of angels and men! Next, thee I implore, omnipotent king, Redeemer of the lost remnant whose nature thou didst assume, ineffable and everlasting love! And thou, the third subsistence of divine infinitude, illumining Spirit, the joy and solace of created things! one *tripersonal* Godhead! look upon this thy poor and almost spent and expiring church. *Milton.*

TRIPETALOUS, *adj.* [*τριεις* and *πεταλον*.] Having a flower consisting of three leaves.

TRIPETTY, a town of the south of India, province of the Carnatic, containing a very celebrated Hindoo temple. The image is one of the numerous incarnations of Vishnu. Lat. 13. 31. N. long 79. 33. E.

TRIPHTHONG, *s.* [*triphthongue*, French; *τριεις* and *φθοσση*, Greek.] A coalition of three vowels to form one sound: as *eau*; *eye*.

TRIPLARIS [from *triplex*, threefold], in Botany, a genus of the class triandria, order trigynia, natural order of polygoneæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, ovate, trifid; segments lanceolate, membranaceous, spreading, very long, permanent; six-cleft. Corolla: petals three, length of the tube of the calyx; none. Stamina: filaments three, awl-shaped, length of the tube of the calyx. Anthers linear, membranous, ovate. Pistil: germ ovate, triangular; angles compressed. Styles three, awl-shaped, length of the stamens. Stigmas three-sided, villose. Pericarp none. Seed: nut three-sided, within the ovate base of the calyx.—*Essential Character.* Calyx very large, three-parted, or six-parted. Corolla three-petalled, or none. Nut three-sided, within the ovate base of the calyx.

1. *Triplaris Americana*.—Spikes erect, terminating. This is an upright elegant tree, with a trunk the height of a man, and a thin head made up of horizontal branches forming a long pyramid. Leaves oblong-ovate, acuminate, very large, a span long, entire, petioled. Spikes long, slender, erect, terminating, hairy; with small, ovate, acuminate, hairy bractes.—Native of South America.

2. *Triplaris ramiflora*.—Racemes lateral, aggregate. This is a branching diffused tree. Leaves ovate, or roundish-ovate.—Native of the woods about Carthage, but more rare than the preceding; by the river Cinu it is more common.

TRIPLE, *adj.* [*triple*, French; *triplex*, *tripulus*, Latin.] Threefold; consisting of three conjoined.

See in him

The *triple* pillar of the world transform'd
 Into a strumpet's stool.

Shakspeare.

Treble; three times repeated.—We have taken this as a moderate measure betwixt the highest and lowest; but if we had taken only a *triple* proportion, it would have been sufficient. *Burnet.*

To TRIPLE, *v. a.* To treble; to make thrice as much, or as many.—To what purpose should words serve, when nature hath more to declare than groans and strong cries; more than streams of bloody sweat; more than his doubled

and *tripled* prayers can express? *Hooker.*—To make threefold.

Time, action, place, are so preserved by thee,
 That e'en Corneille might with envy see
 Th' alliance of his *tripled* unity.

Dryden.

TRIPLET, *s.* Three of a kind.

There sit C—nts, D—ks, and Harrison,
 How they swagger from their garrison;
 Such a *triplet* could you tell,
 Where to find on this side hell.

Swift.

Three verses rhyming together: as,

Waller was smooth, but Dryden taught to join
 The varying verse, the full resounding line,
 The long majestic march and energy divine.

Pope.

TRIPPLICATE, *adj.* [from *triplex*, Latin.] Made thrice as much.—*Triplicate* ratio, in geometry, is the ratio of cubes to each other; which ought to be distinguished from triple. *Harris.*—All the parts, in height, length, and breadth, bear a duplicate or *triplicate* proportion one to another. *Grew.*

TRIPPLICATION, *s.* The act of trebling or adding three together.—Since the margin of the visible horizon in the heavenly globe is parallel with that in the earthly, accounted but one hundred and twenty miles diameter; sense must needs measure the azimuths, or verticle circles, by *triplication* of the same diameter of one hundred and twenty. *Glanville.*

TRIPLICITY, *s.* [*triplicité*, French; from *triplex*, Latin.] Trebleness; state of being threefold.—It was a dangerous *triplicity* to a monarchy, to have the arms of a foreigner, the discontents of subjects and the title of a pretender to meet. *Bacon.*

TRIPIOIDES, a Surgeon's instrument with a threefold basis, used in the restoring of great depressions of the skull.

TRIPLOW, or THRIPILOW, a parish of England, in Cambridgeshire, noted for its heath, on which the army chose Oliver Cromwell for their leader in 1648; 8 miles south of Cambridge.

TRIPMADAM, *s.* An herb.—*Tripmadam* is used in salads. *Mortimer.*

TRIPPOD, *s.* [*tripus*, Latin. "Sedebat Martinus in sella rusticana, ut est in usibus servulorum, quas nos rustici Galli *tripetias*, vos scholastici, aut certè tu qui de Græcia venis, *tripodas* nuncupatus. *Sulp. Sev. Dial.* 2.] A seat with three feet, such as that from which the priestess of Apollo delivered oracles.

Two *tripods* cast in antic mould,
 With two great talents of the finest gold.

Dryden.

TRIPPOD, or TRIPPO, a famed sacred seat or stool supported by three feet, on which the priest and sybils were placed to render oracles.

TRIPOLI, an extensive territory on the northern coast of Africa, forming the most easterly of the Barbary states. It consists chiefly of a line of coast extending about 800 miles in length, or from Cape Razatin in 11. 38. E. long., to Port Bomba in 32. 20. E. long. Its interior boundaries are, on the east the desert of Barca, on the south Fezzan, on the west Tunis, and part of the Bled el Jereede, or country of dates. The habitable part of this country consists chiefly of the coast, which for a few miles inland, is almost throughout of exuberant fertility; but beyond this limit, the productive qualities of the soil entirely disappear, and the interior is occupied either with deserts of sand, or with the mountainous districts of Garian and Mesulata. The Tripolitan territory includes the country colonised by the Greeks, and celebrated by them under the name of Cyrene. It appears then to have included a much greater extent of cultivated territory than now, and to have supported a larger population. In the great bay called now the gulf of Sidra, are the quicksands so dreaded by the ancients, under the appellation of Syrtis. At this point the Greeks derived their most intimate knowledge of the African desert,

desert, and its savage inhabitants, called then the Nasamones and Lotophagi, the last from the lotus, a species of berry on which they subsisted, and still found in abundance on the shores of the Syrtis.

The productions of Tripoli vary exceedingly, according to the different quarters of the country. The track along the coast produces, in the utmost luxuriance, every article peculiar to the finest tropical climates. The exportation of corn might be considerable, did not the Tripoline government follow the absurd policy of prohibiting it, unless by the bashaw, merely for his own profit. The same law applies to horses and mules, the breed of which is cultivated with the greatest care; and though the former be of small size, they are very active and serviceable. Bullocks, sheep, and poultry, are reared in immense quantities; and animal food being little consumed, afford an ample object of exportation.

The basis of the population in Tripoli consists of a mixed race of Moors, Arabs, and Turks. They seldom exceed the middle size. The Moors have a very fair complexion; while that of the Arabs is dark and sallow. They are all remarkable for regular and athletic forms; and a cripple or a deformed person is scarcely to be seen among them.

From the imperfect notices afforded by travellers, it appears certain, that this region affords a rich magazine of Greek and Roman antiquities. Along the whole coast, and in many parts of the interior, are found fine specimens of classic architecture. The spots most remarkable in this respect that have been hitherto observed, are Ptolometa (formerly Ptolemais), and still more Lebida, the Leptis Magna of the ancients. The remains of the latter are about three miles in length, and two in breadth, and consist of gateways, walls, an immense number of pillars, some of the very finest granite, and numerous inscribed marbles.

TRIPOLI, a considerable city, capital of the territory of the same name in Northern Africa, is built in a low situation, on a neck of land projecting a short distance into the sea. It is of great extent, though a large portion of the space inclosed within its walls being unoccupied, the population is not supposed to exceed 25,000. The caravanseras, mosques, houses of the foreign consuls, and of the higher ranks of the natives, are mostly built of stone, and regularly whitewashed twice a year. The lower ranks construct their houses of earth, small stones, and mortar; the height never exceeds one story; and they are built in a square form, with a court in the centre, which is generally paved with stone brought from Malta. The roofs being flat, serve at once as an agreeable promenade, and as a receptacle for the rain water, which is conveyed by pipes to cisterns constructed below.

The body of the inhabitants of Tripoli consist of the race called Moors, distinguished by reclus Oriental habits, and by a bigoted attachment to the Mahometan religion. Notwithstanding, however, their contempt for Christians and Jews, they do not interrupt them in the free exercise of their religion. Reverence for deceased relations forms one of the amiable features in the character of the Tripolitans. This is shewn by continued periods of lamentation, and regular visits paid to their tombs. Their character, however, is not generally the subject of praise. Revenge, avarice, treachery, and deceit, are described as predominant vices. In their intercourse with Christians, particularly, all sort of chicanery and low cunning are employed. They do not even possess the Mussulman virtue of sobriety; winehouses being public, and intoxication as common as in Britain.

The prince, as usual in Mahometan countries, enjoys an authority altogether despotic. He is nominally, indeed, the subject of the Porte, from which, at the entrance of his reign, he must receive confirmation. The trade of Tripoli is chiefly confined to Malta, Tunis, and the Levant. The vessels employed in it are mostly Maltese and Ottoman, with only a few belonging to Tripoli. The annual caravan from Morocco to Mecca, combining commercial with religious objects, passes through this city. The pilgrims, when fatigued, often freight a ship from Tripoli to Alexandria.

Caravans also come generally twice a year, bringing all the commodities of interior Africa, slaves, gold dust, pearls, ivory, ostrich feathers, saffron, drugs, senna, camel's hair, camels, mules, antelopes, &c., which are exchanged for coarse European cloths, a few silks, baracans or cloaks of the country, Tunisian caps, powder, muskets (which ought to be very light, and have long barrels), pistols, scimitars, hardware, glass-beads, toys, Venetian looking-glasses, &c. The traders from Bornou and Soudan are described as dealing with a simplicity and good faith not to be found among the Moors. Lat. 32. 54. N. long. 13. 18. E.

TRIPOLI, a seaport of Syria, capital of a pachalic of the same name. It is situated at the foot of the branches of Lebanon, and along the edge of a small triangular plain, which extends between them and the sea, and terminates in a flat promontory, on which is situated the place of anchorage. The pachalic of Tripoli contains a great part of the ancient *Phœnicia*, and consists of the declivity of Lebanon, with the plain interposed between it and the Mediterranean. It is in general well watered, and covered with rich verdure, exhibiting extensive groves of mulberry, orange, lemon, and other fruit trees. The mountainous districts, inhabited by the independent tribes of the Maronites and Ansarians, are better cultivated than the plains. Latakia or Ladikieh is the only other considerable town, except Tripoli itself. For some time past, this pachalic has been generally included either under that of Acre, or that of Damascus. Lat. 34. 26. N. long. 35. 44. E.

TRIPOLIZZA, a town of Greece, in the Morea, situated in a narrow valley, at the foot of Mount Mænalus; 22 miles south-south-west of Argos, and 30 north-north-west of the ruins of Sparta. It is said to have been built of the remains of several towns, Megalopolis, Tøgea, Mantinæa, and Pallantium, without, however, occupying the site of any of these places, which were at a considerable distance from each other. Its situation is bleak, the ground which it occupies is rugged and uneven, and the general plan of the town extremely irregular.

TRIPOLY, *s.* [I suppose from the place whence it is brought.] A sharp cutting sand.—In polishing glass with putty, or *tripoly*, it is not to be imagined that those substances can by grating and fretting the glass bring all its least particles to an accurate polish. *Newton.*

TRIPONTARY, a town of the south of India, district of Cochin. It is situated on the side of a lake, and is the occasional residence of the Cochin rajah. Lat. 9. 57. N. long. 76. 20. E.

TRIPOS, *s.* A tripod. See TRIPOD.

Craz'd fool, who would'st be thought an oracle,
Come down from off the *tripos*, and speak plain. *Dryden.*

TRIPOSSOOR, a town of the south of India, province of the Carnatic; 30 miles west-by-north from Madras.

TRIPOTAMIA, or TRIPOTEMI, a small town of Greece, in the central part of the Morea, situated in a valley, in a fertile and well cultivated country. It is inhabited almost exclusively by Greeks, and is 25 miles north-by-west of Tripolizza.

TRIPPER, *s.* One who trips.

TRIPPING, *adj.* Quick; nimble.

The clear sun of the fresh wave largely drew,
As after thirst; which made their flowing shrink
From standing lake, to *tripping* ebb; that stole
With soft foot tow'rd's the deep. *Milton.*

TRIPPING, *s.* Light dance.

Back, shepherds, back, enough your play,
Here be without duck or nod,
Other *trippings* to be trod,
Of lighter toes. *Milton.*

TRIPPINGLY, *adv.* With agility; with swift motion.

This ditty after me
Sing, and dance it *trippingly*. *Shakspeare.*

TRIPSACUM

TRIPSACUM [*Τριψις, tritus*, from *τριψω, tero*], in Botany, a genus of the class monoecia, order triandria, natural order of gramina, gramineæ, or grasses.—Generic Character. Male flowers double on one side, alternate, in the upper part of the spike.—Calyx: glume two-flowered; outer floret male, inner neuter; each two-valved; outer valve lanceolate, flattish, obtuse, awnless, cartilaginous, with the margins thinner (the interior one straightish), embracing the interior, oblong, triangular-boat-shaped, acute, almost the length of the exterior. Corolla: in each two-valved, membranaceous, very thin, awnless; less than the calyx; valves nearly equal; exterior ovate, boat-shaped, bluntish; interior lanceolate, bifid at the top. Nectary two-leaved, very small; leaflets triangular, fleshy, convex, truncate, mucronate at both ends, the upper margin thinner, the middle emarginate. Stamina of the outer floret: filaments three, capillary, longer than the calyx. Anthers parallel-iped.—Of the inner floret: filaments three, very slender, sub-connate. Anthers none. Female flowers on the same spike below the males, immersed alternately on each side into the rachis. Calyx: involucre ovate, cartilaginous, very thick, ventricose below, shining, obscurely margined on both sides at the back, submarginate with a blunt top, embracing the glume with a thinner margin. Glume two-valved; outer valve oblong, ventricose, attenuated at the top, acuminate, thickish, doubled; inner similar, bluntish. Corolla two-valved, smaller than the calyx and more tender; outer valve larger, ventricose, bluntly three-toothed; inner scarcely smaller, flat at the back, emarginate. Glume barren, one-valved, oblong, folded together at each margin, two-toothed, by the anterior side of the corollet, and much smaller than it. Nectary two-leaved, very small; leaflets linear, membranaceous, very thin, acutely emarginate at the top. Stamina: filaments three, at the base of the germ, very small, broad at the base, capillary. Anthers linear, very small, barren. Pistil: germ oblong. Style longer than the calyx, compressed. Stigmas two, very long, twisted, villose. Pericarp none. Seed one, ovate, compressed a little, acuminate with the permanent style.—*Essential Character.* Male.—Calyx: glume four-flowered. Corolla: glume membranaceous. Female.—Calyx: glume with perforated sinuses. Corolla: glume two-valved. Styles two. Seed one.

1. *Tripsacum dactyloides*.—Spikes androgynous. Leaves an ell or more in length. Culms the thickness of a goose quill or of the little finger, with few joints and long internodes, angular, tinged with purple, as high as a man, dividing at top into three, four, or five spikes, a long span or a foot in length, and straight.—Native of Virginia. It flowers in August.

2. *Tripsacum hermaphroditum*.—Spike hermaphrodite. Root annual, fibrous. Culm erect, two feet high, roundish, very smooth, jointed, branched.—Native of Jamaica.

TRIPTIS, a small town in the interior of Germany, in Saxe-Weymar, on the river Orla; 4 miles east of Neustadt.

TRIPTOTE, *s.* [*triptoton*, Latin.] A noun used but in three cases. *Clarke.*

TRIPUDIARY, *adj.* [*tripudium*, Latin.] Performed by dancing.—Claudius Pulcher underwent the like success when he continued the *tripudiary* augurations. *Brown.*

To **TRIPUDIATE**, *v. n.* [*tripudio*, Latin.] To dance. *Not in use. Cockeram.*

TRIPUDIATION, *s.* [*tripudium*, Latin.] Act of dancing. **TRIPUDIUM**, in Antiquity, a species of divination, in which omens were drawn from the rebounding of corn thrown to chickens.

TRIQUETRA OSSA, the small irregular bones occasionally found between the regular bones of the cranium.

TRIREME, *s.* [*triremis*, Latin.] A galley with three benches of oars on a side.

TRISA'GION, *s.* [old French; *τρεις* and *αγιος*, Greek.] A particular kind of hymn.—Hereto agrees the seraphical hymn, called the *trisagion*, Holy, holy, holy, &c. that used

to be sung in all churches throughout the Christian world. *Bp. Bull.*

TRIS-DIAPASON, or **TRIPLE-DIAPASON**, in Music, what is otherwise called a triple eighth.

TRISE, at Sea, the seamen's word for hauling up of any thing with a dead-rope, or one that doth not run in a block, but is pulled by hand or by main strength: thus if any cask, chest, or other goods, hath only a rope fastened to it, and so without a tackle be pulled up into a ship by hand, they say it is trised up.

TRISECTION, *s.* [*tres* and *sectio*, Latin.] Division into three equal parts: the trisection of an angle is one of the desiderata of geometry.

TRISMEGISTUS [formed from *τρεις*, *thrice*, and *μεγιστος*, *greatest*], an epithet, or surname, given to one of the two Hermeses, or Mercuries, kings of Thebes, in Egypt, who was contemporary with Moses.

TRISPYRGOI, a cape on the coast of Greece, in Livadia. Lat. 36. 53. N. long. 23. 29. E.

TRISSINO (Giangiorgio), an Italian poet, was descended from a noble lineage, and born in 1478 at Vicenza. In his youthful studies he was industrious and ardent. Besides the Latin and Greek languages, the latter of which he acquired under Demetrius Chalcondylas, he became a proficient in mathematics, physics, architecture, and other fine arts. He was employed in posts of trust and honour by the popes Leo X. and Clement VII., and he also received many tokens of distinction from the Venetian republic and his native city. He died at Rome in 1550. His great work, in which he was engaged for twenty years, was his epic poem, entitled "Italia Liberata de' Goti," the subject of which was the deliverance of Italy from the Goths in the reign of the emperor Justinian. His model in the composition of this work was Homer, whom he servilely imitated, insomuch that, according to Voltaire, "he took every thing from him but his genius." *Gen Biog.*

TRIST, *adj.* [*tristis*, Latin.] Sad; gloomy. Old Cornish *trist*, sad; *tristyans*, sorrow.

Amaz'd, asham'd, disgrac'd, sad, silent, *trist*,
Alone he would all day in darkness sit.

Fairfax.

TRISTAN D'ACUNHA, the largest of three islands in the South Atlantic ocean, about 1500 miles from any land either to the west or north, very lofty, and about 15 miles in circumference. A part of the island, towards the north, rises perpendicularly from the sea to a height apparently of a thousand feet or more. A level then commences, forming what among seamen is termed table land, and extending towards the centre of the island; from whence a conical mountain rises, not unlike in appearance to the Peak of Teneriffe, as seen from the bay of Santa Cruz. These islands are certainly worthy of a more particular inquiry; for they are not 50 leagues from the general track of vessels bound to China, and to the coast of Coromandel by the outer passage. In war time an excellent rendezvous might be settled there for ships that wanted no other supply than that of water. Lat. 37. S. long. 15. 40. W.

TRISTE, an island on the coast of America, near the boundary of the provinces of Vera Cruz and Merida, in the lake or gulf of Terminos. It abounds in delicious water; is full of lizards and other reptiles, and is desert. Lat. 18. 20. N.

TRISTFUL, *adj.* [*tristis*, Latin.] Sad; melancholy; gloomy; sorrowful. *A bad word.*

Heaven's face doth glow
With *tristful* visage; and, as 'gainst the doom,
Is thoughtsick at the act. *Shakspeare.*

To **TRISTI'TIATE**, *v. a.* [from *tristitia*, Latin.] To make sad or sorrowful. *Not used.*—Nor is there any, whom calamity doth so much *tristitiate* as that he never sees the flashes of some warming joy. *Feltham.*

TRISTRA, **TRUSTRA**, or **TRISTA**, in our old Law, an immunity, by which a man is excused from attending on the lord of the forest, when he is disposed to chace within the forest;

forest; so that he cannot be compelled to hold a dog, follow the chase, nor stand at the place appointed, which otherwise he might be, under pain of amerement.

TRISULC, *s.* [*trisolcus*, Latin.] A thing of three points.—Consider the threefold effect of Jupiter's *trisolc*, to burn, discuss, and terebrate. *Brown.*

TRISULCATE, *adj.* Having three points or forks.

Sons of him

That hurls the bolt *trisulcate*.

Old Ballad.

TRISYLLABICAL, *adj.* Consisting of three syllables.

TRISYLLABLE, *s.* [*trisyllaba*, Latin.] A word consisting of three syllables.

TRITE, *adj.* [*tritius*, Latin.] Worn out; stale; common; not new.

She gives her tongue no moment's rest,

In phrases batter'd, stale, and *trite*,

Which modern ladies call polite.

Swift.

TRITELY, *adv.* In a trite or common way.

TRITENESS, *s.* Staleness; commonness.—The scarcity of sermons, which, while they preach the Gospel to the poor, disgust not the fastidious ear of modern elegance by *triteness* or vulgarity, has long been a subject of regret and of complaint. *Wrangham.*

TRITHEISM, *s.* [*tritheisme*, Fr.; $\tau\rho\epsilon\iota\varsigma$ and $\delta\epsilon\omicron\varsigma$, Gr.] The opinion which holds three distinct gods.—Dr. Sherlock is certainly clear from the charge of *tritheism*. *Bp. Bull.*

TRITHEIST, *s.* One who maintains tritheism.—I will lay together the several theses which he hath undertaken to defend against both Arians and Socinians on one hand, as also against Sabellians and *tritheists* on the other. *Nelson.*

TRITHEISTIC, *adj.* Relating to tritheism.—Reprinting exploded *tritheistic* notions. *South.*

TRITHEMIUS (John, Abbot,) was born in the year 1442, at the village of Tritenheim, near Treves, whence he took his name. Having finished his course of education in the universities of Treves and Heidelberg, he was chosen abbot of the Benedictine monastery of Spanheim in 1483, which he superintended for twenty-two years, and when he withdrew from it in consequence of a faction of the monks, he was placed by the bishop of Wurtzburg at the head of a monastery in that city, where he died in 1518, at the age of seventy-six. "Trithemius," says one of his biographers, "was a person of vast erudition, a philosopher, mathematician, chemist, poet, historian, and divine, and conversant in the Hebrew, Greek, and Latin languages." His works, written in Latin, are numerous, but those in biography and history are held in the highest estimation. Otherwise, "he appears to have been a person whose great learning was considerably tinged with credulity, and whose industry was superior to his judgment." *Dupin. Gen. Biog.*

TRITING, *s.* [$\tau\rho\iota\delta\iota\eta\eta\gamma\alpha$, Sax., whence *triding*, *riding*; which see.] The tiring contains three or four hundreds, or the third part of a shire or province. *Cowel.*—It is now retained only in Yorkshire, in its three *ridings*.

TRITICAL, *adj.* [from *tritius*, Latin.] Trite; common; worn out.—He appears from a *tritival* philosophy to have earned his uncommon credulity, and a peculiar propensity to the marvellous, into our British, Roman, and Dano-Saxon archæology. *Warton.*

TRITICALNESS, *s.* Triteness.—Where there is not a *tritivalness* or mediocrity in the thought, it can never be sunk into the genuine and perfect bathos by the most elaborate low expression. *Arbutnot and Pope.*

TRITICUM [Latin *q.* tritum, vel quod ex spicis tritum-rando facile excutiat. In Greek, $\tau\rho\iota\tau\iota\kappa\omicron\varsigma$, *q.* $\sigma\rho\upsilon\rho\omicron\varsigma$, from $\sigma\rho\omicron\rho\omicron\varsigma$, *secd*], in Botany, a genus of the class triandria, order digynia, natural order of gramina, gramineæ or grasses.—Generic Character. Calyx: a common receptacle elongated into a spike. Glume two-valved, subtriflorous; valves ovate, bluntish, concave. Corolla two-valved, nearly equal, size of the calyx; exterior valve ventricose, blunt with a point; interior valve flat. Nectary two-leaved; leaflets acute, gibbous at the base. Stamina: filaments three, capillary. An-

thers oblong, forked. Pistil: germ turbinate. Styles two, capillary, reflexed. Stigmas feathered. Pericarp none. Corolla fosters the seed, opens and drops it. Seed one, ovate-oblong, blunt at both ends, convex on one side, grooved on the other.—*Essential Character.* Calyx two-valved, solitary, subtriflorous (or many-flowered, on a flexuose toothed rachis.) Corolla blunt with a point.

I.—Annual. Corn or Grain."

1. *Triticum æstivum*, summer or spring wheat.—Calyxes four-flowered, ventricose, smooth, imbricate, awned. This will ripen much earlier, and therefore has been often sown in the spring, at the same time with oats; but if the season should prove wet, it is very subject to grow tall, and to have very thin grains; so that unless from the severity of the winter, or some other accident, the winter corn has been injured, the practice of sowing spring wheat is rarely used.

2. *Triticum hybernum*, winter or lammas wheat.—Calyxes four-flowered, ventricose, even, imbricate, with little or no awns. Common or winter wheat has long ears or spikes, with the grains ranged in four rows, and imbricate; the chaff smooth, ventricose or bellied, and not terminated by awns or beards. The last character however is not constant, for winter or lammas wheat has frequently short awns, but they never grow to the length of those in spring wheat. Wheat being subject to the severity of winter, its roots are wonderfully disposed to withstand the inclemency of the season. The first, or seminal root, is pushed out at the same time with the germ; and that, together with the meal, nourishes the plant, until it has formed the crown. When this has become sufficiently large, it detaches a number of strong fibres, which push themselves obliquely downwards. These are the coronal roots. A small pipe preserves the communication between them and the seminal roots. It makes an essential part of the plant, and is observed to be longer or shorter, according to the depth at which the seed has been buried. The crown however is always formed just within the surface; and its place is the same, whether the grain has been sown deep or superficially. As the increase and fructification of the plant depends upon the vigorous absorption of the coronal roots, it is no wonder that they should fix themselves so near the surface, where the soil is always the richest. The stalk, straw, or culm as Linnæus calls it, is three feet high at a medium, jointed, cespitose, or in tufts; seventy-two have been known to issue from one root. Leaves smooth, three lines wide; much more, and of a very dark green in good ground. Spike close, weighty, several inches in length. The lower flowers imperfect, as is commonly the case in this order of plants. The glumes or chaffs of the calyx are ovate-lanceolate, and end in a point like a short awn; they contain for the most part each four flowers, but there are sometimes only three, and sometimes five or six, but then one or more of these fall off without producing any grain. The two glumes or chaffs of the corolla are equal, but the outer one puts forth an awn a little below the tip, an inch or two inches in length; sometimes however there is none; the inner one is hollow, awnless, and two-toothed, between these lies the seed or grain, which is villose, and the largest of its congeners. The nectaries are small, fringed, and silky.

Varieties.—The principal varieties of winter wheat are, the white and red lammas and red Kentish without awns, and the red and white bearded wheat. Of these there are innumerable subordinate varieties, of which those most esteemed are the Taunton-dean, Egg-shell, Hedge-wheat, Essex white, Essex dun, Hertfordshire white, and brown, and velvet ears: though in the midland counties there is no sort preferred to the brown lammas.

3. *Triticum compositum*, or many-spiked wheat.—Spike compound; spikelets clustered, awned. Linnæus's account of the many-spiked wheat is, that it is allied to the summer or spring wheat, but that the spike is four times as large and a hand in length, formed of spikelets in two rows, alternate, approximating, from nine to twelve, the lower ones

shorter, but the upper one single. Chaffs smooth, keeled. Awns a hand in length.—It is said to be a native of Egypt, at least it is cultivated there, as it is also about Naples, in other parts of Italy, and in the south of France.

4. *Triticum turgidum*, gray pollard or duck-bill wheat.—Calyxes four-flowered, ventricose, villose, imbricate, obtuse. This is called gray wheat, duck-bill wheat, and gray pollard, in Sussex fuller's wheat; (in other places bearded wheat, dunover, rivets, pole or poll-rivet, red poll-rivet, square-gray, pendulum, yeograde, &c.) It has two varieties: viz. cone wheat; and Barbary wheat.

5. *Triticum Polonicum*, Polish or Poland wheat.—Calyxes two-flowered, naked; florets with very long awns; teeth of the rachis bearded. The Polonian wheat grows tall, and the ears are long and heavy, so that where it is sown too thick it is very subject to be lodged, on which account it is little regarded; but since it produces much flour it is worthy of cultivation.

6. *Triticum spelta*, or spelt wheat.—Calyxes four-flowered, truncate; florets awned, hermaphrodite, the middle one neuter. Spelt has a stout straw that is almost solid. Spikes strong, white.—It is much cultivated in many of the southern countries of Europe. In the south of France they call it *épéaute blanche*, and sow it in spring; it ripens in July and August; it requires strong land, and they esteem it to be very useful in destroying weeds, to which the stoutness of the straw is well adapted. Spelt is supposed to be the *Zea* of the Greeks, and the *Far* of the Romans.

7. *Triticum monococcum*, or one grained wheat.—Calyxes subtriflorous, the first awned, the middle one sterile. This one-grained wheat is sown in autumn, before the common sort, and yet ripens later; it is therefore longer in the ground than any other, and continues a whole year, or even more in the mountains. It is less subject to smut than common wheat. The straw is excellent for thatching. The flour is used for the same purposes as spelt; but is of a better quality: the bread made of it is light, though brown; but its great excellence is for gruel.

II.—Annual Grasses.

8. *Triticum Hispanicum*, or Spanish wheat-grass.—Calyxes six-flowered; florets all directed the same way, awned at the tip. This is an annual grass, scarcely a span in height.—Native of Spain.

9. *Triticum prostratum*, or trailing wheat-grass.—Spike ovate, compressed, bifarious; glumes both of calyx and corolla smooth; awns shorter than the floret. This also is an annual grass.—Native the Caspian deserts, in the driest soil.

10. *Triticum pumilum*, or dwarf wheat-grass.—Spike ovate; glumes somewhat awned, those of the calyx two-grooved. This is a small annual species.—Native of Siberia.

III.—Perennial Grasses; except 16, 17, 18.

11. *Triticum junceum*, or rushy sea wheat-grass.—Calyxes five-flowered, truncate; leaves rolled in, mucronate-pungent. Root perennial, creeping. The whole plant very glaucous; the lower part of the stem however is of a more or less vivid violet hue and very smooth and shining. Leaves rigid and sharply pungent, perfectly smooth at the back; their upper side marked with numerous longitudinal rough furrows. Stipulas very short. Spike solitary, erect, straight and stiff, much broader in proportion to its length than that of any other British triticum, and consisting of numerous alternate flat spikelets, of five or six florets each, perfectly smooth and beardless. The glumes are furrowed and blunt; the interior valve of the corolla flat and fringed.—Native of Europe, the Levant, Siberia, and Barbary. There are two varieties.

12. *Triticum distichum*.—Calyxes four-flowered, smooth, awnless; flowers distich; leaves filiform.—Native of the Cape of Good Hope.

13. *Triticum repens*, or creeping wheat-grass, quick, quich, twitch, couch, or dog's-grass.—Calyxes five-flowered, awl-shaped, many-nerved; florets acuminate; leaves flat; root creeping. Root perennial, creeping very much, jointed,

coated; fibres downy. This troublesome and pernicious weed is too well known to farmers and gardeners, under the names of quich, quitch, squitch, twitch, couch and scutch-grass, all evidently corrupted from *quich*, which signifies living, and is a term well appropriated to this grass, because every particle of the root will grow. In Scotland and the north of England, it has the appellation of quickens. In some counties it is called spear-grass and dog's-grass.—It must be observed, that farmers call any perennial grass with creeping roots, that infest arable land, by this name. This pest of the husbandman and gardener is not however without its use. At Naples the roots are collected in large quantities, and sold in the markets to feed horses; they have a sweet taste, something approaching to that of liquorice. When dried and ground to meal they have been made into bread in years of scarcity. The juice of them drank liberally is recommended by Boerhaave in obstructions of the viscera, particularly in cases of schirrous liver and jaundice. Cattle are frequently found to have schirrous livers in winter, and to be cured soon when turned out to grass in the spring. It is well known that dogs eat the leaves to excite vomiting. Horses eat them when young, but leave them when fully grown. Cows, sheep, and goats eat them. The variety figured in *flora danica* and *flora rustica* has awns from two to four lines in length, and the calyxes contain from four to six flowers. There is another variety.

14. *Triticum caninum*, fibrous or bearded wheat-grass.—Calyxes four-flowered, acuminate, three or five-nerved; florets awned; leaves flat. Root perennial, fibrous, tomentose, not creeping.

15. *Triticum maritimum*, or sea wheat-grass.—Calyxes many-flowered; florets mucronate; spike branched.—Native of France, Spain, Barbary and Egypt, but not of England.

16. *Triticum tenellum*, or delicate wheat-grass.—Calyxes four-flowered or more; florets awnless, acute; leaves bristle-shaped. Root annual.—Native of France, Spain, Italy, and Switzerland.—Introduced in 1781, by Mons. Thouin.

17. *Triticum unioloides*, or linear-spiked wheat-grass.—Spikelets linear-lanceolate, keeled, distich. Root annual, capillary, villose.—Native of Italy, Sicily, and Barbary.

18. *Triticum loliaceum*, or dwarf sea wheat-grass.—Calyxes obtuse, many-flowered; spike simple, directed one way; florets awnless; culm branched. Root annual, consisting of long downy fibres, as in most grasses that grow in pure sand.—Native of England, in many parts on the sandy beach.

19. *Triticum unilaterale*, or one-sided wheat-grass.—Calyxes one-sided, alternate, awnless.—Native of the south of France and Italy, on the sea-coast.

Propagation and Culture.—The season for sowing of lammas or winter wheat is autumn, and always when the ground is moist. In the downs of Hampshire, Wiltshire; and Dorsetshire, the farmers begin sowing their wheat in August, if there happens rain; so that when they are in their harvest, if the weather stops them, they employ their people in sowing, for if the corn is not forward in autumn, so as to cover the ground before winter, it seldom succeeds well on those dry lands, especially if the spring should prove dry; but in the low strong lands, if they get their wheat into the ground by the middle of November, the farmers think they are in good season; but sometimes it so happens from the badness of the season, that in many places the wheat is not sown till Christmas or after, but this late-sown wheat is subject to run too much to straw, especially if the spring should prove moist.

The usual allowance of seed-wheat to one acre of land is three bushels, but from repeated experiments it has been found that two bushels is sufficient on good land. The drill system is a great saving in seed, and perhaps the best method of seeding the ground, though dibbling still exists to some extent in some counties. Therefore, if the farmers have regard to their own interest, they should save this expence of seed, which amounts to a considerable article in large farms, especially

especially when it is to be purchased, which most of the skilful farmers do, at least every other year, by way of change; for they find that the seeds continued long upon the same land will not succeed so well as when they procure a change of seeds from a distant country.

Preparation.—The old preparation for wheat is a naked summer fallow. In some counties the fallows are ploughed just before harvest on to two bout ridges, ready to plough and sow under furrow in the spraining method, a seedsman to every plough, which reverses the ridges. In others they lay their lands into ten or twelve furrow stiches or lands, and sow some under furrow, some under the harrow. Ridges vary exceedingly, according to their wetness; and in Kent, by means of the turn-wrest plough, they have no ridges, but the whole field an even surface.

Other preparations for wheat are beans, clover, peas, potatoes, rape, tares, and turnips. Wheat should never be sown after rye, barley or oats.

Beans, if well cultivated, form the best preparation for wheat. Clover forms a very excellent preparation for wheat. This may be effected by the following course of crops. 1. Turnips. 2. Barley. 3. Clover. 4. Wheat.

Peas are a good preparation for wheat, on land which is too light for beans. Great crops of wheat have been grown after potatoes, well manured for, and on a proper soil. A good crop of winter tares leaves the ground in such loose, friable order, that it is much better husbandry to sow turnips or plant cabbages on it, than to leave it to receive tillage for wheat.

Steeping the seed.—It has been a great controversy whether this operation be beneficial or not; the evidence certainly goes much in favour of doing it; and there can be no objection to it except the expence and trouble; unless the seed-wheat be suffered to lie too long in some mixtures. The intention of them is to guard against the smut, and the modes of steeping, brining, and liming are innumerable. Arsenic has lately had the preference; and Mr. Young informs us, that it appears from his experiments that steeping the seed from twelve to twenty-four hours in a ley of wood-ashes, in lime water, and in a solution of arsenic, gave clean crops from extremely smutty seed; but a short time in those mixtures had a much less effect.

Salt water, where the sea is near, and brine, where it is not so, are the common steeps for seed wheat in most places. After soaking for a few hours, it is taken out, and a sufficient quantity of lime, to dry it for sowing, is sifted over it.

October and November are the months in which wheat is commonly sown. It has been lately thought in some places that September is a still better time, provided it be wet enough; but few farmers are ready so early.

Harvesting.—It is well known that wheat is for the most part cut with the sickle; in some parts, where straw is more than ordinarily valuable, it is cut near the ground, but in most places at a considerable height.

In Middlesex, Kent, Surrey, and West Devonshire, reaping (provincially near London called *bagging*.) is mostly done with a toothless hook of about twice the weight of a common sickle. It is sharpened in the same manner as a scythe; and the corn is cut by a succession of blows, made within two or three inches of the ground. The reaper collects enough for one sheaf at a time, binds and sets it up in tens, called a shock. This bagging is, to all intents and purposes, mowing with one hand against the standing corn. By this operation the straw is cut much closer to the ground than can be done by hand-reaping; it is equally expeditious, and secures a greater quantity of straw, which near London is a considerable object. Upon the whole, hand-reaping is preferable to every other method; an expert reaper will cut, bind, and shock from half to three quarters of an acre per day. The writer of this article has known one man in Surrey reap, bind, and set up an acre in one day, in a crop that cut forty shocks to the acre.

In bagging, the corn is struck at horizontally and almost close to the ground with one hand; whilst the other hand and arm strike it at the same instant about the middle of the

straw; thus driving it upright against the standing corn, the workman taking a sweep round as much as will form a sheaf, and collecting the whole together in the centre, into a sort of leaning cone; finally striking the hook under its base, to disengage it entirely from the soil; but still supporting it with the left arm and the leg, until the hook be put beneath it, to lift it horizontally to the band. If a crop of wheat be free from weeds, and stand well, this method of cutting is expeditious and eligible enough; but if it be lodged, or ravelled, or foul at bottom, it is improper: at best it requires expert workmen to make good work. A scythe in good hands will do as well or better, and is still more expeditious.

TRITLINGTON, a hamlet of England, in Northumberland; $4\frac{1}{2}$ miles north of Morpeth.

TRITOMA, a genus of the Coleoptera order of insects; the characters of which are, that the antennæ are clavated or club-shaped, the club being perfoliate, and the anterior palpi or feelers hatchet-formed. It has seven species, as follow.

1. *Tritoma bipustulatum*.—Black, with wing sheaths marked by a scarlet lateral spot.—Found in England.

2. *Tritoma glabrum*.—Smooth, black, with pitchy antennæ and feet.—Found in Sweden.

3. *Tritoma dubium*.—Black, with wing-sheaths and feet testaceous.

4. *Tritoma vittatum*.—Red, with black wing-sheaths; fillet red.—Found in India.

5. *Tritoma morio*.—Black, silky, with antennæ and feet of the same colour.

6. *Tritoma sericeum*.—Blackish, silky, with feet testaceous.—Found in Germany.

7. *Tritoma collaræ*.—Black, with the sides of the thorax and abdomen red.—Found in New Holland.

TRITON, in Mythology, a sea demi-god, held by the ancients to be an officer, or trumpeter, of Neptune, attending on him, and carrying his orders and commands from sea to sea.

The poets and painters represent him as half man, half fish, terminating in a dolphin's tail, and bearing in one hand a sea-shell, which served him as a trumpet.

TRITON, a genus of the mollusca order of worms; the characters of which are, that the body is oblong, the tongue spiral, the tentacula twelve in number, and bipartite, six on each side, and the three hinder ones cheliferous. There is one species, viz. *Triton littoreus*, which is found in the clefts of submarine rocks.

TRITURABLE, *adj.* [*triturable*, Fr., from *trituro*.] Possible to be pounded or comminuted.—It is not only *triturable* and reducible to powder by contrition, but will not subsist in a violent fire. *Brown.*

To TRITURATE, *v. a.* [*trituro*, Latin.] To thresh; to pound. *Not used.* *Cockeram.*

TRITURATION, *s.* [*trituration*, Fr.; *trituro*, Lat.] Reduction of any substances to powder upon a stone with a muller, as colours are ground: it is also called *levigation*.—He affirmeth, that a pumice stone powdered is lighter than one entire; that abatement can hardly be avoided in *trituration*. *Brown.*

TRIVADY, or TRIVIDY, a town of the south of India, province of the Carnatic, containing a large temple, which serves as a citadel. Lat. 11. 42. N. long. 79. 45. E.

TRIVALENOOR, a town of the south of India, province of the Carnatic. Lat. 11. 51. N. long. 79. 30. E.

TRIVANDAPATAM, a town of the south of India, province of Travancore. It is the station of a large portion of the Travancore troops, many of whom are disciplined in the European manner. Lat. 9. 27. N. long. 76. 55. E.

TRIVANT, *s.* A truant. See TRUANT.—Thou art a trifer, a *trivant*, thou art an idle fellow. *Burton.*

TRIVELL, a hamlet of England, in Herefordshire; 7 miles from Ross.

TRIVENTO, a small town of Italy, in the north of the kingdom of Naples. It is the see of a bishop, has 3100 inhabitants, and stands in a mountainous country, on the right bank of the river Trigno; 10 miles north-by-east of Molise, and 60 north-north-east of Naples.

TRIVERO, a small town in the north of Italy, in Piedmont, province of Biella. Population 3300.

TRIVET, *s.* [See TREVET.] Any thing supported by three feet.

The *trivet* table of a foot was lame,
A blot which prudent Baucis overcame,
Who thrusts beneath the limping leg a sherd. *Dryden.*

TRIVET (Nicholas), an English historian of the thirteenth century, was the descendant of a respectable family in Norfolk. Having entered among the Dominicans in London, he studied at Oxford and at Paris; and at the latter place collected from books on the history of the Normans and Franks such passages as related to the English nation, and supplied their defects from the best accounts which he could procure in his own country. In this way he composed his "Annals of the Six Kings of England sprung from the Counts of Anjou," introducing a detail of the most remarkable events that occurred under the Roman pontiffs, the emperors, the kings of France, and other contemporary princes, together with an account of learned men, particularly of his own order, and intending that his work should be a continuation of that of William of Malmesbury. He also wrote various other works, partly containing illustrations of ancient authors, but none of them were printed, except his commentary on St. Augustine's book "De Civitate Dei." Soon after his return from France he became prior of a monastery in London, where he died in 1328, at the age of nearly 70 years. His historical work has passed through several editions under different titles, for which we refer to Aikin's Gen. Biog.

TRIVIAL, *adj.* [*trivialis*, Lat.] Vile; worthless; vulgar; such as may be picked up in the highway.

Be subjects great, and worth a poet's voice,
For men of sense despise a *trivial* choice. *Roscommon.*

Light; trifling; unimportant; inconsiderable. This use is more frequent, though less just.

This argues conscience in your grace,
But the respects thereof are nice and *trivial*,
All circumstances well considered. *Shakspeare.*

TRIVIALLY, *adv.* Commonly; vulgarly.—Money is not the sinews of war, as is *trivially* said, where the sinews of men's arms, in effeminate people, fail. *Bacon.*—Lightly; inconsiderably.—The presence of a beautiful woman of honour, to minds which are not *trivially* disposed, displays an aciracy which is not to be communicated by any other object. *Tatler.*

TRIVIALNESS, *s.* Commonness; vulgarity; lightness; unimportance.

TRIVICARY, an ancient city of the south of India, province of the Carnatic, but of which very little remains. Lat. 12. 3. N. long. 79. 43. E.

TRIVIER, *St.*, a small town in the east of France, department of the Ain, with 1200 inhabitants; 11 miles north-east of Trevoux, and 20 south-west of Bourg.

TRIVIER DE COURTES, *St.*, a small town in the east of France, department of the Ain, containing, with the adjacent hamlets, 1600 inhabitants; 20 miles north-west of Bourg.

TRIVIGILLO BAY, a bay of the gulf of Honduras, on the south shore of the gulf of Mexico.

TRIVIGLIO, a considerable town of Austrian Italy, in the Milanese, delegation of Bergamo, on the river Adda. It has a population of more than 6000; 20 miles east of Milan.

TRIVIUM, a term invented in the times of barbarism to express the three sciences that were first learned in the schools, viz., grammar, rhetoric, and logic; and the schools in which these sciences were taught were called *triviales*.

TRIUMFETTA [so named by Plumier, in memory of Giov. Battista Triumfetti, prefect of the botanic garden at Rome], in Botany, a genus of the class dodecandria, order monogynia, natural order of colummiferæ, tiliaceæ (*Juss.*)—Generic Character. Calyx: perianth five-leaved; leaflets

lanceolate, arilled below the tip, deciduous. Corolla: petals five, linear, erect, obtuse, concave, bent back, awned below the tip. Stamina: filaments sixteen, equal, ascending, length of the corolla, awl-shaped, erect. Anthers simple. Pistil: germ roundish. Style length of the stamens. Stigma bifid, acute. Pericarp: capsule globular, fenced on every side with hooked prickles, four-celled. Seedstwo, convex on one side, angular on the other.—*Essential Character.* Calyx five-leaved. Corolla five-petalled. Capsules hispid, opening in four parts.

1. *Triumfetta lappula*, or prickly-seeded triumfetta.—Leaves emarginate at the base; flowers uncyclized. This rises with an upright stem to the height of six or seven feet.—Native of Jamaica, Martinico, and other islands of the West Indies, the Bermudas, and Brazil.

2. *Triumfetta glandulosa*, or glandular triumfetta.—Flowers complete; leaves ovate-lanceolate, tomentose-hoary beneath. Branches woody, round, villose.—Native of Arabia Felix and India.

3. *Triumfetta bartramia*, or currant-leaved triumfetta.—Leaves entire at the base, undivided. Root annual.—Native of the East Indies.

4. *Triumfetta velutina*, or velvet triumfetta.—Flowers complete; leaves ovate, somewhat angular, acuminate, tomentose-hoary beneath. Stem softly villose, round.—Native of the Isle of France.

5. *Triumfetta procumbens*, or procumbent triumfetta.—Leaves roundish-cordate, subtrilobate tomentose; stem procumbent.—Native of the Society Isles.

6. *Triumfetta hirta*, or hairy triumfetta.—Flowers complete; leaves three-lobed; the branches of the terminating panicle dichotomous, rough-haired. Stem frutescent.—Native of the island of Santa Martha in America.

7. *Triumfetta semitriloba*, or mallow-leaved triumfetta.—Flowers complete; leaves half-three-lobed. This is an upright branching shrub, six feet high.—Native of the West Indies.

8. *Triumfetta grandiflora*, or great flowered triumfetta.—Flowers complete; leaves subcordate-ovate, entire, serrate, somewhat hairy; floral leaves lanceolate; branches rough-haired. This differs from the other species, in having the corallas twice or thrice as large.—Native of Montserrat.

9. *Triumfetta macrophylla*, or long-leaved triumfetta.—Flowers complete; leaves ovate-cordate, entire, unequally serrate, acuminate, tomentose, glandular at the base. Branches round, tomentose, as the whole plant is.—Native of South America.

10. *Triumfetta rhombæfolia*, or rhomb-leaved triumfetta.—Leaves rhomboid; the upper ones lanceolate-ovate; flowers complete. This is an upright branching shrub, three feet in height.—Native of the West Indies.

11. *Triumfetta annua*, or annual triumfetta.—Leaves ovate, undivided; sometimes but rarely lobed. This is an annual plant, rising about two feet and a half high, and sending out several branches on every side.

Propagation and Culture.—Sow the seeds on a hot-bed early in the spring; when the plants come up, transplant each into a separate pot filled with light, fresh, kitchen-garden-earth, and plunge them into a moderate hot-bed of tanner's bark, shading them from the sun until they have taken new root, and then treating them in the same manner as other tender exotic plants. In autumn remove them into the bark stove, and refresh them with water frequently, except in very cold weather. If the plants live through the winter, they will flower the following summer, and ripen their seeds in autumn; but may be continued two or three years if carefully managed.

TRIUMPH, *s.* [*triumphus*, Lat.] Pomp with which a victory is publicly celebrated.

Hence will I drag thee headlong by the heels
Unto a dunghill, which shall be thy grave;
And there cut off thy most ungracious head,
Which I will bear in *triumph* to the king. *Shakspeare.*

State of being victorious.

Sublime

Sublime with expectation when to see
In *triumph* issuing forth their glorious chief.

Milton.

Victory; conquest.

Eros has

Packt cards with Cæsar, and false play'd my glory
Unto an enemy's *triumph*.

Shakspeare.

Joy for success.—Great *triumph* and rejoicing was in heaven.
Milton.—Show; exhibition of masks; stately procession. *Obsolete.*

Knights and barons bold,
In weeds of peace, high *triumphs* hold.

Milton.

A conquering card now called *trump*. See TRUMP.

To TRIUMPH, *v. n.* [*triumpho*, Latin; *trionpher*, Fr.]
This word is always accented in prose on the first syllable,
but in poetry sometimes on the last.—To celebrate a victory
with pomp; to rejoice for victory.

Your victory, alas! begets my fears;
Can you not then *triumph* without my tears?

Dryden.

To obtain victory.

There fix thy faith and *triumph* o'er the world;
For who can help, or who can save besides?

Rowe.

To insult upon an advantage gained.

How ill beseeeming is it in thy sex
To *triumph*, like an Amazonian trull.

Shakspeare.

To TRIUMPH, *v. a.* To triumph over; to subdue.

We that, within these fourscore years, were born
Free, equal lords of the *triumphed* world.

B. Jonson.

The triumph was the most pompous spectacle known
among the ancients: authors usually attribute its invention
to Bacchus, and derive the term from *ἑριαμχος*, one of his
titles; and tell us, that he first triumphed upon the conquest
of the Indians; and yet this ceremony was only in use
among the Romans.

The triumph was of two kinds, the *less* and the *greater*.
The *less* triumph was granted upon a victory over some
unequal and unworthy enemy, as over pirates, slaves, &c.
This they called *ovatio*, because the only sacrifices offered in
it were sheep.

The *greater* triumph, called also *curulis*, and simply the
triumph, was decreed by the senate to a general upon the
conquering of a province, or gaining a single battle. The
order and economy of the triumph were thus.—The general
having dispatched couriers with tidings of his success, the
senate met in Bellona's temple to read the letters: this done,
they send him the title *Imperator*, with orders for him to
return, and bring his victorious troops along with him.

When he was arrived near the city, the general and principal
officers took oath of the truth of the victory; and the day
of triumph was appointed.

The day being arrived, the senate went to meet the con-
queror without the gate called Capena, or Triumphalis, and
marched in order before him to the Capitol. He was richly
clad in a purple robe, embroidered with figures of gold,
setting forth his glorious achievements; his buskins were be-
set with pearl, and he wore a crown, which at first was only
laurel, but afterwards was gold; in one hand he bore a
laurel branch, and in the other a truncheon. He was drawn
in a car, or chariot, adorned with ivory and plates of gold,
drawn usually by two white horses; though sometimes by
other animals, as that of Pompey, when he triumphed over
Africa, by elephants; that of Mark Antony, by lions; that
of Heliogabalus, by tigers; that of Aurelian, by deer; and
that of Nero, by hermaphrodite mares, &c.

At his feet were his children, or sometimes on the chariot-
horses. It is added, that the public executioner was behind
him, to remind him, from time to time, that these honours
were transitory, and would not screen him from the severity
of the laws, if he should ever be found delinquent.

The cavalcade was led up by the musicians, who had
crowns on their heads; after them came several chariots, in
which were plans of the cities and countries subdued, done

VOL. XXIV. No. 1631.

in relievō: they were followed by the spoils taken from the
enemy, their horses, arms, gold, silver, machines, tents, &c.
After these came the kings, princes, or generals subdued,
loaded with chains, and followed by mimics and buffoons,
who insulted over their misfortunes. Next came the officers
of the conquering troops, with crowns on their heads.

After these appeared the triumphal chariot, before which,
as it passed, they all along strewed flowers, and the music
played in praise of the conqueror amidst the loud acclama-
tions of the people, crying *Io triumphe!*

The chariot was followed by the senate, clad in white
robes; and the senate by such citizens as had been set at
liberty or ransomed.

The procession was closed by the priests, and their officers
and utensils, with a white ox led along for the chief victim.

In this order they proceeded through the triumphal gate,
along the Via Sacra, to the Capitol, where the victims were
slain.

In the mean time all the temples were open, and all the
altars loaden with offerings and incense; games and combats
were celebrated in the public places, and rejoicings
appeared every where.

TRIUMPHAL, *adj.* [*triumphalis*, Lat.] Used in ce-
lebrating victory.

Ye—so near heaven's door,

Triumphal with *triumphal* act have met.

Milton.

TRIUMPHAL, *s.* [*triumphalia*, Lat. triumphal orna-
ments.] A token of victory. *Not in use.*

He to his crew that sat consulting brought
(Joyless *triumphals* of his hop'd success),
Ruin, and desperation, and dismay.

Milton.

TRIUMPHANT, *adj.* [*triumphans*, Lat.] Celebrating
a victory.—Captives bound to a *triumphant* car. *Shak-
speare.*—Rejoicing as for victory.

Think you, but that I know our state secure,
I would be so *triumphant* as I am?

Shakspeare.

Victorious; graced with conquest.

He speedily through all the hierarchies
Intends to pass *triumphant*, and give laws.

Milton.

TRIUMPHANTLY, *adv.* In a triumphant manner in
token of victory; joyfully as for victory.

Through armed ranks *triumphantly* she drives,
And with one glance commands ten thousand lives.

Granville.

Victoriously; with success.

Thou must, as a foreign recreant, be led
With manicles along our streets; or else
Triumphantly tread on thy country's ruin,
And bear the palm.

Shakspeare.

With insolent exultation.—A mighty governing lye goes
round the world, and has almost banished truth out of it;
and so reigning *triumphantly* in his stead, is the source of
most of those confusions that plague the universe. *South.*

TRIUMPHER, *s.* One who triumphs.—August was dedi-
cated to Augustus by the senate, because in the same month
he was the first time created consul, and thrice *triumpher* in
Rome. *Peacham.*

TRIUMPHO DE LA CRUZ, a cape on the coast of Hon-
duras. Lat. 15. 56. N. long. 88. 25. W.

TRIUMVIRATE, or TRIUMVIRI, *s.* [*triumviratus* or
triumviri, Lat.] A coalition or concurrence of three men.

With these the Piercies them confederate,

And, as three heads, conjoin in one intent,
And instituting a *triumvirate*,
Do part the land in triple government.

Daniel.

TRIUNE, *adj.* [*tres* and *unus*, Lat.] At once three and
one.—We read in Scripture of a *triune* Deity, of God made
flesh in the womb of a virgin, and crucified by the Jews.
Burnet.

TRIXIS [from *τριξος* for *τριστος* *triplex*], in Botany, a
genus of the class syngenesia, order polygamia necessaria,

2 G

natural

natural order of *compositæ oppositifolia, corymbifera (Juss)*.—Generic Character. Calyx: common imbricate, ovate; scales eight to ten, oblong, acuminate, convex, almost equal; outer somewhat keeled, membranaceous at the tip. Corolla: compound; corollets hermaphrodite, numerous, in the disk; females fewer, shorter, in the ray; proper in the hermaphrodites funnel-form, with a very short tube, and an erect five-cleft border; in the females funnel-form, with a compressed tube, and a trifid border; the hinder segment larger, the anterior ones smaller. Stamina: in the hermaphrodites filaments five, length of the tube; anther cylindrical, above the border. Pistil: in the hermaphrodites, germ linear, pubescent. Style filiform, length of the stamens, bifid at the tip. Stigmas reflexed. Pericarp none. Calyx unchanged, converging. Seeds: in the hermaphrodites often abortive; in the females ovate, somewhat compressed, margined, convex behind, blunt at the tip, sub-trigonal, hirsute. Down none. Receptacle chaffy; chaffs oblong, acute, concave, membranaceous.—*Essential Character*. Corollets of the ray trifid. Seeds hairy at the tip, without any down. Receptacle chaffy.

1. *Trixis terebinthinaea*.—Leaves ovate, serrulate, hispid, hirsute beneath; flowers corymbed.

2. *Trixis aspera*.—Leaves ovate, attenuated at the base and tip, tooth-serrate, rough; flowers panicked.

3. *Trixis erosa*.—Leaves broad-ovate, gash-serrate, wrinkled, rugged; petioles longer.—These are natives of the West Indies, the first of Jamaica; and the last of Dominica and St. Christopher's.

TROAD, or PLAIN OF TROY, a track of Asia Minor, to which this name, unknown to the natives, has been applied by modern Europeans. This spot is not distinguished by any of the features which form the usual subjects of geographic delineation. It contains no great cities, no grand features of nature, not even any ancient monuments of peculiar magnitude. The extraordinary interest excited by it depends solely on its being the scene of events celebrated in the immortal verse of the first of Grecian poets. This alone gives it a pre-eminence over all the other regions of Western Asia. "So high the deathless muse can raise her theme." Yet a considerable mystery hangs over this curious subject. The most learned travellers and inquirers, Chandler, Wood, Chevalier, Bryant, Gell, Clarke, Hobhouse, Carlyle, &c. have exhausted their efforts, without bringing out any result in which the public is disposed fully to acquiesce. The decision of the question must depend upon a multiplicity of details, into which it would not consist with the plan and limits of this work to enter. It may be expected, however, that we should take some general survey of the *campi ubi Troja fuit*, a district which the recollections and associations connected with it render so justly and deeply interesting.

Modern scepticism has exercised its full influence upon this subject. Bryant, one of the most learned inquirers, denies not only that any spot can be identified as Troy, but that there ever was such a place as Troy, or such an event as the Trojan war. This supposition, in itself extremely improbable, has been refuted by medals and inscriptions relating to that subject, as well as by other circumstances. Other writers have endeavoured to place Troy in a position farther to the south, and on the shore of the Egean sea. But the general opinion seems now fixed upon that part of the coast of Asia Minor which lies immediately without the narrow sea called anciently the *Hellespont*, and now the *Dardanelles*. Here is found the island of Tenedos, in the situation assigned by Homer, and retaining its name unaltered; and notwithstanding difficulties of detail, the general features exhibit a very striking correspondence. We find here a plain of considerable extent, watered by several streams, and behind which rises a chain of lofty mountains, called by the Turks *Kazdaghi*, but which entirely correspond to the *Gargarus* and *Ida* of Homer. Every trace of the ancient Troy being confessedly obliterated, its site can only be guessed by the relative position of the natural objects alluded to by Homer. Of these, in this level track, the most conspicuous are

the rivers; and upon them chiefly the grand controversy has hinged. The most considerable is the *Mender* or *Mender Sou*, which rises about 40 miles to the southward, amid the steepes of *Ida*, whence it is precipitated in a lofty cascade. It traverses the plain in a northern direction, with a certain declination westward, and falls into the mouth of the *Hellespont* at a place called *Koum Kale*. Notwithstanding the different direction in which the researches of Chevalier long turned the attention of the learned, it seems now universally agreed that this must be the *Scamander*. Its very name is of considerable weight; for those of natural objects very usually survive the original language; and the *Mender* has a farther claim, as being decidedly the largest river of the plain. Besides, the scene of Homer's battles is clearly fixed in a great plain to the east of the *Scamander*. Such a plain exists to the east of the *Mender*, and in no other position. This river is, after all, only a great mountain torrent, which, in the heat of summer, is nearly or altogether dry; but when filled with the winter rains, it is about 300 yards wide, deep, and rapid; insomuch that Dr. Clarke and Mr. Gell incurred considerable danger in fording it. On the eastern side the *Mender* receives a rivulet called the *Callifat Osmack*, rising in the lower heights of *Ida*, and joining the *Mender* about four miles before its falling into the sea. The course of this rivulet is about 15 miles, and its stream not generally rapid, though its depth is such that it can be crossed only at a ford. This river Dr. Clarke conceived to be the *Simois*, traversing the *Simoisian* plain, on which were fought all the great battles narrated in the *Iliad*. There is, however, a much larger river, second only to the *Scamander*, among those which traverse the plain of *Troy*, called the *Thymbrek*. It flows much farther eastward, leaving a wide interval between it and the *Scamander*, which it joins only at its mouth. The name strongly suggests the *Thymbrius*, a river mentioned by Homer, and not the scene of any great achievements.

We have now to consider the human structures by which this plain is distinguished. Among these, the most remarkable are the ruins near *Palaio Callifat*, first discovered and pointed out by Dr. Clarke, and clearly proved by him to occupy the site of the *New Ilium* of *Strabo*. They are situated about three miles from the sea, and nearly midway between the *Mender* and the *Thymbrek*. The remains of a citadel could be clearly traced, and Turks were employed raising enormous blocks of marble from the foundations surrounding the eminence on which it was situated. The appearance of the structure exhibited that colossal and massive style of architecture which characterised the early ages of Greece. *Strabo* himself, however, following *Demetrius of Scepsis*, placed old *Troy* three miles and a half farther to the west. This carries us to the village of *Tchiblack*, where were noticed very considerable remains of ancient architecture, but in such a state of disorder and ruin, that no precise description of them could be given. The most remarkable are on the top of a hill, nearly a mile from the place called *Beyan Mezaley*, in the midst of a beautiful grove of oak trees. Here the ruins of a Doric temple of white marble lay heaped together in the most striking manner, mixed with very large fragments of broken pillars.

Besides the ruins already described, there are those of *Halil Elly*, a village beyond the *Thymbrek*. They appear to be rather the remains of ten temples than of one. The earth, to a very considerable extent, is covered with broken columns of marble and granite; while Doric, Ionic, and Corinthian capitals, some very beautiful, lie dispersed in all directions.

A characteristic feature of this plain consists in a considerable number of *tumuli* or mounds, which are named by the natives with the appellation *tepe*, supposed a corruption of *taphos*, tomb, and which may fairly be judged the remains of those erected in honour of the Grecian and Trojan heroes. Among the most remarkable is the *Aiantium* or tomb of *Ajax*, situated upon the ancient *Rhetean* promontory on the coast of the *Hellespont*. The shrine on the top still remains in a state of remarkable preservation; and Dr. Clarke conceives, that of all the remains of former ages, there are few objects more

more powerfully calculated to affect the mind by local enthusiasm. A striking view is here afforded of the Hellespont and the plain of Troy. Another *tumulus* is found in the middle of the Simoisian plain, and on the top of a natural mound, from which circumstances Dr. Clarke supposes it to be the tomb of Ilus. There are a considerable number of other *tumuli*, particularly on the sea-coast, but which it is difficult to identify.

In ascending to the source of the Mender in the Idæan chain, Dr. Clarke passed first through rugged rocky passes, resembling some parts of the Tyrol, and inhabited by a race of rude mountaineers. He came then to the village of *Æne*, the *Æneia* of Strabo, and the name of which strongly suggests the kingdom said to be erected here by *Æneas*, after the capture of Troy. These open into a beautiful plain, appearing as one of the happiest territories in nature, cultivated like a garden, regularly inclosed, and surrounded by mountains. Amid this is *Beyramitch*, the present capital of all Troas, and a large well built town. It contains numerous fragments of antiquity brought from *Kushunlu Tepe*, a large conical mountain, forming one of the first steeps of *Gargarus*. In this place, accordingly, are found the marks of several immense temples; but only their area can now be traced, filled with fragments of *terra cotta* and other materials; the columns and ornaments having been almost entirely carried off.

At the southern extremity of the plain of Troy, nearly opposite to *Tenedos*, appear on a height the remains of *Alexandria Troas*. This was once a splendid city, built by *Antigonus*, and improved by *Lysimachus*, who, in honour of his master, gave to it the name of *Alexandria*. Although it has served for many ages as a magazine of architectural ornaments to *Constantinople*, and all the surrounding country, the monuments which remain are still surprising. The aqueducts of *Herodes Atticus*, formed of enormous masses of hewn stone, the walls of the city in the same colossal style of masonry, and the baths, all exhibit the grand style of ancient building. Broken marble tomb-stones are scattered about, of such prodigious size, that they appear like rocks covering the soil. But the finest building is that called, upon a false theory, the palace of *Priam*, which, besides the vast quantity of marble used in its construction, appears to have been entirely covered with a coating of metal. It is seen to a great distance at sea. The immense theatre, built on the slope of the hill, and looking towards the sea, is still in a state of considerable perfection. The diameter measures 252 feet. Several other edifices may be traced, though it is difficult to trace the purposes for which several of them were erected.

TROARN, a small town in the north of France, department of *Calvados*, with 1000 inhabitants; 9 miles east of *Caen*.

To **TROAT**, *v. a.* To cry as a buck does at rutting time. *Dict.*

TROBRIAND ISLANDS, a cluster forming part of the archipelago of *Louisiade*, discovered by *D'Entrescasteux*. *Cape Denis*, the most northern point of *Trobriand*, the largest, is situated in lat. 8. 24. S. long. 151. 8. E.

TROCADIE, a small island in the gulf of *St. Lawrence*, near the north coast of *St. John's Island*.

TROCAMANA, a small river of *Quito*, in the province of *Mainas*, which enters the *Tigre*, just where that river joins the *Amazons*.

TROCAR *s.* [*trocar*, corrupted from *trois quart*, Fr.] A chirurgical instrument.—The handle of the *trocar* is of wood, the canula of silver, and the perforator of steel. *Sharp*.

The *trocar* is commonly used for tapping the abdomen, in cases of ascites and ovarian dropsy; the tunica vaginalis, in cases of hydrocele; the bladder, when there is no other mode of evacuating the urine.

TROCAZZANO, a small town of Austrian Italy, in the Milanese, delegation of *Cremona*, not far from the *Adda*.

TROCHAICAL, or **TROCHAIC**, *adj.* [*trochaicus*, Lat.] Consisting of *trochees*.—More of that true harmony, which

will best support a poem, will result from a variety of pauses and from an intermixture of those different feet, iambic and *trochaic* particularly, into which our language naturally falls, than from the uniformity of similar terminations. *Dr. Warton*.

TROCHAIC, *s.* A *trochaical* verse.—The supplicating song is highly pathetic and poetical, especially when he conjures the powers below in beautiful *trochaics*;

“By the hero's armed shades,
“Glittering through the gloomy glades;
“By the youths that died for love,
“Wandering in the myrtle grove.”

Dr. Warton.

TROCHANTERS, *s.* [*τροχανήρες*, Gr.] Two processes of the thigh bone, called *rotator major* and *minor*, in which the tendons of many muscles terminate. *Dict.*

TROCHEE, *s.* [*trocheus*, Lat.; *troché*, Fr.; *τροχαιος*, Gr.] A foot used in Latin poetry, consisting of a long and short syllable.

TROCHIL, or **TROCHILUS**, *s.* [*trochilus*, Latin.] A small sea-bird, said to get its meat out of the crocodile's mouth.—The crocodile opens his chaps to let the *trochil* in to pick his teeth, which gives it the usual feeding. *Sir T. Herbert*.—A name sometimes given to the wren.

TROCHILIC, *adj.* Having power to draw out, or turn round.—I am advertised that there is one, which by art *trochilic*, will draw all English surnames of the best families out of the pit of poetry; as *Boucher* from *Busyrus*, *Percy* from *Perseus*, &c. *Camden*.

TROCHILICS, *s.* [*τροχιλιον*, *τροχος*, Greek, a wheel.] The science of rotatory motion.—There succeeded new inventions and horologies, composed by *trochilics*, or the artifice of wheels, whereof some are kept in motion by weight, others without. *Brown*.

TROCHILO, CAPE, one or the southern points of the island of *Cerigo*, in *Greece*; 6 miles south-east of *Cape Liado*.

TROCHILUS, the **HUMMING-BIRD**, or **HONEY-SUCKER**, in Ornithology, a genus of birds of the order *picæ*; the Characters of which are, that the bill is longer than the head, subulate-filiform, or cylindric, slender, with slightly-thickened tip; the upper mandible sheathing the lower; the tongue filiform, consisting of two conjoined slips forming a tube, and extensile; the legs slender and rather short, and feet formed for walking; the tail composed of ten feathers.

The humming-birds constitute a lively brilliant race, distinguished by their beautiful colours and diminutive size, peculiar natives of the American continent and adjacent islands, and, with few exceptions, confined to the hotter regions. The genus is extensive, and it has therefore been found convenient to divide them into two sections, *viz.*, the curve-billed and the straight-billed.

I.—Curved-billed.

1. *Trochilus paradiseus*.—Red; head crested; blue wings, and two of the tail-feathers very long. This is the *Paradise humming-bird* of *Latham*.—A native of *New Spain*.

2. *Trochilus pella*.—Red (purple-red, *Shaw*), with brown (black, *Shaw*) head; golden (topazine, *Shaw*) throat; green rump, and two very long middle tail-feathers. This is the *colibri topaze* of *Buffon*, the long-tailed red humming-bird of *Edwards*, and the *topaz humming-bird* of *Latham*. It is the most brilliant of this section, and has a decided superiority to all the rest by its magnitude as well as colours. The female is far inferior to the male with respect to brilliancy of colour.—This bird is a native of several parts of *South America*, but is principally found in *Surinam* and *Guiana*, frequenting the banks of rivers and brooks. During flight, they skim the surface of the water like swallows.

3. *Trochilus superciliosus*.—Gilded or shining brown; elongated middle tail-feathers (white at the tips, *Shaw*), grey beneath, with long bill and white eye-brows. *Shaw*. The *supercilious humming-bird* of *Latham*, distinguished from all others by the great length of its bill, and its strongly-cuneated tail. The female differs by being of a pale rufous grey beneath, by having a shorter bill, the lower mandible whitish,

whitish, and the tail slightly cuneiform and tipped with white.—Found in Cayenne.

4. *Trochilus polytmus*.—Glossy-green, with black crown and tail; violet-brown wings, and two very long outer tail-feathers. This is the long-tailed black-cap humming-bird of Edwards, and black-capped humming-bird of Latham. An elegant species, of considerable size.—A native of South America, and found also in Jamaica. The female is greenish above and white below; the sides of the neck varied with white and green, and the tail destitute of the two long plumes so conspicuous in that of the male.

5. *Trochilus forficatus*.—Gold-green, with blue crown, and gold-blue forked tail, and two outer feathers very long. The long-tailed green humming-bird of Edwards, and fork-tailed humming-bird of Latham. An elegant but rare species.—Found in Jamaica.

6. *Trochilus leucurus*.—Coppery-green, with brown quill-feathers; a reddish crescent in front of the neck, and white even tail. The white-tailed humming-bird of Edwards and Latham.—Native of Surinam.

7. *Trochilus jugularis*.—Gold-green, with a tinge of dusky-blue; with blood-red throat and breast, blackish abdomen, and even tail. Red-breasted humming-bird of Edwards and Latham. The garnet-throated humming-bird of Latham is of the same species.—Found in Surinam.

8. *Trochilus thaumantius*.—Gold-green, with blackish quill-feathers, and tail-feathers edged with white; the exterior one entirely white on the outside. The admirable humming-bird of Latham, first described by Marcgrave.—A native of Brasil and several other regions of South America.

9. *Trochilus dominicus*, or *pectoralis*.—Gold-green, with velvet-black breast; white belly, and purplish steel-blue tail. The black-breasted and St. Domingo humming-bird of Latham. The female is said to be distinguished from the male by having the green on the fore-part of the neck divided by two white streaks, and the breast of a paler black than that of the male.—A native of the West India islands.

10. *Trochilus mango*.—Copper-green, with black descending throat-stripe and abdomen; violet-brown wings, and ferruginous tail edged with black. The Mango humming-bird of Latham. The female is said to differ in having the two middle tail-feathers gold-green, like the back.—A native of South America, particularly of Brasil, but found in St. Domingo, Jamaica, and other West India islands. Dr. Latham mentions a variety of this species, in which the throat, on each side of the black stripe, was white. Gmelin makes the "*mellivora avis maxima*" of Ray and Sloane a variety of this.

11. *Trochilus holosericeus*.—Gilded-green, with brown wings; black tail and abdomen, and blue pectoral bar. The black-bellied humming-bird of Edwards and Latham.—Native of Mexico and Guiana.

12. *Trochilus galeritus*.—Gold-green, with brown quill-feathers, and purple crest.—Found in Chili.

13. *Trochilus exilis*.—Brownish-green, with a gloss of red; glossy-green crest with gilt tip, and black wings and tail. The little humming-bird of Latham, and humming-bird of a black colour of Bancroft. The smallest of the curve-billed section.—Native of Guiana.

14. *Trochilus cyaneus*.—Velvet-crimson, with blue back, and black wings. The crimson-headed blue humming-bird of Latham.—A native of Mexico.

15. *Trochilus furcatus*.—Glossy violet-blue, with gold-green crown and throat, and black wings, abdomen, and forked tail. The lesser fork-tailed humming-bird of Latham.—A native of several parts of South America, and of some of the larger West India islands.

16. *Trochilus macrourus*, or *forcipatus*.—Gold-green, with violet head and neck; abdomen marked by a white spot, and forked tail. Cayenne fork-tailed humming-bird of Latham.

17. *Trochilus purpuratus*.—Green, with crown, wings, and bifurcated tail purple, and wreath blue. The purple-crowned humming-bird of Latham.

18. *Trochilus auratus*. See *Jugularis*. Of this Gmelin gives a variety, viz., with cheeks, nape and throat golden-red; head and body black, with shining green.

19. *Trochilus gramineus*.—See *Dominicus* or *Pectoralis*.

20. *Trochilus violaceus*.—Dark purple-violet, glossy on the fore-parts, with green and gold wings and tail, the latter tinged with black. The violet humming-bird of Latham.—Native of Cayenne.

21. *Trochilus maculatus*.—See *Gutturalis*.

22. *Trochilus punctulatus*.—Gold-green, with blackish wings; shoulders and back spotted with white, and brown tail with white tip. The spotted humming-bird of Latham.—Native of Mexico, where it is called "*Hoitzitzil*."

23. *Trochilus albus*.—See *Gutturalis*, of which it is a variety.

24. *Trochilus aurantius*.—Brown, with orange head; yellow throat and breast, purple wings, and ferruginous tail. The orange headed humming-bird of Latham.—Native of South America.

25. *Trochilus flavifrons*.—Green, with yellow front, and black wings and tail. The yellow-fronted humming-bird of Latham, and yellow-fronted honey-sucker of Pennant.

26. *Trochilus venustissimus*.—See *Cyaneus*.

27. *Trochilus margaritaceus*.—Bright-green, pearl-grey beneath, with the tail steel-blue at the base, purple-brown in the middle, and white at the tip. The grey-necked humming-bird of Latham. Conjectured by Dr. Shaw to be female?

28. *Trochilus hirsutus*.—See *Brasiliensis*.

29. *Trochilus multicolor*.—See *Histrio*.

30. *Trochilus cinereus*.—Gold-green, ash-coloured beneath, with violet-brown wings, and rounded steel-blue tail with white tips. The ash-bellied humming-bird of Latham.

31. *Trochilus gularis*.—Gold-green; white beneath, with blackish wings and tail, and deep-blue throat and vent.—Probably a native of South America.

32. *Trochilus fulvus*.—Yellow, with the tail-feathers and covers thick; beneath brownish.—A native of South America.

33. *Trochilus varius*.—Gold-green; beneath whitish-brown, with a double pectoral band green-blue and blood-red.—Found in South America.

34. *Trochilus cyanurus*.—Green; cinereous beneath, with the throat, breast, and two very long middle-tail-feathers blue. The blue-tailed humming-bird of Latham.—Native of New Spain.

35. *Trochilus furcifer*.—Gold-green, with brown wings; white throat, and glossy blue-green breast and forked tail.—Native of Paraguay.

36. *Trochilus maximus*.—Gold-green, with white throat, ferruginous vent, and blue crown, quill and tail-feathers. Ekelberg's humming-bird of Latham.

37. *Trochilus Capensis*.—Green, with long middle tail-feathers, and blue wing-coverts. Ekelberg's humming-bird of Latham.

38. *Trochilus chrysobronchos*.—Gold-green, with very bright throat and breast; subferruginous wings, and white-edged tail.—Native of Guiana.

39. *Trochilus sparganurus*.—Gold-green, with emerald throat, and black forked tail, with a gold-crimson bar across the feathers. The bar-tailed humming-bird.—A very beautiful species, said to be a native of Peru.

40. *Trochilus porphyurus*.—Brown, with velvet-black throat, and purple neck-stripes and tail. A variety of the mango, according to Latham.—Native of South America and the West India islands.

41. *Trochilus gutturalis*.—Gold-green, with emerald throat; whitish rufous on each side; black breast, and black abdominal stripe. The *trochilus gularis* of Latham; and *maculatus* of Gmelin. The green-throated humming-bird of Latham.

42. *Trochilus nitidus*.—Violet-tailed humming-bird of Latham,

Latham, and *trochilus albus* of Gmelin's Linnæus. Supposed by Shaw to be a variety of the preceding.

43. *Trochilus Brasiliensis*.—Gold-green; rufescent beneath, with violet-brown wings and tail; the latter tipped with white, and white-feathered legs. The rufous-bellied humming-bird of Latham. The *trochilus hirsutus* of Gmelin's Linnæus. An elegant species.—Native of Brazil.

44. *Trochilus fasciatus*.—Green-gold, with rufus undulations; blackish-rufous head; and a black band edged with white along each side of the body. Banded humming-bird.—Native of Paraguay.

45. *Trochilus punctatus*.—Gold-green; beneath brownish undulated with white; with subviolaceous wings, and tail white at the base and tip. Scalloped humming-bird, strongly allied to the mango, and it is not impossible, says Dr. Shaw, that it may be the young, in its first year's plumage.

46. *Trochilus aureo-iridis*.—Gold-green, with blackish wings; and steel-blue tail with white tip.—Native of the West India islands.

47. *Trochilus aurentus*.—Dark gold-green, with brighter throat and shoulders; black breast, brown abdomen, and subviolaceous tail.—A native of the island of Porto-Rico.

48. *Trochilus trimaculatus*.—Gold-green; black beneath, with three white spots on each side; brown quill-feathers, and steel-blue tail.—Native of South America. Dr. Shaw conjectures that this may be only a variety of *trochilus mango*, *holosericeus*, or *pectoralis*.

49. *Trochilus elegans*.—Gold-green, with black breast; violet-black wings; and greenish-black forked tail.—Native of St. Domingo.

50. *Trochilus histrio*.—Brown, with gold-green crown, throat, breast, and shoulders; red belly, and blue cheeks. The harlequin humming-bird of Latham and Shaw, and the multicolor of Latham and others. A highly elegant species, and remarkable for its variety of colours.—Native country uncertain.

51. *Trochilus christatellus*.—Green, with shining gold-green crest; and black wings and tail. Gilt-crested humming-bird of Latham. A small and elegant species, much allied to the *trochilus exilis*.

II.—With straight bills.

52. *Trochilus platyrus*.—Gold-green, with brown belly, quill-feathers, and tail; the two middle tail-feathers naked with webbed tips. The racket-tailed humming-bird of Latham.—This is a rare species, and a native of South America.

53. *Trochilus latipennis*, or *campylopterus* of Linn. Gmel. —Gold-green; grey beneath, with brown wings and tail; and the shafts of the greater quill-feathers dilated and incurved. The broad-shafted humming-bird of Latham.—One of the larger humming-birds, a native of Cayenne, and a very rare species.

54. *Trochilus auritus*.—Gold-green; white beneath, with slightly elongated violaceous ear-feathers, black wings, and lateral tail-feathers. The violet-eared humming-bird of Latham; an elegant species.—Native of Cayenne. Gmelin mentions a variety with a purple band below the eyes, a large area near the ears, below which is a green-blue spot.

55. *Trochilus mellivorus*.—Gold-green, with blue head, neck, and breast, and white nuchal bar, abdomen and tail. White-bellied humming-bird of Edwards and Latham.—Native of South America, and not uncommon in Cayenne. The *trochilus fimbriatus*, or spotted-necked humming-bird of Latham and Gmel. Linn. is supposed to be a variety. There are also other varieties mentioned by Viellot.

56. *Trochilus ourissia*.—Gold-green, with blue back, breast, and belly; brown quill-feathers, and golden-brown tail. The green and blue humming-bird of Edwards and Latham.—Native of Surinam. N.B. The American word "Ourissia," signifying a sun-beam, is applied by some of the earlier writers to certain species of humming-birds, on account of the splendour of their colours. Gmelin mentions a variety, viz.: *trochilus green*; beneath blue, with orange spot on the chin; quill-feathers and tail obscure.

57. *Trochilus superbus*.—Gold-green, with blue crown; double black-and-white cheek-stripe, and crimson throat and breast. Stripe-cheeked humming-bird of Shaw. This superb humming-bird is a most beautiful species, and one of the finest of this brilliant race.—Native, probably, of South America.

58. *Trochilus sapphirinus*.—Bright sapphire-coloured, with slightly-gilded-back; brown wings; black abdomen, and steel-blue tail. The sapphire humming-bird of Latham.—Native of South America. Gmelin mentions a variety, viz., *trochilus* with sapphire breast, white belly, and tail blue-black.

59. *Trochilus smaragdo-sapphirinus*.—With bright sapphire-blue head and throat; gold-green body; brown wings, and steel-blue tail. The sapphire and emerald humming-bird of Latham.—Native of South America and the West Indies. Shaw suggests that the two last mentioned humming-birds really constitute one species. He mentions a variety of the last from Viellot, viz., the blue-gorge humming-bird.

60. *Trochilus lucidus*.—Bright gold-green, with deep-blue throat, breast, and tail; and a white spot behind each eye: supposed by Azara and Sonnini to be the same with the sapphire and emerald humming-bird.—Native of Paraguay.

61. *Trochilus amethystinus*.—Gold-green, varied beneath with grey and brown, with amethystine throat, and forked tail. The amethystine humming-bird of Latham.—Native of Cayenne.

62. *Trochilus moschitus*.—Purple-brown; blackish beneath, with ruby-gold crown, topazine throat, and black-tipped tail. The ruby-necked humming-bird of Latham. To this species Dr. Shaw refers the *trochilus elatus* of Gmelin's Linnæus, or ruby-crested humming-bird of Edwards and Latham. This is one of the most beautiful of the straight-billed humming-birds.—Native of South America, and particularly of Brazil, Guiana, and Surinam. The ruby-crested humming-bird is a variety.

63. *Trochilus pegasus*.—Gold-green; grey beneath, with brown wings, and blackish-purple tail with greenish hue. Grey-bellied humming-bird and gold-throated humming-bird of Latham. Dr. Shaw suggests that this may be a young female of *trochilus moschitus*.

64. *Trochilus hypophæus*.—Gilded-brown; whitish beneath, with brown crown, and gold-green stripe down the middle of the throat. The brown-crowned humming-bird of Latham, conjectured by M. Viellot to be no other than an advancing young of *trochilus moschitus*.

65. *Trochilus carbunculus*.—Glossy-black, with dark-red crown and nape, fiery-red throat and breast, and gilded-rufous tail.—The carbuncle humming-bird of Latham is suggested to be a variety of *trochilus moschitus*; rare in Cayenne.

66. *Trochilus chrysurus*.—Gold-green, with cinnamon throat, brown quill-feathers, and topazine tail.—Native of Paraguay.

67. *Trochilus colubris*.—Gold-green; about three inches in length; beneath white, with gold-red throat, and purple-brown wings and tail. The red-throated humming-bird of Edwards and Latham, red-throated honey-sucker of Pennant, *guainumbi* of Marcgrave. A beautiful species.—A native of America, breeding in Carolina, Florida, and, as some say, in Canada; and also a native of Jamaica and some other West India islands. The female differs in having the whole under side white, without any redness on the throat, and all the tail-feathers, exclusive of the two middle ones, tipped with white. The general history of this beautiful bird is detailed by Mr. Pennant, in his *Arctic Zoology*. Its flight is rapid, so that it is transient as lightning, and resembling this meteor in the glare of its colours; it feeds only upon the wing, suspended over the flower from which it extracts nourishment. The most violent passions sometimes agitate the little bodies of these birds. Their contests in disputing possession of the same flower are very violent; tilting against one another with such fury, as if they intended to transfix their antagonists with their long bills. They are

fearless of mankind, coming into apartments of houses, the windows of which are left open, but when approached, darting away with admirable velocity. Their nests, made in branches of trees amidst the thick foliage, are found with difficulty; they are of elegant structure, formed on the outside the moss, and within lined with down or gossamer collected from the great mullein, but sometimes constructed of flax, hemp, hair, and other soft materials. The female is said to be the builder, and the male supplies her with materials: both assist in the labour of incubation, which lasts twelve days; they lay only two eggs, which are white, and as small as peas. It is suggested that the patch-necked humming-bird of Latham's first supplement is no other than a young male of this species. The tomimeo of Gmelin is a variety.

68. *Trochilus rubineus*.—Green-gold, with gold-red throat, purplish-brown wings, and rufous tail. The ruby-throated humming-bird of Latham.—Native of South America, and particularly of Brazil, and is considered as one of the rarer kinds of humming-birds.

69. *Trochilus melisugus*.—Gold-green, with glossy blue-green throat, violet-black wings, and feathered legs. The emerald-throated humming-bird of Shaw, the all-green humming-bird of Edwards, and the Cayenne humming-bird of Latham.—This is one of Marcgrave's guainumbis.

70. *Trochilus collaris*.—Rufous, paler beneath, with gold-green crown, and gold-red throat, with the feathers elongated on each side. The ruff-necked humming-bird of Latham.—This species is numerous in Nootka Sound.

71. *Trochilus ornatus*.—Brownish, with rufous crest, emerald throat, and elongated rufous neck-feathers with gold-green tips. The tufted-necked humming-bird of Latham.—Native of Guiana.

72. *Trochilus albirostris*.—Blackish, with gold-green throat; each feather edged with grey, and white bill, thighs, and vent. The white-billed humming-bird of Shaw.—Native of Cayenne.

73. *Trochilus Vielloti*.—Blackish-olive, with golden gloss; beneath whitish, with violet-brown quill-feathers. Viellot's humming-bird, and black humming-bird of Latham. This small species is common in the island of St. Domingo, supposed by Viellot to be the *trochilus niger* of Linnæus.

74. *Trochilus leucocrotaphos*.—Gold-green; beneath grey, with white belly; a whitish stripe behind the eyes, and blue-black quill and tail-feathers.—The most common species in Paraguay.

75. *Trochilus maugeanus*.—Gold-green; beneath glossed with violet-blue, with violaceous-black wings and tail, the latter slightly forked. Maugean humming-bird, or Tobago humming-bird of Latham.—Native of the island of Porto-Rico, whence it was brought by M. Mauge.

76. *Trochilus ruber*.—Sub-ferruginous; slightly spotted with brown, with the side-feathers of the tail violet-brown. The little brown humming-bird of Latham.—Brought from Surinam.

77. *Trochilus cristatus*.—Gold-green, cinereous beneath; with golden-blue pointed crest, and violet quill-feathers and tail. The crested green humming-bird of Edwards and Latham. The female differs in wanting the crest, and in being ash-coloured beneath.—Native of South America, and some of the West India islands.

78. *Trochilus pileatus*.—Brown, with glossy-blue-pointed crest. The trochilus puniceus of Linn. Gmel., and crested brown humming-bird of Latham.

79. *Trochilus minimus*.—Gold-green; measuring about an inch and a half in length; beneath whitish, with violet-brown wings and tail. Least humming-bird of Edwards and Shaw, &c. The smallest of the genus, and consequently of the whole feathered tribe: its general length being somewhat more than an inch and a quarter.

80. *Trochilus striatus*.—Brown; beneath white, with a longitudinal stria or streak green-gold; brown cap; black quill-feathers; base of the tail cinnamon-coloured, tip obscure. The brown-crowned humming-bird of Latham.—Found in the island of Tobago.

81. *Trochilus obscurus*.—Blue; crown obscure; chin and throat glossy-green; middle of the back greenish; rump, wings, and tail purple.—The dusky-crowned humming-bird of Latham.

82. *Trochilus cyanocephalus*.—Green-gold, with head, tail-feathers, and crown blue; abdomen red.—Found in Chili.

83. *Trochilus glaucopus*.—Green-gold, with blue front; white vent; violet-brown tail-feathers; pennated feet; tail steel-blue sub-furcated. The blue-fronted humming-bird of Latham.—Found in Brazil.

84. *Trochilus cyanomelas*.—Variegated with white and blue; throat and breast red. Black and blue humming-bird of Bancroft and Latham.—Found in Terra Firma and the Caribbee islands.

85. *Trochilus Guianensis*.—Green, with crest and breast red; quill-feathers and tail-feathers green, variegated with red and purple.—Guiana humming-bird of Latham.

TROCHINGS, *s.* The branches on a deer's head.

Ainsworth.
TROCHISCH, *s.* [τροχισκος, Greek; *trochiscus*, Latin.] A kind of tablet or lozenge.—The *trochisks* of vipers, so much magnified, and the flesh of snakes some ways condited and corrected. *Bacon.*

TROCHITÆ, or TROCHITES, in Natural History, a kind of figured fossile stones, resembling parts of plants; vulgarly called St. Cuthbert's beads. They are found in great plenty in the bodies of the rocks at Braughton and Stock, two villages in Craven, at all depths under ground; also in Mendip-hills, &c.

TROCHITE, *s.* [from τροχος, Greek; a wheel.] A kind of figured fossil stone.—Near Levinz in Westmoreland, I met with a stone which ran almost across the river Kent, made of several millions of *trochites*, pretty regularly cemented into one mass. *Bp. Nicolson.*

TROCHTELFINGEN, a small town of the west of Germany. It has 2300 inhabitants, and is the chief place of a lordship; 14 miles east of Hechingen, and 31 south of Stuttgart.

TROCHTELFINGEN, a large village of the west of Germany, in Wirtemberg; 4 miles south of Nordlingen.

TROCTOU, a small island in the Eastern sea, near the coast of Queda. Lat. 6. 30. N. long. 99. 33. E.

TROD, or TRO'DDEN, participle passive of *tread*.—Jerusalem shall be *trodden* down of the Gentiles. *St. Luke.*

Thou, infernal serpent, shalt not long
Rule in the clouds; like an autumnal star,
Or lightning, thou shalt fall from heav'n *trod* down
Under his feet. *Milton.*

TRODE, the preterite of *tread*.—They *trode* the grapes and made merry. *Judges.*

TRODE, *s.* [preterite of *tread*.] Footing.—The *trode* is not so tickle. *Spenser.*

They never set foot on that same *trode*,
But baulk their right way, and strain abroad. *Spenser.*

TROGEN, a small town in the north-east of Switzerland, in the canton of Appenzel, in what is called the Outer Rood. It contains only 2300 inhabitants; 4 miles east of St. Gall, and 6 north-east of Appenzel.

TROGLODYTE, *s.* [τρογλοδυτης, Gr.] One who inhabits caves of the earth.—These savages, gazing a while upon them, flew away at last into their caves, for they were *troglodites*, and had no dwelling but in the hollows of the rocks. *Howell.*

TROGLODYTES, or TROGLODYTÆ [formed of τρογλη, *caverna*, and δυω, *I enter*], a people of Ethiopia, said to have lived in caves under ground.

Pomp. Mela gives a strange account of the Troglodytes.—He says, they did not so properly speak as shriek; and that they lived on serpents, &c. Tzetzes calls them *Ichthyophagi*. Montanus takes them to be the same with those called in Scripture *Ghananim*. Pintianus in Strabo will have the name written without the *l*, *Trogodite*.

These Troglodytes, so called by the Greeks from their primeval

meval habitations in natural caverns, or in mountains excavated by their own labour, were probably, as Sir William Jones conjectures (Works, vol. iii. p. 166, 8vo), the first inhabitants of Africa, where they became in time the builders of magnificent cities, the founders of seminaries for the advancement of science and philosophy, and the inventors (if they were not rather the importers) of symbolical characters. Upon the whole he concludes, that the Ethiops of Meroe were the same people with the first Egyptians, and hence likewise, as might be easily shewn, with the original Hindoos.

TROGON, CURUCUI, a genus of the Picæ; the characters of which are, that the bill is shorter than the head, cultrated, hooked, and serrated at the margin of the mandibles; the nostrils are covered with bristles; and the feet, short, simple, covered with down, are formed for climbing, having two toes forwards, and two backwards.

The birds of this genus are mostly inhabitants of South America: they feed on fruits, and all agree in their general habits of life. In Guiana they are denominated *Couroucouis* or *Curucui*, from their notes being very much like that word.

1. *Trogon strigilatus*.—Cinereous, with a fulvous abdomen, wings striated with white; tail-feathers black, the three lateral ones outwardly banded and tipped with white. The cinereous curucui of Latham.—Inhabits Cayenne and Guiana.

2. *Trogon curucui*.—Golden-green; of a fulvous red beneath, throat black; wing-coverts and the three exterior tail-feathers white, striped with black. Red-bellied curucui of Latham. Of this species there are several varieties, viz. one mentioned by Marcgrave, which had the wing-coverts plain brown, the bill ash-coloured, irides saffron-coloured, and without the bare spot under the eye mentioned by Brisson in his description:—another, with a yellow abdomen; the green yellow-bellied cuckoo of Edwards:—another, described and figured by Buffon, of a cinereous-grey, with very slight traces of green-gold, especially on the back and middle tail-feathers; the lower part of the belly and the vent only being red; the tail very long, having the outer webs of the three lateral feathers and the tips plain white; the three outer quills are also marked with black and white on the exterior webs. This species is a very solitary bird, being found only in the thickest forests; and in pairing time never more than two are found together, when the male has a very melancholy note, never uttered except whilst the female is sitting. They pair in April, and lay three or four white eggs. The male, during the incubation of the female, supplies her with food, and by his song helps to pass away the time. The young, when first hatched, are altogether without feathers, and are fed by the old birds with small worms, caterpillars, and insects; but are deserted by them, when they are able to shift for themselves; and the parent-birds return to their solitary haunt, till August or September, when they are prompted to produce another brood. At St. Domingo and in other islands these birds are called "Demoiselle," or "Dame Anglaise," where attempts have been made to tame them, but ineffectually, as they refuse to eat, and consequently die.—They are also found in Cayenne, Peru, Brazil, and Mexico.

3. *Trogon viridis*.—Golden-green; beneath yellow; throat black; with the three lateral feathers on both sides obliquely dentated with white. The yellow-bellied curucui of Latham. Of this species there is a variety, viz. the less, with white abdomen: the white-bellied curucui of Latham.—This species inhabits Cayenne.

4. *Trogon rufus*.—Rufous, with the body beneath yellow; wings striated with black and grey; the three lateral tail-feathers striated with black and white, with white tips. The rufous curucui of Latham.—Found in Cayenne.

5. *Trogon violaceus*.—Violet-coloured, with a green back; wing-coverts and secondary quills spotted with white; the three lateral tail-feathers barred with black and white, with white tips. The violet-headed curucui of Latham.—Found in Cayenne.

6. *Trogon maculatus*.—Striped with dusky and brown;

crown green; wing-coverts and secondary quill-feathers green; white at the tips; tail dusky, with white bars. Spotted curucui of Latham.—Inhabiting Ceylon.

7. *Trogon fasciatus*.—With a ferruginous back; body beneath fulvous red; head and neck dusky, with a white fascia on the breast; wings fasciated with black and white; apex of the tail black. Fasciated curucui of Latham.—Inhabiting Ceylon, but rare, and called by the inhabitants "Raut-vankondea."

8. *Trogon Asiaticus*.—Green, with the forehead, crown, and hind part of the neck red; throat blue, with a red spot; quills and tail-feathers black. Blue-cheeked curucui of Latham.—Inhabiting India.

9. *Trogon Indicus*.—Dusky, with ferruginous spots above; beneath yellowish, striped with dusky; head black, with white stripes; tail very long, and barred. Indian curucui of Latham; called in India by the natives "Bangumni."

10. *Trogon narina*.—Above green, with a red belly. Male, with the head, neck, back, throat, jugulum, breast, and wing-coverts green, which last are greyish behind; quills black, bordered externally with white. Female, with the throat, jugulum, and wing-coverts brown; abdomen in front cinerous. Le Vaillant says, that this bird is an inhabitant of Caffraria, and the country of Auteniqua to the river Gamtoo, and that the name Narina, in the Hottentot language, signifies a flower. The female lays four nearly round eggs, and during her incubation the male has a melancholy note, but at all other times he is silent.

TROGUS (POMPEIUS), a Latin historian, flourished in the time of Augustus, and wrote 44 books, under the title of "Philippics," so called from their subject, which was the Macedonian empire, originating with Philip, the father of Alexander. An epitome of this work by Justin is extant. Justin denominates Trogus a man of antique eloquence, and Pliny, who often refers to him in his Natural History, distinguishes him by the appellation of "severissimus auctor," as the most exact author.

TROHAM, a hamlet of England, in the parish of Bisley, Gloucestershire, remarkable for quarries of good tiles.

TROIA, or **TROJAN GAMES**, *Ludi Trojani*, were games instituted by Ascanius, son of Æneas; and which afterwards passed to the Romans, and were celebrated in the circus by the youth of Rome.

TROIS PISTOLES, a seigniorship of Lower Canada, in the county of Cornwallis.

TROIS PISTOLES, RIVIERE DE, a river of Lower Canada, which falls into the St. Lawrence; 6 miles below Green Island.

TROIS RIVIERES, a bay at the east end of the island of St. John's, and west of Cape Breton island. Three streams fall into it from different directions; hence its name. Lat. 46. 5. N. long. 62. 15. W.

TROIS RIVIERES, a river of St. Domingo, which is formed by the union of three streams, and runs into the sea on the north coast of the island, near Port Paix.

TROIS SAUMONS, a small river of Lower Canada, which has its source in the mountains, about five miles to the south of the St. Lawrence, and descending in a westerly direction, falls into that river a little below Crane island. Over this river there is a good bridge. At its mouth there are valuable mills, and an extensive distillery.

TROITSK, a town of Asiatic Russia, in the government of Orenbourg. It is surrounded with wooden fortifications, forming a square, flanked with towers, and encompassed by a ditch and glacis. Lat. 54. 15. N. long. 55. 30. E.—Also another town of Asiatic Russia, situated about 90 miles to the west of the former. The inhabitants, amounting to upwards of 3000, are entirely employed in cultivation.

TROITSKO SAUSKAIA, a fortress of Asiatic Russia, situated near the Chinese frontier, on the Kiachta; 345 miles south of Irkoutsk.

TROIZK, a small town in the south-west of European Russia; in the government of Pensa, with 3800 inhabitants; 79 miles north-north-west of Penza.

TROIZKOI SERGIEV, a small town in the interior of European Russia, in the government of Moscow; 32 miles south-east of that capital. It contains 4000 inhabitants.

TROJA, a small town of Italy, in the east part of the kingdom of Naples, in the Capitanata; 33 miles south-west of Manfredonia, and 60 north-east of Naples.

TROJA, a petty island of the Mediterranean, off the coast of Tuscany, in the province of Sienna.

TRAJANOW, a small town in the south-west of European Russia, in the government of Volhynia, not far from Vlodzimierzetz!

TROKI, a small town in the west of European Russia, in Lithuania, and the government of Grodno; 20 miles west of Wilna, and 180 east of Königsberg.

TROKI, New, another small town of Russian Lithuania; 18 miles west of Wilna.

To TROLL, *v. a.* [*trollen*, to roll, Dutch; perhaps from *trochlea*, Latin; a thing to turn round.] To move circularly; to drive about.

Then doth she *trowle* to me the bowle,

Even as a malt-worm should;

And saith, sweet heart, I took my part

Of this joly good ale and old.

Ballad in Gamm. Gurton's Needle.

To move volubly.

Bred only and completed to the taste

Of lustful appetite, to sing, to dance,

To dress, and *troll* the tongue, and roll the eye. *Milton.*

To utter volubly. [perhaps from *tralla*, Su. Goth. to sing.]

Will you *troll* the catch

You taught me but while-ere?

Shakespeare.

To draw on. [*troler*, French, to lead, to draw.] He *trolls* and baits him with a nobler prey. *Hammond.*

To TROLL, *v. n.* To go round; to be moved circularly.

Nappy ale in a browne bowle,

Which did about the board merrily *trowle*. *Old Ballad.*

To roll; to run round.

How pleasant on the banks of Styx,

To *troll* it in a coach and six.

Swift.

To fish for a pike with a rod which has a pulley towards the bottom.

Nor drain I ponds the golden carp to take,

Nor *trowle* for pikes, dispeoplers of the lake.

Gay.

TROLLHETTA, a village of Sweden, in West Gothland; 15 miles east-south-east of Uddevalla. Here is a celebrated cataract in the river Gotha-Elf, not far from the place where it issues from the lake Wenner.

TROLLIUS [*trollblume* seems to signify in German a magical flower]; in Botany, a genus of the class polyandria, order polygynia, natural order of multisiliquæ, ranunculaceæ (*Juss.*).—Generic Character. Calyx none. Corolla: petals about fourteen, subovate, deciduous, in the three outer rows three, in the inmost five. Nectaries nine, linear, flat, curved in, perforated at the base inwards. Stamina: filaments numerous, bristle-shaped, shorter than the corolla; anthers erect. Pistil: germs numerous, sessile, columnar. Styles none. Stigma mucronate, shorter than the stamens. Pericarp: capsules numerous, collected into a head, ovate, with a point curved back. Seeds solitary.—*Essential Character.* Calyx none. Petals about 14. Capsules numerous, ovate, many-seeded.

1. *Trollius Europæus*, or European globe-flower.—Corollas converging; nectaries length of the stamens. Root perennial, fibrous, black, from which spring up many leaves resembling those of Wolf's-bane, cut into five segments almost to the bottom. The stalk rises almost two feet high; it is smooth, hollow, and branches towards the top. Each branch is terminated by one large yellow flower, shaped like that of crowfoot, but without any calyx.—Native of the North of Europe, Carniola, Dauphiné, Piedmont, Siberia. In the northern counties of England, in Wales, and Scot-

land, on the sides of mountains and mountainous meadows, in moist shady places.

2. *Trollius Asiaticus*, or Asiatic globe-flower.—Corollas spreading; nectaries longer than the stamens. The Siberian globe-flower differs from the first in having larger leaves, of a lighter green colour, with fewer and larger segments.—Native of Siberia. Cultivated by Mr. Miller in 1759. It flowers in May and June.

Propagation and Culture.—Part the roots at the end of September, when the leaves are beginning to decay, planting them at a foot distance, in a shady situation and a moist soil. The plants should not be parted oftener than once in three years, nor into parts too small.

TROLLOP, *s.* [*A low word*, derivation unknown.] A slattern, a woman loosely dressed.—The remembrance of his old conversation among the viraginian *trollops*. *Milton.*

TROLLOPE'E, *s.* A kind of loose dress for women. *Not now in use.*—There goes Mrs. Roundabout; I mean the fat lady in the lutestring *trollopee*. *Goldsmith.*

TROLMYDAMES, *s.* [from *trou-madame*, French.] The game of nine holes. *Warburton.*—A fellow I have known to go about with *trolmydames*: I knew him once a servant of the prince. *Shakespeare.*

TROMBONE, a wind instrument blown by the mouth, and resembling in form a military trumpet, of which it is the base, the name implying the *great trumpet*. See *MUSIC*.

TROMPERWICK, GULF OF, a bay, but by no means a safe one, on the east coast of the island of Usedom, in the Baltic. Lat. 54. 40. N. long. 13. 40. E.

TROMPETAS, a large and abundant river of Brazil, which runs south, and enters the Amazons on the north shore, near the strait of Pauxis, in lat. 1. 50. S.

TROMPEUR, CAPE, DEL ENGANNA, or FALSE CAPE, is the easternmost point of the island of St. Domingo. Lat. 18. 25. N. long. 68. 35. W.

TROMPIA, a valley of Austrian Italy, in the Milanese delegation of Brescia. It is divided into 19 communes, and contains above 13,000 inhabitants.

TROMSOE, an island on the north-west coast of Norway, which, though extensive, contains only from 3000 to 4000 inhabitants.

TRO'NAGE, *s.* Money paid for weighing.

TRONATOR, an officer of the city of London, whose business it was to weigh the wool brought into that city.

TRONCO, in the Italian music, by the French called *coup de grâce*, is used to intimate to the voices as well as instruments, that they are not to draw out the sound to its natural length, but cut it short.

TRO'ND, ST., or ST. TROIJEN, an inland town of the Netherlands, in the province of Limburg, with a population of 7300; 18 miles north-west of Liege, and 20 west of Maestricht.

TRONDA, or TRONDRAV, a small island of Shetland, lying opposite to the village of Scalloway. It is about 3½ miles long, and 2 broad.

TRO'NE, a hamlet of England, in the parish of Wantage, Berkshire.

TRO'NEKEN, a village of the Prussian province of the Lower Rhine, in the Hundsruck; 12 miles south-south-east of Traarbach, and 16 east of Treves.

TRO'NQUIERE, a petty town in the south of France, department of the Lot, with 1100 inhabitants. It stands on the small river Bave; 14 miles north of Figeac.

TRO'NTO, a river of Italy, in the States of the Church, which rises in the Appennines, and flowing along the border of the Neapolitan dominions, discharges itself into the Adriatic.

TRO'NTO, CASTEL DEL, a strong castle of Italy, in the north-east part of the kingdom of Naples, province of Abruzza Ultra, situated on a lofty rock.

TRO'NZZANO, a small town in the north-west of Italy, in Piedmont, province of Vercelli, with 2500 inhabitants.

TROO, a small town in the central part of France, department of the Loire and Cher, with 1100 inhabitants, partly employed in the manufacture of woollen stuffs; 10 miles south-west of Vendome.

TROOLIE,

TROOLIE, an island of Dutch Guiana, situated at the mouth of the Essequibo.

TROON, a promontory of Scotland, in Ayrshire, in the parish of Dundonald, projecting about a mile into the frith of Clyde; 5 miles south of Irvine, and 7 north of Ayr. Lat. 55. 36. N. long. 4. 36. W.

TROONGOOMBA, a small walled village of Central Africa; 12 miles south-west of Benown.

TROOP, *s.* [*troupe*, French; *troppa*, Italian; *troope*, Dutch; *troj*, Swedish; *troppa*, low Latin. *Dr. Johnson.*] A company; a number of people collected together.

That which should accompany old age,
As honour, love, obedience, *troops* of friends,
I must not look to have.

Shakspeare.

A body of soldiers.

Æneas seeks his absent foe,
And sends his slaughtered *troops* to shades below. *Dryden.*

A small body of cavalry.

To TROOP, *v. n.* To march in a body.

I do not, as an enemy to peace,
Troop in the throngs of military men,
But rather shew awhile like fearful war.

Shakspeare.

To march in haste.

Yonder shines Aurora's harbinger,
At whose approach ghosts, wandering here and there,
Troop home to churchyards.

Shakspeare.

To march in company.

I do invest you jointly with my power,
Pre-eminence, and all the large effects
That *troop* with majesty.

Shakspeare.

TROOPER, *s.* A horse soldier. A trooper fights only on horseback; a dragoon marches on horseback, but fights either as a horseman or footman.—Custom makes us think well of any thing; what can be more indecent than for any to wear boots but *troopers* and travellers? yet not many years since it was all the fashion. *Grew.*

TROPE, *s.* [*τροπος*, Greek; *tropus*, Latin.] A change of a word from its original signification; as, the clouds *foretel* rain, for *foreshew*.

For rhetoric he could not ope
His mouth, but out there flew a *trope*.

Hudibras.

TROPÆOLUM [dimin. from *tropæum*, a *trophy*], in Botany, a genus of the class octandria, order monogynia, natural order of trihilatæ, gerania (*Juss.*)—Generic Character. Calyx: perianth one-leafed, five-cleft, from upright spreading, acute, coloured, deciduous; the two lower segments narrower, horned at the back with an awl-shaped, straight, longer nectary. Corolla: petals five, roundish, inserted into the divisions of the calyx; two upper sessile, the others lower, with oblong, ciliate claws. Stamina: filaments eight, awl-shaped, short, declining, unequal; anthers erect, oblong, rising. Pistil: germ roundish, three-lobed, striated. Style simple, erect, length of the stamens. Stigma trifid, acute. Pericarp: berries (or nuts) somewhat solid, three; on one side convex, grooved, and striated, on the other angular. Seeds three, gibbous on one side, angular on the other, roundish, grooved, and striated—*Essential Character.* Calyx one-leafed, with a spur. Petals four; unequal. Nuts three, coriaceous.

1. *Tropæolum minus*, or small Indian cress.—Stem herbaceous, trailing. Leaves almost circular, smooth, grayish. Flowers axillary, on very long peduncles, composed of five acute-pointed petals, the two upper large and rounded, the three under narrow, jointed together at bottom and lengthened out into a tail two inches long. There are two varieties of this, one with a deep orange-coloured flower inclined to red, and the other with a pale yellow flower.—Native of Peru.

2. *Tropæolum majus*, or great Indian cress.—Leaves peltate, repand; petals obtuse. The second sort is larger in all

parts. The flowers of this are larger and more beautiful than the preceding. This and the two following are natives of Peru.

3. *Tropæolum hybridum*, or bastard Indian cress.—Leaves subpeltate, five-lobed; lobes obtuse, subrepand; petals wedged, toothed at the tip.

4. *Tropæolum peregrinum*, or fringe-flowered Indian cress.—Leaves subpeltate, five-lobed-palmate, somewhat toothed; petals lacinated.

5. *Tropæolum pentaphyllum*, or five-leaved Indian cress.—Leaves quinate; leaflets quite entire, acute; petals shorter than the calyx, quite entire, acute.

TROPEA, a small town in the south-west of the kingdom of Naples, in Calabria Ultra, the see of a bishop, with about 4000 inhabitants; 37 miles north-north-east of Reggio.

TROPES, *St.*, a small sea-port in the south-east of France, department of the Var. It has 3700 inhabitants, employed for the most part in the tunny and pilchard fishery, and in the coasting trade; 30 miles east-by-north of Toulon. Lat. 43. 16. 27. N. long. 6. 38. 44. E.

TROPHIED, *adj.* Adorned with trophies.

Some greedy minion or imperious wife,
The *trophy'd* arches, story'd halls invade,
And haunt their slumbers in the pompous shade.

Pope.

TROPHIS [from *τροφω*, *nutrio*: on account of its nourishing quality as fodder for cattle,] in Botany, a genus of the class diccia, order tetrandria, natural order of calycifloræ, incertæ sedis (*Juss.*)—Generic Character. Male.—Calyx none. Corolla: petals four, obtuse, spreading. Stamina: filaments four, capillary, longer than the corolla. Female on a distinct plant.—Calyx one-leafed, very small, closely investing the germ. Corolla none. Pistil: germ ovate. Style filiform; two-parted. Stigmas adnate. Pericarp: berry substriated, wrinkled, one-celled. Seeds single, subglobular.—*Essential Character.* Male.—Calyx none. Corolla four-petalled. Female.—Calyx none. Corolla none. Style two-parted. Berry one-seeded.

1. *Trophis Americana*, or the ragoon tree.—This is a tree twenty feet high at most, with nearly upright, round, even branches. Leaves oblong, acuminate, with the point blunt, entire, beneath netted-veined and paler. Male flowers in peduncled roundish aments, an inch long, erect, axillary, subsolitary: flowers approximating, minute, whitish. Female flowers in axillary racemes, two together, longer than the petioles, composed of seven or eight sessile, alternate, horizontal flowers.

2. *Trophis laurifolia*, or laurel-leaved trophis.—Leaves elliptic-oblong, acute at each end, smooth, entire. Berry with two horns, and two or four seeds.—Native of Quito and New Granada. A tree with thick, nearly round, branches.

3. *Trophis aspera*, or rough-leaved trophis.—Leaves obovate, unequally serrated, very rough on both sides. Petals four in all the flowers.—Native of woods and thickets at Tranquebar.

4. *Trophis spinosa*, or thorny trophis.—Branches thorny. Leaves elliptical, entire, smooth.—Native of Java.

TROPHY, *s.* [*tropæum*, *trophæum*, Latin.] Something shewn or treasured up in proof of victory.

To have borne

His bruised helmet and his bended sword
Before him through the city, he forbids;

Giving all *trophy*, signal and ostent,
Quite from himself to God.

Shakspeare.

TROPIC KEYS, small islands or shoals among the Virgin islands, between Great Passage island and the east coast of Porto Rico. They are so named from their abounding in birds called tropicos.

TROPICAL, *adj.* Rhetorically changed from the original meaning.—The foundation of all parables is, some analogy or similitude between the *tropical* or allusive part of the parable, and the thing intended by it. *South.*—Placed near the tropic; belonging to the tropic.—The pine-apple is one of the *tropical* fruits. *Salmon.*

TROPIC, *s.* [*tropicus*, Latin.] The line at which the

sun turns back, of which the north has the tropic of Cancer, and the south the tropic of Capricorn.

Since on ev'ry sea, on ev'ry coast,
Your men have been distress'd, your navy tost,
Seven times the sun has either *tropic* view'd,
The winter banish'd, and the spring renew'd. *Dryden.*

TROPICALLY, *adv.* Figuratively.—The mouse trap! marry, how? *tropically.* *Shakspeare.*

TROPIST, *s.* [*tropiste*, French.] One who deals in tropes: a name also given to a sect which pretended to explain the Scriptures altogether by tropes and figures.

TROPOLOGICAL, *adj.* [*τροπος* and *λογος*, Greek.] Varied by tropes; changed from the original import of the words.—What should be the true moral or *tropological* reason of salt being used in all sacrifices. *Biblioth. Bibl.*

TROPOLOGY, *s.* [*τροπος* and *λογος*, Greek.] A rhetorical mode of speech including tropes, or a change of some word from the original meaning.—Not attaining the deuterology and second intention of words, they omit their superconsequences, coherences, figures, or *tropologies*, and are not persuaded beyond their literalities. *Brown.*

TROPPAU, or **OPPAU**, the capital of Austrian Silesia, till lately the residence of the regency, and still the seat of a high court of justice. It stands at the confluence of the Oppa and Mohe, is still surrounded with a wall, and has two public squares. The number of inhabitants is nearly 10,000; 87 miles south south-east of Breslau, and 162 east of Prague. Lat. 49. 50. 1. N. long. 17. 50. 45. E.

TROPPAU, a principality of Silesia, bounded on the north by the principality of Opoln, on the east by Ratibor and Teschen, and on the south and west by Moravia.

TROPPAU, a circle of Austrian Silesia, containing several lordships, and the parts of the principalities of Troppau, Jagerndorf, and Neisse, that were retained by Austria, when the rest of Silesia was ceded to Frederick II. Its area is 1080 square miles; its population somewhat below 200,000.

TROQUES, a bay at the south extremity of Lake Huron, separated from Matchudock bay on the north-east by a broad promontory.

TROQUIRE, a parish of Scotland, in the stewartry of Kirkcudbright, lying on the river Nith, opposite the parish of Dumfries, and connected with it by a handsome bridge. Population 3409.

TROSA, a sea-port of the middle part of Sweden, in Sudermanland, on the Baltic. Population only 500. Its harbour is small but secure.

TROSACHS, certain rugged and stupendous mountains of Scotland, in Perthshire, which have been greatly visited since they have been made the scene of the adventures of the Lady of the Lake. In entering the Trosachs the mind is impressed with a feeling of wildness and of rude grandeur. It seems as if a whole mountain had been torn in pieces, and frittered down by a convulsion of the earth, and the huge fragments of rocks, woods, and hills, scattered in confusion into the east end, and on the sides of Loch Catherine. Travellers who wish to see all they can of this singular phenomenon, generally sail west on the south side of the lake, to the rock and den of the ghost, whose dark recesses the imagination conceived to be the habitation of supernatural beings. Every rock has its echo. Down the side of the mountain, after a shower of rain, flow a hundred streams, which rush with incredible velocity and noise into the lake, and spread their foam upon its surface. On one side the water eagle sits in majesty undisturbed, on his well known rock, in sight of his nest on the top of Benvenu; the heron stalks among the reeds in search of his prey; and the sportive ducks gambol on the waters. On the other, the wild goats climb where they have scarce ground for the soles of their feet; and the wild fowls perched on trees, or on the pinnacle of a rock, look down with composed defiance at man. This scene is closed by a west view of the lake for several miles, having its sides lined with alternate clumps of wood and arable fields, and the smoke rising in spiral columns through the air, from villages which are concealed by

the intervening woods; and the prospect is bounded by the towering Alps of Arroquhar, which are chequered with snow, or hide their heads in the clouds.

TROSSBERG, a small town of Bavaria, on the river Alza; 42 miles east of Munich, with 800 inhabitants.

TROSSERS, *s.* [*troussés*, French.] Breeches; hose. See **TROUSE**.—You rode like a kern of Ireland; your French hose off, and in your strait *trossers.* *Shakspeare.*

TROSSULI, among the Romans, a name given by some to the guards that attended the kings of Rome, otherwise called *celerés*.

TROSTON, a parish of England, in Suffolk; 6½ miles north-north-east of St. Edmund's Bury.

TROSTREY, a parish of England, in Monmouthshire; 3 miles north-by-west of Usk.

TROSTRIE, LOCH, a small but beautiful lake of Scotland, in Kirkcudbright stewartry, in the parish of Twynholm, abounding with pikes.

To **TROT**, *v. n.* [*trotter*, French; *trotten*, Dutch. *Dr. Johnson.* Wachter, with Verelius, derives it from the Su. Goth. *trotta*, fatigare; Lye and Serenius from the Icelandic *tritta*, Sueth. *tratta*, cursitare, brevibus et citatis passibus ire; frequentat a *traeda*, ire.] To move with a high jolting pace.—Poor Tom, that hath made him proud of heart, to ride on a bay *trotting* horse, over four inch'd bridges, to course his own shadow for a traitor. *Shakspeare.*—To walk fast; or to travel on foot: in a ludicrous or contemptuous sense.

TROT, *s.* The jolting high pace of a horse.

Here lieth one who did most truly prove,
That he could never die while he could move;
So hung his destiny, never to rot
While he might still jog on and keep his *trot.* *Milton.*

An old woman in contempt. Derivation uncertain.—Give him gold enough, and marry him to an old *trot* with ne'er a tooth in her head: why, nothing comes amiss, so money comes withal. *Shakspeare.*

TROTBY, a river of England, in Monmouthshire, which runs into the Wye below Monmouth.

TROTTH, *s.* [*trouth*, old English; *τρεοθ*, Saxon.] Belief; faith; fidelity.

Saint Withold met the night-mare,
Bid her alight and her *trotth* plight. *Shakspeare.*

Truth; verity.

In *trotth* thou'rt able to instruct grey hairs,
And teach the wily African deceit. *Addison.*

TROTTHLESS, *adj.* Faithless; treacherous.—Thrall to the faithless waves and *trotthless* sky. *Fairfax.*

To **TROTTHPLIGHT**, *v. a.* To affianc; to betroth.

This, your son-in-law,
Is *trotthplight* to your daughter. *Shakspeare.*

TROTTHPLIGHT, *s.* The act of plighting troth; the act of betrothing; an instrument used in the preparation of flax. It is placed before the body and shoved forward by an indelicate movement. Hence some have read the preceding quotation

As rank as any flax-wench that *buts tow*
Before her *trotthplight.* *Shakspeare.*

TROTTER, *s.* One that walks a jolting pace; one that runs up and down. *Huloet.*—A sheep's foot.

The chief of your fayre
Might stand now by potters,
And suche as sell *trotters.* *Skelton.*

A horse whose trot is very swift.

TROTTERNISH POINT, a headland on the west-north-west coast of the isle of Skye.

TROTTECLIFFE, or **TROSLEY**, a parish of England, in Kent; 2 miles north-east-by-east of Wrotham.

TROTTON, a parish of England, in Sussex; 3½ miles west-north-west of Midhurst.

TROU PETIT, a port of the island of St. Domingo.—There is another port of the same name on the west coast. It is also the name of a bay on the south coast.

TROUBADOUR,

TROUBADOUR, *s.* [old French. *Troubadour* and *trouueur* or *trouvere* signify an inventor, or, as we formerly called a poet, a maker; from *trouuer*, to invent; the *trouueurs* of Normandy and Britany are represented as persons of higher attainments than their contemporaries the *troubadours*; the latter only of which is the name familiar to us.] An early poet of Provence.—About the beginning of the eleventh century, and for a century or two after, flourished the tribe of *troubadours*, or Provençal poets. *Harris*. See ROMANCE.

To TROUBLE, *v. a.* [*troubler*, Fr. Dr. Johnson.—Mr. H. Tooke calls *trouble* the past participle of the Sax. *trubulan*, *tundere*, *conterere*, *pinsere*, to *bruise*, to *pound*, to *vex*. The Latin *tribulare* is the same word, differing only by a different infinitive termination; *tribulan*, *tribulare*. Div. of Purl. i. 247.—The German *tribulieren* is also used in the sense of the Sax. *trubulan*, and, figuratively, for to *vex*. All perhaps, Fr. Sax. and German, are to be referred to the Lat. *turbo*, to *disturb*; whence the Germ. *truben*, by transposition, the same; *trube*, Norm. Fr. *trouble*; *towbled*, old Eng. for *troubled*, Gloss. to Wicliffe; and in our ancient vocabulary, the Prompt. Parv., *sturbler* and *sturbling* are found for a *troubler* and a *troubling*.] To disturb; to perplex.—Never *trouble* yourself about those faults which age will cure. *Locke*.—To afflict; to grieve.—It would not *trouble* me to be slain for thee, but much it torments me to be slain by thee. *Sidney*.—To distress; to make uneasy.—He had credit enough with his master to provide for his own interest, and *troubled* not himself for that of others. *Clarendon*.—To busy; to engage overmuch.—Martha, thou art careful, and *troubled* about many things. *St. Luke*.—To give occasion of labour to. *A word of civility or slight regard*.—I will not *trouble* myself to prove that all terms are not definable, from that progress in *infinitem* which it will lead us into. *Locke*.—To tease; to vex.

The boy so *troubles* me;

'Tis past enduring.

Shakspeare.

To disorder; to put into agitation or commotion.—The best law in our days is that which continues our judges during their good behaviour, without leaving them to the mercy of such who might, by an undue influence, *trouble* and pervert the course of justice. *Addison*.—[In low language.] To sue for a debt.

TROUBLE, *s.* [*trouble*, French.] Disturbance; perplexity.

They all his host derided, while they stood
A while in *trouble*.

Milton.

Affliction; calamity.
Double, double, toil and *trouble*,
Fire burn and cauldron bubble.

Shakspeare.

Molestation; obstruction; inconvenience.
Take to thee from among the cherubim
Thy choice of flaming warriors, lest the fiend
—some new *trouble* raise.

Milton.

Uneasiness; vexation.

I have dream'd
Of much offence and *trouble*, which my mind
Knew never till this irksome night.

Milton.

TROUBLE-STATE, *s.* Disturber of a community;
public makebate.

Those fair baits these *trouble-states* still use,
Pretence of common good, the king's ill course,
Must be cast forth.

Daniel.

TROUBLER, *s.* Disturber; confounder.—The best temper of minds desireth good name and true honour; the lighter, popularity and applause; the more depraved, subjection and tyranny; as is seen in great conquerors and *troublers* of the world, and more in arch heretics. *Bacon*.

TROUBLESOME, *adj.* Vexatious; uneasy; afflictive.
Heaven knows
By what bye-paths and indirect crooked ways
I met this crown; and I myself know well

How *troublesome* it sat upon my head:

To thee it shall descend with better quiet.

Shakspeare.

Full of molestation.—Though our passage through this world be rough and *troublesome*, yet the trouble will be but short, and the rest and contentment at the end will be an ample recompence. *Atterbury*.—Burdensome; tiresome; wearisome.—My mother will never be *troublesome* to me. *Pope*.—Full of teasing business.—All this could not make us accuse her, though it made us almost pine away for spight, to lose any of our time in so *troublesome* an idleness. *Sidney*.—Slightly harassing.

They eas'd the putting off

These *troublesome* disguises which we wear.

Milton.

Unseasonably engaging; improperly oppotuning.

She of late is lightened of her womb,

That her to see should be but *troublesome*.

Spenser.

Importunate; teasing.—Two or three *troublesome* old nurses never let me have a quiet night's rest with knocking me up. *Arbuthnot*.

TROUBLESOMELY, *adv.* Vexatiously; wearisomely; unseasonably; importunately.—Though men will not be so *troublesomely* critical as to correct others in the use of words; yet, where truth is concerned, it can be no fault to desire their explication. *Locke*.

TROUBLESOMENESS, *s.* Vexatiousness; uneasiness.—The lord treasurer complained of the *troublesomeness* of the place, for that the exchequer was so empty: the chancellor answered, Be of good cheer, for now you shall see the bottom of your business at the first. *Bacon*.—Importunity; unseasonableness.

TROUBLIOUS, *adj.* Tumultuous; confused; disordered; put into commotion. *An elegant word, but disused*.

As a tall ship tossed in *troubulous* seas,

Whom raging winds threaten to make the prey

Of the rough rocks.

Spenser.

TROVER, *s.* [*trouuer*, French.] In the common law, is an action which a man hath against one that having found any of his goods refuseth to deliver them upon demand. *Cowel*.

Bring my action of conversion

And *trover* for my goods.

Hudibras.

TROUGH, *s.* [*τρογ*, *trōh*, Saxon; *troch*, Dutch; *trou*, Danish; *traug*, Icel.; *truogo*, Italian.] Any thing hollowed and open longitudinally on the upper side.—Where there is a good quick fall of rain-water, lay a half *trough* of stone, of a good length, three foot deep, with one end upon the high ground, the other upon the low; cover the *trough* with brakes a good thickness, and cast sand upon the top of the brakes, the lower end of the *trough* will run like a spring of water. *Bacon*.

TROUGH, a hamlet of England, in Cumberland; 9½ miles north-east of Langtown.

TROUGHEND, a township of England, in Northumberland; 20 miles north-by-west of Hexham. Population 380.

TROUILLE, a small river of the Netherlands, in the province of Hainault. It falls into the Haisne near Gemappe.

To TROUL. See To TROLL.

TROUN, CAPE, a cape on the north coast of Staten island, in the North Pacific ocean. Lat. 45. 30. N. long. 148. 10. E.

To TROUNCE, *v. a.* [derived by Skinner from *tronc* or *tronçon*, French, a club.—This is an old word in our language, and used for *beat* or *discomfit*, long before Butler's time, from whose *Hudibras* Dr. Johnson's earliest example is taken.] To punish by an indictment or information; to punish severely.—If you talk of peaching, I'll peach first: I'll *trounce* you for offering to corrupt my honesty. *Dryden*.

TROUP HEAD, a cape of Scotland, on the north coast of the county of Banff; 10 miles west of Kinnaird's point. Lat. 57. 39. N. long. 2. 11. W.

TROUP,

TROUP, a village of Scotland, in Banffshire, on the sea coast, near Gardenston, about half a mile from the above head.

TROUSE, or **TRO'USERS**, *s.* [*trousse*, Fr.; *trius*, Irish: "Their breeches like the Irish *trooze*, have hose and stockings sewed together." *Sir T. Herbert, Trav.* p. 297.—Roquefort calls the French *trousse*, "culotte ou haut-de-chausse en usage au dix-cinquieme siecle."] Breeches; long breeches; pantaloons. See also **TROSSERS**.—The leather quilted jack serves under his shirt of mail, and to cover his *trouse* on horseback. *Spenser on Ireland.*

TROUT, *s.* [truhht, Saxon; *trocta, truta, trutta*, Lat.] A delicate spotted fish inhabiting brooks and quick streams.—The pond will keep *trout* and salmon in their seasonable plight, but not in their reddish grain. *Carew*.—A familiar phrase for an honest, or perhaps for a silly fellow. ["The *trout* is in some kind a foolish fish, and an emblem of one who loves to be flattered; for when he is once in his hold, you may take him with your hands by tickling, rubbing, or clawing him under the belly." Swan, *Speculum Mundi*, ch. 8. § 1. So Beaum. and Fl. "Leave off your *tickling* of young heirs like *trouts*."] Here comes the *trout* that must be caught with tickling. *Shakspeare.*

TROUTBECK, a river of England, in Cumberland, which runs into the Irthing, below Horsehead.—Another river in Westmoreland, which runs into the Eden, 3 miles below Appleby.

TROUTBECK, a township of England, in Westmoreland, situated on the river of the same name, over which it has a bridge; 5 miles south-east-by-east of Ambleside.

TROUTSDALE, a township of England, North Riding of Yorkshire; 12 miles from Malton.

To TROW, *v. n.* [*tro*, Su. Goth.; *trawan*, M. Goth. To think; to imagine; to conceive. *A word now disused, and rarely used even in ancient writers but in familiar language.*

To-morrow next
We will for Ireland; and 'tis time, I *trow*. *Shakspeare.*

To believe.
Lend less than thou owest,
Learn more than thou *trowest*. *Shakspeare.*

TROW, *interject.* [for *I trow*, or *trow you*.] An exclamation of enquiry. Well, if you be not turned Turk, there is no more sailing by the star.—What means the fool, *trow*? *Shakspeare.*

TROWAY, a township of England, in Derbyshire; 6½ miles north-by-east of Chesterfield.

TROWBRIDGE, a market town of England, in the county of Wilts, situated on the side of a rocky hill, by the river Were, which runs into the Avon near Bradford, and over which it has a stone bridge. It is a thriving and populous town, and has long been noted for its manufactures. Trowbridge had anciently a castle, no part of which, however, is now standing, although its site can still be easily distinguished by the remains of the moat and vallum by which it was surrounded. This site is more elevated than the ground on which the town stands, and still retains the name of Court-hill. The castle was formerly approached from the town by a draw-bridge over the moat. This castle was traditionally said to have been built by John of Gaunt, but the original structure must have existed before his time, as it is mentioned in the reign of king Stephen. The government of Trowbridge is vested in the county magistrates, who hold the petty sessions for the Trowbridge division of the hundred, alternately here and at Bradford. Two other annual courts are likewise held in the town, namely, a court leet and a court baron, belonging to the lord of the manor. It contains 1170 houses, and 6075 inhabitants. Market on Saturday, and an annual fair on the 5th of August, at which a considerable quantity of woollen goods, and some cattle, cheese, &c. are sold; 10 miles south-east of Bath, and 98 west of London. Lat. 51. 19. N. long. 2. 12. W.

TROWEL, *s.* [*trulla*, Lat.] A *trowel* is a tool to take up the mortar with, and spread it on the bricks, with which also they cut the bricks to such lengths as they have occasion, and also stop the joints. *Moxon.*

This was dext'rous at his *trowel*,
That was bred to kill a cow well. *Swift.*

It is used for any coarse instrument.

How shall I answer you?

—As wit and fortune will.

—Or as the destinies decree.

—Well said, that was laid on with a *trowel*. *Shakspeare.*

TROWELL, a parish of England, in Nottinghamshire; 5½ miles west of Nottingham.

TROWERT ISLAND, a small island in the Eastern seas, near the south coast of Java. Lat. 7. 2. S. long. 105. 45. E.

TROWERYN, a river of North Wales, which rises in a lake in Merionethshire, and runs into the Dee.

To TROWL. See **To TROLL**.

TROWERS. See **TROUSE**.

TROWSE, or **TROWSE NEWTON**, a parish of England, in Norfolk; 2 miles south-east-by-south of Norwich. Population 488.

TROY, a parish of England, in Monmouthshire; 3 miles south-west of Monmouth.

TROY, a township of the United States, in Orleans county, Vermont; 60 miles north of Montpelier. Population 231.

TROY, a post township of the United States, in Bristol county, Massachusetts; 16 miles south of Taunton, and 48 south of Boston. Population 1296.—2. A city of the United States, and capital of Rensselaer county, New York, on the east bank of the Hudson. Population 3895; 3 miles south of Lansingburgh, 6 north of Albany, and 166 north of New York.—3. A township of the United States, in Athens county, on the Ohio, at the junction of the Hockhocking, 25 miles below Marietta. Population 578.—4. A post town of the United States, and capital of Miami county, Ohio; 72 miles north of Cincinnati.—5. A township of the United States, in Trumbull county, Ohio. Population 239.—6. A township of the United States, in Perry county, Indiana, on the Ohio, about 55 miles west-south-west of Corydon.

TROY, or **TROY-WEIGHT**, *s.* [from *Troies*, Fr.] A kind of weight by which gold and bread are weighed, consisting of these denominations: a pound = 12 ounces; ounce = 20 pennyweights; pennyweight = 24 grains.—The English physicians make use of *troyweight* after the following manner.

Grains				
20	Scruple			
60	3	Drachm		
480	24	8	Ounce	
5760	288	96	12	Pound

The Romans left their ounce in Britain, now our averduupois ounce, for our *troy* ounce we had elsewhere. *Arbuthnot.*

TROYES, a large town in the north-east of France, in Champagne, the capital of the department of the Aube. It is situated between two fine meadows on the Seine; which is here comparatively small, and divided into several channels. It is the seat of an archbishop, and of the different branches of the administration of the department of the Aube. Pope Urban IV. was a native of Troyes; 42 miles north-east of Auxerre, 70 south of Rheims, and 100 south-east of Paris. Lat. 48. 18. 5. N. long. 4. 4. 49. E.

TRSTENNA, or **TRSZIENNA**, a small town in the north-west of Hungary; 48 miles south-by-west of Cracow. Population 2700.

TRU'ANT, *s.* [*truand*, old Fr.; *truwant*, Dutch; a *vagabond*.

bond. An old word in our language; written also *truand*, *trewan*, and *trivant*. See TRIVANT.—“*Truand*, he that loitereth, wandering abroad, or lurking in corners.” Barret, *Alv.* 1580. “No better than rogues and *trewans*, men of base qualitie and as low courage.” Sir G. Buck, *Hist. of K. Rich.* III. 1646, p. 57.] An idler; one who wanders idly about, neglecting his duty or employment. To play the *truant* is, in schools, to stay from school without leave.

Though myself have been an idle *truant*,
Omitting the sweet benefit of time,
To clothe mine age with angel-like perfection;
Yet hath Sir Protheus made fair advantage of his days.

Shakspeare.

TRU'ANT, *adj.* Idle; wandering from business; lazy; loitering.

What keeps you from Wertemberg?

—A *truant* disposition, good my lord.

Shakspeare.

To TRU'ANT, *v. n.* [*truander*, Fr. *to beg about a country*; *truwanten*, old Germ.] To idle at a distance from duty; to loiter; to be lazy.

'Tis double wrong to *truant* with your bed,
And let her read it in thy looks at board.

Shakspeare.

TRU'ANTLY, *adj.* Like a *truant*.—The spirit of a man is *truantly* and trifling. *Bp. Taylor.*

TRU'ANTSHIP, *s.* [*truante*, old Fr.; from *truant*; *truandise* in Chaucer is beggary.] Idleness; negligence; neglect of study or business.—The master should not chide with him if the child have done his diligence, and used no *truantship*. *Ascham.*

TRUBIA, a small town in the north of Spain, in the Asturias. It stands on a river called also Trubia, and has a cannon foundry.

TRUBS, *s.* [*tuber*, Latin.] A sort of herb. *Ainsworth.*

TRU'BTAIL, *s.* [*trubbig*, Swed. obtuse, and *tail*. *Serenius.*] A short squat woman. *Ainsworth.*

TRUBTSCHEVSK, a small town in the interior of European Russia, in the government of Orel, on the Desna, with 3000 inhabitants; 92 miles west-south-west of Orel.

TRUCE, *s.* [*treuga*, Germ.; *tregua*, Span. and Ital. from the M. Goth. *triggwo*, pactum, foedus. *Serenius.*] A temporary peace; a cessation of hostilities.—Leagues and *truces* made between superstitious persons, and such as serve God aright. *Hooker.*

This token serveth for a flag of *truce*
Betwixt ourselves, and all our followers.

Shakspeare.

Cessation; intermission; short quiet.

There he may find

Truce to his restless thoughts, and entertain
The irksome hours.

Milton.

TRU'CHMAN, or TRU'DGEMAN, *s.* [*τρυγονμενος*, *δραγονμενος*, in the later Greek writers, signifieth an interpreter; derived from *thirgem*, Hebrew, to interpret, or expound out of one language into another; whence *thargum*, or *targum*; which see. Bedwell, *Mohammedis Impost.* 1615, p. 105.] An interpreter.—The Arabian *trudgman*, interpreting certain Arabic terms used by historians. *Bedwell.*

TRUCIDATION, *s.* [from *trucido*, Lat.] The act of killing. *Cockeram.*

To TRUCK, *v. n.* [*troquer*, French; *truccare*, Italian; *trocar*, Spanish; deduced by Salmasius from *τρωγειν*, Gr. *to get money*. *Our word is old.* “To *trukkyn* or change.” Prompt. Parv.] To traffic by exchange; to give one commodity for another.—Despotism itself is obliged to *truck* and huckster. *Burke.*

To TRUCK, *v. a.* To give in exchange; to exchange.

Go, miser! go; for lucre sell thy soul,
Truck wares for wares, and trudge from pole to pole;
That men may say, when thou art dead and gone,

See, what a vast estate he left his son!

Dryden.

TRUCK, *s.* Exchange; traffic by exchange.—Love is covetous; I must have all of you: heart for heart is an equal

Vol. XXIV. No. 1632.

truck. *Dryden.*—[*τροχος*, Gr.] Wooden wheels for carriage of cannon. *Ainsworth.*—A kind of carriage, with low wheels, for any heavy weights.

TRU'CKER, *s.* One who traffics by exchange.—Of all the courses which man in such a case can take, this of capitulating, and as it were making terms, with the devil, is the most senseless and dangerous; no man having ever yet driven a saving bargain with this great *trucker* for souls, by exchanging guilts, or bartering one sin for another. *South.*

TRU'CKAGE, *s.* The practice of trafficking by exchange.—Without the *truckage* of perishing coin. *Milton.*

To TRU'CKLE, *v. n.* [Etymology unknown.] To be in a state of subjection or inferiority; to yield; to creep.

His zeal was not to lash our crimes,
But discontent against the times:

For had we made him timely offers,

To raise his post or fill his coffers,

Perhaps he might have *truckled* down,

Like other brethren of his gown.

Swift.

TRU'CKLEBED, or TRU'NDLEBED, *s.* [properly *troclebed*; from *trochlea*, Latin, or *τροχος*, Gr.] A bed that runs on wheels under a higher bed.—There's his chamber, his house, his castle, his standing bed and *trucklebed*. *Shakspeare.*

TRU'CULENCE, or TRU'CULENCY, *s.* [*truculentia*, Lat.] Savageness of manners.—He loves not tyranny;—the *truculency* of the subject, who transacts this, he approves not. *Waterhouse.*—Terribleness of aspect.

TRU'CULENT, *adj.* [*truculentus*, Lat.] Savage; barbarous.—A barbarous Scythia, where the savage and *truculent* inhabitants, transfer themselves from place to place in waggon, as they can find pasture, and live upon milk, and flesh roasted in the sun at the pomels of their saddles. *Ray.*—Terrible of aspect.

The trembling boy his brethren's hands,
Their *truculent* aspects, and servile bands,
Beheld.

Sandys.

Destructive; cruel.—Pestilential seminaries, according to their grossness or subtlety, cause more or less *truculent* plagues, some of such malignity, that they enecate in two hours. *Harvey.*

To TRUDGE, *v. n.* [*truggolare*, Ital.] It is of the same origin as *tread*. See to TREAD.] To travel laboriously; to jog on; to march heavily on.

No man is secure, but night-walking heralds,

That *trudge* between the king and mistress Shore.

Shakspeare.

TRUE, *adj.* [*τρεωρα*, *τρυφα*, Sax.; *trewe*, Germ.; from the M. Goth. *trawan*; Icel. *trua*, confidere, fidere, credere. *Serenius.*] Not false; not erroneous; agreeing with fact, or with the nature of things.

Teeth hadst thou in thy head when thou wast born,

And if the rest be *true* which I have heard,

Thou cam'st into the world with thy legs forward.

Shakspeare.

Not false; agreeing with our own thoughts; pure from the crime of falsehood; veracious.—A *true* witness delivereth souls. *Prov.*—Genuine; real; not counterfeit.

Among unequals what society

Can sort? What harmony or *true* delight?

Milton.

Faithful; not perfidious; steady.—My revenge is now at Milford, would I had wings to follow it! come and be *true*.

Shakspeare.—Honest; not fraudulent.—The thieves have bound the *true* man; now could thou and I rob the thieves and go merrily to London, it would be argument for a week.

Shakspeare.—Exact; conformable to a rule.—If all those great painters, who have left us such fair platforms, had rigorously observed it, they had made things more regularly *true*, but withal very unpleasing. *Dryden.*—Rightful.

They seize the sceptre;
Then lose it to a stranger, that the *true*
Anointed King Messiah might be born
Bar'd of his right.

Milton.

TRU'EBORN, *adj.* Having a right by birth to any title.
Where'er I wander, boast of this I can,
Though banish'd, yet a *trueborn* Englishman. *Shakspeare.*

TRU'EBRED, *adj.* Of a right breed.—Two of them I
know to be as *truebred* cowards as ever turned back.
Shakspeare.

TRUEHE'ARTED, *adj.* Honest; faithful.—I have known
no honest or *truehearted* man: fare thee well. *Shak-*
speare.

TRU'ELOVE, *s.* An herb.—One-berrie, or herbe *true-*
love, at the very top whereof cometh forth four leaves,
directly set one against another, in manner of a Burgun-
nion cross, or a true love knot; for which cause among the an-
cients it hath been called herbe *truelove*. *Gerarde.*—A
sweetheart.

Should my *truelove* less than woman be,
She were scarce any thing.

Donne.

TRU'ELOVEKNOT, or TRU'ELOVERSKNOT, *s.* Lines
drawn through each other with many involutions, considered
as the emblem of interwoven affection.

I'll carve your name on barks of trees
With *trueloveknots*, and flourishes,
That shall infuse eternal spring.

Hudibras.

TRU'ENESS, *s.* Sincerity; faithfulness.—The even car-
riage between two factions proceedeth not always of modera-
tion, but of a *trueeness* to a man's self, with end to make use
of both. *Bacon.*

TRU'EPENNY, *s.* A familiar phrase for an honest fellow.
Say'st thou so? art thou there, *truepenny*?
Come on.

Shakspeare.

TRU'FFLE, *s.* [*truffe, truffe*, French.] A subterraneous
mushroom.—In Italy, the usual method for the finding of
truffles, or subterraneous mushrooms, called by the Italians
tartufali, and in Latin *tubera terræ*, is by tying a cord to
the hind leg of a pig, and driving him, observing where he
begins to root. *Ray.*

TRUG, *s.* A hod for mortar.

TRUIM, a small river of Scotland, in Inverness-shire,
which falls into the Spey, near the church of Laggan.

TRU'ISM, *s.* A self-evident and undeniable truth.—
Truism occurs in Swift's Remarks on the Rights of the
Christian Church, and in Bishop Berkeley's Alciphron.
Peguc.

TRULL, *s.* [Dr. Johnson cites the Ital. *trulla*, after Lye,
who assigns to it the meaning of "mulier sordida." But as
our word at first had what Dr. Johnson calls a neutral sense,
viz., that of girl or wench, it probably may be descended
from the Teut. *drollen*, gesticulari, facetum et lætum se ex-
hibere.] A girl; a lass; a wench. *Obsolete.*

Among the rest of all the route
A passing proper lasse,
A white-hair'd *trull* of twenty years,
Or neere about there was:
In stature passing all the rest,
A gallant girl for hewe;
To be compar'd with townish nymphs,
So fair she was to viewe.

Turberville.

A low whore; a vagrant strumpet.—I'm sure, I scar'd the
dauphin and his *trull*. *Shakspeare.*

TRULL, a parish of England, in Somersetshire; 2 miles
south-south-west of Taunton. Population 499.

TRULLO, CAPE, the north-west point of the island of
Myconi, in the Grecian archipelago. Lat. 37. 28. N. long.
25. 19. E.

TRUMBULL, a county of the United States, in the state
of Ohio. It is watered by branches of the Big Beaver, run-

ning into the Ohio, and Grand river of the Lake. Popula-
tion 8671. Warren is the chief town.

TRUMBULL, a post township of the United States, in
Fairfield county, Connecticut; 6 miles north-west of Strat-
ford. Population 1241.

TRUMIAN, a town of the south of India, province of
the Carnatic, district of Tanjore. Lat. 10. 11. N. long.
78. 47. E.

TRU'LY, *adv.* According to truth; not falsely; faith-
fully; honestly.—They thought they might do it, not only
willingly, because they loved him; and *truly*, because such
indeed was the mind of the people; but safely, because she
who ruled the king was agreed thereto. *Sidney.*—Really;
without fallacy.—Wisdom alone is *truly* fair. *Milton.*—
Exactly; justly.—Right reason is nothing else but the mind
of man judging of things *truly*, and as they are in them-
selves. *South.*—Indeed: a slight affirmation, almost exple-
tive.—I have not undertaken it out of any wanton pleasure
in mine own pen; nor *truly* without often pondering with
myself beforehand what censures I might incur. *Wotton.*

TRUMP, *s.* [*trompe*, Dutch, and old Fr.; *tromba*, Ital.
Serenius considers the word as formed from the sound.]
A trumpet; an instrument of warlike music.

I heard

The neighing coursers and the soldiers cry,
And sounding *trumps* that seem'd to tear the sky. *Dryden.*

[Corrupted from *triumph*: Latimer, in a Christmas ser-
mon, exhibited a game at cards, and made the ace of hearts
triumph. *Fox.*—The Swedish *trumpf* is also the winning
card.] A winning card; a card that has particular privi-
leges in a game.

Now her heart with pleasure jumps,
She scarce remembers what is *trumps*.

Swift.

An old game at cards.

What, Diccon? come near, ye be no straunger:
We be fast set at *trump*, man, hard by the fire;
Thou shalt set on the king, if thou come a little nyer.

Com. of Gamu.

To put to or upon the TRUMPS. To put to the last
expedient.—We are now put upon our last *trump*; the fox
is earth'd, but I shall send my two terriers in after him.
Dryden.

To TRUMP, *v. a.* To win with a trump card; to im-
pose upon. [*tromper*, French, to cheat.]

Fortune—

When she is pleas'd to trick or *trump* mankind. *B. Jonson.*

To obtrude; to force; to obtrude fallaciously.—Authors
have been *trumped* upon us, interpolated and corrupted.
Leslie.

To TRUMP up. [from *tromper*, French, to cheat.] To
devise; to forge.—If this book had been *trumped* up,
every one would have said upon its first appearance, we
never heard of it before. *Young.*

To TRUMP, *v. n.* To blow a trumpet.—And the fifthe
angel *trumpide*. *Wicliffe.*—To play a trump card; to
interpose as with a trump card; to be an impediment.—The
envy of some powerful corival *trumps* in thy way, and holds
thee off from thine already swallowed honour. *Bp. Hall.*

TRUMPERY, *s.* [*tromperie*, French, a cheat.] Some-
thing fallaciously splendid; something of less value than it
seems.

The *trumpery* in my house bring hither,
For state to catch these thieves.

Shakspeare.

Falsehood; empty talk.—Breaking into parts the story of
the creation, and delivering it over in a mystical sense,
wrapping it up mixed with other their own *trumpery*, they
have sought to obscure the truth thereof. *Raleigh.*—Some-
thing of no value; trifles.

Embrios and idiots, eremits and friars,
White, black, and grey, with all their *trumpery*. *Milton.*

TRUMPET, *s.* [*trompette*, Fr. and Dutch.] An instru-
ment of martial music sounded by the breath.

What's

What's the business?

That such a hideous trumpet calls to parley
The sleepers of the house. *Shakspeare.*

In military style, a trumpeter.—He wisely desired, that a trumpet might be first sent for a pass. *Charendon.*—One who celebrates; one who praises.—The great politician was pleased to have the greatest wit of those times in his interests, to be the trumpet of his praises. *Dryden.*

To TRUMPET, *v. a.* [*trompetter*, Fr.] To publish by sound of trumpet; to proclaim.

That I did love the Moor to live with him,
My downright violence to form my fortunes
May trumpet to the world. *Shakspeare.*

TRUMPETER, *s.* One who sounds a trumpet.

Trumpeters,

With brazen din blast you the city's ear,
Make mingle with our rattling tambourines. *Shakspeare.*

One who proclaims, publishes, or denounces.—Where there is an opinion to be created of virtue or greatness, these men are good trumpeters. *Bacon.*—[*scolopex*.] A fish. *Ainsworth.*

TRUMPET-FLOWER, *s.* [*bignonia*.] A tubulous flower. *Miller.*

TRUMPET-TONGUED, *adj.* Having a tongue vociferous as a trumpet.

This Duncan's virtues

Will plead, like angels, trumpet-tongu'd against
The deep damnation of his taking off. *Shakspeare.*

TRUMPINGTON, a parish of England, in Cambridgeshire; 2 miles south of Cambridge. Here are still the ruins of the mill celebrated by Chaucer in the Miller's Tale. Population 508.

TRUMPLIKE, *adj.* Resembling a trumpet.

A breast of brasse, a voyce

Infract and trumplike. *Chapman.*

TRUN, a small town in the north of France, department of the Orne. Population 1500. It stands on the Dive; 6 miles north of Argentan.

To TRUNCATE, *v. a.* [*trunco*, Lat.] To maim; to lop; to cut short. *Truncated* is an heraldic word applied to trees.—These feathers are neither gradually lessened towards their extremities, nor rounded; which are the usual terminations of the feathers in most birds; but they appear as if cut off transversely towards their ends with scissors. This is a mode of termination, which, in the language of natural history, is called *truncated*. *Dr. Shaw.*

TRUNCA'TION, *s.* The act of lopping or maiming.—Decreasing judgment of death or *truncation* of members. *Prynne.*

TRUNCH, a parish of England, in Norfolk; 3 miles north-by-east of North Walsham. Population 363.

TRUNCHEON, *s.* [*tronçon*, Fr.] A short staff; a club; a cudgel.

Set limb to limb, and thou art far the lesser;
Thy hand is but a finger to my fist;
Thy leg is a stick compared with this *truncheon*. *Shakspeare.*

A staff of command.

The hand of Mars

Beckon'd with fiery *truncheon* may retire. *Shakspeare.*

No ceremony that to great ones 'longs,
The marshal's *truncheon*, nor the judge's robe,
Become them with one half so good a grace,
As mercy does. *Shakspeare.*

To TRUNCHEON, *v. a.* To beat with a *truncheon*.—Captain, thou abominable cheater! If captains were of my mind, they would *truncheon* you out of taking their names upon you before you earn'd them. *Shakspeare.*

TRUNCHEONE/ER, *s.* One armed with a *truncheon*.—I mist the meteor once, and hit that woman, who cried out,

chibs! when I might see from far some forty *trunchconcers* draw to her succour. *Shakspeare.*

TRUNDITCH, a township of England, in Derbyshire; 8 miles from Derby.

To TRUNDLE, *v. n.* [*trondeler*, Picard French; *trēnbl*, Saxon, a *bowl*.] To roll; to bowl along.—In the four first it is heaved up by several spondees intermixed with proper breathing places, and at last *trundles* down in a continued line of dactyls. *Addison.*

To TRUNDLE, *v. a.* To bowl; to roll.

Like to the golden tripod it did pass,
From this to this, till 't came to whose it was;
Cæsar to Gallus *trundled* it, and he
To Maro. *Lovelace.*

TRUNDLE, *s.* [*trēnbl*, Saxon; and *trendyl*, old Engl. trochlea, Prompt. Parv. afterwards *trindel*, or *trindlc*.] Any round rolling thing.—Whether they have not removed—all images, candlesticks, *trindels* or rolles of wax. *Abp. Cranmer.*

TRUNDLEBED. See TRUCKLEBED.

TRUNDLE-TAIL, *s.* Round-tail; a kind of dog.

Avaunt you curs;

Hound or spaniel, brach or lym,
Or bobtail tike, or *trundle-tail*. *Shakspeare.*

TRUNK, *s.* [*truncus*, Lat.; *tronc*, Fr.] The body of a tree.

He was

The ivy, which had hid my princely *trunk*,
And suckt my verdure out on't. *Shakspeare.*

The body without the limbs of an animal.

Thou bring'st me happiness and peace, son John;
But health, alack, with youthful wings is flown
From this bare, wither'd *trunk*. *Shakspeare.*

The main body of any thing.—The large *trunks* of the veins discharge the reflux blood into the next adjacent *trunk*, and so on to the heart. *Ray.*—[*tronc*, French.] A chest for clothes; sometimes a small chest commonly lined with paper.—Neither press, coffer, chest, *trunk*, well, vault, but he hath an abstract for the remembrance of such places. *Shakspeare.*—The proboscis of an elephant, or other animal.

Leviathan that at his gills

Drains in, and at his *trunk* spouts out a sea. *Milton.*

A long tube through which pellets of clay are blown.—In rolls of parchment *trunks*, the mouth being laid to the one end and the ear to the other, the sound is heard much farther than in the open air. *Bacon.*

To TRUNK, *v. a.* [*trunco*, Lat.] To truncate; to maim; to lop. *Obsolete.*

Large streams of blood out of the *trunked* stock
Forth gush'd, like water streams from riven rock. *Spenser.*

TRUNKED, *adj.* Having a trunk.—She is thick set with strong and well *trunked* trees. *Howell.*

TRUNK-HOSE, *s.* Large breeches formerly worn.

The short *trunk-hose* shall show thy foot and knee
Licentious, and to common eye-sight free;
And with a bolder stride, and looser air,
Mingled with men, a man thou must appear. *Prior.*

TRUNNIONS, *s.* [*trognons*, Fr.] The knobs or bunchings of a gun, that bear it on the cheeks of a carriage. *Bailey.*

TRUNS, a petty town of the Swiss canton of the Grisons; 6 miles west of Ilantz.

TRURO, a market town and borough of England, in the county of Cornwall. It is situated in a deep dell, at the confluence of the two small rivers Kenwyn and St. Allen, which direct their streams on each side of the town, and at the bottom unite with a branch of Falmouth harbour, commonly called Truro creek or river. At every spring tide the waters are swelled into a fine lake, two miles in length, and of sufficient depth to be navigable for vessels of upwards of 200 tons burden. And to this advantageous situation is chiefly to be ascribed

ascribed that rapid improvement which has raised the town, though of no very remote antiquity, to the rank of the metropolis of Cornwall. Its central situation with respect to the commerce and chief productions of the county, its advancing prosperity, the regularity and handsome appearance of its buildings, and the similarity of its local regulations to those of our principal cities, justly entitling it to this appellation. The town is situated in the three parishes of St. Mary, St. Clement, and Kenwyn, the former occupying its central parts, and portions of the two latter its eastern and western sides. On the great road to Falmouth, on a gentle ascent, an elegant new street, called Lemon-street, has been formed. It is spacious and commodious, and the houses are built on a regular plan, and faced with granite. The town now consists of about 12 streets, through the principal of which run the roads to St. Austel on the east, to Falmouth on the south, to Redruth on the west, and to Bodmin on the north.

It appears to have been incorporated between the years 1130 and 1140, by Richard de Lucy, a person of great note in the reigns of Stephen and Henry II., and supposed to have been an earl of the county. Besides the charter, he allowed it the highest privilege of a burgh, exemption from toll. Since that time its charter of incorporation has been frequently renewed. The last, which is now in force, was granted to the borough in the 31st of Elizabeth. By this the government of the town is vested in a mayor, four aldermen, and 20 capital burgesses. Truro returns two members to parliament. This privilege was conferred in the 23d of Edward I., and the right of election vested in the corporation. Truro contains 400 houses, and 2482 inhabitants. Market on Wednesday and Saturday; the last a very large one, with four annual fairs; 11 miles north of Falmouth, and 257 west-by-south of London. Lat. 50. 16. N. long 5. 2. W.

TRURO, a town of Nova Scotia, in Halifax county, at the head of the basin of Minas; 3 miles south of Onslow, and 40 north-by-west of Halifax.

TRURO, a post township of the United States, in Barnstable county, Massachusetts. Population 1209; 40 miles north-east of Barnstable, and 107 south-east of Boston. Lat. 42. N. long. 70. 8. W.

TRURO, a township of the United States, in Franklin county, Ohio.

TRUSHAM, a parish of England, in Devonshire; 2½ miles north-north-west of Chudleigh.

TRUSION, *s.* [*trudo*, Lat.] The act of thrusting or pushing.—By attraction we do not understand drawing, pumping, sucking, which is really pulsion and *trusion*. *Bentley*.

TRUSLEY, a parish of England, in Derbyshire; 7 miles west of Derby.

TRUSS, *s.* [*trousse*, Fr.] A bandage by which ruptures are restrained from lapsing.—A hernia would succeed, and the patient be put to the trouble of wearing a *truss*. *Wise-man*.—Bundle; any thing thrust close together.

All as a poor pedler he did wend,
Bearing a *truss* of trifles at his back,
As belles and babies, and glasses in his packe. *Spenser*.

Trouse; breeches. *Obsolete*.

To TRUSS, *v. a.* [*trousser*, Fr.] To pack up close together.—You might have *trussed* him and all his apparel into an eel-skin.

TRUSS. See SURGERY.

TRUST, *s.* [*traust*, Runick.] Confidence; reliance on another.—What a fool is honesty! and *trust*; his sworn brother, a very simple gentleman. *Shakspeare*.—Charge received in confidence.

In my wretched case 'twill be mote just
Not to have promis'd, than deceive your *trust*. *Dryden*.

Confident opinion of any event.

His *trust* was the Eternal to be deemed
Equal in strength. *Milton*.

Credit given without examination.—Most take things upon *trust*, and misemploy their assent by lazily enslaving their

minds to the dictates of others. *Locke*.—Credit on promise of payment.

Ev'n such is time, who takes on *trust*
Our youth, our joys, our all we have,
And pays us but with age and dust. *Raleigh*.
Something committed to one's faith.

Thou the sooner
Temptation found'st, or over potent charms,
To violate the sacred *trust* of silence
Deposited within thee. *Milton*.

Deposit; something committed to charge, of which an account must be given.—Although the advantages one man possesseth more than another, may be called his property with respect to other men, yet with respect to God they are only a *trust*. *Swift*.—Confidence in supposed honesty.—Behold I commit my daughter unto thee of special *trust*; wherefore do not entreat her evil. *Tob*.—State of him to whom something is entrusted.—I serve him truly, that will put me in *trust*. *Shakspeare*.—Being transplanted out of his cold barren diocese he was left in that great *trust* with the king. *Clarendon*.

To TRUST, *v. a.* To place confidence in; to confide in. I'd be torn in pieces ere I'd *trust* a woman
With wind. *B. Johnson*.

To believe; to credit.—Give me your hand: *trust* me you look well. *Shakspeare*.—To admit in confidence to the power over any thing.—When you lie down, with a short prayer commit yourself into the hands of your faithful Creator; and when you have done, *trust* him with yourself as you must do when you are dying. *Bp. Taylor*.—To commit with confidence.

Give me good fame, ye pow'rs, and make me just,
This much the rogue to public ears will *trust*:
In private then:—When wilt thou, mighty Jove,
My wealthy uncle from this world remove? *Dryden*.

To venture confidently.—Fool'd by thee to *trust* thee from my side. *Milton*.—To sell upon credit.

To TRUST, *v. n.* To be confident of something future. From this grave, this dust,
My God shall raise me up I *trust*. *Raleigh*.

To have confidence; to rely; to depend without doubt. Sin never shall hurt them more who rightly *trust*
In this his satisfaction. *Milton*.

To be credulous; to be won to confidence. Well you may fear too far
—Safer than *trust* too far. *Shakspeare*.

To expect.

TRUSTEE, *s.* One entrusted with any thing.—Having made choice of such a confessor that you may *trust* your soul with, sincerely open your heart to him, and look upon him only as he is a *trustee* from God, commissioned by him as his ministerial deputy, to hear, judge, and absolve you. *Bp. Taylor*.—One to whom something is committed for the use and behoof of another.—You are not the *trustees* of the public liberty: and if you have not right to petition in a crowd much less to intermeddle in the management of affairs. *Dryden*.

TRUSTEE, *s.* One who trusts.

Nor shall you do mine ear that violence,
To make it *truster* of your own report
Against yourself. *Shakspeare*.

TRUSTHORPE, a parish of England, in Lincolshire; 7½ miles north-east-by-east of Althorp.

TRUSTILY, *adv.* Honestly; faithfully; with fidelity.

TRUSTINESS, *s.* Honesty; fidelity; faithfulness.—If the good qualities which lie dispersed among other creatures, innocence in a sheep, *trustiness* in a dog, are singly so commendable, how excellent is the mind, which ennobles them into virtues. *Grew*.

TRUSTLESS, *adj.* Unfaithful; unconstant; not to be trusted. *A word elegant but out of use*, Dr. Johnson says, citi-

citing only Spenser.—The *trustless* wings of false desire. *Shakspeare*.

TRUSTY, *adj.* Honest; faithful; true; fit to be trusted.

This *trusty* servant
Shall pass between us.

Shakspeare.

Strong; stout; such as will not fail.

The neighing steeds are to the chariot ty'd,
The *trusty* weapon sits on every side.

Dryden.

TRUTH, *s.* [ερεοψθε, Sax. veracitas, fides data, foedus. *triggwo*, M. Goth. pactum, foedus. Mr. Horne Tooke appears, deducting *truth* from *trawan*, or ερεopian; saying that "it is the third person singular of the indicative *traw*, and was formerly written *troweth*, *trowth*, *trouth*, and *troth*; and means (aliquid, any thing, something,) that which one *troweth*, i. e. thinketh, or firmly believeth." Div. of Purl. ii. 408.] The contrary to falsehood; conformity of notions to things.—All *truths* are equal, *veritas non recipit magis ac minus*. *Wilkins*.—Conformity of words to thoughts.—*Truth* is the joining or separating of signs, as the things signified agree or disagree. *Locke*.—Purity from falsehood.

So young and true.

—Let it be so, thy *truth* then be thy dower. *Shakspeare*.

Right opinion.

But, self-devoted from the prime of youth
To life sequester'd, and ascetic *truth*,
With fasting mortified, worn out with tears,
And bent beneath the load of seventy years.

Harte.

Fidelity; constancy.

I'll follow this good man, and go with you;
And, having sworn *truth*, ever will be true.

Shakspeare.

Honesty; virtue.

The money I tender for him in the court;
If this will not suffice, it must appear,
That malice bears down *truth*.

Shakspeare.

It is used sometimes by way of concession.—She said, *Truth*, Lord: yet the dogs eat of the crumbs which fall. *St. Matthew*.—Exactness; conformity to rule.—Ploughs to go true, depend much upon the *truth* of the iron work.—*Mortimer*.—Reality; real state of things.—There are innumerable *truths* with which we are wholly unacquainted. *Beattie*.

Of a TRUTH, or *in TRUTH*. In reality.—*Of a truth*, Lord, the kings of Assyria have destroyed the nations. *2 Kings*.

—*In truth*, what should any prayer, framed to the minister's hand, require, but only so to be read as behoveth? *Hooker*.

TRUTHFUL, *adj.* Full of truth.—I profess to be as accurate as I can, and as *truthful* as the character of my records will allow. *Berington*.

TRUTHLESS, *adj.* Wanting truth; faithless; wanting reality.—What shall I call her? *truthless* woman. *Beaumont and Fl.*

TRUTINATION, *s.* [*trutina*, Latin.] The act of weighing; examination by the scale.—Men may mistake if they distinguish not the sense of levity unto themselves, and in regard of the scale or decision of *trutination*. *Brown*.

TRUXILLO, **TURRIS JULIA**, a small town in the west of Spain, in Estremadura, situated on a hill, of which it occupies the top and the south side. Francis Pizarro, the conqueror of Peru, was a native of this town; 44 miles north-north-east of Merida, and 130 west-south-west of Madrid.

TRUXILLO, a city of the Caraccas, in the province of Venezuela. This was formerly a splendid and flourishing city. It enjoys a pure air, but its waters, although clear and light, are impregnated with metallic particles, and occasion goitres, which, however, are only an inconvenience, as they do not in the least affect the health; 105 leagues south-west of Caraccas, and 20 north-east of Merida. Lat. 8. 33. N. long. 70. 15. 30. W.

TRUXILLO, a town of Guatimala, in the province of Honduras, situated between two rivers of good water, on a

hill near the sea, in Truxillo bay. Truxillo is 90 miles north of Valladolid. Lat. 15. 51. E. long. 86. 8. W.

TRUXILLO, a city of New Granada, in the province of Popayan.

TRUXILLO, an intendency of Peru, containing within its limits seven jurisdictions: viz. Sana, Pluru, Truxillo, Caxamarca, Chachapoyas, Lulia, and Chiloas and Pataz.

TRUXILLO, a province of Peru in the above intendency.

TRUXILLO, the chief town of the above district, and also of the whole province, pleasantly situated, and surrounded with gardens, groves, and delightful walks; 480 miles south of Quito, and 268 north-north-west of Lima. Lat. 8. 8. S. long. 78. 53. W.

TRUXTON, or **FABIVS**, a post township of the United States, in Courtland county, New York; 142 miles west of Albany. Population 1012.

TRUXVILLE, a township of the United States, in Richland county, Ohio.

To TRY, *v. a.* [*trier*, French.] To examine; to make experiment of.

Some among you have beheld me fighting,

Come *try* upon yourselves what you have seen me.

Shakspeare.

To experience; to assay; to have knowledge or experience of.

Some to far Oaxis shall be sold,

Or *try* the Libyan heat, or Scythian cold.

Dryden.

To examine as a judge. To bring before a judicial tribunal.

—To bring to a decision, with *out* emphatical.—I'll *try it out*, and give no quarter. *Dryden*.—To act on as a test.

Sure he who first the passage *try'd*

In harden'd oak his heart did hide,

And ribs of iron arm'd his side.

Dryden.

To bring as to a test.

They open to themselves at length the way

Up hither, under long obedience *try'd*.

Milton.

To essay; to attempt.—Let us *try* adventurous work. *Milton*.—To purify; to refine.

After life

Try'd in sharp tribulation, and refin'd

By faith and faithful works.

Milton.

To use as means.

To ease her cares the force of sleep she *tries*,

Still wakes her mind, though slumbers seal her eyes. *Swift*.

To TRY, *v. n.* To endeavour; to attempt; to make essay.

He first deceas'd, she for a little *try'd*

To live without him, lik'd it not, and dy'd.

Wotton.

TRYDDIN, a township of Wales, in the parish, and adjoining to the village of Mold. Population 554.

TRYON MOUNTAINS, mountains of the United States, in North Carolina, west of Salisbury, bordering on Tennessee.

TRYSALL, a parish of England, in Staffordshire; 5 miles from Wolverhampton. Population 491.

TRZEMEZNO, a small town of Prussian Poland; 9 miles east of Gnesna. Population 1400.

TSANG, a city of China, of the third rank, in Pe-chee; 102 miles south of Peking.

TSAO, a city of China, of the second rank, in Shantung. Lat. 35. 22. N. long. 115. 16. E.

TSCHAIKISTS, meaning the Pontooneer district, a part of the military frontier of Hungary, lying between the Theyss and the Danube. Its superficial extent is 340 square miles; its inhabitants in number about 22,000.

TSCHAKATHURN, or **CSAKATORNIA**, a small but populous town in the south-west of Hungary, between the Muhr and the Drave. It is remarkable for the good quality of its wine, &c.; 126 miles south of Vienna, and 6 north-north-east of Warasdin.

TSCHANGNAU, a village of the Swiss canton of Berne district

district of Emmenthal, among the Alps. It is noted for its cheese and, is 22 miles south-east of Bern.

TSCCHATYRDAGH, a mountain in the south of European Russia, in the Crimea, and the highest of the chain of the mountains of Taurida. It consists of calcareous rock, and is 4900 feet above the level of the sea.

TSCHAUSSY, or **CZAUSSY**, a town in the west of European Russia, in the government of Mohilev, with 3000 inhabitants; 25 miles east of Mohilev.

TSCHEBOKSARY, a town in the east of European Russia, in the government of Kasan, on the Wolga. It contains 5000 inhabitants; 80 miles west of Kasan.

TSCHEG, **GREAT** and **LITTLE**, two villages of Transylvania, in the county of Clausenburg, noted for their mineral springs.

TSCHEITE, or **TSCHACHTITZ**, a small town in the north-west of Hungary, in the palatinate of Neutra; 18 miles north of Leopoldstadt.

TSCHENBAR, a town of the east of European Russia, in the government of Pensa, on a small river of the same name, with 1200 inhabitants; 60 miles west-south-west of Pensa.

TSCHEPEL, an island in the Danube, below Pest, in Hungary. It is about 20 miles long, and is remarkable chiefly for an abundance of game, particularly hares.

TSCHEPLIN, a large village of Prussian Saxony, on the river Mulda, to the north of Eilenburg.

TSCHEPPLAU, a small town of Prussia, in Silesia, and the principality of Glogau, with 1000 inhabitants.

TSCHERBENIDSCHÉ, or **TREBIGNÉ**, a considerable town in the north-west of European Turkey, in Bosnia. It is situated on the small river Trepignizza, is the see of a Catholic bishop, and is said to contain about 10,000 inhabitants; 15 miles north-east of Ragusa, and 58 south-by-east of Mostar.

TSCHERDIN, a small town in the east of European Russia, in the government of Perm, on the Kolva. It has 2500 inhabitants; 85 miles north-north-east of Perm. Lat. 60. 33. N. long. 54. 18. E.

TSCHEREMISSES, or **MARI**, a tribe of Finnish origin, settled on the banks of the Kama, and in the governments of Viatka, Simbirsk, Kasan, and Orenbourg, in European Russia. They resemble the natives of Finland in their appearance, manners, and language. A great part of them have been converted to Christianity, but the remainder are either Mahometans or Pagans.

TSCHERIKOV, a small town in the west of Russia, in the government of Mohilev, on the river Soscha, with 1800 inhabitants; 44 miles south-east of Mohilev.

TSCHERIKOW'S ISLAND, an island in the North Pacific ocean, observed by Vancouver in 1794, and so called after Tscherekow, the companion of Behring's discoveries. The centre of the island is in lat. 55. 49. N. long. 205. 4. E.

TSCHERKASK, the capital of the Don Cossacks, a well known tribe on the banks of the river Don, in the south-east of European Russia. The town now called Old Tscherkask, is situated on the right bank of the Aksai, a branch of the Don, and is surrounded on every side by water and marshes, which remain during the whole summer, and occasion various diseases. This led to a removal, after the peace of 1814, of the capital to New Tscherkask, situated at the confluence of the Aksai and Turlov, at the distance of 5 miles from the old town. The old town has a particular slobode or quarter assigned to its Tartar inhabitants, and is situated 40 miles east-by-north of Azoph, and 250 east-south-east of Ekaterinoslav. Lat. 47. 13. 34. long. 39. 50. 15. E.

TSCHERKASSY, or **TSCHERKESK**, a town in the south-west of European Russia, in the government of Kiev, on the Dnieper. Population 3200; 110 miles south-south-east of Kiev.

TSCHERNAMBL, or **ZERNAMEL**, a small town of Austrian Illyria, in Carniola, with 1100 inhabitants; 11 miles south of Neustadt.

TSCHERTASH, a small town in the interior of Eu-

ropean Russia, in the government of Perm, with 2000 inhabitants.

TSCHETAZUGA, a small town and fortress of European Turkey, in Moldavia, in the district called the Zara de Suss. **TSCHETNEK**, or **STIRNIK**, a town in the north of Hungary; 13 miles north of Gomer, and 42 north of Erlau. Population 3800.

TSCHIEFER, a village of Prussia, in Silesia, and the circle of Freystadt, with 900 inhabitants.

TSCHIRNAU, **GROSS** or **GREAT**, a small town of Prussian Silesia; 20 miles east of Glogau. Population 900.

TSCHIRNHAUSEN (Ehrenfried Walter von), an ingenious mathematician, was a descendant of a noble Bohemian family, and born at Kislingswald, in Upper Lusatia, in 1651. Having studied for some time at the university of Leyden, directing his particular attention to mathematics and philosophy, he entered into the Dutch army in 1672, and for the purpose of further improvement visited France, Sicily, Italy, and Malta. He also established three glass-houses in Saxony, with a view to the improvement of the science of optics, and having shewn how porcelain might be made from an earth found in that country, he may be regarded as the founder of the Dresden porcelain manufactory. As to his claims on the invention of caustic curves, we refer to the article *Caustic Curve*. His account of them was communicated to the Academy of Sciences at Paris, in 1682. See also the same Memoirs for 1703. For the construction and powers of his burning-glass, constructed about the year 1687, we refer to the article *BURNING-GLASS*. Heedless of the fame which he so justly acquired, Tschirhausen took delight in encouraging the researches of others, who were engaged in pursuits similar to his own, and was at considerable expence in printing works of public utility. He died, highly esteemed and much regretted, in the month of September 1708. He furnished the Leipzig Transactions with many articles; and also the Memoirs of the Academy of Sciences with the following: viz. "Observations on Burning-glasses of three or four Feet Diameter," in the vol. for 1699; "Observations on the Glass of a Telescope convex on both sides, and of thirty-two Feet focal Distance," 1700; "On the Radii of Curvatures, and finding the Tangents, Quadratures, and Rectifications of many Curves," 1701; "On the Tangents of Mechanical Curves," 1702; and "On a Method of Quadratures." The only work published separately, was his "*Medicina Mentis*," resembling Malebranche's "*Recherche de la Verité*," but much more extensive; first published in 1687, and again with improvements in 1695. *Montucla, Hist. des Mathem. Hutton's Math. Dict.*

TSCHORLI, anciently *Tyrylos*, a small inland town of European Turkey, in Romania. It is noted for its cheese.

TSCHUDES, the general name of the various tribes of Finnish descent, but applied more particularly to tribes of living in the vicinity of the gulf of Bothnia, viz., the Finns properly so called, the Laplanders, the Esthonians, and the Livonians.

TSCHUDI (*Ægidius*), an eminent Swiss historian, was descended from a noble family, and born at Glarus in 1505. After completing his school education, he went to Basle, and accompanied his preceptor, Glareanus, to France, with a view to further improvement. Upon his return to his native place he was employed, in 1528, on a mission respecting the Reformation, in which he conducted himself to the satisfaction of both Reformers and Catholics; and in the following year was chosen chief magistrate of Sargans. By his discharge of the duties of this office, he gained increasing reputation, and more extended trusts of a similar kind. His great object was to enlarge his acquaintance with the Helvetic history; nor did he cease to pursue it, even in the military service of France, or in any of the honorable stations which he was appointed to occupy. Towards the close of his life, he was severely afflicted with the stone, but death terminated his pains and labours in the year 1572, and the 69th year of his age. His principal works were "*A Description of the ancient Rhætia*," published

at Basle in 1538; the "Helvetic Chronicle," commencing with the year 1001, and terminating at 1470, edited by Iselin, in two vols. fol. Basle, 1734—1736; "De vera et prisca Alpina Rhætia, &c." Basle, 1538, 4to. ib. 1560; "Description of the Alps," Basle, 1738, &c. Tschudi was a zealous Catholic, as we may infer from his "Treatise on Purgatory," and another "On the Invocation of Saints;" though he was fully apprised of the errors of Popery, the licentious manners of the clergy, and the avarice of the convents, which he very freely exposed.

TSCHUFUT-KALAE, a large village in the south of European Russia, in the Crimea, situated on a hill. The inhabitants, in number 1000, are Jews of the sect of the Caraites, and are distinguished from their brethren by superiority in cleanliness, as well as in other respects.

TSCHUGUJEV, a considerable town in the south of European Russia, in the government of Slobodsk-Ukraine, on the Donez. It is surrounded by a ditch and earthen wall, has about 9000 inhabitants, and is the capital of a tribe of Cossacks; 23 miles east of Charkov.

TSCHUSSOVAJA, a river in the east of European Russia, in the government of Perm, which falls into the Kama. It is navigable, and of great use for transporting the ore produced from the mines in that province.

TSCHUVASCHEs, a tribe of Finnish origin, who are spread over several provinces of Russia, viz., those of Kasan, Simbirk, Orenbourg, Niznei-Novgorod, and Viatka, in Europe, and Tomsk in Asia. Their total number is 106,000, of whom about 23,000, settled in the government of Kasan, have embraced Christianity, and become agriculturists, but the rest are Pagans, and live by hunting. In taking a judicial oath, their only form is taking a little bread and salt in their hands, saying, "May these fail me if I lie."

TSE, a town of China, in Chan-si; 300 miles south-west of Peking. Lat. 35. 30. N. long. 112. 26. E.

TSEBID, or **TECEBIT**, a town and district of Northern Africa, in the county of Sigilmessa; 75 miles east of Sigilmessa, and 80 south-west of Gardeiah. Lat. 31. 40. N. long. 1. E.

TSENA, a river of Malacca, which runs into the Chinese sea. Lat. 7. 33. N. long. 101. 21. E.

TSERKESB, a town of Asiatic Turkey, in Anatolia; 36 miles north of Angora, and 60 east of Boli.

TSHAC, a mountain of Little Bukharia; 80 miles south-west of Hotun.

TSHANI, a town of Circassia; 25 miles south of Anapa. **TSHATSHI**, a town of Little Bukharia; 30 miles north-east of Acsu.

TSHENIKE, a town of Asiatic Turkey, in the government of Sivas; 20 miles north-east of Amasieh.

TSHI-KOI, a river of Russia, which runs into the Selenga; 12 miles south of Selenginsk.

TSI, a city of China, of the second rank, in Ho-nan; 242 miles south of Peking. Lat. 34. 30. N. long. 114. 34. E.

TSIAO, a city of China, of the second rank, on the south coast of the island of Hai-nan; 125 miles south-south-west of Kiang-tcheou. Lat. 18. 20. N. long. 108. 25. E.

TSIAO, a lake of China, in Kiang-nan, about 60 miles in circumference; 42 miles south-west of Nang-king.

TSIAO-TING-CHAN, a town of Corea; 50 miles east-north-east of Koang-tcheou.

TSIAO-TONG, a town of Corea, on an island of the same name. Lat. 37. 48. N. long. 124. 14. E.

TSIAO-TONG, an island of China, in the Yellow sea, near the coast of Corea, about 35 miles in circumference. Lat. 37. 44. N. long. 124. 54. E.

TSIBBA, a town of Japan, in the island of Nippon; 30 miles east-south-east of Jedo.

TSIEN-OUEY, a town of Chinese Tartary; 40 miles south-west of Ning-yuen.

TSIJA, a town of Thibet; 48 miles west of Contchoud-song.

TSILKANI, a village of the principality of Georgia, in the province of Carduel; 20 miles north-west of Teflis.

TSILON-PALHASIN, a town of Eastern Chinese Tar-

tary, in the country of the Mongols; 13 miles south of Oulan.

TSIN, a city of China, of the second rank, in Chan-si; 620 miles south-west of Peking. Lat. 34. 35. N. long. 105. 24. E.

TSIN, a city of China, of the second rank, in Hou-quang; 645 miles south-south-west of Peking. Lat. 26. 36. N. long. 109. 2. E.

TSIN, or **TCIN**, a town of Corea; 188 miles south-south-east of King-ki-tao.

TSINCHAN, a town of Corea; 13 miles north-west of Sing.

TSIN-CHOUI, a river of China, which runs into the Yuen, near Meyang.

TSING, a city of China, of the second rank, in Chan-si; 267 miles south-south-west of Peking. Lat. 36. 42. N. long. 112. 24. E.

TSING, a lake of China, in Kiang-nan; 22 miles in circumference; 45 miles north of Hoai-ngan.

TSING-HING, a city of China, of the second rank, in Yunan; 1162 miles south-south-west of Peking. Lat. 24. 47. N. long. 102. 30. E.

TSING-YANG, a river of China, which rises near Tei-hia, in Shantung, and runs into the Eastern sea, near Foucha.

TSING-YANG, a town of China, of the third rank, in Kiang-nan; 20 miles east of Tchi-tcheou.

TSIN-KIEN, a river of China, which runs into the Hoang; 12 miles east-south-east of Yen-tchan.

TSIN-NING, a city of China, of the second rank, in Chan-si; 585 miles west-south-west of Peking. Lat. 35. 36. N. long. 105. 25. E.

TSINO, a town of Japan, in the island of Awasi; 10 miles north of Awasi.

TSIN-TCHUEN, a town of Corea; 40 miles south-east of Hoang-tcheou.

TSIN-YUEN-OEI, a fortress of China, in Chan-si, near the great wall, on the river Hoang; 75 miles north of Lingtao.

TSIOMPA, a country of Eastern Asia, between Cambodia and Cochinchina. It, as well as all the countries in this part of Asia, are now subjected to the latter kingdom.

TSITA, a lake of Thibet, 45 miles in circumference. Lat. 33. 32. N. long. 90. 39. E.

TSIURAC, a small river of Anatolia, which runs into the Meinder, at Tcharshebeh.

TSO, a city of China, of the second rank, in Pe-che-lee; 22 miles south-south-west of Peking. Lat. 39. 32. N. long. 115. 39. E.

TSO, a city of China, of the second rank, in Quang-see; 930 miles south-south-west of Peking. Lat. 22. 42. N. long. 106. 49. E.

TSO-CHOUI, a town of Corea; 55 miles south-east of Kang-tcheou.

TSONG-KING, a city of China, of the second rank, in Sechuen; 857 miles south-west of Peking. Lat. 30. 38. N. long. 103. 23. E.

TSONG-MING, an island near the coast of China, in the Eastern seas, near the mouth of the Yang-tse-kiang river, about 50 miles in length, and 15 in breadth. This island was formerly a place of banishment for criminals, who were joined by some poor Chinese families, and they divided the lands amongst them. The island contains only one city, which is of the third rank, surrounded with high walls, and a wet ditch. There are also large villages scattered at convenient distances, containing numerous shops, well furnished with the necessaries and conveniences of life. Lat. 31. 38. N. long. 120. 54. E.

TSOT-SANG, a river of China, which runs into the Hoang, near Hoai-king.

TSUEN, a city of China, of the second rank, Quang-see; 912 miles south-south-west of Peking. Lat. 25. 50. N. long. 110. 44. E.

TSUN-Y, a city of China, of the first rank, in Sechuen; 890 miles south-west of Peking. Lat. 27. 38. N. long. 106. 35. E.

TUA,

TUA, a river of Portugal, which rises on the borders of Galicia, in Spain, flows southward through the province of Traz oz Montes, and falls into the Douro; 15 miles north-west of St. Joao de Pesqueira.

TUABO, a village of Africa, in the kingdom of Kaen, on the side of the Senegal. Lat. 14. 56. N. long. 10. 28. W.

TUAK, a small island in the Red sea, about two miles from the coast of Arabia. Lat. 5. 58. N. long. 41. 58. E.

TUAM, a large, populous, and well built town of Ireland, in the county of Galway, consisting of four main streets, which diverge nearly at right angles from the market-house. It is an archiepiscopal's see. It was a borough previous to the union with Great Britain, and sent two members to the Irish parliament; 17 miles north-north-east of Galway, and 93 south-west of Dublin.

TUANSQUITI, a river of the province of Darien, which falls into the sea opposite the Mulatas islands.

TUARICK, a numerous people of Central Africa, occupying all the territory to the west and south of Soudan, and as far as the country on the Niger. They are tall, erect, and handsome, with an imposing air of pride and independence. Their skin is generally white, except in those parts that are exposed to the climate, which are of a dark brown. The most remarkable feature in their costume consists in a piece of glazed cotton cloth, generally blue, with which they cover their faces as high as the eyes, and which hangs down on the breast below the chin. Not to interfere with this, the beard is generally clipped very close. They wear turbans, generally blue, surmounted by high red caps; while the body is generally covered with a loose shirt of blue cotton. Their swords are straight, of great length, and wielded with much ease and dexterity. From the left wrist is suspended a dagger, without which no Tuarick is ever seen: he wears also a light elegant spear of iron, and sometimes of wood. Their courage and skill in the use of their weapons, causes them to be much dreaded; and small bodies of them even traverse populous and hostile countries without fear of molestation. They ride on a light and very swift species of camel, called maberry or heirie, which they manage with great dexterity, and which trot for many hours together, at the rate of nine miles an hour. Among the most powerful tribes of Tuarick are the Ghraat, who inhabit the neighbourhood of Gadamis; the Kolluvi, who possess the powerful kingdom of Asben, of which Agades is the capital; and the Tagaina, who immediately border on Soudan.

TUAT, or **TWAT**, a district of Northern Africa, mentioned often as a town, but forming in fact a large track of country, inhabited chiefly by Tuarick.

TUB, *s.* [*tobbe*, *tubbe*, Dutch.] A large open vessel of wood.—In the East Indies, if you set a *tub* of water open in a room where cloves are kept, it will be drawn dry in twenty-four hours. *Bacon*.—A state of salivation; so called, because the patient was formerly sweated in a tub.

Season the slaves

For *tubs* and baths, bring down the rose-cheek'd youth
To the *tub*-fast, and the diet. *Shakspeare.*

TUBA, a small river of Asiatic Russia, which falls into the Yenisei, in the government of Kolivan; 16 miles south-west of Abakansk.

TUBAGE, a large and deep river of New Granada, in the province of San Juan de los Llanos, which enters the Orinoco a little lower than the Meta.

TUBAGI, a large river of Brazil, which runs north-west, and enters the Parapamena

TUBE, *s.* [*tubus*, Latin.] A pipe; a siphon; a long hollow body.—This bears up part of it out at the surface of the earth, the rest through the *tubes* and vessels of the vegetables thereon. *Woodward.*

TUBER [an old Latin name for a sort of excrescence, appropriated also to several things of the fungus tribe. Its derivation is from *tumeo*, to swell. Botanists have retained this name for the present genus, to which it originally belongs], in Botany, a genus of the class cryptogamia, order fungi, natural order fungi.—*Essential Character.*

Roundish, fleshy, solid, closed; its substance variegated with veins bearing seeds.

1. **Tuber cibarium**, or common truffle.—Blackish, rough with prominent warts.—Found under the surface of the ground in most parts of Europe, where the soil is light and dry; as well as in Japan, and the East Indies. Dogs are taught to find this fungus by the smell, and to scratch it out of the earth. It is brought to table. The size of this fungus is about that of a walnut in its outer coat, but the surface is irregularly tumid, and harsh to the touch from innumerable sharp warts. The inner substance is greyish, or pale brown, with numerous curved branching veins, lodging the minute seeds. No signs of a root are observable. There are said to be several varieties of colour in this species.

2. **Tuber moschatum**, or musky truffle.—Blackish, smooth.—Native of France.

3. **Tuber griseum**, or grey truffle.—Roundish, irregular, smooth, soft, greyish-ash-coloured.—Native of Piedmont, in a light, moderately moist soil. The size of the two preceding, but more irregular in shape, of a soapy texture and light colour, with a strong scent of garlic.

4. **Tuber album**, or white truffle.—Light reddish-brown, roundish, half above ground; veins rusty-coloured.—In woods, in England and France, also in Greece, but partly sunk in the earth. Its flavour is disagreeable.

5. **Tuber aestivum**, or summer truffle.—Nearly globular, smooth, brown, or blackish; spongy within; entirely subterraneous.—Plentiful in Carinthia and Carniola from May to August. These have little taste or smell, but are used much for the table.

6. **Tuber cervinum**, or bastard truffle.—Globular, finely granulated, rather solid, finally bursting; powdery in the centre.—Found barely sunk in the ground, in several parts of England, as well as in Bohemia and Silesia, about September.

7. **Tuber solidum**, or hard truffle.—Globular but compressed, brown, reticulated, very firm; blue-black within.—Found in Dr. Withering's park at Edgbaston, near Birmingham, under an oak-tree by the pool, in August. This had a short root, as Vaillant represents it, and appears to be, as Mr. Sowerby supposes, only a nearly sessile variety of his *Lycoperdon defossum*, Engl. Fungi, t. 311.

8. **Tuber radicum**, or rooted truffle.—Roundish, depressed, cracked in the surface, with a thick short root.—Found on heaths, and in woods, in Italy and England in the summer, but rare. Two or three inches in diameter, solid, never bursting, nor becoming internally powdery.

TUBERCLE, *s.* [*tuberculum*, Latin.] A small swelling or excrescence on the body; a pimple.—A consumption of the lungs, without an ulceration, arrives through a schirrosity, or a crude *tubercle*. *Harvey.*

TUBERMORE, a neat little village of Ireland, in the county of Londonderry; 9½ miles north-north-west of Dublin.

TUBEROSE, *s.* A flower.—The stalks of *tuberoses* run up four feet high, more or less; the common way of planting them is in pots in March, in good earth. *Mortimer.*

TUBEROUS, *adj.* [*tuber*, Lat.] Having prominent knots or excrescences.—Parts of *tuberosus hæmatitæ*, shew several varieties in the crusts, striature, and constitution of the body. *Woodward.*

TUBINGEN, a town in the south-west of Germany, in the kingdom of Wirtemberg, situated on the Neckar, where it receives the Ammer; 18 miles south-by-west of Stulgard, and 59 east of Strasburg. The environs are finely diversified by hill, dale, and forest. The town contains 6000 inhabitants.

TUBIPORA, or red tubular coral, a name given by Linnæus to a genus of Zoophyta, in the class of worms; the characters of which are, that its animal is a nereis, and that it is a coral, consisting of cylindrical, hollow, erect, and parallel tubes.

In Gmelin's edition of the Linnæan System we have the following species:—

1. **Tubipora musica**.—With fasciculated combined tubes; the

TUBIPORA AND TUBULARIA.

1 *Tubi. musica.* 2 *Tubu. magnifica.*

the transverse partitions membranaceous and distant. This is the purple tubipora of Pallas, of which he mentions a variety, or the flexuose tubipora.—It is found in the American, Indian, and Red seas, affixed to other corals or rocks; and is used by the Indians as an antidote to strangury and wounds inflicted by poisonous animals.

2. *Tubipora catenulata*.—With parallel tubes, connected into a lamina anastomosing with a folded wreath.—Found on the shores of the Baltic sea.

3. *Tubipora serpens*.—With cylindric, erect, very short, distant, axillary tubules; divaricated at the dichotomous base: the *Millepora liliacea* of Pallas.—Found in the Mediterranean and Northern seas, and on the shores of the Baltic.

4. *Tubipora fascicularis*.—With filiform fasciculated tubes; the sides anastomosing.—Found on the shores of Gothland.

5. *Tubipora ramosa*.—With roundish interstices, and simple, flexuose, aggregate, conglutinated tubules of the confluent branches.—Found in the White sea.

6. *Tubipora pinnata*.—Dichotomous, erect, with tubules distributed in the form of small feathers.—Found in the Mediterranean sea.

7. *Tubipora penicillata*.—Stalky; the top incrassated, and formed of tubules connected towards the base.—Found in the Greenland sea, affixed to testacea.

8. *Tubipora flabellaris*.—Depressed, flabelliform, radiated with parallel conjoined tubules.—Found as the former.

9. *Tubipora stellata*.—With separate tubes, combined in layers or tables, many of these tables being remote, horizontally tubulous, and radiated with striæ on the surface.—Found among fossils.

10. *Tubipora strues*.—With distant diverging tubes, loose behind, and often bent; with tubules small, simple, and horizontal, combined.—Found among fossils.

TUBISE, a small town of the Netherlands; 16 miles south-south-east of Brussels, on the small river Senne, with 1700 inhabitants.

TUBNA, a small town of Algiers, in Africa, the ancient *Thubana*. There are considerable ruins, beneath which the Arabs believe that treasure is buried; 110 miles south-south-west of Constantinæ.

TUBNEY, a parish of England, in Berkshire; 4 miles west-by-north of Abingdon.

TUBCEUF, a small town in the north-west part of France, department of La Mayenne, with 1000 inhabitants; 17 miles north-east of Mayenne.

TUBUGANTI, a river of the province of Darien, which runs to the west, and falls into the Chucunaqui.

TUBUL, a river of Chili, which runs north-north-west, and enters the Carampangue.

TUBULAR, *adj.* [*tubulus*, Lat.] Resembling a pipe or trunk; consisting of a pipe; long and hollow; fistular.—He hath a *tubular* or pipe-like snout, resembling that of the hippocampus or horse-fish. *Grew*.

TUBULARIA, a genus of the Zoophyta class of worms; the characters of which are, that the animal is vegetating and radicated; the head crested with tentacula, generating small eggs; and that the stem is tubulous, horny, very simple or branched, affixed at the bottom, and the animal thrust out at the apex. Among the following species are included several of the tubular corallines of Ellis.

1. *Tubularia cornucopiæ*.—With simple tube, attenuated below, flexuose and rough.—Found among the corals of the American and Mediterranean seas. Colour dusky-yellow.

2. *Tubularia indivisa*.—With very simple stalks, and wreathed joints. One of Mr. Ellis's tubular corallines.—Found in the European and Mediterranean seas. Colour yellowish-grey.

3. *Tubularia ramosa*.—With branched stalks, and wreathed joints. One of Ellis's.—Found in the European sea. The soft tubules sordidly grey.

4. *Tubularia ramea*.—With compound branched tubes, large and small branches alternate.—Found in the Mediterranean ocean. Brownish-grey.

5. *Tubularia fistulosa*.—With dichotomous articulated stalks, with impressions in form of a rhombus. Bugle coralline of Ellis.—Found in the European, Mediterranean, and Atlantic seas. Pale-grey.

6. *Tubularia fragilis*.—With dichotomous stalks, and compressed joints.—Found in the American sea. White or greenish.

7. *Tubularia muscoides*.—With sub-dichotomous stalks, wholly annulate-rugose. One of the tubular corallines of Ellis.—Found in the European and Mediterranean seas. Pale-grey.

8. *Tubularia papyracea*.—With a very large papyraceous tubule, alternately ramose.—Found in the Indian ocean.

9. *Tubularia penicillus*.—With aggregate, simple, radiated tubules, proliferous and penicillated at the apex.—Found in the American sea. It is doubted whether this and the last be of this genus.

10. *Tubularia acetabulum*.—With filiform stalks; the terminal pelta or shield striated, radiated and calcareous.—Found in the Mediterranean and American seas. White and soft, and adjoined to testacea.

11. *Tubularia splachnea*.—With capillary very simple stalks; the terminal pelta smooth and membranaceous.—Found in the Mediterranean sea. Of horn-colour.

12. *Tubularia coryna*.—Sub-ramose, filiform, papyraceous, jointed, with ovate-acuminated capsules, and dilatible mouth, and terminated with cylindric armed tentacula.—Found on the shores of Holland and England. Arenaceous and reddish.

13. *Tubularia affinis*.—Simple, sub-annulated, soft; with the tentacula of the mouth encompassing the papilla attenuated.—Found on the English coast, adhering to fuci, and akin to the last.

14. *Tubularia fabricia*.—Stellated, with pinnated cirrhi, and six rays encompassing the mouth.—Found on the shores of Norway and Greenland, often in the fissures of rocks. Grey, green, or white.

15. *Tubularia longicornis*.—With two setaceous cirrhi, longer than the tubule.—Habitation unknown.

16. *Tubularia multicornis*.—With more than twenty cirrhi centrally white; body round and hyaline, tubule mace-like.—Habitation unknown.

17. *Tubularia campanulata*.—With lunated crest; orifices of the vagina annulated; body concealed within the vagina.—Found in the stagnant waters of Europe.

18. *Tubularia repens*.—Crested, with cirrhi on both sides radiated; vagina extended, tubule opaque, procumbent.—Found in the stagnant waters of Northern Europe.

19. *Tubularia reptans*.—With lunated crest; body tractile beyond the vagina.—Found in the stagnant waters of Europe. Hyaline, soft, with about sixty cilia.

20. *Tubularia sultana*.—With infundibuliform crest, ciliated at the base.—Found in the pools of Gottingen.

21. *Tubularia stellaris*.—Crested, with pectinated cirrhi, brown, annulated erect tubule.—Found in the fucus of the Baltic sea.

22. *Tubularia simplex*.—With eight linear cirrhi, and conic hyaline tubule.—Found in the fucus of the Norwegian sea.

23. *Tubularia spallanzani*.—With five plumose cirrhi, pectinated on both sides, and cylindric, horny tubules, below incurvated.—Found in the Mediterranean sea.

24. *Tubularia magnifica*.—With a double concentric range of fistulous tentacula, and a membranaceous, contractile, viscid, cylindric tubule inclosing the inhabitant.—Found in calm parts of the Mediterranean.

TUBULATED, or TUBULOUS, *adj.* [*tubulus*, Lat.] Fistular; longitudinally hollow.—The teeth of vipers are *tubulated* for the conveyance of the poison into the wound they make; but their hollowness doth not reach to the top of the tooth. *Derham*.

TUBULE, *s.* [*tubulus*, Lat.] A small pipe, or fistular body.—As the ludus Helmontii, and the other nodules, have in them sea-shells that were incorporated with them during the time of their formation at the deluge, so these stones had

then incorporated with them testaceous *tubules* related to the siphunculi or rather the vermiculi marini. *Woodward*.

TUBURBO, a small town of Tunis, in Africa, supposed to be the ancient *Tuburbum*; 16 miles west-north-west of Tunis.

TUCAPEL, a fortress of Chili, in the province of La Concepcion, situated on the banks of the river of the same name; 106 miles east of Concepcion. Lat. 36. 45. S.

TUCAPEL, a river of Chili, in the province of La Concepcion, which runs south, and changing its course to the west, is salt to the sea.

TUCH, *s.* A kind of marble. See the fifth sense of **TOUCH**.—Several parts of it were as bright and splendent as *tuch*. *Sir T. Herbert*.

TUCHEL, a small town of West Prussia, on the Brahe; 25 miles west of Culm. Population 1400.

TUCHEN, a large village of Prussian Saxony, in the duchy of Magdeburg, near Jerichow, with 1000 inhabitants.

TUCK, *s.* [*tweca*, Welsh, *a knife*; *estoc*, Fr.; *stocco*, Ital.] A short narrow sword.

These being prim'd, with force he labour'd
To free his sword from retentive scabbard;
And after many a painful pluck,
From rusty durance he bail'd *tuck*.

Hudibras.

A kind of net. [*Blekingo-Goth. tacker*, triplex rete piscatorium. *Serenius*.] The *tuck* is narrower meashed, and therefore scarce lawful with a long bunt in the midst. *Carew*.—A kind of fold; a sort of pull; a kind of lugging. [*tucken*, Teut. *to strike*.] If he was dull, nothing was given to him but salted drink, or salt put in college beer, with *tucks* to boot. *Life of A. Wood*.

To **TUCK**, *v. a.* [*tucken*, Germ., *to press*. *Skinner*.] To gather into a narrower compass; to crush together; to hinder from spreading.

Dick adept! *tuck* back thy hair,
And I will pour into thy ear.

Prior.

To inclose, by tucking clothes round.—Make his bed after different fashions, that he may not feel every little change, who is not to have his maid always to lay all things in print and *tuck* him in warm. *Locke*.

To **TUCK**, *v. n.* To contract. *A bad word*.—An ulcer discharging a nasty thin ichor, the edges *tuck* in, and growing skinned and hard, give it the name of a callous ulcer. *Sharp*.

TUCKER, *s.* A small piece of linen that shades the breast of women.—A female ornament, by some called a *tucker*, and by others the neck-piece, being a slip of fine linen or muslin, used to run in a small kind of ruffle round the uppermost verge of the stays. *Addison*.

TUCKER'S ISLAND, a small island of the United States, near the coast of South Carolina. Lat. 32. 36. N. long. 80. 16. W.

TUCKER'S ISLAND, a small island in the Pacific ocean, so called by captain Wilson of the *Duff*, from one of the crew who left the ship there. The island is from 2 to 3 miles in circumference. The natives are of a dark copper colour, and a lively disposition, and much addicted to theft. Lat. 7. 22. N. long. 122. 5. E.

TUCKEREAH, a small town in the southern part of the kingdom of Algiers, in Africa, bordering on the desert. It is the ancient *Figava*, and is situated on the river Midroe; 106 miles south of Algiers.

TUCKERSVILLE, a post village of the United States, in Wayne county, Georgia.

TUCKERTON, a post village of the United States, in Burlington county, New Jersey, near the south end of Little Egg Harbour Bay.

TUCKET, or **TUCET**, *s.* [*toccheti*, Italian; minced meat, collops, &c. Florio; *tucetum*, low Lat. "jus crassum, in quo bubula caro conditur." *Du Cange*.] A steak; a collop.—Neither will the pulse and leeks, Lavinian sausages, and the Cisalpine *tucets* or gobbets of condited bull's flesh, minister such delicate spirits to the thinking

man. *Bp. Taylor*.—[*toccata*, Italian.] A kind of flourish or prelude on a trumpet.

(*A tucket* sounds:;—

Your husband is at hand, I hear his trumpet. *Shakspeare*.

TUCKETSONANCE, *s.* The sound of the tucket.

Let the trumpets sound,

The *tucketsonance* and the note to mount. *Shakspeare*.

TUCKUM, a small town in the north-west of European Russia, in Courland, near the Baltic. Population 1300; 23 miles north-north-east of Mittau.

TUCKUSH, a small sea-port of Algiers, on the Mediterranean, near which is a little island of the same name.

TUCOMBIRA, a river of Brazil, in the province of Los Ilheos, which runs south, and changing its course to the east, enters the sea; 21 miles north of Los Ilheos.

TUCOPIA, an island in the Pacific ocean, discovered by Quiros in 1606. Lat. 12. S. long. 167. E.

TUCUMAN, a province and government of the viceroyalty of Buenos Ayres, bounded on the north-east by Chichas and Lipas in Charchas; north-west and west by Atacama; west and south-west by Cuyo or Cujo; south-east by the Pampas or territories inhabited by the Aucaes, Huarcaes, or Pampas, Pihuenches, Puelches, Uncos, and other unconquered tribes which wander over the plains and mountains adjacent to Chili; on the south-east it has the jurisdiction of Santa Fe, in Buenos Ayres; and on the east it has the uncultivated Llanos de Manso, and the country of Chacos or Chaco Gualamba. Its extent is from lat. 22. to 33. 10. S.; its length 370 leagues; and its breadth 190 leagues from east to west. The climate of Tucuman is hot in those parts farthest from the main chain and branches of the Andes; but in general the seasons are regular, and the soil prolific and good. It produces all sorts of grain, esculent plants and fruits in abundance, with plenty of excellent pasture for the innumerable herds of cattle, mules, and horses it contains. The forests, which overspread a great part of it, contain good timber for building, and which forms one great article of its trade. In Tucuman, the desert places and woods abound with all kinds of game and wild animals, as pumas, jaguars, ant bears, bears, wild hogs, elks, deer, hares, rabbits, armadillos, guanucos, vicunas, and many other kinds. The American ostrich or cassowary frequents the plains, and innumerable birds are seen in its woods, &c. The immense boa, called in this country *ampolaba*, destroys the smaller animals which come within its reach, and appears, when lying among the grass, like the huge trunk of an old tree. Besides the boa, there are also rattle-snakes, vipers, and other reptiles common to warm climates. In the rivers and lakes are found abundance of fish, tapits, cavies, water-pigs, and other amphibious animals. The great road from Buenos Ayres to Potosi and Lima, passes through Tucuman. The population, including the converted Indians, is 100,000. The Jesuits had formed about 24,000 of the natives into a militia, to repel the invasion of the Chaco Indians; but they are now employed in cultivating the land. The capital and chief towns of this government are Tucuman, Cordova, Rioxa, Jujuy, Santiago, Londres, and Salta, with thirty-eight other towns and villages, and ten missions.

TUCUMAN, or **SAN MIGUEL DE TUCUMAN**, the capital of the above province, situated in a pleasant plain, though much in want of water, having a mild climate, producing abundance of fruits and grain; 1170 miles in a direct line from Lima, 462 south of La Plata, and 200 east of Copiapo. Lat. 26. 49. S. long. 64. 36. W.

TUCUMAN, a settlement of Mexico, in the province of Mexico, in which there is a beautiful stone bridge on the road which leads to that city.

TUCUMAN, a river of the above province, which takes a south-east course, and runs beyond the capital.

TUCUMANILLA, a settlement of the province of Tucuman; 10 miles west of the capital.

TUCUMARE, a river which has its rise in the extensive plains which bound the Amazons. It is small, and falls into the Madera, between the rivers Yamari and Macacipe.

TUCUME,

TUCUME, a river of South America, which enters the sea in the bay of Panama.

TUCUPA, a river of Guiana, which runs to the north, and falls into the river Paraguay.

TUCUPIO, a small river of the Caraccas, in the province of Cumana, which runs south, and then unites with the river Curuma, to fall into the Cuyuri.

TUCUPIO, a river of South America, in the province and government of Venezuela, which takes its rise in a plain west of the city of Guanare, and joining the Guanari it falls into the Portubueza.

TUCURAI, a large river of Quito, in the province of Mainas, which falls into the Guallaga.

TUDDENHAM, a parish of England, in Suffolk; 3 miles north-east-by-north of Ipswich.—Another parish in the same county; 3 miles south-east-by-south of Mildenhall.

TUDDENHAM, EAST, a parish of England, in Norfolk; 6 miles east-south-east of East Dereham. Population 453.

TUDDENHAM, NORTH, another parish in the above county; 4 miles east-by-south of East Dereham. Population 334.

TUDELA, a town in the north-east of Spain, in Navarre, at the confluence of the Queilos and the Ebro. It is the second city in the province, and a bishop's see. Population 7300; 45 miles south of Pampeluna.

TUDELA, a small town in the interior of Spain, on the Douro, with 2000 inhabitants; 5 miles east of Valladolid.

TUDELA, a town of South America, in New Granada, now a heap of ruins.

TUDELEY, a parish of England, in Kent; 2 miles east-by-south of Tunbridge.

TUDERGA, a village of Anatolia, in Asiatic Turkey; 32 miles north-north-east of Eski Shehr.

TUDERLY, EAST and WEST, adjoining parishes of England, in Southamptonshire, about 5 miles from Stockbridge.

TUDHOE, a township of England, in Durham; 4½ miles south-south-west of Durham.

TUDHOPE FELL, a mountain of Scotland, in Roxburghshire, on the English border.

TUDRINGTON, a hamlet of England, in the parish of Chippenham, Wiltshire.

TUDURA, a town of the south of India, province of Mysore, situated on the west bank of the Tunga river, and having in its vicinity a forest of fine timber. Lat. 13. 40. N. long. 75. 25. E.

TUDY, ST., a parish of England, in Cornwall; 5½ miles north-by-west of Bodmin. Population 512.

TU'EL, s. [*tuyeau*, French.] The anus. *Skinner.*

TVER, one of the central governments of European Russia, lying between the governments of Moscow and Novgorod, and extending from 56. to 58. 40. N. lat. and from 32. 20. to 39. of E. long. It has a superficial extent of 24,100 square miles, with about 1,000,000 inhabitants, partly of Russian, and partly of Finnish descent: The climate is on the whole temperate; but the weather very changeable. The rivers are constantly frozen over from the beginning of December to the end of March. These are pretty numerous: the principal are the Wolga, the Dwina, the Msta, the Tverza, the Mologa, and the Meduvitza, none of which are of large size in this government. The chief lakes are the Seliger, the Wolga, and the Dvinez.

TVER, a city of European Russia, the capital of a government, and an archbishop's see. It stands on the great road from St. Petersburg to Moscow, at the confluence of the Tvertza, the Wolga, and the Tmaka, which divide the town into four parts, united by three bridges, the one over the Wolga being of boats, that it may be removed during winter. The population of the town is about 20,000; 100 miles north-north-west of Moscow, and 300 south-east of St. Petersburg. Lat. 56. 51. 44. N. long. 35. 57. 23. E.

TVERZA, a river of European Russia, in the government of Tver, which falls into the Wolga.

TU'ESDAY, s. [tueɹdæɹ, Sax.; tu, tu], Sax. is Mars. Some refer it to *Tuisco*, a Saxon deity, to whom it has been thought that this day was dedicated. See *Verstegan.*] The third day of the week.

TUESDAY BAY, a bay on the coast of Terra del Fuego, in the straits of Magellan. lat. 52. 53. S.

TUESLEY, a hamlet of England, in the parish of Godalming, Surrey.

TUETA, or **TWETA**, a town of Middle Sweden, in the province of Dalecarlia, on a peninsula in the lake Wener.

TUEZAR, a small town in the east of Spain, in Valencia, with 2200 inhabitants; 42 miles north-west of Valencia.

TUFFE, a small town in the north-west of France, department of the Sarthe, on the small river Vanet, with 1500 inhabitants, who manufacture stone and pottery ware; 20 miles north-east of Le Mans.

TUFFER, a market town of the Austrian states, in Styria, on the Save; 4 miles south of Cilley. In the neighbourhood are found both coal and chalk, and the mineral springs of Toeplitz.

TUFFLEY, a hamlet of England, in Gloucestershire; 2 miles south-south-west of Gloucester.

TUFT, s. [*tuffe*, old French, "touffe, houpe, couronne," &c. *Roquefort.* But see Lye, ed. Manning, Saxon ðyrc, "germen, frons, inde forsan nostra tuft."] A number of threads or ribbands, flowery leaves, or any small bodies joined together.—Upon sweet brier, a fine tuft or brush of moss of divers colours, you shall ever find full of white worms. *Bacon.*—A cluster; a plump.

Under a tuft of shade, that on a green
Stood whisp'ring soft, by a fresh fountain side
They sat them down. *Milton.*

To TUFT, v. a. To separate into tufts, or little clusters. This seems to be the meaning; but it is not noticed in Dr. Johnson's or other dictionaries.

The labouring hunter tufts the thicke unbarbed grounds,
Where harbor'd is the hart. *Drayton.*

To adorn with a tuft.

Sit beneath the shade
Of solemn oaks, that tuft the swelling mounts,
Thrown graceful round. *Thomson.*

TUFTA'FFETY, s. A villous kind of silk. His clothes were strange, though coarse, and black, though bare:

Sleeveless his jerkin was, and it had been
Velvet; but it was now, so much ground was seen,
Become tuftaffety. *Donne.*

TUFTED, adj. Growing in tufts or clusters.

'Midst the desert fruitful fields arise,
That crown with tufted trees and springing corn,
Like verdant isles the sable waste adorn. *Pope.*

TUFTON, a parish of England, in Southamptonshire; 1 mile south-west of Whitchurch.—A hamlet in the parish of Ramham, Kent.—A hamlet in the parish of Nordham, Suffolk.

TUFTONBOROUGH, a township of the United States, in Strafford county, New Hampshire, on the east side of Lake Winnipiseogee; 50 miles north-north-east of Concord, and 53 north-north-west of Portsmouth. Population 709.

TUFTY, adj. Adorned with tufts; growing in tufts.

The Sylvans that about the neighbouring woods did dwell,
Both in the tufty frith and in the mossy fell. *Drayton.*

To TUG, v. a. [tʌgən, tɔgən, Saxon.] To pull with strength long continued in the utmost exertion; to draw.

Take pains the genuine meaning to explore,
There sweat, there strain, tug the laborious oar. *Roscommon.*

To pull; to pluck.

Priest, beware thy beard;
I mean to tug it, and to cuff you soundly. *Shakspeare.*

To

To TUG, *v. n.* To pull; to draw.

Thus galley-slaves *tug* willing at their oar,
Content to work in prospect of the shore;
But would not work at all, if not constrain'd before.

Dryden.

To labour; to contend; to struggle.

Cast your good counsels
Upon his passion; let myself and fortune
Tug for the time to come.

Shakspeare.

TUG, *s.* Pull performed with the utmost effort.

Downward by the feet he drew
The trembling dastard: at the *tug* he falls,
Vast ruins come along, rent from the smoking walls.

Dryden.

TUGBY, a parish of England, in Leicestershire; 12 miles east-by-south of Leicester.

TUGLOO, a river of the United States, in Georgia, one of the branches of the river Savannah, which joins the Keowee; 48 miles north-west of Petersburg.

TUGFORD, a parish of England, in Salop; 11 miles north-north-east of Ludlow.

TU'GGER, *s.* One that tugs or pulls hard. *Sherwood.*

TU'GGINGLY, *adv.* With difficulty. *Bailey.*

TUGGURT, the principal village in the district of Wad-reag, situated on the borders of the desert, to the south of Algiers; 290 miles south-south-east of Algiers.

TUGGURT, a town and district of Central Africa; in the Sahara, on the road to Tombuctoo; 360 miles north-east of Tombuctoo.

TUGGURT, a village of Tunis, in Africa; 60 miles south-west of Tunis.

TUGHALL, or TUGGEL, a hamlet of England, in Northumberland; 9 miles north-by-east of Alnwick.

TUHERE, a river of South America, in the country adjoining the great river Amazons, into which this river runs with a south-south-east course, between the Isari and the Igarape.

TUL, a small river of the Caraccas, in the province of Cumana, which enters the Arui at its source.

TUICHI, a river of Peru, in the province of Apolabamba, which runs to the north-east, and enters the river Beni.

TUILERIE, or TYLERY, French; formed from *tuile*, *tile*, a *tile-work*; a large building, with a drying place, covered at top, but furnished with apertures on all sides, through which the wind having admittance, dries the tiles, bricks, &c. which the sun would crack, before they be put in the kiln.

The garden of the Louvre is called the Tuileries, as being a place where tiles were anciently made, &c. But the term Tuileries does not only include the garden, but also a magnificent palace, whose front takes up the whole length of the garden.

The palace of the Tuileries is joined to the Louvre by a large gallery, which runs along the banks of the river Seine, and has its prospects on it.

The Tuileries was begun in 1564, by Catherine de Medicis, wife of Henry II., in the time of her regency; it was finished by Henry IV. and magnificently adorned by Louis XIV. The garden of the Tuileries was much improved by Louis XIII.

TUIN, a town of Austrian Croatia, in the military district of Ogulini.

TUIRA, a river of South America, in the province of Darien, which takes its rise by the coast of the Atlantic ocean, and traversing, with an irregular course, almost the whole isthmus, discharges itself into the gulf of St. Michael in the Pacific ocean, forming the bay of Garachine, in lat. 8. 18. N.

TUIRAN, TUILAN, or TOIRAN, a small town of European Turkey, in Romania, situated on a lake, with a mosque and a small market-place.

TUITION, *s.* [*tuitio*, from *tueor*, Latin.] Guardianship; superintendent care; care of a guardian or tutor.—

When so much true life is put into them, freely talk with them about what most delights them, that they may perceive that those, under whose *tuition* they are, are not enemies to their satisfaction. *Locke.*

TUK, a village of Upper Egypt, on the left bank of the Nile; 6 miles north of Negade.

TULA, a government or province in the interior of Russia, to the south of Moscow. It extends from 52 to 55 of north lat. and has a surface of nearly 12,000 square miles, with a population of 950,000. Like others of the provinces of European Russia, it may be called a great undulating plain. The climate is healthy, the soil in general of a middling quality. The capital employed in trade amounts, by the official return, to about 500,000*l.* Exports take place by the rivers Oka, Upa, Don, and Plava.

TULA, a large town of European Russia, and the capital of a government, is situated at the confluence of the Tulpa and the Upa. This place, the population of which now approaches to 40,000, is called the Sheffield of Russia, and is one of the few towns in the empire that can be termed a place of activity; 115 miles south of Moscow, and 487 south-east of St. Petersburg. Lat. 54. 11. 40. N. long. 37. 1. 34. E.

TULA, a town of Mexico, in the intendency of Mexico, and capital of a district of the same name; 14 miles north-west of Mexico. Lat. 19. 57. N. long. 99. 21. W.

TULA, a settlement of Mexico, in the intendency of Valladolid, consisting of 1000 families of Indians.

TULANZINGO, a town of Mexico, in the intendency of Mexico, and capital of a district of the same name. Lat. 19. 58. N. long. 98. 22. W.—There is another settlement of the same name in Mexico.

TULBAGIA [so named by Linnæus, from *de Tulbagh*, governor of the Cape of Good Hope, a patron of Botany, who sent the Cape plants to the Burmans in Holland], in Botany, a genus of the class hexandria, order monogynia, natural order of spathacea, narcissi (*Juss.*)—Generic Character. Calyx: spathe two-valved, oblong, membranaceous; with the flowers peduncled. Corolla: petals six, lanceolate, length of the nectary, placed on the tube, three in the middle, three behind the border. Nectary one-petalled, cylindrical; with the border six-parted, awl-shaped, spreading. Stamina: filaments six, very short, three in the throat, three within the tube. Anthers somewhat oblong, acute. Pistil: germ superior, ovate. Style cylindrical, short. Stigma turbinate, hollow. Pericarp: capsule ovate, subtrigonal, three-celled, three-valved; partition contrary to the valves. Seeds two in a cell.—*Essential Character.* Corolla funnel-form, with a six-cleft border. Nectary crowning the aperture, three-leaved; leaflets bifid, the size of the border. Capsule superior.

1. *Tulbagia alliacea*, or narcissus-leaved tulbagia.—Nectary one-leafed, six-toothed. Stature of *Galanthus*, or snow drop. Root bulbous, with numerous thick subfusiform fibres. Leaves radical, numerous, linear, even. The spathe contains from five to seven flowers. Corolla green, like the oriental hyacinth, with a small acute border. Nectary very dark purple, length of the border.—Native of the Cape of Good Hope; where it flowers in August.

2. *Tulbagia cepacea*.—Nectary three-leaved. Root bundled. Leaves radical, from two to four, lanceolate-linear, somewhat fleshy. Flowers erect, purple.

3. *Tulbagia hypoxidea*, or short-crowned green tulbagia.—Flowers drooping. Nectary very short and obtuse. Segments of the limb of the corolla taper-pointed.—Native of the Cape of Good Hope.

TULCZYN, a small town in the west of European Russia, in the government of Wilna, with 200 houses; 14 miles south of Braslav.

TULDSCHA, a small town of European Turkey, situated at the confluence of two arms of the Danube.

TULGOM, or TULGONG, a town of Hindostan, province of Auringabad, belonging to the Mahrattas. Lat. 18. 46. N. long. 74. 40. E.

TULIAN,

TULIA, an inconsiderable village of Ireland, in the county of Clare; 102 miles west-south-west of Dublin castle.

TULIAN, a settlement of South America, in the province of Tucuman.

TU'LIP, *s.* [*tulipe*, French; *tulipa*, Latin.] A flower.—The *tulip* opens with the rising, and shuts with the setting sun. *Hakewill.*

TULIPA [from the resemblance of the flower to the eastern head-dress called *Tulipan* or *Turban*], in Botany, a genus of the class hexandria, order monogynia, natural order of coronariæ, lilia (*Juss.*)—Generic Character. Calyx none. Corolla bell-shaped. Petals six, ovate-oblong, concave, erect. Stamina: filaments six, awl-shaped, very short. Anthers quadrangular, oblong, erect, distant. Pistil: germ large, oblong, from three-cornered round. Style none. Stigma three-lobed, triangular; angles protuberant, bifid; permanent. Pericarp: capsule three-sided, three-celled three-valved; valves ciliate at the edge, ovate. Seeds numerous, flat, incumbent in a double row, semicircular, separated by similar florets.—*Essential Character.* Corolla six-petalled, bell-shaped. Style none.

1. *Tulipa sylvestris*, or yellow tulip.—Flower solitary, somewhat drooping; leaves lanceolate; stigma triangular, abrupt, slightly three-cleft; stamens hairy at the base; petals acute, hairy at the tip.—Native of Sweden, England, Bohemia, Germany, Switzerland, and France.

2. *Tulipa celsiana*, or small yellow tulip.—Flower mostly solitary, erect; leaves lanceolate; stigma triangular, with three short, rounded, downy lobes; stamens slightly hairy above their base; petals smooth at the tip.—Native of the south of Europe, and of the banks of the Wolga.

3. *Tulipa biflora*, or two-flowered yellow tulip.—Stem two or three-flowered, with two spreading lanceolate leaves; stigma triangular, abrupt, downy, scarcely notched; petals widely spreading, hairy, like the stamens, above their base; smooth at the tip.—Native of salt deserts about the river Wolga.

4. *Tulipa sibthorpiana*, or yellow Greek tulip.—Stem single-flowered, smooth; flower drooping; petals obtuse; stigma club-shaped; filaments hairy all over.—First observed by the late professor Sibthorpe, near the ancient Cressa, now Porto Cavalieri, in Asia Minor.

5. *Tulipa clausiana*, or red and white Italian tulip.—Stem single-flowered, smooth; flower erect; petals acute, smooth; leaves linear-lanceolate.—Native of Italy, Sicily, and Persia.

6. *Tulipa suaveolens*, or early dwarf tulip.—Stem single flowered, downy; flower erect; leaves ovate-lanceolate; downy above; petals and filaments smooth.—Supposed to be a native of the south of Europe.

7. *Tulipa oculis solis*—Stem single-flowered, smooth, as well as the petals and filaments; flower erect; leaves ovate-lanceolate, finely fringed.—Found about Agen, in France, and several places in the southern part of that kingdom.

8. *Tulipa gesneriana*, or common garden tulip.—Stem single-flowered, smooth, as well as the petals and filaments; flower erect; leaves ovate-lanceolate, glaucous, smooth; lobes of the stigma decurrent, deeply divided.—Native of the country bordering on mount Caucasus, where it flowers in April.

The several varieties of these early-blowing tulips rise to different heights in their stems, and scarcely any two of them are equal. The Duke Van Toll, which is one of the first that appears in the spring, is generally very short-stalked, and the others, in proportion to their earliness, are shorter than those which succeed them; and the late-blowers are all considerably longer in their stems than any of the early-blowers.

The late-blowing tulips producing much finer flowers than the early ones, have engrossed almost the whole attention of the florists: it would be to little purpose to enumerate all the varieties, since there is scarcely any end of their numbers; and what some value at a considerable rate, others reject; and as there are annually many new flowers obtained from seeds, those which are old, if they have not very good

properties to recommend them, are thrown out and despised. It is observed further, that modern florists in Holland and Flanders, and our English florists from them, boast a prodigious variety of late-blowing tulips. And that Mr. Maddock, of Walworth, so long ago as 1792, had no less than about six hundred and sixty-five of these admired beauties, all ranged under their proper families and colours, with their names and prices: besides the early sorts, double tulips, parrot-tulips, French tulips, and breeders. And moreover that the late-blowers are distributed into five families. 1. Primo baguets: very tall; fine cups, with white bottoms, well broken, with fine brown, and all from the same breeder. 2. Baguets rigauts: not quite so tall, but with strong stems, and very large well-formed cups with white bottoms, well broken with fine brown, and all from the same breeder. 3. Incomparable verports: a particular kind of Bybloemens; with most perfect cups, very fine white bottoms, well broken with shining brown, and all from the same breeder; some of these are from two to five guineas a root. 4. Bybloemens: with bottoms white, or nearly so, from different breeders, and broken with a variety of colours: those of the Verports are cherry and rose. 5. Bizarres: ground yellow, from different breeders, and broken with a variety of colours. These barbarous terms, used by the Dutch florists, are, it is said, a mixture of Dutch and French. Baguet is from the French *baguette*, a rod or wand, so named from its tall slender stem. Bizarre is also French, and the tulips of that family have the name from the variety and irregularity of their colours. Rigauts are probably from the name of some eminent florist, as Rigaud. The other terms are Dutch. Breeders are of one colour, and when broken produce new varieties, which are now almost endless.

The properties of a fine variegated late tulip, according to the best modern florists, are these: 1. The stem should be strong, upright, and tall; about thirty inches high. 2. The flower should be large, composed of six petals, proceeding a little horizontally at first, and then turning upwards, so as to form an almost perfect cup, with a round bottom, rather wider at the top. 3. The three outer petals should be rather larger than the three inner ones, and broader at their base: all the petals should have the edges perfectly entire; the top of each should be broad and well rounded; the ground colour at the bottom of the cup should be clear white or yellow, and the various rich stripes, which are the principal ornament of a fine flower, should be regular, bold, and distinct on the margin, and terminate in fine broken points, elegantly feathered or pencilled. 4. The centre of each petal should contain one or more bold blotches or stripes, intermixed with small portions of the original colour, abruptly broken into many irregular obtuse points. Some florists, it is said, are of opinion that the central stripes or blotches do not contribute to the beauty of the tulip, unless they are confined to a narrow stripe exactly down the centre; and that they should be perfectly free from any remains of the original colour: it is certain that such flowers appear very beautiful and delicate, especially when they have a regular narrow feathering at the edge: but it is unanimously agreed, that the tulip should abound in rich colouring, distributed in a distinct and regular manner throughout the flower, except in the bottom of the cup, which should indisputably be of a clear bright white or yellow, free from stain or tinge, in order to constitute a perfect flower.

The colours which are generally held in the greatest estimation in the variegated or striped sorts of tulips, are the blacks, the golden yellows, the purple violets, the rose and the vermillion, each of which being varied in different ways; but such as are striped with three different colours, in a distinct and unmixed manner, with strong regular streaks, with but little or no tinge at all of the breeder, are supposed the most perfect. However, though it is extremely difficult to meet with such as possess all these estimable properties of good flowers of this sort, yet many are found which have sufficient perfection to become of high value as fine flowers. The double and parrot tulips, are held

in no sort of esteem among florists. Among the first sort, however, there are many distinct varieties, in so far as regards the colouring of the flowers; as the yellow-flowered, the yellow and red-flowered, the white and red-striped, the white and blush-coloured, besides a great number of intermediate variegations. And in the latter, those with long hooked petals of flowers, consisting of yellow-flowered, red-flowered, red-striped, and other kinds.

The second species has the bulb ovate, and gibbous in the shape; the stem is quite simple, nearly upright, round, smooth, leafy in the middle, and attenuated at the base, with the flower always yellow in its colour, but a little greenish on the outside.

And it is further noticed, that it has most of these characters in common with the garden species; but the circumstances that abundantly distinguish this sort are, the narrow leaves, the nodding flower, the hairiness at the base of the stamens and on the tips of the petals, and especially the simple obtuse form of the stigma, which is totally different from that of the garden tulip: the flower too is fragrant; the pollen yellow, not black; and the anthers remarkably long. But in the *Flora Danica* they are represented as short and round.

As this sort of tulip is of much inferior beauty to those of the other and its several varieties, it is of course not nearly so much known and cultivated in flower-gardens, though it deserves a place among the other sorts of tulips and spring flowers, for the purpose of its early blowing, and increasing the variety.

Propagation and Culture.—All the different sorts of tulips may be increased by offsets from the roots, and by sowing seeds to produce new varieties. The offsets should be separated from the old roots every year in June, especially for the fine sorts. On taking them up when the flowering is over, plant them in nursery-beds, in rows six inches apart, and to the depth of three, four, or five in the beginning of autumn, to remain for one or two years, until they attain the flowering state, and are proper for being set out regularly. They may also in the old root be planted in beds, or in the borders or other parts where they are to remain and blow, in patches of four or five placed regularly; and to have a succession, they may be planted at different times; they are usually planted with a blunt dibble: the new roots should always be planted by themselves.

In this way the most approved sorts are propagated and continued always the same, and the stocks of any good varieties multiplied and increased as may be necessary and convenient to the growers of them.

When these flowers are blown, if the seasons should prove very warm, it will be proper to shade them with mats, &c. in the heat of the day; and when the nights are frosty, they should be covered in the same manner, by which means they may be preserved a long time in beauty; but when their flowers are decayed, and their seed-vessels begin to swell, they should be broken off just at the top of the stalks, as when they are permitted to seed, it injures the roots greatly.

In the early sorts, when the leaves are decayed, which is usually before the late-blowers are out of flower, their roots should be taken up, and spread upon mats in a shady place to dry; after which they should be cleared from filth, and put in a dry place where vermin cannot come to them, until the season for planting them again, being very careful to preserve every sort separate, that it may be known how to dispose of them at the time of planting.

For the main collection of flowers to blow in the spring and early summer, the most proper time of planting the roots or bulbs, is in the autumn, from the end of September to December; but to have a later bloom in succession, some may be planted out about the close of the year, and in the two beginning months of the new one. These last, however, will seldom grow so strong as those of the autumn planting.

The roots of the late sorts of tulips may be planted in

any common beds, or in the borders, as they are not much liable to be injured by bad weather. But those of the fine or more valuable sorts of the early as well as the late kinds, are in general, for the most part, disposed together, in beds by themselves, in order to exhibit a grand blow, and be defended in the manner which has been explained.

The double variety of the common tulip is very beautiful, though not held in such estimation by the florist as the common single variegated sorts, from their not possessing that profusion of variegations in their colours, or such a regularity of stripes. They, however, exhibit an elegant ornamental appearance in their upright, tallish, firm stems, and the crowns of large double flowers at the tops, formed somewhat as in those of the double pæony, but far more beautiful in their diversity of colours, variegations, and stripes of white and red, or yellow and red, &c. On these accounts they certainly deserve to be cultivated either alone in beds, at a little distance from the other sorts, for the sake of increasing the variety; or in patches about the borders, in assemblage with the common large variegated tulips, as blowing nearly about the same time in the later spring months.

They are all highly ornamental flowers, from their much varied and most beautiful colours; but those of the common garden sort, and its numberless varieties, are the most generally introduced, being admirable ornaments for beautifying the various flower-borders and other parts of gardens and pleasure-grounds during several weeks in the spring and summer seasons.

TULIPTREE, s. A tree.—It grows in North America, and was called *tulipifera*, because the shape of its flowers in some degree resemble a tulip. *Mason.*—The *tuliptree* that bears its flowers aloft. *Anonymous.*

TULL (Jethro), a distinguished agriculturist, was a descendant of a respectable family in Yorkshire, educated at one of the universities, and admitted a barrister of the Temple towards the commencement of the eighteenth century. Returning from the tour of Europe, in which his attention was particularly directed to agricultural subjects, he married, and settled upon a paternal farm in Oxfordshire, which gave him an opportunity of prosecuting a variety of experiments in husbandry. Upon his return from France and Italy, which he was under a necessity of visiting on account of his impaired health, and with a fortune also impaired, he took a farm near Hungerford, in Berkshire, where he pursued his plans for improved cultivation. His grand principle was, that labour and arrangement would supply the place of manure and fallowing, and raise more grain at a less expence. Tull, in 1731, printed "A specimen" of his system; and in 1733, "An Essay on Horse-hoeing Husbandry," folio, which was translated into French by Du Hamel. He pursued his system till his death, which happened in January, 1740. *Gen. Biog.*

TULLAGAN BAY, a bay on the west coast of Ireland, and county of Mayo, a little to the south-east of Black Sod bay.

TULLAMORE, a town of Ireland, in King's county, and nearly divided into two portions by a river of the same name. It is a neat, regular, well-built town; 46 miles west-south-west of Dublin.

TULLE, a considerable town in the south-west of France, the capital of the department of the Correze. It is the seat of the different branches of the departmental administration, and the see of a bishop; 42 miles south-east of Limoges. Lat. 43. 16. 3. N. long. 2. 54. 13. E.

TULLEDA, a small town of Prussian Saxony, in the government of Erfurt, near Kelbra. It is a place of some note in German history, having once had an imperial palace.

TULLIALLAN, a parish of Scotland, in Perthshire, of an irregular figure, about four miles long, and four broad, having a pretty level surface, gently declining towards the south, when the Forth forms its southern boundary. Population 3194.

TULLINS,

TULLINS, a small town in the south-east of France, department of the Isere, situated in a rich and beautiful country. Its inhabitants amount to nearly 4000. Singular petrifications are found in the neighbourhood; 14 miles north-east of St. Marcellin, and 15 north-west of Grenoble.

TULLIS CREEK, a river of the United States, in Virginia, which runs into the Potomac. Lat. 39. 33. N. long. 78. 2. W.

TULLOCH-ARD, a mountain of Scotland, in the south-west part of Ross-shire.

TULLOW, a town of Ireland, in the county of Carlow, pleasantly situated on the river Slaney, over which is erected a bridge consisting of six arches; 47½ miles south-south-west of Dublin, and 8 east-south-east of Carlow.

TULLUS HOSTILIUS, was elected king of Rome after the death of Numa, in the year B. C. 672. See **ROME**.

TULLY, a post township of the United States, in Onondaga county, New York; 14 miles south of Onondaga, and 50 south-west of Utica. Population 1092.

TULLYCLEA, a river of Ireland, in the county of Fermanagh, which runs into Lough Erne; 4 miles north of Enniskillen.

TULLYHOG, a small village of Ireland, in the county of Tyrone; 79 miles north-west of Dublin.

TULLY-NESSLE, a parish of Scotland, in Aberdeenshire, about 4 miles long and 2½ broad, lying on the north bank of the Don. Population 362.

TULM, a small isle of the Hebrides, on the north coast of the isle of Skye.

TULMERO, a small town of the Caraccas, in the province of Venezuela, situated in the valleys of Arogoa; 2 leagues from Maracay. Population 8000.

TULN, a small town of Lower Austria; 14 miles west-north-west of Vienna. It stands near a river of the same name, and has 1500 inhabitants.

TULPEHOCKEN, a township of the United States, in Berks county, Pennsylvania, on the north side of the Tulpehocken.

TULPEHOCKEN, a river of the United States, in Pennsylvania, which runs east into the Schuylkill, just above Reading. It rises near the sources of the Quitipihilla, a branch of the Swatara.

TULSK, once a place of considerable importance in Ireland, to which the promiscuous and indiscriminate ruins of towers, castles, forts, and churches, bear ample testimony. Before the union with Britain it sent two members to the Irish parliament; 9 miles north of Roscommon, and 11 south-south-west of Carrick.

TULTEPEC, a settlement of Mexico, in the intendency of Mexico, containing 378 Indian families.

TULTITLAN, a settlement of Mexico, in the intendency of Mexico, containing 332 Indian families.

TULULUI, a river of Quito, in the province of Esmeraldas, which runs to the west, and enters by the north into the river Bogota, in lat. 58. N.

TULUMBA, a river of South America, in the province of Tucuman.

TULUN, a village of Asiatic Russia, in the government of Irkoutsk, on the Ija; 44 miles east of Niznei-Udinsk.

TULWUNDY, a town of Hindostan; province of Lahore. This place is celebrated for having been the birth-place of Baba Nanoc Shah, the founder of the religion of the Seiks. Lat. 31. 15. N. long. 75. E.

TUMACO, an island in the Pacific ocean, lying off the coast of the province of Esmeraldas, and kingdom of Quito. It is 2 miles long from south-east to north-west, and 1 broad. It has a snug commodious port. It is also called Gorgonilla. Lat. 1. 46. N. long. 78. 43. W.

TUMBADO, a small island among the Bahamas. Lat. 26. 24. N. long. 79. 30. W.

TUMBAVIRO, a settlement of Quito, in the province of Ibarra. Lat. 0. 26. N.

TUMBELAN ISLANDS, a cluster of small islands in the Eastern seas. Lat. 1. N. long. 107. 58. E.

TUMBEZ, a town of Peru, in the province of Piura, situated on the Rio Tumbéz. According to some, Tumbéz is included within the limits of Quito, and province of Guayaquil; 280 miles north of Truxillo, and 186 north of Piura. Lat. 3. 6. S. long. 80. 6. W.

TUMBEZ, an abundant river of the same province and kingdom. It rises in the mountains of the Andes, and empties itself in the gulf of Guayaquil in the South Sea, opposite the island of Santa Clara, or Amortajado.

TUMBIA, a settlement of South America, in the new kingdom of Granada, and province of Pasca; 24 leagues from Santa Fe.

TUMBLING DAM, a place in the United States, in the river Delaware; 20 miles above Trenton.

TUMBA, DE CRELLUDOS, a river of New Granada, in the province of San Juan de los Llanos, which runs east, and falls into the Orinoco.

To **TUMBLE**, *v. n.* [*tomber*, French; *tommelen*, Dutch; *tombolare*, Italian; *tumbian*, Saxon; *tumla*, Swedish; *tummeln*, German.] To fall; to come suddenly and violently to the ground.

Though the treasure
Of nature's germins *tumble* all together,
Answer me.

Shakspeare.

To fall in great quantities tumultuously.—When riches come by the course of inheritance and testaments, they come *tumbling* upon a man. *Bacon*.—To roll about.—I saw at the bottom of one tree a gentleman bound with many garters hand and foot, so as well as he might *tumble* and toss. *Sidney*.—To play tricks by various librations of the body.

Reform our sense, and teach the men t' obey;
They'll leave their *tumbling*, if you lead the way. *Rowe*.

To **TUMBLE**, *v. a.* To turn over; to throw about by way of examination.—When it came to the ears of Maximilian, and *tumbling* it over and over in his thoughts, that he should at one blow be defeated of the marriage of his daughter and his own, he lost all patience. *Bacon*.—To throw by chance or violence.—The mind often sets itself on work in search of some hidden ideas; though sometimes they are roused and *tumbled* out of their dark cells into open day-light by some turbulent passions. *Locke*.—To throw down.

Wilt thou still be hammering treachery,
To *tumble* down thy husband and thyself,
From top of honour to disgrace's feet? *Shakspeare.*

TUMBLE, *s.* A fall.—A country-fellow got an unlucky *tumble* from a tree: why, says a passenger, I could have taught you a way to climb, and never hurt yourself with a fall. *L'Estrange*.

TUMBLER, *s.* One who shews postures by various contortions of body, or feats of activity.

Never by *tumbler* thro' the hoops was shown,
Such skill in passing all, and touching none. *Pope*.

A large drinking glass.—A particular species of pigeon.—A sort of dog.—The *tumbler* and lurcher ought to be reckoned by themselves. *Swan*.

TUMBREL, *s.* [*tumerel*, old Fr., *tombereau*, modern.] A dungcart.

Twifallow once ended, get *tumbrel* and man,
And compass that fallow as soon as ye can. *Tusser*.

TUMBUK, a place of Cordofan, in Africa; 108 miles south-west of Sennaar.

TUMBY, a parish of England, in Lincolnshire; 7 miles south-by-west of Horncastle.

TUMCURU, a town of the south of India, province of Mysore. It is a place of some consequence, and is defended by a good fort. The town is also surrounded by a mud wall. Lat. 13. 15. N. long. 77. 12. E.

TUMEFACATION, *s.* [*tumefactio*, Lat.] Swelling.—The common signs and effects of weak fibres, are paleness, a weak pulse, *tumefactions* in the whole body. *Arbuthnot*.

To

To **TU'MEFY**, *v. a.* [*tumefacio*, Lat.] To swell; to make to swell.—A fleshy excrescence, exceeding hard and *tumefied*, supposed to demand extirpation. *Sharp*.

TUMEN, a small town of Ghilan, in Persia; 18 miles west of Reshd.

TUMENE, a district of Tobolsk, in Asiatic Russia, with a capital of the same name, situated on the southern bank of the Tura, at its confluence with the Tumenka. It was the first town built by the Russians in Siberia. Lat. 57. N. long. 100. 14. E.

TUMID, *adj.* [*tumidus*, Lat.] Swelling; puffed up. Protuberant; raised above the level.

So high as heav'd the *tumid* hills, so low
Down sunk a hollow bottom broad and deep,
Capacious bed of waters.

Milton.

Pompous; boastful; puffy; falsely sublime.—Though such expressions may seem *tumid* and aspiring; yet cannot I scruple to use seeming hyperboles in mentioning felicities, which make the highest hyperboles but seeming ones. *Boyle*.

TUMIRIQUIRI, a mountain of the Caraccas, in the province of Cumana, near Cumanacoa. Here an enormous wall of rock rises out of the forest, and is joined on the west by the Cerro de Cuchivano, where the chain is broken by an enormous ravine more than 900 feet in width, filled with trees, whose branches are completely interlaced with each other. The Rio Juagua traverses this crevice, which is the abode of the jaguar, or American tiger, of a very formidable size, being six feet in length. They carry off the horses and cattle in the night from the neighbouring farms, and are as much dreaded as the most ferocious of the feline race are in the East Indies. Two immense caverns open into this precipice, from which flames occasionally rush out that may be seen in the night at a great distance.

The round summit of the Tumiriquiri is covered with turf, and is elevated more than 4400 feet above the ocean. This elevation gradually diminishes towards the west by a ridge of steep rocks, and is interrupted at the distance of a mile by an immense crevice, which descends towards the gulf of Cariaco. Beyond this two enormous peaks arise, the northernmost of which, named the Cucurucho of Tumiriquiri, is more than 6500 feet in height, surpassing that of the Brigantín, with which it is connected.

TUMLOOK, a town of Bengal, situated on the south-west of Roopnarain river. Lat. 22. 17. N. long. 88. 2. E.

TUMMEL, a large river of Scotland, in Perthshire, which issues from Loch Rannoch, and, taking an easterly course through the district of Athol, falls into the Tay at Logierait. About the middle of its course it expands into a lake of the same name, in which is a small island, partly artificial, with an old fortress or castle, formerly the residence of the chief of the Robertsons.

TUMOROUS, *adj.* Swelling; protuberant.—Who ever saw any cypress or pine, small below and above, and *tumorous* in the middle, unless some diseased plant. *Wotton*.—Fastuous; vainly pompous; falsely magnificent.—According to their subjects these stiles vary; for that which is high and lofty, declaring excellent matter, becomes vast and *tumorous*, speaking of petty and inferior things. *B. Jonson*.

TUMOUR, *s.* [*tumor*, Lat.] A morbid swelling.—Having dissected this swelling vice, and seen what it is that feeds the *tumour*, if the disease be founded in pride, the abating that is the most natural remedy. *Gov. of the Tongue*.—A swell or rise of water.

One *tumour* drown'd another, billows strove
To outswell ambition, water air outdrove.

B. Jonson.

Affected pomp; false magnificence; puffy grandeur; swelling mien; unsubstantial greatness.—His stile was rich of phrase, but seldom in bold metaphors; and so far from the *tumour*, that it rather wants a little elevation. *Wotton*.

—See **SURGERY**.

TUMOURED, *adj.* Distended; swollen; puffed up.—You shall see a man look like the four winds in painting, as if he would blow away the enemy; and yet, at the very first

onset, suffer fear and trembling to dress themselves in his face apparently! And commonly where is least heart, there is most tongue. And lightly if we note such an one, he seldom unbuttons his *tumoured* breast, but when he finds none to oppose the bigness of his looks and tongue. *Junius*.

TUMP, *s.* [perhaps a corruption of *umbo*, Latin.] The knoll of a hill. *Ainsworth*.

To **TUMP**, *v. a.* Among gardeners, to fence trees about with earth.

To **TUMULATE**, *v. n.* [*tumulo*, Latin.] To swell. Urinous spirits, or volatile alkalies, are such enemies to acid, that as soon as they are put together, they *tumulate* and grow hot, and continue to fight till they have disarmed or mortified each other. *Boyle*.

TUMULOSE, *adj.* [*tumulosus*, Latin.] Full of hills. *Bailey*.

TUMULO'SITY, *s.* [*tumulus*, Lat.] Hilliness. *Bailey*.

TUMULT, [*tumulte*, Fr.; *tumultus*, Lat.] A promiscuous commotion in a multitude.

With ireful taunts each other they oppose,

Till in loud *tumult* all the Greeks arose.

Pope.

A multitude put into wild commotion.—A stir; an irregular violence; a wild commotion.

What stir is this? what *tumults* in the heavens?

Whence cometh this alarum and this noise? *Shakspeare.*

To **TUMULT**, *v. n.* To make a tumult; to be in wild commotion.

Why do the Gentiles *tumult*, and the nations

Muse a vain thing.

Milton.

TUMULTER, *s.* One who makes a tumult; a rioter.—The governor found it a work so difficult to appease them, that once in a mutiny he was left for dead among many slain; and though afterwards he severely punished the *tumulters*, was fain at length to seek a dismissal from his charge. *Milton*.

TUMULTUARILY, *adv.* In a tumultuary manner.—Divers thousands of the Jews *tumultuarily* resisted. *Sandys*.

TUMULTUARINESS, *s.* Turbulence; inclination or disposition to tumults or commotions.—The *tumultuariness* of the people, or the factiousness of presbyters, gave occasion to invent new models. *King Charles*.

TUMULTUARY, *adj.* [*tumultuaire*, Fr.] Disorderly; promiscuous; confused.—Perkin had learned, that people under command used to consult, and after to march in order, and rebels contrariwise; and observing their orderly, and not *tumultuary* arming, doubted the worst. *Bacon*.—Restless; put into irregular commotion.—Men who live without religion; live always in a *tumultuary* and restless state. *Atterbury*.

To **TUMULTUATE**, *v. n.* [*tumultuor*, Lat.] To make a tumult; to rage.—Like an opposed torrent, it *tumultuates*, grows higher and higher. *South*.

TUMULTUATION, *s.* Irregular and confused agitation.—That in the sound the contiguous air receives many strokes from the particles of the liquor, seems probable by the sudden and eager *tumultuation* of its parts. *Boyle*.

TUMULTUOUS, *adj.* [*tumultueux*, Fr.] Violently carried on by disorderly multitudes.—Many civil broils, and *tumultuous* rebellions, they fairly overcame by reason of the continual presence of their king, whose only person oftentimes contains the unruly people from a thousand evil occasions. *Spenser*.—Put into violent commotion; irregularly and confusedly agitated.

His dire attempt; which nigh the birth
Now rolling, boils in his *tumultuous* breast,
And like a devilish engine back recoils
Upon himself.

Milton.

Turbulent; violent.

Nought rests for me in this *tumultuous* strife,
But to make open proclamation.

Shakspeare.

Full

Full of tumults.—The winds began to speak louder, and as in a *tumultuous* kingdom, to think themselves fittest instruments of commandment. *Sidney.*

TUMULTUOUSLY, *adv.* By act of the multitude; with confusion and violence.—It was done by edict, not *tumultuously*; the sword was not put into the people's hand. *Bacon.*

TUMULTUOUSNESS, *s.* State of being tumultuous.—Keep down this boiling and *tumultuousness* of the soul. *Hammond.*

TUN, *s.* [tunne, Saxon; tonne, Dutch; tonne, tonneau, Fr. *Dr. Johnson.*—It is the past participle of the Sax. *tynan*, to inclose; though now usually applied to an *inclosure* for fluids.] A large cask.

As when a spark
Lights on a heap of powder, laid
Fit for the *tun*, some magazine to store
Against a rumour'd war.

Milton.

The measure of four hogsheads.—Any large quantity proverbially.

I have ever follow'd thee with hate,
Drawn *tuns* of blood out of thy country's breast.

Shakspeare.

A drunkard: *in burlesque.*

Here's a *tun* of midnight-work to come,
Og from a treason-tavern rolling home.

Dryden.

The weight of two thousand pounds. A cubic space in a ship, supposed to contain a *tun*.—So fenced about with rocks and lets, that without knowledge of the passages, a boat of ten *tuns* cannot be brought into the haven. *Heylin.*—Dryden has used it for a perimetrical measure, without precedent or propriety.

A *tun* about was every pillar there;
A polish'd mirrour shou'd not half so clear.

Dryden.

To TUN, *v. a.* To put into casks; to barrel.—If in the must or wort, while it worketh, before it be *tunned*, the burage stay a time, and be often changed with fresh, it will make a sovereign drink for melancholy. *Bacon.*

TUNA, a small island of Lower Egypt, in the Lake Menzaleh; 8 miles south-east of Tennis.

TUNA, a harbour on the eastern coast of Egypt, upon the Red sea. It affords good shelter against the north-west winds, but is much narrowed by shoals and rocks; 52 miles south-south-east of Cosseir.

TUNA, a small river of Brazil, in the province of Pernambuco, which runs east, and falls into the sea between the rivers Ilheos and Piratuninga.

TUNABLE, *adj.* Harmonious; musical.

A cry more *tunable*

Was never halloo'd to, nor cheer'd with horn. *Shakspeare.*

TUNABLENESS, *s.* Harmony; melodiousness.

TUNABLY, *adv.* Harmoniously; melodiously.

He cannot wel fly,
Nor syng *tunably*.

Skelton.

TUNBRIDGE, a market town of England, in the county of Kent, situated on the river Tun, which forms one of the five branches into which the Medway here divides itself, and over each of which there is a stone bridge. The town consists chiefly of one long and wide street, which is kept very clean, though ill paved, and the houses indifferently built. Tunbridge contains 964 houses, and 5932 inhabitants. Market on Friday, and one on the first Tuesday of every month for live cattle; 14 miles south-south-west of Maidstone, and 30 east by-south of London.

TUNBRIDGE, a post township of the United States, in Orange county, Vermont; 32 miles south of Montpelier. Population 1640.

TUNBRIDGE WELLS, a town of England, in the county of Kent, or rather the appellation given to a series of scattered villages or dwellings within five or six miles from the town of Tunbridge, immediately bordering on Sussex, and which owe their origin and importance to the

Vol. XXIV. No. 1633.

celebrated mineral waters in the vicinity. They are situated in the parishes of Tunbridge, Frant, and Speldhurst, and consist of four divisions; Mount Ephraim, Mount Pleasant, Mount Sion, and the Wells properly so called. The air of this district is very pure and salubrious, and aids powerfully the medicinal qualities of the waters. The general appearance of the country is inviting, and the aspect of the villages is picturesque, appearing like a large town in a wood, interspersed with rich meadows, and inclosing a large common, in which are walks, rides, handsome rows of trees, and other objects of variety. The village is nearly two miles in length by one in breadth, and of late years the buildings have been rapidly increasing, many persons of rank and respectability having houses here for occasional or constant residence. The component parts of the water are steele particles, marine salts, and oily matter, an ochreous substance, a volatile vitriolic spirit, too subtle for analysis, and a simple fluid. The waters are considered to be of great use in removing complaints arising from sedentary occupations, weak digestion, and nervous and chronic disorders. The rides in the neighbourhood of the wells include a variety of interesting and picturesque scenes. The high rocks, about a mile and a half south-westward of the wells, on the Sussex side, are much celebrated, and certainly form a very striking and romantic picture. The trade of Tunbridge Wells is similar to that of the Spa in Germany, and consists chiefly in the manufacture of a variety of toys in wood of different kinds. The goods manufactured are well known by the name of Tunbridge ware, and consist of tea-chests, dressing-boxes of different kinds, children's toys, punch-ladles, snuff-boxes, and other articles.

TUNDERGARTH, a parish of Scotland, in Dumfriesshire, in the district of Annandale, about 14 miles in length, and 1½ in breadth. Population 522.

TUN-DISH, *s.* A tunnel.—Filling a bottle with a *tun-dish*. *Shakspeare.*

TUNE, *s.* [toon, Dut.; tou, Swed.; tuono, Ital.; tone, Fr.; tons, Lat.] A diversity of notes put together. *Locke.*—*Tunes* and airs have in themselves some affinity with the affections; as merry *tunes*, doleful *tunes*, solemn *tunes*, *tunes* inclining men's minds to pity, warlike *tunes*, so that *tunes* have a predisposition to the motion of the spirits. *Bacon.*—Sound; note.

Such a noise arose

As the shrouds make at sea in a stiff tempest,

As loud, and to as many *tunes*.

Shakspeare.

Harmony; order; concert of parts.—A continual parliament I thought would but keep the commonweal in *tune*, by preserving laws in their due execution and vigour. *King Charles.*—State of giving the due sounds; as, the fiddle is in *tune*, or out of *tune*. Proper state for use or application; right disposition; fit temper; proper humour.—A child will learn three times as much when he is in *tune*, as he will with double the time and pains, when he goes awkwardly, or is dragged unwillingly to it. *Locke.*—State of any thing with respect to order.—Distressed Lear, in his better *tune*, remembers what we are come about. *Shakspeare.*

To TUNE, *v. a.* To put into such a state, as that the proper sounds may be produced.

Tune your harps,

Ye angels, to that sound; and thou, my heart,
Make room to entertain thy flowing joy.

Dryden.

To sing harmoniously.

Fountains, and ye that warble as ye flow,
Melodious murmurs, warbling *tune* his praise.

Milton.

To put into order, so as to produce the proper effect.—Especially he hath incurred the everlasting displeasure of the king, who had even *tuned* his bounty to sing happiness to him. *Shakspeare.*

To TUNE, *v. n.* To form one sound to another.

The winds were hush'd, no leaf so small
At all was seen to stir;

Whilst *tuning* to the waters fall,
The small birds sang to her.

Drayton.
To

To utter with the voice inarticulate harmony.

TU'NEFUL, *adj.* Musical; harmonious.

Poets themselves must fall, like those they sung,
Deaf the prais'd ear, and mute the *tuneful* tongue. *Pope.*

TU'NELESS, *adj.* Unharmonious; unmusical.

When in hand my *tuneless* harp I take,
Then do I more augment my foes despight. *Spenser.*

TU'NER, *s.* One who tunes.—The pox of such antic, hisping, affected phantasies, these new *tuners* of accents. *Shakspeare.*

TUNGURAGUA, a very high mountain of Quito, in the province of Riobamba, of a conical figure, regularly sloped on all sides, and rising far above the line of perpetual snows. It is volcanic, and often bursts forth into the most violent eruptions, by one of which the town of Riobamba was destroyed. The lower parts of the mountain are covered with a thick wood. Some hot springs gush out through crevices in its sides, which has caused warm baths to be erected for the accommodation of invalids. Tunguragua is 16,500 feet above the level of the sea; 7 leagues north of Riobamba. Lat. 1. 29. S.

TUNGURAGUA, a large river of South America, which has its rise in Peru, in the province of Tarma, in the lake Lauricocha, near the city of Guanuco, in lat. 11. south, and flows through Peru to Bracamoros, where, passing by Jaen, it turns to the east, and pours itself, after intersecting the Andes at the Pongo de Manseriche, into the Amazons by an immense mouth, below the village of St. Regis.

TUNGUSES, a wandering native race of Asiatic Russia, who cover nearly the whole south-eastern portion of that vast territory. They are first found on the banks of the Yenisei, whence they extend all the way eastward to the sea of Okhotsk. The Tunguses are of middle size, of a robust constitution, and endowed with the greatest agility. They have small eyes, a smiling physiognomy, and long black hair, which they allow to hang freely over their shoulders. They employ themselves solely in hunting and fishing. They have no permanent abodes, but range through the woods and along the rivers, seldom remaining more than six days at a time in one spot. Their tents are formed of a few spars, put together in a conical shape, and covered with skins, or with willow bark, which, after being exposed for some time to the vapour of boiling water, becomes equally flexible. In pursuing their occupation of hunting, they distinguish themselves by bravery and activity. Their arms are bows and arrows, with which they will attack the fiercest animals. The delicacy of their sight and smell on such occasions is almost incredible. In winter they use light wooden shoes, five feet long, with which they are able to walk over the deepest snow without sinking. The most valuable of the animals which they pursue is the sable, whose fur is so delicate as to be spoiled by the least wound or hurt. They pursue it therefore till the animal is driven to seek shelter at the top of a tree, when the hunter spreads his nets at the foot, and kindles a fire, the smoke of which cannot be endured by the sable, who drops down and is caught. The Tunguses clothe themselves with the skins of rein-deer and wild sheep, having the hair or wool turned inward during winter; in summer they wear the same skins tanned, ornamented with beads and glass. The moral character of the Tunguses is the subject of considerable praise. They are a brave, honest people, frank, open, and sincere. They hold lying in detestation, and refuse to make an oath, thinking that their word ought to be sufficient. Theft and fraud are unknown among them.

TUNGUSKA, the name of three large rivers of Asiatic Russia, all tributaries to the Yenesei. The first, called the Lower Tunguska, is the most northerly of the three, and has the longest course. It rises in the northern part of the government of Irkoutsk, and falls into the Yenisei, near Turuchansk. Its entire course cannot be estimated at less than 1000 miles.

The Middle Tunguska rises also in the district of Irkoutsk,

and after a course of between five and six hundred miles, falls into the Yenesei, in lat. 62. N.

The Upper Tunguska rolls a greater mass of water than either of the above streams, and might even rival the Lower Tunguska in length of course, if counted from the commencement of its stream. It bursts from the northern part of the lake or sea of Baikal, through a broken and rocky channel. It bears the name of Angara in all the first part of its course, and till after being joined by the Ilim, when it receives the name of Tunguska. It then flows westward, and joins the Yenisei, in lat. 59. N.

TU'NIC, *s.* [tuneece, Sax.; *tunique*, Fr.; *tunica*, Lat.] Part of the Roman dress.—The *tunics* of the Romans, which answer to our waistcoats, were without ornaments, and with very short sleeves. *Arbutnot*.—Natural covering; integument; tunicle.—The dropsy of the *tunica vaginalis* is owing to a preternatural discharge of that water continually separating on the internal surface of the *tunic*. *Sharp.*

TU'NICLE, *s.* Natural cover; integument.—One single grain of wheat, barley, or rye, shall contain four or five distinct plants under one common *tunicle*; a very convincing argument of the providence of God. *Bentley*.—Formerly a kind of cope worn by the officiating clergy. *Obsolete*.—*Tunicles* Durand describes to have been a silk sky-coloured coat made in the shape of a cope. *Wheatly*.

TU'NING, *s.* Act of singing or playing in concert; act or method of putting into tune.

All organs of sweet stop,
All sounds on fret by string or golden wire
Temper'd soft *tinings*. *Milton.*

TUNIS, a considerable territory of Northern Africa, forming one of the most powerful of the Barbary states. It consists chiefly of a large peninsula, stretching into the Mediterranean in a north-easterly direction, and coming within less than a hundred miles of the coast of Sicily. Beginning at Cape Jerbi, the frontier point of Tripoli, the coast extends northerly with a slight declination to the east; but after turning Cape Bon, its general direction is easterly, with a slight declination to the south. It terminates at Cape Roux, in lat. 37. N. and the whole extent is about 500 miles. The cultivated part reaches from 200 to 250 miles into the interior, till it terminates with the chain of Atlas, and the vast dry plains of the Bled el Jereede. There are few countries more highly favoured as to natural beauty and fertility. It is watered by the noble river Mejerdah, celebrated by the ancients under the name of *Bagrada*, and which contains on its banks many towns and large villages, with from 5000 to 15,000 inhabitants. The inhabitants are almost exclusively governed by chiefs of their own, the Tunisians merely sending once a year a flying column, to collect the tribute, rather in the form of military exaction, than of voluntary gift. The mountains near Tunis contain mines of silver, copper, and lead; and there is one of quicksilver near Porto Tarina; but these sources of national wealth are not turned to any account. It was governed for some time by its viceroys, called deys; but the people, or rather the soldiery, soon acquired the privilege of electing their own dey; and that officer may now be considered entirely independent of the Porte. The chief danger of the Tunisian state arises at present from the Algerines, who, in the course of the last century, have wrested from it the fine province of Constatina, and aim at subduing the whole kingdom.

TUNIS, a large city of Barbary, capital of the territory of the same name. It is situated at the bottom of a bay, about ten miles south-west from the site of the ancient Carthage, of which it may properly be considered as the successor. The city is large, being supposed to contain 12,000 houses, and 130,000 inhabitants. The intercourse between Britain and Tunis is very small, and is mostly carried on by way of Leghorn. France, however, when the intercourse is open, has obtained a preference in the Tunisian trade, though it must often secure the sale of its manufactures by giving them the name of *Londres*. The best time to send a cargo to Tunis, especially of woollens, is in September

September or October, when the inhabitants begin to lay in their winter stock. Provisions, particularly beef and flour, may be had good and in great plenty. Lat. 36. 44. N. long. 10. 20. E.

TUNIS, BAY OF, a large bay of the Mediterranean, comprehending a coast of 120 miles, in the most interior part of which is the city of Tunis.

TUNJA, a town of New Granada, and capital of a district of the same name, in the province of Santa Fé. It was enlarged into a town by the Spaniards in 1539, and was formerly a very opulent place; 60 miles north-east of Santa Fé. Lat. 5. 5. N. long. 72. 56. W.

TUNKAT, or **TONCAT**, a city of Independent Tartary, situated near the banks of the Sirr or Jaxartes; 250 miles north-east of Samarcand.

TUNKHANNOCK, a post township of the United States, in Luzerne county, Pennsylvania. Population 884.

TUNKHANNOCK CREEK, a river of the United States, in Pennsylvania, which runs south-west into the east branch of the Susquehanna, about 35 miles above Wilkesbarre

TUNLEY, a hamlet of England, in the parish of Bisley, Gloucestershire.

TUNNAGE, *s.* Content of a vessel measured by the tun.—The consideration of the riches of the ancients leads to that of their trade, and to inquire into the bulk and *tunnage* of their shipping. *Arbuthnot*.—Tax laid by a tun; as, to levy *tunnage* and *pourage*.

TUNNEL, *s.* [tænel, Saxon.] The shaft of a chimney; the passage for the smoke.—The water being rarefied, and by rarefaction resolved in to wind, will force up the smoke, which otherwise might linger in the *tunnel*, and oftentimes reverse. *Wotton*.—A funnel; a pipe by which liquor is poured into vessels.—For the help of the hearing, make an instrument like a *tunnel*, the narrow part of the bigness of the hole of the ear, and the broader end much larger. *Bacon*.—A net wide at the mouth, and ending in a point, and so resembling a funnel or tunnel; an arch made under ground.

To TUNNEL, *v. a.* To form like a tunnel.—The Phalænæ tribe inhabit the *tunnelled*, convolved leaves. *Derham*.—To catch in a net.—This word is used by Derham for to make network; to reticulate.—Some birds not only weave the fibrous parts of vegetables, and curiously *tunnel* them into nests, but artificially suspend them on the twigs of trees. *Derham*.

TUNNUDTIORBIK, an island near the coast of East Greenland. Lat. 60. 45. N. long. 46. 50. W.

TUNNY, *s.* [*tonnen*, Ital.; *thygnus*, Lat.] A sea-fish.—Some fish are boiled and preserved fresh in vinegar, as *tunny* and *turbot*. *Carèw*.

TUNQUIN, or **TONQUIN**, a large kingdom of Eastern Asia, bordering on the Chinese provinces of Quangsee and Yunan, and separating that empire from Cochinchina and Cambodia. It surrounds a large gulf of the Chinese sea, at the mouth of which is the island of Hainan. The frontier to the north and west consists of mountains of considerable height; the breezes from which, and from the sea, preserve always a tolerable degree of coolness. The central part of the country consists of a vast alluvial plain, traversed by numerous rivers, chiefly tributaries to the great one called Saigong, which flows through the whole breadth of Tunquin, and on which all the principal towns are situated. The usual tropical fruits abound—mangoes, lemons, coconuts, bananas; and the orange of Tunquin is said to be the best in the world. The tea tree is almost as common as in China, but not being tended with the same care, does not afford the commodity of equal quality. The areca, the betel, the indigo, the sugar cane, also grow in the fertile plains. The woods contain a variety of valuable timber. Neither the sheep nor the ass are known in Tunquin; the principal domestic animals being the ox, the buffalo, the hog, with abundance of poultry. A valuable species of honey is said to be produced by the wild bees.

Tunquin formed originally a portion of China, from which empire it was detached in 1368.

The capital of Tunquin having the name of the kingdom,

and called also Cachao or Kescho, is situated on the western bank of the great river, about 80 miles above its junction with the sea. It is said by one traveller to be equal in extent to Paris, and by another to contain only 40,000 inhabitants.

TUNSTALL, a hamlet of England, in Lancashire; 3 miles south of Kirkby Lonsdale.—2. A township in Durham; 3 miles south-west-by-south of Sunderland.—3. A parish in Kent; 2½ miles south-west-by-west of Sittingbourne.—4. A parish in Norfolk; 2½ miles south-south-east of Acle.—5. A hamlet in the parish of Drayton in Hales, Salop.—6. A parish in the East Riding of Yorkshire; 14 miles east-by-north of Kingston-upon-Hull.—7. A township in the North Riding of Yorkshire; 2½ miles south-west of Catterick.—8. A parish in Suffolk; 4 miles east-by-south of Market Wickham.

TUNSTEAD, a parish of England, in Norfolk; 3 miles north-east-by-east of Coltishall. Population 454.

TUNUYAN, a large and abundant river of Chili, in the province of Maule, which runs north-east for more than 60 leagues, when it loses itself in a lake.

TUNWORTH, a parish of England, in Southamptonshire; 3½ miles south-east of Basingstoke.

TUOTONE, a small river of Dutch Guiana, which enters the Cuyuni.

TUP, *s.* [Derivation unknown.] A ram.—This word is yet used in Staffordshire, and in other provinces.

To TUP, *v. n.* To but like a ram.

To TUP, *v. a.* To cover as a ram.

TUPARRO, a river of New Granada, in the province of San Juan de los Llanos, which runs east, and falls into the Orinoco.

TUPHOLME, a parish of England, in Lincolnshire; 6 miles west-by-south of Horncastle.

TUPINAMBES, or **TOPINAMBOS**, a barbarous nation of Indians of the kingdom of Brazil, in the province and captainship of Para.

TUPOZA, a river of South America, in the province of Darien, which runs nearly due west, and falls into the Chucunaqui.

TUPPEL, a town of Hindostan, province of Delhi, situated on the east side of the river Jumna. Lat. 28. 25. N. long. 77. 30. E.

TUPPENDEN, a hamlet of England, in the parishes of Orpington and Farnborough, Kent.

TUPSLEY, a township of England, in Herefordshire; 2 miles east-south-east of Hereford.

TUPTON, a township of England, in Derbyshire; 4 miles south of Chesterfield.

TUPUNGATO, a mountain of Chili, said to be 20,000 feet above the level of the sea. Lat. 33. 24. S.

TUQUAQUE ISLANDS, some small islands on the coast of South America, and province of Venezuela. They form a small chain from Point Seca to Point Cabello. Lat. 10. 15. to 10. 35. N. long. 68. 40. W.

TUQUARES, a river of Buenos Ayres, which runs west, and enters the Parana.

TUQUEQUE, a large and abundant arm of the river Apure, in the Caracas, from which it communicates with the Portuguesa.

TUR, a small town in the east of Hungary; 24 miles east of Szolnok.

TURA, or **O TURA**, a small town in the north-west of Hungary, on the Waag, inhabited by Slovacs; 23 miles north-by-west of Leopoldstadt.

TURA, a considerable river of Asiatic Russia, which rises in the district of Verchoturria, among the Ourals, and falls into the Tobol. It is navigable.

TURA, a small river of Irkoutsk, in Asiatic Russia, which rises in the district of Nertschinsk, and falls into the Ingoda.

TURANY, a market town of the north-west of Hungary, on the Waag; 26 miles north-north-west of Neusohl.

TURATIE, a town of the island of Celebes, and capital of a powerful kingdom; 180 miles north of Macassar.

TURBACO, an Indian village of South America, in the kingdom

kingdom of New Granada, and province of Carthagena. Here and there limpid springs rise out of a calcareous rock, which contains numerous fragments of petrified coral, and are shaded by the splendid foliage of the anacardium caracoli, a tree of colossal size, to which the natives attribute the property of attracting from great distances the vapours floating in the atmosphere. As the soil of Turbaco is more than 300 metres above the level of the ocean, a delightful coolness prevails, especially during the night. In order to avoid the excessive heats and diseases which prevail during the summer at Carthagena, and on the coast, it is the practice for those Europeans who are not seasoned to the climate, to retire inland to Turbaco.

TURBAH, a town of Hindostan, province of Bahar, district of Chuta Nagpore. Lat. 22. 32. N. long. 85. 5. E.

TURBAN, TURBAND, TURBANT, *s.* [Turkish, *dulbant* or *tulbant*; hence the old Engl. *tulibant*, and *tulipant*, the former in Puttenham's Art of Poesie, the latter repeatedly in Sir T. Herbert's Travels.] The cover worn by the Turks on their heads.

Gates of monarchs

Arch'd are so high, that giants may jet through,
And keep their impious *turbands* on, without
Good-morrow to the sun.

Shakspeare.

His hat was in the form of a *turban*, not so huge as the Turkish *turbans*. *Bacon.*

In Eastern nations, making up turbans constitutes a particular trade, as the making of hats does among us.

The emirs, who pretend to be descended of the race of Mahomet, wear their turbans green: those of the other Turks are ordinarily red, with a white sash. The genteel people have frequent changes of turbans. M. de Tournefort observes, that the turban, all things considered, is a very commodious dress; and that he even found it more easy to him than his French habit.

The grand seignor's turban is as big as a bushel, and is so exceedingly respected by the Turks, that they dare scarcely touch it. It is adorned with three plumes of feathers enriched with diamonds and precious stones: he has a minister on purpose to look to it, called *tulbentoglan*.

That of the grand vizier has two plumes; so have those of divers other officers, only smaller one than another; others have only one, and others none at all. The turban of the officers of the divan is of a peculiar form, and called *mugenezek*.

The sash of the Turk's turban, we have observed, is white linen; that of the Persians is red woollen. These are the distinguishing marks of their different religions; Sophi, king of Persia, who was of the sect of Ali, being the first who assumed that colour, to distinguish himself from the Turks, who are of the sect of Omar, and whom the Persians esteem heretics.

TURBANED, *adj.* [from *turban*, Sir T. Herbert, *tulipanted*.] Wearing a turban; dressed with a turban.

A *turban'd* Turk

That beat a Venetian, and traduc'd the state,
I took by the throat.

Shakspeare.

The better sort, to vary from the vulgar, are *tulipanted*.
Sir T. Herbert.

TURBARY, *s.* [*turbaria*, low Lat.] The right of digging turf. *Skinner.*—The place where turfs are digged.
Cowel.

TURBIA, a small town in the north of Italy, in Piedmont, province of Sospello, situated in a small plain surrounded by three hills. Population 800.

TURBID, *adj.* [*turbidus*, Latin.] Thick; muddy; not clear.—The ordinary springs, which were before clear, fresh, and limpid, become thick and *turbid*, as long as the earthquake lasts. *Woodward.*

TURBIDLY, *adv.* Haughtily; proudly: a *latinism*.—A person of small merit is anxiously jealous of imputations on his honour, because he knows his title is weak; one of great merit *turbidly* resents them, because he knows his title is strong. *Young.*

TURBIDNESS, *s.* Muddiness; thickness.

TURBIGO, a small town of Austrian Italy, in the Milanese, on the Naviglio Grande; 18 miles west of Milan.

TURBINATED, *adj.* [*turbinatus*, Lat.] Twisted; spiral; passing from narrower to wider.—Let mechanism here produce a spiral and *turbinated* motion of the whole moved body without an external director. *Bentley.*—Whirling as a body that turns round its own axis.—The oval figure of Mercury might be caused by the velocity of its *turbinated* or diurnal motion. *Hist. R. S.*—Among botanists, plants are called *turbinated*, as some parts of them resemble or are of a conical figure. *Dict.*

TURBINATION, *s.* The act of spinning like a top. *Cockeram.*

TURBIO, a small river of Brazil, in the province of Rio Janeiro, which runs west, and enters the Parana between the rivers Paranapana and Tiete.

TURBITH, *s.* [*turpethus*, Latin.] Yellow mercury precipitate.—I sent him twelve grains of *turbith* mineral, and purged it off with a bitter draught. I repeated the *turbith* once in three days; and the ulcers shell'd soon off. *Wiseman.*

TURBITH MINERAL [*Turpethum Minerale*], is a name which the chemists give to a yellow precipitate of mercury, now called protoxide of mercury.

TURBO, a river of New Granada, in the province of Choco, which falls into the Atlantic.

TURBO, in the Linnæan system of Zoology, is a genus of the Testacea order of worms. Its characters are; that its animal is a slug; the shell univalve, spiral, and solid; and the aperture straightened, orbiculated, and entire. Gmelin, in his edition of Linnæus, enumerates one hundred and seventeen species, besides several varieties. See CONCHOLOGY.

TURBOT, *s.* [*turbot*, French and Dutch; *rhombus*, Lat.] A delicate fish.—Of fishes you shall find in arms the whale, the salmon, the *turbot* *Peacham.*

The turbot is a species of pleuronectes. See PLEURONECTES *Maximus*.

TURBULENCE, or TURBULENCY, *s.* [*turbulence*, Fr.; *turbulentia*, Latin.] Tumult; confusion.

I have dream'd
Of bloody *turbulence*; and this whole night
Hath nothing been but forms of slaughter.

Shakspeare.

Disorder of passions.

I come to calm thy *turbulence* of mind,
If reason will resume her sov'reign sway.

Dryden.

Tumultuousness; tendency to confusion.

You think this *turbulence* of blood,
From stagnating preserves the flood,
Which thus fermenting by degrees,
Exalts the spirits, sinks the lees.

Swift.

TURBULENT, *adj.* [*turbulentus*, Lat.] Raising agitation; producing commotion.

From the clear milky juice allaying
Thirst, and refresh'd; nor envy'd them the grape,
Whose heads that *turbulent* liquor fills with fumes.

Milton.

Exposed to commotion; liable to agitation.

Calm region once,

And full of peace; now tost, and *turbulent*.

Milton.

Tumultuous; violent.

What wondrous sort of death has heav'n design'd
For so untam'd, so *turbulent* a mind?

Dryden.

TURBULENTLY, *adv.* Tumultuously; violently. *Sherwood.*

TURBUT, or TARBUT, a city of Korassan, in Persia, defended with a very strong wall, flanked with towers, and containing a population of about 18,000 souls. It has 220 villages dependent on it, and is possessed by a powerful chief, who can bring into the field 10,000 troops; 50 miles north-east of Tursheez.

TURCISM, *s.* [*Turcismus*, low Lat.] The religion of the Turks.—Methinks I am at Mecca, and hear a piece of *Turcism* preached to me by one of Mahomet's priests.
Dr. Maine.

TURCO,

TURDUS.

J. Zuss. sc.

1. *T. longirostris*. 2. *T. crassirostris*. 3. *T. orpuleus*. 4. *T. perspicillatus*. 5. *T. yanvurus*. 6. *T. Rex*.

Engraved for the Encyclopædia Londinensis, 1828.

TURCO, a settlement of Peru, in the province of Caran-gas. Lat. 20. 30. S. long. 68. 20. W.

TURCOING, or **TOURCOING**, a considerable town of French Flanders; 6 miles north-north-west of Lille. It contains about 11,000 inhabitants.

TURCOIS, or **TURQVOIS**, a substance found in Persia and other parts of Asia, and formerly classed with stones. It has a beautiful light-green colour, and is susceptible of a high polish. The surface is smooth and polished; it has also a smooth shining fracture, and is so hard as to scratch glass slightly: the specific gravity is 3.127. It has for a long time been considered as the tooth of an unknown animal impregnated with copper; but by a series of analytical experiments, La Grange has proved that it does not contain a particle of copper, but is in reality bone coloured by phosphate of iron.

TURCOMANS, or **TRUCKMEN**, a Nomadic Tartar race, who fill with their hordes many of the districts of Western Asia. Their native seat seems to be in the regions east of the Caspian, in the vast plains between it and the Aral. They are completely a Tartar race, disdaining all cultivation, and employing themselves in the rearing of horses and cattle, to which, when opportunity admits, they add that of plunder, and of mercenary warfare.

TURD, *s.* [турд, Saxon.] Excrement.

TURDUS, or **THRUSH**, the name of a genus of birds, of the order of the Passeres. The distinguishing characters of this genus are, that the tongue is jagged, and has a rim or margin round it; the bill is of a conic pointed figure, the upper mandible bent at the apex, and emarginated; the nostrils naked, but half covered above with a small membrane, and the chaps ciliated.

1. *Turdus viscivorus*.—With a brown back, neck with white spots, and a yellowish bill. This is the missel thrush of Pennant and Latham.—Found in the woods of Europe.

2. *Turdus pilaris*.—With black tail-feathers, the outermost whitish at the apex and interior margin, the head and rump hoary. The fieldfare of Ray, Willughby, Pennant, and Latham. Of this there are four varieties.—Found in the woods of Europe, Siberia, and Syria.

3. *Turdus Africanus*.—Blackish, the breast covered with black feathers, with red margin; the bill yellow; and the legs cinereous.—Found in Africa.

4. *Turdus Tripolitanus*.—Olive-yellow, whitish beneath; black quills; equal blackish tail and yellow apex. The Tripoli thrush of Latham.—Found in Barbary.

5. *Turdus polyglottus*.—Obscurely ash-coloured; beneath palely ash-coloured, with the greater quill-feathers white on the exterior half. The singing-bird, mocking-bird or nightingale of Sloane, the mock-bird of Catesby and Kalm, and the mimic thrush of Pennant and Latham.—Found in Jamaica, and the moist woods of America, practising in the way which its name imports.

6. *Turdus Orpheus*.—With brown back; breast and lateral wing-feathers whitish; eye-brows white. The polyglott bird of Willughby, the lesser mocking-bird of Edwards, and the mocking-thrush of Latham.—Found in Jamaica, and the warmer parts of America. It has two varieties.

7. *Turdus Sandwichensis*.—Above and abdomen brownish; beneath and front cinereous-white. The Sandwich thrush of Latham.—Found in the Sandwich islands.

8. *Turdus Novæ Hollandiæ*.—Blueish lead-coloured; the anterior part of the head, the bill, chin, throat, and legs black; the quill and wing-feathers black, with lead-coloured margin; the intermediate white at the apex. The New-Holland thrush of Latham.

9. *Turdus plumbeus*.—Black, with yellow axillæ, and cuneated tail. The red-legged thrush of Pennant and Latham.—Found in North and South America, and in the Bahama islands.

10. *Turdus crassirostris*.—Above from red, and beneath from black to brown, with the quill-feathers acuminate; the two intermediate obscure. The thick-billed thrush of Latham.—Found in New Zealand.

11. *Turdus pagodarum*.—Black; back and rump grey; Vol. XXIV. No. 1633.

vent white; head crested. The pagoda thrush of Latham.—Found in Malabar and Coromandel.

12. *Turdus Cayennensis*.—Cinereous; beneath whitish; vent white; greater wing-feathers and tail-feathers black; throat, bill, and legs black. The Cayenne thrush of Latham.

13. *Turdus variegatus*.—Above brown; beneath whitish; feathers whitish and black interspersed. Variegated thrush of Latham.—Found in Surinam.

14. *Turdus striatus*.—Varied with yellow and grey; a longitudinal streak of the back yellow. Yellow-backed thrush of Latham.—Found in Surinam.

15. *Turdus fuscus*.—Olivaceous-brown; breast and abdomen whitish, spotted with brown; greater quills and legs black. Brown thrush of Latham.—In New York.

16. *Turdus nigerrimus*.—Wholly black; feathers yellow at the margin; cheeks and throat holosericeous. The black-cheeked thrush of Latham.—Found in Madagascar.

17. *Turdus Hispaniolensis*.—Olive-coloured; beneath varied from olive to grey; brown tail-feathers, whitish at the interior margin, olive at the exterior; with the intermediate part altogether olive. The Hispaniola thrush of Latham.

18. *Turdus albifrons*.—From black to lead-coloured; beneath yellowish; with the spot on the front white; and brown legs. The white-fronted thrush of Latham. There is a variety black; beneath white, tail beneath cinereous.—Found in New Zealand.

19. *Turdus Capensis*.—Brown; abdomen yellowish; vent yellow. A variety has the head and tail black.—Found at the Cape of Good Hope.

20. *Turdus atricapillus*.—Brown; black head; abdomen and rump red; spot on the wing white.—Found at the Cape of Good Hope.

21. *Turdus longirostris*.—From olivaceous to pale-brown; beneath pale sulphureous; rump and eye-brows yellowish; tail round and yellow; intermediate tail-feathers brown. The long-billed thrush of Latham.—Found in the islands of Eimeo and York.

22. *Turdus fuscipes*.—Cinereous; beneath red; vertex black; legs and tail-feathers brown; tail sub-cuneated. The buff-winged thrush of Latham.—Supposed to found in Cayenne.

23. *Turdus formicivorus*.—Above from red to brown; beneath cinereous; chin, throat, and breast black; band varied with white and black. The ant thrush of Latham.—Found as the former.

24. *Turdus cyanurus*.—Spadiceous; beneath varied with blue and yellow transverse alternate streaks; vertex at the nape to the quill-feathers and ocular band black; another orange; pectoral band and wedge-formed tail blue. The blue-tailed thrush of Latham.—In Guinea.

25. *Turdus rex*.—From red to brown; beneath more dilute; occiput lead-coloured; front varied from white to brown. The king thrush of Latham.—Found in South America, particularly Guiana and Brazil.

26. *Turdus Sinensis*.—Reddish; head brown striated; white eye-brows; tail-feathers marked with obscure brown streaks, and legs yellow. The Chinese thrush of Latham.—Found in China.

27. *Turdus leucocephalus*.—Grey; black quill-feathers; the lesser with the covers of the wings and tail green-brassy and shining violet. The white-headed thrush of Latham.—In China.

28. *Turdus perspicillatus*.—With head and neck cinereous; front and streak under the eyes on both sides black; body above from greenish to brown; beneath ochroleucous. The spectacle thrush of Latham.—In China.

29. *Turdus flavus*.—Yellow; white orbits; band from upper mandible produced near the eye black; bill and legs red. The yellow thrush of Latham.—In China.

30. *Turdus viridus*.—Green; with eye-brows, spot below the eye, abdomen and vent white; throat grey, spotted with white; breast reddish. The green thrush of Latham.—In China.

31. *Turdus cyanus*.—With feathers cinereous-blue at the margin; mouth and eye-lids yellow. The Indian mockbird.

of Ray, the solitary sparrow of Edwards, and blue thrush of Latham.—Found in Candia, the Archipelago islands, and the rocks of Italy.

32. *Turdus morio*.—Shining black, with the greater tail-feathers red, and apex black. The African thrush of Latham.—Found at the Cape of Good Hope.

33. *Turdus bicolor*.—Brown tinted with green; abdomen and vent white. The white-rumped thrush of Latham.—Found as the former.

34. *Turdus erythropterus*.—Black, with red wings; wing-coverts and lower quill-feathers of the tail, the intermediate excepted, white at the apex; tail wedge-formed. The rufous-winged thrush of Latham.—Found near the Senegal river.

35. *Turdus cantor*.—From greenish to black, shining blue and violet; with tail-feathers and tail black. The songster thrush of Latham.—Found as the former.

36. *Turdus Malabaricus*.—Shining-green; yellow front; throat, bill and legs black; covers of the wings and streak on the lower mandible blue.—The yellow-fronted thrush of Latham.—Found in Malabar.

37. *Turdus zeylonus*.—Green; beneath yellow; ocular line on both sides extended as far as the black breast. The Ceylon thrush of Latham.—Found at Ceylon and the Cape of Good Hope.

TURDUS Aquaticus of Brisson. See *TRINGA MACULARIA*.

TURDUS Chiappa, the name of a bird of the West Indies called also *passer faber*.

TURDUS, in Ichthyology, the name of a genus of fishes, according to Mr. Ray, of the class of those which have only one back-fin, the anterior rays of which are prickly; the hinder ones soft and smooth.

TURENNE, a small town in the central part of France, department of the Correze, near the river Tourmente, with 1600 inhabitants. Before the revolution, it was the chief place of a county called Turenne; 9 miles south-by-east of Brives, and 20 south-by-west of Tulle.

TURENNE (Henry de la Tour), Viscount of, a famous general, was the son of Henry de la Tour d'Auvergne, duke of Bouillon, by Elizabeth, daughter of William I. prince of Orange, and born at Sedan in 1611. Destined from his childhood to the military profession, his education and habits were conducted and formed with this view. Having acquired the necessary qualifications, he was placed, in 1634, at the head of a French regiment, in which post he acquitted himself with honour; and having pursued a career of distinguished services, cardinal Richelieu, in 1638, offered him one of his nieces in marriage; but his attachment to the reformed religion, led him to decline the proposal. After he had served 17 years in Italy and elsewhere with singular reputation, he obtained in 1644, the staff of marshal of France, and was entrusted with the command of the army in Germany, the wants of which he supplied out of his own purse. When the war of the Fronde broke out in 1649, he withdrew to Holland, but afterwards returned and engaged with the party opposed to the court. In this connection he was defeated near Rhetel in 1650; and when asked how he had lost this battle, he replied, "By my own fault; but when a man commits no faults in war, it is because he has not been long engaged in it." On July 17, 1675, he was struck by a cannon ball, which killed him on the spot, in the 64th year of his age. For his life and exploits, see *FRANCE*.

TURF, *s.* [турф, Saxon; *torf*, Dutch and Swedish; ab antiquiss. Goth. *torfa*, effodere. *Serenius*.] A clod covered with grass; a part of the surface of the ground.

Yet shall thy grave with rising flowers be drest,
And the green *turf* lie lightly on thy breast.

Pope.

To *TURF*, *v. a.* To cover with turfs.—The face of the bank next the sea is *turfed*. *Mortimer*.

TURFINESS, *s.* The state of abounding with turfs.

TURFY, *adj.* Full of turfs; covered with turf; built of turf.—Thy *turfy* mountains, where live nibbling sheep. *Shakspeare*.

TURGENT, *adj.* [*turgent*, French; *turgens*, Latin.] Swelling; protuberant; tumid.—Where humours are *tur-*

gent, it is necessary not only to purge them, but also to strengthen the infested parts. *Gov. of the Tongue*.—Pompous; tumid.—Recompensed with *turgent* titles. *Burton*.

TURGE'SCENCE, or *TURGE'SCENCY*, *s.* [*turgescens*, Latin.] The act of swelling; the state of being swollen.—The instant *turgescence* is not to be taken off, but by medicines of higher natures. *Brown*.—The *turgescency* of the seminary vessels. *Smith on Old Age*.—Empty magnificence.

TURGH, a river of Wales, in the county of Montgomery. It rises on the west side of the county, and running eastward till it reaches the foot of Mount Golway, turns to the north, and after receiving the Wurway, falls into the Tanat.

TURGHE, a river of Wales, in the county of Carmarthen. It runs into the Cothey, below Capellanpympsent.

TURGID, *adj.* [*turgidus*, Latin.] Swelling; bloated; filling more room than before.—A bladder, moderately filled with air, and strongly tied, held near the fire, grew *turgid* and hard; and brought nearer, suddenly broke with a vehement noise. *Boyle*.—Pompous; tumid; fastuous; vainly magnificent.—Some have a violent and *turgid* manner of talking and thinking; whatsoever they judge of is with a tincture of this vanity. *Watts*.

TURGIDITY, *s.* State of being swollen.—The fore-runners of an apoplexy are dulness, slowness of speech, vertigos, weakness, wateriness and *turgidity* of the eyes. *Arbuthnot*.—Pompousness; empty magnificence.—A simple, clear, harmonious style; which, taken as a model, may be followed without leading the novice either into *turgidity* or obscurity. *Cumberland*.

TURGIDNESS, *s.* Pompousness.—The *turgidness* of a young scribbler might please his magnificent spirit, always upon the stilts. *Warburton*.

TURGOT (Anne Robert Jaques), an enlightened and patriotic minister of state, born at Paris in the year 1727. See *FRANCE*.

TURIAMO, a bay on the north coast of South America, in the province and government of the Caraccas. It is three leagues to the east of Porto Cabello, and extends one league from north to south.

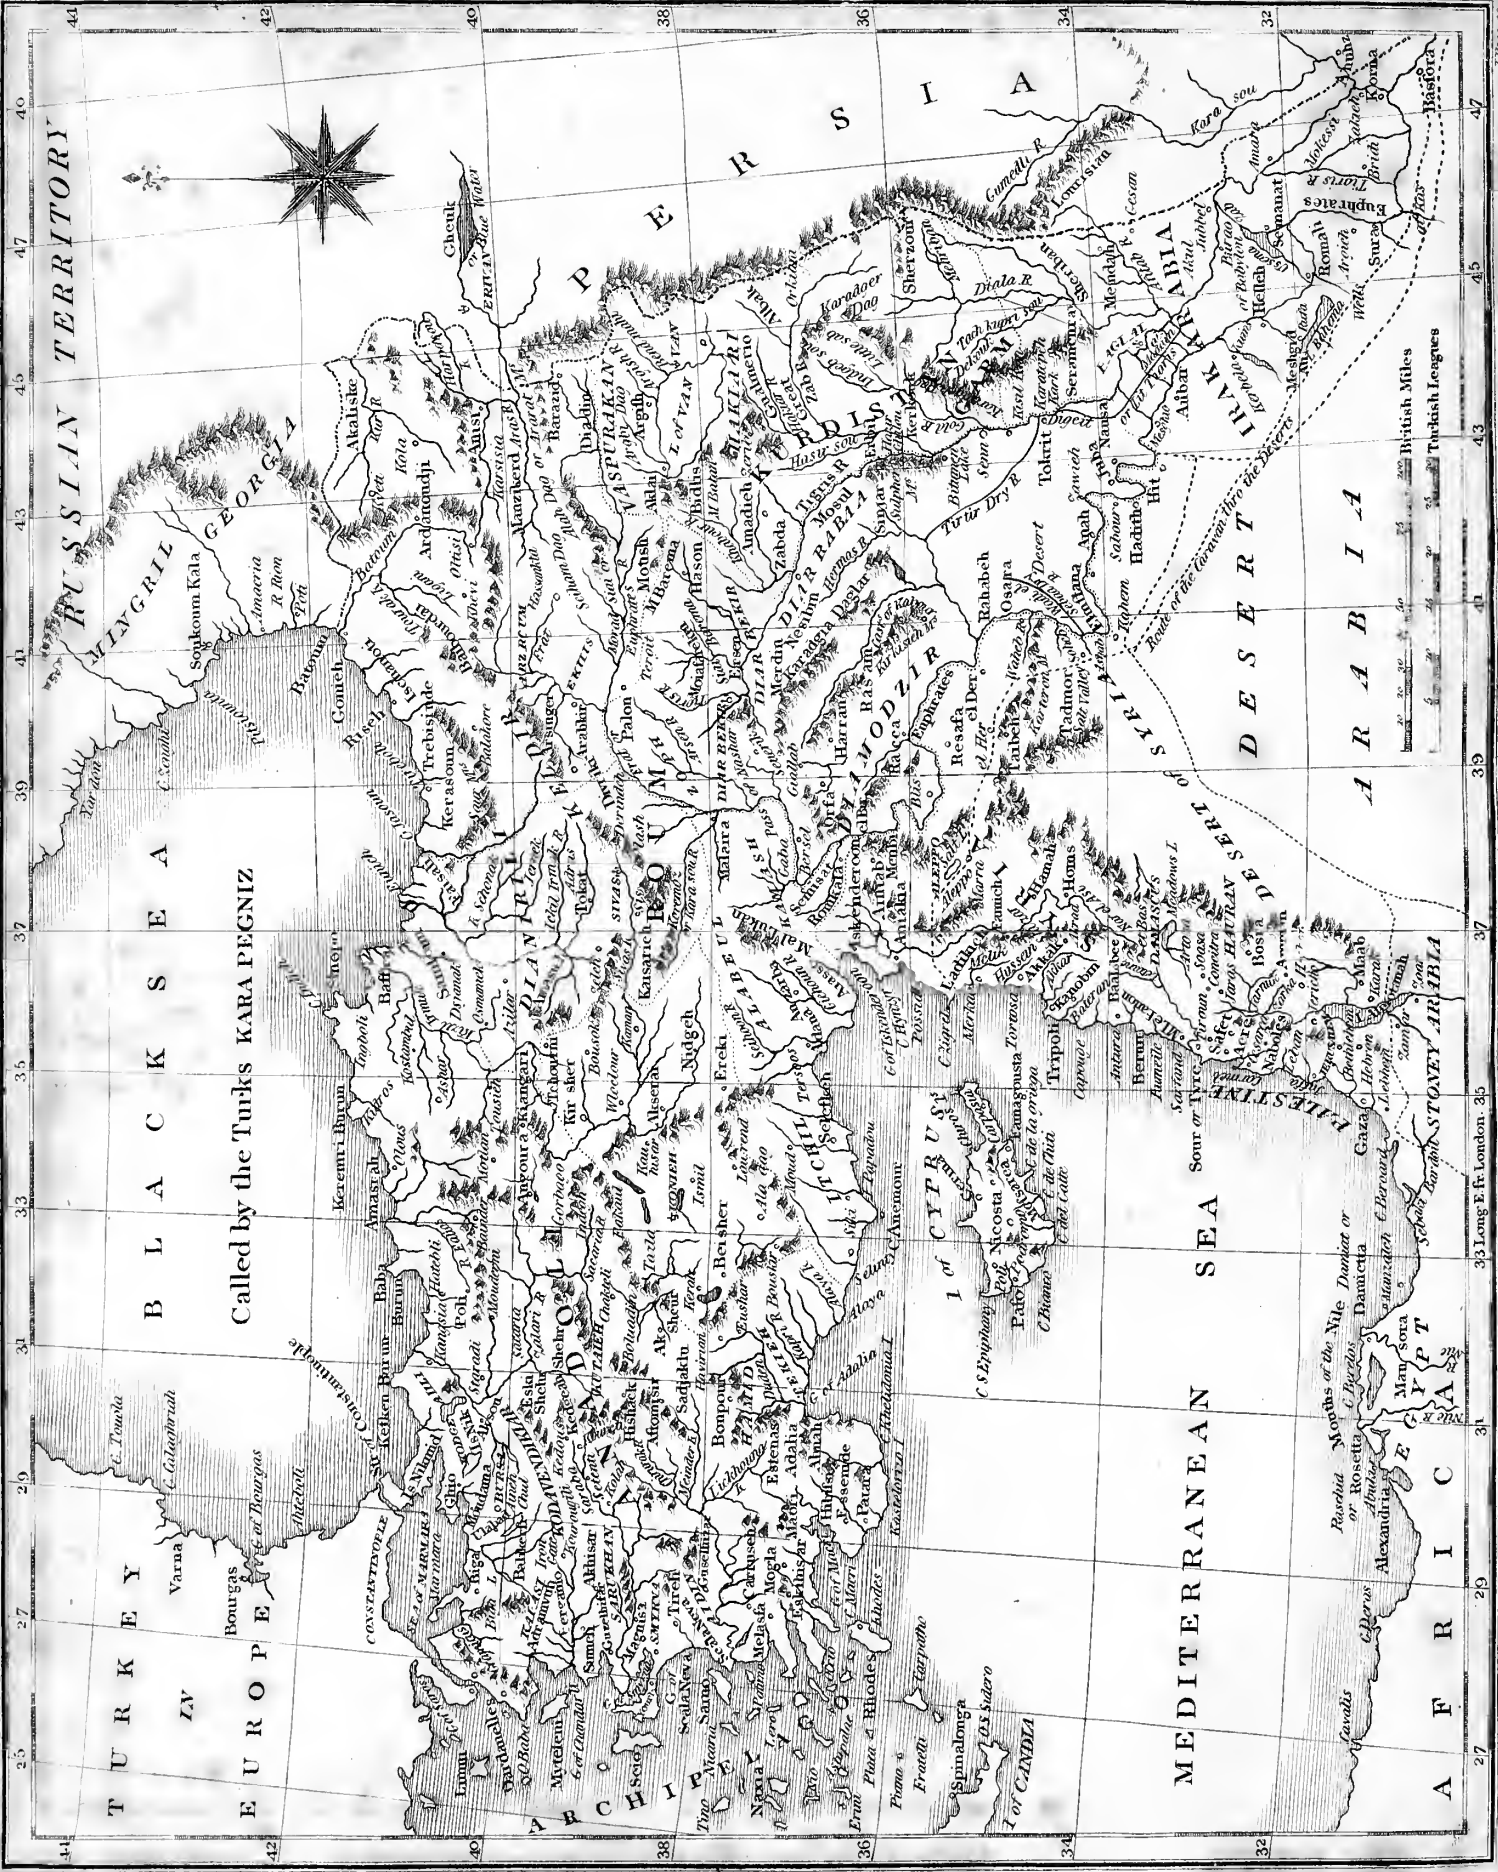

TURIBASA, a small river of Brazil, in the province of Para, which falls into the sea between the Turirana and the Gururiba.

TURIBUNE, a large and rapid river of Quito, in the province of Mainas, which runs south-south-east, and enters by the north and east into the Curaray.

TURIN, a large city in the north of Italy, in Piedmont, the capital and seat of the Sardinian monarchy. It stands in a beautiful plain, on the western bank of the Po, which here receives the waters of the Dora Ripuaria, and flows past with a copious stream, at a short distance from the walls. The situation is extremely agreeable; the country is luxuriant: on one side beyond the river rises a beautiful range of hills; while on the other a plain strewed with villas and gardens, extends as far as the base of the Alps. The town is of an oblong form, and its circumference, including the ramparts, is about four miles. The principal square is near the centre of the town, bears the name of Piazza Reale, and ranks, both for its size and beauty, among the elegant squares of Europe. On one of its sides stands the royal palace; in the centre is the structure erected by the dukes of Savoy, and commonly called the Castello Reale. On three of the sides of the square are arcades, as in the *Palais Royal* at Paris. The Piazza di St. Carolo, though smaller, is entitled to notice, its façades being uniform, and its two longer sides having arcades supported by pillars. The theatre of La Gutera was this year, 1828, destroyed by fire.

Of the public walks of Turin, the most frequented are the royal gardens: they form the morning rendezvous of the fashionable world. The terrace on the other side of the river, though commanding a view of great extent, is less frequented. The Rondo, extending between the city walls and the banks of the Po, is resorted to as an evening walk; while the Valentina,

Called by the Turks KARA PEGNIZ

TURKEY IN ASIA.

lentina, another promenade along the Po, about a mile from the town, is little visited on account of its distance.

The university of Turin was instituted in the beginning of the 15th century, and endowed for 24 professors, but was afterwards greatly enlarged. It has a public library, a museum, with a large collection of statues, vases, and medals; an observatory, and an anatomical hall. The population amounted in 1820 to 90,000. The character of the inhabitants is, like their dialect, Italian, with a mixture of French. The dress differs little from that of the French, and their manners have received a polish from the long residence of the court; from which, and the consequent residence of the gentry, a number of inhabitants derive their support.

The foundation of Turin is of very remote date, Hannibal having found on its site a town, which he sacked, because the inhabitants refused to join him against the Romans. It was subsequently rebuilt, and received from Cæsar the name of Colonia Julia, changed by his successor into that of Augusta Taurinorum. Its modern history is closely connected with the wars of Italy, of which its situation rendered it almost always the first theatre. It passed successively from the Romans to the Lombards, to Charlemagne, to the marquises of Saluzzo, and lastly to the princes of Savoy (see *SARDINIA*), who made it the capital of their states; 75 miles west-south-west of Milan, 185 west-north-west of Florence, and 320 north-west of Rome. Lat. 45. 4. 6. N. long. 7. 40. 15. E.

T U R K E Y.

TURKEY, a well-known empire, extending over the south-east of Europe and the contiguous parts of Asia and Africa; bounded by the Adriatic in the west, and by Persia in the east. It occupies a track of country extending from lat. 29. to 48. N. and from long. 16. to 50. E.

HISTORY.

The origin of this great nation is obscure. Most writers agree, however, that the Turks were a few rude barbarians, who, by successively conquering other tribes, and amalgamating with them, gradually augmented to an immense number, and obtained overwhelming power. The history of *ARABIA* has already embraced the important subjects of the life and character of Mahomet, and of the general spread of the Koran over the East. The Turks, properly so called, came into warlike collision with the Saracens, who were the temporal subjects of Mahomet's successors, about the year 1300. These they conquered as well as the Tartars, whose vast but disunited hordes had spread far and wide over the finest provinces of Asia. Previous to this epoch the Turks had voluntarily embraced the creed of Mahomet, and had assisted the Saracens in various battles.

OTHMAN was the founder of the Ottoman empire. His original name was *Athman*, which he changed, and assumed, perhaps in imitation of Mahomet, the character of Envoy from God. He wrested Bithynia from the Greeks, and also many parts of the usurpations of Jenghis Khan from the Tartars. He died in 1326, and his son established the seat of his government at Prusa, the capital of Bithynia.

1326—1360.—**ORKHAN** succeeded his father at the age of thirty-five years. He introduced splendour and magnificence at his court, and assumed the title of Sultan. He coined money, improved the military discipline, collected the young Christian renegadoes, who had been stolen in their infancy from their parents, and trained them into soldiers, who became the firmest support of his power. He was also the first who assigned a daily pay to the infantry. Such of his subjects as possessed lands or other property were destined for the cavalry; he formed out of them the corps of spahys, or horse-soldiers, which still subsists.

Andronicus, emperor of the Greeks, crossed the sea to oppose the incursions of the Turks; he was defeated and wounded in the hand by Orkhan, who took Nicomedia in 1327, and Nicæa in 1333, after a siege of two years. The

TURIN, a post township of the United States, in Lewis county, New York, on Black river; 20 miles north of Rome, and 143 north-west of Albany. Population 356.

TURINSK, a town of Tobolsk, in Asiatic Russia, capital of a district of the same name, situated along the banks of the river Tura. It was built about 1660, and contains 4000 inhabitants. There is a separate suburb for the Tartars. Lat. 57. 56. N. long. 98. 40. E.

TURINSKOI, a village of Tobolsk, in Asiatic Russia, on the Niznei-Tunguska; 132 miles east of Turuchansk.

TURIRANA, a river of Brazil, in the province of Para, which, springing from a branch of the Tocantines, and running almost due north, and serving as a line of division between the provinces of Para and Maranhã, falls into the sea, forming a large port opposite the island of San Juan.

TURIVICARY, a town of the south of India, province of Mysore. Lat. 13. 7. N. long. 76. 50. E.

TURKAL, a town of Asia Minor, the ancient *Sebastopolis*. It is situated near a high rock, crowned by an ancient fortress; 24 miles north-west of Tokat.

TURK-DEAN, a parish of England, in Gloucestershire; 2 miles north-by-west of North Leach.

TURKESTAN, the name often given to an extensive region of Central Asia, the original or acquired seat of the great Tartar race called Turks or Toorks.

latter then turned his arms against the children of the emirs, who had divided Anatolia with his father, and having first sown dissensions among those petty princes, he afterwards stripped them of almost all their possessions. Being now master of Anatolia and the shore of the Hellespont, Orkhan burned with impatience to pass that barrier, and to attack the Greeks in Europe. His son Soleïman, a young prince full of ambition and courage, finding no other means of crossing the strait (for the Turks yet possessed not a single boat,) formed, one dark night, three rafts of planks fastened together upon cork, and, committing himself with eighty brave followers to this frail conveyance, arrived without accident at the foot of the castle of Hanni, on the European side of the Hellespont. Here he found a peasant, who conducted him by a subterraneous passage into the castle; the garrison, being thus surprised, laid down its arms. Soleïman assembled the principal inhabitants, who, seduced by promises or intimidated by threats, delivered to him the vessels which were upon the coast, and before the day was over, four thousand Turks landed in Europe, reduced the fortress, and proceeded to lay siege to Gallipoli. The garrison made a valiant defence, but their provisions being exhausted, and the fortifications in a bad state, the city was compelled to surrender. Thus this key of Europe fell into the hands of the Turks.

About this time the Greek empire was distracted by fresh dissensions, by which the Turks knew how to profit.

Soleïman gradually extended his conquests towards the east, and took from the Tartars the cities of Ancyra and Cratæa. On his return, he reduced the rest of Thrace; but while wholly intent on increasing his glory and the dominions to which he was heir, an unforeseen accident put a period to his life. Orkhan survived him only two months, and died in 1360, at the age of seventy years.

1360—1389.—**AMURATH**, for thus have European writers disfigured the name of Murad, Orkhan's second son, succeeded his father at the age of forty-one. He at first affected the appearance of piety, for the purpose of gaining the veneration of the people, and assumed the title of envoy of God. After concluding a treaty with Paleologus, he fixed his residence at Adrianople; but having received information that Asia manifested a disposition to shake off his yoke, he crossed the Bosphorus, marched against the rebels, and put them to flight. Returning to Europe, he took the town of Pheres, which

which served as a bulwark to Macedonia; he then attacked and subdued the despot of Servia, but showed him favour, and purchased the hand of his daughter with the sacrifice of a province. He reduced several Mysian and Triballian princes; and imposed a capitation tax on such of his new subjects as adhered to Christianity. Those who, after bearing arms, turned Mahometans, were enrolled among the spahys. The sultan granted lands to some others, on condition of their maintaining, in time of war, a horse and a number of soldiers proportionate to the value of their land. These military grants, called *tymars*, conferred by Amurath and his successors, devolving to the eldest son upon the same condition only as was imposed upon the father, are so completely in the power of the prince, that he can take them away from the tymariots as easily as a daily pay. The sultan next directed his attention to the formation of his infantry, which he justly considered as the strength of armies. In 1361 he established the famous corps of *janissaries*, by taking one-fifth of the prisoners who embraced the religion of Mahomet. The number of this body, at first fixed at ten thousand men, was in the sequel considerably augmented.

Coutuz, one of Amurath's sons, and Andronicus, son of Paleologus, after defeating an army of neighbouring confederate nations, at the head of the janissaries, spahys, and some Greek troops, were inflated with their success, and rebelled against their fathers, who were then engaged in Asia. The two monarchs crossed the strait. The presence and address of the legitimate sovereigns introduced desertion into the camp of the rebel princes, who retired to Didimotica, and in spite of their resistance and a great effusion of blood, fell into the hands of the inexorable conqueror Amurath, who ordered his own son's eyes to be put out, and insisted that Paleologus should inflict the like punishment on Andronicus and his grandson. Manuel, the brother of the latter, was declared his associate in the empire: like him he conspired against the sultan, and retired to Thessalonica, but destitute of succour, he delivered the place to the general of Amurath, before whom he appeared as a supplicant. The sultan pardoned him, well pleased at having been furnished with an occasion to make himself master of Thessalonica without striking a blow.

The policy of the sultan was not less serviceable to him than his arms, and procured him several provinces in Asia, by alliances and negociations. He returned to Europe to oppose the Prince of Servia, who, with a formidable army of Wallachians, Hungarians, Dalmatians, and others, attempted to check the progress of the Mahometan arms. In the year 791 of the hegira, (1388-9) he engaged and defeated him in the plains of Kosowah. The sultan, alighting from his horse, walked over the field of battle, the theatre of his glory, and remarked with astonishment that almost all his foes, with whose bodies it was covered, were beardless youths. "Prince," said one of his generals, "none but hot-headed boys dare to cope with Mussulmans." While he was speaking, a wounded Triballian, extended on the ground near them, raised himself, recognized the sultan by the respect paid to him, gave him a mortal blow, and was himself immediately cut in pieces.

Amurath lived seventy-one years, of which he reigned thirty, feared by his enemies and by his subjects. His severity in the administration of the army and of justice, was excessive. The respect which he affected for religion, caused him to be respected in his turn. He founded several useful establishments, such as public schools and hospitals.

1389—1403.—BAJAZET (properly BAYAZID) I.—Amurath's eldest son was proclaimed emperor by the army. The first days of his reign manifested his ambition and his sanguinary disposition. He fell upon the dominions of a prince of Phrygia, whose daughter he had married, and banished his father-in-law to Ipsala, whence, to withdraw himself from the sultan's cruelty, he fled to Persia. Bajazet engaged in several wars, in which he was so successful as to gain immense territories. Sigismund, king of Hungary, uneasy at his progress, represented to the princes of Christendom the

necessity of opposing a bulwark to the sultan's conquests. One hundred thousand Christians assembled under his command. Bajazet, with sixty thousand men, marched to meet and dispersed them.

The Greek empire would now have been annihilated had not an unexpected defender checked the course of Bajazet's prosperity. Tymur-lenk, commonly called Tamerlane, a descendant of Jhengis-khan, having found means to discipline the Tartars, conquered with incredible rapidity Asiatic Sarmatia, Persia, Mesopotamia, and Syria, and compelled the city of Bagdad to open its gates to him. The sultan, being informed that the Tartar conqueror was advancing into Asia Minor, marched to meet him, and a battle ensued on the 30th of June, 1402, in the plains of Ancyra. The Turks, not half so numerous as the Tartars, performed prodigies of valour. Bajazet found all his efforts ineffectual, and having seen his eldest son Mustapha slain by his side, he ordered his vizir to fly to Prusa with his younger son Soleman, in order to preserve a remnant of Othman blood. Soon afterwards Bajazet was made prisoner. Notwithstanding the kind treatment which the sultan received at the hands of the Tartar prince, grief shortened his life, and he died on the 9th of March, 1403, in the train of his conqueror, who ordered magnificent obsequies for him, and sent his remains to Prusa, to be deposited in the tomb of his ancestors.

The story of the iron cage, in which Bajazet is reported by some writers to have been confined by Tamerlane, we have rejected; but Gibbon, who, in his history, sums up the authorities on both sides of the question, thinks that it was not wholly without foundation. Tamerlane withdrew from all his conquests, and restored the Ottoman empire into the hands of Bajazet's sons. While these were settling their disputes by the sword, an interregnum of ten years occurred. After which, MAHOMET I. mounted the throne. This sultan restored to Manuel the city of Thessalonica, and all the fortresses on the shore of the Euxine Sea. He gave a favourable reception to the envoys of Wallachia, Bulgaria, and Moldavia, and accepted the tribute which they offered him. Mahomet was acknowledged in Asia as well as in Europe, after he had subdued and rendered tributary Caraman Oghly, son of a prince of the same name whom Bajazet had put to death, and seized the dominions of the prince of Castamouny, his confederate. He reduced Sineis, pacha of Smyrna, and received the homage and tribute of several Greek princes, who had for a moment fancied themselves independent. The sultan was not so fortunate by sea. The republic of Venice, then very powerful, engrossed all the commerce of Europe, and its possessions extended from Capo d'Istria to Constantinople. Incensed at the piracy of the Turks, the Venetians sent their galleys into the Hellespont, where they destroyed the Turkish fleet, but durst not attempt a landing. About this time an upstart, named Perciglia, began to preach with vehemence against the Mahometans, whom he denounced as blasphemers and infidels. All those whom he could not persuade he put to death. His proselytes having become very numerous, Mahomet sent his son Amurath, who was scarcely twelve years old, with sixty thousand men against this pretended apostle of God, who was taken and crucified. This sect occasioned the spilling of much blood, contrary to the wishes of Mahomet, who was more sparing of human life than any of his predecessors. Soon afterwards another impostor, who exactly resembled Mustapha, Mahomet's elder brother, who fell in the battle of Ancyra beside their father Bajazet, laid claim to the throne. He was acknowledged by some malcontents, at the head of whom was the same Sineis on whom Mahomet had bestowed his favour, and even the government of Nicopolis, and who thus repaid his bounty. He collected some troops, and had the temerity, with a weak and contemptible army, levied in haste, to wait for Mahomet under the walls of Thessalonica; but the janissaries and spahys quickly dispersed the rebels. Sineis and his pupil escaped the carnage, and sought an asylum with the Greek emperor, who refused to give them up, and obtained the sultan's consent

sent to their living in exile in an island of the Archipelago. The Wallachians, who had countenanced the spurious Mustapha, drew merited chastisement on themselves. Their country was ravaged in 1421, and the tribute paid by them was augmented. Scarcely was this expedition terminated, when Mahomet was attacked by a bloody flux, which in a short time put a period to his life, after a reign of eight years, at the age of forty-seven.

1421—1451.—AMURATH (properly MURAD) II. ascended the throne at the age of eighteen; but his father had previously habituated him to command, by committing to him the government of Amacyeh and the chastisement of rebels in Asia. Accordingly, from the very beginning of his reign he manifested great firmness. When Manuel sent to him to demand his two younger brothers, to whom Mahomet had appointed him guardian, Amurath replied, that he could not entrust an infidel with the education of Ottoman princes, and that he should not comply with an arrangement which his father neither could nor ought to have made. To revenge himself, Manuel again brought forward the pretended Mustapha, who, still accompanied by Sineis, quitted Lemnos and landed at Gallipoli, where he was received as the rightful prince. Amurath sent his vizir against the adventurer, who found means to win over the troops, and even persuaded the general to join his party. This child of fortune began to think himself secure in her favours, when the Greeks demanded places which he had agreed to give up to them as the price of their assistance; Mustapha refused them, on which Manuel, incensed at his perfidy, espoused the cause of Amurath. Meanwhile Mustapha, encouraged by his success in Europe, crossed the strait and offered battle to Amurath, who, knowing Sineis to be an able general and a great traitor, thought it more prudent to seduce than to fight him. He was offered the government of Smyrna, which he accepted, and went over with the greatest part of the army to the camp of Amurath. Mustapha, deserted by his partisans, fled, was taken, and put to death.

Amurath did not forget that it was Manuel who had raised up this rival against him: he augmented the number of his troops, ravaged Thessaly, Macedonia, and Thrace, and threatened Constantinople. The Greek emperor, with a view to divert the impending danger from his capital, excited fresh troubles in the family of the sultan, who thought it right to sacrifice to his own safety the lives of his two brothers, whom he caused to be strangled, together with all the accomplices in their revolt. Amurath had one more traitor to punish; this was Sineis, who, again guilty of perjury and rebellion, was obliged to flee. Being at length taken in the forests, where he lived as a robber, he was doomed to suffer the most ignominious death.

About this time Manuel died. The new emperor sued for peace to Amurath, ceding to him all the towns which he had already taken, and even Thessalonica which had not yet surrendered: but that city claimed the protection of the Venetians, who sent thither a governor. The sultan however proclaimed that he would give up to his troops all the slaves and the booty which should be found in the city, and Thessalonica was carried by assault in April 1429, and all the inhabitants reduced to slavery. After taking some towns in Etolia, Amurath made peace with the Venetians, but for twelve whole years he was engaged in wars with his vassals, stripping them one after another of their possessions, and appointing successors on whom he imposed very heavy tributes. One of these deposed petty princes retired to the court of Ladislaus, king of Hungary and Poland, and placed under his protection the city of Belgrade. Amurath laid siege to it, but the effect of the artillery employed for the first time against the Turks in 1435, surprised and terrified them to such a degree that they abandoned the siege with disgrace. Hunniades, waywode of Transylvania, one of the greatest generals of that age, harassed and beat the army of Amurath, who was obliged in 1444 to conclude a truce for ten years with Ladislaus.

Caraman Oghly, prince of Caramania, who had married

Amurath's sister, was the most refractory of his vassals. From the extremity of Asia he raised against his brother-in-law a confederacy of European princes, who placed Ladislaus at their head. Pope Eugene IV. authorized the king of Hungary to break the treaty which he had concluded; and the confederates equipped a fleet, which, however, could not prevent the sultan from penetrating into Europe. The Turks marched towards Varna, on the shore of the Black Sea, to meet the allies. The army of the latter consisted of a motley mixture of men of all nations, without experience or discipline, and no match for the janissaries, who advanced in good order, bearing at the point of a lance the treaty which the Christians had violated. The battle, fought on the 10th of November, 1444, was extremely sanguinary. The king of Hungary, having had the imprudence to penetrate into the thickest of the fight, fell, pierced with many wounds, in the midst of the janissaries. His death filled the Christians with consternation, and their army was dispersed. Amurath did not follow up his victory: weary of the fatigues of government, he determined, after the battle, to resign the empire to his son, Mahomet, then scarcely fifteen years of age. He caused him to be proclaimed emperor of the Turks, in the city of Adrianople, and retired to Magnesia, where he gave himself up entirely to repose and pleasure. It was not long before the internal tranquillity was disturbed by seditious persons, who took advantage of Mahomet's youth to commit all sorts of excesses. The ministers, in alarm, entreated Amurath to reascend the throne. This prince was received with transport, caused the factious to be punished, and the young emperor was sent to Magnesia, there to remain till years should teach him to command.

Success had hitherto pretty constantly attended the sultan; but in his latter years he had to contend with a formidable foe, whom he had cherished in his bosom. This was the famous Scanderbeg, of whom historians relate the most extraordinary stories. He was the son of Castriot, prince of Epire, who having submitted to the conqueror, with the other Greek princes, had sent his sons as hostages to the court of Amurath. George Castriot, the only one of these children who survived, became a favourite with the sultan, who brought him up in the Mahomedan religion, and took him along with him to war, where his strength and courage caused the Turks to give him the name of *Scander*, or Alexander, and the title of *Beg*, prince. On the death of the prince of Epire, Amurath appointed a pacha in his stead, regardless of the rights of Scanderbeg. The young soldier, stung by this injustice, vowed to be revenged: he stole away from the court, drew the reis-effendi (secretary of state) into his tent, forced him to sign and seal the deposition of the pacha of Epire, and an order for his own investiture with the sovereignty of that state; after which he killed the reis-effendi and buried him on the spot, to conceal all traces of this action. He then set out immediately for Croya, the capital of Epire, obtained possession of it by means of the order, which none suspected to be a forgery, released the Albanians from their allegiance to the sultan, raised troops and strengthened himself in a sovereignty wrested from his house by injustice, and recovered by perfidy. Favoured by the Venetians, this fugitive was already a formidable enemy, when the sultan set about reducing him. With a small army, Scanderbeg made head against the Turks, who laid siege to Croya: he compelled them to raise the siege, killed great numbers of them, and harassed them in their retreat. Amurath was preparing to attack him in person when an acute disease carried him off in three days, on the 9th of February, 1451.

1451—1482.—MAHOMET II.—Young Mahomet inherited the affection which the people had entertained for his father; but he marked the first year of his reign by an act of barbarity. He put to death his brother, an infant at the breast, whom Amurath had had by the daughter of the despot of Sinope, and compelled the unhappy princess to contract a fresh marriage. Preparing in silence for the blows he meant to strike, he renewed the alliance with all the tributaries, and

reduced Caraman-Oghly, who had revolted. He found means to create a formidable artillery, built a castle on the strait of the Dardanelles, opposite to that which his grandfather had erected, and thereby made himself absolute master of that important passage, in spite of Constantine, the Greek emperor, who justly complained of this infringement of treaties. That prince, in his distress, implored the aid of Pope Nicholas V., but the people opposed the union of the two churches required by the pontiff. After many successes Constantinople was taken. This great event took place on the 29th of May, 1453, 1123 years after its foundation, and 1205 after that of Rome. The particulars however of the siege, its causes and consequences, are related at full under the article *ROME*, p. 338.

When Mahomet made his entry into Constantinople, not a Greek was to be seen. He alighted at the church of St. Sophia, which he that moment converted into a mosque, by causing the prayers enjoined by the Mahometan ritual to be said in it. The sultan would have reigned in a deserted city, had he not been politic enough to recal the Greeks, by allowing them to retain some churches and the free exercise of their religion. He then returned to Adrianople, and in a short time completed the conquest of the remaining possessions of the Greek emperor.

Pope Calixtus III., alarmed at the progress of the Turkish arms, excited the princes of Christendom to form a league. But as the preparations for this new war were long protracted, Mahomet resolved to strike the first blow, and laid siege to Belgrade, defended by the valiant Hunniades, but was obliged to raise it with disgrace. He revenged himself by completing the subjugation of the Morea, added the province of Athens to his other European possessions, reduced the little empire of Trebisond in Asia, and put to death David Commenius who had usurped that sovereignty.

The Knights of Rhodes, afterwards Knights of Malta, hovered over the coasts of the Ottoman empire, and annoyed their commerce. Mahomet resolved to attack their island; but to facilitate his design, he determined to begin with the other islands of the Archipelago, from which the knights might derive succour. He made himself master of Lesbos by means of a traitor, whom he afterwards put to death.

Caraman-Oghly died about this time. His children quarrelled respecting the division of the paternal inheritance, and solicited the mediation of the sultan, who, in order to restore harmony, immediately annexed Caramania to his dominions.

Mahomet next directed his efforts against the island of Negropont, which belonged to the Venetians. The fleet of the latter was of no benefit to them. The governor of Negropont defended himself with great valour; but famine obliged him to capitulate in 1470, and notwithstanding the plighted faith of the sultan, this brave man and his principal officers were laid between planks and sawn in two. His only daughter was dragged before the murderer of her father, and chose rather to die by his hand than to yield to his desires. This circumstance probably gave rise to the story of Irene, which is not mentioned by any contemporary historian. The barbarous Mahomet having taken umbrage at the success obtained by his own son Mustapha in Persia, declared him a rebel, and caused him to be strangled.

The Knights of Rhodes meanwhile took advantage of all these delays to fortify themselves in their island. D'Aubusson, the grand master, a man of equal prudence and courage, on learning that the sultan had put an end to hostilities in Asia, and concluded peace with the republic of Venice, agreed himself to a truce of three months, during which the knights summoned to the defence of the island, arrived from all parts of Christendom. Mahomet, who began to be fond of ease, committed the conduct of the siege of Rhodes to the pacha Paleologus, a Greek renegado, of the family of the last emperors. The Turkish fleet, armed with a formidable artillery, arrived off Rhodes, and the siege immediately commenced. Both sides fought with obstinacy; but the fire of the besieged was so well directed and so destructive,

that the Turks were dispirited. The pacha, despairing of conquest by force, employed emissaries to poison the grand-master, but the plot was discovered, and the miscreants were punished. Justice was also executed on a German engineer, a renegado, who had come over from the Turkish camp into the city. This villain, who in full council sustained his infamous part, nevertheless by his conduct excited suspicions in the minds of the persons appointed to watch him, and the torture soon converted those suspicions into certainty. The Turks renewed their efforts, but were constantly repulsed by the knights, who performed prodigies of valour. Paleologus then thought fit to try the effect of negotiation. The brave D'Aubusson would not listen to any terms: at the head of his people he withstood a fresh assault, but was wounded, and the Turks forced their way into the city. This momentary success inflamed the knights, the soldiers, and even the citizens, with such fury, that the Turks were driven back, not only from the city, but from the entrenchments of the whole island, and compelled to return to their ships, and put to sea on the 17th of August, 1480. Paleologus, who had lost all hope and spirit, conducted with shame the wreck of his fleet and army to Constantinople, entirely engrossed with the means of persuading his master that Rhodes was impregnable. Mahomet, on receiving the first intelligence of the raising of the siege, flew into so vehement a rage as made even those of his ministers who had nothing to do with that affair tremble. He declared that his general and the principal officers of his army should be strangled. Paleologus, however, was not put to death; the sultan took his post from him, and banished him to Gallipoli. Dissembling his mortification, and resolved to wipe away the disgrace which his arms had incurred under Paleologus, he raised two numerous armies, intending with the one to conquer Persia, and to send the other into Europe under the conduct of his generals; but death overtook him amid these great plans, on the 2d of July, 1481.

This prince, whose whole life may be said to have been but one campaign, conquered two empires, twelve kingdoms, and nearly three hundred towns.

1481—1512.—*BAJAZET II.*—The eldest son of Mahomet, was appointed his successor. Instead of repairing to Constantinople to take possession of the throne which devolved to him, and though he had a rival in his brother Djem-djem, called by the Greek writers Zizim, this superstitious prince chose rather to go on pilgrimage to Mecca; and wrote to the divan, desiring that his son, who was yet an infant, might reign in his name during his absence. Zizim took advantage of this opportunity, and upon pretext that Bajazet, though the eldest son, was the offspring of a slave, raised an army and made himself master of Prusa and of all Bithynia. Ahmed, or Acomat, the vizir, passed over into Asia with the flower of the janissaries and spahys, and marched against Zizim, whose army he put to flight. This ambitious prince then sought an asylum with the sultan of Egypt, who received him with the respect due to misfortune.

Bajazet, on his return from Mecca, found his throne secured by the defeat of his brother, who was not long before he again tried his fortune. Zizim returned to Asia, made common cause with one of the sons of Caraman-Oghly, whom Mahomet had stripped of his possessions, but was again beaten. Destitute of all resources, Zizim solicited an asylum of the knights of Rhodes; which the grand master of the order deemed it consistent with their honour and their interest not to refuse him. Don Alphonso de Suniga, grand-prior of Castile, who was commissioned to proceed with his squadron and take him on board, brought him to Rhodes, where he was treated with the utmost respect; but he was not allowed to remain long there in quiet. The sultan proposed a highly advantageous treaty of peace to the order, on condition of their delivering up his brother. The knights were too generous to abandon him. They persuaded him to retire to France, and importune for assistance.

Zizim found that his solicitations to the king of France were beginning to produce some effect, when Pope Innocent VIII. suffered

suffered himself to be persuaded, that if Zizim was in his hands, he should be able to unite all the powers of Europe against the Turks; he therefore demanded him of Charles VIII. The unfortunate Zizim, after travelling from the east to Europe, and from Rhodes to the extremity of Auvergne, was delivered to the emissaries of the Pope, who conducted him to Rome, where he was received as a sovereign, and had apartments assigned him in the Vatican. But some time afterwards, on the death of Innocent VIII., Zizim, contrary to the law of nations, in spite of the oath sworn to him and to the king of France, was confined to the castle of St. Angelo, by command of the infamous Borgia. The new Pope dismissed the faithful Knights of Malta, who composed Zizim's guard, acquainted Bajazet with what he had done, and agreed to take forty thousand ducats a-year for the detention of his brother. Charles VIII. king of France, a young, powerful, and ambitious monarch, warmly interested himself for the preservation of Zizim, and entered Italy with an army of thirty thousand men. The Pope, trembling for his fate, applied for succour to Bajazet, assuring him that it was the intention of the king of France to take from him Zizim. The Turk tendered a still higher price for the murder of his brother; but the Pope, reluctant to lose the annual stipend paid for the detention of Zizim, deferred the execution of this infamous treaty. Meanwhile the king of France had reached Rome, without having occasion to draw his sword. The cowardly Borgia shut himself up in the castle of St. Angelo, employed the immense treasures which he had amassed in corrupting the king's ministers, and succeeded in opening a negotiation and concluding a treaty, which stipulated, among many other articles of equal importance, that Zizim should be placed in the hands of the king; but the wretch, before he delivered up the Ottoman prince, caused him to be poisoned. (1495.)

Relieved from the anxiety occasioned by the existence of Zizim, Bajazet turned his arms against the Venetians, defeated them at sea, took the town of Lepanto, and those of Modon and Coron, in the Morea, laid waste the Friule and reduced Durazzo. While Persia was convulsed by a religious revolution, the shocks of which caused that country to assume a new face, Bajazet resided at Constantinople in perfect repose, if that term may be applied to an effeminate and voluptuous life, the excesses of which had brought upon him many disorders. Tormented by painful infirmities, he resolved to abdicate the empire in favour of his eldest son, Achmet; but the soldiers preferred to Achmet his youngest brother, named Selym. Emboldened by the public favour, the latter raised an army, marched against his father, and was at first beaten: but the janissaries urged him to fresh efforts, promising to join his standard. Selym arrived before Constantinople at the head of the European troops, and Bajazet beheld his son, the people, and the army at once arrayed against him. He now thought of nothing but relinquishing a sceptre of which his indolence had long been weary; and set out for the purpose of retiring to Adrianople. Selym accompanied him with feigned respect to the place agreed upon for their separation. There, throwing himself at the feet of his father, he begged his blessing; but no sooner had he left him, than on some trivial pretext, he ordered him to be poisoned. This took place in 1512. Timid, cruel, superstitious, and addicted to wine, Bajazet II. was nevertheless, according to the Turkish historians, a patron of learning and the sciences. He built several mosques and repaired the walls of Constantinople, which were half overthrown by an earthquake, that lasted ten days, and buried thirteen hundred persons.

1512—1520.—SELYM I.—From the moment of his accession to the throne, Selym deserved by his sentiments, and still more by his actions, the surname of *Yavus*, the ferocious. Determined to rid himself of all those who gave him umbrage, he decreed the death of his two brothers. Achmet, the elder, notwithstanding his love of peace, resolved to sell his life and rights at a dear rate; while his brother, Korat, who was less courageous, wandered from cavern to cavern, in order to conceal himself. The latter was betrayed, and

Selym caused him to be strangled before he marched against Achmet, who, having only fifteen thousand men to oppose one hundred and fifty thousand, was vanquished and strangled on the field of battle.

Selym subdued all Egypt, and put an end to the dominion of the Mamelukes, and appointed two pachas to govern Egypt and Syria in his name.

The finances being exhausted by these two long wars, the sultan found means to fill his coffers by cutting off the heads of the wealthiest individuals and the great officers of the empire. The destroyer was at length arrested in the course of his cruelties, when preparing to march against Persia. An acute disorder seized him in a village near Adrianople, the very place where his father had been murdered by his command, and he died a few days afterwards, on the 22d of September, 1520, reproaching himself, it is said, for the blood which he had shed in such abundance.

1520—1566.—SOLEIMAN I., Selym's son, made it his first care to quell the insurrection of the pacha of Syria. Having left troops in Asia, and sent a squadron of observation into the Archipelago, he turned his attention toward Hungary, blockaded Belgrade, and made himself master of that city, which was the key of the country, meditating a still more important conquest for the following year.

The election of Villiers de l'Isle-Adam to the honourable post of grand-master of Rhodes gave rise to intrigues. One of the candidates, enraged at his failure, resolved, says an historian, to deliver the island to Soleiman, who soon found a pretext for violating treaties, and the knights prepared to sustain a new siege.

Deserted by the Christian potentates, they held out long, but at last capitulated on the 22d of December, 1522. Soleiman made his entry into the city on Christmas day; and the knights, after an equally sanguinary and memorable siege of six months, prepared to quit that sovereignty which they had possessed for two hundred and twenty years, with such glory and advantage to the commerce of all the nations of Christendom.

Soleiman was endowed with an elevated soul. The resistance of the knights; though it inflamed his anger, excited his admiration. He treated the grand-master with kindness, praised his valour, and even endeavoured to engage him in his service; but de l'Isle-Adam replied, that he should be unworthy the sultan's favours if he were capable of accepting them. The excesses which are the usual consequences of victory, were repressed. Soleiman, to secure the tranquillity of Rhodes, determined to visit the city in person; and, on entering the palæ of the grand master, observed:—"It is not without pain that I am obliged to turn this Christian, at his age, out of his house."

After making sure of the departure of the knights, Soleiman returned to Constantinople, to attend to the cares of the government; and made ordinances regulating as well the administration of justice as that of the finances. The collection of these judicious ordinances, known by the title of the *Canons of Soleiman*, still has high authority in the divan and among the ulemas. This monarch committed the custody of the seraglio to his bostandjys, or gardeners, with whom he formed a military corps. This institution caused an insurrection among the janissaries; and the emperor was convinced that, for the sake of his peace as well as his glory, it was necessary to find employment for this restless soldiery. Hungary offered a wide field for his ambition, since Belgrade was in his power. Louis II. king of that country, only twenty-two years of age, had neither experience nor resources sufficient to defend his dominions, Soleiman had no difficulty to reduce Peterwaradin, Saliuk, and Ozek. On the 29th of August, 1526, he engaged and defeated the Hungarians near Mohars. This victory opened to him the gates of Buda on the 10th of September, 1526. He plundered that city as well as the rest of Hungary; and on the approach of winter led back his soldiers to Constantinople loaded with booty.

Hostilities were soon renewed in Hungary. After the death

death of Louis II., who fell at the battle of Mohars, the country was distracted by factions. The one chose John Zapoli, waywode of Transylvania, the other elected the archduke Ferdinand of Austria for king. The latter, at the head of a powerful army, came up with his competitor in the plains of Tokay, and put him to flight. King John, dethroned almost as soon as elected, sought refuge with Soleiman. The sultan, in hopes of rendering the crown of Hungary tributary to his own, declared in favour of Zapoli, and he received him with honour in his camp near Belgrade. The Ottoman army immediately entered Hungary, retook several places in which it had left no garrison, and advanced towards Vienna, the capital and barrier of the Austrian dominions. Ferdinand had time to throw into it twenty thousand men, and to supply it with provisions. The attack and defence of that city were equally creditable to the contending parties. But the season becoming unfavourable, Soleiman was necessitated, on the 14th of October, 1529, to raise the siege, which had cost him eighty thousand men; and after having himself crowned king John, with whom he left some troops in Hungary, he returned to his capital.

The two kings of Hungary entered into a compromise and divided the country between them, while Soleiman made preparations for a war with Persia. Shah Thahmas, sovereign of that country, sensible that the deserts which surround it are its strongest fortifications, spontaneously abandoned Tauryz, leaving the Turks to penetrate into a country where they must be in want of every thing and become weaker from day to day. Then relinquishing the defensive, this prince at the head of the *gizil-bach*, the flower of his troops, marched by a by-way upon Tauryz, retook that city, and routed the Turks in their retreat.

While Soleiman was in vain seeking conquests in Asia, kingdoms were won and lost in his name in Africa. Khair-ed-dyn, who acquired celebrity by the name of Barbarossa, son of a potter, had, with one of his brothers, relinquished in his youth his father's profession for that of a pirate. They possessed talents and courage. After cruising along the coasts of Spain and Italy, they took Algiers, which was then but a receptacle for banditti like themselves. Barbarossa's elder brother became sovereign of these pirates. Some time afterwards he died without issue and Barbarossa succeeded him. The enterprising character of this adventurer attracted the notice of the sultan, who attached him to his interest, and appointed him the sole pacha of the sea or capitan-pacha. Barbarossa manned the Turkish fleet, ravaged the coasts of Italy, took several towns in Calabria, struck terror into Naples, and even into Rome, and then suddenly bearing away for Africa, made himself master of Tunis.

Charles V., jealous of the Ottoman power, and desirous of putting a stop to the piracies which desolated the southern coasts of Europe, formed an alliance with several other Christian princes, and in 1535, sailed himself with a numerous fleet for Africa. He reduced the fort of Goletta, situated a few miles from Tunis, and advanced to meet the army of Barbarossa. The latter less fortunate by land than by sea, was defeated by the emperor, who entered Tunis, the gates of which were opened to him by the Christian slaves who were confined there. Anxious to destroy the last remaining haunt of the pirates, he laid siege to Algiers; but his bravest soldiers fell victims to the climate; and after losing one hundred and forty of his ships in a tremendous storm, on the coast of Barbary, Charles was obliged to re-embark the relics of his army in the vessels that were left.

About this time Soleiman turned his whole naval force against the republic of Venice. Barbarossa ravaged the island of Corfu, and reduced in the Archipelago the islands of Scyros, Patmos, and Stampalia, Paros, and some others belonging to the Venetians, and forced the republic to sue for peace.

John, king of Hungary, was by this time dead, leaving a son a year old, under the guardianship of his mother Isabella. The crown of Hungary could not fail to tempt the Austrians, who advanced to Buda for the purpose of seizing

it. They were defeated by the pacha of Belgrade, and Soleiman made himself master, almost without striking a blow, of the city which was the object of contention.

The Turkish emperor received at Constantinople an embassy from Francis I. of France, who solicited his assistance against Charles V. proposed an alliance offensive and defensive, offered to unite his forces with those of the Porte, and to give Barbarossa free admittance into the French ports, whenever he should come thither with the Ottoman fleet. Proposals were made to the Venetians to enter into this confederacy, for the purpose of humbling the house of Austria; but that republic deemed it more prudent to remain neutral than to involve itself in a new war by which it could have nothing to gain.

In 1543, a Turkish fleet commanded by Barbarossa, appeared off the coast of Messina, took Reggio, passed Ostia and struck terror into Rome, which cursed a Christian prince for contracting an alliance with Mussulmans. This fleet cruised along the coasts of Tuscany and Genoa without committing any depredations, and on reaching Marseilles, joined the French fleet and laid siege to Nice, which belonged to the Duke of Savoy an ally of Charles V. This town, after an honourable resistance, surrendered to the French to avoid the horrors of pillage. The Ottomans, offended at this capitulation, paid no regard to it, rushed into the town, which they plundered; then returned on board their ships and sailed for Constantinople.

Soleiman, the conqueror, soon had occasion to bedew his laurels with his tears. He lost the best beloved of his sons, one of the children borne him by Rochema, his favourite sultana, whom Christian authors call Roxalana. On this occasion he founded a mosque, schools, and a hospital, and liberated a great number of slaves of both sexes. Soon after he married Roxalana. Mustapha, the emperor's eldest son, was aware what he had to fear from this ambitious female, who contrary to all laws and usages had contrived to raise herself to the rank of empress, and would no doubt strive to transfer the sceptre to her children to the prejudice of the rightful heir.

Rustam, the vizir, a creature of Roxalana's, soured the mind of the sultan, and excited his jealousy, by his pompous panegyrics on Mustapha. Roxalana led Soleiman to believe, that his son was in league with the king of Persia, and he was to marry the daughter of monarch, and designed to declare himself independent. To prevent the success of the pretended conspiracy, Soleiman dispatched his vizir with an army to Syria. Rustam endeavoured but in vain to draw Mustapha to his camp. Soleiman repaired in person to Asia, and commanded his son to come and clear himself from the suspicions which were entertained of his designs. The young prince, though he had avoided Rustam's snares, would not disobey his father, and appeared before him. Djehanguyr, a son of Roxalana, alarmed in the highest degree for his brother, vainly attempted to skreen him from the sultan's cruelty; and finding that it was not in his power to preserve him, he resolved at least to share his fate. They were parted; and Mustapha, being disarmed, was strangled at the feet of his father. Djehanguyr entered, and, at the sight of the corpse of a brother whom he so dearly loved, he drew his poniard, and addressing the sultan: "Monster," cried he, "neither you nor my guilty mother deserve such children as we"—he stabbed himself to the heart, fell, and expired on the body of Mustapha. This fatal catastrophe filled the army with horror, and Rustam was obliged to withdraw himself by flight from the public indignation. Mustapha had a son who was likewise sacrificed by Roxalana. It was not till after the death of this fury, that Soleiman discovered Mustapha's innocence and the perfidious character of Bajazet her favorite son. The latter at length threw aside the mask, levied an army, and marched against his brother Selym, who was commander-in-chief of the sultan's troops. The rebel prince was defeated and fled to Frusa, where he was overtaken by the condemnation pronounced by Soleiman, and put to death with all his children.

The sultan then resumed his plans of conquest against the Christians. The Knights of Malta, in revenge for the loss of Tripoli, carried off great numbers of slaves from the Turkish coast, and annoyed its commerce. Soleiman resolved to besiege Malta. The knights on their side solicited and received succours from the Christian princes, and a barren rock became, in some measure, the object of an extraordinary conflict between the east and the west. The honour of it was destined to remain with the Christian name, and this rock was in fact the limit against which the triumphal car of the Turks was dashed in pieces for ever. A numerous fleet, commanded by Dragut, and carrying forty thousand men, surrounded the island, attempted a landing, and after a vigorous resistance took the fort of St. Elmo, which opened to him the entrance of the port; but the town itself withstood all attacks, and a fleet from Sicily landed seven thousand men sent to the assistance of the knights. The Turks were repulsed, driven from St. Elmo, and obliged to raise the siege on the 11th of September, 1564, after losing two-thirds of their number.

Misfortune continued to attend Soleiman's arms. Several of his expeditions failed. At length, conducting in person the siege of Sigeth, a small town in Hungary, the resistance which he met with, and which he was far from expecting, occasioned a violent paroxysm of rage, that terminated in apoplexy, of which he died in a few moments, on the 30th of August, 1566, at the age of seventy-six years and after a reign of forty-six. The grand vizir concealed this event, and dispatched a courier to Iconium to give Selym notice to come over and take possession of the throne.

The reign of Soleiman, who is called the Turkish Alexander, is considered by them as the most glorious of the Ottoman dynasty.

1566—1575.—SELYM II. (surnamed Mest, the Drunkard.)—Of all Selym's children, Soleiman alone survived. He hastened to Constantinople and thence to the camp at Sigeth, where he proclaimed at the same time the death of his father and his own accession to the throne; but his inauguration did not take place till the month of January 1568. As the new sultan had not bestowed the usual largesses on the janissaries, and had placed a different class of troops about his person, the former mutinied against him, and claimed the payment of what they termed a debt. After he had been weak enough to comply with the demands of this formidable body, he became sensible that war alone could rid him of it. He might have directed his arms against Spain, in favour of fifty thousand Mohamedan families, the remains of those conquerors who under Walyd I. made themselves masters of that country in the year 711. To escape the faggots of the Inquisition, which was not content with the external appearances of Christianity, this relic of a great nation, destroyed by the sword of the Christians, had entrenched itself on the most rugged mountain in the kingdom of Grenada, and thence implored the assistance of the sultan. He, however, chose rather to declare war against the republic of Venice, contrary to the advice of his vizir, and in spite of a treaty which the Venitians had faithfully observed. The Turkish fleet sailed for the island of Cyprus. The troops, landed without any opposition from the inhabitants, weary of the Venetian yoke. Two towns only, and Famagosta, Nicosia were in a situation to sustain a siege. Dandoli, the governor of the latter, solicited the aid of the combined fleet of Venice, the Pope, and Spain; but it arrived too late: Nicosia had already been pillaged by the Ottomans, who sent off part of the ships laden with booty, while the enemy's fleet, distracted by dissensions, never stirred to pursue them. On board one of these vessels were several young female slaves of high birth and extraordinary beauty, who were destined for the harem of the sultan. One of them proposed to her companions to prevent their dishonour by setting fire to the powder magazine; the plan succeeded, and they blew themselves up with the ship and the whole crew.

The fleet of the allies having failed in its object, dispersed.

VOL. XXIV. No. 1634.

The Turks closely pressed Famagosta, which, notwithstanding the most obstinate resistance, fell into their hands on the 15th of August, 1571. The rest of the island shared the same fate as the town, and the conquerors committed the most atrocious cruelties.

The confederates, who had left the foe abundant time to reduce the island of Cyprus, having united their force a second time, at length sent two hundred and seventy galleys to meet the Turkish fleet, which consisted of three hundred sail, and had entered the gulf of Lepanto. An engagement in so confined a space, could not be otherwise than terrible. The Christians, much more expert in manœuvring than their antagonists, broke the enemy's line, and their skill contributed, not less than their courage, to decide the victory. Don John of Austria, who at the age of twenty-four commanded the allied fleet, singled out and took the galley which had on board the capitan-pacha. He cut off his head, and placed it on the top of the mainmast of his vessel. Most of the Christian galleys gained a similar advantage; and though the Turkish fleet made a long and obstinate resistance, yet one hundred and sixty-one galleys and sixty other vessels were taken or sunk. Thirty-two thousand Ottomans lost their lives, and three thousand five hundred their liberty.

Mortified at his defeat, Selym, in a paroxysm of rage, issued orders for putting to death all the Christians residing in Constantinople. Mehemet, his vizir, deferred the execution of this rash command, which was revoked the following day.

The Porte knew better how to retrieve its disasters than the Franks to follow up their advantages. The treasures of the mosques were opened, and in a short time the Ottomans had a new fleet to oppose to that of their adversaries. They met off Cerigo, without coming to an engagement, and peace was concluded between the sultan and the Venitians.

The other events of Selym's reign, with the exception of the capture of Tunis by Sinan Pacha, are of little importance. The emperor, after reigning eight years, or rather living that time under the tutelage of his vizir, Mehemet, was carried off by an acute disease, induced by intemperance and debauchery, on the 23d of December, 1564, at the age of fifty-two years. His vizir kept secret his death as he had done that of Soleiman, to allow time for the arrival of Selym's son, Amurath, from Amacyeh.

1575—1595.—AMURAT III.—Amurat, aged thirty-one years, impatient to mount the throne, hastily crossed the Dardanelles, though the sea was tempestuous. This was the only danger to which he would ever expose himself during his whole reign. On reaching the gates of his capital at midnight, he made himself known and sent for the grand vizir. The latter dispatched a messenger to the sultana-valydeh, who went to meet her son, threw herself at his feet, and prayed for the prosperity of his reign. The following day, the death of Selym and Amurat's accession were made public. This day was stained by an atrocity which the Turkish style an act of policy, and which the head of their religion was not ashamed to authorise. Amurat caused his five young brothers to be put to death in the presence of their mothers, as well as two khasschkys, or concubines, whom his father had left pregnant. The mother of one of the young princes stabbed herself in despair, in the presence of the sultan. Amurat, wholly incapable of application to business, contributed as much as his father to render the power of the vizirs absolute.

After ensuring his own tranquillity in Europe, by blowing up the flames of discord among his neighbours, Amurath resolved upon a new war with Persia, in spite of the ill success which had attended former sultans. He was induced to adopt this measure, contrary to the advice of all his ministers, by the prediction of an iman. One hundred and fifty thousand men, whom he sent against the Persians, were defeated at the outset. The Turkish army then crossed the Kbanak or Carah-Sou, and overran the province of Chyrvan, but during the winter, the Persians, falling upon their foes while

2 R

dispersed

dispersed, recovered that province; and the Turkish general received orders to return to Constantinople, where he was stripped of all his employments.

Amurat strove to stifle in debauchery the thoughts of the disasters which befel his arms in Persia. This war, in which a third attempt proved as fruitless as the preceding, together with the continual change of vizirs, exhausted the public exchequer, and rendered it necessary to increase the taxes; while the frequent insurrections of the people and the janissaries kept the sultan a prisoner in his own palace. To recruit his finances, Amurat, by the advice of Ferhad, who from a low condition had successively risen to the most important posts in the empire, and was then vizir, augmented the imposts of the remote provinces, and extorted considerable sums from the Christians and Jews, upon the specious pretext of favouring their trade. He thought fit also to demand presents of Rudolph, emperor of Germany, who answered him by sending to the frontiers an army, which took Sigeth. This movement induced the sultan to conclude peace with Persia, which ceded Tauryz to the Ottomans.

It was high time to oppose the progress of the Christians. The archduke Matthias, general of the Hungarians, had taken, almost without resistance, the towns of Silek and Novigrade, in the month of March, and laid siege to Grom. The pacha who commanded in that place was killed in a sally. The garrison still held out, and the Turks arrived in time for its relief: they forced the enemy to an engagement on an unfavourable ground and with inferior numbers. The archduke was vanquished, and forced to flee into Croatia, where he rallied the wreck of his army, while the victorious Turks laid siege to Raab, or Javarin, one of the strongest fortresses of Lower Hungary. A large sum of money induced the perfidious governor to deliver up the place to them, on the 17th of September, 1594. The traitor afterwards had the imprudence to repair to the camp of the archduke, who discovering his guilt, sent him to Vienna, where he and his accomplices perished on the scaffold.

The Turks next invested Comorn; but the emperor Rudolph, having formed an alliance with Sigismund Battori, waywode of Transylvania, and Moldavia and Wallachia threatening to join this confederacy, the Turkish general proposed to the sultan to assume the command of his troops in person, or to place his eldest son, then twenty years of age, at their head. Amurat, who was jealous of him, and regarded him rather in the light of his rival than his heir, preferred doing violence to his indolent disposition, and declared that he would command the army himself in the ensuing campaign. All his exploits, however, consisted in his taking a journey to Adrianople, and there reviewing part of his troops. While they were filing off before him, a tremendous storm compelled them to disperse. Alarmed at the circumstance, Amurat consulted the soothsayers, who unable to devise any favourable interpretation of this perfectly natural phenomenon, excited in his mind apprehensions for his life. Nothing more was required to plunge Amurat into a state of languor from which he never recovered, and which brought on a fever, that carried him off on the 17th of January, 1595, at the age of fifty years, and after a reign of twenty.

1595—1603.—**МАХОМЕТ III.**, whom the jealousy of Amurat, his father, had kept aloof from the command of armies, was dreaded by all who had the means of knowing him in his retirement. He had manifested a cruel disposition and a readiness to punish. No sooner was he girt with the sword of Othman, than, upon pretext of securing himself upon the throne, he caused nineteen of his brothers to be strangled before his face; and ten *odahlycs*, or concubines, pregnant by Amurath, to be thrown into the sea.

The empire was in the greatest disorder. The capital threatened by famine, obliged the sultan to open the treasures amassed by Amurat, for the purpose of averting this calamity; but that of war succeeded. The waywodes of Transylvania, Moldavia and Wallachia, tributaries of the Porte, availed themselves of the protection of the emperor of

Germany to revolt. The Turks were beaten and lost several towns. Ferhad, the vizir, promoted for the third time to that office, ineffectually attempted the following year to recover Wallachia. He was pursued into Nicopolis, and lost a battle before that city, which was taken by the allies. This general, less fortunate than his predecessor, who had obtained pardon for his defeat, by sharing his immense wealth with the sultana-valydeh, was punished with the fatal cord. His successor, fearful of risking his fortune and his life in a war already so disastrous, prevailed upon his master to take the command of the troops. The sultan accordingly set out with great pomp from Constantinople, in the month of September, 1596, and put himself at the head of an army of 200,000 men, of which he formed several divisions. He first took Agria, in spite of the archduke Matthias, who did not hesitate to offer him battle, though his army was far inferior in strength; but superiority in tactics gained the advantage over numbers, and the guards of the Ottoman emperor being cut in pieces, he was himself exposed to imminent danger. The Turks abandoned their camp to the enemy. The cavalry, attracted by the richness of the booty, having dismounted, notwithstanding the repeated prohibitions of the archduke, was suddenly charged by the Turks. The victory was thus wrested from the confederates, who were obliged to retreat into Hungary.

Immediately after this engagement, the waywode of Wallachia, bribed by the sultan's gold, concluded a secret negotiation, by which he acknowledged himself a vassal of the Porte. On the other hand, Sigismund Battoria resigned to the emperor Rudolph all his claims upon Transylvania.

On the sultan's return, the plague broke out at Constantinople. Never had it yet made such ravages. Seventeen princesses, sisters of the emperor, died in one day, and a great number of sultanas and *odahlycs*, or concubines, were carried off. Mahomet himself had a slight attack of the disease. On escaping this danger, he relinquished the reins of government to his mother, the sultana-valydeh, and thought of nothing but his personal pleasures. The sultana soon abused her power, and bestowed her confidence on eunuchs, who employed their influence only in tyrannising over the provinces of the empire. Amid this anarchy, the French ambassador, M. Savary de Brèves, found means to be serviceable to his countrymen, and to obtain for them that justice which was denied to Mahometans themselves. At the peril of his life, he caused the Christian religion and its ministers to be protected, and enforced respect for the French flag, and he persuaded Mahomet to send an embassy to Henry IV.

In this state of things the spahys, indignant at being governed by a woman, threatened to burn the seraglio, unless its gates were opened to them. This tumult roused the emperor from his lethargy. He received the chiefs of the mutineers, who with vehemence represented their grievances, pointed out the abuses which enfeebled the empire, and demanded the heads of the eunuchs. Mahomet, trembling for his own safety, durst not refuse. The proscribed persons were brought forth and strangled on the spot. The troops, being now satisfied, dispersed, and the sedition was appeased; but the sultan called out the janissaries, who had taken no part in this disturbance, and ordered them to chastise the insurgents. The mufty, charged with favouring the spahys, was deposed; and his successor issued a fetva, or proclamation, declaring the spahys traitors to the emperor, if they did not instantly lay down their arms. This proclamation being published in the city, the gates of which were shut, most of the spahys dismounted from their horses, signified their obedience to the fetva, and delivered up their leaders who were put to death, and other officers appointed in their stead. This cavalry, thus humbled, retained a feeling of animosity against the janissaries, and continual fights ensued between them whenever they met in any number. To put an end to these disorders, the sultan removed all the spahys from Constantinople, and sent them against the Persians, who had retaken the province of Chyrvan.

While

While his numerous armies at once threatened Persia, the Asiatic rebels, and the German empire, the effeminate sultan, shut up in his harem, left the cares of government to his grand-vizir and his ministers. Plunged in debauchery of every kind, he exhibited, though in the prime of life, all the appearance of decrepitude. One of the sultanas, the mother of his eldest son, encouraged an impatience to reign in the heart of that young prince. His seditious expressions, with which the seraglio resounded, were repeated to the emperor, who condemned both the mother and son to die. Soon afterwards famine, which had terrified his subjects at the commencement of his reign, ravaged Constantinople for several months. It was succeeded by pestilence, and Mahomet, whose strength was completely exhausted at the age of 37, this time sunk under that scourge, on the 21st of December, 1603, after a reign of nine years.

1603—1617.—**ACHMET** (properly Ahmed) I.—This prince was only fifteen years old when he ascended the throne, in 1603. He was less cruel, but not less despotic than his predecessors. Achmet had a brother, whom he did not put to death, but was content with confining him in a prison, and with seizing the wealth of his grandmother, the valydeh, whom he sent back to the old seraglio; and with this money he bestowed gratuities on the troops.

Some pachas, taking advantage of the sultan's youth, attempted to shake off the yoke. The capitan-pacha was sent against the rebels, whose audacity was encouraged by a strong reinforcement of Persians. Calender, one of these pachas, after making himself master of Antioch, Damascus, and Tripoli in Syria, proclaimed himself sovereign of that province. The capitan-pacha, having no experience in military operations upon land, was defeated; and a small rebel squadron intercepted a convoy carrying the imposts levied in Egypt to Constantinople. The Ottoman admiral was summoned to give an account of his conduct, strangled before his arrival at court, and all his property confiscated.

This reverse induced the sultan to wish for peace with the emperor Rudolph, and the treaty of Vienna was signed on the 9th of November, 1606. Meanwhile, the self-created despot of Syria was extending his conquests in Asia. The grand-vizir passed over to that country, and efficaciously opposed the progress of the rebel, who, compelled, notwithstanding a vigorous resistance, to retreat to Erzerum, his capital, secured his treasures and fled to Persia. The vizir, highly appreciating the valour of Calender, strove to gain him over, and prevailed upon him to set out for the purpose of throwing himself at the emperor's feet and soliciting his pardon. From that moment all the provinces of Asia returned to their allegiance. Calender, on his arrival at Constantinople, was admitted to the presence of the emperor; he accosted him with a firmness mingled with respect, and obtained his pardon, and even the government of Temesvar in Hungary; but having two years afterwards retained part of the revenues of his pachalik, he was put to death in his palace and in the midst of his troops.

The grand-vizir then proceeded through Asia with his army, restoring tranquillity to its provinces, and received orders to march against the sofys; but learning that the emperor had been prejudiced against him, he repaired to the court, confounded his enemies, secured the approbation and confidence of his master, and returned to his camp, resolved to extinguish the last sparks of rebellion, and accomplished his object as much by stratagem as by force.

The archduke Matthias, having become king of Hungary in the life-time of his brother, the emperor Rudolph, renewed the treaties concluded with the Porte, which having thus no cause for hostility with Europe, renewed the war with Persia, which however produced no event worthy of record.

The grand signor employed his leisure in the erection of a magnificent mosque in the Hippodrome, close to that of St. Sophia, and surpassing that edifice in splendour. Domestic tranquillity was soon disturbed by a very slight cause. The muffy prohibited the use of tobacco; then recently introduced into Turkey, because it produces a kind of intox-

ication; but the partizans of that plant were so numerous, that they imposed silence on the imans and on the muffy himself. The plague having again broken out at Constantinople, the dogs, which are innumerable in that city, were accused of propagating the contagion; but the muffy espoused the cause of those animals and would not suffer them to be killed. They were therefore collected together and transported to an uninhabited island.

After an inactivity of two years, a long interval for the Turks to remain at peace, troops were sent into Moldavia, the new waywode of which had neglected to pay his tribute and seemed disposed to shake off the yoke. The defaulter was slain; and the sultan at the same time recovered Transylvania. The inhabitants had deposed their waywode, Batori, and invested Bethlem Gabor with that dignity. The latter, supported by the Turks, engaged his competitor, killed him and received from the Porte the investiture of Transylvania, as a vassal, and paid the tribute. The peace with the court of Vienna was not interrupted by this event.

Facardin (Fakhred-dyn) prince of the Druses, who at first took up arms to clear Syria from the banditti by which it was infested, gave in the sequel some alarm to the sultan; but after defeating the Turks, he offered to pay tribute, and the sultan confirmed him in his little sovereignty.

Persia, dissatisfied with the peace which she had signed, again had recourse to arms. Shah Abbas, who was ardently desirous of war, set out from Ispahan in 1616, marched against the Turks and routed them near Bassorah. Pursuing his victory, he recovered all that part of Asia Minor which his ancestors had lost.

Achmet, ashamed of remaining inactive in his palace, while Abbas was triumphing at the head of the Persian armies, prepared to take the field, but was seized with a violent disorder, which put an end to his life on the 15th of November, 1617, in his 30th year, after a glorious reign of 14 years.

1617—1618.—**MUSTAPHA** (properly Mousstapha) I.—During the reign of Mahomet III., Achmet, confined in a narrow prison with his brother Mustapha, and exposed to the same dangers, promised to spare his life, if fortune should ever raise him to the throne. He did more than keep his word; for when, after a reign of 14 years, he found himself at the point of death, and considering that all his children were still very young, this prince sent for his ministers, and told them that he was authorised by the example of the khalys to chuse the eldest of the imperial race for his successor; and he therefore desired, for the good of his subjects, that his brother might fill the throne after his death. Accordingly, no sooner had Achmet closed his eyes, than Mustapha was proclaimed emperor. It was soon found that a worse choice could scarcely have been made. A long captivity during the two last reigns had impaired the intellects of this prince. Manifesting a strong antipathy to women, and prodigal without motive, he indulged the most childish whims: conferring wealth all at once upon those who had no kind of merit to recommend them, or appointing persons wholly incapable to the most important posts, he highly enjoyed the surprise and embarrassment arising from so unexpected a change of fortune. To such a length did he carry these frolics, that he gave the pachaliks of Cairo and Damascus to two itchoglans, who were mere children.

The sultana-valydeh, incensed at the aversion which the emperor displayed for her sex, and at the little influence which he allowed to herself, soon conspired against him. The ministers, convinced of the sultan's utter incapacity, excited the janissaries and spahys to insurrection. A rumour was circulated that he designed to strangle his nephews; and the people demanded his deposition, for the purpose of raising to his place a son of Achmet's, whose memory was dear to them.

1618—1622.—**OTHMAN** II.—The life of Mustapha was spared. He was shut up in one of the towers of the seraglio on the 17th of March, 1618, and prince Othman, twelve years of age, appeared among the people, who approved by their acclamations the choice of the soldiery.

The ministers calculated upon governing in the name of this boy. The grand-vizir put himself at the head of a powerful army, which was raised by the emperor Achmet, and had been long waiting to be led into Persia. The young sultan was left under the care of an ambitious lawyer, who had been his preceptor.

The zeal of the young sultan for the observance of the laws of the Prophet was extreme. He was shocked at the frequent use which the Turks made of wine, and ordered the delinquents to be put to death. As it happened, almost all those on whom this punishment was inflicted were janissaries; and hence arose a bitter hatred between the latter and their emperor.

Meanwhile success attended the arms of the grand-vizir; he retrieved in Persia the losses which the Turks had there sustained, and obliged the sofy to conclude peace. The young prince felt an ardent desire to signalize himself. The waywode of Transylvania, who had gained some advantage in a war against Austria, allied with Poland, proposed to him to besiege Vienna; but the sultan, adhering to the treaties which subsisted between the two empires, resolved to attack the Polish monarch, Sigismund, only. He accordingly marched toward that country at the head of 300,000 men, and attacked Vladislaus, Sigismund's son, near Khocsim. The Turks, repulsed with loss, could not even gain possession of a castle which stood on the summit of a steep mountain. It was the wisest policy in the Poles to weary out their enemy; they daily routed in detail the different corps of Othman's army, who persisted in blockading the enemy's camp. He resolved at length upon a general assault. The janissaries, thrice repulsed with slaughter, received orders to charge a fourth time; and when the vizir represented that the flower of the army would be thereby sacrificed, the sultan angrily replied: "When I have lost the asses, I will supply their place with horses." This expression, being repeated to the janissaries, contributed in an equal degree with the murder of one of his brothers, for which he issued orders, to the catastrophe which shortly afterwards befel him. As the repeated attacks of Othman continued to prove unsuccessful, conferences were opened, and peace was concluded.

A report was soon spread that the sultan intended to disband the corps of janissaries, and perhaps to employ the pretext of a pilgrimage to Mecca, in order to transfer the seat of the empire to Damascus. In spite of the remonstrances of the mufty and all the grandees, he insisted on marrying the sister of sultan Mahomet III., who was already the wife of a pacha. All Constantinople was filled with indignation. The mufty published a fetvah declaring the marriage incompatible with the dignity of the throne, and the journey to Mecca adverse to the welfare of the state. This decree, in fact, authorized rebellion. The sultan, being informed that the janissaries and spahys were ready to rise, abused the effendys who had come to remonstrate with him. The troops immediately beset the seraglio, put to death the grand vizir, and demanded Othman's uncle, sultan Mustapha, again for their emperor. They broke open the prison in which that unfortunate prince was confined and removed him from it. He was recognized by the effendys, and conducted to the old seraglio.

At this intelligence the rage and obstinacy of Othman were converted into despair. He had recourse to intreaties, but it was too late. He quitted the seraglio with some officers who were cut in pieces before his face: he would then have turned back, but was prevented and forced into a mosque, where his rival had just girded on the sword of Othman; but when Mustapha beheld the young prince surrounded by several officers approaching, under the idea that he had gained over the soldiery, he fell at his feet and implored his mercy. "Is this the master ye prefer to me?" cried the unfortunate Othman, with a sarcastic smile, and loudly expressing the contempt which such a competitor excited, he endeavoured to retrieve his fortunes, but was interrupted by the shouts of the people, who declared that his reign was at

an end, but that his life should be spared. Notwithstanding this promise, the new vizir, the principal instigator of this revolution, caused him to be strangled the following day, May 20th, 1622, in the castle of the Seven Towers, to which he had been removed.

1622—1623.—Mustapha had not during the interval of his deposition, become more worthy of the throne. The sultana-valydeh and the grand-vizir assumed the supreme authority. The latter would have taken away the liberty and perhaps the lives of Othman's brothers, but the seraglio rose against him and he was obliged to flee. The pachas of Asia took advantage of this state of affairs to rebel. Anarchy was at its height, when the grandees of the empire assembled and resolved to chuse a new master, in whose name the government might be administered. As the election could fall only on one of Achmet's children, they chose Amurat, the eldest, then 15 years of age. He at first modestly refused the proffered dignity; but the troops, having been prepared by the aghas for this change, repaired to the first court of the seraglio, shouting, "Long live Murad!" The young prince then went down to the divan, and addressing the assembly with great majesty, he recommended to the mufty and the vizir to enforce the laws and to re-establish order, which had been too long interrupted in the empire. Mustapha was again shut up on the 10th of September, 1623, in his former place of confinement.

1623—1640.—AMURAT IV.—The first use that Amurat made of his authority was to perform an act of justice and severity; he condemned the pacha of Cairo to death. He then directed his attention to the re-establishment of the finances; for the affairs of Europe and the rebellion of the Asiatic pachas required a considerable expenditure. The Tartars of the Crimea having manifested a disposition to shake off the yoke, the capitan-pacha collected the whole naval force against those people, while the grand-vizir marched toward Amacyeh, against Abazah, pacha of Erzerum, one of the insurgents. The capitan-pacha, having landed at Kaffah, the capital of the Crimea, his troops falling into an ambuscade were almost all cut in pieces, and such as were fortunate enough to escape precipitately re-embarked. The Cossacks, taking advantage of the absence of the Turkish fleet, penetrated into the Bosphorus, struck terror into Constantinople itself, and plundered and burned all the adjacent villages. The Turks were forced to secure the entrance of the port with an iron chain; and the fleet of the capitan-pacha, which was hastily recalled, had great difficulty to disperse these pirates. The state of affairs in Asia was not more prosperous. To crown all, the janissaries who remained in the capital excited fresh disturbances; they murdered the caïmacam, and could not be appeased without the distribution of money; but Amurat afterwards caused the mutineers to be secured and their heads struck off.

The Persians meanwhile entered the Ottoman territory at several points, and overran Dyarbekir, Palestine, and Arabia; they even made themselves masters of Médina, and were advancing upon Trebisond. Amid these disasters, Amurat found a wise minister, in whom he could repose confidence, and conferred on him the post of the caïmacam, who had been put to death by the janissaries. This officer, whose name was Hafez-Ali, restored order in the finances, and advised his sovereign to shew himself frequently to the people and the janissaries, that he might excite their respect and affection for his person. The sultan mingled in the sports of the soldiers, and sometimes won the prize in contests with the bow and the djeryd.

The Ottoman troops having been beaten in Asia, the vizir, to whom were attributed all these disasters, was sacrificed. The caïmacam, who was appointed his successor, exhorted the sultan to listen to the overtures for peace made to him by Persia, and to take advantage of this negotiation to draw the rebellious pacha away from the interest of the sofy. The emperor received the homage of the rebel, who, in the sequel, rendered him important services.

At this juncture Shah Abbas died, in 1628; and having left

left the reins of government in the hands of a son, incapable of guiding them, the Ottomans determined to prosecute the war, and the grand-vizir set out for Mossul, which was the rendezvous of his army.

The Ottoman army at first gained some advantages over the Persians, and was afterwards beaten. Hafez-Ali, already advanced in years and worn out with the toils of so harassing a war, was attacked by a mortal disease. He immediately wrote to his master, advising him to make peace, and died a few days afterwards, in 1631. Amurat sincerely lamented the loss of this excellent minister, and complied with his last exhortations.

Some commotions in Transylvania, occasioned by the Poles, were soon quelled; and Amurat, who was yet but 24 years old, having restored peace to his empire both at home and abroad, resolved to shew himself worthy of commanding his troops, by whom he was feared and respected. Pretexts were not wanting for renewing the war with the Persians. The prince therefore put himself at the head of his army. He shared the fatigues of the soldiers, prevented excesses on the march, and laid siege to Revan, which was surrendered by the governor. Amurat sullied this first success by the death of his brother Bajazet, of whom he had become jealous.

The army which the sultan had left behind in Europe was unfortunate. He returned to that quarter, retrieved his affairs, and received tribute from a new waywode of Transylvania, while his generals followed up the advantages which he had gained in Persia.

During these operations, the Cossacks reduced Azof, and the sofy, in the middle of winter, retook Revan. The plague, which broke out in Constantinople and ravaged all Anatolia, was a great impediment to Amurat's exertions. He was himself ill of the gout; and immediately on his recovery, he again put himself at the head of his army in Persia. On Christmas day, 1638, he entered Bagdad, but before he set out on his return to Constantinople, he gave permission for the sacking of the unfortunate city. Twenty-five thousand persons of both sexes and all ages were butchered on this occasion.

The affairs of Europe demanded the emperor's attention. A quarrel had arisen between the Porte and the republic of Venice. The envoy of the latter was thrown into prison, and though in confinement, he had the glory of concluding a treaty which prevented a war. Peace with Persia soon followed, and the empire became more and more flourishing, while the health of the sultan gradually declined. Excessive intemperance in regard to wine and strong liquors brought on dropsy, the progress of which was very rapid. Finding his end approaching, he desired to see his brother, that he might give him advice respecting his future government; but as it was feared that in one of the gusts of passion to which he was extremely subject, he might take away his life, the sultana-valydeh kept Ibrahim aloof from his brother's apartment.

Amurat died on the 8th of February, 1640, at the age of 31 years.

1640—1648.—**IBRAHYM.**—This prince, of a weak constitution and a timid disposition, had become still more fearful after Amurat put to death his brother Bajazet. When he was sent for to be placed upon the throne, he imagined that his last hour had arrived, and mistook the acclamations of joy for shouts of uproar. He displayed so little firmness and dignity during the ceremony of his inauguration, that the people thence deduced an unfavourable omen for his reign. Released from a severe captivity, this prince immediately plunged into voluptuousness and debauchery, relinquishing the affairs of government to his vizir and the sultana-valydeh, who overheard unseen the deliberations of the divan.

The empire appeared flourishing, but its chief was not respected, and the intrigues of the seraglio had an influence upon the government of the whole empire. The qyzlar-agma, the chief of the black eunuchs and superintendent over the women of the seraglio, occasioned the celebrated war of

Candia. This officer, to gratify a luxury equally useless and cruel, had a great number of women in his harem. He purchased one, who, being pregnant, produced a son. This female was selected for the nurse of the young prince Mehemet. The emperor conceived a strong attachment for her and her child, who was called the son of the qyzlar-agma. The favourite sultana having obliged the feeble monarch to remove the objects of her jealousy from his court, that officer solicited permission to perform a pilgrimage to Mecca with his reputed family. He travelled with such pomp, that the people concluded it must be a sultana and a son of Ibrahim's, whom he was sending to Mecca; and the presence of the chief officer of the seraglio gave plausibility to the rumour. He embarked for Alexandria with a squadron, which on entering the Archipelago, was overtaken by a tempest and obliged to bear away for Rhodes. The news of the appearance of so rich a prize having reached Malta, the galleys of the order were dispatched to intercept the squadron bound to Alexandria. They fell in with it; a bloody conflict ensued, in which the eunuch was slain, and the knights took the squadron which he commanded. After touching at Candia to refit, they returned in triumph to Malta, persuaded they had a son of the Turkish emperor in their power. The report spread and was believed by all Europe. The child was treated with the honours that were thought to be due to the son of a great sovereign. The truth however was soon known, and the supposed prince quitted Malta.

The rage of Ibrahim, on receiving the intelligence of the capture of the adopted son of the qyzlar-agma, was sufficient to authorise the belief that the Maltese had really taken a child of his own. He swore to destroy that haunt of pirates, and a formidable fleet, commanded by Yusuf, the capitan-pacha, set sail in 1645. On reaching Candia, there was nothing to prevent the Turkish troops from landing and laying siege to Canea, which was found incapable of making a long resistance, any more than Retino, the governor of which was slain in the breach. The Venetians who had now nothing left but the city of Candia, implored the aid of the Christian princes, but could not obtain any, because each power laid claim to the honour of the flag.

But Ibrahim had soon to encounter a more dangerous foe. The sultan, more engrossed by the concerns of his family than those of government, married his daughter, scarcely four years of age, to Yusuf, the capitan-pacha, who was immensely rich. Ibrahim, accustomed to consider the wealth of all his subjects as belonging to himself, determined to secure Yusuf's property for his daughter, and soon caused him to be strangled upon some slight pretext. The pacha was beloved by the troops, who mutinied and exclaimed loudly against a prince equally blood-thirsty and effeminate. Some nocturnal executions imposed silence on the malcontents. One of his emissaries having spoken in high terms of the beauty of the mufty's daughter, he demanded her of her father, and on his refusal caused her to be carried off while going to the bath attended only by a few women. She was dragged to the harem, where she was violated by Ibrahim, and then sent back to her father. The mufty cherished in his heart the strongest resentment of this outrage, and resolved to revenge himself. Of the janissaries, he heard the murmurs, and did not fail to encourage them: he assembled all the mollas, and the officers of the janissaries and spahys, in the mosque called Ortah Djami. The emperor sent the bostandjy-bachy, and the capydjy-bachy to disperse the assembly; they were admitted into the mosque, and the mufty delivered to them a fetva, proscribing the grand vizir, whose head they required before they separated. The sultan's officers returned to him with this answer. Ibrahim refused to comply with the demands of the malcontents, on which the mufty appointed another vizir, and sent him with all the effendys and officers to the seraglio, into which they were introduced; but Ibrahim fell furiously upon the new minister; the deputies having rescued him from the sultan's rage withdrew in disorder from the palace. The people then

cried out that the sultan himself must be deposed. The janissaries secured all the gates of the city; the troops at night surrounded the seraglio; the old vizir was brought forth, declared a traitor, and put to death. Next day another meeting was held in the mosque of St. Sophia. The mufty addressed the assembly and painted in strong colours the misfortunes of the empire, and the vice, and incapacity of its ruler. The new grand vizir proposed the issuing of a fetva, requiring the emperor to appear before his people and to account to them for his conduct. The fetva was carried to Ibrahim, who tore it in pieces, and threatened to make an example of the mufty; but when the agha of the janissaries represented to him, that the life of his highness was in much more imminent danger than that of the head of the Mahometan religion, his rage was suddenly changed to fear. He implored, but in vain, the aid of the officers around him, and fled for protection to the apartments of his women. He was brought forth and conducted before his judges. The mufty loaded the violator of his daughter with reproaches. It was agreed that the sultan's life should be spared; he was therefore thrown with some old female slaves into a prison, the doors and windows of which were walled up, and in which a single aperture only was left for the introduction of food. The public criers immediately published in the capital the accession of Mahomet IV., who was but seven years of age. The implacable mufty ordered the old sultan to be strangled.

1649—1687.—**MAHOMET IV.**—The troops learned with anger that they had been made instrumental to a murder which they would fain have prevented. The mufty had the art to throw all the blame on the vizir, who was punished for it. Synan-pacha was appointed in his stead; but he was disliked by the sultana Kieuzel, who gained over the agha of the janissaries and concerted with him the deposition of Mahomet IV. and the elevation of Soleiman, the younger brother of that prince, to the throne. The politic mufty resolved to espouse the cause of the stronger party, and awaited the event. The agha of the janissaries collected troops, and Synan the vizir, being surprised at night, and obliged to attend this meeting, affected to enter into the views of the rebels. Upon pretext of convoking the divan, he demanded permission to repair immediately to the seraglio, the gates of which he found shut: he ordered them to be again closed after him, and employed the rest of the night in barricading himself there, and in arming the troops and all the persons belonging to the household of the sultan. By his command the young sultana-valydeh was awakened, and conducted to the chamber of her son who was still a child. The murmurs raised through the whole seraglio in spite of the endeavours of those who wished to stifle them, the light of torches, the terror expressed in every countenance, and the imminent danger which all these things bespoke, filled the young sultana with terror, and mingling her tears with those of her son, she incessantly exclaimed "O my child, it is all over with us." The emperor of the East, whose ordinary titles are *Lightning of Heaven and Terror of the World*, hid his face in his mother's bosom, and seizing the hands of the grand vizir, cried: "Save us, father, save us." Synan did his best to cheer them, and ordered the throne of the young emperor to be placed in such a manner as to be exposed to the view of those whose duty it was to defend it. The prince, in walking to the spot where the throne was raised, saw the bodies of the bostandjy-bachy and the qyzlar of Kieuzel, who had been strangled, extended on the ground. This spectacle increased the terror of the child, which was at its height, when the baltahdjys put to death in his presence a white eunuch, master to the chamber of Kieuzel. The blood of this unfortunate man, who had fallen at the foot of the throne, sprinkled the infant emperor, who, unable to support the horrible sight, sought refuge in the arms of the grand vizir. Some of the itchoghblans perceiving a veiled female behind the gauze that covered the *dangerous window*, from which the sultan can observe every thing without being himself

seen, imagined that it was the sultana Kieuzel, and insisted that she should be secured. The affrighted woman, forgetting the laws of the seraglio, immediately drew back the gauze curtain, threw aside her veil, and showing her face bathed in tears, "I am not Kieuzel," cried she, "but the real sultana Valydeh, the mother of his Highness;" then descending in haste she rushed through the crowd and ran to embrace the knees of her son. The vizir presented the young Mahomet to his future defenders, and made them take the oath of allegiance to him. The mufty declared by a fetva that the sultana Kieuzel must die. A decree drawn up by the vizir and signed with a trembling hand by the young emperor, purporting that she should be strangled, but that her body should neither be bruised with blows nor cut with the sword. She was strangled, and her partisans were afterwards put to death. Synan's boldness was attended with success equal to the most sanguine expectation. The janissaries deserted their agha and his supporters, who were put to death, and order was restored. The vizir, who had rendered his master such essential service, met with a fate he did not merit. The relatives of those whom he had sacrificed to the welfare of the state having met with him one evening almost unaccompanied, stabbed him and had time to escape.

The first years of Mahomet's reign were marked by all the disorders that might be expected in a state without a master. In the course of seven years, six vizirs were deposed or strangled; pachas rebelled; and the spahys and janissaries cut one another's throats for the sake of the property of the chiefs whom they had proscribed. The Turkish fleet was several times beaten by that of the Venetians, who, however, had not the promptitude to follow up their advantages and drive their enemies out of Candia.

Meanwhile the sultana-valydeh quietly educated the young emperor in the recesses of the seraglio; and in concert with the divan she at length chose the aged Mehemet Kiuperly, who had always been beloved and respected by all parties, for grand vizir. The wise minister devoted his attention to the re-establishment of internal tranquillity and the means of ensuring prosperity to the arms of the empire. He began by separating the spahys from the janissaries, as the association of those two bodies tended only to perpetuate discord, and dispersed the former in the provinces. The Venetians were victorious in the Bosnia, where they had driven back the Ottomans to Saraï, the capital of that province. Kiuperly was content to keep them in check in that quarter, and sent more considerable reinforcements to the army in Candia. Moncenigo, the admiral of the republic, after defeating the Ottoman fleet, took, in 1659, the island of Tenedos and Lemnos. The Venetians then made overtures for peace; but Kiuperly would not listen to any accommodation, unless they would evacuate the island of Candia. In a subsequent naval engagement, Moncenigo was slain, and this irreparable loss to the Venetians opened all the seas to the Turks, and Tenedos and Lemnos soon fell again into the possession of the Porte.

When the emperor had attained the age of fourteen years, Kiuperly thought it time to show him to the troops; he therefore took him to Adrianople, then the general rendezvous of the army. Meanwhile the pacha of Aleppo hoisted the standard of rebellion, and gave out that a son of Amurat IV., proscribed by Ibrahim, had been concealed by his mother and saved from the researches of his executioners. This pretended prince was twenty years of age. The love of novelty soon collected an army round this impostor, who assumed the insignia of royalty. Mahomet's troops proceeded towards Smyrna; those of the usurper advanced by forced marches. Kiuperly, conceiving them not so strong as they really were, sent against them only ten thousand men, who were beaten; he then went to meet them himself with the main army. The battle was fought in the presence of the young emperor; the rebels were dispersed, and the pacha of Aleppo, as well as the spurious sultan, being taken in their flight, were condemned and put to death.

Commutations

Commotions having broken out in Transylvania, Kiuperly prepared to lead a powerful force into that country, when death overtook him at Adrianople, where he had persuaded his master to fix his residence. The young prince, sensible how serviceable Kiuperly had been to his authority, in 1661 appointed his son, Achmet Kiuperly, to the post of grand-vizir, as much from choice as gratitude. By a judicious mixture of mildness and severity, this minister caused himself to be as much respected as his father had been before him.

The troubles in Transylvania continued. The emperors of the east and west each of them appointed several waywodes to govern that country; the two powers, being unable to adjust their differences by a treaty, prepared for war. The Ottoman armies approached the frontiers of Hungary; but the emperor of Germany sent, for the defence of that country, the celebrated Montecuculli, whose experience and resources were of more value than a numerous army. The great object of this able general was to conceal from the enemy the small number of his troops, which he had distributed along the Danube to defend the passage of the river, which he seemed to multiply by marches and counter-marches. Kiuperly commenced operations with the siege of Neuhausel, which he took on the 27th of September 1663. He then divided his cavalry, composed of spahys and tymariots, into several detachments, and sent them to ravage the Austrian dominions to the very gates of Presburg and Vienna. Levents, Novigrad and Nitra surrendered almost without resistance, and the grand-vizir was foiled only before the fortress of Scinta. Consternation pervaded Vienna. The representation of the emperor Leopold to the diet procured him some troops from the circles; but there was no harmony among the different corps; and till Montecuculli took the command of this army it was without confidence and without discipline. That general, apprized by his spies of every motion of the Turks, removed his head-quarters towards St. Gothard, and from that point covered alike both Styria and Austria. Kiuperly, having already attempted in vain the passage of the Raab, far out of sight of the hostile army, found that he could not accomplish his purpose by open force. On the 1st of August, 1664, the Austrians encamped on the opposite side of the river, suffered fifteen thousand Turks to cross, and then charged them with fury. The janissaries and spahys threw themselves into the river to hasten to the assistance of their comrades; their valour long rendered victory doubtful, but it was at length won by the efforts of the Austrians, and above all by the talents of their general. The loss of the Turks amounted to twenty-one thousand men, while that of the Imperialists was estimated at only four thousand. The sultan was the more keenly mortified by this defeat, as he had calculated upon a victory, and, on the assurance he had received from Kiuperly, had given directions for magnificent rejoicings which were turned to mourning. The consternation extended to the divan, which advised the speedy conclusion of peace.

Montecuculli, following up his victory, was pursuing the Turks in their retreat, when he received orders to suspend hostilities, and was informed that the Porte had made proposals for peace. A treaty was actually negotiated on conditions that were hard for the Hungarians alone. The defeat which Kiuperly had sustained occasioned no diminution of his influence, since the treaty was advantageous to the Ottomans, who retained some of their conquests.

The war in Candia still continued, though the Turks, after being for twenty years in possession of Canea and Retino, had made no farther progress. Kiuperly directed his views towards the reduction of Candia, the capital of the island. The Venetians had made such additions to the fortifications of that city, that the harbour was absolutely inaccessible. They had drawn together for the defence of the place a great number of volunteers of all nations, and French gentlemen in particular. The war in Candia has been compared with the Trojan war; it resembled the latter in its duration and

in the briskness of the last siege, which continued upwards of two years, and was one of the most bloody recorded in history. Military engineering was there carried to a high pitch of perfection, and all the efforts of the Turks failed against the improved art of defence. One hundred and ten thousand men had already perished before this fortress; but the Turkish army was incessantly receiving fresh reinforcements, while the irreparable losses of the Christians amounted to thirty-one thousand. Louis XIV. had promised farther succours in men and money, which had even sailed from Toulon, when a Greek, drogoman to the Porte, invented a falsehood most calumnious to France, to induce the Venetians to capitulate. This treacherous Greek declared, that he had seen a letter from the French minister, in which Louis XIV. promised to join the Porte; adding, that the expected succours were destined to strengthen the Ottoman fleet. Accordingly, the following day, six vessels under French colours were seen entering the harbour of the Turks. These ships were French only in appearance, and had been detached the preceding night from the Turkish squadron. Consternation did not the less pervade the feeble remnant of the defenders of Candia; and the grand-vizir having offered Morosini, the governor, an honourable capitulation, that officer deemed it prudent to accept it, on the 16th of September, 1669. The prisoners were liberated on both sides, and the Venetians evacuated Candia, leaving to the conquerors the ruins of a city without inhabitants.

The news of this important capture, which terminated the war, filled the whole Ottoman empire with exultation. Great rejoicings were made, and Kiuperly, after adopting measures for re-peopling the ruined city, returned to Adrianople, where he was hailed with universal acclamations.

Mahomet received about this time an embassy highly honourable to the Porte. The cossacks of the Ukraine, vassals of Poland, and smarting under its yoke, solicited the protection of the emperor of the east. A fetva of the mufty declared it lawful to attack Poland, unless that power should grant a durable peace to the Cossacks, the allies of Turkey. The emperor set out in person at the head of a powerful army, marched through Transylvania and Wallachia, crossed the Dniester and entered Podolia, where Kiuperly resolved to lay siege to Kamienieck, the capital of the province.

Poland was at this juncture distracted by civil broils; Michael and Sobieski contended for the crown. The latter opposed an army of Tartars which, in concert with the Ottomans, were ravaging the country. He defeated them several times, but could not prevent Kamienieck, one of the strongest fortresses in Europe, from falling into the hands of Mahomet, on the 22d of August, 1672. Kiuperly then advanced towards Leopoldstadt, which made but a feeble resistance. King Michael, trembling in Lublin, where he had shut himself up, was jealous of Sobieski's victories, and unwilling that the country should owe its salvation to him. The loss of Leopoldstadt induced him to listen to the proposals of the Turks, and he concluded a hasty peace. The indignant Sobieski exclaimed against this infamous treaty, which he regarded as null and void, and advanced toward Khoezim, on the right bank of the Dniester, where the enemy had fortified themselves. He attacked them, destroyed a bridge to intercept their retreat, penetrated into their camp, through which he spread dismay, and drove them from it. The Turks lost great numbers in crossing the river, and retired in disorder towards Kamienieck. Sobieski summoned the citadel of Khoezim to surrender, and allowed the garrison to march out with the honours of war. This able general was then advancing at the head of his victorious army, when he received intelligence of Michael's death. This event saved Kamienieck. Sobieski, being called away to Warsaw on more important business, was elevated to the throne of Poland, which he had so valiantly defended.

Kiuperly knew too well with whom he had to deal not to reinforce his army. He ordered the Tartars to march towards the Ukraine, and selected from among the janissaries twelve thousand serdengielchdis (men devoted to death) corresponding

responding with what was formerly called the *forlorn hope* in the European armies. This corps was destined for the most perilous enterprises. The new king of Poland, being deserted by the Lithuanians, was obliged to go into winter-quarters, and the operations were suspended on both sides.

The sultan was meanwhile indulging at Adrianople in the display of all the profusion of Eastern magnificence, on occasion of the marriage of his daughter, and the circumcision of two of his sons. The festivities were interrupted by an event which the whole empire had reason to deplore. At the moment of re-commencing hostilities in 1678, Kiuperly was attacked by a violent and mortal disease, in the forty-seventh year of his age, after he had governed fifteen years with equal wisdom and success. A longer administration might perhaps have changed the manners of this people, to whom he set an example of virtue.

Carah-Mustapha, his brother-in-law, who had served under him, was appointed his successor. The war in Poland was prosecuted with less vigour, and Sobieski, though he had but a small number of troops, kept in check the whole Ottoman force. At length, confined in his camp, in which want began to be felt, the king of Poland, who returned no other reply to repeated summonses than—*Conquer or die*—thought of cutting his way through the enemy's army; and he would have accomplished his design, had not the Turkish general received orders to put an end to the war, in which the European powers threatened to take part. Sobieski concluded peace on honourable and advantageous conditions. It took but a few days to adjust the terms between the two nations, and upwards of six months to settle the ceremonies to be observed in regard to the ambassador who brought the ratification of the treaty.

Carah-Mustapha possessed the same power, but not equal talents with his predecessor. His intolerable pride and his severity alienated the minds of the Cossacks, who had recently become vassals of the Porte. They now placed themselves under the protection of Russia. The Turks were beaten in several rencounters by the Russians and Cossacks. In another quarter, the Hungarians loudly summoned the Turks to their aid against the emperor of Germany, who treated them as rebels and infringed their privileges. They were headed by the young count Tekeli. The divan opposed the design of declaring war against Austria. Carah-Mustapha nevertheless prevailed upon his master to adopt that measure, and dispatched succours to Tekeli. The vizir, having gained an accession of power by his marriage with one of the emperor's daughters, set out in 1683 for Adrianople, where the army was assembling. It consisted of Tartars, Wallachians, Moldavians and Hungarians, and amounted to one hundred and eighty thousand, or according to some historians, two hundred thousand men. It first marched towards Belgrade, and after passing the Saave, a council was held. Carah Mustapha was for proceeding directly to the Austrian capital. Tekeli opposed that plan; and they were marching towards Raab, when news arrived that the imperial family had quitted Vienna. It was then decided that they should lay siege to that capital.

The duke of Lorraine, the emperor's brother-in-law, commanded the Austrian army, which was then engaged in the siege of Gran, a fortress designed for a bulwark to Germany. That prince had time to throw into Vienna eight thousand men under the command of count Starhemberg, while he himself encamped with his troops in the island of Leopoldstadt: but this prudent general, fearful of being shut up in the island, quitted it the day before the arrival of the Turks, broke down the bridges, and chose a more advantageous camp at some distance from the city, where he waited for the reinforcements which he expected from Poland, Bavaria, and Saxony, while a corps, which he had detached from his army, defeated count Tekeli in Hungary.

The siege of Vienna was opened: the fire of the batteries did great damage to the ramparts; but the duke of Lorraine continually sent out detachments which harassed the enemy and destroyed their works. The siege was protracted through

the fault of the grand vizir; and this gave Sobieski time to arrive with the Bavarian and Saxon contingents, and the besieged were informed by signals that they should soon be relieved. Sobieski immediately prepared to give battle to the Turks. Accompanied by the duke of Lorraine, he crossed with his artillery a chain of mountains which separated him from the rich Turkish camp pitched in the plain before Vienna, and fell unawares upon the advanced posts of the Ottomans. The duke of Lorraine broke the enemy's left wing and put it to flight. The spahys, with the vizir at their head, long maintained their ground, but were finally borne down by the torrent of the fugitives, and Sobieski completed the rout which he had begun. He marched his army in good order to the trenches which surrounded the city, made himself master of them, and Vienna was delivered on the 11th of September, 1683. The Turkish camp, being given up to the soldiers, yielded them an immense booty. Count Starhemberg came out at the head of the garrison of Vienna, to thank their deliverers, and Sobieski triumphantly entered the city by the breach which the Turks had not dared to scale.

The fugitives reassembled in the camp which they had left near Raab. Sobieski pursued them, but he learned that an enemy, though beaten, is not always to be despised: the Turks charged him vigorously when he least expected it, threw his troops into confusion, and the king himself was in danger of losing his life or his liberty. Fortunately the duke of Lorraine came up to his assistance, and the Ottomans had the prudence not to risk the fruit of their victory. Sobieski soon had his revenge; he drove the enemy into the Danube, and took Gran and Cestlin. The grand vizir found himself necessitated to fall back to Belgrade.

When these disasters and the immense losses which reduced so mighty an army to less than half were known in Constantinople, the utmost consternation prevailed. Carah-Mustapha attempted to justify his conduct; but the divan and the whole body of the ulemas, as well as the janissaries, were vehement against him; and the emperor, notwithstanding his attachment to this minister, was constrained to affix his khatty-cheryf to the sentence which doomed him to perish by the bow-string. Two persons only, the tchaouchbachi and the capydjy-kihaya (the chief officer and lieutenant of the guard of the interior of the seraglio) were charged with its execution. They went and demanded the head of the most absolute minister of the empire, who still had the command of eighty thousand men, accustomed to tremble in his presence. But Carah-Mustapha was feared only, and the troops rejoiced at the arrival of these officers. The vizir received with firmness the order to resign the seals; but he could not read his condemnation without accusing his sovereign of ingratitude, and uttering imprecations against fortune. Sensible, however, that resistance would be fruitless he ejaculated a short prayer, and put the fatal cord round his neck with his own hands. His head was carried to Constantinople, and exposed to the view of the people and of the soldiery, who were appeased by this sight. Several great officers refused the post of vizir. The caïmacam at length trembling accepted it, and sought means to withstand the enemies of the empire, but he was not successful, and the Turks by their arrogance brought fresh foes upon themselves. The republic of Venice declared war against them. The Ottoman fleet was in a wretched state; that of the Venetians, under the same Morosini who had defended Candia, reduced St. Maura, and placed a garrison in Prevesa, which commands the entrance of the gulf of Arta.

The empire was attacked on all sides. The duke of Lorraine, at the very outset of the campaign, took Vingrade. He offered an amnesty to all the Hungarians who should abandon Tekeli. Several nobles in consequence renewed their allegiance to the house of Austria. Tekeli marched against them, and the country suffered equally from both parties. The duke of Lorraine, marching towards Buda, received a momentary check from the Turks. They made head at the same time against Sobieski, whose object was to possess himself of Kamienieck; but they were soon afterwards beaten, and

and Tekeli, being accused of treason against the Porte, was secured, loaded with chains, and sent to the castle of the Seven Towers at Constantinople.

The Turks had no better luck against the republic of Venice, which had formed an alliance with the Morlachians in Dalmatia and the Mainots in the Morea, who had shaken off the yoke of the Porte. The people of the capital were thunderstruck on receiving this unfavourable intelligence. The vizir was deposed; the capitan-pacha atoned for his defeats with his life, and count Tekeli was liberated. Peace was earnestly desired, but the negotiations were not successful. General discontent prevailed; the sultan was charged with effeminacy, debauchery, and disregard of the interests of the empire.

The campaign of 1687 was as disastrous as the preceding. Morosini took Patras, Lepanto, Misitra, Corinth, and Athens, and reduced the whole of Attica. Comaro, another Venetian general, was victorious in Dalmatia; he penetrated into Bosnia and took Castel Nuovo, the strongest place in that country. The Poles gained ground on their side; they reduced Slavonia and Transylvania. The Turkish army at length revolted: Mahomet tottered on his throne: he nevertheless made reforms in his harem and removed the mufly, who had authorised by his fetva the war in Germany. The army, the seraglio, and the city, were exasperated against the emperor. Mahomet now hoped by means of a crime which he had previously several times contemplated to ensure his authority. He gave orders for the death of his brothers; but Kiuperly, the caïmacam, son and grandson of the two grand-vizirs who had shed such glory on the commencement of Mahomet's reign, and the bostandjibachi, to whom the execution of these orders was delegated, not only refused to comply, but even provided for the safety of those princes. Meanwhile the army, having arrived at Constantinople, secured the different gates of the city and the port. The attempt made by Mahomet, excited the public indignation, and on the 9th of November, 1687, deputies were sent to the sultan to inform him of his deposition. They then proceeded to the apartments of prince Soleïman, aged forty-six years, who affected a reluctance to accept the proffered sovereignty. In spite of his refusal, he was invested with the insignia of royalty and conducted to the divan, where the chief officers of the empire took the oath of allegiance to him. The dethroned prince was shut up in the prison which his brother had just quitted; in this rigorous captivity he passed five years, and ceased to live in the month of January, 1693.

1687—1691.—SOLEÏMAN II.—The janissaries seemed to have assented to the elevation of Soleïman to the throne, merely that they might indulge in all those excesses which they knew this emperor would be too weak to repress. Dissatisfied with the vizir, who was preparing to reduce them to their duty, they attacked him in his palace, where, after a long defence, he was obliged to yield to numbers: his residence was pillaged and the seclusion of the harem violated. The people, incensed against barbarians who transgressed all the laws of the Koran and of modesty, fell furiously upon the janissaries, and made a great carnage among them, which could not be stopped but by unfurling the standard of the Prophet.

Since the deposition of Mahomet, affairs had gone on worse and worse in Hungary. The emperor Leopold had caused his son to be proclaimed hereditary king of that country. The imperialists made themselves masters of the strong places; the duke of Bavaria took Agra on the 28th of November, 1687, and reduced Belgrade, after a long siege, on the 6th of September, 1688. At the same time the Venetians pushed their conquests in Dalmatia. Poland alone made no progress. The divan therefore concluded it to be high time to make peace.

Maurocordato, a Greek, interpreter to the Porte, and a man of great address, was sent to propose a suspension of arms to the Germans; but as this negotiation failed, the grand-signor issued orders for public prayers; he even

expressed a desire to put himself at the head of the troops. It was not long, however, before this timid prince changed his mind, and sent in his stead the seraskier Rejeh, who had formerly desolated Asia as a chief of banditti, and knew nothing of the military profession. He sustained, in consequence, several defeats, and on his return he was strangled, because, contrary to the law of Mahomet, he had consulted a magician.

The Mainots meanwhile revolted against the Venetians, and returned to their allegiance to the Turkish emperor. At length the third Kiuperly, who had preserved Soleïman's life, before his accession to the throne, was elevated to the post of vizir. This minister, inheriting the talents of his father and grandfather, won the confidence of the people, restored order in the finances, eradicated great abuses, administered justice without respect of persons, protected the different religions, and ordered even the erection of a church in a village inhabited exclusively by Greek Christians; and by these means afforded general satisfaction. The divan was desirous of peace; Kiuperly ventured to promise it victory. His first campaign was as glorious as that which preceded it had been calamitous. The janissaries, recovering their ancient valour, retook Belgrade and several other towns in 1689, and gained a signal victory over the Germans, near Essek, the siege of which it was nevertheless found necessary to raise, on account of the approach of winter. Kiuperly was received at Constantinople with all the honors of a triumph. The infirmities of the sultan, degenerating into dropsy, prevented the grand-vizir from returning in the spring to Hungary, according to his intention. Proposals were privately circulated for placing on the throne one of the sons of Mahomet IV. Kiuperly advocated the rights of Achmet, the emperor's brother, the eldest of all the princes of the house of Othman. The firmness of this minister disconcerted the intrigue, and on the death of Soleïman, which happened on the 22d of June, 1691, not an individual durst raise his voice in behalf of Mahomet, who was still a captive, or his children,

1691—1695.—ACHMET (Ahmed) II.—The new emperor, as incapable of governing as his predecessors, had more humanity than they. The first thing he did, was to visit his brother Mahomet IV. in prison; where he cheered him and sent several slaves for his amusement.

While Kiuperly was intent on promoting the public welfare, envy conspired the downfall of that minister. The officers of the seraglio, whom he held in dependence, represented him as a rebel and an usurper to the feeble monarch, whose destruction also they had secretly determined upon. The minister, informed of the scheme by a mute, immediately assembled the principal officers of the different corps, and communicated to them the intelligence he had received. They were all filled with indignation; the troops ran to arms, surrounded the seraglio, and demanded the heads of Kiuperly's enemies, which they obtained without difficulty of the imbecile sultan.

The success of the late campaign had revived the courage of the Ottomans, who considered themselves as invincible under the vizir. He arrived at Belgrade with one hundred thousand men, and learned that the prince of Baden was below Peterwaradin, with an army little inferior in number to his own. He crossed the Saave, hastened to meet the enemy, and defeated his advanced posts: but no sooner had the two main armies engaged, on the 19th of August, 1691, than Kiuperly, struck by a ball in the temple, fell from his horse, and though all possible assistance was rendered, no sign of life could be discovered in him. This event spread consternation and terror among the Turks: they fell into confusion, and were completely routed. They left thirty thousand slain on the field of battle, and never rallied till they reached Belgrade, under the walls of which they formed an entrenched camp.

A general peace was now expected. Maurocordato, bribed by France, insisted that Austria, drained of troops and money, was incapable of prosecuting the war much

longer, and that it would therefore be wise to wait till she was reduced to the necessity of soliciting a disadvantageous peace.

The ensuing campaign was by no means brisk. The Venetians made vain attempts to recover the island of Candia. Several vizirs were successively appointed and removed. The Porte was dispirited, when a circumstance, in itself of little importance, but which now occurred for the first time in the Ottoman house, was considered as the forerunner of some great victory: a sultana was delivered of twin princes. The death of Mahomet IV., brother of the sultan, did not interrupt the rejoicings occasioned by this event. No better success, however, attended the Ottoman arms. The Poles defeated the Turks, united with the Tartars of the Crimea; and the Venetians took Chio and two towns in Dalmatia. The pachas of Asia had to oppose the sheryf of Mecca, who plundered the caravans of pilgrims, and compelled them to pay him a kind of tribute. Such was the state of affairs when the sultan died on the 27th of January, 1695, at the age of fifty years.

1695—1702.—MUSTAPHA II.—Mustapha, son of Mahomet IV., was no sooner informed of the death of his uncle, than he showed himself to the bostandjys and itchoghians, and ascended the throne as the eldest prince of the house of Othman. He summoned the great dignitaries of the empire, received from them the oath of allegiance, demanded an account of the sums in the public exchequer, and declared his intention of heading his armies in person. This prince, thirty-three years of age, had a commanding figure and a despotic disposition. He took his father's creatures into his service, removed his mother from the old seraglio, in which she had been confined, displaced the mufty and the other unfaithful minister, put to death the grand-vizir, and seized the wealth amassed by those officers. He made himself feared alike by the divan and the army, and proved that he was fond of order, and had discernment enough to select men worthy of commanding. He attached to his service a Tunisian pirate, named Mezzomorto, who promised to retake Chio from the Venetians, provided he were furnished with a few ships. The sultan complied with the proposal; and this enterprising man defeated the Venetian fleet, actually reduced Chio, and was rewarded by Mustapha with the appointment of capitán-pacha.

Mustapha assumed the command of his troops, agreeably to his intimation, and marched to meet the German general, Frederic Augustus, elector of Saxony. He established strict discipline in his army, crossed the Danube at Belgrade, took Lippa and Titul, which he demolished, and routed a small Transylvanian force; but this action cost him a great number of troops. He left the enemy to retreat without molestation, and returned through Wallachia to Adrianople, which he entered in triumph in 1696.

In the following campaign, Frederic Augustus laid siege to Temesvar. The sultan resolved to raise it or to give battle, and accomplished both purposes at once, but without pursuing his advantages. The German emperor was too fully engaged with France to act with vigour against Turkey; he therefore ordered the elector of Saxony to stand on the defensive. Peter the Great, czar of Muscovy, who had previously laid siege, but without success, to Azof, took that place with the assistance of foreign engineers. This important conquest secured to the Russians the commerce of the Black Sea, and set bounds to the power of the Turks in that quarter.

The sultan, having learned by his own experience the indispensable necessity of discipline and tactics, endeavoured to habituate the janissaries to obey the word of command, according to the rules of the military art: but the janissaries never would learn any new evolutions.

The peace concluded between France and the allied powers might reasonably have been expected to produce a cessation of hostilities between the Porte and Austria. Mustapha, nevertheless, prepared to prosecute the war. He opened the campaign early in 1697, with a numerous army, and approached Temeswar, when news arrived that prince

Eugene, who had already acquired great celebrity, was advancing to cover Segedin, Peterwaradin, and the other places situated both on the Danube and on the Teisse, which discharges itself into the former river. That prince had, however, resolved to avoid a battle as much as possible. The Turks would have been obliged to cross the Danube before they could attack Peterwaradin. The sultan having changed his plan and turned toward Segedin, on the 1st of September, 1697, prince Eugene came up with the Turkish army, near a town called Zeuta, cut in pieces the rearguard, struck a panic into the main army, and forced the sultan to cross the Teisse in haste by a flying bridge. Half of the Turkish army had already passed the river, when the Germans made their appearance: the Ottomans were obliged to face about; at this moment the bridge broke down, and the Imperialists had to fight but a portion of the enemy's force, whose retreat was cut off. They did not allow them time to rally, and charged them with such vigour and concert, that they drove them into the river. Twenty thousand Turks perished on the field of battle, and ten thousand were drowned. The grand-vizir and seventeen pachas having fallen while fighting bravely, the seals of the empire fell into the hands of the Austrian general, together with the sultan's tent and all the rich effects which the Turks had left in their camp. Several carts were found loaded with chains and handcuffs, destined for the prisoners whom the Ottomans calculated upon taking.

Mustapha himself witnessed this catastrophe. The rage which it at first excited in him, was suddenly changed into terror and despair. Throwing off in the night the insignia of sovereignty, he disguised himself and fled from the camp with two attendants. He proceeded to Tenesvar, where he made himself known to the sandjac, or governor of the town only, enjoining him to keep his arrival a profound secret. Three days afterwards, the Turkish army, farther diminished by the want of provisions (the soldiers having had nothing to eat for three days), and by the fatigues of a forced march, re-assembled in great confusion in the camp of Temesvar.

Notwithstanding the defeats which the emperor had sustained through his own fault, he was beloved and esteemed by the troops. They received him with strong demonstrations of joy; he put himself at their head, and after distributing the different corps in the frontier towns, he returned to Adrianople, and thence to his capital, which was plunged in despondency.

Prince Eugene meanwhile ravaged Bosnia, and burned Sarai, the capital of that province, the governor of which had been slain in a sally; but the troops elected another pacha, who found means to check the progress of the Germans.

Preparations for a new campaign were making with considerable difficulty; nothing was to be heard but complaints and anticipations of future disasters. Maurocordato had the address to bring about conferences between the plenipotentiaries of Austria, Venice, Poland and Russia. The French ambassador, M. de Ferioles, endeavoured in vain to thwart the negotiations. The plenipotentiaries repaired to Carlowitz on the 14th of November, 1698, and the treaty was signed on the 29th of January in the ensuing year. The Turks ceded Transylvania to the emperor and agreed to a truce of twenty-five years with that prince. The truce with the czar was for two years only, and the Venetians retained part of their conquests. On the conclusion of this so much wished for general peace, the grand-signor retired to a palace erected by Mahomet IV., between Constantinople and Adrianople.

Mustapha's residence at a place where his father had so long resigned himself to indolence and pleasure, excited the murmurs of the people, who loudly censured the peace purchased by the sacrifice of the finest provinces. Some disorders in the administration caused an insurrection at Constantinople. The soldiers appointed new ministers, quitted the capital under arms, and marched toward Adrianople, where the grand-signor had taken refuge. The sultan ordered his troops to advance against the rebels; but no sooner had the two parties met, than the former, seduced

by

by the eloquence of the mufty, laid down their arms, and opened the gates of the city to him. The emperor's chief officers were put to death. Mustapha was necessitated to confirm the ministers appointed by the insurgents; the more the prince conceded, the more intractable the latter became; and the degradations to which the timid sultan submitted to preserve his sceptre assisted only to strike it from his hand.

The emperor had no children but what were very young. His brother Achmet, the heir to the throne, according to the law, was confined at Adrianople. The mufty wrote to him that Mustapha was unworthy to reign; that the good Mussulmans placed all their hopes in him; and that the general voice called him to the throne. This letter fell, as it was intended to do, into the hands of the sultan, who hastened to his brother's apartments, ceded to him all his rights, and implored him to treat him with kindness.

Mustapha was deposed on the 20th of September, 1702, at the age of forty years. He died of dropsy a year after his deposition.

1702—1730.—ACHMET III.—The new emperor received the homage of the grandees and of his officers with affected kindness, bestowed large gratuities on the army; and knowing that the people had censured Mustapha for his residence at Adrianople, he resolved to return to the capital. He was thirty-six years of age; and owing to the humanity of his predecessors, his captivity had not been rigorous. In his prison he had acquired a variety of information by reading and conversation with certain effendys, who had given him some notion of politics and taught him to dissemble with those whom he designed to punish. When he therefore regarded his power as secure, he displaced the vizir and the mufty, and proscribed all the chief actors in the late revolution. Executions struck terror into all classes, and his new ministers conceived that there was nothing which they might not attempt.

All Europe meanwhile envied the Turks the political repose which they enjoyed. Charles XII., king of Sweden, had just wrested the Polish sceptre from the hand of Augustus, elector of Saxony and given it to Stanislaus Leczinski: he then threatened Peter the Great, the protector of Augustus. In another quarter the Spanish succession had armed the house of Austria against France. Prince Ragotzki, a Hungarian nobleman, married to the only daughter of count Tekeli, who was recently dead, being invited to Transylvania by a considerable party, assumed the title of prince of that country, the investiture of which he solicited from the Porte. But whatever interest the sultan might have in raising up enemies against the Austrian monarch, he refused to break the peace which he deemed so necessary for his own dominions.

At this juncture the Ottoman empire became the retreat of two fugitive sovereigns, Charles XII. king of Sweden, and Stanislaus, whom he had placed on the throne of Poland. See SWEDEN and POLAND.

The peace enjoyed by Turkey was disturbed by a quarrel in which it was involved with the republic of Venice on account of the Morea. The divan made great preparations to reconquer that peninsula, and at the same time to cover the frontiers of Transylvania, Hungary and Poland. The Venetians were lulled into a fatal security, and before they had raised the force necessary for withstanding a powerful foe, the Morea was again under the yoke of the Porte. Austria interfered in this quarrel, and as her mediation was rejected, she declared war against the Turks. The two armies met at Peterwaradin; prince Eugene, who commanded the Imperialists, attacked the Turks on the 25th of August, 1716. He had the art to avoid their first onset, which alone is to be feared, surrounded and completely routed them; and while their scattered troops were rallying at Belgrade, the Austrian general took Temesvar. In spite of this reverse, the Porte continued the war; and the Imperialists laid siege to Belgrade. Notwithstanding the most vigorous resistance the city was taken. The sultan, convinced of the necessity of

peace which he ought not to have broken, now opened negotiations. The congress of Passarowitz, after some discussion, concluded peace on the 21st of July, 1718, on the basis of *uti possidetis*, that is to say, each party retained what it possessed at the moment of signing the treaty.

The peace lasted some years, when troubles breaking out in Persia, excited the ambition both of the Turks and the Russians. The latter threatened an invasion of the country, which the grand-signor made preparations to oppose or to profit by. France offered her mediation, which was accepted, and for that time the storm blew over. A treaty fixed the limits of Turkey and Russia, and Persia alone suffered by this compromise. In 1721 the Ottomans renewed their hostile pretensions against that kingdom, then distracted by internal revolutions. The death of the czar Peter the Great, left an open field to the Turks, who already threatened Ispahan; but revolts at Cairo and Smyrna compelled the divan to accommodate matters with Persia, by a peace which was nevertheless highly advantageous to the Turks, since they retained the possession of great part of that extensive kingdom and the acknowledged supremacy over almost all the rest of it; but this glorious prosperity was soon eclipsed by a phenomenon which none of the powers that occupied the great theatre of the world could either have feared or expected. Nadir Gagatir, afterwards so celebrated by the name of Thahmas-Kuli-Khan, son of a shepherd, sold his father's flocks, expended the money in collecting a band of robbers, and began to plunder caravans. After carrying on these depredations for seven years, and increasing his troop to 5000 men, he resolved to engage in a more glorious warfare; he therefore offered himself and his little army to his sovereign. Shah Thahmas, closely pressed by the Afghans, accepted this assistance, for which he was doomed to pay dearly. While Nadir was engaged in reducing Khorasan, Shah Thahmas, being apprized that the Ottomans threatened Persia, marched against them, was defeated in a great battle near Erivan, and signed a disgraceful peace. This peace, instead of being ratified by the ambitious Nadir, excited his indignation, and war was resolved upon.

The Persians demanded the provinces of which the Porte had possessed itself. The latter expected nothing less than war: the troops were disbanded or dispersed; the sultan and his ministers, engaged in frivolous pursuits, were lulled to sleep in the lap of sloth and effeminacy, regardless of the discontent of the people and the complaints of the janissaries. Recourse was had to a very dangerous expedient, particularly among the Turks, that of imposing a fresh tax to defray the expenses of the war. The news of the taking of Tauryz by the Persians excited murmurs, and the minds of the people became more and more inflamed. An Albanian, named Khalyl Patrona, a turbulent man, who had escaped capital punishment, and two other janissaries, who like him, followed the trade of pedlars, became the instruments of the ruin of a powerful monarch.

These factious men began with declaiming against the new tax. On the 28th September, 1730, about nine o'clock in the morning, the populace rose at their instigation, and the troops assembled in the Atmeidan, and murdered their officers who came to appease the tumult. The grand-signor, shut up in his seraglio, ordered the rebels to lay down their arms and disperse, but to no purpose: he had no soldiers to send against them, and at length enquired the object of their assembling. Patrona demanded that the mufty, the grand-vizir, his kiahya, the caïmacam and the reis-effendy should be given up to them to be put to death. While waiting for the sultan's answer, they plundered the residences of those officers, and as they threatened to force the seraglio, Achmet was obliged to deliver to them those ministers with the exception of the mufty, who was exiled, because the law does not allow his life to be taken away. The audacity and insolence of the insurgents increased with their success: not content with this concession, they openly demanded the deposition of the sultan, on the 2d of October, 1730. Achmet, forsaken by all his supporters, and convinced

vinced of his inability to struggle with his ill fortune, went to Mahmud's apartments and giving his hand to that prince: "The wheel has turned both for you and for me," said he, conducting him to the hall of the divan; "I give up to you the empire which my brother Mustapha resigned to me on a similar occasion. Remember that Mahomet IV., your father Mustapha, and myself, were hurled from the throne which you are mounting, because we placed too much confidence in our ministers. See every thing with your own eyes, and beware of that sloth which proved our ruin. Be severe, but just. I recommend to you my children and myself." After this exhortation he returned to the apartments from which he had taken his nephew, and where he was destined to pass the remainder of his life.

1730—1754.—**MAHMUD I.**—The new emperor desired to see the man who had raised him to the throne. Khalyl Patrona appeared before him in the dress of a janissary and bare-legged, just as he was before the revolution. His looks bespoke a bold but ferocious spirit. The emperor offered him a reward; he asked for nothing but the abolition of the tax recently imposed, which was immediately granted. Presents were distributed among the troops, who nevertheless refused to lay down their arms, and did what they pleased. Patrona defied the ministers and gave appointments to his creatures; but the abuse of the authority assumed by the rebels prepared their downfall. The divan secretly agreed to get rid of the three ringleaders. On the 25th of October, they were summoned to the seraglio, separated by surprize from their accomplices, and dispatched with daggers in the very hall of the divan. Those who had accompanied them into the seraglio were then sent for; and upon pretence of rewarding them, they were successively conducted five at a time into a vestibule, where they were disarmed and put to death. These executions, instead of exciting the slightest movement of sedition, gave the greatest joy to the inhabitants of the capital, who could not patiently brook all the disorders that were daily occasioned by the licentiousness of the insurgents.

It was a difficult task for the grand-vizir to restore order and economy; the spirit of rebellion was not completely extinguished, and the sparks of the smothered fire kept continually bursting forth into a new flame. The high price of bread and other necessaries of life rendered the people dissatisfied with the government. At length the grand-vizir could perceive no other means of stifling rebellion than to make peace with Persia. Tauryz and all the country beyond the Araxes were restored to it, and Georgia was ceded by it to the Turks. Thahmas-Kuli-Khan, displeased with this treaty, deposed Shah-Thahmas, banished him to Khorasan, where he soon caused him to be murdered, proclaimed a new-born infant son of the unfortunate monarch sof, by the name of Shah-Abbas, and declared himself regent of the kingdom. This important revolution took place in the month of August, 1731. Thahmas-Kuli-Khan immediately renewed the war with Turkey, and threatened Bagdad; but all the governors of Asia having joined the Ottoman troops, he was defeated and wounded. The grand-vizir pursued and compelled him to sue for peace. The Turkish general, proud of his advantage, attacked his enemy with a small number of men, but was vanquished in his turn, and killed in the engagement; his troops disheartened fled in disorder. The Persian usurper drove them beyond Tauryz, and advanced upon Bagdad, which was thrown by this disaster into great consternation. The pacha who governed there lost no time in concluding peace; but the divan deposed him and disavowed the treaty. Fresh dissensions in Europe however induced the Porte to renew the negociations, and to cede Georgia and Armenia to Persia.

About this time Russia reduced Asof, and soon afterwards Oczakow and Kilbournou, while the Austrian troops, under general Wallis, entered Wallachia, and laid Moldavia under contribution; but were soon obliged to evacuate the latter province. At length the Turks, after obtaining some advantages, accepted the medium of France, just at the moment when they

were investing Belgrade: and a general peace, destined to ensure for many years the tranquillity of the Ottoman empire, was signed on the 22d of September, 1739.

Mahmud, now in peaceable possession of the throne, was wholly engrossed with pleasure, the means of filling his exchequer, and the superintendance of the police of his capital. He greatly regretted his having no children. Those of sultan Achmet were advancing in age, and he was apprehensive that after him the empire would be distracted by dissensions. As however, the splendour of the sultan and his ministers was kept up only by oppressive measures, the people murmured at these abuses and at the tyranny of the officers of the seraglio. The body of the ulemas could not even obtain justice for outrages committed on one of its members. The complaints of the people could not reach the throne, on which the monarch slumbered, and the general discontent manifested itself in frequent fires, which lasted upwards of twenty days, consumed great part of the city and gave occasion to numberless disorders. At length Mahmud's brother in-law, a vizir nearly eighty years old, throwing himself at the feet of his highness, represented to him, that the conflagrations which desolated the capital were but the expression of the public dissatisfaction, on account of the abuse of his confidence by the qyzlar-agma and his creatures. The sultan, moved by the remonstrances of the aged vizir, and having consulted the mufty, who held the same language, had the magnanimity to sacrifice his favourites. The qyzlar-agma and the other officers who had given cause for complaint were apprehended and publicly executed, and their property confiscated.

This exemplary punishment restored tranquillity, which continued during the remainder of Mahmud's reign. This prince, who was endowed with a mildness of disposition calculated to render his subjects happy, was long afflicted with a disease which at times prevented his leaving the seraglio. The people then murmured, suspecting that the sultan was dead and that his decease was kept secret from them. On Friday the 13th of December, 1754, the officers of the palace prevailed upon him to make an effort to shew himself according to custom, in order to pacify the populace; and the unfortunate monarch expired on his horse, in his return from the mosque, between the two gates of the seraglio. He was fifty-eight years old, and had filled the throne nearly twenty-five.

1754—1757.—**OSMAN, or OTHMAN III.**—Mahmud's brother, was proclaimed emperor by the divan. No sooner was he seated on the throne, than he manifested his incapacity and the fickleness of his disposition. So frequent were the changes in his government, that in less than three years there were six vizirs and as many caimacams.

1757—1774.—**MUSTAPHA III.**—The eldest of the children of sultan Achmet III., who had survived the barbarous designs imputed to Othman, succeeded that prince by the name of Mustapha III. He gave a new existence to the empire; the people, dismayed by the reign of two princes who had not had issue, conceived hopes of seeing the house of Othman flourish once more. Mustapha was moreover fond of study and application; he was austere, just and religious, and possessed equal penetration and firmness.

The Ottomans were at peace with their neighbours when, in 1763, the death of Augustus III., king of Poland, changed the aspect of affairs in that part of Europe. Russia interfered in the election of a new king; the Porte took umbrage at this, complained of the assemblage of Russian troops in the vicinity of Turkey, and war was soon declared. The courts of Berlin and Vienna, after offering their mediation to the two powers, marched troops into Poland upon the pretext of restoring tranquillity there; and that kingdom, rent by civil wars, was completely at their mercy. The Austrian and Prussian troops took possession of such provinces as lay conveniently for their respective sovereigns.

It was to the interest of the Ottoman court to prevent the partition of Poland, and to protect that country against

the ambition of Russia; but its measures were taken too late, and it could not act with sufficient efficacy to prevent that catastrophe.

At the conclusion of 1768, the czarina set on foot three armies; one, commanded by prince Gallitzin, was intended to cover Poland and to prevent the Turks from joining the confederates; the second, under count Romanzow, was to protect the Ukraine from the incursions of the Tartars, while a detachment from it was to form a corps of observation on the frontiers of the Crimea; and the third, of less force, was to march to the provinces bordering upon the Caucasus, and to encourage insurrection among the petty princes tributary to the Ottoman empire, from Georgia to Trebisond.

The court of Russia availed itself also of the aversion excited by religious opinions against the Turks, to raise an insurrection of the Greek Christians in Albania, the Morea and Greece. A fleet of twenty-two ships was equipped to make the circuit of Europe and to proceed into the Archipelago with troops, money, and military stores, for the purpose of arming the Greeks; and a flotilla was to sail down the Don into the Black Sea, in order to intercept in that quarter all communication between Asia and the Crimea.

The Ottoman Porte, unused for upwards of 30 years to war, was unable to oppose its foe with so formidable a force.

The Ottoman army traversed Moldavia, with a view to enter Poland; and after several marches and counter-marches without any definite object, it was beaten by prince Gallitzin, and the capture of the town of Khoczim made the Russians masters of Moldavia, and part of Wallachia, the conquest of which was completed by count Romanzow during the winter of 1769.

The campaign of 1770 began in the south. The Russian fleet, commanded by count Orlov, proceeded to the coast of the Morea, where the Greeks impatiently awaited succours and arms to assert their liberty and shake off the Ottoman yoke: but the Russians landed a force of scarcely eight hundred men, and appeared to no purpose before Modon, Napoli di Romania and Navarin. They miscalculated the force of the Greeks, which they deemed adequate to the consummation of the revolution; they were every where repulsed, and the only effect of this ill concerted diversion was, that they exposed the people of the Morea to the sanguinary vengeance of the Turks.

The Russian fleet then sailed into the Archipelago, and there met that of the Turks within view of Scio. The two admirals attacked each other with such fury that the ship of one of them having taken fire, the flames communicated to the other, and both blew up nearly at the same moment. The Turks, daunted by this tremendous accident, fled to Chesmeh, landed their guns and formed batteries with them in order to protect themselves from insult; but the Russian fleet, approaching the harbour, detached four fire-ships; these were driven by the wind among the Ottoman vessels, which they grappled; the flames spread rapidly and the whole fleet was consumed to ashes. The Russians, being now masters of the Archipelago, reduced the islands which were defenceless, and greatly injured the Turkish commerce. Their success near the Danube also was brilliant. The Turks, routed and pursued by Romanzow, abandoned Ismailow, re-crossed the Danube, and allowed the enemy to make himself master of Bender and Bahilow.

The discomfiture of the Ottomans in the Archipelago and on the Danube spread consternation throughout the empire; the remote provinces manifested a disposition to throw off the yoke. Ali-Bey, one of the chief members of the government of Egypt, made himself almost absolute master of that country: he then carried the war into Syria, and, in concert with the governor of St. Jean D'Acre, reduced the principal cities, and imposed a considerable contribution on the city of Aleppo.

In the succeeding campaign the Russians were indebted for their trophies solely to the inexperience and the dependency of the Turks; their progress, however, toward

the Crimea, was inconsiderable, while their fleet in the Mediterranean made some unsuccessful attempts upon Rhodes, and proceeded, likewise to no purpose, to Negropont and the gulf of Salonica.

In 1772, the two courts accepted the mediation of the emperor of Germany and the king of Prussia, and agreed to an armistice; but a congress, which met in Wallachia, was soon broken up, because the Russians insisted on the independence of the Crimea and freedom of navigation in the Black Sea. The armistice was nevertheless prolonged, and the commissioners of the Porte repaired to Bucharest, where the conferences were renewed, but with no better success. The Porte meanwhile abated none of its preparations for war. In 1773 it dispatched a squadron into the Black Sea, and reinforced its army on the Danube. Several insignificant affairs took place in that quarter; and the Russians were baffled in an attempt to make themselves masters of Silistria. Turkish troops were sent to Egypt and attacked Ali-Bey near Cairo: he was defeated, taken prisoner, and died of his wounds.

Sultan Mustapha, who had not been disheartened by any of the reverses which he had sustained, finding his health daily declining, sent for his brother Abdul Hamyd, the last of Achmet's sons, laid before him the state of the empire, over which he would soon rule, and died on the 21st of January, 1774.

1774—1789.—**ABDUL HAMYD**, born in 1725, and confined at the age of six years, had lived forty-four years in captivity. He marked his accession to the throne by the most favourable dispositions. He confirmed the ministers in their posts, issued orders for prosecuting the preparations for war, augmented his navy with ships purchased abroad, and thus strengthened the naval force destined for the Archipelago and the Black Sea. His army assembled on the banks of the Danube, received a check from the Russians, who crossed that river, and forced the Porte to sue for peace, which was signed the same year, on conditions by no means advantageous to the Turks.

Abdul Hamyd, however, profited by this opportunity to quell the disturbances which had broken out in the Asiatic provinces. Several rebels were put to death. Syria and Egypt were not the only theatres of insurrection and dissension. Bagdad and Bassorah had been taken by the Persians; and the Morea, where the Russians had originally excited commotions, was still at the discretion of a body of Greeks and Albanians, whom the Turks could not till long afterwards disperse.

Russia was meanwhile ready to seize the first favourable occasion to renew the war. Elated by her success, she conceived that she could not require too much, while the Porte, though humbled by its disasters, had still too high a confidence in its courage and resources to brook an insult. The two empires were on the point of a rupture, when France lent her mediation, and the peace of Kudjuk-Cainardjy, signed in August, 1774, being adopted for the basis of the reconciliation, was renewed at Ainahly Cavac, on the 21st of June, 1779. By virtue of this treaty, Russia was left in final possession of the Crimea and the Kuban. The empress Catherine caused the town, fortress, and Port of Cherson, to be constructed at the mouth of the Borysthenes, with a view to make it the capital of the country. In 1781, the Tartars of the Crimea having revolted, Russia marched troops towards the Crimea and the Ukraine. The Porte also, on its part, dispatched troops to the frontiers of Servia, and erected batteries at the mouth of the Black Sea. A treaty, signed at Constantinople on the 21st of June, 1783, confirmed Russia in the possession of the Crimea, and afforded Turkey a momentary peace.

The pretensions incessantly renewed by the Russians, and the instability of treaties, were not the only embarrassments experienced by the divan. The Albanians ravaged the Morea, from which it was found very difficult to expel them. Asia was agitated by three impostors, who went from province to province seducing the people by their fanatical harangues.

harangues. These enthusiasts even obtained some advantages over the troops that were sent against them. Egypt was a prey to fresh troubles: but the beys who shared among themselves the administration of that kingdom, were reduced to reason by the high-admiral, Hassan-Pacha, who returned to Constantinople with spoils won from the rebels.

In 1787, the empress Catherine determined to visit Cherson, with the intention, as it was positively asserted, of there assuming the crown of the Taurida. She sent a great number of troops into the Crimea; the Turks took umbrage, and put themselves in a posture of defence.

No sooner did the Ottoman Porte think itself capable of retrieving its losses, than it formally claimed the restitution of the Crimea; and on the refusal of the empress to give it up, declared war against her. Hostilities first commenced on the Black Sea. The Russians marched troops towards Bessarabia and Moldavia; and the emperor of Austria, allied by a treaty with Russia, deemed it incumbent on him to fulfil his engagements. He nevertheless offered, jointly with France, his good offices to the Porte for the restoration of harmony between the two powers, but was unable to effect it, and both parties took the field.

The Austrians reduced Dresnih in Croatia; the emperor in person laid siege to Schabacz, and made himself master of it, but was baffled in an attempt on Semendria. The Ottomans gained some advantages in Transylvania, penetrated into Slavonia and the Baunat, and threatened Hungary. The emperor flew to the protection of that country, and expelled the enemy. The Russians, commanded by Romanzow, could not effect a junction with the Austrians till late in the season, before Khoczim, which surrendered after an obstinate defence.

The campaign in the Black Sea was not less honourable to the Ottoman navy. Hassan-Pacha worsted the Russians in several encounters, but could not prevent the fall of Oczakow, a place of great importance and the key to the Crimea.

Abdul Hamyd died in 1789, leaving the throne to his nephew.

1789—1807.—SELYM III. was twenty-six years old when he succeeded his uncle, Abdul Hamyd, in April, 1789. When he ascended the throne, the Turks hailed him as a deliverer. Governed for a long series of years by monarchs, who had been all their lives immured in a prison, till they were summoned to wield the sceptre, they flattered themselves that the education of their new prince would have a favourable influence on his conduct; but Selym, though endowed with qualities that might have made his people happy, had not the firmness, the presence of mind, and the experience, required by the critical situation of the empire.

In the very first year of his reign, the united force of general Suwarrow and the prince of Coburg gained a signal victory over the Turks; the fortresses of Bender and Ismail were taken; all Moldavia fell into the hands of the Russians; and the Austrians made themselves masters of Belgrade. The treaty of Yassy put an end to the war; but the Russians retained the country situated between the Bog and the Dniester, and obtained for Moldavia and Wallachia privileges hostile to the interests of the Porte.

Paswan-Oglou, by the repeated advantages which he gained over the Ottoman troops, demonstrated the extreme weakness of this once formidable empire.

On the first of July, 1798, a French army landed in Egypt. For the narrative of that expedition, See EGYPT.

Meanwhile the Russians, whose ambition was but increased by success, invaded Georgia. The Servians, headed by Czerni-George, an Austrian serjeant, obtained important advantages; and the Wahabys, a new sect, sprung up in Arabia, possessed themselves of the two sacred cities of Mecca and Medina. Moldavia and Wallachia were wrested from Turkey, and Romelia was harassed by the incursions of banditti.

To these disasters abroad was superadded the general discontent of the ulemas, the janissaries, and the people at home. Selym, deeply afflicted by the calamities of the

empire, hoped to apply a remedy, by introducing into the civil and military departments a new system, borrowed in part from that of the European states. This new system, to which was given the appellation of *nizam-djedyd* (which signifies new order, new regulations), consisted in the adoption of the modern military tactics, in a reform of the tymars, and in the creation of fresh imposts, which were intended to ensure the payment of the troops trained in the European manner. The janissaries, exasperated at the institution of a new class of troops, swore to annihilate them or to hurl from the throne the sovereign by whom they were raised. For a long time they confined themselves to words, consultations and conflagrations: but at length they broke out into actual revolt.

War having been declared against Russia, towards the conclusion of 1806, the grand-vizir took the field, and committed the guard of the important castles of the Black Sea to a garrison of janissaries, among whom was the famous Cabatchy, the ringleader of the revolution of 1807. Mahmud, the reis-effendy, was charged with the inspection of that garrison and the supply of its wants. Selym, weary of the dissensions which thwarted his plans, resolved to incorporate the janissaries into the new regiments. When Mahmud communicated to the new garrison the imperial command, enjoining the assumption of the uniform of the new troops, a sudden agitation took place among the janissaries. The reis-effendy sought to escape their fury by flight, but was soon overtaken and put to death. The janissaries now determined upon insurrection, and marched to the capital with the intention of dethroning Selym. On reaching Constantinople, on the 27th of May, 1807, they repaired to the Atmeidan; after deliberating what to do, they hoisted their kettles, the usual signal of mutiny, and advanced toward the seraglio, the gates of which they found shut. They demanded the head of the bostandjy-bachy. With a compliance unworthy of a sovereign, Selym caused the unfortunate officer to be decapitated. Emboldened by success, they gave full scope to their rage. The ministers were all murdered. Selym descended from the throne, repaired to the apartment of the princes of the imperial blood, invited his cousin Mustapha to take the sceptre, and implored him to spare his life.

1807—MUSTAPHA IV.—Seated on the throne by the janissaries, he abolished the new taxes, promised to restore the former customs, and swore to extend the empire to its ancient limits.

As soon as the revolution which had taken place in the capital was known on the banks of the Danube, a strong fermentation was excited in the army. The janissaries, considering their chief officers and the grand-vizir as partisans of Selym, of the prince who attempted to counterbalance their power, that he might afterwards destroy it, endeavoured to sow discord among the troops. The Russian general, apprized of these intrigues, availed himself of them to act on the offensive, and forced the Turks to fall back into the interior of Bulgaria.

Notwithstanding this reverse, the disgrace of which ought to have fired all the troops in the empire with one sentiment—that of retrieving it; the janissaries prosecuted their machinations against the partisans of Selym. They finally succeeded. The grand-vizir was apprehended and soon afterwards beheaded. Mustapha Bairactar, or the standard-bearer, then agha of Rudschuk, assumed the command of the army. Meanwhile the Turkish fleet was completely beaten between Lemnos and Monte Santo.

Mustapha Bairactar, who was now about to act a conspicuous part, had raised himself by his valour. Born of poor parents, he had in early youth been engaged in agriculture and afterwards dealt in horses. In the war which preceded this revolution he had distinguished himself by extraordinary bravery and natural talents. The surname of *Bairactar*, or Bairactdar—standard-bearer, was given to him because he had taken a pair of colours from the enemy and retained it in spite of numerous wounds and the superiority of his antagonists.

antagonists. This brilliant action attracted the notice of the army, and won the confidence of his predecessor, Tersanik-Oglou, agha of Rudschuk. He accompanied him in all his campaigns, especially in the war with Paswan Oglou, attended him in 1804 to Rudschuk, and at length succeeded him. Mustapha Bairactar conceived the design of putting an end to the anarchy by replacing Selym on the throne; he alone possessed the courage requisite for the execution of such a design, and on him the hopes of Constantinople were founded. In the prosecution of his purpose he suddenly marched with part of his army to Adrianople, and after some conferences with the grand-vizir, he proceeded direct to Constantinople. These two generals, whose troops were united under the standard of the Prophet, encamped not far from the walls of the capital. Mustapha's real intentions were as yet but matter of conjecture; he gave out that he was come only to pay homage to his new master. The sultan either was or feigned to be convinced of his sincerity, and went forth with his whole court to meet the sacred standard. He was received in the camp with all the honours due to imperial majesty; but it was not long before the governor of the forts of the Bosphorus, who had contributed to Mustapha's elevation, was assassinated by unknown persons. The agha of the janissaries, the mufty and the ulemas of his party were displaced. So far Mustapha had rendered a service to the sultan, who had been a mere tool in the hands of his ministers; but on the 28th of July, that general made his entry into Constantinople, at the head of eight thousand men, cashiered the grand-vizir, assembled the ulemas and the mufty, and borrowing the sacred voice of religion, deposed the new sultan, and at the same time advanced towards the seraglio for the purpose of demanding Selym. The gates were shut at his approach, and Mustapha IV. thinking to secure the crown for himself and to deprive Selym's partisans of all hopes, ordered that prince to be put to death. The execution of this command was committed to the haznadar agha (private treasurer,) the buyuk-embrokhor (chief-equerry,) and bach-tchocadar (governor of the pages). As soon as Selym perceived them, he suspected their intention and drew his poniard to defend himself. The three murderers instantly rushed upon him, and while one of them cut the cord of a pendulum to strangle him with, another plunged a poisoned dagger into his bosom and the prince expired without uttering a word. His corpse was wrapped in a carpet, and carried to the gate of the seraglio, which opened only to exhibit to the view of Mustapha Bairactar the bleeding body of his beloved master. At this horrid sight Bairactar was overwhelmed with affliction: he embraced the lifeless corpse, covered it with kisses, bathed it with tears, and swore to be revenged.

Thus died at the age of about forty-four years, one of the best princes that ever reigned over the Ottoman empire, and whose memory will never cease to be cherished by those foreigners to whom he was known. Just and humane, but too weak to sustain the sinking fortunes of the empire, he had the mortification to be aware of its desperate state, without being able to apply a remedy. The future always seemed to him to present a most gloomy prospect. For more than ten years he deplored the condition of his subjects. Superior to the Turks in the elevation of his sentiments, the extent of his acquirements, and the correctness of his judgment, he had measured the immense distance which parted them from Europeans in point of knowledge, which he made it his particular study to propagate. He gave a kind reception to foreigners, re-established printing-houses, encouraged talents of all kinds, and combated fanaticism and prejudice with all his might; but these very efforts, which will hand down his name to posterity, were the principal cause of his downfall.

Mustapha IV., who hoped to secure the empire by putting Selym to death, derived no other fruit from his crime than the disgrace of having perpetrated it: for he was conducted from the throne to the prison of his victim.

1807—1828.—**MAHMUD II.**—On the deposition of Mus-

tapha IV., his brother Mahmud was proclaimed sultan. He conferred on Mustapha Bairactar the dignity of grand-vizir. His first care was to rid himself by death or exile of the adherents of Mustapha, and to crush the party of the janissaries. He caused the castles of the Dardanelles, garrisoned by the rebels, to be evacuated, and sent a detachment of the artillery to occupy them; and the new commandant received orders to put his predecessor to death. For several days the heads of the principal officers in the preceding reign were exhibited on the gates of the seraglio.

If the sober class, the great majority of the nation, applauded the appointment of Mustapha Bairactar, the janissaries could not without horror behold their most inveterate enemy raised to the second, or rather to the first place in the empire. From this contrariety of sentiments arose two parties, that of the grand-vizir and that of the janissaries, which was less numerous but more powerful than the other. Nothing but a bloody and decisive catastrophe could put an end to the state of continual warfare that subsisted between them. The circumstances are as follow:—

So soon as the 10th of December, 1808, that is, three months after Mahmud's inauguration, seditious movements were observed at Constantinople. Troops successively arrived from the Dardanelles, and from the interior of Romelia: on the 14th, the janissaries attacked the seymens, and this was the signal for a fresh revolution. Several obstinate conflicts took place between these two bodies, always to the disadvantage of the seymens. The janissaries, after murdering the agha appointed over them by Mustapha Bairactar, elected another. In the night of the 16th, they set fire to the palace of that minister, and posted themselves in such a manner that they could scarcely fail to intercept him in case he should not perish by the flames. Being fortunate enough, however, to effect his escape, he took refuge in the seraglio, where the other chief officers of the Porte had likewise sought an asylum. On the morning of the 15th, the city was but one vast scene of carnage and conflagration. The janissaries were masters of the city, properly so called; the suburbs were in the hands of the sekbans or seymens; while Bairactar's troops and a numerous artillery defended the seraglio. Two brigs and two ships of the line, lying in the harbour, cannonaded the city and the janissaries who appeared upon the shore, and intercepted the communication between the suburbs of Galata and Pera. The fighting was kept up for two days without intermission; and for two days the flames continued their ravages: the seymens made an obstinate resistance. Mustapha Bairactar paraded the streets at the head of a few thousand men, hastening to every point where the danger was most urgent, encouraging the troops by exhortation and example, and issuing orders with extraordinary coolness. Twenty times he fell upon the janissaries, and carried destruction into their ranks. It was for a moment doubtful to which side victory would incline; at length, in the evening of the 16th, the janissaries gained the ascendancy; and on the 17th, the face of things was entirely changed. Mustapha Bairactar was no more: the new troops, beaten at all points, were compelled to seek safety in flight. The fleet and the artillery had declared in favour of the janissaries, who were masters of Tophanah, the arsenal, the shipping and Galata; and the sultan, having lost his principal officers, came to terms with the rebels. On the 18th, the gates of the seraglio were thrown open, and Mahmud, after causing his brother Mustapha IV. to be strangled, repaired to the mosque to perform Friday's devotions. The partisans of Bairactar were put to death, and the janissaries resumed their influence. The public tranquillity was nevertheless gradually restored, and in a fortnight Constantinople was perfectly quiet. The shops were open, the artisans pursued their occupations, the police was administered as usual, and a stranger arriving in that unfortunate capital, would have known nothing of the revolution of the 14th of December, had not the heaps of ashes and ruins that met his view and the offensive effluvia arising from the carcases of four thousand Musulmans, apprized him of it.

The recent events of the Turkish empire resolve themselves into the disputes between the Sultan and foreign powers, and the domestic disturbances which he has found himself called upon to quell. He appears, as far as our very meagre accounts enable us to judge, to be a man of great decision and energy, and on two memorable occasions to have turned these qualities to account.

His treacherous and cruel, but politic destruction of the Mamelukes, has been already noticed in this work under the word EGYPT. Recently the sultan has rid himself of more dangerous domestic foes, viz., the janissaries. These formidable guards, who have been so accurately compared to the prætorian bands of the Roman empire, after having effectually resisted every attempt that the sultan had made either to subject them to a strict discipline or to improve their mode of fighting and their arms, have been utterly disbanded. The European tactics had been long urged upon Mahmud by some French and Austrian officers whom he retained in his pay, and he formed some corps disciplined in a regular manner. This excited the resentment and ridicule of the janissaries. No notice, however, was taken of their murmurs or threats. The organization of the new troops proceeded as quietly as possible, and when completed, on a sudden these imperious bands were ordered to be dissolved: they partially rebelled, but some submitted and joined the ranks of the new army. This was too formidable for the remaining janissaries, who were destitute of leaders. Many were sacrificed; the rest submitted to be incorporated with the new troops, and the sultan was secured upon his throne.

Excepting the preceding events, namely, the extermination of the mamelukes and the destruction of the janissaries, no change of importance in the administration of Turkish affairs remains to be recorded. But in the provinces two famous events have occurred. The one, the rebellion of a cruel and despotic pacha, ended in his discomfiture and death: the other, the insurrection of the Greeks, promises to rescue from oppression and misrule one of the fairest portions of the globe, and the narration of it forms one of the most interesting pages that history furnishes us with.

THE GREEK REVOLUTION.—The Greeks, though with the fall of Constantinople their empire had been dissolved, were not thoroughly subjected in the provinces until centuries had passed, occupied in the fiercest combats and the most barbarous massacres. The Morea especially fell only when Venice was no longer able to defend it, in 1715. Nor were the Greeks ever entirely subdued even here; numerous armed bands of hardy mountaineers took refuge in the inaccessible fortresses with which the Morea abounds, and under the name of Klephtai, or robbers, not only refused tribute to the Turks, but even plundered them. Their chiefs or capitani have transmitted through succeeding generations this proud freedom, and there still live Greeks who boast that their ancestors never submitted to the yoke of the infidel.

It was not more than 34 years after the capture of Corinth by the Turks, that the expectation of Catherine of Russia's restoring the Eastern empire, led to a very general rising on the part of the Greeks. The scheme proved abortive. Peace was made, and a treaty entered into, by which the Porte bound itself in the most sacred manner to respect the lives, property and religion of the Greeks: nevertheless 100,000 Greeks were butchered by the Turks and Albanians. This for a time quieted the Morea. Insurrection appeared next in the north.

The Servians were roused to a state of insurrection by Czerni George, before mentioned, in the year 1800, when he took Belgrade and some other places, and butchered every Turk he could lay hands on. He contrived to oppose successfully the Turkish arms until 1813, when peace having been made with Russia, 100,000 Turks entered Servia. Czerni retired into Russia, many thousand Servians took refuge in Austria, many were enslaved and vast numbers exterminated. Still there remained enough for insurrection, and in a short time the Servians were again formidable.

This time the Porte relented, and a treaty was entered into, which restricted the number of garrisons that the Turks should keep on the fortresses of the Danube; established a regular and fixed impost of 100,000*l.* per annum; and allowed a native prince (Milosh, the brother of Czerni George) to reign in Servia.

During the period that elapsed from 1815 to 1820, the affairs of the Ottoman government seemed to wear a comparatively prosperous aspect. The reigning sultan, Mahmud, gave proofs of a vigorous character: at peace with all his neighbours, he allayed the mutinous spirit of the janissaries, and broke the power of the great Asiatic vassals: some revolts in the Eastern divisions of the empire were also promptly suppressed. Mecca was rescued from the Wechabites, while the imperial firmans had greater weight, and excited more respect than heretofore. It was, however, under this seeming tranquillity, that all the elements of insurrection were actively fermenting, and projects formed, which have produced the late conflagration.

During the whole of this period, the difficult negotiations that were kept open between Russia and the Porte, and the ill-concerted jealousy that each power entertained against the other, fostered among the Greeks the hope of war, and kept their minds constantly prepared to attack their oppressive masters.

The Emperor of Russia and the legitimates of the congress of Vienna did not deem it consonant with the general tenor of their principles to encourage openly rebellion of any kind, and hence they denounced the enterprizes of the Greeks in cold terms, and though they expressed regret at the miseries they endured, abandoned them. Nevertheless, the light of civilization had fully dawned upon Greece—she had in some few places tasted the sweets even of partial liberty. Her sons, enriched by commerce, had cultivated science to an extent that served at least to rouse them from the degrading apathy of contented slaves, to shew their measureless superiority in mental attributes over the Turks, and to fill them with the utmost contempt for the bigotry and ignorance of Mahomet's disciples.

It was about this period that the celebrated association of the Heteria commenced, and of which the founder is unknown to the members themselves, as they are individually bound by an oath, not to disclose the name of the person by whom they were initiated. The real object of this society, the emancipation of Greece, was slightly veiled, under the semblance of distributing books, and diffusing the means of education amongst the people. Its head quarters were established at St. Petersburg. Nearly all the Greeks residing in Europe hastened to join the association, and extensive ramifications were formed throughout the Turkish provinces, with which an active correspondence was carried on by numerous agents employed for that purpose.

But the Heterists were fully aware that the time was not yet arrived for revolt. They knew that the Greeks could not, unless quite united, which was hopeless, or were assisted by some of the European powers, maintain a successful opposition to the power of the Turks, and they fixed on the year 1825 as the period for the proposed revolution. Their hope in Russian interference was destroyed by what happened in Servia.

Czerni George, the exiled chief of Servia, who still resided at Kiev, and Count Galati, a native of Corfu, related to the Russian secretary of state, determined, in 1817, to commence the revolution, trusting to their own resources for its success. Czerni George was to appear suddenly in Servia, put himself at the head of his former subjects, and drawing the attention of the Turks to that side of the empire, thereby afford Galati, Colocotroni, and others, an opportunity of organizing the insurrection in the southern parts of Greece. In furtherance of this scheme, the Servian chief set out in disguise, and arrived in the vicinity of Semindria; but having discovered himself and his designs to his former friend and relative Milosh, on whose co-operation he had calculated, the latter caused him to be treacherously murdered, and sent his head to.

to the pacha of Belgrade, by whom it was transmitted to Constantinople.

The Russian cabinet was accused of having assisted this abortive enterprise. This, however, was strenuously denied, and Alexander took occasion, in very strong terms, to express his disapprobation of Czerni's conduct and of the revolt. Thus the Greeks had, for the present, their hopes of assistance from Russia, which they had calculated on so much, entirely baffled. But another event occurred which hurried them into insurrection before the period reckoned upon by the Heterists. This was the rupture between the Sublime Porte and the famous Ali Pacha of Yanina. This enterprising chief was born in the year 1751, at Tesselina, a small town in the interior of Albania, where his father was a pacha of two tails. When Ali was fifteen years of age, his father died, at which time, to use his own expression, he commenced his fortunate career with sixty paras and a musket. He was now driven from Tesselina, and abandoned by almost all his followers. The people of Gardiki next formed a plan for his destruction; by surrounding the village where he reposed in the night: he effected his escape, but his mother and sister fell into the hands of his enemies, who treated them with every indignity; for which he afterwards inflicted dreadful vengeance. Ali now entered the service of Coul, pacha of Berat, whose daughter he soon obtained in marriage. Shortly after he overthrew the pachalic of Yanina, which became the centre of his future fortunes; from whence, by money, artifice, force and treachery, he extended his authority. The pachalic of Arta next submitted to his arms; and the Porte appointed him derveni pacha of Romelia, guardian of all the passes in the country. In 1798 he was appointed vizier, or a pacha of three tails. After the death of his father-in-law, he attacked and defeated the pachas of Berat and Delvino, in 1811 and 1812, by which he gained the finest part of Albania and a population of about 300,000. He was induced to preserve Ibrahim at Berat, for some time in nominal authority. He now successively overran Prevesa, Vonitza, Kilili, or Acarnania. Tesselina, with its inhabitants, now fell into his power. His good fortune had not obliterated the memory of the wrongs he had formerly received from the people of Tesselina; and he ordered all those involved in the guilt, to the number of 700, to be dragged out of the city, bound together with cords, and destroyed. The Suliotas, a people living in mountainous retreats, till now supposed impregnable, were next conquered by Ali. He had now obtained absolute and undisputed possession of a country larger than Alexander the Great possessed previous to his conquests in Asia Minor. Ali was master of all Greece from Attica to Illyria. England, France, and Russia, generally kept a consul at his court; and on his part, the political information he possessed was said to have been far superior to that at Constantinople. But Ali, the mighty pacha, knew well the uncertain tenure of his greatness. The Porte most ardently wished Ali to repair to Constantinople, and even offered him the dignity of grand vizier; but he refused this high office, well knowing that his arrival at the capital would be quickly followed by decapitation. War was declared, and the rebel found himself successively deserted by all the various tribes of Greeks whom he had made the instruments of each others subjection and of his own elevation. At length this despot, who had practised dissimulation all his life, became in turn its victim: being at war with the Porte, and having fortified himself in a strong fortress, with four years' provisions, he was inveigled from his strong hold by a promise of pardon, and instantly cut down by the Turkish officers (Feb. 5, 1822).

The Greeks, whom Ali had taught the use of arms and trained to conquest, and had enlightened by partial civilization, though they deserted their leader, were not all prepared to unite themselves permanently with the Turks who overthrew him. Of those who did so unite themselves, a large proportion became immediately disgusted with the treachery of their new leaders, and having received money from Ali,

betook themselves even during his life-time to harass the Ottoman force. When Ali fell they kept up a vigorous though partial opposition to the detached forces of the Turks. This circumstance induced the Heterists to strike a speedy blow. Their choice fell on Alexander Ipsilanti for a leader. This general was the son of a banished hospodar of Wallachia, who had been highly respected by the inhabitants of the principality.

Alexander had embraced the military profession at an early age, and served during the campaigns of 1812, and the two following years, with considerable distinction. He lost his right hand at the battle of Culm, and though still under the age of thirty, he was a major-general in the Russian army, and aid-de-camp to the emperor at the commencement of the Greek struggle.

Another Russian general, Prince Cantacuzene, descended from an illustrious Greek family, although senior in rank, generously volunteered to serve under Alexander; and Michael Suzzo, the Hospodar of Moldavia, engaged to cooperate with them. The plan of campaign traced out by the Heterists, and the calculations on which they proceeded, were as follows:—No doubt could be entertained of the speedy reduction of the principalities; their possession would afford the means of organizing a considerable force, keeping up a communication with the rest of Europe, diverting the attention of the Turks, and also a fair chance of embroiling them with the great northern Potentate, to whom the patriots still confidently looked for assistance. A formidable conspiracy was set on foot at the same time, in the very capital itself, the explosion of which would, it was thought, shake the Ottoman empire to its foundations, and enable Ipsilanti to assume the offensive beyond the Danube, while a spirited proclamation should summon the whole of Greece to arms, from Ossa to Tonarus. It was fully expected that on the first news of the rising, the Servians, instead of remaining tranquil spectators of the contest, would unite their efforts to those of the Greeks. The plan was unquestionably well concerted, and had all the parts received their full execution, it would probably have been crowned with success.

But the scheme for attacking the metropolis was discovered thus:—A merchant of Constantinople, one of the principal conspirators, had some goods on hand, which he was unable to dispose of before the period fixed for the explosion. Unwilling to lose his merchandize, he found means to have the appointed day exchanged for another a little later; and in the interval, a discovery took place.

In the next place the revolutionists had very much miscalculated the spirit and inclinations of the inhabitants of the principalities. The whole country was governed by Boyars, who held the peasantry almost in the same subjection as the barons of Europe did their vassals of yore. They were not, therefore, inclined for change. The peasants themselves, subdued and impoverished by a long course of slavery and exaction, had not the energy to bear arms, and scarcely the means to procure them. Suzzo died, and left the divan or assembly of Moldavian Boyards in the greatest embarrassment. At this juncture an adventurer, named Theodore Vladimiresco, formerly in the Russian service, thought fit to press some claims on the divan, against the treasury, for sums of money which he pretended to have disbursed in 1811, for the exigencies of the state: the divan refused to take cognizance of the affair until the arrival of another prince, and Vladimiresco, exasperated by this resolution, immediately repaired to little Wallachia, where he possessed some influence among the Arnauts: allured by the hopes of plunder, a certain number of these engaged to join in a political crusade against the nobility of BUCKAREST. Accordingly, Theodore appeared in the field at the head of three hundred men, well armed, and issued a manifesto declaring that all the miseries of Wallachia proceeded from the apathy, corruption, and arrogance of the Boyards; that his sole object was to effect a reform in the government; and that this could only be done by expelling

pling the local authorities, and laying the grievances of the people before the Porte.

Vladimiresco marched triumphantly to Buckarest, but he had not been many days there before Prince Alexander arrived at the head of five hundred men, dragging with them some pieces of iron cannon, mounted on ship carriages. Both himself and Suzzo had already made overtures to Theodore, for combining their plans and forces; but the latter being but little interested in the more extensive designs of the Hetærists, and desirous to make war on his own account, demurred at first, betraying no disposition to act; he was however at length prevailed on to accede to the proposal by Douka, his lieutenant, who exercised great influence over the irregular bands composing his forces, and had previously entered into all the views of Ipsilanti. In the arrangements which followed, it was understood that each of the two chiefs should command his own corps, independent of the other, but that they were to act in unison against the common enemy.

It was now that the Prince began to feel all the difficulties of his situation. He was indeed master of the two provinces, but so far from being able to advance, it plainly appeared that he had little chance of being allowed to maintain his position at Buckarest. To crown all, the most fatal blow to his hopes came from a quarter whence he had expected support and even direct assistance. The Emperor of Russia issued a manifesto, in which the Greek leader was treated as a rebel and incendiary, and his conduct formally disapproved.

In this hopeless situation, obliged to pass from an offensive to a purely defensive system of operations, and menaced with an attack by superior forces, the state of his own army gave Ipsilanti still more uneasiness. Accustomed to regular warfare, he naturally wished to introduce discipline and tactics into the army, as well as to arm it on the European model, but these intentions were defeated by the envy and intrigues of his lieutenants, while the soldiers, composed of different nations, eager only for plunder, and strangers to all subordination, were not less intractable than their chiefs. There was but a single corps on which dependence could be placed, this was a battalion of young Greeks, educated in Europe, and for the most part students or merchant's clerks, who repaired to his standard from Russia and Germany. They were clothed alike in a regular uniform, and perfectly obedient. The zeal and patriotism of these young men, induced the prince to confer on them the appellation of the Sacred Band, a distinction which their subsequent heroism proved to have been most justly merited. With such indifferent troops, never exceeding nine thousand men, even after the junction of Vladimiresco; without possessing a single fortified place; unprovided with field artillery, and having but a very scanty supply of ammunition, he was charged with the defence of an extensive region, consisting of level plains, extremely favourable to the operations of the Ottoman cavalry.

The Turks appeared in the field in the beginning of April: some trifling skirmishes of advanced posts were followed by the capture of Galatz, which the Pacha of Ibrail assailed with a body of land forces, and a flotilla of gun boats. The Greek garrison, surprised and greatly inferior in number, made a brave but ineffectual resistance. A part was cut to pieces, while the remainder were obliged to seek safety in flight. The Turks avenged the death of their countrymen who fell on the 4th of March, by completing the destruction of the town, and putting all the inhabitants of the adjacent districts, whom they could seize, to the sword, without distinction of age or sex. In the meantime, Kara Mehamed, Seraskier of Silitria, advanced on the northern bank of the Danube at the head of ten thousand men, and on the 10th entered Bukarest, without firing a shot. Measures were immediately taken by the Seraskier, in concert with some officers of the Austrian consulate, for preserving order in the city; but the open country was exposed to every species of violence: the Turkish soldiery carrying their barbarity so far as to hang up numbers of little children by the feet on the

trees along the public roads, and impaling such of the Hetærists as fell into their hands. What with treachery, and those divisions which unhappily prevailed in the Christian army, there were no hopes left of impeding these successes of the enemy.

Although Vladimiresco had consented to unite his forces and co-operate with Ipsilanti, still no cordiality existed between them. The motives of the Wallachian chief were exclusively selfish, and, as he is said to have confessed in a conference with the prince, unconnected with the emancipation of Greece, he only wished to gain some personal advantage from the storm he had excited: besides, he pretended to an entire equality, while his vanity was offended at Ipsilanti's assuming the supreme command and title of generalissimo. The Ottomans, whose favourite weapon is perfidy, availed themselves of these dispositions in Vladimiresco with considerable address, and he was soon gained over by a promise of being raised to the dignity of Hospodar, if he would only betray his associates. The result of this offer was, that Theodore kept aloof, and openly refused to second the prince, who was anxious to risk a battle for the defence of Bukarest. That city was, therefore, abandoned; and the retreat to Tergovist effected with precipitation and disorder. While at this place, Vladimiresco met the punishment due to his perfidy and crimes. The prince, resolving to rid the army of a chief whose treachery was apparent, caused him to be arrested, and tried by a council of war; being condemned to death, the sentence was carried into immediate execution. All the troops who had served under Theodore, were then incorporated with those of Ipsilanti.

This act of vigour did not, however, stop the progress of disaffection or treason; desertions were frequent, while Douka, Sava, and most of the principal officers, continued secretly to negotiate and intrigue with the Turks. In order to bring his projects with those traitors to maturity, the Pacha remained quietly at Bukarest, in a state of complete inactivity, for nearly six weeks; during which period, the Pacha of Ibrail overran Moldavia, and occupied Yassy without the least opposition.

Had it not been for these obstacles, and the sudden departure of Cantacuzene, with the alleged intention of checking the progress of Ibrail Pacha, the strong and commanding position of Tergovist might have enabled Ipsilanti to make a formidable stand there. Convinced that he possessed no adequate means of defence at Tergovist, the prince determined to march on to Rimnik, a small town on the Oltau, and close to the Transylvanian frontier. While proceeding to this place, he heard that a Turkish division was advancing on the left bank of the river, and therefore lost no time in preparing to attack the enemy. A council of war being held, it was decided that a battle should be risked. Pursuant to this determination, Ipsilanti crossed the Oltau on the 17th of June, and took up a position at the monastery of Dragachan, within a few miles of Rimnik. The Turks had, by this time, approached so near, that the two armies were in sight of each other on the morning of the 19th. In a second council of war, Karavia, one of the chiefs, strongly urged the necessity of an immediate attack, while Giorgaki suggested that it would be much better to defer it for another day, when the expected reinforcements would arrive. They could, in the meantime, amuse the Turks with some skirmishing, and post detachments in the adjacent woods to attack the enemy's rear, when the action became general: but the advice of Karavia unhappily prevailed.

Ipsilanti having made the necessary disposition of his troops, the attack commenced at ten o'clock in the morning. A few rounds of grape-shot from five small pieces, flanked by the sacred battalion, was followed by a charge of the Turkish infantry, who rushed forward with loud shouts, and were repulsed at the point of the bayonet. A second charge was repelled with equal intrepidity by the sacred band, and had the cavalry come up at this moment, the fate of the day

was

was no longer doubtful. Cowardice and treason were, however, at work. No sooner had the enemy's cavalry perceived the retreat of their infantry, than they advanced on both flanks of the sacred battalion, and had nearly surrounded it, when the infamous Karavia, who had been stationed on the left with the Arnaut cavalry, instead of advancing to their support, turned suddenly round and fled, throwing the corps of Nicolas Ipsilanti, brother to the prince, into a disorder which ended in their joining the fugitives. It was in vain that he attempted to rally his men. The effect of this cowardly act, was to strike a panic into nearly the whole of the troops, nor could all the efforts of Alexander prevent them from re-crossing the Oltau, thus leaving the sacred band, as a halocaust to the enemy. Animated by the spirit which taught their ancestors to perish at Thermopyle, these youthful heroes preferred a glorious death to flight or dishonour. The result of a conflict sustained by a handful of young men totally unaccustomed to war, very badly armed, and exposed on an open plain to fifteen hundred cavalry, may be readily conceived. It ended in the destruction of nearly four hundred Greek youths, at once the flower and hope of their country; but a much greater number of the infidels covered the field of battle with their dead bodies. The heroism displayed on this occasion, will bear an advantageous comparison with the best days of Grecian history, and is by far the most brilliant trait of the contest. As an example of true patriotism, it has had a most salutary effect on the people of Greece: nor will the column which records the names of those who fell at Dragachan, be a sterile lesson for posterity.

Bereft of all farther hope, Ipsilanti bent his way towards Transylvania, having first issued an address, wherein he thanked those who had remained faithful to their oath, and paid a well merited tribute of praise to the manes of the sacred band, while the traitors Karavia, Sava, Douka, Varlo, and Mano, were denounced to the vengeance of the laws and the execration of Greece.

Proceeding to Trieste, with the intention of joining his countrymen in the Morea, where the patriot banner was already displayed, a mandate from the Austrian cabinet ordered the arrest of Ipsilanti, who was forthwith conducted under a strong escort to the castle of Mongatz, in Hungary.

Thus ended the short, though memorable campaign in Wallachia and Moldavia: its failure may be ascribed as much to the total want of resources, in money and munitions of war, as to the base treachery and selfish cabals of Ipsilanti's lieutenants, and to the pusillanimity and indiscipline of troops collected under every imaginable disadvantage. As a diversion, however, this attempt produced all the results that were expected from it, in drawing the attention and forces of the Turks to the North.

With respect to the origin of Ipsilanti's enterprise, it is still involved in considerable mystery. Whatever part the agents of the Russian cabinet may have had in stimulating this officer to come forward, no person who had watched the uniform policy of Russia, could feel the smallest surprise at the Emperor's disavowal of any participation in his proceedings. If he took the field without any other assurances of support, except what could be derived from four or five hundred followers, against whom an overwhelming force could at any time be sent, Ipsilanti must have added madness to folly, and there is nothing connected either with his public or private character, to justify such an imputation. On the cruelty and injustice of his arrest, by a power of which he was not the subject, and without even the shadow of any charge, there can be but one sentiment.

Previously to the rising in Moldavia, a certain number of the ecclesiastics and municipal magistrates called Primates, as also some chiefs among the Klepthis, had been entrusted with the secret plans laid down by the Heterists in the Morea and other points of the confederation. A new set of emissaries had, however, arisen just before the insurrection: these were styled Apostles by their employers, but known to

the lower classes under the denomination of philosophers, and were sent from Russia to stir up the people. Enthusiastic in the highest degree, these men, whose appearance in this part of Greece coincided with the first rumours of Ipsilanti's movements, went about circulating reports that the sultan had declared his resolution of transporting all the Greeks into Asia Minor, and establishing Turkish colonies, drawn from that portion of the empire, in their place; that Prince Alexander was abetted and supported by Russia, and that he was marching at the head of a large force upon Constantinople. Some of them affected to imitate the language and gestures of the old Grecian orators, and a ludicrous scene occurred at Spezzia, where an apostle who had proposed Demosthenes as his model, mounted a rostrum and very freely indulged in such reproaches as that great master of his art used not unfrequently to address his countrymen: but the Spezziots, less accustomed to such harangues, and by no means so gifted with patience as the Athenians, pulled the modern censor from his pedestal, and rewarded his frankness with a sound drubbing. On the whole, however, these emissaries produced a great effect; their reports were greedily swallowed by the people, while the Greeks, influenced by their characteristic ardor, neither lost a moment in deliberation, nor in waiting for more correct information of what was passing elsewhere, but rushed at once into the enterprise.

The first people who appeared in the field were the inhabitants of Sudena, a large village near Calavrita in the northern part of Arcadia. In order to conceal their design for a short time, they had recourse to a stratagem, which was subsequently repeated in another place: by giving out that the object of their armed bands was to plunder travellers, well knowing that the Turks are seldom in a hurry to suppress such excesses. But the Ottoman authorities had already taken the alarm, and were consulting at Tripolizza, on the best measures to be adopted. Among other plans, they resolved to invite the Greek bishops and primates to that city, under pretence of public business, and then to detain them as hostages: this measure was to be accompanied by another—that of carrying the order for disarming the people into effect.

The first design succeeded in part; the second failed. The governor of Patras having summoned the Christian inhabitants to deliver up their arms, met with a flat refusal: he then turned the cannon of the castle against the town, and easily made himself master of it, but the archbishop Germanos, descending from the mountains next day, at the head of nearly four thousand peasants, regained possession of the place, and obliged the Turks to shut themselves up in the citadel. This event was followed by a general and simultaneous rising throughout every town and village of the Peninsula, while the people of Hydra, Spezzia, and Ipsara also displayed the standard of independence, and prepared their numerous vessels to cruise against Turkish commerce, with the greatest expedition. In the beginning of these troubles, and before intelligence of passing events had reached Syria, Egypt, and the most distant points of the empire, many rich prizes fell into their hands. Samos, and indeed most of the other islands in the Archipelago, followed the example of Hydra, and declared themselves free. The presence of Ottoman garrisons, which were reinforced from the coast of Asia Minor, alone contributed to keep Lesbos, Rhodes, and Scio in subjection. Ten thousand Syrian troops were also transported into Cyprus, in time to render the plan of liberating it abortive, and ten thousand Christians perished:

The universal character of the revolt in the Peloponnesus struck the infidels with such a panic, that they saw no other alternative but that of throwing themselves into the nearest fortified places. At Calavrita and Calamata, the Turkish Agas capitulated and delivered themselves up to the insurgents: while in Elis, the Mussulmen resident at Gastouni and Lala, carried on a brisk warfare with the Greek inhabitants. The Laliots, however, abandoned their town after setting

setting it on fire, and retreated with their families to Patrass. This, however, being unprovided with subsistence for the garrison, was at first on the point of falling into the hands of the Greeks, and if the blockade could have been maintained for a day or two longer, the garrison must have submitted; but it was relieved by Ussuf, Pacha of Negropont, who crossed over from Lepanto with a body of Roumelians, and scarcely meeting with any resistance, compelled the Greeks to fly to the mountains of Calavrita.

At Caritena, about one hundred Turks took refuge in an old Venetian castle, above the town, built on a rock which overhangs the Alpheus. As they had no means of existence in this isolated spot, two thousand men were detached from Tripolizza to bring them off, upon which, three thousand Greeks under Colocotroni, who had now arrived from the Ionian Islands, assembled to prevent their passing. A striking proof was afforded on this occasion, of the little dependance that can be placed on irregular and untrained forces. Although they had collected for the purpose of fighting, yet, as the enemy approached, their spirits began to fail; they withdrew either singly or in small parties, until at length Colocotroni, seeing himself almost alone, was forced to escape to the hills.

But now a more valiant race, inured to arms, appeared in the field to aid the Christian cause. These were the Mainotes, the hardy mountaineers of Laconia, who, on the first symptoms of insurrection, hastened to the scene of action with alacrity. The Mainotes are not less brave than skilful in the use of their arms, and on every occasion gave examples of intrepidity, which the other troops of Greece hardly dared to imitate. Their character is however stained with many vices; of these the principal is a propensity to robbery and plunder, without caring much whether the object of spoliation be a friend or foe. The Mainotes were, however, far from being cheap auxiliaries; for besides pillaging the country, and living at free quarters, some of them, who were employed in guarding the Isthmus of Corinth, received from thirty to fifty Turkish piastres a month; and no sooner had the moment of their stipulated service expired, than they abandoned the posts confided to their care; nor did they return until fresh remittances were sent.

Before the middle of May, the whole Peloponnesus was in possession of the Greeks, except a few fortified points, and these furnished in general with a very scanty supply of ammunition and provisions.

A new government, composed of Archons and Bishops, was now established at Calamata, but afterwards transferred to the centre of the province; and an Arcadian army had sat down before Tripolizza. The Greeks did not, however, as yet dare to approach the city, but remained perched upon the highest summit of Tricopha, a sharp and rocky ridge to the north, observing the place from a distance, and occasionally skirmishing with parties of the garrison.

In the meanwhile, the Seraskier Chourshid Pacha, though sufficiently occupied in keeping up the blockade before the citadel of Yanina, into which Ali had retired; as well as in protecting his communications from the Suliote bands, resolved, nevertheless, to send whatever troops he could spare into Greece. Agreeable to this design, the Pacha's Kiayah or Lieutenant landed at Patrass, with nearly two thousand Albanian cavalry, and immediately marched towards Tripolizza. The blockade of the Acrocorinthus was raised, upon which the Turkish garrison took advantage of the respite thus afforded, to reap the harvest of the neighbouring districts then ripe, and carry it into the fortress. From Corinth, the infidel chief proceeded to Argos, passing through the intermediate defiles without the least opposition, and putting every Christian who fell into his hands to the sword. Argos was given to the flames, but a part of the armed inhabitants, having occupied a ruined castle, on the lofty rock above the town, he did not venture seriously to attack that point, and after exchanging some rounds of musketry with its defenders went on towards Napoli di Romania; opened a communi-

cation with that place, and thence directed his steps to Tripolizza. The Greeks, who had by this time approached somewhat nearer, and encamped before the city, being afraid to risk an action, retreated to Valdezza, on the road to Calamata, where, according to their favourite method, they entrenched themselves behind heaps of loose stones piled up for the occasion.

The Kiayah having assumed the chief command on entering Tripolizza, he began to make predatory excursions on every side, for the purpose of collecting supplies, and destroyed several christian villages. It was in one of these marauding parties, that Nikitas, the bravest and most disinterested of the Greek captains, acquired the high reputation for valour, which he has since preserved among his countrymen. Having halted in a small hamlet with only fifty soldiers, he was suddenly attacked by nearly three thousand Turks, and three pieces of cannon. Nikitas, undaunted by such fearful odds, took his measures so well, and kept up such a spirited fire, that, however strange it may appear, he repulsed the enemy with great loss. Ali Bey, second in command of the Turkish division, was killed by a musket ball in this affair.

On the 6th of June the Greeks were attacked by the Kiayah in person, at the head of all his disposeable force. The Ottoman cavalry, embarrassed and unable to act on narrow and rocky ground, were thrown into disorder by the fire of the Greek light infantry. The Mainotes, by a vigorous attack in flank, completed their defeat, and a total rout ensued. Two hundred infidels were slain, the remainder succeeded in re-entering the city, though in the utmost confusion, many of them having lost their arms and accoutrements.

As the Turks did not attempt to keep the field after this overthrow, it merely remained for the Greeks to watch the fortresses. The head-quarters of the Mainotes, and of the Arcadians under Colocotroni, were therefore once more established in front of Tripolizza; while Modon, Coron, and Malvasia, were invested on the land side by the peasants of Laconia and Messinia, and some parties of Mainotes. Two thousand Peleponnesians and a body of Ionians formed the siege of Navarin, while a more numerous corps of Achaians, reinforced by auxiliaries from Cephalonia and Zante, sat down before Patrass. Napoli di Romania was also blocked up by the militia of Argolis, and the Acrocorinthus by the Corinthians and Sycionians. The Hydriots and Spezziots cruised along the shore with some light vessels, and prevented any supplies from arriving by sea; and the heroic Bobolina of Spezzia undertook to conduct the naval blockade of Napoli di Romania, with seven sail of armed ships, brigs, and schooners, her own property, and fitted out solely at her own expence.

While these scenes were passing in the Peloponnesus, the insurrection continued to gain ground in the northern parts of Greece, though with less vigour, and fewer striking events. The Romeliots generally boasted that they were better soldiers than the natives of the Morea, but their conduct during the early part of the contest cannot certainly be cited as a proof of superiority. In Acarnania and Etolia, the revolution was effected without any difficulty, there being no Turkish troops in these provinces, except a few at Lepanto. In Phocis, Attica, and Bœotia, the peasants assembled in arms upon the mountains, but struck no blow worthy of being mentioned; the Athenians and Bœotians were indeed regarded as the worst troops in Greece.

About the time that the Kiayah Bey entered the Peloponnesus, another detachment of Chourshid Pacha's army advanced through the passes of Oeta, into Bœotia, burned the city of Livadia, and occupied Thebes. Omcr Vrioni, an Albanian chief of some reputation, who had the honour of defeating a party of British troops near Rosetta, in the ill-concerted expedition of 1807, marched towards Athens, with seven hundred horse. The town was in possession of the peasants of Attica, and the few Turks it contained, shut up

up in the Acropolis, were in great distress for want of provisions; while, in order to accelerate its capture, the Hydriots had disembarked a body of islanders with some ship guns at the Piræus. But no sooner did they receive tidings of Omer's approach, than a general flight took place; the Hydriots sailing away, while the Athenians sought shelter either in the mountains or in the island of Salamis, where fifteen hundred of them found a refuge. Soon afterwards, however, Odysseus and some other Greek captains, who had been attached to the former army of Ali Pacha, came from Epirus, and occupying the defiles of Thermopolæ, effectually prevented any more Turkish reinforcements from advancing in that direction.

In Macedonia, hostilities had already commenced, and the Christians of that province, meeting at first with some success, pushed their incursions as far as the gates of Salonica, causing great alarm in that rich and populous city. But, instead of following any fixed plan, they roamed about the country in separate bands, and for objects of little importance. At the commencement of these tumults, the Greek inhabitants of Mount Pelion, in Thessaly, were excited to revolt, but this insurrection was soon suppressed by the Turks.

At sea, the Greeks carried every thing before them, and for a long time rode undisputed masters of the Egean, keeping the Turkish ports and islands in a state of complete blockade: with the exception of merchant vessels, however, the only prizes hitherto made consisted of a corvette with a small complement of men, surprised in the port of Milos, and also one or two brigs of war. But a far more glorious triumph was afforded them, by the first attempt the Ottomans made to regain possession of the sea, and re-establish the maritime communication between Constantinople, Smyrna, and Egypt. In order to effect this purpose, two line-of-battle ships, and several smaller vessels, had quitted the Hellespont towards the end of May, and proceeded as far as the island of Lesbos. The Greek squadron fell in with one of the two-deckers, a seventy-four gun ship, which had separated from the others off the southern coast of the island. The following are a few particulars of the action, as related by Tombasi, the Hydriot admiral. Instead of keeping the open sea, and making use of his formidable artillery, the Turkish captain only thought of flight, but being unable to escape without fighting, he anchored his ship at the entrance of the gulf of Adrametum. On this, the Greeks immediately prepared fire ships to lay him on board: their first attempt failed, but the second completely succeeded. Two of these destructive masses being linked together, fell athwart the bows of the Ottoman, while the ignorant Mussulmen stood on deck with their muskets to oppose what they imagined to be an attempt at boarding, deceived by several effigies the Greeks had dressed up in different parts of the fire vessels. When once attacked, only a few minutes elapsed before the Turkish ship was enveloped in flames, the captain then cut his cables and allowed her to drift towards the shore, but long before reaching it she run a-ground. The crew now endeavoured to save themselves by swimming; but the victorious islanders pursued in their boats, and such were the perils which the Turks had to encounter, that out of a complement of eight hundred men, scarcely a single individual was saved. As to the ship, she burned to the water's edge. The rest of the Turkish squadron fled with all possible speed to the Dardanelles.

Demetrius, the brother of Alexander Ipsilanti, arrived at Hydra early in June from Trieste, having traversed the Austrian dominions in disguise. He bore a commission from Prince Alexander appointing him general in chief of all the forces in Greece, and was accompanied by a younger brother of prince Cantacuzene and some other Greeks belonging to families settled in the North of Europe. The Hydriots received Ipsilanti with discharges of artillery and other demonstrations of joy. After remaining a few days in the island, he proceeded to the Morea, where he assumed the command of the army before Tripolizza. The disastrous

issue of his brother's expedition could not then be known, and it was generally supposed that Demetrius had brought large sums of money and a quantity of military stores; but this illusion soon vanished, for it was found he had not more than 200,000 Turkish piastres, most of which Petros Bey borrowed for the support of his followers, and 200 stand of arms. As the melancholy termination of the northern campaign became known, the ardour excited by Ipsilanti's arrival began to cool, when the ephors turned a deaf ear to all his propositions for organising the army and establishing a regular system of administration. Independently of this Demetrius found that the Greeks were never united. The armed population was commanded by officers bearing the title of Capitani, a word of very vague signification; since some were at the head of 2000 men, while others were not followed by more than 20 or 30. These officers, though engaged in the same enterprise, acted quite independently of each other, but it more frequently occurred, that a number of them agreed to obey one chief of superior reputation. Now the best understanding did not always exist between the captains and the primates, although they were reciprocally dependent on each other; the first for receiving a regular supply of rations, which it was the business of the ephors to collect and send to the army; the second, for having their decrees enforced and measures carried into effect. The confusion arising from the jumble of civil and military organization, to which the country party adhered but too obstinately, may be easily conceived: brought up under the Turkish system, and participating in its abuses, they seemed to have no permanent rule of action, and took a singular pride in attempting to imitate the barbarous pomp displayed by the Mahometans of rank. The situation of the prince was both difficult and delicate, surrounded by jarring interests and passions, an object of constant jealousy to the primates, and frequently opposed in his attempts to correct prevailing defects.

Prince Cantacuzene, his colleague, quitted Greece altogether in October, hopeless of effecting any good purpose with these discordant forces.

Early in August, prince Mavrocordato and Caradja, the first a highly distinguished Fanariot, and the second a son of the fugitive Hospodar, arrived from Marseilles in a Greek vessel, loaded with military stores, which Mavrocordato had purchased there, and after visiting the camp before Patrass, disembarked their supplies at Messolonghi. The talents and noble character of Mavrocordato, soon procured him great weight and authority among all classes. The bey of Maina, Mavromichalis, though as anxious to see his country free as most men, was destitute of those powers of the mind, indispensable for those destined to take a prominent part in such a revolution; but his brother, Kyriacouli, on whom the command of the Mainotes seemed principally to devolve, gave proofs of courage and enterprise.

But of all those who were now called upon to aid the Greek cause, Colocotroni deserves most particular notice. This chief had never submitted to the Ottomans, but like his ancestors, had almost from his cradle carried on a petty warfare against them, spreading alarm throughout his native province, at the head of a band of faithful and determined followers, making the most inaccessible mountains of Arcadia his abode, and plundering all who came in his way. No wonder if the character of such a man received a tinge from the wild habits of his life; hasty and violent in his temper; an Ajax in person; bold and daring in the field, where he seemed to court danger; greedy and rapacious of spoil, fertile in stratagem, it would have been almost impossible to find a more active or efficient partisan. Driven from the Morea by Veli Pacha, he first entered into the Russian, and subsequently the British service, and was appointed captain of guides in one of the Greek battalions raised in the Ionian Islands. But his military experience had given to Colocotroni no relish for tactics or discipline; to neither of which did he appear to attach the smallest importance; and he

neither loved nor esteemed Ipsilanti, whom he accused of sloth and want of vigour.

Ipsilanti had two important projects in view: one of these, was to establish a general and central government for all Greece; the other, to put the army upon a regular footing, and assimilate it to the troops of Europe. Both the above designs met with numberless obstacles; the first would have destroyed the influence of many interested individuals, who were at the head of different states of the confederation, and the second was calculated to lessen the power of the military chiefs. The captains and ephors therefore joined in opposing them, and in other respects created such difficulties as to render the situation of the Prince exceedingly irksome. In the meanwhile, two events occurred, which, though favourable to the cause of independence, tended by their consequences to exasperate Ipsilanti still more.

The strong fortresses of Malvasia and Navarin surrendered to the patriots in August. The former, situated on the east coast of Laconia, is a place very difficult to reduce, being built in a rock washed on every side by the Egean sea, and communicating with the continent only by a bridge. Defended in this quarter by a strong treble wall, it is inaccessible at every other point, containing within itself sources of excellent water, and a small patch of cultivated land, sufficient to support a garrison of fifty or sixty men. Below this impregnable citadel is a port and suburb, where most of the inhabitants reside. The Greeks had kept it closely blockaded both by sea and land, since the month of April; Cantacuzene arrived in the camp about the middle of July, and took the command: famine had already made dreadful havoc amongst the Mahometans, who after prolonging their existence by the most unnatural aliments, were at length reduced to feed on human flesh, eating their prisoners, and even their own children.

But while the majority of the population was thus suffering, the governor, shut up with two hundred soldiers in the citadel, enjoyed abundance, and gave himself no trouble about the fate of his countrymen in the lower town. These last were disposed rather to famish than trust to the mercy of the peasants and Maiiotes who were investing the place: but the arrival of prince Cantacuzene having inspired them with some degree of confidence, they ventured to open a negotiation. Full protection was stipulated for their lives, moveable property, and the honour of their families; it was also agreed that they should be transported in Greek vessels to the coast of Anatolia. On the faith of these assurances, a part of the inhabitants got into the castle by stratagem, seized and disarmed the governor and his troops, and on the 3d of August opened the gates to the besiegers.

Prompted by those feelings of irritation and revenge, which have been so often betrayed under similar circumstances; and impressed with a notion that the garrison was not entitled to the benefits of a capitulation entered into with the inhabitants of the town, the Greek soldiery, strangers to discipline, fell on the former, of whom numbers perished. To the credit of Cantacuzene, it should be added, that he displayed equal prudence and firmness on this occasion; interposing his authority with such effect, as to save a number of lives, and eventually succeeded in putting a stop to the excesses, though not without considerable risk from his own soldiers, who conceived they were only retaliating the countless murders previously committed by the infidels.

Navarino, which also surrendered soon after, was the theatre of another tragedy, to which none but wars between slaves and their task masters ever give rise. Well fortified, and possessing one of the finest harbours in Europe, this city is built in the immediate vicinity of the ancient Pylos; it was ably defended by the Turks, who made several vigorous sorties, but at last, every kind of sustenance being exhausted, after devouring even their slippers, they were forced to capitulate. Ipsilanti had sent one of the best and most distinguished of his friends, Tipaldo the Cephalonian, to conduct the siege. Tipaldo was a man of virtue and abilities, who,

after practising as a physician in Bessarabia with great success, abandoned the rising prospect of wealth to take his part in the national war. He manifested great spirit at the head of some Ionians in the various actions which were fought under the walls, and it was his presence that chiefly induced the Turks to treat about a surrender; for such was their obstinate resolution, that they had placed barrels of gunpowder under their houses, with the intention of blowing up the town, when a longer resistance should become impossible: the same terms were granted here as at Malvasia. It was while the siege of both these places had been carrying on, that the news of the Patriarch's murder and that of the Greek clergy at Adrianople, together with the profanation of the Christian churches throughout the empire, spread through Greece: the fury of the troops, worked up to madness, was therefore vented on the garrison, of whom a considerable number were sacrificed. Tipaldo endeavoured in vain to arrest the heart-rending spectacle; the infuriated soldiery answering his exhortation by citing some act of personal suffering or oppression, and directing his attention to the recent massacres of the capital and other places.

These disorders, joined to the opposition he experienced in other respects, roused the indignation of Ipsilanti, who determined to withdraw until a clearer understanding could be established. He accordingly issued a proclamation, in which he inveighed bitterly against the cruelties and indiscipline of the Peloponnesians, and giving up the command, proceeded to Leondari. The Primates and Captains being however alarmed at this step, sent a deputation to the place of his retreat, and persuaded him to resume, for the present, his functions as generalissimo.

All eyes were now turned on Tripolizza, a town of modern origin, where the Turkish army were closely besieged by the Greeks. The supineness of the former was astonishing; they, whose numbers amounted to nearly 20,000 men, suffered themselves to be blockaded by 5000 undisciplined, ill-armed Greeks, without cavalry or artillery. The town was fortified by a wall, nine feet high, six feet thick at bottom and three at the top, which was furnished with a double row of loop-holes. There were demi-towers at different points, where cannon is placed; the rest of the wall was defended by musketry. Here the Mussulman cavalry soon became useless for want of forage, having nothing to subsist on but vine leaves. Frequent skirmishes took place, by the Turks endeavouring to force a way into the vineyards; one party was intercepted by Colocotroni, and defeated with the loss of 100 men in killed alone. Provisions became very scarce in Tripolizza, and the Greeks cut off the supply of water; which made the distress of the besieged extreme. The remaining store of provisions in the Turkish garrison, consisted of a small quantity of biscuit: horse-flesh was a luxury appropriated to persons of the highest rank; while hundreds of miserable starving objects were seen, wandering in crowds, gnawing the bones already cleanly picked by their superiors. Whole families of these poor famishing creatures came out and surrendered to the Greeks, but were driven back into the town; and some who endeavoured to escape to the mountains, were intercepted and slain. The Turks were at this time harassed by an accumulation of horrors; in addition to the evils before named, an epidemic disease raged among them, brought on by famine, and want of good water; to this was added, disunion among their chiefs: a part of the garrison became mutinous.

Some attempts were now made at negotiation, which was procrastinated from time to time by the Turks, until the 23d of September, when a smart action occurred. On that day, some of the besieged came out to exchange their arms for strings of dried figs; a Greek fired his musket in the direction of the Turks, to warn them to withdraw; the latter, suspecting treachery, immediately attacked the Greeks, and obliged them to retreat. The Mussulmen perceiving this, issued forth in great numbers to support their countrymen, and the whole Greek army took part in the action. During
the

the engagement, Colocotroni marched round the wall, and falling on the rear of the Turks, they were defeated with great loss.

On the 1st of October, 2500 Bardouniots came out, surrendered, and took their place in the Greek camp. On the fifth of the same month, the horrors of this protracted siege was brought to a terrible close. A few Greek soldiers having approached the gate of Argos, entered into conversation with the Turkish sentinels, and began as usual to barter fruit. The Turks were imprudent enough to assist them in mounting the wall, with a large basket of grapes, in exchange for which they gave their arms; but no sooner had the Greeks gained the summit, than they hurled down the unguarded Mahometans; opened the gate, the only one that was walled up, to their comrades, and displayed the standard of the cross above it. When this emblem was perceived from the camp, it acted like an electric shock; the whole Christian army instantly rushed from all sides to the assault, and the disorder once began could not be stopped, for the Turks immediately opened a brisk fire of cannon and small arms upon them from the citadel and ramparts. The principal Greek officers, who certainly could not have restrained their men, were drawn away by the torrent: Colocotroni was one of the last to hear what was passing, and as he would not deign to follow the steps of any other captain, he determined to force a passage for himself, so that his troops suffered severely. After the gates were broken down and the walls scaled, a furious struggle was maintained in the streets and houses; but the Peloponnesians, flushed with victory and spurred on by vengeance, were irresistible, and before sunset, all opposition was quelled in the blood of the unfortunate Moslems. The citadel, where a large body of Turks had taken refuge, having held out till the following evening, surrendered at discretion.

Filled as the history of Europe is, with the recital of cities taken by storm, and the scenes which have followed, it were a task as needless as it would be painful to retrace those which occurred at Tripolizza between the evening of the 5th, and the morning of the 7th of October, 1821.

Nothing could exceed the dreadful and indiscriminate carnage; but let it be remembered, that during the whole war, not a single armed Greek who fell into the hands of the Turks, had been spared. The loss of the Turks on this occasion was reckoned at 6000 killed, besides many prisoners; the loss of the Greeks was said to be about 500 killed and wounded. It was but a short time before the assault, that the capitan Pacha's fleet had entered the gulf of Lepanto, landed troops at Vastigza, Galzida, and other places, who after massacring the defenceless inhabitants; had reduced the towns to ashes. Patras, Corinth, Modon, Coron, and Napoli de Romania were still in possession of the Turks.

It is now necessary to retrograde a little in point of time, to mark events occurring in other parts. In the month of August, four Pachas at the head of 5000 men, marched against Zetouni. Their object was to unite with the Ottoman troops at Thebes and Athens, to enter the Morea and relieve Tripolizza, and the other fortresses.

On the 31st of August, these were encountered at Fontana, on the high road to Lavidia, by a small corps commanded by Odysseus. Three hundred Turkish horse, sent to reconnoitre, fell into an ambuscade and were cut to pieces. Next day the Turks attacked with their whole force: at first the Christians gave way, but being rallied by a chief, named Gouraz, they made a desperate charge, and the Turks were routed. The Turks lost here one Pacha and above 1000 men slain. Several standards, pieces of cannon, and many horses, with much baggage, fell into the hands of the victors.

For nearly two months afterwards, the positions of the armies in Greece were various. At Zetouni and in front of Odysseus, were the remains of the Mussulman forces, beaten on the 31st; in his rear was a Turkish division of three thousand men at Thebes; and the corps of Omer Vrioni at Athens, both of which had continual affairs of advanced

posts at Dolreni and Dorbeni, with the Greeks who defended the Isthmus of Corinth. Two thousand Bœotian peasants occupied some points round the mountains of Thebes, while fifteen hundred armed Athenians held the island of Salamis, and other parties were assembled on the hills of Attica.

About the end of August, an insurrection broke out in Eubœa, headed by the Bishop of Carystus, who endeavoured to interrupt the communication between Athens and Negropont, and to cut off a Turkish detachment passing from the former to the last named place, with a convoy of valuable effects. But his followers taking to flight at the first fire, he was forced to escape to Hydra.

It was on the 14th of August, that the grand Ottoman fleet quitted the Dardanelles, under the command of Kara Ali, the Capitana Bey, who was afterwards blown up by the Ipsariots at Scio. It consisted of thirty sail, of which four were of the line, and one a three-decker. After an ineffectual attempt on the Island of Samos, the Turkish admiral steered to the southward, pursued by one hundred and nine Greek vessels. The islanders, whose largest ships did not carry more than thirty guns, did not however seek an action in the open sea, but sought an opportunity of separating the hostile fleet, or attacking it with fire-ships. The Turks, grown wary by experience, avoided exposing themselves to these destructive machines, taking care to keep in a close body, and always under sail. They had now a number of European seamen, chiefly natives of Malta and Genoa, on board the fleet. These men, of whom there are a great many generally idle at Constantinople, were allured more by the hope of pecuniary advantages than any interest in the struggle, which was indeed a matter of perfect indifference to them. The Greek sailors, with a spirit of impatience which has often proved prejudicial to their cause, obliged their chiefs to return to port, so that all their exploits during this cruise were limited to burning a few Turkish transports on the coast of Anatolia. A single fast sailing schooner, commanded by a brother of the Hydriot admiral Tombasi, was left to watch the enemy's movements; but she returned to Hydra on the 3d of September, bringing intelligence, that the Capitana Bey, reinforced by the Egyptian and Algerine squadrons, had passed the island of Cos, on his way to Candia. This information proved erroneous, as Kara Ali steered directly for the Peloponnesus, and supplied Coron and Modon with provisions. His appearance on the southern shore of the Morea, created general consternation. Some of his smaller vessels having approached Calamata, the military commandant and garrison prepared to fly to the mountains, but were encouraged to remain by the example of the brave Balisto, who drew up his weak battalion, in order of battle upon the strand, partially covered by some sand hills, and caused his drums and trumpets to sound, while a body of one thousand Mainotes fired a general volley of musketry from behind the rocks. The pusillanimous Turks, disheartened by this show of resistance, sheered off without daring to disembark; while thus employed, Balisto learned that the people of Calamata were about to dispatch the Mussulman prisoners confined there; he instantly flew to the town with a party of soldiers, arrived in time to prevent the act, and then returned to his post on the beach.

From Modon, the Capitana Bey sailed to Patras; three thousand Achæians and Ionians blocked up that place on the land side, while some light vessels prevented supplies from entering by sea. The latter fled on the appearance of the fleet, taking shelter either at Galaxidi, or running on the shallows of Messolonghi, where they were burned by the Turkish boats. Kara Ali, having arrived in the roads, made a discharge of his artillery upon the Greek camp, and the garrison sallied forth at the same time: a single post of two hundred men offered a slight resistance; the rest of the besiegers dispersed themselves in the mountains, leaving the few pieces of cannon they had in the power of the Turks. This was the event which induced Ipsilanti

to quit the walls of Tripolizza, for the purpose of re-establishing the blockade, as well as obviating the consequences of such a defeat. The troops destined to accompany him, amounting to about seven hundred men, marched in two columns; the first consisting of five hundred of the militia of Caritena, left the camp on the 24th of September, under the orders of two sons and a nephew of Colocotroni. The prince himself, accompanied by Mr. Gordon and his own staff, the battalion of Balisto which had just arrived from Calamata, and did not exceed two hundred men and officers; and also a few artillery men having one mounted gun, and a light brass four-pounder, set out on the following day. On the 28th, both divisions formed a junction at Calavrita. The advantages of his position engaged the prince to suspend his march to Patrass; whither he dispatched an aid-de-camp, until he should receive intelligence of the enemy's movements. Indeed his presence before that fortress was no longer necessary, as the Turks had not attempted to improve their victory, and the Greeks were beginning to recover from their panic; seven hundred having re-assembled in the mountains, they were soon increased to more than double that number. On the night of the 29th, a messenger arrived in breathless haste, bringing information that the sultan's forces had landed at Vostizza, only a few leagues from Calavrita, and having burned the town, were advancing into the interior. Ipsilanti instantly took his measures with great judgment, and at day break on the 30th, marched to meet the enemy. His little army, reinforced by some militia of Calavrita, and now amounting to nearly a thousand men with one field piece, was in high spirits, and extremely well disposed to fight. But a second messenger met the prince on his way, and stated that the enemy had re-embarked, after committing various excesses and carrying off a large flock of sheep found near Vostizza. Approaching the coast, Ipsilanti took post for the night on a lofty eminence between the plain and the sea, adopting such precautions as were necessary to prevent a surprise; for the Ottoman squadron, of one frigate and thirty brigs, was seen at anchor near the shore, and it was known that the pacha of Egypt had sent fifteen hundred Albanians, who passed for good troops. The 1st of October was stormy and rainy, but on the mist clearing away about noon, the Turkish vessels were perceived to weigh anchor and steer to the north-east. There could be no doubt that their first object was the attack of Galaxidi, but well-founded apprehensions were entertained with regard to their ulterior operations. The wind was blowing steadily from the north-west, and a few hours might carry them to the head of the gulph of Corinth: the prince resolved thereupon to advance towards Corinth with all speed.

The small commercial town of Galaxidi, on the shore of Ozolian Locris, is situated within the Bay of Cyrrha, and near its entrance. The principal wealth of its industrious inhabitants consisted in a number of small trading vessels. Aware that their vigilance in blockading Lepanto, had rendered them peculiarly obnoxious to the barbarians, they had made preparations for defence, by erecting a battery on an islet at the harbour's mouth, and mooring their little flotilla in line before the town. The women and children were sent to Salona, so that none but combatants remained. On the evening of the 1st of October, the Ottoman squadron took up its position and summoned the Galaxidiotes to surrender. But regardless of the vast disparity of force, the latter answered by firing on the boat which brought the message. The Turks immediately began the attack, and battered the place for two hours, when night put an end to the action. It was renewed at day-break, and lasted for three hours more. Ipsilanti and his staff were on a height on the opposite side of the gulph, anxiously watching the issue of the battle. After opposing a most gallant resistance to a prodigious superiority both in numbers, guns and weight of metal, the brave inhabitants of Galaxidi fled to the mountains of Salona, having previously destroyed their vessels and batteries. The town was pillaged and set on fire.

After witnessing the destruction of Galaxidi, Ipsilanti proceeded by forced marches towards the Isthmus: on the 2d he slept at Akrata, and on the next night, at Hylocastro. The wind having changed to the east, the Turkish fleet stood down the gulph again in its way to Patrass, and under a press of sail. All immediate cause of apprehension being thus removed, the prince went on to Basilico, on the 4th, and halted there for some days, amidst the ruins of the ancient Sycion.

Having halted a day or two at Argos, and visited the posts round Napoli de Romania, Demetrius made his entry into the capital of the Morea on the 15th of October, amidst very great demonstrations of joy, and attended by a large body of troops who went out to meet him. Nothing could be more deplorable than the appearance of the town: not a single door lock, and scarcely a nail was left—the Mainotes having carried off every thing of that description. The plunder was taken home on the backs of their wives, who came down in great numbers for this purpose from their native fortresses. When every other portable article was gone, peasants were seen driving away their asses loaded with doors and window shutters. Complaints were heard on every side, and while some wished to conceal their gains, others murmured loudly at being defrauded of a fair portion. Ipsilanti's first object was to put an end to the great confusion that prevailed. He certainly succeeded in restoring some degree of order, but this was chiefly owing to the breaking up of the army, which gradually dispersed and melted away, carrying into the farthest corners of the Peloponnesus, those discontents and heartburnings, the seeds of which were sown at the sacking of Tripolizza. There now remained only the regular troops, consisting of one battalion of infantry and a company of artillery, with the retinue of some captains; a force scarcely sufficient to guard the Turkish prisoners. Perceiving that his plans of amelioration were opposed with scarcely less pertinacity than before, and his influence every day declining, Ipsilanti resolved to submit all the disputed points to a national congress, which was summoned to meet at Tripolizza. But a contagious disease broke out there in the beginning of November. The assembly was therefore convoked at Argos, where the prince repaired to attend the deliberations.

In the meanwhile, deputies arrived from different parts of Greece charged to demand succours from the government of the Peloponnesus, and to give an account of what was passing in their respective districts.

The news from Macedonia excited most attention, as the campaign there did not, as yet, wear a hopeless aspect. Allusion has already been made to the insurrection at Salonica, and the retreat of the Greeks into the Peninsula of Cassandra, where they threw up entrenchments, and cut a ditch across the Isthmus. The adjacent promontories of Torone and Mount Athos were also in a state of revolt, and each contained several thousand armed men.

During the summer and autumn, the Macedonian Turks sent two expeditions against the entrenchments of Cassandra, and were twice repulsed. On the second occasion, the Christians by a vigorous sally possessed themselves of nine pieces of heavy artillery. They were, however, much distressed for want of grain and ammunition, having received only some scanty supplies from the Hydriots, and therefore demanded assistance from the Peloponnesians. It happened most unfortunately, that while the affair was in agitation, the new Pacha of Salonica, who had brought up an overwhelming force, succeeded completely in a fresh attack. Cassandra was taken by storm on the 12th of November, and its garrison put to the sword, as a matter of course. Soon after this event, Mount Athos capitulated.

A deputation from Mount Olympus reached Tripolizza about the middle of October, stating that seven thousand Macedonians were prepared to rise in the southern parts of that country, and demanding cannon, gunpowder and officers. Two six inch mortars were given to them, but scarcely had these pieces been landed at Ekatarina, than they

they were seized by a party of Turks. The projected insurrection, however, took place, and has continued with various success ever since.

In the Peloponnesus, there were but two points at which hostilities were prosecuted with any degree of vigour; these were Patrass and Napoli di Romania. The besieging force against Patrass having been considerably swelled by reinforcements from Arcadia and Elis, was joined by Prince Mavrocordato and young Caradja, who brought over some pieces of ordnance, and a quantity of muskets from Messolunghi. Towards the end of October, the town was carried by assault, and the garrison once more forced to retire into the citadel. The Greeks displayed a good deal of courage in this affair, and experienced considerable loss. Having occupied the minarets and entrenched themselves in the houses, they kept up a continued fire of musquetry against the ramparts of the castle, which the Turks answered from their great guns. Unhappily, the vigilance of the assailants was not equal to their bravery. Yussuff Pacha, who had retreated into the castle of the Morea, quitted this place on the 15th of November, at noon, with only four hundred horse and foot, and, marching in the rear of the Greeks, was not perceived, until he entered the gates, and commenced an attack. The garrison of the citadel immediately sallied, and after a short and tumultuary conflict in the streets, the Christians were entirely routed. Mavrocordato and Caradja escaped with difficulty to a boat, which conveyed them back to Messolunghi: their cannon, baggage, and a magazine containing fifteen hundred muskets, fell into the hands of the Turks. This action did much honour to the vigour and military talents of Yussuff Pacha.

Ipsilanti had another object in view in going to Argos, besides presiding over the deliberations of the Congress. He wished to push the siege of Napoli di Romania; but the means of attacking so strong a fortress were lamentably deficient. A plan was suggested to the prince for carrying it by assault. This was adopted, and measures taken in consequence, for re-assembling the army. The hope of spoil attracted the peasants from all quarters; and not less than twelve thousand of them were in fact collected. Scaling-ladders were accordingly prepared, and on the night of the 15th of December, the troops and ships of war took up their respective stations; but this assault entirely failed.

Nikitas and Balisto carried the scaling-ladders to within two yards of the ditch, and remained there for nearly an hour waiting the signal of attack. Ipsilanti then caused it to be given; but the Greeks, after a general volley, which only served to shew the enemy where the men had retired behind the rocks, subsequently dispersed themselves over the plain. The fleet did not make any attack, neither did Colocotroni; each party waiting till the other should begin. The Turks emboldened by the retreat of their adversaries, made a sortie, repulsed a party, which had kept its ground after the flight of Colocotroni's division, seized the scaling-ladders, and bore them off in triumph.

After the above check, Prince Demetrius went to Argos, where frequent meetings of the deputies, who had collected there from various points of the confederation, took place at his quarters: these continued until the arrival of Mavrocordato, whose presence, however, produced an immediate diminution in the number of Ipsilanti's visitors: nor did many days elapse, before it was evident that he regarded the former as a rival. Despairing, therefore, of being able to carry his plans into effect, and not wishing to expose himself to further humiliation, his whole attention was now directed to the progress of the war, and he departed soon after for Corinth, accompanied by Kiamel Bey, through whose influence, it was hoped, that place would shortly surrender.

Owing to the vicinity of Argos to Napoli di Romania, and the consequent interruption which might be occasioned by the operations of the siege, it was determined, after some preliminary arrangements, that the more important deliberations of the Congress should be held at Epidaurus in the Gulf of Egina; to which place the members accordingly repaired early in December.

The anxiety of all classes to witness the formation of a government, was strongly evinced in the eagerness with which deputies were elected. Besides Prince Mavrocordato and the military chiefs, the number of representatives who had reached Epidaurus by the middle of December, exceeded sixty, consisting of ecclesiastics, landed proprietors, merchants and civilians, who had for the most part received a liberal education in the west of Europe.

The first act of a congress thus met, to re-establish institutions which may be said to have ceased with the Roman conquest, twenty-one centuries before, was that of naming a commission, including the most enlightened members, to draw up a political code; the remainder being occupied in examining into the general state of the nation, ascertaining its resources, and devising the best mode of commencing the second campaign, with proper effect.

Having decided on the civil and political rights of the nation, the next object of congress was to select five members to form an executive; the choice of president fell on Prince Mavrocordato, whose talents and extensive information were pre-eminently displayed in aiding the commission appointed to draw up the constitution. Ipsilanti was also invited to preside over the deliberations of the legislative assembly; but having conceived that he was entitled to a still higher office, the prince did not accept the proffered honour. In order that still greater effect might be given to the measures of the new government, ministers were named to superintend the various departments of war, finance, public instruction, interior and police; a commission of three individuals from Hydria, Spezzia, and Ipsara, was also appointed to direct the naval affairs.

While the national congress were pursuing their arduous labours at Epidaurus, the capture of Corinth became an object of increasing solicitude and importance to the executive.

The arrival of Panouria, of Salona, a popular chief of that neighbourhood, gave a favourable turn to the siege. Originally a peasant of Mount Parnassus, he had in early life been driven to the necessity of drawing the sword to avenge the cruelty of a Turkish Aga, and greatly distinguished himself at the head of some brave Annatolians ever since the insurrection began; he opened a communication with the Albanian portion of the garrison; this plan succeeded so well, that a treaty was concluded, by which they consented to withdraw, on condition of being allowed to return home with their arms and a gratification in money. These terms being readily granted, they descended from the citadel to the number of two hundred on the 22d of January, and having been escorted to the beach, were embarked in boats, which transported them to the opposite shore of the gulph.

The retirement of the Albanians having removed all farther hope of holding out on the part of the Turks, they also declared themselves ready to capitulate. It was then agreed that the garrison should lay down their arms, and be conveyed to the coast of Asia Minor in transports provided by the government of Greece. The first part of these conditions was carried into effect on the 26th, and preparations made to execute the second, which was also fulfilled to a certain extent: but owing to a delay in the arrival of transports, the peasants who had been exposed to the innumerable exactions and oppressive acts of Kiamil Bey, rushed into the citadel and gratified their irresistible thirst for revenge on many of the Turks. The executive naturally took advantage of the capture of Corinth, to establish the seat of government there.

This event took place on the 27th of February, and it may truly be said, that on their reaching Corinth, those whom the legislators of Epidaurus had appointed to watch over the destinies of Greece, had little more to depend on, than the justice of her cause and constancy of the people. On the other hand, the preparations of the enemy were such as to appal ordinary minds. The reduction of Yanina and death of Ali Pacha, had placed a very large disposable force into the hands of Chourschid Pacha, together with the

immense treasures of the Albanian tyrant: an army had collected at Larissa to invade the Peloponnesus, while a formidable fleet was ready to leave the Dardanelles.

On the arrival of the president from Hydra, where he had proceeded, to urge the necessity of sending divisions of the fleet towards the Dardanelles and gulph of Lepanto, a system of order and activity commenced, which had been hitherto unknown in the confederation. As to the spirit which animated the new government, it might be easily traced in the decrees which followed the transfer to Corinth. It was while the Porte was meditating fresh scenes of vengeance, and preparing to attack Greece by sea and land, that a decree was issued to abolish slavery, as well as the sale of the Turkish prisoners who should henceforth fall into their hands, which was interdicted under the severest penalties, and ordering that they should be treated as those of the most civilized countries. Another edict regulated the compensations for military service, as also the provision to be made for the widows and orphans of those who should fall in battle: while a third established a regular system of internal administration for the provinces.

Menaced on every side by forces so infinitely superior in number to their own, and headed by the most able of the infidel chiefs, the necessity of organizing the army on the European system, now became more apparent than ever. Although the means of effecting this great object were so slender, still it was of importance to make a beginning: a corps to be styled the first regiment of the line was therefore formed, and many of the officers were selected from the volunteers who had joined the Christian standard from the west of Europe. There being, however, a much larger number of these than was required, they were embodied into a second corps, which assumed the name of Philhellenes. The organization and command of the regular troops were entrusted to General Normann, a distinguished German officer, who had just arrived from Marseilles with a number of volunteers.

In the mean time, Ipsilanti and Nikitas had gone towards Zetouni: a second corps of three thousand men was sent to re-establish the blockade of Patras, under Colocotroni; and a smaller body of troops was detached to Athens, under Colonel Voutier, a Frenchman, in order to reduce the Acropolis of that place. An addition was also made to the force before Napoli di Romania, and every precaution adopted to secure its blockade by sea. As to the garrisons of Modon and Coron, they continued to be closely invested by the armed peasantry of the neighbouring villages.

The commencement of the second campaign for the emancipation of Greece, was marked by an event at once the most atrocious and terrific that the historians of the present age will have to record. It is scarcely necessary to name the desolation of Scio, and massacre of its ill-fated inhabitants. This fertile and beautiful island, the chosen asylum of modern Greek learning, not less distinguished for the wealth and industry, than the hospitable urbanity of the natives, had long been singled out as an object of spoliation and vengeance by the infidels, who only waited for a pretext, no matter how trifling, to carry their nefarious design into execution.

The people of Scio had been remarkable for their peaceable habits and quiet submission to the Porte, ever since the capture of Constantinople, and although not less interested in the regeneration of Greece, than the rest of their countrymen, they declined taking any part in the revolt when it first broke out. The commercial relations of the island were more complicated and extensive than those of any other part of the confederation; there being scarcely a capital of Europe without some establishments kept by Sciot merchants, while a very large portion of their wealth was locked up at Constantinople and Smyrna; the trade between these two cities being almost exclusively conducted by them. Possessing such ample means of ministering to the avarice of their tyrants, the civil government had long been confided to the elders, whose administration was of the most paternal description. What with its palaces, country houses and

gardens, its colleges and general state of improvement, Scio presented so striking a contrast to the other islands of the Archipelago, that travellers could hardly be persuaded it was under the same dominion.

In the beginning of May, 1821, the appearance of a small squadron of Ipsariots off the coast, furnished the Aga or military governor, with a pretence for seizing forty of the elders and bishops, and shutting them up in the castle as hostages for the good conduct of the people. A large body of troops was brought from the neighbouring coast of Asia Minor: as in the other islands, the arrival of these lawless hordes was attended with every species of irregularity and excess. In addition to numerous assassinations, and plundering the most wealthy inhabitants, all the provisions that could be found were seized for the use of the garrison, while new imposts were levied to pay the troops and Pacha, who had led them to the island. It was not until Scio had been a whole year exposed to a system like the above, and when it seemed impossible any longer to bear up against it, that any attempt was made to rouse the people to resistance. Two adventurers, named Burnia and Logotheti, without any previous communication with the provisional government, and merely to gratify views of personal ambition, concerted a plan of revolt. Landing from Samos on the 17th and 18th of March, at different points of the island, with a very small number of followers, they called upon the people to join them. Aware of the disastrous consequences which must follow this unexpected descent, the elders who were still at large made every effort to prevent the peasantry from taking any part in the insurrection. In the meanwhile, a strong detachment of cavalry was sent out by the Pacha, to oppose the Greeks, and on the 22d the number of hostages already in the citadel were doubled, the victims being selected from the most opulent and distinguished inhabitants.

The Turks set forward, but perceiving that the Greeks determined to resist, they immediately retreated towards the town, pursued by the former, till they were at length forced to shut themselves up in the castle: thus leaving the Greeks in full possession of the open country. Encouraged by their success, Burnia and Logotheti appealed once more to the people, and a few hundred peasants flocked to their standard, many of these being merely provided with sticks for their defence. It was, however, soon discovered, that there were really no means of arming the people to any extent, and that the expedition was itself but badly armed, as well as totally unprovided with cannon. Convinced, on the other hand, that union and perseverance could alone save them, several plans of organization were adopted, and had the Greek fleet anticipated the arrival of the Pacha, there was every reason to hope the inhabitants would have been enabled to prevent the catastrophe which followed his appearance. This event took place on the 23d of April, when a fleet of fifty sail, including five of the line, anchored in the bay, and immediately began to bombard the town, while several thousand troops were landed under the guns of the citadel, which also opened a heavy fire on the Greeks. It was in vain for the islanders to make any resistance: deserted by the Samians, most of whom embarked and sailed away when the Turkish fleet hove in sight, they were easily overpowered, and obliged to fly. Having massacred every soul, whether men, women, or children, whom they found in the town, the Turks first plundered and then set fire to it, and watched the flames until not a house was left except those of the foreign consuls. The only exception made during the massacre, was in favour of young women and boys, who were preserved only to be afterwards sold as slaves.

About forty thousand of both sexes had already either fallen victims to the sword, or been selected for sale in the bazaars, when it occurred to the Pacha, that no time should be lost in persuading those who had fled to the more inaccessible parts of the island to lay down their arms and submit. It being impossible to effect this by force, they had recourse to a favourite experiment with Mussulmen—that of proclaiming an amnesty. In order that no doubt should be entertained

entertained of their sincerity, the foreign consuls, more particularly those of England, France, and Austria, were called upon to guarantee the promises of the Turks: they accordingly went forth, and invited the unfortunate peasantry to give up their arms and return. Notwithstanding their long experience of Turkish perfidy, the solemn pledge given by the consuls at length prevailed, and many thousands, who might have successfully resisted until succours arrived, were sacrificed; for no sooner did they descend from the heights, and give up their arms, than the infidels, totally unmindful of the proffered pardon, put them to death without mercy. The number of persons of every age and sex who became the victims of this perfidious act, was estimated at seven thousand.

After having devoted ten days to the work of slaughter, it was natural to suppose that the monsters who directed this frightful tragedy would have been in some degree satiated by the blood of so many innocent victims; but it was when the excesses had begun to diminish on the part of the soldiery, that fresh scenes of horror were exhibited on board the fleet, and in the citadel. In addition to the women and children embarked for the purpose of being conveyed to the markets of Constantinople and Smyrna, several hundred of the natives were also seized, and among these all the gardeners of the island, who were supposed to know where the treasures of their employers had been concealed. There were no less than five hundred of the persons thus collected hung on board the different ships; when these executions commenced, they served as a signal to the commandant of the citadel, who immediately followed the example, by suspending the whole of the hostages, to the number of seventy-six, on gibbets erected for the occasion. With respect to the numbers who were either killed or consigned to slavery, during the three weeks that followed the arrival of the Capitan Pacha, there is no exaggeration in placing the former at twenty-five thousand souls. It has been ascertained that above thirty thousand women and children were condemned to slavery, while the fate of those who escaped was scarcely less calamitous.

All the most opulent Sciot merchants resident in the capital were seized and thrown into prison as hostages on the first alarm. Immediately after the arrival of the Capitan Pacha in Constantinople, and when the steps he had taken were known, the whole of them were impaled alive by a mandate from the sultan.

Of all the errors laid to the charge of the naval chiefs of Greece, their delay in coming to the relief of Scio is unquestionably the best founded, as it is most to be lamented. From whatever cause it arose, the fleet did not arrive until the last week in May, when the catastrophe was already consummated. Tombasi, the Hydriot admiral, who commanded, had, however, the satisfaction of saving a great number of both sexes, who succeeded in escaping to the mountains.

Having rendezvoused at Ipsara, Tombasi was joined by a division from that island, when it was decided that a combined effort should be made against the enemy's fleet; but nothing effectual was accomplished.

The sailing of the Egyptian squadron from Alexandria for the relief of Candia, where the inhabitants had recently made a most gallant stand, having obliged Tombasi to proceed towards that island, the second great naval triumph of the Greeks was destined to be achieved under the auspices of Miaouli, the most celebrated admiral of Greece. Fertile in expedients, and anxious to avenge some portion of the horrors committed at Scio, the modern Themistocles determined to adopt a stratagem, which, though extremely hazardous to those employed to carry it into effect, yet presented the greatest probabilities of success. Perceiving that the Turks were now on their guard, and prepared for the mode of attack practised by the Greeks, he directed two fire vessels, one from Ipsara, and the other a Hydriot, to sail alone; and when close to the coast of Asia Minor, they were to bear up towards the Turkish fleet, and keep near the shore,

as if they were merchant ships bound to Smyrna. They were thus allowed to pass the look-out ships unmolested, and sailing boldly into the midst of the fleet, which were at anchor in the Scio roads, both their commanders laid a Turkish line of battle ship on board. One of the latter contrived to disengage herself, but the Ipsariot, under the intrepid Canari, took full effect, and he had the glory of destroying the Capitan Pacha's ship, together with the monster himself and all his crew. The ship was loaded with the spoils of Scio, and it is to be feared that many Greek women and children perished in her. This event happening at such a time, was attributed to the interposition of a special Providence by the people of Greece, for had the Turkish fleet been enabled either to co-operate with the Egyptian squadron sent against Candia, or with the army which invaded the Morea, it is impossible to calculate what the consequences might have been. Fortunately for the Christians, the infidels were panic-struck, and fled to the Dardanelles.

While the provisional government was occupied in preparing for the approaching campaign at Corinth, an event occurred which rendered it necessary to send Colocotroni with a force of three thousand men towards Patras: this was the arrival of a division of the Turkish fleet which had sailed from the Hellespont before the Capitan Pacha; it consisted of six large frigates, and above fifty transports and smaller vessels, the whole filled with troops, which were landed at Patras in the latter end of February. Colocotroni arrived before the wall soon after they had been disembarked.

On perceiving his approach, the Turks quitted their position, and went in pursuit of the Greeks with nearly the whole of their force. Apprehensive that his detachment was unequal to cope with such numbers, Colocotroni retreated towards the mountains, closely pursued by the enemy; and when in a situation where his men could act with advantage, he suddenly halted, harangued the troops, upon which they immediately turned round and advanced towards the infidels; the latter, supposing that reinforcements had by this time appeared in sight, became panic-struck in their turn, and were followed sword-in-hand by the Greeks to the very walls of Patras: the result of this affair was, that five hundred of the enemy were slain in less than two hours. On seeing the kind of troops he had to contend with, the Greek chieftan now took up a position close to the town, and established a rigorous blockade.

Notwithstanding the large force collected before Yanina and in other parts of Epirus, the Greeks under Marco Bozaris and Rango had gained many advantages, and taken Arta, after a desperate struggle on the 5th of December. This was a highly important point to the patriots; but owing to the treason of a chief named Tairabos, it was abandoned, the Greek leaders conceiving themselves too weak to resist the forces which might be sent against them by Chourshid Pacha. The necessity of thus giving up the key of Albania was a great misfortune for the Hellenists, and could not fail to expose Acarnania to the incursions which were made not long after.

The tyrant of Yanina's fall had placed such abundant resources in men and money at the disposal of Chourshid Pacha, that he was enabled to concert a plan of operations, which, if carried into execution with an ordinary portion of skill, must have led to the total destruction of the Greek cause.

Mavrocordato now made an expedition into Epirus, to establish the new system of government in western Greece; draw the attention of the Turks from the Morea; relieve the brave Souliotes, who were defending themselves in Kaipha with their wonted heroism, and carry the war into the heart of Albania. The only force, however, he could avail himself of, was the battalion of Philhellenes and the first regiment of the line, neither of which bodies was by any means complete. With these, the prince set out from Corinth accompanied by General Normann and Kiriakouli, who had

seven hundred men under his orders; these were more particularly destined to relieve the Souliotes. The expedition was to be joined by fifteen hundred men from the army before Patras. The prince arrived there on the 12th of June, and was received by Colocotroni with every demonstration of joy; but refused to allow the latter any part of his troops to be detached, so that the expedition was compelled to depart without the promised assistance. Embarking next day on board a small Greek squadron which had been waiting near Patras for the purpose, Mavrocordato landed at Messolonghi with only a few hundred men, while Kiriakouli and his party proceeded northwards, in order to be disembarked as near Kiapha as circumstances would admit.

But during the absence of the president, the chiefs and the congress fell out: the first glaring manifestation of discontent was made by Colocotroni, who suddenly raised the blockade of Patras on the 6th of July without orders, and proceeded with the whole of his forces to Tripolizza, thus leaving the Turkish garrison at liberty either to penetrate into the Morea, or cross the gulf of Lepanto; a fortunate movement, since a Turkish army had passed the great *Dervenachi*, or defiles. Not doubting but that the relief of Napoli di Romania was a grand object with the enemy, he determined to march towards that place, but on preparing to depart, the utmost force he could muster did not exceed two thousand men. Forming this small corps into two divisions, he sent the largest, consisting of twelve hundred men, towards Corinth, under the command of his most confidential officer Coliopulo, to occupy the passes between that place and Argos; while the remainder was destined to act under his own immediate orders. Messengers were dispatched on every side to recall the troops who had retired to cultivate their fields or visit their families. Colocotroni proceeded to Argos, where he only found Demetrius Ipsilanti with little more than three hundred men; the members of the executive having thought it expedient to embark, and to proceed to a neighbouring island, when they heard of the enemy's approach. The consternation which now spread throughout the Peloponnesus, was greatly increased by the abandonment of Corinth and its re-occupation by the infidels.

Nothing could be more embarrassing or alarming than the situation of the two chiefs at this moment, without money or provisions, and having scarcely thirteen hundred men, to oppose to an army of thirty thousand, which was the number said to be advancing towards the plain. In this state of things, Ipsilanti, with a degree of courage and resolution which did him the highest honour, threw himself into the ruined citadel of Argos, there to impede the progress of the enemy, while Colocotroni entrenched himself at Lerna, a strong position on the western shore of the gulph, and waited the arrival of reinforcements from Maina, Arcadia and other points.

The precaution having been taken of destroying or carrying off whatever could be of use to the enemy, more especially corn and forage of every kind, the Turks, who expected large supplies of wheat from the produce of the recent harvest, and other booty, finding nothing but the bare walls of the villages and churches standing, had ample cause of alarm. Contrary to general expectation, the Pacha, who was accompanied by Ali Bey, the governor of Napoli di Romania, entered that fortress, and remained there several days without a single movement on the part of his army, or indeed seeming to have any decided plan of operation in view. The Greeks were by no means so inactive. Colocotroni continued to strengthen his position at Lerna, while the number of his troops increased daily, and soon amounted to eight thousand men. On the appearance of the second division of the enemy, Ipsilanti retreated in a very masterly style, though surrounded by detachments of the enemy, and succeeded in joining the main body at Lerna, without losing a man.

When there had been sufficient time for the Greeks to look

around them, and send out reconnoitring parties, the state of affairs assumed a much less terrific aspect than at first. It was soon found, that so far from having brought supplies to the starving garrison of Napoli, the infidels had advanced without any means of subsistence for themselves.

Threatened with all the horrors of famine, the Pacha seemed at length to awake from his lethargy, and quitting Napoli, followed by a numerous suite, gave orders for preparing to return towards Corinth. The whole camp was instantly on the alert, and no sooner were the camels laden with the baggage, than the infidel army set forward in great disorder. Minutely informed of what was passing on the plain, by their out-posts, the chiefs at Lerna had already sent off detachments by a mountain path-way, so as to overtake the enemy's columns as they entered the defiles between Corinth and Mycene. Colocotroni himself advanced with the main body the moment he perceived that the Turks were in motion; while a part of the troops employed before Napoli, advanced on their right flank. These movements were so well contrived and executed, that the enemy, whose rear-guard had suffered severely on the first day's march, was attacked with such impetuosity on the second, that not less than five thousand were destroyed in the course of a few hours. The fate of the advanced guard was little better than that of their companions. On reaching the defiles near Corinth, they were met by the Mainotes, dispatched from Lerna, under Nikitas, and attacked so furiously, that above twelve hundred of them perished in the first onset. Many more were killed in trying to force the passes. A great quantity of baggage and a number of horses fell into the hands of the Greeks. These memorable successes occurred between the 4th and 7th of August.

Having collected the remnant of his army under the walls of Corinth, and been joined by the reserves left there, Machmout Pacha made a movement on the 18th, with the seeming view of resuming the offensive and marching towards Argos: the real object of this movement was, however, to draw the Greeks, who had been watching him, into an ambuscade. Aware of his intentions in time, the Greeks, instead of attempting to impede him, got into his rear, when the Turks attacked them, but owing to the advantageous position taken up by the Greeks, the enemy was again repulsed with great loss. A still more bloody affair took place on the following day. Determined to regain the position they had abandoned, the Turkish troops were headed by Hadji Ali, second in command to Machmout; this officer, one of the bravest of the Ottoman army, was killed while encouraging his men. In the above desperate effort, the enemy lost nearly two thousand men, together with a large quantity of baggage and several hundred horses.

The blockade of Napoli di Romania was now renewed with increased vigilance, and Ipsilanti proceeded to reinforce the garrison of Athens, lest other divisions of the enemy should advance towards that place. Ali Bey had retained the five hundred cavalry which he brought to strengthen the garrison of Napoli: but with the exception of a small quantity of grain found concealed in some parts of the plain, during its recent occupation, his stock of provisions was exhausted.

After the successes between Corinth and Argos, Colocotroni collected the whole of his troops, within a short distance of the former place, and leaving them under the direction of Coliopulo, with orders to watch the shattered remains of Machmout's army, he went on to Tripolizza, to concert with the Senate. Here he quarrelled with all the civil authorities, and matters were thrown into so much confusion, that the troops left under Coliopulo, not being regularly supplied with rations nor receiving any pay, became tired of the service, and withdrew; merely leaving Colocotroni's eldest son, a brave and promising young officer, with two or three hundred men, to maintain the blockade of Corinth. As there was still a body of three thousand men, of whom two-thirds were cavalry, encamped under the walls, the situation of young Colocotroni was now very critical, and he had cer-
tain

tain information that the Turks were preparing to march at all hazards to the relief of Napoli. They did succeed in sending a small detachment, which gained the fortress unobserved by the troops before Corinth, or those employed in the blockade of Napoli. The latter were, however, in general extremely vigilant, as, excepting a convoy of fifty mules laden with grain, that contrived to steal across the plain of Argos and enter the citadel in the night and during a heavy storm, the exertions of the Greeks were so unremitted, that whoever attempted to leave or approach the walls, was almost sure of being intercepted. It was thus, that nearly all the cavalry brought by Ali Bey, were cut off in detail, during their attempts to obtain supplies.

The time had however now approached, when the garrison of Napoli could no longer hope for relief on the side of Corinth. Colocotroni, who had succeeded in making arrangements for the more regular subsistence of the troops, uniting his forces with those under Nikitas, marched to the passes near the Isthmus with a determination not to abandon them before Napoli surrendered. A long time, however, elapsed, and the besieged were reduced to subsist on each other ere a capitulation took place.

The surrender of Napoli led to another triumph on the part of the Greeks, destined to form the last portion of that terrible fate which had awaited the army of Marchmont Pacha. Want of provisions had rendered a change of position absolutely necessary, and the Turkish commanders, therefore, determined to march towards Patrass, the blockade of which place had been lately neglected by the Greeks. Setting out about the middle of January, with nearly three thousand men, of whom a large portion was cavalry, they had only advanced as far as Akrata, near Vostitza, when Lundo, who was returning from Messolonghi with a small body of troops, appeared on a height through which the road lay, and thus suddenly stopped their progress. Pet-mesa, another distinguished chief, next occupied the opposite side of the valley, and Odysseus joined the other chiefs with about two hundred men. The Turks, thus hemmed in, were reduced by famine to the utmost extremity: at length negotiations were entered into, by which those who survived obtained permission to embark, on condition of giving up their arms and effects. The number of Turks who perished miserably without firing a shot or drawing a sword in their defence, was estimated at two thousand.

Such was the termination of the second campaign in the Morea; and upon the results of which, the Porte fondly calculated on restoring its iron sway over Greece. Instead, however, of realizing this hope, the loss of the Turks, whether by famine or the sword, could not be less than twenty-five thousand men in the Peloponnesus alone.

We return now to the operations of Mavrocordato.—The state of anarchy and confusion in which this chief found Acarnania and Etolia, was more than sufficient to damp the ardour of an ordinary mind. Having collected all the troops he could find at Messolonghi, and incorporated them into the newly organized levies, the whole did not amount to two thousand men, being less than half the number first proposed. With this force he however took the field, and having passed the Acheron, or Aspropotamos as it is now called, in the latter end of June, proceeded through Loutraki, towards the defiles of Macrinoros, where the Greeks could easily defend themselves and arrange a more extended plan of attack, according as their numbers should increase. The Turks, who were posted in far superior force at Cambotti, attacked the left, occupied by a part of the first regiment, on the 2d of July. The new system of tactics was now put into execution with such effect, that the enemy was soon forced to retreat, having been pursued to some distance by the Philhellenes, with a loss of thirty men in killed and wounded. Several days had been passed here, during which there were frequent skirmishes with the Turkish cavalry. Such was the success attending these, that the Greeks considered it no longer necessary to confine themselves to the defensive, and as the siege of Kiapha was

carrying on with great vigour by a large body of Albanians, Marco Bozzaris, who had accompanied the Prince, expressed so much anxiety to go to the relief of his brave countrymen, and such confidence in the success of the enterprise, that he was at length allowed to set forward with six hundred men, although the reinforcements had not yet arrived. The enemy having been secretly advised of the march of Bozzaris, attacked him at Placa, compelled him to fall back and retreat to the mountains. The separation of the forces, which were already so inferior to those of the enemy, could not fail to expose the small corps at Peta to the general attack which now took place, and was extremely prejudicial to the Greeks.

On mustering their forces, it was found that their loss in killed exceeded two hundred, of whom nearly one fourth were officers. This check created such a panic among the inhabitants, that several thousands sought refuge in the mountains; while the more helpless portion of the community fled to the desert island of Calamos, whence however they were directly driven by the British authorities, who considered that to receive these defenceless beings would be an infraction of neutrality.

Whatever may have been the motive that dictated an act, upon which it would be superfluous to make any comment, it had the effect of rousing the Acarnanians to a keener sense of their danger, and owing to the fears awakened for the safety of their families, numbers of the peasantry who had concealed themselves in the mountains, now flocked to Catoouna, where the Greek force was soon doubled. Mavrocordato, who had established his head-quarters at Vracori, in order to keep up the communication with Messolonghi and the Peloponnesus, as well as to watch the motions of the Turkish fleet, gave the command of this small corps to a chief named Varnachiotti, a man whom the wealth and influence which he possessed in the province, rendered it necessary to conciliate; but designed to betray his country and pass over to the enemy. Such, however, was the great influence of his family and connections, that Mavrocordato had no alternative in giving to him the command.

The failure of the expedition under Kiriakouli, who fell in the conflict which followed his disembarkation at Splanza, a small village north of Prevesa, and the disappointment of Marco Bozzaris, added to the aspect of affairs in the Morea, having deprived the Souliotes of all hope of aid from their countrymen of the south, they were induced to accept the terms proposed to them, through the mediation of our consul at Prevesa, Mr. Meyer, who guaranteed their safe transport to the Ionian Islands, with their baggage and arms.

The fall of Souli placed so many troops at the disposal of Omer Vrioni, who now assumed the chief command in Acarnania, that he prepared to advance with an overwhelming force: and strong detachments had actually arrived in the immediate vicinity of the defiles early in October. The only chance, now left to the Hellenists, of maintaining their ground and preventing the whole province from being occupied by the enemy, was derived from the hope, that when the rainy season should commence, and there were no longer any means of procuring supplies, the Turks would retreat, and thus afford time for re-organizing the troops who had been dispersed subsequently to the disaster at Peta.

Though pressed in the most urgent manner to attack the enemy, before he received any more reinforcements, Varnachiotti always contrived to defer it; and about the middle of September, the traitor openly declared himself, and induced the districts of Valtos and Xeromeros to submit to the enemy. On hearing this piece of intelligence, the Prince immediately united all the men he could collect, quitted the town, and reached Vracori on the 24th.

Mavrocordato had not been many days in his new position, before the enemy's army, which was increased to nearly thirteen thousand men, mostly Albanians, under Omer Vrioni in person, had passed the defiles of Xeromeros, guided by Varnachiotti; it was supplied with a good park of artillery,

and a large corps of cavalry; and immediately advanced to Vracori.

Xeromeros, Valtos and Vracori, were now overrun, and there was but too much reason to fear, that others had followed the example of Varnachiotti, by joining the enemy, who now advanced to the heights of Stamma, about five miles from Anatolica, and from which he could at any time descend on the plain, to the very walls of Messolonghi. The loss of this place would have put the whole of Western Greece into the hands of the Turks, who might have then poured any number of troops into the Morea.

The conduct of Prince Mavrocordato on this occasion was marked by a degree of firmness and resolution, which has since placed him deservedly high in the estimation of the Greek people.

Having put the remnant of his forces in motion, he set out from Anatolica, as if he intended to retreat towards Salona, but turning suddenly round, he returned by a flank march on the village of Therasova, and entered Messolonghi on the 17th of October. The difficulties which now presented themselves, were, however, far greater than any hitherto experienced.

The population of this place was now reduced to a few families. The fortifications consisted of nothing more than a low wall without bastions, and surrounded by a ditch seven feet wide, by four in depth, and filled up with rubbish in many places. The parapet, which did not rise more than three feet above the counterscarp, was formed of loose stones, very much out of repair, and broken down in a number of places. For the defence of this extensive line, the Prince had now with him, including those found in the town, not more than five hundred men. The only cannon to be found within the walls, were four old ship guns, and a dismounted thirty-six pounder. As to ammunition, there was not sufficient for a month's siege, and with the exception of maize, every kind of provisions was extremely scarce. When the president quitted Anatolica, it was agreed that Marco Bozzaris should occupy the passes through which the enemy would be likely to advance, between that place and the sea. The temporary occupation of this point enabled the Greeks to drive a quantity of cattle into Messolonghi. They were, however, obliged to retire in two days, upon which Bozzaris, followed by a small detachment of Souliotes, succeeded in reaching the town, all the rest having dispersed among the mountains. A large division of the Turkish army appeared before the walls two days after, and immediately commenced a cannonade and fire of musquetry, which continued with little intermission until the next day, when it was only suspended, to propose a capitulation. Mavrocordato, whose only chance of safety depended on gaining time till succours were sent, replied in such a way, as to make Omer Vrioni imagine, that his proposal would be accepted, and the Greeks made considerable progress in their preparations for defence: such however was the total inadequacy of means and resources, that there seemed to be no hope of escape. Matters went on in this state of painful suspense until the morning of the 9th of November, when the Turkish brig and schooner which had been sent to blockade the place by Yussuff Pacha, were observed to steer towards Patross, but the former being unable to reach the roadstead, owing to a strong southerly wind, bore up and stood for Ithaca, chased by six vessels, on board of which the Greek flag was seen flying. The ships were followed by the eager eyes of the prince and his brave followers, until night closed in, and they were once more left to ruminate on the perils of their situation. Although the appearance of this small squadron filled every breast with hope, yet a vigorous attack during the night might enable the infidels to render all opposition fruitless: as it fortunately happened, no attempt was made, and their joy may be readily conceived on the return of daylight to perceive the whole of the Greek squadron anchored as near the town as it could be approached. Having chased the Turkish brig until she was run on the rocks of Ithaca by her crew, the Greek commo-

dore came to announce that a body of Peloponnesians were ready for embarkation at Chiarenza and Katakolo, destined for the relief of Messolonghi. These long-wished-for succours arrived on the 14th; they consisted of twelve hundred men, headed by Mavromichalis, who was accompanied by Andreas Lundo, of Vostizza, and Deligianapulo, both distinguished Maniote chiefs. A sortie was immediately made on the 27th November, in which a hundred and ten Turks were left dead on the plain, while the loss of the Greeks did not amount to more than twenty in killed and wounded.

No sooner had the peasantry recovered from their consternation, than all those who had been able to retain their arms rose, and greatly harassed the Turks by interrupting their communications, and preventing the arrival of any supplies.

In order to second these efforts of the people, it was determined that a part of the troops, sent from the Morea, should embark, and landing at Dragomeste, co-operate with the inhabitants of Valtos and Xeromeros, for the purpose of re-occupying the defiles, and thus effectually cut off the enemy's communication with Arta and Vonizza. The command of this expedition was assumed by Mavromichalis, who sailed for his destination on the 24th of December. His departure reduced the garrison so much, that Omer Vrioni, who had remained for two months without attempting an assault, now determined to take advantage of this circumstance. The signal for commencing the attack was made at five in the morning of the 25th by firing a gun. A tremendous cannonade began along the whole Turkish line, and was as briskly answered by the Greeks. An escalating party contrived to approach within a few yards of the wall unperceived, and had even fixed some ladders, which enabled a few of the Turks to pass the parapet; these were, however, instantly cut down; two standard bearers who succeeded in planting the crescent on the walls, shared the same fate; all, in fact, who attempted to mount the wall were precipitated into the ditch. Though short, the conflict which followed was both desperate and sanguinary, for when day-light broke, the whole of the glacis was seen covered with the dead. The infidels lost above twelve hundred men and nine stands of colours in this affair; while, incredible as it may appear, the utmost loss of the Greeks was only six killed and about thirty wounded.

The immediate effect of this signal discomfiture, was that of making the rising general throughout the neighbouring provinces: those who had entertained any dread of the enemy before, were now quite disengaged from their fears, and bands were found in all directions, to cut off their retreat whenever they attempted to recross the mountains.

Omer Vrioni having sent Varnachiotti to Xeromeros, in order to procure provisions and forage, received a letter on the 31st, from the traitor, informing him that Rongo, whom Omer had sent into Valtos for the same object, had abandoned the cause he had feigned to espouse, the more effectually to deceive the enemy; and placing himself at the head of three thousand men, was marching to cut off Omer's retreat by Langoda; that the people of Xeromeros had flown to arms in spite of all his influence, and that the Prince of Maina, at the head of fifteen hundred men, had just driven the Turks from Dragomeste, and was advancing to occupy the defiles by which the Pacha could alone effect his retreat to Vonizza. The Turks were so panic-struck by this intelligence, that it had not reached the camp two hours before their retreat commenced, with the greatest disorder. This was so sudden and precipitate, that they left the whole of their artillery, consisting of eight fine pieces of brass cannon, with a complete field train and tumbrils; two howitzers; ammunition and camp equipage, together with a large quantity of provisions and all the baggage. To increase their embarrassment, the infidels were scarcely in motion, when a detachment of five hundred men sallied from the town, and overtaking their rear guard at Kerasova, killed a great number. On reaching the Achelous, its waters were so swollen by the continued rains, that the enemy could not pass

Pass, so that they now found themselves enclosed on every side and without provisions. It was while the Turks were in this situation and meditating the means of escape, that a large division of the Greeks under Marco Bozzaris appeared marching towards them. Such was the effect of this movement, that the Infidels, more panic-struck than ever, determined to attempt the passage of the river, rather than risk a battle. They accordingly plunged into the stream, and several hundreds were drowned in crossing, while those who did not adopt this perilous mode of saving themselves, were under the necessity of surrendering as prisoners to the Souliote chief.

Having gained the right bank of the river, the Turkish hordes had fresh enemies to contend with at every step, in the armed peasantry of Xeromeros, Valtos, and the other districts through which their line of retreat lay; so that, of the large force brought into Acarnania only three months before, not more than half the number escaped. A local junta being formed at Messolunghi, measures were immediately adopted for carrying the law of Epidaurus into effect throughout Acarnania and Etolia. Arrangements were also made for re-organizing the military system of the provinces. The importance of Messolunghi being now more apparent than ever, it was soon placed in state of defence.

According to the law of Epidaurus, the elections for the second period should have been completed by the first of January, 1823, but this was impossible, owing to the proximity of the seat of war and long continuance of the campaign. The members of the government, who had passed some weeks at Castries, on the coast opposite Hydra, proceeded to Astros early in March, but more than a month elapsed before the whole of the deputies and military chiefs had arrived.

In order to secure the concurrence of all parties, and give greater unity to the political system, one of the first proposals made by Prince Mavrocordato, on his arrival from Messolunghi, was that of transferring the powers confided to the three local juntas of Epirus, Livadia and Peloponnesus, to the central government. The meetings commenced on the 10th of April, and were held in a garden under the shade of orange trees.

This second Constituent Assembly of Greece, after having introduced those changes and improvements into the constitution rendered necessary by experience, decreed first: that the political code of Greece, which was called the LAW OF EPIDAUROS, be entrusted to the fidelity of the executive government; but that the executive should not enact laws or make innovations on the said law of Epidaurus, under any circumstances whatever.

The project of a law for the establishment of provincial governors and local magistracy, was next submitted to congress, and confirmed. It being impossible to determine on a criminal code without farther inquiry and examination, the executive was empowered to make selections from the code Napoleon, and to organize the tribunals *pro tempore*.

The labours of congress closed on the 30th of April, when it was decreed that, unless circumstances rendered it necessary, the assemblage of a third National Congress should be deferred for two years.

As the invasion of the Morea and the operations in Acarnania had rendered it impossible for the people to cultivate their grounds, little could be expected from the ensuing harvest; an arrangement was however made, by which the national property and forthcoming crops, estimated at twelve millions of Turkish piastres by the finance commission, were farmed out for about a third of that sum, and this, together with a few millions furnished by the zeal of patriotic individuals, was all Greece had to enter the field a third time against the whole military and naval power of the Ottomans.

Although so inactive during the early part of the summer, the enemy was by no means idle afterwards. A fleet, consisting of seventeen frigates and above sixty smaller vessels of war, and transports filled with troops, ammunition and provisions, was dispatched for the purpose of supplying the

fortresses still held in Negropont, Candia, and the Morea. Owing to the impossibility of preparing the Greek ships in time, this was effected without opposition at Carystus, Canea, Coron, Modon and Patras, where the Capitan Pacha arrived about the middle of June.

With respect to the plan of operation projected by the enemy on shore, it was infinitely better than that of last year; while the forces destined to carry it into effect were far superior both as to numbers and leaders. An army of twenty-five thousand men having been assembled at Larissa early in June, it was formed into two divisions, intended to act at separate points: one of these, under Yusuff, Pacha of Bercoffeli, marched towards Thermopili, while the other, led on by Mustapha Pacha, proceeded to the pass of Neopatras near Zetouni. The Greeks posted here being too weak to attempt making any resistance, withdrew, so that the enemy was enabled to advance into Livadia unopposed, and encamped at Nevropolis on the 20th of June. Still unable to cope with the Turkish division, the Greeks contented themselves with occupying the passes through which this force had entered the province.

In the meanwhile, Yusuff continued to occupy and lay waste the whole country round Parnassus and Livadia, murdering all the inhabitants who had not escaped to the mountains or marshes near the lake Copaeas: he also attacked a small corps which had thrown up entrenchments on the high road between Rachova and Delphi, but was repulsed with considerable loss: returning a few days after, the enemy was more successful, and having turned the right of the Greeks, advanced to both the above named places, to which he set fire after plundering whatever had been left by the fugitive peasantry.

Odysseus, who had been waiting at Athens until the contingent dispatched from Tripolizza under Nikitas passed the Isthmus of Corinth, set out on the 28th of June: leaving orders that all the forces collected in Attica and Bœotia should follow, he proceeded to Megara with five hundred men, and embarking there, sailed up the gulph and joined Nikitas at Dobrenka. The two chiefs lost no time in advancing towards the enemy, and soon reached the heights in sight of Yusuff's camp. A system of guerrilla warfare was now commenced, and the Turks were so harassed, that they soon retreated in the greatest disorder pursued by the Greeks, who killed numbers, and took a large quantity of their baggage.

The second division, under Mustapha, waited on the plain of Thebes for the result of Yusuff's operations, in order to advance towards the gulph of Lepanto, but the retreat of his coadjutor having enabled the Greek chiefs to alter their plans, Odysseus pushed on to attack this division, which he forced to take refuge in Negropont, leaving behind most of its baggage and military stores. The Turks had scarcely reached Carystus, when Odysseus appeared before it, and established a rigorous blockade. After these successes, which removed all apprehension of any new attack on the side of Corinth, Nikitas proceeded to Salona to co-operate with the inhabitants in the preparations making for the defence of that place, and its neighbourhood.

The management of the war in Acarnania being confided to Mustapha, Pacha of Scutari, with Yusuff the Pacha of Serres, as his second in command, they found such difficulty in organizing a sufficient force, that the whole of June and July were passed in preparing a corps of eight thousand men at Prevesa. Yusuff had taken up a position at Ponda, a village close to the ancient Actium, there to await the Pacha of Scutari. The latter was advancing with his own troops, and a large contingent furnished by the Pacha of Thessaly. Marco Bozzaris was at Katochi between Messolunghi and Vonitza, with Joncas of Agrapha. Their utmost force did not exceed twelve hundred men, but with these it was decided they should continue closely to watch the motions of the enemy. While, however, Mustapha was on his march from Agrapha to Vracori, fully expecting to be joined there by the troops at Prevesa, the Albanians, who formed the flower of Yusuff's army, no sooner received the allowances usually

usually made before entering the field, than they mutinied, threatened the life of their commander, and after committing numerous excesses, withdrew to their respective homes. Even Yusuff's tent was not spared on this occasion, while he himself only escaped by embarking and flying to Patrass with a few of his attendants. The cause of this mutiny and desertion was afterwards traced to Omer Vrioni, who had become jealous of Yusuff's military fame, and determined to strip him of all means of co-operating with Mustapha in the present campaign. He accordingly succeeded in persuading the Albanians to join his own standard, and took post at Lapanore, to the right of the Acheron, with four thousand men. On reaching Patrass, Yusuff Pacha sent a body of troops to be landed at Crionero, not far from the position of Marco Bozzaris, with orders to attack the Greeks in flank. Apprised of their landing, the Souliote chief fell on the Turks, and having either killed or taken prisoners more than two thirds of the whole number, the rest were glad to escape to their boats.

Hearing that a division of two thousand men was advancing on the side of Valtos, Bozzaris sent a detachment in that direction to prevent their approach, while he himself determined to dispute the entrance of Mustapha Pacha into Acarnania. To effect this important object, it became necessary to undertake an extraordinary forced march, which enabled him to reach Carpensia in time to prevent the consequences that must have followed a sudden invasion by Mustapha. The enemy's army reached the frontier of Acarnania on the 19th of August, and encamped on an extensive plain near the above place; it amounted to fourteen thousand men, while the Greeks could with difficulty collect two thousand. Undaunted by such fearful odds, Bozzaris addressed his companions, and having drawn a flattering picture of the glory which awaited those who took a part in the intended attack, as well as the service they were about to render Greece, the hero called upon those who were ready to die for their country to stand forward. The call was answered by four hundred men, chiefly Souliotes, who according to the ancient practice of Souli, when they are determined to conquer or die, threw away their scabbards, and embraced each other. Having selected three hundred to act immediately about his own person, Bozzaris directed that the remainder of the troops should be formed into three divisions, for the purpose of assailing the enemy's camp at different points, while he penetrated to the centre with his own chosen band.

Every thing being prepared by midnight on the 19th, Bozzaris set forward closely followed by the sacred battalion, while the three Stratarchs or minor chiefs, destined to make their attack at separate points, also proceeded to their stations. Bozzaris was enabled to advance by addressing the Turkish sentinels in the Albanese language, and telling them he came with reinforcements from Omer Vrioni. On reaching the centre, he sounded the bugle, upon which the attack commenced on every side. The enemy, either unprepared or panic struck, fled in all directions, while those who resisted, frequently mistook their comrades for enemies, perishing by each other's hands. While dealing death around, and encouraging his companions to profit by so favourable a moment, the voice of Bozzaris was recognized, and just as he had ordered the chief pacha to be seized, a ball struck him in the loins: though the wound was dangerous, he concealed it, and continued to animate the men, until wounded a second time in the head, when he fell, and was borne from the field by a party of soldiers. Notwithstanding this disaster, the struggle was maintained with the utmost spirit till daylight, at which time the Greeks saw themselves undisputed masters of the field. While the loss of the infidel army could not be less than three thousand men, that of the Christians was only thirty killed and seventy wounded: of these about half were Souliotes.

On discovering the loss of Marco, the eyes of the Greek chiefs and soldiers were immediately turned on Constantine, the hero's elder brother, who was named his successor with

acclamation. When he had paid the last sad duties to the manes of his departed relative, a party of Souliotes were sent to convey the body to Messolunghi for sepulture, while the remainder of the troops, headed by their new leader, took up a position, whence they could watch the future movements of the enemy and prevent his advancing.

The Capitan Pacha's fleet, which had arrived in the waters of Patrass about the middle of June, enabled him to declare Messolunghi and every other port possessed by the Greeks, in a state of blockade, though he had neither the courage nor energy to enforce it.

Emmanuel Tombasi, the Hydriot admiral, being supplied with a body of fifteen hundred men, and a small squadron, proceeded to Candia early in June. Landing near Kisamos on the 6th, he ordered the ships to blockade the port, while he should attack the town by land. A proposal was, however, first made to the Turkish garrison to capitulate, and they agreed to accept it; but on hearing that the Capitan Pacha was at sea, they retracted, and broke off the parleys which had commenced. Being soon after attacked from two batteries, which were mounted under the direction of Mr. Hastings, who accompanied the Captain General as head of the artillery, the Turks were glad to renew the negotiation, and terms having been mutually agreed on, they embarked in their own ships next day for Canea.

After the fall of Kisamos, Tombasi marched on to the district of Selinon, in the chief town of which the Turks had shut themselves up after being repulsed on all sides by the armed peasantry. Besides its high walls and bastions, this place is surrounded by thick groves of olive and plane trees, which render the approach extremely difficult. The Captain General having proposed terms similar to those granted at Kisamos, they were rejected, upon which batteries were immediately opened on the place: these had not played long, when the Turks fled towards Canea and were pursued to the very walls by a detachment of Greeks, who slew numbers. Master of these two points, Tombasi was enabled to open a communication with the various other districts which had been conducting the war before his arrival, and although it was out of his power to furnish them with those supplies of which they stood so much in need; yet, the presence of such a force as he brought with him, as well as the recent check experienced by the enemy, gave a fresh impulse to the exertions of those brave islanders, who had by their own gallantry sustained a most unequal contest with the Turks for above two years; and succeeded, without any assistance whatever, in driving them into the fortresses.

With respect to the Capitan Pacha, a few Greek gun-boats were more than sufficient to set the whole of his vigilance and power at defiance. Having remained in a state of the greatest inactivity for above three months, during which time nearly a third of his crews were carried off by an epidemic fever, the Turkish admiral sailed at length, and made the best of his way towards the Archipelago. A Greek squadron which left Hydra early in September, met the infidel fleet off Mytelene, and sent some fire-ships in among them, but without effect, the wind being so high that the Turkish vessels had time to escape. A division of them was attacked soon after in the gulph of Volos, and several taken or destroyed. The Capitan Pacha hastened back to the Dardanelles with all possible speed.

The campaign of 1823 was signalled by two events no less advantageous to the Greek cause than they were honourable to the Greek character—the re-occupation of Corinth and defence of Anatolica. Though frequently reduced to great distress for provisions, yet, such was the importance attached to the possession of Corinth by the Turks, that they obstinately rejected every overture to surrender, until the latter end of October, when there being no longer any hope of receiving the assistance promised by the Capitan Pacha, who had thrown a trifling supply into the place on the arrival of the fleet, a proposal was made to Staico of Argos, who had maintained the blockade ever since he had led the assault of the Palanida at Napoli di Romania. This brave man immediately

immediately repaired to the seat of government, then at Napoli, to communicate the circumstance, and to know its pleasure; the result was, that he received full powers to treat with the garrison, and he returned for this purpose; but Colocotroni and one or two other chiefs, happening to hear of the intended negotiation, repaired to the spot, with a view, it is said, of participating in the spoils. No sooner, however, did the Turks hear of this, than a flag of truce was instantly sent to inform Staico, that they would only open the gates to himself and Giorgaki Kizzo. As it was in vain to think of reducing the Acropolis by force, there was now no alternative but that of acceding to their wishes: a messenger was therefore dispatched for the Souliote chief, who arrived soon after, and entered the Acrocorinthus, on condition that the Turks might be permitted to depart. This being accorded, they were embarked on board some Austrian vessels, and conveyed to Asia Minor.

The town of Anatolica was closely invested by the Pacha of Scutari early in October, he having previously received large reinforcements and being joined from Lapanou by Omer Vrioni. Constantine Bozzaris, unable to cope with such a force as that now brought forward, quitted his post at the bridge of Kerasova, and retired to this town to prepare for the Pacha's reception.

Having established several batteries composed of mortars and eighteen-pounders, the Turks continued to fire shells and shot into the place for above three weeks, during which they frequently summoned the inhabitants to surrender, but were invariably answered by a brisk cannonade from the few guns which had been mounted in great haste when the enemy appeared, and discharges of musketry. Warned by the result of the attempt to assault Messolunghi, the experiment was not repeated, and having expended the whole of their shot and shells, as well as exhausted their stock of provisions, the Turks retreated in their usual disorder on the 19th of November, leaving behind a number of guns, and a considerable quantity of baggage. The loss of the infidels in the various sorties made from the town, was above four hundred, while the Greeks had only about fifty killed and wounded, although the number of shot and shells thrown into the town was estimated at no less than two thousand six hundred: as the Turks were also frequently harassed in the rear, by parties from the mountains, or who sallied forth from Messolunghi, the number of their killed is probably under-rated. It should be added, that an epidemic fever carried off above twelve hundred of the Pacha's army between the period of its defeat at Carpenisa and that of his retreat. The reason for attacking Anatolica was, that its possession would have enabled the Turks to assail Messolunghi by sea. Three gun-boats had even been prepared by the Pacha, but when completed, he could not prevail on any person to embark in them, and they were accordingly burnt by his own orders. Nothing could exceed the cool and determined bravery of the defenders of Anatolica, of whom a hundred and fifty swore a solemn oath to each other before the attack commenced, that they would bury themselves under its ruins, rather than surrender.

Such was the end of the third campaign; and such the fate of the formidable armies collected by the Pachas of Scutari and Thessaly.

1824.—Hitherto the Greeks had struggled valiantly against their oppressors; but the civil dissensions which had partially appeared among their chiefs, threatened now more ominously than the sword of the Ottoman, the safety of Greece. The authority of the legislative body was denied and insulted by the military leaders, who had possessed themselves of nearly all the executive functions of the state. At the head of this faction stood Colocotroni, who had established himself at Tripolizza. His son, Panos, or Panegiola Colocotroni, commanded at Napoli di Romania, and Corinth was garrisoned by a band of his followers. Of this faction, Mavro Michalis, Andrew Metuxa, and Perouk were also members. The senate, which had removed its sittings from Argos to Cranidi, impeached the members of the executive council

above named, of divers crimes and misdemeanors, omitting, however, the name of Colocotroni in the accusation, though he was known to be the prime mover. The council was dissolved, and others appointed to succeed them. This proceeding brought on great commotions: Panos Colocotroni refused to open the gates of Napoli to the senate, at the same time Colocotroni himself affected to assemble another senate at Tripolizza. After much angry discussion, these differences were adjusted.

None of these unworthy dissensions had yet appeared in western Greece. About the latter end of the last year, Lord Byron had arrived at Messolunghi, with the avowed intention of devoting his life and fortune to the furtherance of Greek independence. His fortune, however, was scanty; his life, however valueless he might affect to hold it, was never exposed to the perils of actual warfare; his manners were moreover not at all conciliating, and for political or military business, he had neither the inclination nor the capacity. Nevertheless his name and his eloquence gained him the greatest popularity, and his death, which took place on the 7th of April, threw a gloom over the whole of Greece: the greatest homage was paid to his memory. Meanwhile the Turks were preparing to open a fourth campaign against their insurgent subjects. Dervish Pacha of Widdin, commanded the army destined to act against the Morea. A large Turkish fleet left the Dardanelles, commanded by the Capitan Pacha, under orders to proceed to Scala Nova, where a large Turkish force was collected, and thence to the attack of Ipsara and Samos. The divan had also the greatest expectations from the co-operation of Mahomed Ali, the Pacha of Egypt, who had long been busily employed in fitting out an expedition. An army of 25,000 men was assembled at Cairo, and many transports, principally furnished by Austrian, Spanish, and Italian merchants, waited to convey them against Greece; when a fire breaking out at Cairo, destroyed much of their stores and ammunition, and for the present delayed the expedition. The movements of the Seraskier, Dervish Pacha, had been delayed by dissensions among the inferior pachas, and he durst not put his troops in motion till he heard that the Capitan Pacha had appeared off Negropont. A part of his first army under Bekir Pacha, was beaten by the Greeks on the 20th of May; another division succeeded in forming a junction with the Turkish force at Negropont, whence they poured into Attica, and forced the Greeks to take refuge in the Acropolis. Ishmael Gibraltar at this time appeared with the Egyptian fleet off the coast of Candia, where he effected a landing, and reduced that island. He also took the island of Casso, and massacred nearly all the inhabitants.

The Capitan Pacha, Chosrew, proceeded to attack Ipsara. He had with him a fleet of two sail of the line, six frigates, ten corvettes, a large flotilla of gun-boats, and nearly one hundred transports, furnished in this instance, also, it would seem almost exclusively by Christian owners, Austrian and Russian, and on board of which was a force of 14,000 picked troops. The island was surrounded on all sides by the fleet, and while their ships of war opened a fire upon the town, the Turks effected a landing on the opposite side of the island, on a point, the defences of which guarded by an Albanian battalion, the cowardice or treason of which suffered the Mussulmans to execute their debarkation without interruption. By this means they were enabled to take all the Ipsariot works in the flank, and the event of the contest could scarcely now be doubtful. The clergy and ephori, with a great part of the old men, women, and children, immediately sought refuge on board of such vessels as they could find; many of which were so crowded with the fugitives that they sunk before they arrived out of sight of the coast. The rest made the best of their way to Hydra. The pacha's force then effected a landing, and attacked the town on all sides; it was defended street by street, and house by house by the inhabitants, with a most desperate courage; but the numbers of the enemy prevailed; before dark they had made themselves masters of the place, and the night was spent in

pillage and massacre. At day-break, on the 4th, nothing remained to the garrison but two small forts, and the convent of St. Nicholas. In these three last holds they continued to defend themselves with an heroic obstinacy of purpose; and finding all further resistance impossible, they resolved to set fire to some mines which had been formed under the works on which they were fighting. The explosion took place at the very moment that the Turks escalated the ramparts, and buried the conqueror and the conquered under a common pile of ruins. The Turks, it is said, lost three thousand men in the conflict on this second day alone; but the ruin to Ipsara was total; her whole population disappeared, with the exception of a few hundreds that took refuge in the interior, and continued to hide themselves in caves from the research of the conquerors. Two hundred pieces of cannon were found on the works; Chosrew Pacha spiked such of them as he did not carry away, and then set sail for Samos, leaving a body of troops to complete the demolition of the forts. Five hundred heads and about as many pairs of ears were sent in testimony of this triumph to Constantinople, and nailed, as is the Turkish custom, with respect to such trophies, to the gates of the seraglio.

The intelligence of this catastrophe when it arrived at Hydra, only roused the government and the people of that place to purposes of retribution and revenge; a fleet was immediately collected, in which was embarked a force of 1200 men, which set sail under the command of Admiral Miaoulis, and came in sight of Ipsara on the 14th. They found the Capitan Pacha had already departed; the forts were destroyed, and the whole island wore an aspect of singular desolation. A Turkish force, however, as we have seen, had been left on the spot, which the Greeks estimate at 2000 men, although the mussulmans do not describe it as amounting to a third of that number. They were completely surprised by the sudden appearance and attack of the Greeks, and nearly the whole were either killed or taken prisoners; of the vessels in the harbour the only one which escaped was a frigate which succeeded in rejoining the Turkish fleets at Mitylene.

Meanwhile the Capitan Pacha was meditating the infliction of a similar blow against the more important island of Samos, one of the most flourishing of the Archipelago. In the present crisis, with the unhappy catastrophe of Ipsara before their eyes, and menaced with a force yet more overwhelming than had been employed for the extirpation of that unfortunate community, they seemed to abate nothing of their resolution to defend their liberties to the last extremity. All their preparations, accordingly, bore a character of desperate resistance; the whole of their women and children, and sick and aged, with their more valuable moveables were conveyed into the mountains in the interior; and every building or habitation which could serve as a shelter or screen to the advance of the enemy, was razed to the ground. The division of the Greek fleet under Vice-Admiral Sactouris was stationed in the neighbourhood of the island in order to watch the motions of the enemy, and prevent his debarkation; the other division under Miaoulis had set sail to look out for the Egyptian armament, the approach of which was daily expected.

It was not until the 11th of August that the Capitan Pacha appeared off the coast of Samos, and opened a fire on the Samian forts erected in that quarter, while the transports endeavoured to land a body of four thousand Asiatic troops on the north of the island; this operation, however, was effectually prevented by the Grecian fleet; a division of which fell upon the transports, sunk two or three, and dispersed the rest.

On the 17th a more serious attempt was made by Chosrew Pacha, who ordered the Capitan Bey to bear down upon the strait, not two miles wide, which divides the island from the continent, and to transport across this channel the Asiatic army which was assembled on the shore, at the feet of mount Mycale. The Turks found the strait occupied by a Greek flotilla of forty sail, which seemed quietly to await the

onset; they continued to approach them, and had come within reach of cannon-shot, when six fire-ships, under the direction of Canaris, were pushed forward from the Greek line of battle, and thrown among the Turkish fleet. Two of them were fastened to frigates; a third was grappled with a brig; the three devoted vessels immediately took fire and blew up, communicating the flames to the transports which surrounded them. All was now confusion in the fleet of the Moslems; terror seemed to spread among the troops on shore who broke up in disorder, and the Capitan Pacha abandoning all hope of being enabled to effect a landing, withdrew from the coast, having lost in the affair, besides the three ships of war, about twelve hundred men and a considerable number of transports.

About the middle of July, Dervish Pacha, with an army of 20,000 men, chiefly Albanians, broke up from Larissa and penetrated into Livadia from the north, with the view of advancing on Salona and thence to Lepanto, where he hoped to effect his junction with Omer Vrioni, who was marching on the same point from Epirus. On the 18th, a strong Turkish division attacked the position of the Greeks at Masonitza, but was defeated with loss in four successive assaults. Four days after they brought up a large force, which by dint of numerical superiority carried the position, and thence advanced to Gravia; but the Greeks receiving a reinforcement on their part, resumed the offensive, and by an able movement on the enemy's flanks compelled him to retrace his steps. On the 26th, Dervish Pacha came up with his whole force and attacked the Hellenic army, which was strongly posted at Amplana; an action of nine hours ensued, in which the Turks were completely discomfited with great loss.

It was not until after the failure of Dervish Pacha that Omer Vrioni appeared on the scene of action. Every preparation to oppose his progress had been adopted by Mavrocordat, who established his head-quarters at Ligovitzi, and distributed his several corps in the principal positions commanding the advance of the enemy. About the middle of August, Omer advanced from his camp at Carvassara upon Ambracia and Agrapidi. A series of affairs of detail ensued in which the Turks, or rather Albanians, for of such almost wholly consisted the invading army, were uniformly repulsed; and by the end of the month the pacha had been compelled to retreat with precipitation, and resume his position at Cavassara. Nothing more was attempted on this side in the course of the present year, and in November, Omer fell back into Epirus.

The Seraskier advanced once more from Thessaly, and attempted to force his way into Bœotia by the celebrated pass of Thermopylæ. He had already received two checks in this defile; but advanced a third time with better hope of success, as his troops had discovered a by-way over Mount Æta, by which he detached a division to take the Greeks in the rear, at the same time that he himself led on the attack in front. By a singular coincidence, however, it happened that the detachment fell in with a body of about two thousand Greeks, which was hastening by forced marches to join their friends in the pass. The Turkish detachment was instantly attacked and cut to pieces; the victors then hurried forward to Thermopylæ, where the combat had already begun, and their sudden appearance immediately decided the fate of it. The Turks were driven from the field with great loss and in complete disorder, leaving in the hands of the Greeks fourteen standards, with all their artillery.

The maritime operations of this year were of a more decisive character than those which took place by land; and yet in one sense the campaign by sea could hardly be said to have begun, as the formidable armament from Egypt, which for some months past had been expected, had only just arrived in the Archipelago. The expedition consisted of 9 frigates, 14 corvettes, 40 brigs, and about 240 transports, on board of which was embarked a force of 18,000 men, including four Arab regiments, disciplined after the European manner, and officered in great part by Europeans, chiefly

chiefly, we believe, Frenchmen. It set sail from Alexandria on the 19th of July, under the command of the Pacha's son, Ibrahim. On the 4th of September a junction with the fleet of the Capitan-Pacha was effected in the gulf of Bodroun; and next day, the Greek squadron, which had closely followed the retreat of Chosrew Pacha from Samos came in sight. On the 5th a partial and indecisive action took place between the two fleets; another of like character occurred on the 9th. On the 10th the Turkish fleet made for Naxos, when it was again attacked by the Greeks; a general battle ensued, and in the course of which the brave Canaris, with his usual skill and courage, succeeded in fastening a fire-ship on one of the largest of the Egyptian frigates, which almost immediately blew up with all on board. This explosion had the ordinary effect of discouraging the Turks, who withdrew in disorder from the contest, and made for Mitylene after suffering a considerable loss in transport vessels. All intention of carrying into effect the ulterior objects of expedition seems now to have been abandoned for this year. The Capitan-Pacha himself returned to Constantinople, leaving the greater part of his fleet with the Egyptians. After a short stay at Mitylene, Ibrahim Pacha proceeded with his whole force to the gulf of Bodroun. From thence he set sail again, apparently not so much with the purpose of resuming offensive operations, as of re-victualling some of the islands, and among the rest Candia. Miaoulis, however, was still on the watch for a favourable opportunity of attack; on the 25th of November, he came up with the Moslems off Candia, and notwithstanding the disproportion of their respective forces, attacked them immediately with impetuosity and with his accustomed success. The Egyptian fleet was compelled to fly to Rhodes with a loss of a large frigate, twelve smaller vessels of war, and about fifteen transports. In these last, it is stated, were taken and sent to Napoli, above two thousand black troops, disciplined after the European manner, four hundred Arab horses, and an immense quantity of rice and coffee, destined for the supply of Candia.

The Greek government naturally indignant at seeing Christian merchants take part with the enemies of their faith, by affording them the means of transporting the hordes destined against Greece, issued on the 27th of May, a proclamation addressed to the European consuls and vice-consuls in those parts, declaring "that as the masters of sundry European vessels have freighted their ships to the Turkish government, for the conveyance of troops, stores, and provisions, in opposition to the advice of their consuls, and in contravention of the principles of neutrality professed by their respective sovereigns, in the present contest in which Greece is engaged, all such vessels, together with their crews, shall be considered as no longer belonging to any neutral nation, but as enemies, and shall, as such, be attacked, burnt, or sunk, together with their crews, by the ships of the Greek fleet, or by any other armed Greek force that may fall in with them."

The lord high commissioner of the Ionian islands, Sir Frederic Adam, who had lately succeeded to that post on the death of Sir Thomas Maitland, immediately and loudly remonstrated against this measure, and finding the provincial government not disposed to revoke it, issued a proclamation reprobating their conduct, and expressing his determination to seize their armed vessels.

At the same time Sir Harry Neale, commanding the British naval force in the Mediterranean, was ordered to enter the Archipelago, and proceed to Napoli di Romania. The provisional government, alarmed by the menacing representations of the government of the Ionian Islands, had published on the 27th of August, a resolution which declared the decree of the 27th of May to be revoked, with regard to all neutral ships that had not Turkish troops on board. Admiral Neale, not satisfied with this resolution, demanded, on his arrival before Napoli, the unconditional and complete revocation of the original decree. Hereupon another resolution was taken, which, as there was as yet no

printing-office at Napoli, was published and posted up in manuscript, and which, in short but precise and positive terms, revokes the decree of the 27th of May.

The sieges or blockades of Patras, Coron, and Modon, which the late troubles had interrupted, were now resumed; and at the close of the year the affairs of the Greeks, both as respected the success of their arms, and the vigour of their internal administration, presented, perhaps, a more prosperous aspect than ever. What they chiefly wanted was money: an attempt had been made by their friends in England to supply the deficiency, by taking advantage of the mania which at the time raged in this country, to negotiate a loan for the provisional government of Greece. A loan of 800,000*l.* was accordingly contracted for, and considerable advances made on that account to the government at Napoli. This appears, however, to have been frittered away in a scandalous manner.

The progress of the contest could not fail to be at this time a subject of serious interest to all the leading powers of Christendom, and hopes were entertained that they would at length interpose their powerful mediation with the Ottoman court, to induce it to assent to some arrangement which would substantially leave to the Greeks the enjoyment of that independence which their arms had so gloriously conquered, and of which all the efforts of the divan had hitherto proved utterly unavailing to deprive them. In the course of the summer a paper appeared on this subject, purporting to be a "Memoir on the Pacification of Greece," from the court of St. Petersburg. We have no other strong ground for assuming the authenticity of this document, except that it has never been publicly disavowed by the government to which it is attributed. The memoir begins by adverting to the necessity which exists for putting an end to the struggle in Greece, in a manner that would give a triumph neither to the Turks on one hand, nor a sanction to the cause of insurrection and revolution on the other. It was thought, therefore, that a compromise might be devised, by which says the paper, "according to examples taken from the history of Turkey itself, it may be possible to establish three principalities on the Greek continent. The first will be composed of Thessaly, of Bœotia and Attica, or eastern Greece. The second will comprise the coast anciently belonging to Venice, (with the exception of what now belongs to Austria,) Epirus and Arcanania, or western Greece. The third will comprehend the Morea, to which may be joined the isle of Candia, or southern Greece. The islands will be subject to a municipal regime, and governed nearly as they are at present."

The note then went on to specify the precedents for such an arrangement which the annals of the Ottoman empire itself afforded, and proceeds to state it as the opinion of the Russian government, "That the Greeks could not reasonably carry their hopes farther. They would thus enjoy liberty and freedom of commerce, and would have their own flag. The Greek patriarch, who would continue to reside at Constantinople, would there be, in a certain sense, the representative of the nation. The Turks would preserve garrisons and several fortresses, having a line marked out beyond which they should not go.

"There would be, moreover, neither Turkish pacha nor governor, but each of the principalities would pay a tribute proportioned to its extent and its wealth.

"The rules relating to the interior organization would become the object of a second negotiation among the powers. The porte, on its side, would find a real advantage in negotiating. A fourth campaign will probably have no better success than the preceding ones; while the proposed arrangement would secure to it peace and tranquillity, together with the regular revenues arising from the tribute of the different principalities.

"Up to the present time, rebellious pachas disturb at every instant its repose, and reserve for themselves the treasures which they wrest from the people. These revolts of ambitious and grasping pachas would cease.

"Mahomed

"Mahomed II. granted to the islands the privilege of being simple tributaries. This mode of conducting their affairs would possess this advantage for the allies, that they would guarantee such an emancipation of Greece, without deviating from the principles which compose the basis of their policy, and without having the appearance of wishing to favour projects of an absolute independence."

This project, as might be expected, was by no means relished by the Greeks themselves; indeed the experience of the system in the provinces north of the Danube, is by no means in favour of the tendency of such a mode of administration to promote the happiness and welfare of the people.

These measures seemed to satisfy the Porte, which resumed its usual tone of friendly communication with the English ambassador, and renewed the promise for the evacuation of the principalities; the execution of this promise, however, was still delayed; and Lord Strangford was finally obliged to leave Constantinople on his return to England, October 18th, without having the satisfaction of witnessing the accomplishment of a point which had so long been the object of his negotiations. This extraordinary protraction of the measure, was attributed chiefly to the ascendancy in the divan of a party opposed to the grand-vizir, and which consisted of the commander-in-chief of the troops on the Bosphorus, the aga of the janissaries, the mufti and Dschani-Effendi. This faction violently opposed a concession of any kind to the Christian powers, or the Greek insurgents. Ghalib-Pacha, the vizir, was compelled to give way. On the 14th of September he was dismissed from his office, but with no demonstration of displeasure on the part of the sultan, who, in the *hatti-shefir*, announcing his removal, attributed it chiefly to the weakness of his character, which was said not to be fitted for the direction of affairs at a crisis so difficult. He was succeeded by Mehmed-Selim, pacha of Silistria, a creature of Dschani-Effendi, to whose influence he was supposed to owe his appointment. Dschani-Effendi himself died a few days after at the age of 76 years.

1825.—The internal tranquillity of the Porte seemed threatened this year by the insubordination of some troops, and it was found that they intended to exalt Abdul Hamed, the son of the sultan, a youth of fourteen, to the throne of his father. The death of the prince, by the small-pox, happened at this critical juncture. The heads of the leaders of the insurrection were privately taken off, and the rebels were sent against the Greeks.

During the winter, the Greeks had been occupied much more with their own internal dissensions, than in making preparations to meet the common enemy. To such a height did these dissensions arise, that, after the close of the campaign of 1824, the Moreots, dissatisfied with the individuals who were at the head of affairs, broke out in an open insurrection. After some delay and blood-shed, the insurgents were dispersed, and the rebellion was quelled by the end of the year. The leaders sought safety in flight: some of them were seized; others left the Morea, and took refuge in Kalamos, an island appointed by the Ionian government for the reception of Grecian refugees. Some (and among these was Colocotroni) surrendered to the government.

Though the provisional government was strong enough to suppress these disturbances, they had the effect of making the people of the Morea, who placed their confidence almost exclusively in Colocotroni, backward and slack in the approaching campaign. Another disastrous result of them was, preventing the reduction of the fortress of Patras, which, it was supposed, might easily have been taken during the winter. But in consequence of these internal dissensions, it was the middle of January before a few vessels sailed up the Gulf of Corinth, and, aided by some land forces, recommenced the blockade.

On the other hand, the Porte made all the preparations it could for a vigorous campaign. Omar Pacha was removed to Salonika, whilst Redschid Pacha, who had influence among the Albanian soldiers, was transferred from Larissa.

Being furnished with full power and means to raise the requisite troops, he immediately commenced to do so, intending afterwards to pass over to Roumelia; and, having there likewise increased his army, to descend upon Messolonghi with his united forces, levying soldiers as he passed along by Prevesa and Arta. While he was to advance from the North, the troops of Mahomet Ali Pacha of Egypt, who had by this time succeeded in suppressing, for the present, the insurrection in Candia, were to land in great force upon the Morea. As they were disciplined in the European manner, and were well supplied with all the necessaries of war, it was thought the irregular troops of the Greeks would be unable to stand before them.

Mahomet Ali's fleet, which wintered in the harbour of Suda in Candia, set sail under the command of his step-son Ibrahim Pacha, on the 23d of December, for Rhodes, where it arrived on the 1st of January, 1825. There 5,000 disciplined soldiers awaited him: with these he was to return to Candia; and, having completed his armament there, to sail for the Morea without delay. At the same time, transports with provisions were actively fitting out at Constantinople for the use of the garrisons at Modon and Patras.

The blockade of Patras was now going on with vigour; orders were issued daily for the collecting fresh troops, and the sending of additional ships from Hydra; and the direction of the forces both by land and sea, as well as the presidency of the government, was conferred on Conduriottis. To check the approach of Redschid Pacha, Nota Bozzaris, and generals Suka and Milios were sent forward with a body of troops to occupy the pass of Makrinovo, the ancient Olympus, through which it was necessary he should pass. The progress of the blockade at Patras was observed with double interest; for its fall was daily expected, and there was no probable means of checking the armament of the Egyptians, except by withdrawing the squadron which was cruising before the fortress. At length advices arrived of the departure of the expedition from Candia: further delay was impossible; and the Greek squadron sailed from Patras, but unfortunately too late. The Egyptian squadron of thirty sail had anchored off Modon, and disembarked 6,000 soldiers, infantry and cavalry, well disciplined and commanded chiefly by European officers. These troops immediately encamped round Modon, whilst the ships returned without delay, to Suda in Candia. A few days after, Ibrahim Pacha, at the head of 800 men, advanced to the summit of the range of hills which rise at the haek of Navarino. The inhabitants flew to arms, whilst 700 Roumeliots, under the command of General Ciabella, hastened into the fortress. The Pacha remained quietly at his station for some hours, and then returned to his encampment.

The storming of Patras was now abandoned, and the troops were drawn off to be marched further south. Upwards of 2,000 soldiers, principally under the command of Hadji Christo Joannes Mavromichales, son to Petro Bey, of Maina, were thrown into Navarino; a small corps of artillery, amounting to 50 or 60 men, were sent off with all haste from Napoli; and the command of the fortifications was given to Major Collegno, who lost no time in assuming his post. Provisions were sent in from all parts of the Morea, sufficient for a long siege; large bodies of Roumeliots, under the command of their respective generals Giavella, Karatasso, Constantine Bozzaris, and Karaisaki, took positions in the rear of the enemy. While Conduriottis and Prince Mavrocordato prepared to set out from Napoli with fresh troops, Ibrahim received reinforcements from Candia; in March a second debarkation took place, which made his force amount to upwards of 15,000 men: and before the end of that month, a battery had been erected against Navarino. This place, which had been taken by the Greeks in the first year of the war, instead of having been repaired and strengthened, had been left nearly in the same state in which it was, when taken from the Turks in 1821.

By the middle of April, Conduriottis had succeeded in assembling about 6000 men at Cremidi. But after several desultory

desultory actions with small bodies of the Greeks, Ibrahim, on the 19th of April, attacked, and completely defeated in their position, all the troops which the president had been able to collect. To take Sphacteria, an island which commands the castle of Old Navarino, was the next object of the Pacha; but it was not until the return of his ships from Suda in Candia, whither they had gone in order to transport a third division of land forces, that he could attempt to put this part of his design into execution.

On the 1st of May, the Egyptian fleet, amounting, transports included, to 65 or 70 sail, came out of the port of Suda, where it had been for some days closely watched by a Greek squadron of 29 sail, under Miaoulis. The latter immediately endeavoured to oppose their progress, but the light breezes were unpropitious to his purpose. He attacked, however, a large frigate, which was seriously injured, and a large portion of her crew, who leaped overboard in their terror, were either taken prisoners or perished in the waters. But the Egyptian fleet succeeded in reaching Modon, whence 46 ships, followed by Miaoulis, proceeded to cruise off Navarino. In the harbour of Navarino there was then only one Greek vessel, the brig Mars, commanded by the Hydriote captain Tsammados. It was engaged in provisioning the fortress, and in covering the landing of the water, which was brought in boats from the coast of the modern province of Arcadia. Miaoulis, shortly after his arrival, sent in seven vessels, of which Tsammados was to take the command, and to proceed with them to reinforce the squadron of five ships which remained off Patras. On Sunday the 8th of May, the squadron of Miaoulis, reduced by the detachment above-mentioned to twenty-two vessels, was at a considerable distance towards Zante: the Egyptian fleet, in numbers forty-six, were off the island of Sphacteria; Tsammados's eight vessels were inside the harbour. The neck of land, formed by a swamp and the sea, which connects Old Navarino with the main land, as also the plain at its extremity, were occupied by Ibrahim Pacha in person, with all his cavalry. The island was occupied by about 300 irregular Greek soldiers, and 200 sailors, who had been sent on shore from the ships. A battery of two small guns, wrought by a party of sailors, defended the landing-place towards the sea; three others, also of small size, were placed higher up among the rocks; and a battery of three pieces of heavy artillery at the southern end of the island, defended the only practicable entrance into the harbour. At 10 o'clock in the morning (of Sunday the 8th), the Turkish fleet was observed standing in towards the shore. At noon, they were ranged along the whole length of the island, keeping up a tremendous fire to cover the landing of the boats; and at the same time, the besiegers on the main land feigned to commence a general attack on the fort.

In a very short time a number of troops, estimated at from two to three thousand, disciplined in the European fashion, dressed in red uniforms, and armed with muskets and bayonets, succeeded in forcing their way into the island. The sailors at the lower battery were surrounded and destroyed to a man; and in the space of about an hour, the enemy had traversed the whole island victoriously from end to end. Of the 500 men who defended it, not quite 150 escaped. Among the slain were captain Tsammados; and count Santa Rosa, who acted a conspicuous part in the revolution of Piedmont. The slaughter would not have been so great, had the vessels in the harbour exerted themselves to save the fugitives, or even left their boats on shore so as to facilitate their escape. But as soon as the Turks had made good their landing on the island, the Turkish fleet also began to extend itself for the purpose of blockading the mouth of the bay. Upon this, captain Badouri, a Hydriote, gave the signal of flight; six others followed his example.

The only vessel which remained was the Mars, belonging to captain Tsammados. After waiting for her captain, till the crew were informed of his death, and having taken on board Prince Mavrocordato and the governor of Old Navarino, this small vessel, a brig of only 18 guns, prepared to force her way through the fleet of the enemy. For three

successive hours, the brig remained almost in the middle of the Turkish fleet, during which time she exchanged broadsides with several frigates, besides many corvettes and brigs, none of which was under her own force. Considerably damaged in her hull and rigging, but with a loss of only two men killed, and eight or ten wounded, she at last escaped.

On the evening of the 8th, Old Navarino remained without commander, without water and provisions, and with only twenty barrels of powder. On the morning of the 10th, the garrison capitulated, on terms which the Pacha faithfully observed. The garrison of Navarino capitulated and marched out on the 23d, leaving water in the place for four days' supply only, and bread for ten. The conditions of the surrender were, that the Greeks should march out without arms, and be embarked in neutral vessels.

After the capture of Sphacteria, six ships of war and about thirty transports, part of the Egyptian fleet, were followed by Miaoulis into the harbour of Modon, where more than half of them were destroyed by the Greek fire ships. When Navarino capitulated, the Morea had already been abandoned by the troops of northern Greece; for as soon as they heard of the arrival of Redschid Pacha as Resaskier in Epirus, and of his approach with a large force to Messolonghi, it became impossible for the Cætan and Ætolian chiefs, even had they been so inclined, to keep their followers from proceeding to the defence of their own mountains.

During all this time Colocotroni, with several of the chiefs of the Morea, remained state prisoners in the convent of Hydra; some of the provinces of the Morea had demanded his release; and he himself had, twice besought the government to allow him to engage the enemy, offering his two sons as hostages. After much caballing, an amnesty was published, and Colocotroni, affecting complete oblivion of the past, proceeded to collect the forces of the peninsula, in order to oppose the advance of the Egyptians.

In the beginning of June a detachment of Ibrahim's army defeated a body of Greeks at Aghia, on the mountain which overhangs the town of Arkadhia (the ancient Cyparethus); and about the same time the Pacha himself occupied Kalamata. From Kalamata he soon began his march into the interior. After having sustained some loss from the troops of Colocotroni in crossing the mountain, now called Makriplaghi, which separates the plain of Messene from the valley of Megalopolis or the upper Alpheius, he occupied, on the 20th of June, the half demolished town of Tripolizza, and appeared before Napoli di Romania, within one month after the capture of Navarino. A division of his army attacked the great outposts at the mills of Napoli on the 25th of June, but without success; although the Greeks under Demetrius Ypsilanti (who for some time before had been living retired from affairs at Tripolizza) had, in no part of the action, more than a few hundred men, supported by the fire of some small armed vessels anchored near the shore. Having failed in his principal design, that of surprising Nauplia, or of intimidating it into terms of capitulation, Ibrahim retreated, and endeavoured next to open a passage to Patras; but the mountainous districts of Arcadia and Achaia, which are interposed between that city and the plains of Mantinea and Argos, were favourable to such irregular troops as the militia of Greece. Ibrahim was only able to overrun the plains, to destroy the cultivation, which, during three years of freedom from Turkish plunder, had begun to grow up, and to reduce all the most fertile parts of the country to their former desolation.

About the same time that the Egyptian army occupied Messenia, the Turks moved from Epirus and Thessaly upon the shores of the Corinthian gulf: a Turkish division, making a rapid movement from Zituni, seized upon Salona, and in the end of April Redschid Pacha appeared before Messolonghi. But he came quite unprovided with heavy artillery; he directed therefore all his means to the blockade of Messolonghi, and to the protection of his position before that place, until the arrival of the fleet of the Capitan Pacha should enable him to commence more active operations.

The Turkish admiral sailed from the Dardanelles in the

end of May; about the first of June he was met in the channel of Cavo Doro, by the Hydriote Sakhuri, who destroyed with his fire-ships three Turkish men of war and several transports; another corvette was run ashore by the crew, and burned in the island of Syra. These vessels contained a large proportion of the stores intended for the siege of Messolonghi. A few days afterwards, the Capitan Pacha entered Suda, where he joined the Egyptian fleet which had lately returned from Navarino. He was quickly followed thither by the joint forces of Miaoulis and Sakhuri, amounting to about 70 sail. On the 14th, two days after their arrival, these gallant officers attacked a division of the Ottoman fleet which remained in the outer harbour of Suda, and at the expence of three fire-ships, destroyed a corvette with its equipage. They were prevented from any further success by the narrowness of the entrance into the inner bay of Suda.

A few days afterwards, the Greek fleet was dispersed by a tempest, when, finding themselves deprived of their best means of defence by a want of fire ships, they retired to Hydra. The Turkish admiral now proceeded unmolested to Navarino, where he landed a reinforcement of 5,000 men. From thence he pursued his course, with seven frigates and many smaller vessels, to Messolonghi, and arriving there about the 10th of July, furnished the Turkish garrisons at the entrance of the gulf of Corinth with the supplies of which they stood greatly in need. Redschid Pacha now pressed the siege of Messolonghi with increased vigour. The Capitan Pacha had succeeded, on the 21st of July, in penetrating with small boats into the Lagune; and, on the same day, the fort of Anatolico surrendered to the Turks. The besiegers had, moreover, succeeded in cutting off the water of Messolonghi, and in erecting several batteries; the ramparts had been much injured by their fire, and a part of the ditches was already filled up. At length, on the 1st of August, the Turkish commanders, apprehensive of the approach of the Greek fleet, ordered a general attack. The works on the land side were assailed in four places, while thirty boats occupied the lake. The Turks, however, were every where repulsed. On the 3d of August the Greek fleet, consisting of about 25 brigs, made its appearance; and on the 4th and 5th of the month, succeeded in destroying two small ships of war, as well as all the boats on the Lagune; in relieving Messolonghi, and in forcing the Ottoman fleet to retreat. Some of the Turkish ships retired behind the castles of the gulf of Corinth, while others made sail for the Ægean, whither they were followed by a detachment of the Greek vessels.

At the same time, the troops of Zavellas, Karaiscakis, and other chiefs, to the number of 2,000, who had arrived from the camp at Salona, and were proceeding to Apocuron and Carpenisi, attacked the besiegers in the rear, and opened a momentary communication with the Greek garrison; but the Seraskier was sufficiently strong to repel the sally of the garrison as well as the attack from without. He maintained his position throughout September and October, though with scarcely any result except that of loss to his own troops: expecting the return of the Capitan Pacha with reinforcements.

The Turco-Egyptian fleet came within sight of Messolonghi on the 18th of November. After remaining a few hours so near the coast of Ætolia that the ships could be distinctly seen from the fortress, and from the camp of Redschid Pacha, the whole fleet bore away for the bay of Patras, and anchored there. On the 23d, three ships entered the port of Patras, discharged their cargoes, consisting of provisions, stores, and ammunition, and landed some troops. During this time, no attempt was made against Messolonghi by the Seraskier from the land side, nor did it appear that any combined plan of attack had been concerted; but on the 24th, there was a slight skirmish between a party of Turks, who had concealed themselves in one of the trenches, and the troops of the garrison, in which the former suffered some loss. On the 26th, the Grecian fleet, consisting of about 30 sail, under the command of Miaoulis,

appeared, and began to engage the Turks, who were awaiting them between Zante, Cephalonia, and Chiarenza; a desultory action ensued, which lasted, with little intermission, two days and nights. The Greeks, with their small, stout-built merchant brigs, sought by the dexterity of their movements to cut off and destroy isolated vessels, or to direct fire-ships against the enemy's larger men of war; but on this occasion they were not successful. On the 29th, another naval skirmish took place; partial engagements occurred on the two following days; and, on the 2d of December, the Greeks compelled the enemy to return for shelter within the Gulf. Shortly afterward, Miaoulis returned to the Archipelago. By this time, the whole of the southern shore of the Gulf of Lepanto had been reduced by Ibrahim, who had placed a garrison of Arabs in Patras.

The distress into which the Greeks were driven by this invasion induced the senate and the executive body, towards the end of July, to propose to place the country under the protection of Great Britain; and a formal manifesto to that effect was issued by them, and transmitted to our government. The offer was, however, not accepted.

On the 10th of August, a bold but unsuccessful attempt was made to burn the Turkish fleet in the port of Alexandria.

In this month, the insurrection broke out anew in Candia; and the insurgents obtained possession of the fortresses of Grambouses and Kissamos.

Ibrahim Pacha retreated to Naupaeti, and suddenly embarked on board some vessels stationed in that port, crossed the gulf, landed at Messolonghi, and ordered immediately a general assault. The garrison, however, repulsed the Egyptians, and beat them back into their entrenchments. Ibrahim now established a strict blockade; but on the 22d of December, Miaoulis with the Greek fleet endeavoured to break the blockade, but failed. The garrison suffered the greatest hardships, until the 22d of April, when they made a desperate sortie, but were dispersed. A party now cut their way through the enemy, and procured the escape of about 700 women and children, who fled to Cravari. The Turks made a general assault, entered the town, put to the sword 2,000 or 3,000 men, took 150 men, and 3,000 women prisoners, and burnt the place. Ibrahim had on the 2d offered the Greeks very honourable terms of capitulation, which they refused.

About three weeks after the fall of Messolonghi, Tripolizza was recaptured from the Turks by the brave Nikitas. Ibrahim had made great attempts to save the place, but without avail; for the Greeks had occupied all the passes so completely, that none of his detachments could penetrate into the Morea.

The poverty of the Greeks had driven many of them to plunder merchant ships with their small vessels, and unfortunately they did not confine their depredations to the ships of the enemy, but attacked English merchantmen: other pirates also assumed the Greek flag, and did so much mischief, that the Ionian government was forced to adopt very severe measures, and the Greek navy was severely injured.

A great attempt was now made by the friends of the Greek cause in England. Much money was collected; a large quantity of stores, arms, and ammunition, were sent to Napoli, and Lord Cochrane proceeded from this country to the assistance of the Greeks.

He was received with the warmest demonstrations of attachment from all parties, and was very instrumental in reconciling dissensions and repressing piracy, and reducing the Greek navy to obedience. His exertions were, however, for some time frustrated by the villainy or ignorance of some of those who conducted the Greek affairs in England. It had been arranged that an armed steam boat should be sent out to him as soon as completed. The construction of this was entrusted to some parties who built it so badly, that it was found totally unfit for sea.

The rest of the year was not occupied with very active operations; the Sultan's forces being directed to the suppression

sion of the Janissaries, as before mentioned. Ibrahim's best soldiers were cut to pieces before Tripolizza, and his supplies cut off by Petrova, general of the Arcadians. On the other hand Reschid Pacha, after the fall of the Mes-solunghi, had undertaken an expedition against Athens. He set out with 20,000 men, but that number was diminished during their dangerous passage. He arrived, however, and commenced an assault, and took part of the town. But Colonel Fabvier, and the Roumeliote chief, Karaiski were despatched from Napoli; they attacked the rear of the enemy on the 18th of August, and cut off 3,000 or 4,000 Turks.

The Turkish army soon, however, received reinforcements, and obtained possession of all Athens, except the Acropolis. This held out bravely for a long time, and the government turned its attention very earnestly for its relief. An expedition was planned, of which Lord Cochrane was to take the command of the navy, and General Church of the land troops. A sudden attack was to be made by these combined forces, while Karaiski and the other Greek leaders endeavoured to force a passage into the city, and relieve the garrison of the Acropolis. The Greeks, however, had miscalculated the force of the enemy. They forgot also that they had to pass a vast plain, highly favourable to the movements of the Turkish cavalry, and where they were certain of being attacked, if the Pacha were apprised of their approach. This disaster happened: 3,000 Greek troops were landed safely by day-break on the promontory of Colias, on the 5th of May, 1827; they were shortly met by the Turks, who were in the first instance repulsed; as, however, the Greeks advanced they found themselves completely surrounded.

The action only lasted from eight till ten in the morning; but the defeat of the Greeks was so complete that they lost 2,000 men, including the brave Karaiski and six other generals, together with several standards and pieces of cannon. But few returned to the vessels, the remainder dispersing among the mountains. So sudden was their flight that Lord Cochrane was obliged to swim to a vessel a short distance from the shore. Ibrahim Pacha now had an opportunity to join Reschid Pacha, and march by the way of Patras to Corinth. Meanwhile, Athens surrendered to the Turks, and a war of extermination commenced. In this sad posture of affairs, the great European powers were at length induced to interfere actively, and England, France and Russia signed a treaty between each other, and offered to the Ottoman Porte their mediation, with a view to bring about a reconciliation between them and the Greeks. The proposal to the Porte was; that the Greeks should hold of the Sultan as of a superior lord, and pay him an annual tribute, the amount to be permanently fixed by common agreement; that the Greeks should be governed by authorities of their own choosing; but in the nomination of which the Porte should have a determinate voice. To bring about a complete separation of the individuals of the two nations, the Greeks were to enter upon possession of Turkish property, either on the continent or isles of Greece, on condition of indemnifying the former proprietors. This treaty was signed at London on the 6th day of July, 1827. A secret article further bound the high contracting powers to use every available means of enforcing the conditions laid down in the treaty; and in consequence, instructions were sent to the admirals of the several powers in the Levant seas how to act, should the above terms be disregarded by either the Turks or Greeks. A report was now spread that the Grand Signor intended offering a complete amnesty to the Greeks, to render all interference needless. This rumour was speedily put to silence by a manifesto issued by the Porte, protesting against the interference of the Christian powers; and at the same time promulgating the curious fact, that at the congress of Verona, some of the Christian powers had offered assistance to Turkey, to subjugate her rebellious Greek subjects, which assistance the Porte refused, as inconsistent with its duties and dignity. The treaty of London was formally presented to the Reis Effendi on the 16th of August, by the ambassadors of the three powers, S. Can-

ning, C. Guilleminot, and Ribeaupierre, accompanied by a message intimating that they should expect a final answer at the end of fifteen days. The stipulated time having expired, the dragomans of the three embassies, Desgrange, F. Pisani, and Franchini, were sent to receive the answer of the Reis Effendi. It was given verbally, in the most decided manner, refusing to admit the interference of foreign powers in the affairs of Greece. On the following day the ambassadors met again, and sent another note by their dragomans, distinctly stating, that the terms of the treaty *must* be complied with; and in case of further refusal on the part of the Porte, that measures would be taken to enforce the same. The Reis Effendi replied promptly and firmly, that it was the determination of the Porte to abide by its first decision. The ambassadors consulted together again on the 4th of September, and finding their remonstrances totally disregarded, they considered negotiation at an end; and in consequence, demanded their passports on the following day. About this time an Egyptian expedition entered the port of Navarino, consisting of nearly 100 sail of transports, with 5,000 troops on board. On the 10th of September the three ambassadors signified to the subjects of each power, the necessity of quitting the Turkish capital; but the Sultan at the same time informed the ambassadors, through the Reis Effendi, that the negotiations might be renewed, if they related to Greece.

On the 26th the Admirals Codrington and Riguy repaired to the tent of Ibrahim, and declared to him, that as the Porte had refused to accede to the proposals of the allied powers, they were ordered to bring about an armistice, and to destroy the forces that should oppose it. The Pacha answered, that as servant of the Porte he had been instructed to push the war in the Morea, and to finish by a decisive attack on Hydra; that he did not feel authorized by his present instructions to negotiate in this extraordinary case; but that he would dispatch couriers immediately to Constantinople and Egypt; he also gave his word that his fleet should not quit Navarino until his courier's return. At this time thirty-two Turkish ships, loaded with troops, were cruising before Navarino, and eighty others were in the port.

In consequence of the Pacha's reply, the Turks were blockaded by the allied fleet; but the armistice concluded between him and the allied admirals was violated by the Turks on the 4th of October, when Admiral Codrington intercepted part of the Egyptian fleet sailing towards Patras, and as it afterwards was discovered, intending to relieve that place. When informed that they were infringing an armistice concluded with Ibrahim Pacha, the Turkish commander replied, that he was acting under the Pacha's orders. After passing a severe censure on the duplicity of his conduct, Admiral Codrington directed them to rejoin the rest of the fleet at Navarino. Ibrahim, however, headed a large body of troops in the Morea, who butchered the Greeks in all directions. The English, French, and Russian admirals now determined to block up the Turco-Egyptian fleet in the bay of Navarino, by entering it and anchoring close to the ships, a position which would also enable them to have further conference with the Pacha.

On the 20th of October, therefore, at two o'clock in the afternoon, the combined squadrons passed the batteries, in order to take up their anchorage. The Turkish ships were moored in the form of a crescent, with springs on their cables, the larger ships presenting their broadsides towards the centre; the smaller ones in succession within them, filling up the intervals. The combined fleet was formed in the order of sailing in two columns, the British and French forming the weather or starboard line, and the Russian the lee line. The *Asia* led in, followed by the *Genoa* and *Albion*, and anchored close alongside a ship of the line bearing the flag of the Capitani Bey, another ship of the line, and a large double-banked frigate. No fire had taken place from the batteries, but it was evident that warlike preparations were making on board the Turkish vessels. It was the peremptory order of the English admiral, that no shot should

be fired except in return, a boat was now pushed off from the *Dartmouth*, to proceed to one of the other vessels, commanded by Lieutenant G. W. H. White, who with several of his crew were immediately killed by a fire of musketry. This produced a defensive fire from the *Dartmouth* and *La Syrene*, the latter bearing the flag of Rear-admiral de Rigny. This was followed by cannon shot from the Turks, and the action soon became general. Meantime, however, the English admiral's pilot was sent to interpret to Moharem Bey, his commander's desire to avoid bloodshed: he was shot alongside. The battle now raged with unabated fury for four or five hours, at the end of which time the Turco-Egyptian fleet was totally destroyed. Ibrahim, who was not present, when informed of the event, caused all the Greek prisoners, men, women and children, to be put to death by the sword, many of whom had been in his power fifteen months. According to custom, the priests and others devoted to religion were either crucified or burned by a slow fire.

While the Divan were deliberating what steps should be taken respecting the affair of Navarino, news arrived at Constantinople that Fabvier, supported by Lord Cochrane, had landed on the isle of Scio, and that the Pacha and the Turks had been obliged to quit the fort. This greatly increased the irritation already felt, and the Reis Effendi declared to the dragomans of England, France and Russia, on the 9th of November, that all intercourse was suspended with these three powers until it should be known that they abstained from further interference in behalf of Greece,—until the Grand Signor should be indemnified for the loss of his fleet, &c., and until he had received satisfaction for the insults offered him. On the following day the three ambassadors returned this answer. "The treaty of the 6th of July forbids the allies to abandon Greece. The Turkish fleet gave occasion to the battle of Navarino, which circumstance destroys all claim to indemnity. The Porte has less reason to expect satisfaction, as it was informed in due time that an event such as that of Navarino might occur, if it did not listen to counsels of moderation, or if it should be the first to attack."

The greatest activity now prevailed in the arsenals at Constantinople; proclamations were sent to the provinces, calling upon all Mussulmen to defend their laws and their religion, and troops and ammunition were sent into Silistria, to put the fortresses on the Danube into a state of defence.

On the 28th of November, the Reis Effendi called on the English ambassador, and said, that if the Greek question was the only subject of negotiation, the Porte would be glad to get rid of Greece, if any means could be adopted without wounding the feelings of the Sultan: but at the same time the Sultan continued making active preparations for defensive war, though he abstained from offensive operations, and when pressed on the subject of Greece, replied, "I will not be accessory to my own disgrace in the voluntary surrender of Greece, neither will I go to war on the subject, as I cannot remedy myself; but I will be prepared to resist all further aggression if offered." He summoned deputies, or at least well informed and influential persons from various parts of his dominions, with a view of deliberating on the critical state of the Turkish empire; while the ministers of the allied powers were ordered to remain at Corfu, in expectation of a renewal of negotiations with the Porte.

About the 16th instant about two thirds of the Egyptian force, the whole of which amounted to 21,000 men, embarked for Alexandria, with the Greek women and children whom they had taken prisoners. The Morea had been rendered nearly a desert by their ravages, and the country generally is in a most deplorable condition. The reason assigned for their departure was, that the battle of Navarino had rendered their services useless.

Russia now declared war against the Porte independent of her allies, and assigned as causes numerous breaches of the treaty of Akerman, and the successful attempts of Turkey to provoke the recent hostilities between Russia and Persia.

The last news brings the intelligence that the Porte has

granted an armistice of three months to the Greeks; but has not been influenced by the dangers that threaten its existence, to emancipate them from its yoke.

At present, the state of Turkey is in the highest degree critical and interesting. Attacked by Russia, a foe so long dreaded and so powerful; deserted, and perhaps opposed by England and France, the only powers which could have opposed the enlargement of the great empire of the north; governed by councils, in which no one quality is observable but obstinacy; and distracted by the rebellion of her Christian subjects, and by the partial insubordination of her mercenary troops, this once powerful empire is threatened with dissolution. This is perhaps of little consequence to her subjects, since no change can be for the worse.

OF THE INHABITANTS AND PRESENT STATE OF TURKEY.

The chief characteristics of the Turks are these:—they are by turns active and indolent, cruel and merciful; equally pleased amid the toils of war and the luxury of repose. They are temperate and abstemious; implicit followers of the mandates of Mahomet, and inflexible persecutors of all believers in any other creed. By nature they are candid and sincere; but the amiable qualities are so tinged with duplicity, that they regard not the obligation of a treaty, or the sanctity of a promise, if made to one of a different faith. The Turks are distinguished from all the other nations of Europe, by the ample folds and stately drapery of their garments; by the turban, and by the shorn head and long beard. They are generally actuated by sudden impulses; with the same alacrity they take the life of an adversary, seize the possessions of their weaker neighbours, or purchase and immerse in the harem the object of their desires.

The Turk knows nothing of the perpetual bustle, the complicated intrigue, or the varying opinions which influence the business of life in more northern nations; his life is one continued scene of dull monotony, except where the greater passions of our nature interfere. He wonders at, and pities the assiduity of those who are engaged in the honourable and active pursuit of wealth and greatness; the study of the liberal arts and sciences, the busy stir of commerce, and all that makes life dear and desirable to others, is to him unknown, or totally despised. In their behaviour to women, the policy of this people is a mixture of the most delicate respect, gross sensuality, and refined jealousy. They admit not even their dearest friends to see the face of their wives; on the other hand, the apartment of the women is sacred from intrusion, and a Turkish wife may hold property, even when a husband has not that power.

The religion of Mahomet assigned to its followers a number of minute duties; of these, the performance of five daily prayers, before sunrise, at noon, in the afternoon, at sunset, and at night, instituted in honour of Adam, of Abraham, Jonas, Jesus, and of Moses, is the most important, and no one is reckoned a good Mussulman if he fails in any of those duties. Next follow the ablutions, which are both numerous and various. The fast of Ramazan is another institution which employs the whole attention of the faithful, and compensates for more important duties.

Though the Mahometan religion was by no means a perfect system for the improvement of mankind, it was well adapted to unite the wandering Arabs of the desert, and to form any nation into a military community. It recommends to the faithful, integrity and justice towards each other, and imposes upon them such privations as are most necessary for the discipline of an army; forbidding wine as subversive of all order, and inculcating cleanliness the better to preserve the health of the camp.

Desertion from the army was denounced by Mahomet as one of the gravest and most deadly sins. He promised the crown of martyrdom to those who died in defence of his divine omission, and invented a sensual paradise of ripe fruit, verdant meadows, fresh water, and fine women, for the eternal gratification of his soldiers; who believe when they go to battle, that legions of angels, headed

by Mahomet himself, hover over them and direct their weapons to the hearts of their enemies. The Turkish institutions were well contrived for upholding a military spirit. All Mussulmen are soldiers, in the eye of the law, and are called *Askery*; they form a class totally distinct from their infidel subjects. All their conquered lands have been distributed among the officers and soldiers, by a greater and less division, called *Ziamets* and *Timars*; the former consisting of five hundred acres and upwards, the latter of three hundred and under five hundred acres. The *Ziams* and *Timariots* were bound to take up arms at the summons of the sultan, and follow him to the wars. Their period of service lasted from April to October, at which time they would return home, even without permission.

The grants of land made by sultans to their soldiers were not hereditary, for it is said that the same estate has been granted eight times in one campaign. The *Timariots* are not now soldiers. Recent changes have nearly banished them from the armies, though in case of invasion they may be found formidable defenders.

The distinction of nobility is unknown to the Turks; the meanest peasant may aspire to the highest place next the sultan, than which there can be no greater excitement to a military people. Upon a declaration of war, all the male population from sixteen to sixty are summoned, but their attendance is optional.

To remedy the great defects of the *Timariot* military system, the regular troops called *Janizaries* were first established. This was effected in the following manner:—Amurat having conquered Bulgaria, Servia, and Macedonia, was advised by a vizier to claim a fifth part of the young men of those countries to form a permanent army. This system was found to work so well, that the male children of every fifth year were afterwards taken from the Christian subjects, and reared in seminaries, where they were taught the Turkish language, to wrestle and shoot with the bow, and were initiated in the Mahometan faith. These at a proper age were formed into companies, some of which were attached to the person and palace of the sultan; these collectively formed the most efficient army that had been seen since the decline of the Roman legions. While military discipline was in its infancy in the Christian states, these *Janizaries* triumphed over every opposition, to the terror and amazement of all beholders.

Every Turk at present endeavours to get his name enrolled in the army, as he thereby avoids the payment of taxes; though many thus enrolled never serve. If any one of this body commits a crime for which he is condemned to death, his name is instantly struck off the roll, that the corps may not be disgraced by his execution.

The Turks have also a numerous and efficient cavalry, excellently mounted and superbly dressed, who manage their horses and wield their arms with great dexterity. The greatest order and decency prevail among them, nor do they (in their own territories) ever commit excesses. Their food is simple, wine being strictly prohibited: they are content with bread and a few olives. A dish of vegetables with salt and vinegar is considered a luxury among them.

The two chief judges or *mufti* are called military judges, and all have in their mouths this proverb, that they gained the country by the sword, and by the sword they will maintain it. The real principle of the Turkish government is partly military and partly religious: the distinct powers of each have, however, never been properly defined.

Formerly the sultan's sons were made governors of provinces or commanders of armies; this led to much disorder, and Solyman the first, in consequence, established the custom of imprisoning the princes of the blood in a palace at Constantinople, called *Eski Serai*. They are allowed to marry, but their offspring are destroyed at the moment of their birth; the children of the princesses, who are also allowed to marry, share the same fate. It was Selim the first who united the title of *iman* or pontiff to that of sultan or lord; thus the house of Othman obtained additional reverence from their subjects by uniting the priesthood to the military

command: There is an article in the Turkish code *Multika* which invests the sultan with all the power of an absolute king, while it enjoins him to fulfil the duties of a priest. He is allowed by the Mahometan law to kill fourteen persons in one day, without cause and without blame; but there is one great consolation in this, the soul of him thus slain flies instantly to Paradise. The sultan's will is also sufficient to abrogate any law not founded on the Koran.

The *Ulemas* consist of three classes, the doctors of laws, the judges, and the ministers of religion; the latter is the inferior situation, indeed a layman may be appointed to the offices of *meuzzin* and *imam*, to call to prayers, and perform the duty of priest. The *Ulemas* have many privileges; they are the keepers of the *Fetva* or holy seal; they may marry, and their property descends from father to son, though the sultan can exile, imprison or displace them at pleasure.

The civil government is conducted by the vizier and other principal ministers. When they meet in *divan*, the sultan is always present, where he can hear and see without being seen. In the provinces the chief command devolves on the *Beglierbegs*; the second in command are the pachas, whose authority extends over the military, the revenue, and the administration of justice; yet is the greatest pacha every hour liable to be hurled from the height of power and magnificence by the annihilating mandate of the sultan. Sometimes a pacha becomes so powerful as to defy the sultan, who bears the insult with seeming apathy, or perhaps loads the object of his jealousy with preferments; suspicion thus laid at rest, the pacha falls by the hand of an assassin. The administration of justice is very defective; the judge generally deciding in favour of him who carries the longest purse. Next to the corruption of the judge, is the perjury of witnesses, who think it meritorious to swear falsely against a Christian. The administration of criminal law is equally faulty: the power of life and death is exercised every where without delay or mercy. A baker is found selling bread by a light weight; he is instantly hanged by order of the chief officer of police; if he cannot readily be found, they hang his apprentice, though he is totally ignorant of the offence; thus the crime is punished though the criminal escapes. The following anecdote will serve as an illustration of the celerity of Turkish justice. A Russian minister complained of insult being offered to some persons entitled to the vizier's protection. The vizier made a horizontal motion with his hand, and before the minister departed seven heads were rolled on the floor.

Taxation in Turkey, falls principally, if not entirely, on the unbelievers: the regular taxes are, however, by no means equal to the extortions of the pachas.

On the subject of commerce, the policy of the Porte appears liberal at first sight. All foreign goods are admitted upon the payment of a duty of three or four per cent.; but the merchant pays a further duty of double that amount. Thus the government sacrifices the interests of its own subjects for the sake of a little ready money. Christians are considered an inferior race, and are loaded with every mark of degradation. The oath of a Christian is of little avail against a Mussulman; but if he commits perjury, the punishment is death. If, on the contrary, a Mussulman deliberately murders a Christian, he escapes with impunity. It is, however, consolatory, that this system of misgovernment produces weakness in the sovereign, and desolation in the state. All that is mean, despicable, and cruel, exists among the subjects of the Porte. An habitual distrust poisons all intercourse between the governors and the governed: the miserable rajah hates the law, as his deadliest curse, and constantly endeavours, when the weaker party, to flatter, cheat, and betray, and when the stronger, to mutilate or murder his inhuman master.

TURKEY, a town of the state of New Jersey; 13 miles north-north-west of Amboy.

TURKEY, *s.* [*gallina turcica*, Latin.] A large domestic fowl supposed to be brought from Turkey.—The turkey-cock hath swelling gills, the hen less. Bacon.—See MELE-AGRIS.

TURKEY CREEK, a river of South Carolina, which runs

runs into the Cangaree. Lat. 34. 50. N. long. 81. 35. W.—Also, a river of America, which runs into the Ohio. Lat. 38. 22. N. long. 83. 12. W.

TURKEY FOOT, a township of Pennsylvania, in Somerset county, containing 975 inhabitants.

TURKEY HILL, a township of Illinois territory, in the county of St. Clair, containing 1151 inhabitants.

TURKEY POINT, a cape on the coast of Maryland, at the mouth of the Susquehanna, where it takes the name of Chesapeak. Here the British army landed in August 1777, as they were advancing to Philadelphia; 16 miles south-east of Elkton.—Also, a cape on the north coast of lake Erie.

TURKEY RIVER, a river of Louisiana, which runs into the Mississippi. Lat. 42. 10. N. long. 91. 55. W.

TURK'S ISLANDS, a cluster of small islands among the Bahamas, the largest situated in lat. 21. 20. N. long. 71. 0. W. These islands, belonging to the British, are the most south-east of all the Bahama islands; the principal of which is Grand Key, where there is established a port of entry.

TURKOIS, *s.* [*turquoise*, French, from *Turky*.] A blue stone numbered among the meaner precious stones, now discovered to be a bone impregnated with cupreous particles.—Those bony bodies found among copper-ores are tinged with green or blue: the *turcois* stone, as it is commonly styled by lapidaries, is part of a bone so tinged. *Woodward.*

TURKSCAP, *s.* [*martagen*.] An herb. *Ainsworth.*

TUR-LANGTON, a township of England, in Leicestershire; 5 miles north-by-west of Market Harborough.

TURLOS, a small island of Greece, near the north-east point of the island of Engia.

TURM, *s.* [*turina* Latin.] A troop. *Not in use.*—Legions and cohorts, *turns* of horse and wings. *Milton.*

TURMERIC, *s.* [*turmerica*, Latin.] An Indian root which makes a yellow dye.

TURMERO, a village of South America, and capital of the district in the province of Tunja. It contains more than 1000 housekeepers, and 600 Indians; 14 miles south-south-west of Tunja, and 38 north-east of Santa Fe.—It is also the name of a small settlement in Venezuela.

TURMOIL, *s.* [derived by Skinner from *tremouille*, French, a mill-hopper; more probably derived from *moil*, to labour.] Trouble; disturbance; harassing uneasiness; tumultuous molestation. *Little in use.*

There I'll rest, as after much *turmoil*
A blessed soul doth in elysium. *Shakspeare.*

To **TURMOIL**, *v. a.* To harass with commotion.
Haughty Juno, who with endless broil
Did earth, and heav'n, and Jove himself *turmoil*,
At length aton'd, her friendly pow'r shall join. *Dryden.*

To weary; to keep in unquietness.—Having newly left those grammatic shallows, where they stuck unreasonably to learn a few words, on the sudden are transported to be tost and *turmoiled* with their unballasted wits in fathomless and unquiet deeps of controversy. *Milton.*

To **TURN**, *v. a.* [*turpan*, Saxon; *tourner*, French, from *torno*, Latin.] To put into a circular or vertiginous motion; to move round; to revolve.—She would have made Hercules *turn* the spit; yea, and have cleft his club to make the fire too. *Shakspeare.*—To put the upperside downwards; to shift with regard to the sides.—When the hen has laid her eggs so that she can cover them, what care does she take in *turning* them frequently, that all parts may partake of the vital warmth! *Addison.*—To change with respect to position.

Expert
When to advance, or stand, or *turn* the sway
Of battle. *Milton.*

To change the state of the balance.—You weigh equally, a feather will *turn* the scale. *Shakspeare.*—To bring the inside out.

He call'd me sot;
And told me I had *turn'd* the wrong side out. *Shakspeare.*

To change as to the posture of the body, or direction of the look.

Apollo, angry at the sight, from top of Iliion cride;
Turne head, ye well-rod peeres of Troy. *Chapman.*

To form on a lathe by moving round. [*torno*, Latin.]—The whole lathe is made strong, because the matter it *turns* being metal, is heavier than wood, and with forcible coming about, would, if the lathe were slight, make it tremble, and so spoil the work. *Moxon.*—To form; to shape.

What nervous arms he boasts, how firm his tread,
His limbs how *turn'd*, how broad his shoulders spread. *Pope.*

To change; to transform; to metamorphose; to transmute.

Of sooty coal the empiric alchemist
Can *turn*, or holds it possible to *turn*,
Metals of drossiest ore to perfect gold. *Milton.*

To make of another colour.—The choler of a hog *turned* syrup of violets green. *Floyer.*—To change; to alter.

Some dear friend dead; else nothing in the world
Could *turn* so much the constitution
Of any constant man. *Shakspeare.*

To make a reverse of fortune.
Fortune confounds the wise,
And when they least expect it, *turns* the dice. *Dryden.*

To translate.
The bard whom pilfer'd pastorals renown;
Who *turns* a Persian tale for half-a-crown,
Just writes to make his barrenness appear. *Pope.*

To change to another opinion, or party, worse or better. To convert; to pervert.—*Turn* ye not unto idols, nor make to yourselves molten gods. *Lev.*—To change with regard to inclination or temper.—*Turn* thee unto me, and have mercy upon me. *Psalm.*—To alter from one effect or purpose to another.—When a storm of sad mischance beats upon our spirits, *turn* it into advantage, to serve religion or prudence. *Bp. Taylor.*—To betake.—Sheep, and great cattle, it seems indifferent which of these two were most *turned* to. *Temple.*—To transfer.—These came to David to Hebron, to *turn* the kingdom of Saul to him. *Chronicles.*—To fall upon by some change.—The destruction of Demetrius, son to Philip II. of Macedon, *turned* upon the father, who died of repentance. *Bacon.*—To make; to nauseate.—The report, and much more the sight of a luxurious feeder, would *turn* his stomach. *Fell.*—To make giddy.

Eastern priests in giddy circles run,
And *turn* their heads to imitate the sun. *Pope.*

To infatuate; to make mad: applied to the head or brain.
My aking head can scarce support the pain,
This cursed love will surely *turn* my brain:
Feel how it shoots. *Transl. of Theocrit.*

To change direction to, or from any point.—Unless he *turns* his thoughts that way, he will no more have distinct ideas of the operations of his mind, than he will have of a clock, who will not *turn* his eyes to it. *Locke.*—To direct by a change to a certain purpose or propension.

My thoughts are *turn'd* on peace.
Already have our quarrels fill'd the world
With widows and with orphans. *Addison.*

To double in.
Thus a wise taylor is not pinching,
But *turns* at every seam an inch in. *Swift.*

To revolve; to agitate in the mind.—*Turn* these ideas about in your mind, and take a view of them on all sides. *Watts.*—To bend from a perpendicular edge; to blunt.—Quick wits are more quick to enter speedily, than able to pierce far; like sharp tools, whose edges be very soon *turned*. *Ascham.*—To drive by violence; to expel: with out, or out of.

He was now grown deform'd, and poor,
And fit to be *turn'd out of door*

Hudibras.

To apply by a change of use.

They all the sacred mysteries of Heaven
To their own vile advantages shall *turn*.

Milton.

To reverse; to repeal.—God will *turn* thy captivity, and have compassion upon thee. *Deut.*—To keep passing in a course of exchange or traffic.—A man must guard, if he intends to keep fair with the world, and *turn* the penny. *Collier.*—To adapt the mind.—However improper he might have been for studies of a higher nature, he was perfectly well *turned* for trade. *Addison.*—To put towards another.—I will send my father before thee, and make all thine enemies *turn* their backs unto thee. *Exodus.*—To retort; to throw back.—Luther's conscience, by his instigations, *turns* these very reasonings upon him. *Atterbury.*

To *TURN away*. To dismiss from service; to discard.—Yet you will be hanged for being so long absent, or be *turned away*. *Shakspeare.*

To *TURN away*. To avert.—A third part of prayer is deprecation; that is, when we pray to God to *turn away* some evil from us. *Whole Duty of Man.*

To *TURN back*. To return to the hand from which it was received.

We *turn not back* the silks upon the merchant,
When we have spoil'd them.

Shakspeare.

To *TURN off*. To dismiss contemptuously.

Having brought our treasure,
Then take we down his load, and *turn* him off,
Like to the empty ass, to shake his ears.

Shakspeare.

To *TURN off*. To give over; to resign.—The most adverse chances are like the ploughing and breaking the ground, in order to a more plentiful harvest. And yet we are not so wholly *turned off* to that reversion, as to have no supplies for the present; for besides the comfort of so certain an expectation in another life, we have promises also for this. *Decay of Christian Piety.*

To *TURN off*. To deflect; to divert.—The institution of sports was intended by all governments to *turn off* the thoughts of the people from busying themselves in matters of state. *Addison.*

To be *TURNED off*. To advance to an age beyond. *An odd ungrammatical phrase.*—Irus, though now *turned off* fifty, has not appeared in the world since five-and-twenty. *Addison.*

To *TURN over*. To transfer.—Excusing himself, and *turning over* the fault to fortune; then let it be your ill fortune too. *Sidney.*

To *TURN over*. To refer.—After he had saluted Solyman, and was about to declare the cause of his coming, he was *turned over* to the Bassa's. *Knolles.*

To *TURN over*. To examine one leaf of a book after another.—Some conceive they have no more to do than to *turn over* a concordance. *Swift.*

To *TURN over*. To throw off the ladder.

Criminals condemned to suffer
Are blinded first, and then *turn'd over*.

Butler.

To *TURN to*. To have recourse to.—He, that has once acquired a prudential habit, doth not, in his business, *turn* to these rules. *Grew.*

To *TURN, v. n.* To move round; to have a circular or vertiginous motion.

Such a light and mett'l'd dance

Saw you never;

And by lead-men for the nonce,

That *turn* round like grindlestones.

B. Jonson.

To shew regard or anger; by directing the look towards any thing.

Turn, mighty monarch, *turn*, this way;

Do not refuse to hear.

Dryden.

To move the body round.—Nature wrought so, that seeing me, she *turn'd*. *Milton.*—To move from its place.—The

anle-bone is apt to *turn* out on either side, by reason of relaxation of the tendons upon the least walking. *Wiseman.*—To change posture.—If one with ten thousand dice, should throw five thousand sises once or twice, we might say he did it by chance; but if, with almost an infinite number he should, without failing, throw the same sises, we should certainly conclude he did it by art, or that these dice could *turn* upon no other side. *Cheyne.*—To have a tendency or direction.

His cares all *turn* upon Astyanax,
Whom he has lodg'd within the citadel.

A. Philips.

To move the face to another quarter.

The night seems doubled with the fear she brings.

The morning, as mistaken, *turns* about,

And all her early fires again go out.

Dryden.

To depart from the way; to deviate.—My lords, *turn* in, into your servant's house. *Genesis.*—To alter; to be changed; to be transformed.—In some springs of water if you put wood, it will *turn* into the nature of stone. *Bacon.*—To become by a change.—Cygnets from grey *turn* white; hawks from brown *turn* more white. *Bacon.*—To change sides.—As a man in a fever *turns* often, although without any hope of ease, so men in the extremest misery fly to the first appearance of relief, though never so vain. *Swift.*—To change the mind, conduct, or determination.—He will relent, and *turn* from his displeasure. *Milton.*—To change to acid. Used of milk.—Asses milk *turneth* not so easily as cows'. *Bacon.*—To be brought eventually.—Let their vanity be flattered with things that will do them good; and let their pride set them on work on something that may *turn* to their advantage. *Locke.*—To depend on, as the chief point.—Conditions of peace certainly *turn* upon events of war. *Swift.*—To grow giddy.

I'll look no more,

Lest my brain *turn*, and the deficient sight

Topple down headlong.

Shakspeare.

To have an unexpected consequence or tendency.—If we repent seriously, submit contentedly, and serve him faithfully, afflictions shall *turn* to our advantage. *Wake.*—To return; to recoil.

His foul esteem

Sticks no dishonour on our front, but *turns*

Foul on himself.

Milton.

To be directed to, or from any point; as, the needle *turns* to the pole. To change attention or practice.—Forthwith from dance to sweet repast they *turn*. *Milton.*

To *TURN away*. To deviate from any course.—When the wicked man *turneth away* from his wickedness that he hath committed, and doeth that which is lawful and right, he shall save his soul alive. *Ezekiel.*

To *TURN off*. To divert one's course.

The peaceful banks which profound silence keep,

The little boat securely passes by,

But where with noise the waters creep,

Turn off with care, for treacherous rocks are near. *Norris.*

This word, through all the variety of its applications, commonly preserves that idea of *change* which is included in its primary meaning, all gyration, and all deflection being change of place; a few of its uses imply direction or tendency; but direction or tendency is always the cause and consequence of change of place.

TURN, s. The act of turning; gyration; meander; winding way.

Fear misled the youngest from his way;

But Nisus hit the *turns*.

Dryden.

Winding or flexuous course.—After a turbulent and noisy course among the rocks, the Tevere falls into the valley, and after many *turns* and windings glides peaceably into the Tiber. *Addison.*—A walk to and fro.

My good and gracious lord of Canterbury :

Come, you and I must walk a *turn* together.

Shakspeare.

Change;

Change; vicissitude; alteration.

This *turn* hath made amends! thou hast fulfilled
Thy words, Creator bounteous.

Milton.

Successive course.—The king, with great nobleness and bounty, which virtues had their *turns* in his nature, restored Edward Stafford. *Bacon*.—Manner of proceeding; change from the original intention or first appearance.—The Athenians were offered liberty, but the wise *turn* they thought to give the matter, was a sacrifice of the author. — *Swift*.—Chance; hap.—Every one has a fair *turn* to be as great as he pleases. *Collier*.—Occasion; incidental opportunity.—An old dog, falling from his speed, was laden at every *turn* with blows and reproaches. *L'Estrange*.—Time at which, by successive vicissitudes, any thing is to be had or done.—Myself would be glad to take some breath, and desire that some of you would take your *turn* to speak. *Bacon*.—Actions of kindness or malice.

Lend this virgin aid,

Thanks are half lost when good *turns* are delay'd. *Fairfax*.

Reigning inclination.—This is not to be accomplished but by introducing religion to be the *turn* and fashion of the age. *Swift*.—A step off the ladder at the gallows.

They, by their skill in palmistry,
Will quickly read his destiny;
And make him glad to read his lesson,
Or take a *turn* for it at the session.

Butler.

Convenience; use; purpose; exigence.

His going I could frame to serve my *turn*;
Save him from danger, do him love and honour.

Shakespeare.

The form; cast; shape; manner.—Our young men take up some cry'd up English poet, without knowing wherein his thoughts are improper to his subject, or his expression unworthy of his thoughts, or the *turn* of both is unharmonious. *Dryden*.—The manner of adjusting the words of a sentence.—The *turn* of words, in which Ovid excels all poets, are sometimes a fault or sometimes a beauty, as they are used properly or improperly. *Dryden*.—New position of things; as, something troublesome happens at every *turn*.—The court of the sheriff; of old called also the sheriff's moot. *Minsheu*.—See *TOURN*.

By *Turns*. One after another; alternately.

They feel by *turns* the bitter change
Of fierce extremes; extremes by change more fierce. *Milton*.

TURNA, a town of European Turkey, in Walachia, on the east side of the Aluta, at its junction with the Danube, opposite to Nicopoli.

TURN-AGAIN, a low, flat, and swampy island in Torres strait, about three miles in length, by half that space in breadth. Lat. 9. 34. S. long. 140. 55. E.

TURN-AGAIN RIVER, a branch of Cook's inlet, which runs eastward from Point Possession. It is about three to four leagues broad between its outer points of entrance, Point Possession and Point Campbell; but the part of it which is navigable is only about a league and a half wide, a shallow flat extending for several miles from the shore on both sides, and circumscribing the navigable channel. It terminates, according to the information obtained by Vancouver, in lat. 60. 54. N. long. 211. 30. E. in a circular manner, surrounded by high and steep barren mountains, covered with perpetual snow. The tide in this situation rose nearly 30 feet perpendicularly, so that at low water the inlet at this point must be nearly dry. Another circumstance which adds to the dangerous navigation of this inlet, is the immense number of conical rocks, detached from each other on banks of sand and small stones, which extend a league and upwards from several parts of its shores.

TURN-AGAIN, CAPE, a cape on the east coast of New Zealand, discovered by Captain Cook in 1769. Lat. 40. 34. S. long. 182. 55. W.

TURNAS, a small river of Brazil, in the province of San Vicente, which running north-north-west, unites with the river Yapó, and then enters the Paranapané.

TURNASTON, a parish of England, in Herefordshire; 12 miles west-by-south of Hereford.

TURNAU, a small town in the north of Bohemia; 14 miles north-east of Jung-Bunzlau, and 44 north-north-east of Prague. Population 2800.

TURNAMO, a small town of European Turkey, in the north of Greece, or rather of Thessaly. It is situated in the sangiacat of Tricala, between the left bank of the Peneus and Mount Olympus; 10 miles north of Larissa. It is the see of a Greek bishop, and contains 3000 inhabitants, who cultivate very large quantities of cotton in the environs.

TURNBENCH, s. A term of turners.—Small work in metal is turned in an iron lathe called a *turnbench*, which they screw in a vice, and having fitted their work upon a small iron axle, with a drill barrel, fitted upon a square shank at the end of the axis, next the left hand, they with a drill-bow, and drill-string, carry it about. *Maxon*.

TURNCOAT, s. One who forsakes his party or principles; a renegade.—Courtesy itself must turn to disdain, if you come in her presence—Then is courtesy a *turncoat*. *Shakespeare*.

TURNDITCH, a hamlet of England, in Derbyshire; 5 miles south-by-east of Wirksworth.

TURNEFF ISLANDS, a cluster of islands divided by creeks and lagoons, in the bay of Honduras. It is about 20 miles long and 10 broad, and is often taken by strangers for the mainland, to which its resemblance is great. It abounds in cocoa-nut trees, and is much frequented by fishermen. Lat. 17. 16. N. long. 88. 20. W.

TURNER, a post township of the United States, in Oxford county, Maine, on the Androscoggin. Population 1129; 18 miles east-north-east of Paris, and 155 north-north-east of Boston.

TURNER, POINT, a low narrow strip of land on the west coast of North America, forming the south-east point of the island that protects Port Mulgrave from the ocean. Lat. 59. 32. N. long. 220. 37. E.

TURNER'S PIDDLE, or *PUDDLE*, a parish of England, in Dorsetshire, situated on the river Piddle; $7\frac{1}{2}$ miles north-west of Wareham.

TURNER, s. One whose trade is to turn a lathe.

Nor box, nor limes, without their use are made,
Smooth-grain'd and proper for the *turner's* trade. *Milton*.

TURNERA [so named by Plumier, in memory of William Turner, M. D., Prebendary of York, Canon of Windsor, and Dean of Wells], in Botany, a genus of the class pentandria, order trigynia, natural order of columniferae, portulacaceae (*Juss.*)—Generic Character. Calyx: perianth one-leaved, funnel-form, deciduous; tube oblong, erect, cylindrical-angular; border erect, five-parted; segments lanceolate, length of the tube. Corolla: petals five, obcordate, acuminate, flat, from upright spreading; claws narrow, inserted into the tube of the calyx. Stamina: filaments five, awl-shaped, shorter than the corolla, inserted into the tube of the calyx. Anthers acuminate, erect. Pistil: germ conical. Styles three, filiform, length of the stamens. Stigmas capillaceous-multifid. Pericarp: capsule ovate, one-celled, three-valved. Receptacles annexed to the valves longitudinally, linear. Seeds numerous, oblong, obtuse. *Essential Character*.—Calyx five-cleft, funnel-form; exterior two-leaved. Petioles five, inserted into the calyx. Stigmas multifid. Capsule one-celled, three-valved.

1. *Turnera ulmifolia*, or elm-leaved turnera.—Flowers sessile, petiolar; leaves biglandular at the base. Stem shrubby, eight or ten feet high, sending out branches on every side the whole length.—Found in Martinico; it is a native of other parts of the West Indies. Narrow-leaved turnera, a variety of *ulmifolia*, has a smaller corolla, with pointed petals; the bractes have no glands; the leaves are more obtuse; the anthers orange not yellow.

2. *Turnera pumilea*.—Flowers sessile, petiolar; leaves landular. Root annual, branching, thready.—Native of Jamaica, in dry sandy fields.

3. *Turnera rupestris*.—Peduncles axillary, two-bristled; leaves

leaves linear, serrate. This is a shrub three feet high. Flowers small, yellow, axillary, solitary.—Native of Guiana.

4. *Turnera sidoides*.—Peduncles axillary, two-bristled; leaves obovate-wedge-shaped, serrate. Stems palmary, simple, hairy.—Native of Brazil.

5. *Turnera frutescens*.—Peduncles axillary, two-bristled; leaves lanceolate, acuminate, equally serrate. This is a shrub eight feet in height.—Native of Guiana, in clefts of rocks, on the banks of the Sinemari.

6. *Turnera rugosa*.—Peduncles axillary, leafless; flowers five-styled; leaves oblong, erose-toothed, wrinkled. This is an annual plant, with a fibrous root.—Native of Guiana on sandy coasts.

7. *Turnera cistoides*, or betony-leaved turnera.—Peduncles axillary, leafless; leaves serrate at the top. Root annual.—Native of Jamaica, Surinam, &c. in South America.

8. *Turnera racemosa*.—Racemes terminating, elongated; leaves ovate, toothed. This is an annual plant, with an upright rough-haired stem, tuberous at the base. Peduncles very long, one-flowered. Flowers yellow.

9. *Turnera Guianensis*.—Racemes terminating, few-flowered, naked; leaves linear, serrate, biglandular at the base.—Native of Guiana, in marshy meadows; annual.

Propagation and Culture.—These plants are easily propagated by sowing their seeds on a hot-bed early in the spring. When the plants are grown pretty large, they may be treated more hardily, by placing them in the dry stove; where, if they are kept in a moderate degree of heat, they will thrive and flower very well.

TURNER (William), one of the fathers of English botany as well as of the English Protestant church, was born at Morpeth in Northumberland, probably about the year 1520. He was educated at Pembroke college, Cambridge, under the patronage of Sir Thomas Wentworth, and about the year 1538 had already distinguished himself for science and learning, being justly dissatisfied with the little real information he could obtain from those about him. Turner, like many others in England at this period, now united the characters of a physician and a divine. He became an itinerant preacher, of so zealous a character, that the infamous bishop Gardiner threw him into prison; from whence he was, after a long time, released; we are not informed by what means, and became a voluntary exile from his native land. He resided on the continent with many other English refugees, principally at Cologne, and Basle, till the death of Henry VIII. During this interval, Turner travelled into Switzerland and Italy, where he contracted a friendship with many distinguished botanists and physicians, and at Ferrara received the degree of doctor of physic, which was confirmed to him at Oxford, when he returned to England on the accession of Edward VI. He was made physician to the Protector Somerset, and his ecclesiastical merits were still more amply rewarded, by a prebend of York, a canonry of Windsor, and the deanery of Wells. He died July 7, 1568, apparently at no very advanced age, leaving several children.

Turner's earliest botanical work is said to have been printed at Cologne in 1544, in 8vo., under the title of "*Historia de naturis Herbarum, scholiis et notis vallata*." But this is mentioned by Bumaldus, or rather Ovidius Montalbanus, only, in his *Bibliotheca Botanica*, Seguier's edition, p. 18., without notice of any other publication of our author; nor does it appear to be known to English collectors, any more than the following: "Names of Herbes in Greek, Latin, English, Dutch, and French," printed at London, 1548, in 12mo., by the same writer.

The chief publication of Dr. Turner is his well-known Herbal, in small folio, black letter, with wooden cuts, of which the first part was originally printed at London in 1551, and is now, on account of its rarity, much valued by collectors. The second part appeared at Cologne in 1562, accompanied by a reimpression of the first. In 1568, these first and second parts were republished at the same place, with a new title-page, a dedication to queen Elizabeth, Vol. XXIV. No. 1637.

from which many of the above particulars of the author's life are taken, and the addition of a third part of the same work. To the whole are subjoined "A booke of the natures and properties as well of the bathes in England as of other bathes in Germany and Italye, very necessarye for all sycke persones that can not be healed without the helpe of natural bathes;" and "A most excellent and perfecte homish apothecarye or homely physick booke, for all the grefes and diseases of the bodye, translated out of the Almaine speche into English, by Jhon Hollybusch." The Herbal is arranged alphabetically, and is more original and practical, than the more popular and celebrated publications of Lyte, Gerarde, or even Parkinson. The object of the author was to determine the plants of the ancients, and to record their reputed virtues. But this is accomplished with more caution and discretion than are common to most of his contemporaries. The third part, dedicated to the company of surgeons, professes more especially to treat of medical plants not known to the ancients. The wooden cuts of all the three parts of Turner's Herbal are taken from those of Fuchsius, and at first sight appear to be the very same blocks as those used in the octavo edition of the latter author, printed at Lyons in 1595. A careful inspection, however, will easily detect minute differences; and we especially observe slight damages in Turner's figures, not occurring in this later impression, which decisively prove it to have been printed from more recent cuts.

Turner ranks moreover amongst our earliest British zoologists. He published at Cologne, in 1544, an octavo of ten pages, entitled, "*Avium præcipuarum, quarum apud Plinium et Aristotelem mentio est, historia*." Gesner has prefixed to the third volume of his own ponderous *Historia Animalium*, a letter of Dr. Turner's, dated Wissenburg, Nov. 1557, in which the various kinds of fishes known in England, amounting to more than fifty, are briefly distinguished, with their Latin and English names. He wrote many other works, and on all subjects.

TU'RNERY, *s.* The art of fashioning hard bodies into a round or oval form in a lathe; the articles so turned.

TURNESS, a cape on the east coast of the island of Hoy. Lat. 58. 41. N. long. 3. 10. W.

TURNHAM GREEN, a hamlet of England, in Middlesex, on the road to Brentford; 8 miles west-by-south of St. Paul's, London.

TURNHOUT, an inland town of the Netherlands, the chief place of a district in the province of Antwerp, situated between the heaths of Ravel and Balk. It is well built, and contains a population of nearly 11,000; 24 miles east-by-north of Antwerp.

TURNING, *s.* Flexure; winding; meander.

I ran with headlong haste
Through paths and *turnings* often trod by day. *Milton.*

Deviation from the way.—Behold the divers *turnings*, and windings, by which men wander and go astray. *Harmar.*

TURNERY.—As the operation of turning is to be performed by the aid of the lathe, the structure of that machine is the first thing to be considered. In our article LATHE, we have given a general description of the commonest kind of lathe.

The essential properties of a lathe for outside work are, first, that it shall have two points which will firmly sustain the work at each end, by penetrating into the ends of the work, and, at the same time, allow it to turn freely round upon the points: there must be a rest or support to hold the tool upon, and also some means of turning the work round upon the points. A lathe to turn hollow or inside work will not admit of a point of support at each end of the piece, and therefore the work is firmly fixed to the extremity of a spindle, which is called a mandrel; when the mandrel is turned round, the work revolves with it, and the tool can be applied at the end of the work, to excavate or turn it hollow withinside, or to turn it on the outside, as required.

Lathes are made in a great variety of forms, and put in motion by different means: they are called centre lathes, 3 E where

where the work is supported at both ends; and mandrel, spindle, or chuck lathes, when the work is fixed at the projecting extremity of a spindle.

From the different methods of putting them in motion, they are called pole lathes, and hand-wheel lathes, or foot-wheel lathes. For very powerful works, lathes are turned by horses, steam-engines, or water-wheels.

The lathes used by wood-turners are generally made of wood in a simple form, and are called bed lathes: the same kind will serve for the common turning of iron or steel, but the best work in metal is always done in iron lathes, which are sometimes made with a triangular bar, and are called bar lathes; small ones, for the use of watch-makers, are called turn-benches, and turns; but there is, in fact, no proper distinction between these and the centre lathes, except in regard to size, and that they are made of iron and brass instead of wood.

The centre lathe is the most simple of all others. Two beams of wood are fixed horizontally upon legs, like a bench, and form what is called the bed. The two beams are fixed together, parallel to each other and at a small distance asunder, so as to leave a space or narrow groove between them, nearly the whole length of the bed. This groove is to receive the tenons at the lower ends of the puppets, which are short posts rising perpendicularly from the bed, and firmly fixed thereto by means of cross wedges, put through the tenons beneath the bed; for the tenons are of sufficient length to descend quite through the groove in the bed, and project beneath sufficiently to receive the cross wedges, which being driven in, draw the bases of the puppets or posts so firmly down upon the surface of the bed, that they will stand firmly erect upon it; or by withdrawing the wedges, the puppets become loose, and can be fixed in another part of the bed, in order that the distance between the two puppets may be made to correspond with the length of the piece of work to be turned. One of the puppets has a pin or pike of iron fixed into it, and the other one has at the same level the centre screw, working through a nut fastened in the puppet: both the screw and pike have sharp points made of steel, hardened and tempered, that they may not wear away. They must be exactly opposite, and in a line with each other. The piece of work, suppose for instance it is a roller of wood, is supported by its ends between the points of the pike and the screw, that it may turn round freely. The rest for the support of the tool is a rail or bar, extending from one puppet to the other; it lies in hooks, projecting from the faces of the puppets.

The work is put in motion by means of the treadle, which is worked by the turner's foot; a string or catgut is fastened to the treadle, and passing two or three turns round the work, it is fastened to the end of an elastic pole, fixed to the ceiling over the turner's head.

The workman stands before his lathe, having one of his feet on the treadle to give it motion; he places a sharp gouge or chisel on the rest, and approaches the edge of it gently to the piece of work; then pressing the treadle down by his foot, the string turns the work round, and the chisel or gouge being held firm upon the rest, and so as to touch the wood, it will cut it to a circular form. When he has brought the treadle to the ground, he releases the weight of his foot, and the elasticity of the pole draws up the treadle, turning the work back again; during which retrograde motion, he withdraws the chisel from the work, as it would not cut in this direction, though it might impede the motion of the wood, and would injure the edge of the tool. He must perform his work gradually, without leaving ridges; and when he meets with a knot in the wood, he must go on still more gently, otherwise he would be in danger both of splitting his work and breaking the edge of his tool. For turning light work, a bow, such as is used for shooting arrows, is suspended by its middle over the lathe; the string is then tied to the middle of the bow-string, in lieu of the pole, and acts in the same manner.

The centre lathe will turn any kind of work which will

admit of being supported at both ends; and it is used by mill-wrights and iron-founders, for turning mill-shafts, axles, rollers, and other iron-work. For such purposes, the lathe must be made exceedingly strong, and with nuts and screws to fasten the puppets down upon the bed, instead of wedges; the rest must be made in iron, with the requisite adjustments for placing it close to the work, at that part where it is required to be turned. To put the work in motion, the centre pin or point in one of the puppets is made to project considerably, and has a pulley fitted upon it, so that it can turn freely round upon the pin by means of an endless band or strap, which communicates the motion from a great wheel. In these large lathes for iron-work, the wheel is commonly turned by horses, or by a water-mill or steam-engine. From the pulley a pin projects in a direction parallel to the centre pin, and a piece of iron, called a driver, is screwed or clamped fast upon the end of the piece of work, so as to project from it sufficiently to be intercepted by the pin which is fastened into the pulley: by this means, the motion of the pulley is communicated to the work. The tools employed for turning iron and other metals are different from those used for wood, as we shall afterwards describe.

The spindle or mandrel lathe will turn hollow or internal work, and is equally well adapted to turn centre work as the centre lathe. In Plate turning, fig. 1, we have given a representation of one of these, which is on a very good construction: it is put in motion by the foot, so that the turner has both his hands at liberty to direct the tools. A A are upright legs, to support the bed B, which consists of two pieces or bars of cast-iron, put together, and leaving a crack between them: C D is a cast iron frame, which is fastened down upon the bed B, and supports the spindle or mandrel *a b*: E is the back puppet, which is used to support one end of a piece of work, as shewn in the figure at G, when the other end is fixed to the end of the mandrel, and turned round by it: the back puppet, E, has a cylindrical pin accurately fitted into it at the upper part, and the end of the pin is formed to a sharp conical point, proper to penetrate and support the end of the work: this point is called the back centre. A screw *e* is tapped into the puppet, so as to press on the opposite end of the pin, and force it towards the work; and there is likewise a clamp screw, E, at the top, to bind or fasten the pin into its socket. The back puppet is fastened down upon the bed, by means of a tenon entering into the groove, through the bed B, and a screw descends from the tenon quite through the bed, and projects beneath it: upon this screw a nut *g* is tapped, and by turning it, the shoulder of the puppet E is drawn down firmly upon the bed; but when the nut is loosened, the puppet can be slid along the bed to place it in any required distance from the end of the spindle, according to the length of the piece of work G. It is necessary that the point of the back centre should in all cases be precisely in the centre line of the axis of motion of the spindle *a b*; and for this purpose, the bed must be made very straight, and flat on the upper surface; the groove through it should also be perfectly straight and parallel, and the tenon at the lower end of the back puppet must be exactly fitted to the groove: the frame of the mandrel must be so fixed on the bed, that the centre line of the mandrel will be exactly parallel to the bed, and to the groove in the bed.

Mandrels are mounted in different ways, but they are always made of steel at the parts where they are supported in the collars, which collars should be also made of steel, and hardened, so as to have little friction. The neck of a mandrel must be very accurately fitted into the collar, so as to have no shake or looseness, at the same time that it can turn round quite freely.

The neck at one end projects beyond the collar, and the projecting part is formed to a screw, for the purpose of fixing the work to it. A variety of pieces, called chucks, are fitted upon this screw, and each chuck is adapted to hold a different piece of work: the chucks screw up against a shoulder on the end of the mandrel, and by the motion of turning

TURNING.

J. Pass sc.

turning round in the direction where the lathe works, the chuck screws itself fast on against the shoulder; but if the lathe is stopped, and the chuck is turned in the opposite direction, it will unscrew and come off, and a different chuck may be put on. In some lathes, the neck of the mandrel is perforated, and cut withinside, with a female screw adapted to receive a male screw on the chuck: the effect is just the same as the above described. In general, the mandrel is made with a point at one end; and the other end, which has the screw to fix the work to it, is formed with a neck, proper to run in the collar, and with a shoulder on the neck, to stop the neck from going through the collar. When the mandrel is made with a pointed end, the point must be received in the end of a screw tapped through the part D of the frame of the mandrel, just in the place of the end *a* of the mandrel. By turning the screw, the mandrel can be adjusted to run very correctly in length; and to prevent the screw from turning back when the lathe is in motion, a nut is placed on the screw, beyond the part *d*; this causes such a pressure upon the threads of the screw, that it is in no danger of it turning back, as it would otherwise do with rough work. The mandrel, by this means, runs very steadily and accurately in the bearings, and it is plain that any piece of work, which is firmly attached to the end of it by means of the screw before mentioned, may be turned by a tool held over the rest, in the same manner as if it were mounted between centres, but with the advantage that it may be turned at the end, to make hollow work when required.

The mandrel is turned round by a band of catgut passing round the pulley *h*, and also round the large foot-wheel *H*, which is made of cast-iron, and fixed on the end of the axis *I*. This axis is bent in the middle, as in the figure, to form a crank, which crank is united, by an iron link *K*, to the treadle *L*, on which the workman presses his foot. This treadle is affixed by three rails to an axis *M*, on which the treadle moves. The wheel *H* is of considerable weight in the rim, and being fixed fast on the axis *I*, turns round with it: the momentum acquired by the wheel is the power that continues to turn the work while the crank and treadle are rising, and consequently while the workman exerts no power upon them.

When the crank has passed the vertical position, and begins to descend, the workman presses his foot on the treadle, to give the wheel a sufficient impetus to continue its motion until it arrives at the same position again. The length of the iron link *K*, which connects the crank with the treadle, must be such, that when the crank is at the lowest position, the board *L* of the treadle, to which the link is hooked, should hang about two or three inches from the floor. To put the lathe in motion, the turner gives the wheel a small turn with his hands, till the crank rise to the highest, and passes a little beyond it: then by a quick tread he brings the crank down again, putting the wheel in motion with a velocity that will carry it several revolutions: he must observe to begin his next tread just when the crank passes the highest point, and then it will continue running the same way with a tolerable regular motion, if he is punctual in the periods of his treads. The foot-wheel, by means of the band, causes the mandrel to move very rapidly, so that it will perform its work very quick, and the workman must acquire a habit of standing steady before his work, that he may not give his whole body a motion when his foot rises and falls with the treadle.

The rest *N* of this lathe is fixed on the bed of the lathe by its foot, which is divided in the manner of a fork, to receive a screw-bolt: this bolt passes down through the lathe-bed, and fastens the rest at any place along the bed, by a nut *k* beneath. The groove in the foot is for the purpose of allowing the rest to be moved to and from the centre of the work, to adjust it to the diameter of the work which is turning. The height of the rest is a matter of some importance in turning, and in some work it should be fixed higher than others: therefore the piece upon which the tool is laid, is made with a shank of the form of

the letter *T*. This shank is a round pin, and is received into a socket at the foot of the rest, and can be held at any height by a clamp-screw. As the socket and shank are cylindrical, the edge of the *T* of the rest can be placed inclined to the axis of the work when turning cones, or other similar work, though the same purpose may be accomplished by the screw, which holds the foot of the rest down to the bed of the lathe, admitting the fork to stand in an oblique direction across the bed.

The wood turner employs gouges of all sizes, and chisels of different forms: the gouges are used in the first instance to rough out and form the wood, as they cut very rapidly, because they can take a very strong chip, and the angles will not stick in, as would be the case with the chisels. The latter are used to smooth the work, and to reduce it exactly to shape and size.

The lathe should be fixed in a place very well lighted; it should be immovable, and neither too high nor too low.

The piece of wood to be turned should be partly rounded, before it is put in the lathe, either with a small hatchet made for the purpose, or with a plane or rasp. Before putting it in the lathe, it is necessary to find the true centres of its two end surfaces, so that they shall be exactly opposite to each other, in order that, when the centre points of the puppets are applied to them, and the piece is put in motion, no one side may project out more from the centre line than another. To find these two centres, lay the piece of wood to be turned upon a plank, open a pair of compasses to almost half the thickness of the piece, lay one of the legs on the plank, and let the point of the other mark on one of the ends of the piece when laid flat on the plain with the plank, like a roller, from which plank the point of the compasses stands up at a given height above the plane on which the piece lies. Describe four marks or arcs on that end at equal distances from each other round the circumference of the end, by laying the piece successively on four different sides; which arcs intersecting one another, the point within the intersections will be the centre of the end. In the same manner, the centre of the other end must be found.

After finding the two centres, make a small hole at each of them, into which insert the centre points of the back centre and the mandrel, and screw up the back centre, to fix the piece so firmly as not to be shaken out, and yet loose enough to turn round without difficulty.

This is the manner of fixing the work when it is to be turned between centres; but if it is required to be hollowed out, the back puppet is removed, and the work must be fixed in a chuck at the extremity of the mandrel. For this purpose, a chuck is selected which has a hole in it nearly the size of the piece of wood, the diameter of which being taken in the callipers (fig. 8), the chuck is screwed to the mandrel: the rest is fixed in a convenient position, and the hole in the chuck turned out by a proper tool to the size measured by the callipers: the hole should be rather conical, and the wood, being rasped to the same figure, is driven in fast by a hammer. By turning the mandrel slowly round, it will be seen if the wood is fixed straight in a line with the mandrel, and if not, a blow or two of the hammer, properly directed, will rectify it.

If the piece of wood is not very long, the chuck will be sufficient to hold it firm whilst it is turned; but if it is not, then a small centre hole must be made in the extreme end, and into this the point of the back centre screw must be inserted to steady the work, until the rough part of the turning is done, and then it may be removed; but it is much more convenient to turn without the back centre, and therefore the turner fits the chuck to the wood with care, so that it will fix fast in the chuck.

The work being thus chucked, or fixed in the lathe, the rest is set, so that its edge is close to that part of the work which is required to be turned, and the top of the rest being raised considerably above the level of the centre of the work, it is there screwed fast.

The turner now puts the lathe in motion by treading with his

his foot, and takes a gouge, of a proper size, in his right-hand, and holds it by the handle a little inclined, keeping the back of the hand lowermost: he grasps the blade of the tool with his left-hand, the back of which is to be turned upwards, and he holds it as near the end as possible on the front side of the rest; then leaning the gouge on the rest, he is to present the edge of it a little higher than the horizontal diameter of the piece, so as to form a kind of tangent to its circumference: see fig. 21. This is the best position for cutting, and the tool must be held very firmly, to prevent the edge being depressed by the motion of the work, for if it does, it will take hold too deep, and tear the work. The gouge is applied first to one end of the work, and gradually advanced to the other, turning the work true all the way, and reducing it till the callipers (fig. 9.) determine it to be near the intended diameter.

The chisel is next employed to smooth the cylinder: its handle is held in the right-hand, whilst the left grasps the blade, and keeps it steady upon the rest, holding the edge a little inclined over the work, as in fig. 20; so that one side of the flat part of the blade lies on the rest, and the other side is elevated, that the plane of the blade, and consequently the line of the edge, is not horizontal, but inclined thereto, so that one corner of the edge of the chisel is elevated above the work: then the bottom of the edge of the chisel, or near the bottom, cuts away a shaving from the work, and this is the only way in which it will cut; for if the edge of the chisel is held parallel to the axis of the cylinder, it acts parallel to the length of the grain of the wood, scraping away the fibres, one by one, without cutting, and leaves a very rough surface. In the same manner, the narrow chisels, formers, and other instruments, are to be used according to the work which is to be done, taking care that the wood be cut equally, and that the instrument be not pushed suddenly forwards, or sometimes more strongly than at others; and taking care also that the instrument does not follow the work, but that it be kept firm on the rest, without yielding. The gouge and chisel are the instruments by far the most frequently used, and the most necessary in this art. Soft woods are almost entirely turned by them.

To make the end of the work exactly flat, the thin side of the chisel is laid upon the rest, so that the plane of the edge may stand exactly upright. The hand is depressed, that the lower corner of the edge may rise against the work, and cut a deep circle into it, near the end, and being steadily advanced, cut to the centre, separating a thin round chip, and leaving the end quite flat. The cutting corner of the chisel must be directed exactly perpendicular to the length of the work, in advancing it, otherwise the end will be either concave or convex, and care must be taken to keep the plane of the edge truly upright, and hold it very firm, for there is danger of the work drawing the chisel into the end of it, with a deep spiral cut, like a screw, and tearing the work out of the chuck.

A cylinder of wood being formed by the process we have just described, if it is required to turn it hollow within, the rest is fixed opposite the end of it, with the edge of the rest perpendicular to the length: then a sharp-pointed tool is used, to bore such a hollow in the end as will form the required cavity, using the inside callipers (fig. 8.) to determine the size of it. The side-tool, which is made with a cutting edge on the side, like a knife, may be used, if it is required to make the bottom of the cavity square; or a hooked tool, with the cutting edge at the end of the hook, may be employed to enlarge the inside to the proper size: the gouge (fig. 10.) is used to determine the depth to which it is to be turned.

This is the process for turning soft woods, which are generally of a fibrous texture: but hard woods, ivory, and bone, are turned with different tools. The points or cutting edges of some such tools are represented in figs. 15. and 16; they are bevelled only on one side, and the angle of the edges is obtuse. The round-pointed tool, and the sharp angular-pointed tool, are those employed for first roughing out the work, and by them a number of contiguous grooves

are cut in the wood, until its grain is broken and divided, and the irregularities reduced; then an edged tool can remove the remainder: but as the edged tools will only cut or scrape off thin shavings, they are not used when the work is to be reduced to size, but only to finish it. The manner of applying the tools to the work is shewn in fig. 18, and is nearly the same as for turning brass, or other soft metal: the upper surface of the tool is directed to the centre of the work, the intention being to scrape away shavings in hard wood, and in soft to cut chips, as at figs. 20. and 21. The graver (fig. 19.) is a very useful tool for hard wood, as well as for turning in metal.

After the work is completely turned, it is next to be polished, and this is done with shark-skin, or Dutch rushes. Ivory or horn is polished with pumice-stone or chalk, finely pounded and put upon leather, or a linen cloth a little moistened with this: the piece is rubbed as it turns round in the lathe; and to prevent any dirt from adhering to any part of it, every now and then it is rubbed gently with a small brush dipped in water. To polish metals very finely, the workmen make use of a particular kind of earth called tripoli, and afterwards of putty, or calx of tin. Iron and steel are polished with very fine powder of emery; this is mixed with oil, and put between two pieces of tin or pewter, and then the iron is rubbed with it. Tin and silver are polished with a burnisher, and that kind of red stone called blood-stone. Iron and steel may also be polished with putty, putting it dry into shamoy-skin.

All kinds of articles in wood are turned in the above manner; but many contrivances are necessary to mount different things in the lathe.

The small figures in the plate represent various chucks, which are occasionally employed, and which are adapted for turning different kinds of work.

Figs. 2. and 3. exhibit a small wood chuck, which is adapted to be screwed to the mandrel at *a*, a hole being perforated in the centre of it, at *b*, into which a small piece of wood or ivory is to be inserted, in order to turn it. To hold the work fast in this chuck, it is divided at the end *b* by two saw-kerfs, at right angles to each other, as shewn in fig. 3, so as to separate the end into four segments, which admit of expanding or closing: a hoop or ferril is fitted on the outside of the chuck, which part is made tapering, so that forcing the ferril farther on, will close the four segments together, and bind fast upon the work, which is introduced into the cavity *b*. This is a very convenient chuck for holding small pieces of ivory, and particularly for the purpose of polishing.

Fig. 4. is a brass box, to screw to the mandrel, and hold a wood chuck, such as we have before explained. Wood chucks are usually made to screw on the mandrel by means of a hole in the chuck, which is cut with a female screw within. The objection to this mode is, that the threads of the screw on the wood wear away by constant use. In fig. 4, a brass female screw, *a*, is cut off to fit the screw of the mandrel, and at the other end, *b*, is a box, also cut with a screw within, into which the wood block or chuck is screwed, as shewn by the dotted lines, so as not to come out without great force: by this means, the fitting of the chucks to the mandrel is not with a wooden screw, as in general, but with a brass one, which will not be liable to get out of the truth, but will always screw up to the same shoulder. The lathe should have at least two dozen of these wood chucks, with cavities of different sizes, and some of them hooped with iron at the outer end, to prevent them splitting. The brass box is a great security against splitting.

Figs. 5. and 6. are a table-chuck, proper for holding wheels or flat plates by the circumference, whilst the centre parts are turned: *a* is the screw to fix it to the mandrel: *b b*, a large circular plate, turned perfectly flat on the front surface. In this plate are grooves, pointing from the centre to the circumference, as shewn in fig. 6: the grooves are adapted to receive clamp-pieces, *d, d, d*, by means of which the wheel or other work is bound fast against the flat surface of the chuck. The grooves admit the clamps *d, d, d*, to

to be placed at any distance from the centre, according to the size of the work, and to place them at those parts where it will be most convenient to apply them.

The form of these clamps is shewn more particularly in fig. 7: *f* are sliders of metal, which are fitted to the grooves in the chuck; and the grooves are dove-tailed, so that these sliders can be put into the grooves at the back of the chuck, but will not draw through the grooves into the front. Screws are tapped into the sliders, and draw the clamps, *h*, against the face of the chuck, and hold fast the work, which is placed beneath their claws. The clamps, *h*, have shanks projecting from them at right angles, which pass through the grooves, and keep the clamps from turning round to one side.

Figs. 8. and 9. represent the callipers used by turners to take the measure of their work: they are made of two curved pieces of steel-plate, united together by a joint. When they are opened, as in fig. 9, the dimensions of a round piece of work may be conveniently taken between their points, as shewn by the dotted circle; but if the points are closed together, as in fig. 8, so that they pass each other, then the callipers are adapted for measuring the diameter of internal cavities, by the distances of their points from each other.

Fig. 10. is a gauge for measuring the depth of hollow work.

When a piece of metal work is to be turned between centres, a small chuck, *b*, (figs. 10. and 12.) is screwed to the mandrel: in the end of this chuck, at *b*, is a hole, which is made square withinside, and the work has a square filed at one end to fit the hole. The other end of the work is supported by the back centre, a small hole being made in the end to receive its point; or if the end of the work is sharp-pointed, the back centre pin is drawn out of its socket, and turned end for end: the end of the pin opposite to the point has a small centre hole for the reception of such pointed work. Iron and steel work may be turned very conveniently by means of a square, but not very accurately; and after the work has been taken out of the lathe, and the square cut off, if it be required to turn the work again in the lathe, it is very difficult to find the true centre.

Drivers 13. and 14. are contrivances for retaining the work firmly in its situation.

The turning of elliptical or oval work, such as picture-frames and snuff-boxes, is performed in the same lathe, and with the same tools, as the circular work; but the lathe is provided with a chuck, which causes the work to traverse in a very curious manner, by a motion given to it in a direction to and from the centre of the mandrel as it revolves; so that a tool held up against the work will cut an elliptical figure instead of a circle. The mode of action of this ingenious apparatus is described best by reference to the trammel or elliptic compasses; see fig. 22. An octagonal or square board A A, B B, has two grooves cut in its surface, which intersect each other at right angles; this board is held down upon the surface where the ellipse is to be described, with the centre lines of the cross grooves coincident with the two diameters of the intended ellipse, and of course their intersection will be its centre. The curve D D is traced beyond the circumference of the board, by means of a pen or pencil, which is fixed at F, to a radical bar or beam F G H; this bar carries two other points or pins, G and H, which are attached to sliders, inserted into the cross grooves of the board, as shewn in the figure: the sliders are fitted in truly, so that each of them will have a motion in its respective grooves: thus the slider of the pin H will move along A A; and the slider of G, along the groove B B. By turning about the beam F G H, the sliders go backwards and forwards in their cross grooves with a simultaneous motion; so that when the beam has gone one-fourth way about, one of the sliders will have moved from the circumference of the board A B, to the common centre of the cross grooves: and when the beam has gone half round, the same slider will have proceeded the whole length of the cross, and arrived at the opposite side of the circumference. The same applies

to the other slider, and when one slider is at the centre, the other will always be at the circumference.

The pins F and G H can be fixed at any part of the beam at pleasure (though this is not so represented in the drawing), for the purpose of setting the trammel to draw any particular ellipsis: thus, place the beam in the direction of the line A A, then the pin G will be in the centre of the cross grooves; now fix F at such a distance from the centre, as is equal to half the small diameter of the ellipse, and set H so far distant from G, as the difference of the two diameters; consequently, from F to H will be equal to half the longest diameter. Now in turning the beam round from the direction A A, till it comes to the direction B B, the point G will depart from the centre along B B, and H will approach it along A A, till it gets to the centre. Then will the pencil F be so much farther from the centre, as G is distant from H, and the pin has in its circuit traced one-fourth of an ellipse. The beam being turned quite round, will complete the whole curve.

This apparatus may be applied to turning by some modification. Suppose the two cross grooves made in a round board, as large again as that represented in the figure; then, if the whole apparatus be inverted, and the beam F G held fast in a vice, or otherwise, the board with the cross may be traversed round upon the fixed sliders, in the same manner as the beam could be traversed round upon the fixed board; Suppose a tracing point is held to the back of the board, exactly opposite to the place where the tracing point F is fixed to the beam, and held fast; it is evident that its point will trace the same ellipse on the back of the board, that was described on the surface which the board lay upon in the former instance: or a chissel being held fast in the same spot, will cut the board elliptical when it is turned round; and the chissel being successively applied at different points along the line of the beam, a series of concentric ellipses may be turned in the board, to make mouldings for picture-frames or other ornaments. If the distance of the two fixed pins G and H, and the chissel F, is altered, it will vary the proportion between the two diameters of the ellipsis, in the same manner as before described of the trammel.

TU'RNINGNESS, *s.* Quality of turning; tergiversation; subterfuge.—So nature formed him, to all *turningness* of sleights; that though no man had less goodness, no man could better find the places whence arguments might grow of goodness. *Sidney.*

Jonson.*—Any gate by which the way is obstructed.—The gates are shut, and the *turnpikes* locked. *Arbutnot.*

TU'RN SICK, *adj.* Vertiginous; giddy.—If a man see another turn swiftly and long; or if he look upon wheels that turn, himself waxeth *turnsick*. *Bacon.*

TU'RN SOL, *s.* [*heliotropium*, Lat.] A plant. *Miller.*—Her chaplet of heliotropium or *turnsole*. *B. Jonson.*

TU'RN SPIT, *s.* He that anciently turned a spit, instead of which jacks are now generally used. It is now used of a dog that turns the spit.

I give you joy of the report
That he's to have a place at court;
Yes, and a place he will grow rich in,
A *turnspit* in the royal kitchen. *Swift.*

TU'RN STILE, *s.* Cross bars turning on a pin in a foot-path, to admit foot passengers and to exclude large animals. Twirling *turnstiles* interrupt the way,
The thwarting passenger shall force them round. *Gay.*

TURNUL, a small town with a strong castle, in European Turkey, in Walachia, situated in the angular point formed by the junction of the Danube and the Alt, opposite to Nicopoli.

TURNWORTH, a parish of England, in Dorsetshire; 5 miles west-by-north of Blandford Forum.

TUROBIN, a small town in the south-east of Poland, on a small lake; 28 miles south-south-east of Lublin, and 21 west-north-west of Zamosc. Population 1300.

TURON BAY, a fine bay of Cochinchina, which receives the river on which is situated Faifo, the capital and principal seat of the commerce of that country. The country situated upon Turon bay is remarkably fertile and beautiful. Cape Turon, in lat. 16. 5. N. long. 108. 15. E., forms its eastern extremity, and, with Turon island, situated six miles to the north, makes an excellent harbour, in which vessels are sheltered from all winds.

TUROPOLYA, a small district of Austrian Croatia, lying along the Save, about 10 miles in length.

TURPENTINE, *s.* [*turpentina*, Ital.; *terebinthina*, Lat.] The gum exuded by the pine, the juniper, and other trees of that kind.—As the *turpentine* tree I stretched out my branches. *Ecclus.*

TURPITUDE, *s.* [*turpitude*, Fr.; *turpitude*, from *turpis*, Lat.] Essential deformity of words, thoughts, or actions; inherent vileness; badness.

How would'st thou have paid
My better service, when my *turpitude*
Thou thus dost crown with gold?

Shakspeare.

TURQUOISE, *s.* A jewel.—One shewed me a ring he had of your daughter for a monkey.—Out upon her! it was my *turquoise*, I had it when I was a bachelor. *Shakspeare.*

TURRACH, a village of the Austrian states, in Styria, circle of Judenburg, with manufactures of iron and steel wares. The best Prescian steel is made here.

TURRÆA [so named by Linnæus, in memory of *Giorgio à Turre*, author of a History of Plants, printed at Padua, 1685], in Botany, a genus of the class decandria, order monogynia, natural order of trihilatæ, meliæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, bell-shaped, five-toothed, very small, permanent. Corolla: petals five, linear, spreading, long. Nectary: tube cylindrical, length of the petals, with a ten-cleft mouth. Stamina: filaments ten, within the mouth of the nectary, very short. Anthers subovate. Pistil: germ roundish. Style filiform, length of the nectary. Stigma thickish, wrinkled. Pericarp: capsule roundish, pentacocous; with the valves opening longitudinally. Seeds two, kidney-shaped.—*Essential Character.* Calyx five-toothed. Petals five. Nectary toothed, cylindrical, bearing the anthers at the mouth between the teeth. Capsule pentacocous. Seeds two.

1. *Turræa virens*.—Leaves elliptic-lanceolate, emarginate, very smooth; calyxes and fruits silky-villose. This is an evergreen tree or shrub, with scattered, divaricating, leafy branches, and a smooth cloven bark, silky-villose on the twigs.—Native of the East Indies.

2. *Turræa pubescens*.—Leaves ovate, emarginate, pubescent beneath; calyxes villose.—Native of the isle of Hainam.

3. *Turræa maculata*.—Leaves ovate, acute, smooth; calyxes ciliate. This is a tree with deciduous leaves, alternate branches, and a cloven but smooth bark.—Native of Madagascar.

4. *Turræa sericea*.—Leaves ovate, bluntish, tomentose on both sides; calyxes, peduncles and petals villose. This also is a tree with deciduous leaves.—Found in Madagascar.

5. *Turræa lanceolata*.—Leaves lanceolate, rounded on both sides, smooth; segments of the calyx very long, lanceolate.—Found in Madagascar.

TURRAH, a town of Hindostan, province of Gujerat, district of Kakreze. It consists of 2500 houses, and is subject to the chief of Theraud. Lat. 23. 52. N. long. 71. 41. E.

TURRREL, *s.* A tool used by coopers. *Sherwood.*

TURRET, **LOCH**, a lake of Scotland, in Perthshire,

about a mile long, which discharges itself into the Erne, half a mile above Crieff, by a small river.

TURRET, *s.* [*turris*, Lat.] A small eminence raised above the rest of the building; a little tower.

Make Windsor hills in lofty numbers rise,
And lift her *turrets* nearer to the skies.

Pope.

TURRETED, *adj.* Formed like a tower; rising like a tower.—Take a *turreted* lamp of tin, in the form of a square; the height of the turret being thrice as much as the length of the lower part, whereupon the lampstandeth. *Bacon.*

TURRETINI (John Alphonso), was born at Geneva in 1671, and having, in consequence of distinguished talents and application, the tuition of able masters, access to a well-stored library, and an ample patrimony, laid the foundation of learning at home, he commenced, in his 20th year, his travels, and at Leyden studied ecclesiastical history under Spanheim. During his residence here he published, in 1692, his "Pyrrhonismus Pontificius, sive Theses Theologico-Historicæ de Variationibus Pontificiorum, circa Ecclesia Infallibilitatem," designed to counteract the influence of Bossuet's book "Les Variations des Eglises Protestantes," by shewing that the Roman Catholic church had been equally fluctuating in its opinions. At this time he visited England, and being introduced to Burnet, Tillotson, and Wake, he laboured to cancel the false notions that were entertained by some English divines concerning the Genevan church. When he returned to Geneva, he commenced the exercise of his ministry in 1694, and was much admired as a preacher. The magistrates established for him, in 1699, a professorship of ecclesiastical history, the duties of which he discharged without any salary. These lectures were introduced with an oration, "De Sacrarum Antiquitatum usu et Præstantia;" and the substance of these lectures comprised a body of ecclesiastical history, divided into more than 300 dissertations. In 1701 he was chosen rector of the academy of Geneva; and in this station, which he occupied for ten years, he delivered ten annual discourses, displaying eloquence united with erudition and excellent moral sentiments. Upon being appointed to the office of professor of theology in 1705, he delivered an inaugural speech, "De Theologo Veritatis et Pacis studioso." In his course of divinity lectures, he discussed the most important topics of divinity, without the formality of system; such as natural religion, the excellence and evidences of the christian revelation, the perfections of the Deity, the interpretation of Scripture, and similar subjects. It was very much the object of his wish to unite all Protestants; and with this view he took part with those German ministers who, in 1706, obtained a dispensation from the necessity of singing the formulary, intitled "Consensus," introduced during the violent disputes that had occurred concerning Grace and Predestination. He died in May 1737, at the age of nearly 66 years. His works in 3 vols. 4to. were published in 1737; and after his death appeared his Commentaries on the Epistles to the Romans and Thessalonians. *Moreri. Gen. Biog.*

TURRIF, a parish of Scotland, in Aberdeenshire, of an irregular figure. Population 2227.—Also a town of Scotland, in the above parish. It is situated on the banks of a rivulet, about one mile above its confluence with the Doveron, and is a free burgh of barony, entitled to hold a weekly market, and seven annual fairs; $34\frac{1}{2}$ miles north-north-west of Aberdeen, and 11 south of Banff.

TURRITIS [from *turris*, a tower], in Botany, a genus of the class tetradynamia siliquosa, natural order of siliquosæ, cruciformes or cruciferæ.—Generic Character. Calyx: perianth four-leaved; leaflets ovate-oblong, from parallel-converging, deciduous. Corolla four-petalled, cruciform. Petals ovate-oblong, obtuse, erect, entire; claws erect. Stamina: filaments six, awl-shaped, erect, length of the tube; two of them shorter. Anthers simple. Pistil: germ length of the flower, round, somewhat compressed. Style none. Stigma obtuse. Pericarp: siliqua longest of all, stiff, four-corned; angles opposite, alternate, obsolete, and somewhat compressed, two-celled, two-valved; valves scarcely equal

equal to the partition. Seeds very numerous, roundish, emarginate.—*Essential Character.* Silique very long, angular. Calyx converging, erect. Corolla erect.

1. *Turritis glabra*, or smooth tower-mustard.—Root-leaves toothed, hispid; stem-leaves quite entire, embracing. Root annual.—Native of most parts of Europe in pastures, pits and other waste places, and on banks near hedges, on a dry gravelly soil; flowering from May to July.

2. *Turritis lævigata*.—Leaves smooth; root-leaves obovate, serrate; stem-leaves lanceolate-linear, quite entire, embracing. Root biennial. Stem quite simple, a foot high.—Native of Pennsylvania.

3. *Turritis stricta*.—Leaves smooth, shining, radicate, ovate, somewhat toothed; stem-leaves lanceolate, sharply toothed, sessile. Stem quite simple, two feet high, erect.—Native of Piedmont, in moist meadows.

4. *Turritis hirsuta*, or hairy tower-mustard.—All the leaves hispid; stem rough-haired; hairs simple, spreading; silique quadrangular. Root strong, woody, perennial.—Native of many parts of Europe, on rocks, in stony places, on old walls and castles, and in dry mountainous pastures; flowering in May.

5. *Turritis patula*.—All the leaves hispid; stem-leaves embracing, toothed at the end; branches spreading. Root annual.—Native of Hungary, on open hills.

6. *Turritis pubescens*.—All the leaves hispid; stem-leaves sessile, bluntly toothed at the end; branches spreading. This also resembles *turritis hirsuta*.—Native of Algiers on the mountains.

7. *Turritis ciliata*.—Leaves smooth; stem-leaves sessile, toothed at the base, with forked ciliate hairs at the base and tip. The whole of this is smooth, the stem quite simple and erect.—Native of Switzerland.

8. *Turritis alpina*.—Root-leaves toothed, hispid; stem-leaves half embracing.—Native of Germany, Silesia, and Austria.

Propagation and Culture.—If the seeds be permitted to scatter, or if they be sown on a wall, among rock-work, or in a dry border, there is no hazard of these plants maintaining their situation.

TURSHEEZ, a considerable city of Korassan, in Persia, situated on the borders of the Great Salt Desert. The old city, called Sultanabad, is small; but to this a new one has been added, in which the governor and his principal officers reside. Both together contain about 20,000 inhabitants, among which are a 100 Hindoo families.

TURSIS, a small town in the south of the kingdom of Naples, in the Basilicata, on the river Sino. It is the see of a bishop; 50 miles east of Policastro.

TURTLE, or TURTLEDOVE, *s.* [Turtel, Saxon; *tortorella*, Fr.; *tortorella*, Ital.; *turtur*, Lat.] A species of dove.

When shepherds pipe on oaten straws,
And merry larks are ploughmen's clocks:
When turtles tread.

Shakspeare.

A *turtle* is the name also of the sea-tortoise.—Lytleton, in his *Dialogues of the Dead*, has introduced Darteneuf, in a pleasant discourse between him and Apicius, bitterly lamenting his ill fortune, in having lived before *turtle*-feasts were known in England. "Alas," says he, "how imperfect is human felicity! I lived in an age when the pleasure of eating was thought to be carried to its highest perfection in England and France. And yet a *turtle*-feast is a novelty to me!" *Dr. Warton.*

TURTLE BAY, a bay on the south coast of New Ireland, before called St. George's bay, and Praslin bay.

TURTLE CREEK, a river of the United States, in Pennsylvania, which runs into the Monongahela, in Allegany county. At the head of this creek general Braddock was killed in 1755.

TURTLE CREEK, a township of the United States, in Warren county, Ohio. Population 3442.

TURTLE INLET, a channel of the United States, between two small islands, on the coast of New Jersey. Lat. 39. 2. N. long. 74. 47. W.

TURTLE ISLAND, a small island in the Eastern seas. Lat. 6. 35. S. long. 132. 51. E.

TURTLE ISLAND, a small island in the South Pacific ocean, surrounded by a reef of coral rocks. Lat. 19. 50. S. long. 177. 57. W.

TURTLE LAKE, a small lake of Canada. Lat. 48. 34. N. long. 71. 31. W.

TURTLE POINT, a cape on the coast of West Florida, in the gulf of Mexico. Lat. 29. 54. N. long. 89. 4. W.

TURTLE POINT, a cape on the south coast of Java. Lat. 7. 42. S. long. 109. 58. E.

TURTHE RIVER, a river of the United States, in Georgia, which runs into the sea. Lat. 31. 12. N. long. 71. 40. W.

TURTON, a township of England, in Lancashire; 5 miles north-by-east of Great Bolton. Population 1732.

TURUCHAN, a considerable river of Asiatic Russia, which rises in the district of Turuchansk, and after a course of about 200 miles, falls into the Yenisei near Turuchansk.

TURUCHANSK, or MANGASEA, a town of Asiatic Russia, on the Yenisei, the smallest and most northerly of all those which bear the name of city. Originally built in 1601, for the collection of furs paid in tribute. Most of the inhabitants are Cossacs, employed to keep in subjection the savage tenants of the neighbouring regions. The ground is barren; but the water-fowl are in summer almost innumerable. The trade consists entirely in furs, which are exchanged for all sorts of merchandize of which the people stand in need. Lat. 65. 40. N. long. 88. 44. E.

TURUCURI, a river of Brazil, in the province of Para, which runs east, and enters the river Xingu.

TURVES. The old plural of *turf*.—The Greek historian sets her [Boadicea] in the field on a high heap of *turves*, in a loose-bodied gown declaiming, a spear in her hand. *Milton.*

TURVEY, a village of Ireland, in the county of Dublin; 9 miles from Dublin.

TURVEY, a parish of England, in Bedfordshire; 8 miles west-north-west of Bedford. Population 813.

TURVILLE, or TURFIELD, a parish of England, in Buckinghamshire; 6 miles north-west-by-west of Great Marlow. Population 382.

TURUMBUSA, a river of Quito, in the province of Jaen de Bracamoros, which enters the Amazons.

TURUVISA, a river of Quito, in the province of Quixos and Macas, which runs south, and enters the Santiago.

TURWESTON, a parish of England, in Buckinghamshire; 6 miles west-north-west of Buckingham.

TURWICK, a parish of England, in Sussex; 5½ miles west-by-north of Midhurst.

TURZBURG, or TERTZWARA, a fortified pass of Transylvania, in the district of Burzenland, in the frontier of Walachia.

TUSCAN, *adj.* Denoting one of the orders of architecture.—The *Tuscan* is of all the rudest pillar, and its principal character simplicity. *Wotton.*

TUSCANY, a grand duchy of Italy, in the central part of the peninsula, extending from 42. 15. to 44. 12. of north latitude. Its physical boundaries are on one side of the Appennines, on the other part of the Mediterranean called the Tuscan or Tyrrhenian sea. Its form approaches to the oblong; and it adjoins on the north Modena, on the east and south the Papal States. Elba and some smaller islands along the coast belong to Tuscany; the extent of the whole is about 8500 square miles, a surface somewhat greater than that of Wales. Its population is about 1,200,000. Chief Towns:—Florence (the capital), Leghorn, Sienna, Pisa, Arezzo, Cortona, Piombino, and Porto Ferrajo.

In Tuscany, as in most other parts of Italy, the face of the country is pleasantly diversified with hill, valley, and plain. The Appennines entering at its northern extremity, traverse it in a south-east direction, and prolong their course through the Papal territory to the southern extremity of Italy. In Tuscany their highest summits do not exceed 3000 feet: some of them, exposed to the north, are bleak and sterile; but the chief part even of the highest grounds admits of vegetation, and is covered with forests. Besides the principal chain of the

the Appennines, there are several smaller ranges extending in different directions, and declining in height as they approach the sea. Their sides, and frequently their summits, are cultivated, and covered with rich produce. Between the hills and the mountains are situated a number of pleasant vallies, each traversed by a winding rivulet. Few countries, indeed, are better supplied with water than Tuscany, more than 200 streams, great and small, descending from the Appennines, and holding a westward course to the Tuscan sea. Of these, however, the only considerable rivers are the Arno, the Ombrone, and the Chiana. This country has several lakes, but none of great extent. With mineral waters it is abundantly supplied, and the baths of Pisa and Lucca are well-known throughout Italy.

In climate Tuscany is on the whole fortunate, the sky is serene, the winter is severe only in the high lying tracks, and the country is healthy, with the exception of some marshy districts.

The soil in the greater part of the Tuscan territory is a rich alluvial mould. The chief objects of culture are wheat, maize, beans, peas, and a variety of vegetables; also clover and other artificial grasses. The fruits are vines, olives, oranges, lemons, and figs. The wine of Tuscany is in general good: in the vallies the vines are supported by trees planted at regular distances, and exhibiting a pleasant sight, particularly on the road side; on the higher grounds they are supported by sticks, as in France. Of oil, by which, as in the south of France, is meant olive oil, the annual produce is above 100,000 casks, or calculating by weight, 5000 tons. Mulberry trees are less numerous than in the north of Italy, yet the annual export of raw silk is not below 200,000 pounds. In the mountainous districts the chesnuts supply the deficiency of corn.

Pasturage in this warm climate is good only locally, viz., along the banks of rivers, and in the Maremma, in consequence of the moisture of the soil. In the latter it is computed that no less than 400,000 sheep, 30,000 horses, and a corresponding number of horned cattle, are annually reared and exported to the Val d'Arno, and other parts of Central Italy. The breed of horses is wretched; that of mules, asses, goats, and swine, is tolerably good. The breed of horned cattle is, as in Lombardy, kept up by regular importations from Switzerland. Sheep are numerous in the mountainous districts, but their wool is in general coarse. In minerals Tuscany is by no means deficient. The island of Elba maintains, by its iron mines, its ancient reputation. On the main land of Tuscany are found in particular spots mines of copper, lead, and quicksilver; in the Appennines are marble, alabaster, crystal, and rock salt.

In manufactures Tuscany is no longer conspicuous. Its principal article is silk, made into a variety of articles—ribbons, stockings, gloves, as well as light and heavy stuffs; next come linen, and on a smaller scale, woollens, with the very different articles of straw hats, perfumed essences, and liquors. As to trade, Tuscany possesses in Leghorn a port of considerable activity; the channel for the export of much produce, and for the import of a variety of goods from the Levant and the north of Europe. Pisa has fallen from its former prosperity, and Florence and Sienna trade only with the interior.

The territorial divisions of Tuscany are into the three provinces of Florence, Pisa, and Sienna. The form of the government is monarchical; the title of the sovereign, Arch-Duke of Austria and Grand Duke of Tuscany; his appellation is Imperial Highness; his power, though exercised with mildness, is restricted by no representative body, or even written authority. The seat of government is at Florence; the executive part is managed by the cabinet and a council of state. In taxation the principle is to burden property, but to be sparing of the working classes.

In religion the Tuscans, with a slight exception (Jews to the number of 16,000), are Catholics. They are exempt from several of the defects and bad habits charged on their Italian countrymen: they are less indolent, speak their language with considerable purity, and possess scientific institu-

tions, which, if no longer equal to those of the 16th and 17th centuries, rank among the provincial academies of the more northern part of Europe.

Tuscany is familiar to the readers of ancient history, under the names of Etruria and Tyrrhenia. Its territory early peopled, contained 12 towns of note, in the ages which followed the foundation of Rome. It was about the year of Rome 474, after the conquest of the Volsci, Æqui, and other small tribes, but before the more hazardous contests with Pyrrhus and the Carthaginians, that the Romans completed the subjugation of Etruria. It remained in their possession between 700 and 800 years, until overrun by the barbarians in the 5th century. Held at first as a duchy and fief of Lombardy, it was afterwards restored to independence; but towards the beginning of the 13th century, the continued divisions which agitated it, led first to a change in the form of government, and eventually to the ascendancy of the the Medicis, a family who had originally acquired a fortune by trade, but who, in the exercise of power, well knew how to appreciate literature and the arts. This family, which long ruled with the title of grand duke, became extinct in 1737, when, by arrangements between France and Austria, their place was filled by the duke of Lorraine. That prince, the husband of Maria Theresa, becoming afterwards emperor of Germany, vested the grand duchy in his second son. From him the government of Tuscany descended to the present grand duke Ferdinand, brother of Francis II., the reigning emperor of Austria. In the wars of the French revolution, the policy of Tuscany was to avoid any active participation in the contest. This did not, however, long exempt the country from political change. By the treaty of Luneville (February 1801), the grand duchy of Tuscany received the title of kingdom of Etruria, and was transferred to the hereditary prince of Parma. In the subsequent incorporations of Buonaparte, it was declared an integral part of the French empire; but on his downfall in 1814, it was restored to the Arch-duke Ferdinand, and resumed its proper designation of grand duchy.

TUSCARAWAS, a name frequently applied to the main branch of the Muskingum, above Coshocton, in the United States. The entire length of its course is 85 miles.

TUSCARAWAS, a county of the United States, in the state of Ohio. Chief town, New Philadelphia. Population 1351.

TUSCARORA, an Indian village of the United States, in Niagara county, New York. Population 300; $2\frac{1}{2}$ miles east of Lewistown.

TUSCARORA CREEK, a river of the United States, in Pennsylvania, which runs into the Juniatta; 12 miles south-east of Lewistown.

TUSCARORA VALLEY, a post village of the United States, in Mifflin county, Pennsylvania.

TUSCHAMA, a village of Irkutsk, in Asiatic Russia; 28 miles north-north-west of Ilimsk.

TUSCHAMSKA, a village of Irkutsk, in Asiatic Russia; 100 miles north-west of Ilimsk.

TUSH, *interj.* [from *tyst*, Su. Goth. be silent, hold your peace. *Serenius.*] An expression of contempt.—*Tush*, say they, how should God perceive it: is their knowledge in the Most High? *Psalms.*

TUSHEPAH, Indians of North America, east of Clerk's river. Their number is only 430.

TUSHINGHAM, a township of England, in Cheshire; 2 miles north-west-by-north of Whitchurch.

TUSK, *s.* [тук, тукар, Sax.] The long teeth of a pugnacious animal; the fang; the holding tooth.—Some creatures have over-long, or out-growing teeth, called fangs, or *tusks*; as boars and pikes. *Bacon.*

To TUSK, *v. n.* To gnash the teeth, as a boar.—Nay, now you puff, *tusk*, and draw up your chin. *B. Jonson.*

TUSKAR, a small island in St. George's channel, about 5 miles from the south-west coast of Ireland. Lat. 52. 13. N. long. 6. 10. W.

TU'SKED, or **TUSKY**, *adj.* Furnished with tusks.

In the naked woods he goes,
And seeks the *tusky* boar to rear.

Dryden.
Of

Of those beasts no one was horned and *tusked* too: the superfluous blood not sufficing to feed both. *Grew*.

TUSKEVAR, or **NAGY JENO**, a small town in the west of Hungary, on the river Torna; 4 miles west of Vasarhely.

TUSLA, a small town of the north-west of European Turkey, in Bosnia, near the river Save.

TUSMORE, a parish of England, in Oxfordshire; 6 miles north by-west of Bicester.

TUSPAN, a river of Mexico, in the intendancy of Vera Cruz, which runs into the gulf of Mexico, in lat. 21. 28. N. long. 98. W.—There is a settlement of the same name on its banks.

TUSSEY, mountains of the United States, in Pennsylvania; 10 miles north of Huntingdon.

TUSSILAGO [from *tussis*, on account of its use in curing coughs], in Botany, a genus of the class syngenesia, order polygama superflua, natural order of compositae discoideae, corymbiferae (*Juss.*)—Generic Character. Calyx: common cylindrical; scales lanceolate-linear (15 or 20), equal, as long as the disk, submembranaceous. Corolla compound, various.—Corolllets in some all hermaphrodite and tubular, or only in the disk. Females: in some none, in others ligulate. Proper of the hermaphrodite funnel-form; border five-cleft (or four-cleft,) acute, reflexed, longer than the calyx. Females none, or ligulate, very narrow, longer than the calyx, entire.—Stamina in the hermaphrodites; filaments five, capillary, very short. Anther cylindrical, tubular. Pistil in the hermaphrodites. Germ short. Style filiform, longer than the stamen. Stigma thickish.—In the females germ short. Style filiform, length of the hermaphrodite. Stigma bifid, thickish.—Pericarp none. Calyx scarcely changed. Seeds in the hermaphrodites solitary, oblong, compressed. Down capillary, stipulate. In the females, if any, like the others. Receptacle naked.—*Essential Character*. Calyx: scales equal, as long as the disk, somewhat membranaceous. Down simple. Receptacle naked.

1. *Tussilago anandria*. See **PERDICUM ANANDRIA**.—Native of Siberia, and the northern provinces of China.

2. *Tussilago dentata*.—Scape one-flowered, without any bracte; leaves lanceolate, toothed, villose.—Native of America.

3. *Tussilago albicans*.—Scape one-flowered without any bracte; flower nearly erect; leaves lanceolate-ovate, tomentose beneath, indistinctly serrate backwards. Root annual, simple.—Native of Jamaica.

4. *Tussilago pumila*.—Scape one-flowered without any bracte, erect; leaves lyrate, gashed, toothletted, tomentose. Annual.—Native of Jamaica.

5. *Tussilago nutans*.—Scape one-flowered without any bracte, flower nodding; leaves lyrate, obtuse. This is an annual stemless plant, about a foot high.—Native of Jamaica.

6. *Tussilago alpina*, or alpine colt's-foot.—Scape almost naked, one-flowered; leaves cordate-orbicular, crenate. This is a low perennial plant.—Native of the Alps, Switzerland, Austria, the South of France, Piedmont, also of Siberia.

7. *Tussilago farfara*, or common colt's-foot.—Scape one-flowered, scaly; leaves cordate, angular, toothletted. Root perennial, creeping horizontally far and wide. Flowers solitary, terminating, yellow, more conspicuous on account of their radiate form than most of the other species. The flowers come up early in the spring before the leaves, and at some distance from them: they are upright, but as soon as the bloom is past, and the seeds with their down as yet moist are inclosed within the calyx, the heads hang down; as the moisture evaporates in ripening they become lighter, are again erected, and the down expands.—Native of Europe, Siberia, and the northern provinces of China, in moist stiff clayey and marley soil.

8. *Tussilago japonica*.—Flowers alternate, radiate.—Native of Japan.

9. *Tussilago frigida*.—Thyrse fastigiate; flowers radiate. Root perennial, creeping, triangular, excavated at the base into a deep sinus, having seven or eight prominences on each side, smooth above, white-tomentose beneath. Petioles

slender, scarcely a span long. Scape a span high, round, having one or two broad membranaceous embracing wings, ending in the rudiment of a leaf.—Native of Lapland, Switzerland, Silesia, Dauphiné and Siberia.

10. *Tussilago palmata*, or palmate-leaved colts-foot.—Thyrse fastigiate; leaves palmate, toothed.—Native of Newfoundland and Labrador.

11. *Tussilago alba*, white colt's-foot or butter-bur.—Thyrse fastigiate; female florets naked, few.—Native of several parts of Europe.

12. *Tussilago hybrida*, long-stalked colt's-foot, or butter-bur.—Thyrse oblong; female florets numerous; hermaphrodite florets very few; anthers separate. Root perennial.—Native of Germany, Holland, Silesia, Switzerland, Dauphiné, Piedmont, Britain; by the sides of ditches.

13. *Tussilago paradoxa*, downy-leaved colt's-foot, or butter-bur.—Thyrse subovate; female florets naked, many; hermaphrodites in threes; anthers free; leaves triangular-cordate, toothletted.—Native of Switzerland.

14. *Tussilago petasites*, or common butter-bur.—Thyrse ovate; almost all the florets hermaphrodite, syngenesious. Root perennial, creeping very far, and increasing rapidly so as to be extirpated with difficulty; in which respect it agrees with the *hybrida*, as well as in the appearance and form of its leaves, which however are somewhat larger in this. The scape is rather shorter, and the thyrse is not so much lengthened out after flowering. The flowers are larger, and the scales of the calyx twice as long.—Native of Europe. Common in Britain, on the banks of rivers and ditches; flowering in April. From the largeness of the leaves it had its Greek name *Petasites*. In English, butter-bur, from their being used formerly to wrap up butter in.

Propagation and Culture.—These plants are easily propagated by parting their roots in autumn, and must be planted in a moist shady border, where they will thrive, and require no farther care but to keep them clean from weeds.

Colt's-foot is a bad weed on some lands, especially such as have been over-cropped and exhausted. Ploughing and harrowing alone will not destroy it; but it must be drawn out by the roots, which may be easily done at no great expence where land is well tilled. Root weeds are hardly to be destroyed effectually any other way.

TUSSLE, *s.* A struggle: as, we had a *tussle* for it. *Grose*.—*A vulgar expression*.

TUSSUCK, *s.* A tuft of grass or twigs.—The first is remarkable for the several *tussucks* or bunches of thorns, wherewith it is armed round. *Grew*.

TUT, *interj.* [This seems to be the same with *tush*. *Dr. Johnson*.—The Welsh language, however, has *tutti*, *tutti*, the word used when we make light of a thing, as *tush*, *tut*; *tut*; *tut*; a puff.] A particle noting contempt.—*Tut*, *tut*! grace me no grace, nor uncle me no uncle. *Shakespeare*.

TUTA, a settlement of New Granada, in the province of Tunja, containing 50 housekeepers and 150 Indians.

TUTANA, or **TOTANA**, a considerable town of the south-east of Spain, in the province of Murcia, on the great road by which that province communicates with Andalusia. It contains 8000 inhabitants; 18 miles east-north-east of Lorca.

TUTANAG, *s.* The Chinese name for spelter, which we erroneously apply to the metal of which canisters are made, that are brought over with the tea from China; it being a coarse pewter made with the lead carried from England and tin got in the kingdom of Quintang. *Woodward*.

TUTAPISCO, a river of Quito, in the province of Quixos and Macas, which runs south-east, and enters the Payamino, on its east bank, in lat. 0. 36. S.

TUTBURY, or **STUTESBURY**, a market town of England, in the county of Stafford, situated on the west bank of the river Dove, over which there is a stone bridge of nine arches. It is noted for its ancient castle, which was one of the most famous in England. Contains 1235 inhabitants. Market on Tuesday discontinued. Three annual fairs; 15 miles east of Stafford, and 134 north-west of London.

TU'TELAGE, or **TU'TELE**, *s.* [French; *tutela*, Lat.] Guardianship; state of being under guardian.—He accoupled the ambassage with an article in the nature of a request, that the French king might, according unto his right of seigniority or *tutelage*, dispose of the marriage of the young duchess of Britany. *Bacon*.—He was to have the *tutele* and ward of his children. *Howell*.

TU'TELAR, or **TU'TELARY**, *adj.* [*tutelaire*, Fr. *Cotgrave*; *tutela*, Lat.] Having the charge or guardianship of any person or thing; protecting; defensive; guardian.—According to the traditions of the magicians, the *tutelary* spirits will not remove at common appellations, but at the proper names of things, whereunto they are protectors. *Brown*.—Ye *tutelar* gods who guard this royal fabric. *Rowe*.

TUTEPEC, a settlement of Mexico, in the province of Oaxaca, containing 112 Indian families.

TUTICORIN, a town of the south of India, province of the Carnatic, and district of Tinnevely. At this place there is a pearl fishery, but the pearls are not so valuable as those found on the coast of Ceylon, being frequently discoloured. Lat. 8. 54. N. long. 78. 23. E.

TUTNAL, a hamlet of England, in Warwickshire; 2 miles east-south-east of Broomsgrove. Population 342.

TU'TOR, *s.* [*tutor*, Lat.; *tuteur*, Fr.] One who has the care of another's learning and morals; a teacher or instructor.

When I am as I have been,
Approach me, and thou shalt be as thou wast,
The *tutor* and the feeder of my riots;
Till then I banish thee on pain of death. *Shakspeare*.

To **TU'TOR**, *v. a.* To instruct; to teach; to document.

This boy is forest born,
And hath been *tutor'd* in the rudiments
Of many desperate studies by his uncle. *Shakspeare*.

To treat with superiority or severity.

I hardly yet have learn'd
T' insinuate, flatter, bow, and bend my knee:
Give sorrow leave a while to *tutor* me
To this submission. *Shakspeare*.

TU'TORAGE, *s.* The authority or solemnity of a tutor.—Children care not for the company of their parents or *tutors*, and men will care less for theirs, who would make them children by usurping a *tutorage*. *Gov. of the Tongue*.

TU'TORESS, or **TU'TRIX**, *s.* [*tuteresse*, *tutrice*, old French.] Directress; instructress; governess.

And what still more his stagg'ring virtue try'd,
His mother, *tut'ress* of that virtue, dy'd. *Harte*.

TU'TORSHIP, *s.* Office of a tutor.—He that should grant a *tutorship*, restraining his grant to some one certain thing or cause, should do but idly, because tutors are given for personal defence generally, and not for managing a few particular things or causes. *Hooker*.

TUTOTEPEC, a settlement of Mexico, in the intendancy of Mexico, containing 952 Indian families.

TU'TSAN, *s.* [French; *androsamum*, Lat.] Parkleaves. A plant.—The healing *tutsan* then, and plantan for a sore. *Drayton*.

TUTSEEWAS, or **FLAT HEADS**, a tribe of Indians who reside on the west side of the Rocky mountains.

TUTTINGTON, a parish of England, in Norfolk; 2½ miles east of Aylesham.

TU'TTY, *s.* [*tutia*, low Lat.; *tuthie*, Fr.] A sublimate of zinc or calamine collected in the furnace.—Near it stood a phial of rosewater and powder of *tutty*. *Tatler*.

TUTUBEN, a small river of Chili, in the province of Maule, which runs east, and falls into the river Cauquenes.

TUTUTEPEC, a settlement of Mexico, in the intendancy of Mexico, containing 124 families of Indians, mulattoes, and Spaniards.

TUXFORD, or **TUXFORD IN THE CLAY**, a market town

of England, in the county of Nottingham, situated in a clayey soil, on the great road to York, between Newark and Bawtry. Market on Monday. Population 841; 13 miles north-by-west of Newark.

TUXPAN, a settlement of Mexico, containing 100 families. There is another settlement of the same name, containing 62 Indian families.

TUXTLA, an Indian village of Mexico. There is a very powerful volcano of this name in its neighbourhood.

TUY, an ancient town of the north-west of Spain, in Galicia, and the chief place of a small district. It stands on the summit of a rising ground, at the foot of which flows the Minho. It has always been a fortified place, and one of the keys of the kingdom on the side of Portugal, standing within cannon shot of the Portuguese town of Valença.

TUY, a river of the Caraccas, in the province of Venezuela, which falls into the ocean 30 leagues east of the port of Guaira. This river takes its rise from the mountains of San Pedro, ten leagues from Caraccas. Of all the rivers in the district of the captain-generalship of Caraccas, this is indisputably that which waters the greatest quantity of commercial productions.

TUZ, *s.* [perhaps from *tuss* or *tussy*, an old word for a wreath or tuft: "A girdle of flowers, and *tussies* of all fruits, intertyed and following together." *Donne*.] A lock or tuft of hair.

With odorous oil thy head and hair are sleek;
And then thou kemp'st the *tuzzes* on thy cheek;
Of these thy barbers take a costly care. *Dryden*.

TUZANTALPA, a settlement of Mexico, containing 143 Indian families.

TUZANTLA, a settlement of Mexico, consisting of 52 families of Spaniards, mestizoes, and mulattoes, and 108 Indians.

TUZLA, a town of Caramania, in Asiatic Turkey, situated in an elevated plain in the interior, at the western extremity of a chain of salt lakes; 28 miles north of Koneh.

TUZLA, a village of Anatolia, in Asiatic Turkey; 24 miles east of Constantinople.

TWAIN, *adj.* [τρεῖς, Sax.] Two. *An old word, not now used but ludicrously.*

'Tis not the tryal of a woman's war,
The bitter clamour of two eager tongues,
Can arbitrate this cause betwixt us *twain*. *Shakspeare*.

TWAMBROOKE, a hamlet of England, in the parish of Great Budworth, Cheshire.

To **TWANG**, *v. n.* [a word formed from the sound.] To sound with a quick sharp noise.

A thousand *twanging* instruments
Will hum about mine ears. *Shakspeare*.

To **TWANG**, *v. a.* To make to sound sharply.—A swaggering accent sharply *twang'd* off, gives manhood approbation. *Shakspeare*.

TWANG, *s.* A sharp quick sound.
They by the sound and *twang* of nose,
If all be sound within, disclose. *Hudibras*.

An affected modulation of the voice.—He has such a *twang* in his discourse, and ungraceful way of speaking through his nose, that one can hardly understand him. *Arbutnot*.

TWANG, *interj.* A word marking a quick action, accompanied with a sharp sound: *Little used, and little deserving to be used.*

There's one, the best in all my quiver,
Twang! thro' his very heart and liver. *Prior*.

To **TWANGLE**, *v. n.* To make a sharp quick sound.
She did call me rascal fidler,
And *twangling* jack, with twenty such vile terms. *Shakspeare*.

To **TWANK**, *v. n.* [corrupted from *twang*.] To make to

to sound.—A freeman of London has the privilege of disturbing a whole street with *twanking* of a brass kettle. *Addison*.

TWANN, GREAT and LITTLE, two small but neat towns of the Swiss canton of Bern, on the west side of the lake of Bienna. The environs abound in wine; 5 miles west-south-west of Bienna, and 13 east-north-east of Neufchatel.

TWAS. Contracted from *it was*.—If he asks who bid thee, say *'twas I*. *Dryden*.

To TWATTLE, *v. n.* [*schwätzen*, Germ.] To prate; to gabble; to chatter.—It is not for every *twattling* gossip to undertake. *L'Estrange*.

To TWATTLE, *v. a.* To pat, to make much of, as horses, cows, dogs. *North. Grose*.

TWATTLING, *s.* Act of prating; idle chatter.—When one talks toys or trifles, and speaks shadows or gawds that yield no profit; such *twattling* cuts out the heart of good time. *Whately*.

TWAY, [*twai*, Goth.] For TWAIN.

Guyon's angry blade so fierce did play
On th' other's helmet, which as Titan shone,
That quite it clove his plumed crest in *tway*. *Spenser*.

TWA'YBLADE, *s.* [*Ophris*, Lat.] A polypetalous flower, consisting of six dissimilar leaves, of which the five upper ones are so disposed, as to represent in some measure an helmet, the under one being headed and shaped like a man. *Miller*.

To TWEAG, or To TWEAK, *v. a.* [It is written *twæg* by Skinner, but *tweak* by other writers. *Dr. Johnson*. From the Sax. *twiecan*, *twieccian*, to *twitch*, *vellere*, *carpere*.] To pinch; to squeeze betwixt the fingers.

Who calls me villain, breaks my pate across,
Tweaks me by the nose. *Shakespeare*.

TWEAGUE, or TWEAK, *s.* [*twieogan*, Sax., to *hesitate*, to *doubt*. The Swed. *tuekan*, as Lye observes, is also *hesitation*; from *tueka*, to *doubt*.] Perplexity; ludicrous distress. *A low word*.—This put the old fellow in a rare *tweague*. *Arbuthnot*.

TWEED, a large river of Scotland, which rises in the south-west corner of the county of Peebles, from a well called Tweedswell, 1500 feet above the level of the sea, near where the counties of Peebles, Dumfries, and Lanark join, and near the sources of the Clyde and Annan. It takes a course nearly north-east, being augmented by a number of small streams. It is then joined by the Lyne about three, and the Manor about two miles above Peebles, where it is joined by Eddlestone water, by the Leithan near Inverleithan, and the Quair on the opposite side; when, running nearly east, its stream is augmented by the Etterick 3 miles below Selkirk, the Gala $1\frac{1}{2}$ mile below Galashiels, the Leader at Drygrange bridge, and the Teviot at Kelso. A few miles below this town it leaves Roxburgh-shire, and forms for many miles the boundary between England and Berwickshire, until it falls into the German ocean at the town of Berwick-upon-Tweed. During this part of its course, it receives the Eden 4 miles below Kelso, the Till at Tillmouth, and the Whittader about 5 or 6 miles from its mouth. The Tweed abounds with various kinds of trout; and the salmon fishings are particularly valuable. It is a celebrated pastoral stream, giving name to many of the most beautiful Scottish melodies.

TWEEDALE, that district of Peebles and Berwickshire, in Scotland, watered by the river Tweed, and a name often used for the county of Peebles. It gives the title of marquis to the noble family of Hay.

TWEEDEN, a small river of Scotland, in Roxburghshire, which joins the Liddel a little below New Castle-town.

To TWE'EDLE, *v. a.* [Derivation unknown.] To handle lightly. *Used of awkward fiddling*.—A fidler brought in with him a body of lusty young fellows, whom he had *tweeded* into the service. *Addison*.

TWEEDMOUTH, a parish of England, in that division of Durham called Islandshire, situated at the northern part

of Northumberland, and communicating by a bridge with Berwick-upon-Tweed. Population 3917.

TWEEDSMUIR, a parish of Scotland, in Peebles-shire, about 9 miles long, and in many places of the same breadth. Population 254.

TWE'EZERS, *s.* [*etuy*, French. *Dr. Johnson*.—Formerly, nearer to the etymon, *tweeze*: as, "a surgeon's *tweeze*, or box of instruments." *Sherwood*.] Nippers, or small pincers to pluck off hairs.

There hero's wits are kept in pond'rous vases,
And beaus in snuff-boxes and *tweezer*-cases. *Pope*.

TWELFTH, *adj.* [*twelfta*, Sax.] Second after the tenth; the ordinal of twelve.—He found Elisha plowing with twelve yoke of oxen, and he with the *twelfth*. *1 Kings*.—Supposing, according to the standard, five shillings were to weigh an ounce, wanting about sixteen grains, whereof one *twelfth* were copper, and eleven *twelfths* silver, it is plain here the quantity of silver gives the value. *Locke*.

TWELFTHTIDE, *s.* The twelfth day after Christmas. Plough-munday, next after that *twelfth tide*, Bids out with the plough. *Tusser*.

TWELVE, *adj.* [M. Goth. *twalib*, or *twalif*; Sax. *twepolf*, *twelf*; à *twa*, duo, et antiq. *laib*, residuum; à *lefwa*, relinquere; (duo scil. digiti supra decem numeratos residui.) *Serenius*.] Two and ten; twice six.—Thou hast beat me out *twelve* several times. *Shakespeare*.

TWELVE APOSTLES, a number of small islands at the west extremity of the straits of Magellan, on the coast of Terra del Fuego, between Cape Pillar and Cape Deseada.

TWELVE ISLES, or TWELVE APOSTLES, islands on the south side of Lake Superior.

TWELVE MILE CREEK, a river of South Carolina, which runs into the Salada. Lat. 34. 50. N. long. 81. 16. W.

TWELVE PINS, a range of mountains of Ireland, in the county of Galway; 32 miles west-north-west of Galway.

TWELVEMONTH, *s.* [*twepolf-monð*, Sax.] A year, as consisting of twelve months.—In the space of about a *twelvemonth* I have run out of a whole thousand pound upon her. *Addison*.

TWELVEPENNY, *s.* A shilling.

TWELVEPENNY, *adj.* Sold for a shilling.—I would wish no other revenge, from this ryming judge of the *twelvepenny* gallery. *Dryden*.

TWELVESCORE, *s.* Twelve times twenty; two hundred and forty.—*Twelvescore* viragos of the Spartan race. *Dryden*.

TWEMLOW, a township of England, in Cheshire; $5\frac{1}{2}$ miles east-north-east of Middlewich.

TWENTIETH, *adj.* [*twenteozoða*, Sax.] Twice tenth; ordinal of twenty.

Why was not I the *twentieth* by descent
From a long restive race of droning kings? *Dryden*.

TWENTY, *adj.* [M. Goth. *twaimtig*; Sax. *twentiz*; à Goth., *twa*, *twenne*, et Icel., *tugr*, denarius numerus. *Serenius*.] Twice ten.—Hammond seldom did eat or drink more than once in *twenty*-four hours, and some fruit towards night. *Fell*.—A proverbial or indefinite number.—Maximilian, upon *twenty* respects, could not have been the man. *Bacon*.

TWENTY-FOUR RAJAS, a territory of Hindostan, situated between the 28th and 30th degrees of north lat., which was formerly possessed by 24 petty chiefs, all of whom are now subject to Nepaul or the British.

TWENTY-TWO RAJAHS, a district of the same nature as the above, formerly possessed by 22 petty chiefs, all now subject to Nepaul or the British.

TWENTY-FOUR PERGUNNAS, a considerable district of Bengal, adjoining the southern limit of Calcutta. It has a judicial establishment of its own, the European members of which reside in Calcutta; and is subordinate to the court of appeal and circuit of Calcutta. Fulta and Beningpore are the principal towns.

TWIBIL, *s.* [Sax. *twýbill*, bipennis, securis.] A kind of halberd: formerly, a mattock. *Pr. Parv.*—She learn'd the churlish axe and *twybill* to prepare. *Drayton.*

TWICE, *adv.* [επιτι, Sax.; *twées*, Dutch.] Two times.

Upon his crest he struck him so,
That *twice* he reeled, ready *twice* to fall.

Spenser.

Doubly.

A little sum you mourn, while most have met
With *twice* the loss, and by as vile a cheat.

Dryden.

It is often used in composition.

Life is tedious as a *twice*-told tale,

Vexing the dull ear of a drowsy man.

Shakspeare.

TWICKENHAM, a village of England, in the county of Middlesex, delightfully situate on the river Thames, between Isleworth and Teddington. It is adorned with many handsome seats and villas, the principal of which was that of Pope. During the lifetime of the bard, the house was humble and confined. The centre building only was his residence. The two wings were added by Sir William Stanhope, who purchased the house on Mr. Pope's death, and also enlarged the gardens. Towards the margin of the river stood, till very lately, the two weeping willows that were planted by the hand of Pope himself. One of them was reckoned the finest of its kind; slips of it were annually sent to different parts; and in 1789, the empress of Russia had some planted in her garden at Petersburg. Twickenham contains 3757 inhabitants; 11 miles south-west of London.

To TWIDDLE, *v. a.* [This is commonly written *tweddle*.] To touch lightly. *A low word.*—With my fingers upon the stupe, I pressed close upon it, and *twiddled* it in, first one side, then the other. *Wiseman.*

TWIFOLD, *adj.* Twofold. *Obsolete.*

Her *twyfold* teme, of which two blacke as pitch,
And two were browne, yet each to each unlich,
Did softly swim away.

Spenser.

TWIFORD, a hamlet of England, in the parish of Compton Abbas, Dorsetshire.

TWIG, *s.* [επιγ, επιγγα, Sax.; *twygg*, Dutch.] A small shoot of a branch; a switch tough and long.—The Britons had boats made of willow *twigs*, covered on the outside with hides, and so had the Venetians. *Raleigh.*

TWIGGEN, *adj.* Made of twigs; wicker.—I'll beat the knave into a *twiggen* bottle. *Shakspeare.*

TWIGGS, a county of the United States, in the south-west part of Georgia. Population 3405, including 642 slaves.

TWIGGY, *adj.* Full of twigs.—Though they grow the slowest of all the *twiggy* trees, yet do they recompense it by the larger crop. *Evelyn.*

TWIGHTMEES, a tribe of Indians, in the Ohio, near the Miami.

TWIGMORE, a hamlet of England, in Lincolnshire; 6 miles west of Glanford Bridge.

TWIGWORTH, a hamlet of England, in Gloucestershire; 2½ miles north-north-east of Gloucester.

TWILIGHT, *s.* [*twelicht*, Dutch; επειονελοητ, Sax.; from επει, επειον, dubium, and *light*. *Serenius.*] The dubious or faint light before sunrise, and after sunset; obscure light.—Suspicious amongst thoughts are like bats amongst birds, they ever fly by *twilight*. Certainly they are to be well guarded. *Bacon.*—Uncertain view.

Ambrosial night, with clouds exhal'd
From that high mount of God, whence light and shade
Spring both, the face of brightest heav'n had chang'd
To grateful *twilight*.

Milton.

TWILIGHT, *adj.* Not clearly or brightly illuminated; obscure; deeply shaded.

O'er the *twilight* groves, and dusky caves,
Long sounding aisles, and intermingled graves,
Black Melancholy sits, and round her throws
A death-like silence, and a dread repose.

Pope.

Seen or done by twilight.

On old Lycæus or Cyllene hoar,
Trip no more in *twilight* ranks.

Milton.

To TWILL, *v. a.* [In Scotland *tweel*, or *tweddle*; which Dr. Jamieson derives from Sax. *twæde*, twofold, or *επα* and *bæl*, part.] To weave; to quilt.—In the north of England a *quilt* is still called a *twill*; in other places, *twilled* cloth is no uncommon expression; which means where the woof and warp are not observed alternately to cross each other; but appear like cords closely twisted together.

TWILL, *s.* A quill; a spool; a quill to wind yarn on. *North. Ray, and Grose.*

TWIN, *s.* [επιν, Sax.; *twelingh*, Dutch.] Children born at the same birth. It is therefore seldom used in the singular; though sometimes it is used for one of twins.—In this mystery of ill opinions, here's the *twin*-brother of thy letter; but let thine inherit first, for mine never shall. *Shakspeare.*—Gemini, the sign of the zodiac.

This, when the sun retires,
First shines, and spreads black night with feeble fires,
Then parts the *twins* and crab.

Creech.

To TWIN, *v. n.* To be born at the same birth.

He that is approv'd in this offence,
Though he had *twinn'd* with me both at a birth,
Shall lose me.

Shakspeare.

To bring two at once.—Ewes yearly by *twinning* rich masters do make. *Tusser.*—To be paired; to be suited.

O how inscrutable! his equity

Twins with his power.

Sandys.

To TWIN, or **To TWINE**, *v. n.* To part; to go asunder. *Obsolete.*

Now draweth cutte, ere that ye further *twinne*:
He which that hath the shortest shal beginne.

Chaucer.

To TWIN, *v. a.* To divide into two parts; to separate. *Obsolete.*—There shall no death me fro my ladie *twinne*. *Chaucer.*

TWIN-BORN, *adj.* Born at the same birth.

Our sins lay on the king; he must bear all.
O hard condition, and *twin-born* with greatness!

Shakspeare.

TWIN, a township of the United States, in Preble county, Ohio. Population 719.

TWIN, a township of the United States, in Ross county, Ohio. Population 1050.

TWIN, NORTH, an island in James's Bay, Hudson's Bay. Lat. 53. 20. N. long. 80. 40. W.

TWIN, SOUTH, an island in James's Bay, Hudson's Bay. Lat. 53. 10. N. long. 80. 36. W.

To TWINE, *v. a.* [επιναν, Sax. duplicare; *tweynen*, *twijnen*, Dutch; *twynna*, Swed.; *tuinder*, Dan.; *twinna*, Icel.] To twist or complicate so as to unite, or form one body or substance out of two or more.—Thou shalt make an hanging of blue, and fine *twincd* linen, wrought with needlework. *Exod.*—To unite itself.

Lumps of sugar lose themselves, and *twine*

Their subtle essence with the soul of wine.

Crashaw.

To TWINE, *v. n.* To convolve itself; to wrap itself closely about.

Let wreaths of triumph now my temples *twine*,
The victor cry'd, the glorious prize is mine!

Pope.

To unite by interposition of parts.

Friends now fast sworn, who *twine* in love

Unseparable, shall, within this hour,

On a dissension of a doit, break out

To bitterest enmity.

Shakspeare.

To wind; to make flexures.

As rivers, though they bend and *twine*,

Still to the sea their course incline.

Swift.

To

To turn round.

O friends!

Some one abides within here, that commends
The place to us, and breathes a voice divine:
As she some web wrought, or her spindles *twine*,
She cherisht with her song. *Chapman.*

TWINE, *s.* A twisted thread.

A pointed sword hung threatening o'er his head,
Sustain'd but by a slender *twine* of thread. *Dryden.*

Twist; convolution.

Not all the gods beside

Longer dare abide,

Not Typhon huge ending in snaky *twine*. *Milton.*

Embrace; act of convolving itself round.

Everlasting hate

The vine to ivy bears, but with am'rous *twine*

Clasps the tall elm. *Philips.*

TWINEHAM, a parish of England, in Sussex; 5 miles south-west of Cuckfield.

TWINEING, a parish of England, in the county of Gloucester; 3 miles north of Tewkesbury. On an eminence here above the Severn is an encampment consisting of several acres of ground, and fortified all round with double entrenchments; it is supposed to have been a Roman station.

To TWINGE, *v. a.* [*zwingen*, German; *twinge*, Dan.] To torment with sudden and short pain.—The gnat charg'd into the nostrils of the lion, and there *twing'd* him till he made him tear himself, and so master'd him. *L'Estrange.*—To pinch; to tweak.

When a man is past his sense,

There's no way to reduce him thence,

But *twinging* him by th' ears and nose,

Or laying on of heavy blows. *Hudibras.*

TWINGE, *s.* Short sudden sharp pain.—The wickedness of this old villain startles me, and gives me a *twinge* for my own sin, though far short of his. *Dryden.*—A tweak; a pinch.—How can you fawn upon a master that gives you so many blows and *twinges* by the ears? *L'Estrange.*

TWINK, *s.* [See TWINKLE.] The motion of an eye; a moment. *Not in use.*

She hung about my neck, and kiss on kiss

She vied so fast, protesting oath on oath,

That in a *twink* she won me to her love. *Shakspeare.*

To TWINKLE, *v. n.* [*twincian*, Sax.] To sparkle; to flash irregularly; to shine with intermitted light; to shine faintly; to quiver.—These stars do not *twinkle* when viewed through telescopes which have large apertures: for the rays of light which pass through divers parts of the aperture, tremble each of them apart; and by means of their various, and sometimes contrary tremors, fall at one and the same time upon different points in the bottom of the eye. *Newton.*—To open and shut the eye by turns.—The owl fell a moping and *twinkling*. *L'Estrange.*—To play irregularly.

His eyes will *twinkle*, and his tongue will roll,

As though he beckon'd, and call'd back his soul. *Donne.*

TWINKLE, or TWINKLING, *s.* A sparkling intermitting light. A motion of the eye.

Suddenly, with *twinkle* of her eye,

The damsel broke his misintended dart. *Spenser.*

A short space, such as is taken up by a motion of the eye.

Money can thy wants at will supply,

Shields, steeds, and arms, and all things for thee meet,

It can pourvey in *twinkling* of an eye. *Spenser.*

TWINLING, *s.* [diminutive of *twin*.] A twin lamb; or a lamb of two brought at a birth.—*Twinlings* increase bring. *Tusser.*

TWINNED, *part. adj.* Born at the same birth.—*Twinn'd* brothers of one womb. *Shakspeare.*—Like as
VOL. XXIV, No. 1638.

twins; paired.—The *twinn'd* stones upon the number'd beach. *Shakspeare.*—United.

Since thy original lapse, true liberty

Is lost, which always with right reason dwells

Twinn'd, and from her hath no dividual being. *Milton.*

TWINNER, *s.* A breeder of twins.

Ewes yeerely by twinning rich maisters do make,

The lambe of such *twinnors* for breeders go take. *Tusser.*

TWINS, two small islands in the Eastern seas, near the island of Paraguay. Lat. 9. 18. N. long. 118. 3. E.

TWINS, two small islands in the Eastern seas, near the north coast of the island of Flores. Lat. 8. 2. S. long. 122. 33. E.

TWINSTEAD, a parish of England, in Essex; 4½ miles north-east of Halsted.

TWINTER, *s.* [*twý-winter*, Sax., duos annos natus.] A beast of two winters old. North. *Grose.*

To TWIRE, *v. n.* [perhaps the old word for *twitter*.] To flutter; to take short flights with great agitation of the wings. This is clearly the primary meaning. In the following example, the word has been mistaken by Tyrwhitt, Steevens, Mason, and others, for "to sing or murmur with a gentle sound."—If thilke birde, skipping out of her strait cage, seeth the agreeable shadowes of the wodes, she defoulth with her fete here mete ishad, and seeketh on morning only the wode, and *twireth* desiring the wode with her swete voice. *Chaucer.*—To be moved with quick vibrations; to quiver; to twinkle.—When sparkling stars *twire* not, thou gild'st the even. *Shakspeare.*—To be in a kind of flutter; to be moved to smile or laugh; to twitter.—I saw the wench that *twir'd* and twinkled at thee. *Beaum. and Fl.*—To make flexures or windings.—The sun—with fervent eye looks through the *twyring* glades. *Drayton.*

To TWIRL, *v. a.* To turn round; to move by a quick rotation.

See ruddy maids,

Some taught with dextrous hand to *twirl* the wheel. *Dodsley.*

To TWIRL, *v. n.* To revolve with a quick motion.

TWIRL, *s.* Rotation; circular motion; twist; convolution.—The *twirl* on this is different from that of the others; this being an heterostropha, the *twirls* turning from the right hand to the left. *Woodward.*

TWISEL, a township of England, in that division of Durham called Norhamshire; 4 miles north-east-by-north of Coldstream, in Scotland.

To TWIST, *v. a.* [*twēstan*, Saxon; *twisten*, Dutch.]

To form by complication; to form by convolution.

Do but despair,

And if thou want'st a cord, the smallest thread

That ever spider *twisted* from her womb,

Will strangle thee. *Shakspeare.*

To contort; to writhe.—Either double it into a pyramidal, or *twist* it into a serpentine form. *Pope.*—To wreath; to wind; to encircle by something round about.—There are pillars of smoke *twisted* about with wreaths of flame. *Burnet.*—To form; to weave.

If thou dost love fair Hero, cherish it,

And thou shalt have her: was't not to this end

That thou began'st to *twist* so fine a story? *Shakspeare.*

To unite by intertexture of parts,

All know how prodigal

Of thy great soul thou art, longing to *twist*

Bays with that ivy, which so early kist

Thy youthful temples. *Waller.*

To unite; to insinuate.—When avarice *twists* itself, not only with the practice of men, but the doctrines of the church; when ecclesiastics dispute for money, the mischief seems fatal. *Dec. of Chr. Piety.*

To TWIST, *v. n.* To be contorted; to be convolved.—

In an ileus, commonly called the *twisting* of the guts, is a

circumvolution or insertion of one part of the gut within the other. *Arbutnot.*

TWIST, *s.* Any thing made by convolution, or winding two bodies together.

Minerva nurs'd him

Within a *twist* of twining osiers laid. *Addison.*

A single string of a cord.—Winding a thin string about the work hazards its breaking, by the fretting of the several *twists* against one another. *Moxon.*—A cord; a string.

About his chin the *twist*

He ty'd, and soon the strangl'd soul dismiss'd. *Dryden.*

Contortion; writhe.—Not the least turn or *twist* in the fibres of any one animal, which does not render them more proper for that particular animal's way of life than any other cast or texture. *Addison.*—The manner of twisting.—Jack shrunk at first sight of it; he found fault with the length, the thickness, and the *twist.* *Arbutnot.*—[*twist*, Teut.]. A twig; a branch. *Obsolete.*

Nor bough, nor branch, the Saracens therefore,
Nor *twist*, nor twig, cut from that sacred spring. *Fairfax.*

TWISTER, *s.* One who twists; a ropemaker. The instrument of twisting.—He, twirling his *twister*, makes a *twist* of the twine. *Wallis.*

TWISTON, or **TWISLETON**, a township of England, in Lancashire; 4 miles east-by-north of Clitheroe.

To **TWIT**, *v. a.* [*idweitjan*, M. Goth.; eðþitan, Sax.; Smolando Goth. *twia* vel *twiita*, idem; ab antiquiss. Suio-Goth. *vita*, vitii aliquem notare. *Serenius.*] To sneer; to flout; to reproach.

When I protest true loyalty to her,
She *twits* me with my falsehood to my friend. *Shakspeare.*

To **TWITCH**, *v. a.* [*twiccan*, Saxon.] To vellicate; to pluck with a quick motion; to snatch; to pluck with a hasty motion.

With a furious leap
She sprung from bed, disturbed in her mind,
And fear'd at every step a *twitching* spright behind. *Dryden.*

TWITCH, *s.* A quick pull; a sudden vellication.
But Hudibras gave him a *twitch*,
As quick as lightning in the breech. *Hudibras.*

A contraction of the fibres.

Other confederate pairs
Contract the fibres, and the *twitch* produce,
Which gently pushes on the grateful food
To the wide stomach by its hollow road. *Blackmore.*

TWITCHGRASS, *s.* A plant.—*Twitchgrass* is a weed that keeps some land loose, hollow, and draws away the virtue of the ground. *Mortimer.*

TWITCHEN, a parish of England, in Devonshire; 5½ miles north-east-by-east of South Molton.

TWITHAM, a hamlet of England, in the parishes of Goodnestan and Wingham, Kent.

To **TWITTER**, *v. n.* [*zittern*, Germ., to tremble.] To make a sharp tremulous intermitted noise.

They *twitter* cheerful, till the vernal months
Invite them back. *Thomson.*

To be suddenly moved with any inclination; to be agitated by expectation or suspense. *A low word.*—A widow, which had a *twittering* toward a second husband, took a gossiping companion to manage the job. *L'Estrange.*—To burst into a smile or laugh; to simper.—O the young handsome wenches, how they *twitter'd!* *Beaum. and Fl.*

TWITTER, *s.* Any motion or disorder of passion; such as a violent fit of laughing, or fit of fretting.

The ancient errant knights
Won all their ladies hearts in fights,
And cut whole giants into fritters,
To put them into amorous *twitters.* *Hudibras.*
An upbraider.

TWITTINGLY, *adv.* With reproach; so as to upbraid.—Sir Thomas More's lady, being sick of daughters, prayed importunately for a boy, and nothing but a boy would serve; whereupon she had a boy, which, as Sir Thomas wittily and *twittingly* told her, would be a boy, so long as he lived! *Junius.*

TWITTLEWATTLE, *s.* [a ludicrous reduplication of *twattle.*] Tattle; gabble. *A vile word.*—Insidious *twittle-twattles*, frothy jests, and jingling witticisms, inure us to a misunderstanding of things. *L'Estrange.*

TWIVERTON, a parish of England, in Somersetshire; 2 miles west-by-south of Bath. Population 728.

TWIXT. A contraction of betwixt.—Twilight, short arbiter *'twixt* day and night. *Milton.*

TWIZEL, a hamlet of England, in Northumberland; 8 miles south-west-by-west of Morpeth. Here is Twizel castle, near the junction of the rivers Till and Tweed.

TWO, *adj.* [*twai*, Goth.; *τῦα*, Sax.] One and one.—Fifteen chambers were to lodge us, *two* and *two* together. *Bacon.*—It is used in composition.—A rational animal better described man's essence, than a *two*-legged animal, with broad nails, and without feathers. *Locke.*

TWO BROTHERS, two small islands in the Eastern seas, near the west coast of Borneo. Lat. 1. 32. S. long. 109. 13. E.—2. Two small islands in the Eastern seas; 27 miles from the east point of the island of Madura. Lat. 6. 50. S. long. 114. 43. E.—3. Two small islands in the Eastern seas, near the west coast of the island of Celebes. Lat. 4. 40. S. long. 119. 22. E.—4. Two small islands in Cook's Straits, near the north-east coast of the southern island of New Zealand. Lat. 40. 5. S. long. 184. 35. E.

TWO'EDGED, *adj.* Having an edge on either side.
Clarissa drew, with tempting grace,
A *two-edged* weapon from her shining case. *Pope.*

TWO'FOLD, *adj.* Double; two of the same kind; or two different things coexisting.—Time and place taken for distinguishable portions of space and duration, have each of them a *twofold* acceptance. *Locke.*

TWO'FOLD, *adv.* Doubly.—A proselyte you make *twofold* more the child of hell than yourselves. *St. Matt.*

TWO-FOLD BAY, a bay on the east coast of New Holland. Lat. 37. 5. S.

TWO'HANDED, *adj.* That employs both hands.
With huge *two-handed* sway,
Brandish'd aloft the horrid edge came down,
Wide wasting. *Milton.*

Large; bulky.
If little, then she's life and soul all o'er;
An Amazon, the large *twohanded* whore. *Dryden.*

TWO-HEADED ISLAND, a small island near the south coast of Ireland, and county of Kerry; 1 mile west of Lamb's Head.

TWO-HEADED POINT, a cape on the south-west coast of the island of Kodiak, in the North Pacific ocean, composing a small island which terminates to the north-east by a low flat rocky point. South-westward from Two-Headed Island the coast is low, and appears to be compact; but immediately to the northward of it the shores descend abruptly into the sea, appear to be much broken, and form an extensive sound, of which the flat rocky point may be considered as its south-west point of entrance. Lat. 56. 54. N. long. 207. 5. E.

TWO HILLS, a small island among the New Hebrides; in the South Pacific ocean. Lat. 17. 15. S. long. 160. 38. E.

TWO KEYS, two small islands in the bay of Honduras. Lat. 17. 30. N. long. 87. 52. W.

TWO LICK CREEK, a river of the United States, in Indiana county, Pennsylvania, which runs south into the Conemaugh.

TWO SISTERS, two small islands in the Eastern seas, covered with wood, and surrounded by a reef of coral rocks. Lat. 5. S. long. 106. 12. E.—Also two small islands in the Spanish

Spanish Main, near the Mosquito shore. Lat. 11. 17. N. long. 82. 55. W.

TWO SPOTS, small islands in the bay of Honduras, surrounded with rocks. Lat. 16. 40. N. long. 88. 20. W.

TWO THOUSAND MILE CREEK, a small river which falls into the Missouri, 2000 miles, as its name imports, from the confluence of the Missouri with the Mississippi. It is a bold stream, with a bed about 30 yards wide.

TWO/PENCE, *s.* A small coin valued at twice a penny:—You all shew like gilt *twopences* to me. *Shakspeare.*

TWO/TONGUED, *adj.* Double-tongued; deceitful.—I hate the *two-tongu'd* hypocrite. *Sandys.*

TWUNT, a seaport in the eastern part of Algiers, defended by a fort; 30 miles north-west of Tlemsan.

TWY, a river of Wales, in Cardiganshire, which runs into the Irish channel, near the town of Cardigan.

TWYCROSS, a parish of England, in Leicestershire; 4½ miles west-by-north of Market Bosworth.

TWYFORD, a hamlet of England, in Wiltshire; 5 miles east-north-east of Reading.—2. A hamlet in Buckinghamshire; 5 miles south-west-by-south of Buckingham.—3. A hamlet in Derbyshire; 5½ miles south-south-west of Derby.—4. A hamlet in Leicestershire; 6 miles south-by-west of Melton Mowbray.—5. A hamlet in the parish of North Wytham, Lincolnshire.—6. A parish in Norfolk; 5½ miles west-north-west of Reepham.—7. A parish in Southamptonshire; 3 miles south of Winchester. Population 880.

TWYFORD, EAST, a hamlet of England, in the parish of Willesden, Middlesex.

TWYFORD, WEST, a parish of England, in Middlesex, consisting of only one farm-house; 10 miles west-north-west of St. Paul's, London.

TWYNEHOLME, a parish of Scotland, in the Stewartry of Kircudbright. It is oblong in its form; 9 miles in length by 2 in breadth. Population 740.

TWYWELL, a parish of England, in Northamptonshire; 3½ miles west of Thrapston.

TYAHTATOOA BAY, a bay on the coast of Owhyhee, one of the Sandwich Island. Lat. 19. 37. N. long. 203. 54. E.

TYBEE, an island near the coast of Georgia, at the mouth of the Savannah. A light-house 80 feet high, stands on this island. Lat. 32. N. long. 81. 10. W.

TYE, a river of the United States, in Virginia, which runs into James' river. Lat. 37. 30. N. long. 79. 8. W.

To TYE, *v. a.* To bind.—See TIE.

TYE, *s.* [See TIE.] A knot; a bond or obligation.

Lay your

Command upon me; to the which my duties
Are with a most indissoluble *tye*
For ever knit.

Shakspeare.

TYEMOCHTEE, a river of the United States, in Ohio, which runs into the Sandusky; 12 miles below Upper Sandusky.

TYER, *s.* One who unites; one who joins.—Hymen, the *tyer* of hearts already ty'd. *P. Fletcher.*

TYFERY, a small flat island in the Eastern seas; 45 miles west of Gilolo. Lat. 1. 6. N. long. 126. 28. E.

TYGART'S VALLEY RIVER, a river of the United States, in Virginia, which flows through Randolph county, and unites with Buchanan river.

TYGER, *s.* See FELIS.

TYGER, a river of the United States, in South Carolina, which runs south-east, and unites with Broad river; 5 miles above the Ennoree.

TYGER'S CREEK, a river of the United States, in Kentucky, which runs into the Ohio. Lat. 38. 22. N. long. 83. W.

TYGER'S CREEK, a river of the United States, in Louisiana, which runs into the Missouri; 276 miles west of the Mississippi.

TYGER ISLAND, a small island in the Pacific ocean, at the entrance of the bay of Amapalla. Lat. 13. 10. N.

TYGERS' ISLANDS, a cluster of small islands and

shoals in the Eastern seas; 30 miles east from the island of Saleyer.

TYGERS' ISLAND, a small island in the Chinese sea, near the coast of Chiampa. Lat. 40. 47. N. long. 107. 45. E.

TYGERS' ISLAND, a small island in the Chinese sea, near the coast of Cochinchina. Lat. 16. 51. N. long. 106. 13. E.

TYHE/E. [See TEHBE.] In some old dictionaries it is *tyhee* or *tihee*.

TYKE, *s.* *Tyke* in Scottish still denotes a dog, or one as contemptible and vile as a dog, and from thence perhaps comes *teague*.—See TICE.—Base *tyke*, call'st thou me host? now, by this hand, I swear I scorn the term. *Shakspeare.*

TYKOCZIN, a small town of Poland, on the river Narew; 100 miles north-east of Warsaw, and 17 west of Balystock. It is defended by a fortified castle, and has 2800 inhabitants.

TYLDESLEY, a township of England, in Lancashire; 6½ miles from Newton. Population 3492.

TYLER, a county of the United States, in the north-west part of Virginia, formed in 1814, from a part of Ohio county.

TYLERS, GREAT and LITTLE, two small islands in the gulf of Finland; the first in lat. 59. 50. N. long. 27. 12. E.; the second in lat. 59. 48. N. long. 26. 54. E.

TYLN, a hamlet of England, in Nottinghamshire; 2 miles north of East Redford.

TY'MBAL, *s.* [*tymbal*, French.] A kind of kettle-drum. Yet gracious charity! indulgent guest!

Were not thy power exerted in my breast;
My speeches would send up unheeded pray'r:
The scorn of life would be but wild despair:
A *tymbal's* sound were better than my voice,
My faith were form, my eloquence were noise: *Prior.*

TYMBARK, a market town of Austrian Poland; 27 miles south-south-east of Moscow.

TY'MPAN, *s.* [*tympalum*, Lat.] A drum; a timbrel. *Cotgrave, and Ainsworth.*—A frame belonging to the printing-press, covered with parchment, on which the sheets are laid to be printed. *Cotgrave, and Chambers.*—The pannel of a pillar or door.

TYMPANITES, *s.* [*τυμπανιτης*, Gr.] That particular sort of dropsy that swells the belly up like a drum, and is often cured by tapping.—See PATHOLOGY.

Tympanites, which we call the drum,

A wind.

B. Jonson.

To TY'MPANIZE, *v. n.* To act the part of a drummer. *Coles.*

To TY'MPANIZE, *v. a.* To stretch as the skin over the body of a drum.—If this be not to be sawn asunder as Esay, stoned as Jeremy, made a drum or *tympanized*, as other saints of God were. *Oley.*

TYMPANUM, *s.* [Latin.] A drum; a part of the ear, so called from its resemblance to a drum.—The three little bones in meatu auditorio, by firming the *tympanum*, are a great help to the hearing. *Wiseman.*

TY'MPANY, *s.* [from *tympanum*, Lat.] A kind of obstructed flatulence that swells the body like a drum; the wind dropsy.—The air is so rarified in this kind of dropsical tumour, as makes it hard and tight like a drum, and from thence it is called a *tympany*. *Arbuthnot.*

TYNAN, a small neat village of Ireland, in the county of Armagh, pleasantly situated on an eminence, near a river of the same name; 65 miles north-north-west of Dublin.

TYNE, a considerable river of England, the chief river in the county of Northumberland. It consists of two branches, the North and South Tyne. The former commences on the borders of Scotland, and in its course receives the Reed below Bellingham. The South Tyne rises behind Crossfell, and is joined by the Nent, the Tippal, and the Allen. The two branches unite near Nether Warden, above Hexham,

Hexham, and form a large river, which flowing to Newcastle, enters the German ocean by the estuary of Tynemouth. At Newcastle the Tyne is a fine, deep, and noble stream; its banks are steep, and the ground rises on each side to a considerable height. The fisheries of the Tyne were long celebrated for the excellence of their salmon, but are now nearly destroyed; a circumstance which is ascribed to the locks at Bywell, which prevent the salmon passing up to the shallow streams in the breeding season. The spring tides rise about 18 feet at the mouth of the Tyne, and about 11½ feet at Newcastle. The river is navigable at Newcastle for vessels of 300 or 400 tons burden; and larger vessels deliver their cargoes at Shields, a few miles lower down. The conservatorship of the Tyne appears to have been invested in the corporation of Newcastle since the time of Edward II., though repeated commissions have since been granted to strengthen that power. Their jurisdiction extends to high-water mark on both sides of the river, from the sea to Hedwyn streams, above Newburn, which distance is annually surveyed on Ascension-day by the mayor and river jury, in their barges.

TYNE, a river of Scotland, in Haddingtonshire, which rises in the county of Mid-Lothian, and after a north-east course of nearly 30 miles, passing the town of Haddington, falls into the sea 2 miles north of Dunbar.

TYNEHAM, WEST, a parish of England, in Dorsetshire; 6½ miles west-by-south of Corfe Castle.

TYNEHEAD, NORTH, a township of England, in the parish of Simonburn, Northumberland.

TYNEMOUTH, a village of England, in the county of Northumberland, situated at the mouth of the river Tyne, about a mile below North Shields. It is chiefly noted for its ancient castle and priory, situated on a high rock, and inaccessible from the sea. This castle was a place of great strength in early times, and belonged to the Earls of Northumberland. Tynemouth, from its exposed situation, is extremely bleak and uncomfortable in the winter season, but is much resorted to for sea-bathing during the summer. Good lodgings may be procured, and commodious baths have been erected within these few years. To a contemplative mind, or to a man of taste, nothing can be more enchanting than a walk among the extensive and venerable ruins of the castle and monastery; and at a few miles distant along the shore towards the south, are the Marsden rocks, often visited by parties of pleasure from hence and the neighbouring villages. Across the mouth of the river is a bar, which is not above seven feet deep at low water; and near it are some dangerous rocks. For the guidance of ships by night, light-houses have been set up, and are maintained by the Trinity-house at Newcastle. Tynemouth township contains 9454 inhabitants; 9 miles east of Newcastle, and 286 north of London. Lat. 55. 2. N. long. 1. 25. W.

TYNGSBOROUGH, a post township of the United States, in Middlesex county, Massachusetts, on the west side of the Merrimack, and north-west side of Chelmsford. Here is a grammar school; 28 miles north-west of Boston. Population 704.

TYNIEC, a small town of Austrian Poland, on the Vistula; 7 miles west-south-west of Cracow.

TYNNINGHAME, a parish of Scotland, in East Lothian, united in 1761 to that of Whitekirk. Population 957.

TYNRON, a parish of Scotland, in Dumfriesshire, lying in the north-west part of the county. Population 574.

TYNY, *adj.* Small.—See TINY.

He that has a little *tyny* wit,
Must make content with his fortunes fit. *Shakspeare.*

TYONISTA, a river of the United States, in Pennsylvania, which runs into the Allegany. Lat. 41. 29. N. long. 73. 30. W.

TYPE, *s.* [*typus*, Lat.; *τυπος*, Gr.] Emblem; mark of something.

Clean renouncing
The faith they have in tennis, and tall stockings,
Short bolster'd breeches, and those *types* of travel,
And understanding against the honest men. *Shakspeare.*

That by which something future is prefigured.—The Apostle shews the Christian religion to be in truth and substance what the Jewish was only in *type* and shadow. *Tilotsön.*—A stamp; a mark. *Not in use.*

Thy father bears the *type* of King of Naples,
Yet not so wealthy as an English yeoman. *Shakspeare.*

A printing letter.—This is the style and language of the first printers, as every body knows, who has been at all conversant with old books. Faust and Scheffer, the inventors, set the example in their first works from Mentz; by advertising the public at the end of each, that they were not drawn or written by a pen (as all books had been before), but made by a new art and invention of printing or stamping them by characters or *types* of metal set in forms. *Middleton.*

To TYPE, *v. a.* To prefigure.—He ratified ceremonial and positive laws, in respect of their spiritual use and signification, and by fulfilling all things *typed* and prefigured by them. *White.*

TYPHA [of Pliny. *Τύφη* of Theophrastus and Dioscorides. From *Τίφος*, palus, a marsh], in Botany, a genus of the class monocœcia, order triandria, natural order of calamariæ, typhæ (*Juss.*)—Generic Character. Males numerous in an ament terminating the culm. Calyx: ament common cylindrical, very close, composed of three-leaved, setaceous, proper perianths. Corolla none. Stamina: filaments three, capillary, length of the calyx. Anthers oblong, pendulous.—Females numerous in an ament surrounding the same culm, digested very compactly.—Calyx none. Corolla none. Pistil: germ placed on a bristle, ovate. Style awl-shaped. Stigma capillary, permanent. Pericarp none. Fruits numerous, forming a cylinder. Seeds single, ovate, retaining the style, placed on a bristle. Down capillary, from the base to the middle fastened to the seed-bearing bristle, length of the pistil.—*Essential Character.* Male—Ament cylindrical. Calyx indistinct, three-leaved. Corolla none. Female—Ament cylindrical, below the males. Calyx: a villose hair. Corolla none. Seed one, placed on a capillary down.

1. *Typha latifolia*, great cat's tail, or reed mace.—Leaves somewhat sword-shaped, male and female spike approximating. Root perennial, creeping, the thickness of the human thumb, jointed, spongy, furnished with small fibres of a whitish colour; the young shoots white, tender, terminating in a sharp hard point, like quichgrass. Stalk from three to six feet high, simple, upright, leafy, round and smooth, without knots, leafy at the base. Leaves alternate, upright, twisted, at bottom sword-shaped and fleshy, at top flat, and of a bluish colour, about an inch in breadth, and two or three feet in length, inclosing the stalk in a very long sheath. Sheaths two, deciduous, one at the bottom of the male spike, the other at the middle. The female ament is contiguous to the male; the germ very minute, sitting on a short foot-stalk; the style thickened above, and the stigma black.—This plant is a native of the four continents, is common in Britain, and has been found in Jamaica, and in New Zealand: in ponds, ditches, and by the sides of rivers and brooks. It flowers with us in July.

2. *Typha angustifolia*, or narrow-leaved cat's tail.—Leaves semicylindrical-flatish; equalling the culm; male and female spike remote. The smaller cat's-tail differs from the preceding in having much narrower leaves, not exceeding one-third the breadth of the other, semicylindrical below, flat and strap-shaped towards the end, more slender spikes, though the plant grows as tall and as firm as the great cat's tail, and the male and female spikes about an inch asunder.—Native of Europe, Barbary and Siberia. There is a variety of this; culm a foot and a half high, three times as slender as in *typha angustifolia*. Leaves flat, broadish, scarcely the length of half the culm.

Propagation and Culture.—These plants increase so much by their creeping roots, that they soon choak up a small piece of water, and overpower most other aquatics: they are best therefore cultivated for curiosity in a moist border of the garden, where they will flourish and produce spikes even more abundantly than in the water.

TYPHUS FEVER. See **PATHOLOGY.**

TYPIC, or **TY'PICAL**, *adj.* [*typique*, Fr.; *typicus*, Lat.] Emblematical; figurative of something else.—The Levitical priesthood was only *typical* of the Christian; which is so much more holy and honourable than that, as the institution of Christ is more excellent than that of Moses. *Atterbury.*

TYPICALLY, *adv.* In a typical manner.—This excellent communicativeness of the divine nature is *typically* represented and mysteriously exemplified by the Porphyrian scale of being. *Norris.*

TYPICALNESS, *s.* The state of being typical.

To TYPIFY, *v. a.* To figure; to shew in emblem.—The resurrection of Christ hath the power of a pattern to us, and is so *typified* in baptism, as an engagement to rise to newness of life. *Hammond.*

TY'POCOSMY, *s.* [*τυπος* and *κοσμος*, Gr.] A representation of the world.—[He] should haply find it to be a *typocosmy*. *Camden.*

TYPO'GRAPHER, *s.* [*τυπος* and *γραφω*, Gr.] A printer.—There is a very ancient edition of this work without date, place or *typographer*. *Warton.*

TYPOGRA'PHICAL or **TYPOGRA'PHIC**, *adj.* Emblematical; figurative; belonging to the printer's art.—It was printed in the infancy of the *typographic* art. *Warton.*

TYPOGRA'PHICALLY, *adv.* Emblematically; figuratively; after the manner of printers.

TYPO'GRAPHY, *s.* [*typographia*, Lat.] Emblematical, figurative, or hieroglyphical representation.—Those diminutive and pamphlet treatises daily published amongst us, are pieces containing rather *typography* than verity. *Brown.*—The art of printing.—The overplus of the money collected for the maintenance and repair of the schools is to be employed in setting up and maintaining a learned *typography*. *Blackstone.*

TY'RAN, *s.* [*tyrannus*, Lat.] A tyrant. *Not now in use.*—He is the *tyran*-pike, our hearts the fry. *Donne.*

TY'RANNESS, *s.* A she tyrant.

They were, by law of that proud *tyranness*,
Provok'd with wrath and envy's false surmise. *Spenser.*

TYRAN'NICAL, or **TYRAN'NIC**, *adj.* [*tyrannus*, Lat.; *τυραννικος*, Gr.] Suiting a tyrant; acting like a tyrant; cruel; despotic; imperious.

You have contriv'd to take
From Rome all season'd office, and to wind
Yourself into a power *tyrannical*. *Shakspeare.*

TYRAN'NICALLY, *adv.* In manner of a tyrant.—Tarquin—having governed *tyrannically*, and taken from the senate all authority, was become odious to the senate, nobility, and people. *Raleigh.*

TYRAN'NICIDE, *s.* [*tyrannus* and *cædo*, Lat.] The act of killing a tyrant.—It was in the most patient period of Roman servitude, that themes of *tyrannicide* made the ordinary exercise of boys at school. *Burke.*—One who kills a tyrant.—A band of *tyrannicides*. *Moore.*

TY'RANNING, *part. adj.* Acting the part of a tyrant.
Love, that with thy cruel darts
Dost conquer greatest conquerors on ground,—
What glorie or what guerdon hast thou found
In feeble ladies *tyranning* so sore? *Spenser.*

To TY'RANNIZE, *v. n.* [*tyrannizer*, Fr.] To play the tyrant; to act with rigour and imperiousness.

I made thee miserable,
What time I threw the people's suffrages
On him; that thus doth *tyrannize* o'er me. *Shakspeare.*

To TY'RANNIZE, *v. a.* To subject or compel by tyranny.—Boisterous edicts *tyrannizing* the blessed ordinance of marriage into the quality of a most unnatural and unchristianly yoke. *Milton.*

TYRANNOUS, *adj.* Tyrannical; despotic; arbitrary; severe; cruel; imperious. *Not in use.*

Betwixt two charming words, comes in my father,
Vol. XXIV. No. 1638.

And, like the *tyrannous* breathing of the north,
Shakes all our buds from blowing. *Shakspeare.*

TY'RANNOUSLY, *adv.* Arbitrarily; despotically; severely; cruelly.—By force of that commission, he in many places most *tyrannously* expelled them. *Bale.*

TY'RANNY, *s.* [*tyrannis*, Latin; *τυραννις*, Greek.] Absolute monarchy imperiously administered.

Our grand foe,
Who now triumphs, and, in the excess of joy,
Sole reigning holds the *tyranny* of heav'n. *Milton.*

Unresisted and cruel power.
Boundless intemperance
In nature is a *tyranny*; it hath been
Th' untimely emptying of the happy throne,
And fall of many kings. *Shakspeare.*

Cruel government; rigorous command.
Bleed, bleed, poor country!
Great *tyranny* lay thou thy basis sure,
For goodness dares not check thee. *Shakspeare.*

Severity; rigour; inclemency.
The *tyranny* o' the open night's too rough
For nature to endure. *Shakspeare.*

TY'RANT, *s.* [*τυραννος*, Gr.; *tyrannus*, Lat. Rowland contends that this word, with the correspondent Greek and Latin, is derived from *tir*, Welsh and Erse, *land*, and *rhanner*, Welsh, *to share*, *q. d. tirhanner*, a sharer or divider of land among his vassals. *Dr. Johnson.*—But see *Lyc's Sax. Dict. edit. Manning*, *Tir*, *Tyr*. “*Cimbr. item Tir, Ttir, Tyr*, nomen Odini vel principis saltem Asarum, *i. e. divorum septentrionalium, Odini filiorum. Mars, Mercurius. Item, metonymicè, quivis dux princeps, dominus, imperator: et inde forsan Græcorum τυραννος.*” An absolute monarch governing imperiously. A cruel despotic and severe master; an oppressor.

I would not be the villain that thou think'st,
For the whole space that's in the *tyrant's* grasp,
And the rich east to boot. *Shakspeare.*

TYRAWLEY'S POINT, the south-west extremity of Trevanion's island, in the South Pacific ocean. Lat. 10. 48. S. long. 163. 41. E.

TYRE, *s.* [properly *tire*.] See **TIRE**.—I have seen her beset and bedecked all over with emeralds and pearls, ranged in rows about the *tyre* of her head. *Hakewill.*

To TYRE, *v. n.* To prey upon. See **To TIRE**.

TYRE, or **SOUR**, a seaport of Syria, which derives now its only importance from its occupying the site of the most celebrated commercial city of antiquity. Ancient writers, both sacred and profane, are filled with the most magnificent descriptions of that ancient “Queen of the Sea.” Tyre was first built on the continent; but being taken, and in a great measure destroyed, by the kings of Assyria, a new city was founded on an island at a little distance from the land. New Tyre soon eclipsed the splendour of its progenitor. Its situation, fortified by all the aids of art, enabled it to make its celebrated defence against Alexander. That great conqueror found here a more obstinate resistance than at any other point, and at length succeeded only by throwing an immense mole across to the island, and thereby rendering it a peninsula, which form it has ever since retained: The houses are all built from ruins; yet there are no edifices which bear marks of very high antiquity. Without the walls are ruins of a very large church, built of hewn stone, in the Syrian style; also very perfect remains of several buildings to the north, which probably belong to the archiepiscopal palace. There are remains of several other churches. Lat. 33. 10. N. long. 35. 20. E.

TYREBEGGAR, a ridge of hills in Scotland, in Aberdeenshire, in the parish of Dyce.

TYRIE, a parish of Scotland, in Aberdeenshire; about 10 miles long, and 4½ broad. Population 1454.

TYRINGHAM, a parish of England, in Buckinghamshire; 2 miles north-north-west of Newport Pagnell.

TYRINGHAM, a township of the United States, in Berkshire county, Massachusetts; 14 miles south-south-east of Lenox, and 116 west of Boston. Population 1689.

TYRINTHUS, an ancient town of Greece, in the Morca, built before the period of authentic history. The walls of its citadel being composed, like those of Mycenæ, of solid blocks of stone, are nearly perfect, and exhibit the best specimen of the military architecture of the heroic ages, being generally 25 feet thick.

TYRLEY, a township of England, in Staffordshire; 9½ miles west-by-north of Eccleshall.

TYRNAU, a small town of the Austrian States, in Moravia; 23 miles west-north-west of Olmutz.

TYRNAU, or **NAGY-SZOMBATH**, a town in the west of Hungary, on the river Tyrna. It stands in a fertile but rather unhealthy district: it has been the seat of the chapter of Gran since 1543, and contains so many churches and monasteries, that it has got the name of Little Rome. Population 5100; 25 miles north-north-east of Presburgh, and 66 west-north-west of Gran. Lat. 48. 23. 30. N. long. 17. 35. 2. E.

TY'RO, *s.* [properly *tiro*, as in the Latin.] One yet not master of his art; one in his rudiments.

There stands a structure on a rising hill,
Where *tyros* take their freedom out to kill.

Garth.

TYROL, a large province of the Austrian empire, bounded by Bavaria, Salzburg, Carinthia, Austrian Italy, and Switzerland, and lying between lat. 45. 46. and 47. 46. N. and long. 10. 2. and 12. 20. E. Its form approaches to the circular, but its boundary line is marked by frequent projections and indentations. Its area, about 11,000 square miles, is greater than that of Wales by nearly a third; its population, about 720,000, is about a third less in number, and more thinly scattered, than that of our principality. It is divided into seven districts or circles, viz., The Lower Innthal, the Upper Innthal, the Pusterthal, the Voralberg, the Adige, Italian Confines of Trent, Italian Confines of Roveredo.—Chief Towns, Schwatz, Imbst, Brunecken, Bregenz, Botzen. The capital of the whole is Inspruk.—Of all the countries of Europe, Tyrol is the most exclusively mountainous. A chain of primitive formation, containing mountains of the greatest height, the Orteles of 14,000 feet, the Glokner of 12,000, and the less elevated, but still lofty mass of Mount Brenner, traverses it in all its extent, entering it from Switzerland on the west, and terminating in the east, at the Kahlenberg, near Vienna. On each side of this is a secondary chain, one of which separates Tyrol from Bavaria, the other from Italy. These mountains, with their ramifications, divide Tyrol into more than 20 vallies, the most remarkable of which are the three which contain the largest rivers, the Inn, the Eysach, and the Adige. On the whole, this country resembles Switzerland.

No country contains a more romantic road than that over Mount Brenner, along the Adige. It is indeed sometimes attended with danger, from the rapid increase of the mountain streams, or from the falls of rocks, or snow after thaws; but accidents are rare, and the inconvenience of the way is compensated by the beauty of the scenery, and the simple and honest character of the inhabitants. The climate of Tyrol, in consequence of the height of the mountains, is cold, not only in winter, but in spring; in summer the vallies are hot, particularly when open to the south. The most temperate and pleasant season is autumn. In minerals, Tyrol is doubtless rich, every species of ore having been found there; but in a country so bare of population and capital, much time must elapse ere its mineral treasures are sufficiently explored. The only mines that have as yet been worked with advantage, are those of salt, iron, copper, and calamine. Mineral springs are abundant, there being no less than 60 in different parts of the country. As to vegetable products, the extent of rugged and lofty ground leaves but little space for the labour of the agriculturists; and though the Tyrolese raise corn and vegetables in spots of very difficult access, the quantity produced is inadequate to their wants. These are supplied by the import of corn in exchange for the wine and

silk raised in the southern vallies, and of the cattle exported from the smaller vales of the north, in which pasturage forms the chief employment. The further products of Tyrol are flax, hemp, and tobacco. Among the wild animals is the chamois, the Alpine goat, and the marmotte. Though Tyrol contains hardly any collective establishments, it abounds with insulated examples of manufacturing industry. During winter the women spin flax, knit caps and stockings, or weave baskets and straw hats. The men are employed in various ways, in making wooden utensils or toys, and in some places in the singular occupation of training canary, birds for sale. The streams from the mountains are made to turn a number of wheels, which drive the machinery necessary for their ingenious labours. They associate less in towns, or even in villages, than is common in less mountainous countries.

In a country which so much resembles Savoy, Auvergne, Wales, and the Highlands of Scotland, it is natural to anticipate a similar emigration in the summer season, in quest of work. Suabia and Bavaria are the chief outlets of the Tyrolese. The young men go there to sell their petty wares, or to act as shepherds during summer for very moderate wages; others go to a much greater distance in Germany or Italy; and the ardour of speculation sometimes leads them as far as America or the East Indies.

The inhabitants of Roveredo and the southern confines of Tyrol partake of the character of their Italian neighbours, being possessed of more polish, but at the same time less sincerity, than their countrymen in the interior. It is after passing Trent, and penetrating into the heart of the Alpine territory, that the traveller finds himself among a people religiously attached to their ancient usages, and to their hereditary masters, the emperors of Austria. The Tyrolese are characterised by the domestic affections, the unostentatious manners, the frugal mode of living, of the inhabitants of mountains or sequestered vallies. The dress of the peasantry is peculiar: its principal embellishment consists in a straw-hat ornamented with ribbons and nosegays: that of the women, far from elegant, and even ridiculous in the eye of a foreigner, is composed of a gown both thick and short, of stockings with cross stripes, and of a cap tapering in the shape of a sugar-loaf. In a country so difficult of access, and where the inhabitants have so little intercourse, there necessarily prevails a considerable diversity of language. The music of the Tyrolese has the simple and frequently plaintive character of that of the Scottish Highlanders; but in superstition the Tyrolese take decidedly the lead of our mountaineers.

Tyrol bears in official papers only the title of county; but it is the largest county in Europe. It has a representative body composed of four orders, the clergy, the nobility, the deputies of the towns, and the deputies of the peasants. No new tax can be imposed without the consent of this body; and when it is granted, the sovereign is bound to make an explicit acknowledgment that the states might have refused it had they chose. In addition to the states, there exists a permanent deputation and tribunal, in which the peasantry are represented. The only imposts are a land-tax payable indiscriminately by all classes, and a charge on the higher classes, consisting of a per centage on pensions, tithes, and rents. Though fond of the chase, and excellent marksmen, they are averse to compulsory service in the field. In the defence of their country, however, they display the greatest alacrity. Their aversion to the field arises from their repugnance to the restraints of discipline. Tyrol formed, in the earliest ages in which we can trace its history, a part of the ancient *Rhætia*, a country which from its difficulty of access, and the independent spirit of its inhabitants, so long offered resistance to the Romans. The Rhætians were divided into a variety of tribes. In the disorders that followed the downfall of the Roman empire, Tyrol became divided into a number of petty lordships, which all acknowledged the supremacy of the ancient princes and dukes of Bavaria. On the fall of the house of Guelf in the 12th century, the Tyrolese became immediate subjects of the empire, and the petty lordships.

lordships were some time after absorbed under two heads, the dukes of Meran and the counts of Tyrol. These families being united by marriage, the whole country was governed after 1288 by a single sovereign; and the last of the race, Margaret Maultasche, preserved the succession to the dukes of Austria, who were her nearest relations. In their hands Tyrol has since remained, receiving from time to time additions to its territory. From its geographical position and natural strength, Tyrol has seldom been exposed to the evils of war. In the contests of the French revolution, it was first invaded by Buonaparte, who showed the practicability of traversing its rugged defiles. The treaty of Presburg (January 1806) conveyed Tyrol to Bavaria.

The Austrian government had left the Tyrolese in possession of their privileges, and allowed them to levy taxes in their own manner. The Bavarian government, desirous to remove impressions of independence, suppressed the states or representative body, took into its management the public funds, and secularised a great deal of church property. They farther exposed the public buildings to sale, and abolishing the name of Tyrol, divided the country into the three circles of the Inn, the Eysach, and the Adige. The discontent soon became general, and on the breaking out of the contest between France and Austria in 1809, the flame of insurrection spread throughout the whole province: the French and Bavarians, taken by surprise, had no alternative but to allow themselves to be sent out of the country. Unfortunately, the fresh disasters of Austria left the Tyrolese without support: their territory was again invaded; and after a gallant resistance, was occupied by the French and Bavarians. In their possession it remained until 1815, when the wishes of the inhabitants were at last gratified by the restoration of their country to Austria, and their reinstatement in all their ancient privileges.

TYRONE, a county of Ireland, in the province of Ulster, bounded on the north-east by Londonderry, on the east by Lough Neagh, on the south-east by Armagh, on the south by Monaghan, on the south-west by Fermanagh, and on the west by Donegal. It contains 35 parishes, is about 43 Irish miles in its greatest length from north-west to north-east, and from 18 to 33 in breadth. Although a great portion of this county is rough and mountainous, still in many parts the soil is rich and fertile, and equally calculated for tillage or for pasture. The lakes within the limits of the county are inconsiderable, of which those about Baron's Court appear the most interesting and extensive. The rivers which water this district are large and conveniently distributed. The Blackwater winds its course along the verge of this county, forming its boundary with a part of Monaghan, and the entire of Armagh. The principal river runs nearly through the centre of the county, and is known by the appellations of the Cammon, the Mourne, and the Foyle. In its progress it receives the waters of the Carnown river, and another considerable mountain stream; as also of the Mounterlouny and Driinna rivers on the north; and on the south it is supplied by the Fentona, by the Owenreagh, by the Longfield, by the Derg, and Fin rivers; besides numerous streamlets, which drip from the mountains. The other rivers are the Farran and the Cookestown, which run towards Lough Neagh. The linen manufacture is in a most flourishing condition through the whole extent of the district.

—2. A township of the United States, in Cumberland county, Pennsylvania. Population 2604.—3. A township of the United States, in Huntingdon county, Pennsylvania. Population 753.—4. A township of the United States, in Fayette county, Pennsylvania, on the north-west side of the Yanghiogeny. Population 989; 15 miles north of Union.

TYRREL, a county of the United States, on the east side of North Carolina. Population 3364. Chief town Elizabethtown.

TYRRIL'S PASS, a neat small village of Ireland, in the county of Westmeath. Here are the ruins of an ancient castle; 40 miles west-north-west of Dublin.

TYRTEUS, a Greek poet, is supposed to have been a native of Miletus, and to have resided at Athens, as a poet,

musician, and school-master. Somewhat deformed in body, he possessed a manly and elevated soul. In a contest between the Lacedæmonians and Messenians, the former, having experienced some ill success, are said to have consulted the oracle of Delphi, B. C. 623, and to have been directed to seek a general at Athens. The Athenians, as some say in derision, sent Tyrtaeus, who, by the recital of poems in praise of valour and patriotism, animated the Spartans, so that they became victorious, and reduced the Messenians to subjection. He is said to have also given them useful advice as a military leader, in consequence of which the Spartans conferred upon him the right of citizenship, and honoured him whilst he resided among them. His war-poems have been celebrated by the ancients: some fragments are extant, which are published with the other minor Greek poets. *Moreri. Anc. Un. Hist. Gen. Biog.*

TYRWHITT (Thomas), a profound scholar and acute critic, was born in 1730, sent to Eton school in 1741, and entered at Queen's college, Oxford, in 1747. In 1755 he was elected fellow of Merton college, and in 1756 acted as under secretary of war. In 1762 he became clerk to the house of commons, which post he retained till the year 1763. At this time he retired to pursue those studies which were adapted to his genius and taste, and to the acquirements he had already made in the knowledge of ancient and modern languages, and of the old as well as modern writers of his own country. He commenced his publications with compositions in poetry; such were "An Epistle to Florio," and Latin versions of the "Messiah" and "Splendid Shilling," with an English one of "Pindar's eighth Isthmian Ode." In 1766 appeared his "Observations and Conjectures on some passages of Shakspeare," which enabled him to communicate ingenious remarks to Mr. Steevens and Mr. Reed, for their editions of the works of this great dramatist. His "Proceedings and Debates in the House of Commons in 1620 and 1621, from an original MS. in Queen's college, Oxford," appeared in the same year; and in 1768 he published a corrected and enlarged edition of "Elsynge's Manner of holding Parliaments in England." His first publication in critical literature was "Fragmenta duo Plutarchi," 1773, from one of the Harleian MSS. This was followed by a very valuable edition of Chaucer's "Canterbury Tales," in 4 vols. 8vo. 1773, which, besides corrections of the original text, contains an introduction and admirable essay on the author's language and versification. In 1776, he further displayed his Latin erudition and critical acumen, by a Latin dissertation on Babrius, one of the writers of the Esopæan fables. In 1777 he gave a complete edition of the poems attributed to Rowley, with a preface and glossary. In a subsequent edition, which appeared in 1778, he expresses his full conviction, with the grounds of his opinion, that they were written solely by Chatterton, and he afterwards satisfied all unprejudiced judges with regard to this subject of literary controversy. (See **CHATTERTON**.) We shall merely enumerate his remaining works, which were, an edition of a Greek poem, *Περί Δθων* (on Stones,) ascribed to Orpheus, together with a supplement to his dissertation on Babrius, 1781; "Conjecturæ in Strabouem," 1783; and a newly discovered "Oration of Isæus against Menocles," 1785. Mr. Tyrwhitt was a member of the Royal and Antiquarian Societies, and a curator of the British Museum. He died, much lamented, in 1786, in his 56th year; having established a character that was truly estimable. He bequeathed to the British Museum all those of his books which were not before in that repository. *Nichols's Lit. Anecd. Gen. Biog.*

TYSMENICA, a small town of Austrian Galicia, on the borders of Russia. It has about 3000 inhabitants.

TYSMIEN, a small town of Austrian Poland, in the circle of Stanislawow.

TYSOE, a parish of England, in Warwickshire; 5 miles south-by-east of Kineton. Population 944.

TYSSEN (Peter), was born at Antwerp in 1625, and practised painting in portraiture and history with very great success. In the latter, however, he acquired the most substantial;

stantial portion of his fame; and after the death of Reubens, he was made director of the Academy at Antwerp in 1661. His compositions are rich and ingenious, and are conducted in a style more correct and grand than that of most of his countrymen, and his colour is clear and harmonious. Amongst the best of his works are his "Martyrdom of St. Benedict," in the church of the Capuchins at Brussels; the "Crucifixion," at the Carmelites; and the "Assumption of the Virgin," at the church of St. James at Antwerp. He died in 1692, aged 67, leaving two sons, painters.

TYTHE, *s.* A tenth part. See TITHÉ.

TYTHEBY, a township of England, in Cheshire; $1\frac{1}{2}$ mile north of Macclesfield.

TYTHING, *s.* A company of ten; a district; a tenth part. See TITHING.

TYTHERINGTON, a hamlet of England, in Gloucestershire; $3\frac{1}{2}$ miles south-east of Thornbury.

TYTHERLEY, EAST and WEST, adjoining parishes of England, in Southamptonshire; 7 miles south-west of Stockbridge.

TYWARDREITH, a parish of England, in Cornwall; $3\frac{1}{2}$ miles west-north-west of Fowey. Population 741.

TZAGAMUSKOI, a village of Irkoutsk, in Asiatic Russia, on the borders of China; 48 miles south-south-west of Selenginsk.

TZEKINSKOI, a fortress of Irkoutsk, in Asiatic Russia, on the borders of China; 100 miles west-south-west of Selenginsk.

TZICHU, a settlement of Mexico, in the intendency of Valladolid, containing above 500 Indian families.

TZIKIRSKOI, a fortress of Irkoutsk, in Asiatic Russia; 120 miles west-south-west of Selenginsk.

TZINTZONTZAN, the old capital of the kingdom of Mechoacan, in Mexico, containing 2500 inhabitants.

TZIRAGUATO, a settlement of Mexico, in the intendency of Valladolid; containing 115 Indian families.

TZIVILSK, a small town of the east of European Russia, in the government of Kasan; 64 miles west of Kasan.

TZSCHOPPAU, or ZSCHOPPAU, a small town of Saxony, on the river Tzschoppau; 33 miles west-south-west of Dresden, and 7 south-east of Chemnitz. It contains above 4000 inhabitants.

TZSCHOPPAU, a river of Germany, in Saxony, which rises among the Fichtelberg mountains, joins the Flohe, and falls into the Treyberg Mulda, at Dobeln.

TZULIMM, or TCHULIMM, a river of Asiatic Russia, which runs through the province of Kolivan, and falls into the Yenisei. The track through which it runs is poor and desolate.

TZUMMARUM, a village of the Netherlands, in Friesland. Population 800.

TZURUCHATU, a small town of Asiatic Russia, in the province of Nertschinsk, near the borders of China; 160 miles south-east of Nertschinsk.

V A B

V HAS two powers, expressed in modern English by two characters, *V* consonant and *U* vowel, which ought to be considered as two letters; but as they were long confounded while the two uses were annexed to one form, the old custom still continues to be followed.

V, the vowel, has two sounds; one clear, expressed at other times by *eu*, as *obtuse*; the other close, and approaching to the Italian *u*, or English *oo*, as *obtund*.

V, the consonant, has a sound nearly approaching to those of *b* and *f*. With *b* it is by the Spaniards and Gascons always confounded, and in the Runic alphabet is expressed by the same character with *f*; distinguished only by a diacritical point. Its sound in English is uniform. It is never mute.

V. A numeral letter, denoting five.

VA, a river of New Granada, in the province of San Juan de los Llanos, which running east, after many windings, enters the Guaviare.

VAAGEN, EAST, a small island in the North sea, 20 miles from the coast of Norway, in lat. 68. 26. N.—West Vaagen is 30 miles from the same coast, in lat. 68. 12. N.

VAAGSOE, a small island near the coast of Norway, in lat. 61. 57. N.

VAARSOE, a small island of Denmark, on the east of Jutland, at the entrance of the gulf of Horsens. Lat. 55. 3. N. long. 10. 1. E.

VAAS, a small town in the north-west of France, department of the Sarthe; 20 miles east of La Fleche.

VAASEN, a large village of the Netherlands, in the province of Gelderland; 15 miles north-west of Zutphen.

VAASKAY, one of the smaller Hebrides, in the sound of Harris.

VAAST, ST., a small town in the north-west of France; it has a small harbour, with salt works and fisheries along the coast; 13 miles east-south-east of Cherbourg.

VAAST, a small inland town of the Netherlands, in the province of Hainault.

VABRES, a small town in the south of France, department of the Aveyron, on the river Dourdon; 2 miles south-west of St. Afrique.

V.

U.

V A C

VABRES DE SENEGALS, a small town in the south-west of France, department of the Tarn; 14 miles north-east of Castres.

VACA, a cape in the north of Spain, on the coast of Asturias. Lat. 43. 36. N. long. 5. 47. W.

VACA, an island of the Atlantic ocean, one of the Tortugas or Florida Keys, to the east of Bahia Honda. On the south side of Cayo Vaca, about eight miles from the west end, there are wells of fresh water. A thick range of isles go by this name. Bahia Honda is in lat. 24. 35. N.

VACAN, one of the small Philippine islands, near the north coast of Samar. Lat. 12. 47. N. long. 121. 15. E.

VACANCY, *s.* Empty space; vacuity.

How is't

That thus you bend your eye on *vacancy*,
And with th'incorporal air do hold discourse? *Shakspeare*.

Chasm; space unfilled.—The reader finds a wide *vacancy*, and knows not how to transport his thoughts to the next particular, for want of some connecting idea. *Watts*.—[*vacance*, Fr.] State of a post or employment when it is unsupplied.—In the *vacancy* of a bishop, the guardian of the spiritualities was summoned to parliament in the bishop's room. *Ayliffe*.—[*vacances*, Fr.] Time of leisure; relaxation; intermission; time unengaged.

If, sometimes, each other's eyes we meet,
Those little *vacancies* from toil are sweet.

Dryden.

Listlessness; emptiness of thought.—When alone, or in company, they sit still without doing any thing, I like it worse; for all dispositions to idleness or *vacancy*, even before they are habits, are dangerous. *Wotton*.

VACANT, *adj.* [vacant, Fr.; vacans, Lat.] Empty; unfilled; void.—Why should the air so impetuously rush into the cavity of the receiver, if there were before no *vacant* room to receive it? *Boyle*.—Free; unincumbered; uncrowded.—A very little part of our life is so *vacant* from uneasiness, as to leave us free to the attraction of remoter good. *Locke*.—Not filled by an incumbent, or possessor.—Others when they allowed the throne *vacant*, thought the succession should immediately go to the next heir. *Swift*

—Being

—Being at leisure; disengaged.—They which have the government, scatter the army abroad, and place them in villages to take their victuals of them, at such *vacant* times as they lie not in camp. *Spenser*.—Thoughtless; empty of thought; not busy.

The wretched slave,
Who with a body fill'd, and *vacant* mind,
Gets him to rest, cramm'd with distressful bread.

Shakspeare.

VACAS, a river of Mexico, which rises in the province of Guatimala, and falls into the Pacific ocean in lat. 14. 22. N. long. 92. 48. W.

VACAS, a river of the province and government of Buenos Ayres, which runs south, near the Uruguay, and parallel to it, and enters the Plata, opposite a single island at its entrance.

VACASA, a small island near the west coast of Lewis. Lat. 58. 11. N. long. 6. 57. W.

VACATAMA, a river of Peru, which runs into the Pacific ocean. Lat. 9. 25. S.

To VA'CATE, *v. a.* [*vacco*, Lat.] To annul; to make void; to make of no authority.—That after-act *vacating* the authority of the precedent, tells the world that some remorse touched even Strafford's most implacable enemies. *King Charles*.—To make vacant; to quit possession of: as, he *vacated* the throne.—To defeat; to put an end to.

He *vacates* my revenge;
For while he trusts me, 'twere so base a part
To fawn, and yet betray.

Dryden.

VA'CATION, *s.* [*vacatio*, Latin.] Intermission of juridical proceedings, or any other stated employments; recess of courts or senates.—As these clerks want not their full task of labour during the open term, so there is for them whereupon to be occupied in the *vacation* only. *Bacon*.—Leisure; freedom from trouble or perplexity.—Benefit of peace, quiet, and *vacation* for piety, have rendered it necessary in every Christian commonwealth, by laws to secure propriety. *Hammond*.

VACCA, called also the *Cow's* or *Neat's Tongue*, a low point on the west coast of Chili, in South America, which bounds the bay of Tonguey to the westward.

VACCARIZZO, a village of Italy, in the south of the kingdom of Naples, in Calabria Citra, containing 1000 inhabitants, who are of Albanian descent, and are still members of the Greek church.

VA'CCARY, *s.* [*vacca*, Latin.] A cow-house; a cow-pasture. *Bailey*.

To VA'CCINATE, *v. a.* [from *vacca*, Latin, a cow.] To inoculate with vaccine matter. *Entick*.

VACCINATION, *s.* The act of inserting vaccine matter; inoculation for the cow-pox. *James*, and *Entick*.—For the mode of its performance and utility, see the articles INOCULATION and PATHOLOGY.

VA'CCINE, *adj.* [from *vacca*, Latin.] Of or belonging to a cow. *H. Tooke*.

VACCINIUM [of Pliny and Virgil], in Botany, a genus of the class octandria, order monogynia, natural order of bicornes, ericæ (*Juss.*)—Generic Character. Calyx: perianth very small, superior, permanent. Corolla one-petalled, bell-shaped, four-cleft. Segments revolute. Stamina: filaments eight, simple, inserted into the receptacle. Anthers two-horned, furnished at the back with two spreading awns, opening at the tip. Pistil: germ inferior. Style simple, longer than the stamens. Stigma obtuse. Pericarp: berry globular; umbilicate, four-celled. Seeds few, small. Calyx in most species four-cleft; in myrtillus quite entire. Corolla when fresh almost entire, is revolved to the base in oxycoccus.—*Essential Character*. Calyx superior. Corolla one-petalled. Filaments inserted into the receptacles. Berry four-celled, many-seeded.

I.—With deciduous leaves.

1. *Vaccinium myrtillus*, bilberry, bleaberry, whortleberry, or black-whorts.—Peduncles one-flowered; leaves ovate.

serrate; stem angular. Root perennial, woody; stem shrubby, erect, scarcely a foot high, very much branched, forming a small tufted bush. Branches smooth, green, twisted, sharply angular, especially the young ones.—Native of Europe, Siberia and Barbary, on heaths and stony moors, and in woods where the soil is spongy. It is abundant in the mountainous parts of Great Britain. About May, the young fresh green leaves, and the flowers, make an elegant appearance. Towards autumn the leaves grow darker and more firm, and the ripe berries are gathered in the north for tarts, and in Devonshire are eaten with clotted cream.

2. *Vaccinium pallidum*, pale bilberry, or whortleberry.—Racemes bracted; corollas cylindric, bell-shaped; leaves ovate, acute-serrulate, smooth.—Native of North America.

3. *Vaccinium hirtum*, hairy bilberry, or whortle-berry.—Peduncles one-flowered; leaves ovate-serrate; branches round, divaricating.—Native of Japan, in the mountains between Miaco and Jedo.

4. *Vaccinium stamineum*, green-wooded bilberry, or whortleberry.—Peduncles solitary, naked, one-flowered; anthers longer than the corolla; leaves oblong-ovate, acute, quite entire, somewhat glaucous beneath.—Native of North America.

5. *Vaccinium uliginosum*, great or marsh bilberry, or whortleberry.—Peduncles one-flowered; leaves obovate, quite entire, smooth; branches round. This grows taller than the common bilberry, and the stem and branches are round.—Native of many parts of Europe and Siberia. On marshy mountainous heaths in Britain, but not general.

6. *Vaccinium album*, white bilberry or whortleberry.—Peduncles simple; leaves quite entire, ovate, tomentose beneath.—Native of Pennsylvania, where it was found by Kalm.

We have also the following species: *Vaccinium mucronatum*. *Vaccinium diffusum*. *Vaccinium angustifolium*. *Vaccinium corymbosum*. *Vaccinium bracteatum*. *Vaccinium ciliatum*. *Vaccinium fuscum*. *Vaccinium frondosum*. *Vaccinium venustum*. *Vaccinium ligustrinum*. *Vaccinium resinosum*. *Vaccinium amœnum*. *Vaccinium virgatum*. *Vaccinium tenellum*. *Vaccinium acrostaphylos*.

II.—With evergreen leaves.

22. *Vaccinium meridionale*, Jamaica bilberry, or whortleberry.—Leaves ovate-oblong, acute, serrate, perennial, flat, lucid; racemes terminating, erect; corollas prismatical.—Native of Jamaica, in the Blue mountains.

23. *Vaccinium cereum*, waxen bilberry, or whortleberry.—Peduncles solitary, one-flowered; corollas quinquangular-ovate; leaves ovate-roundish, serrate.—Native of Otaheite.

24. *Vaccinium vitis idææ*, red bilberry, whortleberry or cowberry.—Racemes terminating, nodding; leaves obovate, revolute, toothletted, dotted beneath. Roots creeping, woody. It is of very humble growth, seldom rising above six or eight inches high; and is almost herbaceous, but evergreen. Stems mostly upright, little branched, twisted or flexuose, angular, smooth, pliant.—Native of most parts of Europe, particularly the northern countries, on dry stony heaths or moors, on the mountains. Many places in Derbyshire, and our northern counties, are clothed with this humble evergreen, as also in Scotland and Wales.

25. *Vaccinium oxycoccus*, or European cranberry.—Leaves ovate, quite entire, revolute, acute; stems creeping, filiform, smooth. Roots perennial, fibrous. Stems suffruticose, very slender, smooth, and creeping by means of long fibres. Branches scattered, procumbent, leafy, flowering about the upper part. Peduncles terminating, aggregate, about an inch long, red, one-flowered, having a few scattered or opposite bractes.—Native of Europe, on turf bogs, mostly entangled in Sphagnum and other bog-mosses, which cover the surface of shallow waters, so that those who gather the fruit are obliged to wade in search of it. The flowers come out in June, and the berries ripen in August. Plentiful in the north of England, in Scotland, and Ireland in their bogs. On Dersingham moor near Norfolk, on Bootham moor near Lincoln, and in great quantities in many parts of the county. Gamlingay bogs, Cambridgeshire; and Potton bogs, Bedfordshire;

shire; Bishop's woods near Eccleshall, Staffordshire; Birmingham heath, &c. It has many names in English.—Cranberries, Moss-berries, Moor-berries, Fen-berries, Marsh-worts or Whortle-berries, Corn-berries. The most general name Cranberry probably originated from the peduncles being crooked at the top, and before the expansion of the flower, resembling the head and neck of a crane.

26. *Vaccinium hispidulum*, or hairy-stemmed American cranberry.—Leaves quite entire, revolute, ovate; stems creeping, filiform, hispid. This has the same structure with the European Cranberry, but is bigger in all its parts, and the stem is imbricate with bristle-shaped scales.—Abundant over all North America.

27. *Vaccinium macrocarpon*, or smooth-stemmed American cranberry.—Leaves quite entire, oval-oblong, obtuse, flat; stems creeping, filiform.—Native of North America.

Propagation and Culture.—These are shrubs or shrubby plants, and hardy, with a few exceptions. But they are difficult of culture in gardens, because they require a moorish or boggy soil, which for some of the species must be covered with moss, and constantly kept wet.

VACH, a hamlet of England, in the parish of Chalfont, St. Peter's, county of Buckingham, near Amersham.

VACH, a small town in the interior of Germany. It is situated on the Werra, on the great road from Frankfort on the Maine to Leipsic; 14 miles east of Hersfeld, and 16 west-south-west of Eysenach.

VACHE, or COW'S ISLAND, an island about 12 miles from the south coast of Hispaniola, about nine or ten miles long, and in the broadest part three and a half from north to south. The west point is in lat. 18. 4. N. long. 73. 37. W.

VACHE ET LE TORREAU, or COW AND BULL ROCKS, on the south coast of Newfoundland island, are about a mile south-east of Cape St. Mary, which is the point between the deep bay of Placentia on the west, and St. Mary's bay on the east. They are fair above water; but there are others near them which lurk under water.

VACHER (RUISSEAU), a small river of Lower Canada, which, after a winding course of nearly 20 miles, falls into the Assumption, which carries it southward to the great river St. Lawrence.

VACHERY, a hamlet of England, in the parish of Cranley, county of Surrey.

VA'CELLANCY, *s.* [*vacillans*, from *vacillo*, Latin; *vacillant*, French.] A state of wavering; fluctuation; inconstancy. *Not much in use*.—I deny that all mutability implies imperfection, though some does, as that *vacillancy* in human souls, and such mutations as are found in corporeal matter. *More*.

To VA'CELLATE, *v. n.* [*vacillo*, Latin.] To waver; to be inconstant. *Cockeram*.

VACILLATION, *s.* [*vacillatio*, from *vacillo*, Latin; *vacillation*, French.] The act or state of reeling or staggering.—By your variety and *vacillation*, you lost the acceptable time of the first grace. *Bacon*.—The muscles keep the body upright, and prevent its falling, by readily assisting every *vacillation*. *Derham*.

To VA'CUATE, *v. a.* [*vacuo*, Latin.] To make void.—Such an unhappy force there is in a mistaken zeal, that it dissolves the closest bonds, violates all obligations, and like the Pharisees' Corban, under the pretence of an extraordinary service to God, *vacuates* all duty to man. *Secular Priest Exposed*.

VACUATION, *s.* [*vacuus*, Lat.] The act of emptying. *Dict*.

VA'CUIST, *s.* A philosopher that holds a *vacuum*: opposed to a *plenist*.—Those spaces which the *vacuists* would have to be empty, because they are manifestly devoid of air, the *plenists* do not prove replenished with subtle matter. *Boyle*.

VA'CUITY, *s.* [*vacuitas*, from *vacuus*, Latin; *vacuité*, French.] Emptiness; state of being unfilled.—Hunger is such a state of *vacuity*, as to require a fresh supply of aliment. *Arbuthnot*.—Space unfilled; space unoccupied.

He, that seat soon failing, meets

A vast *vacuity*.

Milton.

Inanity; want of reality.—The soul is seen, like other things, in the mirror of its effects: but if they'll run behind the glass to catch at it, their expectations will meet with *vacuity* and emptiness. *Glanville*.

VACUNALLA, a festival kept in honour of the goddess Vacuna, who presided over those that were unemployed or at rest.

It was celebrated in December by the country labourers, after the fruits were gathered in, and the land tilled.

“Nam quoque cum fiunt antiquæ sacra vacunæ,
Ante vacuales stantque, sedentque fœcos.”

Ovid, *Fasti*, lib. vi.

VA'CUOUS, *adj.* [*vacuus*, Latin.] Empty; unfilled.

Boundless the deep, because I AM who fill

Infinite: nor *vacuous* the space.

Milton.

VA'CUOUSNESS, *s.* State of being empty.—Nothing nauseates the mind so soon, as an emptiness of thoughts bespoken and fitted for her entertainment; since in that *vacuousness* the winds and vapours of tediousness and displicence arise, and fume out of our imagination into our spirits. *W. Montague*.

VA'CUUM, *s.* [Latin.] Space unoccupied by matter.—Our enquiries about *vacuum*, or space and atoms, will shew us some good practical lessons. *Watts*.

VADAMIA, a village of Irak Arabi, on the Euphrates; 105 miles north-north-west of Bassora.

VADDER (Louis de), an eminent landscape painter, was born at Brussels in 1560. It is not known under whom he studied, where he resided, or how long he lived; but he has left works behind him which exhibit him as a diligent observer of nature, with taste and feeling to select her most fascinating effects, and ability to execute what he attempted, so as to afford the greatest pleasure to all admirers of the art.

To VADE, *v. n.* [*vado*, Latin.] To vanish; to pass away. A word useful in poetry, but not received. Yet it was in use before Spenser employed it, and was common in prose.—Thy sun shall no more go down, and thy moone shall not *vade*, because the Lord shall be thy everlasting light. *Stapleton*.

VADE' (John Joseph), was born in 1727, at Ham, in Picardy, and is distinguished as the inventor of a kind of humorous French poetry. In his youth he resided at Paris, and led a dissipated life; but in more advanced age he perceived the defects of his early education, and endeavoured to supply them by a perusal of the best French authors. His species of writing was called the “Poisarde manner,” and he was hence denominated the “Teniers” of poetry. His works, consisting of comic operas, parodies, songs, &c. have been collected in 4 vols. 8vo. *Morcri. Nouv. Dict. Hist.*

VADIANUS (Joachim), was born in 1484, at St. Gall in Switzerland, where his father, Leonard Von Watt, was a senator. Having studied at Vienna, he was chosen professor of the belles lettres, and rector of the university. In 1514 he was honoured at Lintz by the emperor Maximilian with the poetical laurel. In his subsequent travels, he applied to the study of geography, and in 1518, having taken the degree of M.D. at Vienna, he returned to St. Gall, and devoted himself to the practice of physic, to which he joined theology upon the principles of the reformers, whose cause he promoted as a senator, and also by his discourses and writings. Having been honoured eight times with the office of consul, he died in 1551, and bequeathed his library to his fellow-citizens. On the various subjects of mathematics, geography, antiquities, medicine, and theology, he published works, as well as several Latin poems. His “Commentary on Pomponius Mela de Situ Orbis,” and his “Scholia on the second Book of Pliny's Natural History,” are the most generally known of his literary performances. Scaliger regarded Vadianus as one of the most learned men in Germany. *Morcri*.

VADILKORA,

VADILKORA, or VADIAL KORA, a town of Hedsjas, in Arabia; 56 miles north of Medina.

VADKERT, a small town in the west of Hungary, on the river Lokos; 35 miles north of Pest.

VADO, a small town in the north-west of Italy, in the duchy of Genoa, situated on the sea-coast; 6 miles south-west of Savona, and 27 west-by-south of Genoa.

VADUTZ, a petty town of the south-west of Germany, in the principality of Lichtenstein; 39 miles south-east of Constance.

VAE'S ISLAND, ANTHONY, a small island on the east coast of Brazil, in South America.

VAELS, a manufacturing place of the Netherlands, in the province of Limburg; 3 miles west of Aix-la-Chapelle.

VAGA (Pierino del), whose real name was Pietro Buonacorsi, was one of those ingenious painters employed by Raphael to assist him in adorning the Vatican. He was born at a village near Florence in 1500, of indigent parents. His father was killed in battle, and his mother died of the plague before he was two months old.

After the death of Raphael, he was employed, with J. Romano and G. F. Penni, to continue and complete the adornment of the Vatican, great part of the execution of which is the work of Del Vaga.

Pierino was in full possession of public repute when he was compelled to fly for safety from Rome, by the sacking of that city in 1527. He took refuge in Genoa, where he was graciously received by prince Doria, who at that time projected the embellishment of his superb palace near the gate of St. Thomas. He had here a full opportunity of displaying his imagination, as well as his executive powers; and here he indulged in those inventions which breathe the spirit of Raphael himself, and rival the exertions of his fellow pupil J. Romano, in the palazzo del T at Mantua: both do honour to the school they had studied in, and the patron who employed them. He is said not to have been sufficiently scrupulous in the choice of his coadjutors, and the grandeur of his designs is consequently weakened by their imperfect execution. He died at Rome in 1547, aged 47.

VA'GABOND, *adj.* [*vagabundus*, low Latin; *vagabond*, French.] Wandering without any settled habitation; wanting a home.

Let them pronounce the steep Tarpeian death;
Vagabond exile: yet I would not buy
Their mercy at the price of one fair word. *Shakspeare.*

Wandering; vagrant.

This common body,
Like to a *vagabond* flag upon the stream,
Goes to, and back, lacqueying the varying tide. *Shakspeare.*

VA'GABOND, *s.* A vagrant; a wanderer, commonly in a sense of reproach.—We call those people wanderers and *vagabonds*, that have no dwelling-place. *Raleigh.*—One that wanders illegally, without a settled habitation.—*Vagabond* is a person without a home. *Watts.*

VA'GABONDRY, *s.* Beggary; knavery. *Cotgrave*, and *Sherwood.*

VAGALE, a river of Tobolsk, in Asiatic Russia, which, after a course of upwards of 100 miles, falls into the Irtysh.

To VA'GARY, *v. n.* [*vaguer*, old French.] To wander; to gad; to range; to roam; to remove often from place to place. *Cotgrave*, and *Sherwood.*

VAGARY, *s.* A wandering.—The people called Phœnices gave themselves to long *vagaries*, and continual viages by sea. *Rich.*—A wild freak; a capricious frolic.

They chang'd their minds,
Flew off, and into strange *vagaries* fell,
As they would dance. *Milton.*

VA'GIENT, *adj.* [*vagiens*, Latin.] Crying like a child. *Not in use.*

The cradle of the Cretan Jove,
And guardians of his *vagient* infancy. *Morc.*

VAGINOPE'NNOUS, *adj.* [*vagina* and *penna*, Latin.] Sheathwinged; having the wings covered with hard cases.

VAGIOW, a town on the west coast of the island of Celebes.

VAGLIANO, a small town in the north of Italy, in the grand duchy of Tuscany, province of Florence, on the river Chiana.

VAGLIO, a small town in the south of the kingdom of Naples, in the Basilicata.

VAGNEY, a small town in the north-east of France, department of the Vosges; 6 miles east of Remiremont, and 17 south-east of Epinal.

VA'GOUS, *adj.* [*vagus*, Latin.] Wandering; unsettled. *Not in use.*—Such as were born and begot of a single woman, through a *vagous* lust, were called *Sporii*. *Ayliffe.*

VA'GRANCY, *s.* A state of wandering; unsettled condition.—Moses did not lose his affection towards his countrymen, because he was by one of them threatened away into banishment and *vagrancy*. *Barrow.*

VA'GRANT, *adj.* [*vagrant*, old French; wandering. *Kelham.* And so in old English. "The people remained in the woods and mountains, *vagrant* and dispersed like the wild beasts." *Puttenham.*] Wandering; unsettled; vagabond; unfixed in place.

Her lips no living bard, I wet,
May say how red, how round, how sweet;
Old Homer only could indite
Their *vagrant* grace, and soft delight:
They stand recorded in his book,
When Helen smil'd, and Hebe spoke. *Prior.*

VA'GRANT, *s.* A sturdy beggar; wanderer; vagabond; man unsettled in habitation. *In an ill sense.*

Vagrants and outlaws shall offend thy view,
Train'd to assault, and disciplina'd to kill. *Prior.*

VAGUARE, a river of New Granada, in the province of Neiva, which runs east, and enters the Magdalena.

VAGUE, *adj.* [*vagus*, Latin.] Wandering; vagrant; vagabond.—Gray encouraged his men to set upon the *vague* villains, good neither to live peaceably, nor to fight. *Hayward.*—Unfixed; unsettled; undetermined; indefinite.—The perception of being, or not being, belongs no more to these *vague* ideas, signified by the terms, whatsoever and thing, than it does to any other ideas. *Locke.*

VAHL (Martin), a botanical writer of good and original authority, born in Norway in 1751, received his first education at the school of Bergen, which he left in 1766, and was then entered a member of the university of Copenhagen. We know not in what year Vahl quitted Upsal; but in 1779 he was appointed lecturer, or demonstrator, of Botany, in the garden at Copenhagen, where he taught his science, with great applause, for three years.

On returning to Copenhagen in 1785, he was made professor of natural history in that university; and was appointed editor of the *Flora Danica*, begun at the royal expence by Oeder, continued with much imperfection by Muller, but restored to its original excellence by Vahl. The principal object of this work was, in the first instance, to illustrate Forskall's discoveries, very incorrectly displayed in his own *Flora*.

In 1799 and 1800 professor Vahl received the pecuniary support of the Danish government in a second tour to Holland and Paris, for botanical purposes; chiefly, we presume, with a view to the composition of a great work, long in his contemplation, on the model of the Linnæan *Species Plantarum*. Of this he just lived to publish the first volume, under the title of "Enumeratio Plantarum," in 1804, in 8vo. including the classes Monandria and Diandria. The second, containing only the Triandria Monogynia, was published by his widow in 1805. He died on the 24th of December, 1804.

VAHLIA [so named by Thunberg, in honour of *Martin Vahl*, regius professor of Botany at Copenhagen, and member of several academies,] in Botany, a genus of the class pentandria, order digynia, natural order of succulentæ, onagrea

græ (*Juss.*)—Generic Character. Calyx: perianth five-leaved; leaflets lanceolate, acute, concave, spreading. Corolla: petals five, ovate, concave, spreading, shorter by half than the calyx. Stamina: filaments five, filiform, erect, inserted between the petals, length of the calyx. Anthers oblong, four-grooved. Pistil: germ inferior. Styles two, filiform, from upright spreading, longer than the stamens. Stigmas simple, obtuse. Pericarp: capsule ovate, truncate, scored with five raised lines, crowned with the permanent calyx, one-celled, two-valved. Seeds numerous, minute.—*Essential Character.* Calyx five-leaved. Corolla five-petalled. Capsules inferior, one-celled, many-seeded.

Vahlia Capensis.—This plant has the stature of a Silene, half a foot or scarcely a foot in height. Stem herbaceous, round, without knots, below brachiate and subpubescent. Leaves opposite, sessile, subpubescent, narrow-lanceolate. Stipules none. Flowers from the upper branches, peduncled, two or more, frequently three together, yellow. Petals and anthers snow-white.—Native of the Cape of Good Hope, in sandy places near Verkeerde valley.

VAIGATZ, an island, or assemblage of islands, in the north of European Russia, in the Frozen Ocean, between Nova Zembla and the Continent.

VAIGATZ, a strait of European Russia, between the government of Archangel and the island of Vaigatz, and between the Frozen Ocean and the gulph of Cara.

VAIHINGEN, a small town of the west of Germany, in Wirtemberg, on the river Enz; 11 miles north-west of Stuttgart.—Also another large village of Wirtemberg, near Esslingen.

VAIL, *s.* [properly *veil*, from *velum*, Latin.] A curtain; a cover thrown over any thing to be concealed.—While they supposed to lie hid in their secret sins, they were scattered under a dark *veil* of forgetfulness. *Wisdom.*—A part of female dress, by which the face and a part of the shape is concealed; money given to servants. *It is commonly used in the plural.* See *VALE*.

To VAIL, *v. a.* To cover. See *To VEIL*.

To VAIL, *v. a.* [*avalier le bonnet*, French.] Addison writes it *veil*, ignorantly. *Dr. Johnson.*—The etymology appears in the French phrase *à mont et à val*, from top to bottom, from *mountain* to *valley*. *Douce.*—The word is sometimes written *vale*.] To let fall; to suffer to descend.

The virgin 'gan her beavoir *vale*,
And thank'd him first, and thus began her tale. *Fairfax.*

To let fall in token of respect.

Before my princely state let your poor greatness fall,
And *vail* your tops to me, the sovereign of you all. *Drayton.*

To fall; to let sink in fear, or for any other interest.

That furious Scot,
'Gan *vail* his stomach, and did grace the shame
Of those that turn'd their backs. *Shakspeare.*

To VAIL, *v. n.* To yield; to give place; to shew respect by yielding. In this sense, the modern writers have ignorantly written *veil*, *Dr. Johnson* says.

That any petty hill upon the English side,
Should dare, not (with a crouch) to *vale* unto their pride.
Drayton.

It is fit that both should *vaille* to the inevitable danger of those mischievous inconveniences. *Bp. Hall.*

VA'ILER, *s.* One who shews respect by yielding. *Obsoleto.*—He is high in his own imagination: when he goes, he looks who looks: if he finds not a good store of *vailers*, he comes home stiff. *Overbury.*

VAILA, a small island of Shetland.

VAILLAC, a small inland town in the south of France, department of the Lot.

VAILLANT (*Jean Foi*), an eminent antiquary and medalist, was born at Beauvais in Picardy, in the year 1632. The titles of some of his principal works, independently of several separate dissertations, tending to illustrate medallic science in its connection with history, are as follows: "Numismata Imperatorum Romanorum," 1674, 4to.

of which an enlarged edition was published by Baldini at Rome in 3 vols. 4to. 1743; "Seleucidarum Imperium, sive Historia Regum Syriae ad fidem Numismatum accommodata," 1681, 4to.; "Selecta Numismata Antiqua ex Musæo Petri Seguii," 1684, 4to.; "Numismata Ærea Imperatorum, Augustarum, et Cæsarum in Coloniais, Municipiis, et Urbibus, &c." 2 vols. fol. 1688; "Numismata Imperatorum, &c. Græca," 1698, 4to.; "Historia Ptolemæorum Ægypti Regum ad fidem Numism. &c." 1725, 4to.; "Achæmenidarum Imperium, &c." 1725. He died in 1708.

VAILLANT (*Sebastian*), a distinguished French botanist in the early part of the 18th century, was born May 26th, 1669, at Vigny, near Pontoise, being the eldest son of a shopkeeper in that town.

His chief botanical work was published after his death by Boerhaave in 1727, under the title of "Botanicon Parisiense," making a very handsome folio volume, with thirty-three admirable plates, comprehending above 300 figures, of rare or obscure species, in which the cryptogamic plants are very abundant. The arrangement of the work is alphabetical, and its language, except the specific definitions, French. Certain imperfections of this popular work, justly indicated by Haller, arose, as he observes, from Boerhaave's inability to bestow sufficient time on the correction of the unfinished manuscripts. Hence many repetitions occur, and some of the figures want references. Following authors have generally cited the beautiful figures, without adverting to the text; in which, notwithstanding, much may be found worthy of notice, especially all the practical observations, and original descriptions, of Vaillant himself.

VAILLY, a small town in the north-east of France, department of the Aisne; 9 miles north of Soissons, and 12 south-by-west of Laon.

VAIN, *adj.* [*vainus*, Latin.] Fruitless; ineffectual.

Let no man speak again

To alter this; for counsel is but *vain*. *Shakspeare.*

Empty; unreal; shadowy.

Before the passage horrid Hydra stands,
Gorgons, Geryon with his triple frame,
And *vain* chimera, vomits empty flame. *Dryden.*

Meanly proud; proud of petty things: with *of* before the cause of vanity.

The minstrels play'd on ev'ry side,
Vain of their art, and for the mastery vy'd. *Dryden.*

Shewy; ostentatious.—Load some *vain* church with old
theatric state. *Pope.*—Idle; worthless; unimportant.

Both all things *vain*, and all who in *vain* things
Built their fond hopes of glory, or lasting fame,
Or happiness. *Milton.*

False; not true.

'Tis holy sport, to be a little *vain*,
When the sweet breath of flattery conquers strife. *Shakspeare.*

In VAIN. To no purpose; to no end; ineffectually; without effect.—He tempts in *vain*. *Milton.*

VAINGLO'RIOUS, *adj.* [*vanus* and *gloriosus*, Latin.] Boasting without performances; proud in disproportion to desert.

Strength to glory aspires

Vain-glorious, and through infamy seeks fame. *Milton.*

VAINGLO'RIOUSLY, *adv.* With *vain-glorious*; with empty pride.—Heretofore in the pursuance of fame and foreign dominion, [it] spent itself *vaingloriously* abroad. *Milton.*

VAINGLO'RY, *s.* [*vana gloria*, Latin.] Pride above merit; empty pride; pride in little things.—He had nothing of *vain-glorious*, but yet kept state and majesty to the height; being sensible, that majesty maketh the people bow, but *vain-glorious* boweth to them. *Bacon.*

VA'INLY *adv.* Without effect; to no purpose; in *vain*.
Our cannons' malice *vainly* shall be spent
Against th' invulnerable clouds of heav'n. *Shakspeare.*

Proudly;

Proudly; arrogantly.—Humility teaches us to think neither vainly nor vauntingly of ourselves. *Delany*.—Idly; foolishly.—Nor vainly hope to be invulnerable. *Milton*.

VA'INNESS, *s.* The state of being vain; pride; falsehood; emptiness.

I hate ingratitude more in a man,
Than lying, *vainness*, babbling. *Shakspeare*.

VAIR, *s.* [*scribeus*, Latin.] In heraldry, a kind of fur, or doubling, consisting of divers little pieces, argent and azure, resembling a bell-glass. *Chambers*.

VAIR, or VA'IRY, *adj.* Charged or chequered with vair; variegated with argent and azure colours, in heraldry, when the term is *vairy proper*; and with other colours, when it is *vair* or *vairy composed*.

VAISETTE (Joseph), a native of Guillac, in the diocese of Alby, was born in 1685, and entered among the Benedictines of St. Maur, at Toulouse. In 1713 he settled at Paris, and engaged, in concurrence with Claude de Vie, of the same fraternity, in the history of Languedoc, of which the first volume appeared in 1730, in folio: and upon the death of his coadjutor in 1734, it was continued by himself, four more volumes having been published, and a sixth being in preparation at the time of his own death. This history is highly commended, on account of both the learning and moderation displayed by the author. He died much regretted, in 1756. *Moreri*.

VAISON, a small town in the south-east of France, department of the Vaucluse, situated on an eminence near the small river Auveze; 9 miles east-by-north of Orange, and 25 north-east of Avignon.

VAIVODE, *s.* [*vaiwod*, a governor, Sclavonian.] A prince of the Dacian provinces.—He desired nothing more than to have confirmed his authority in the minds of the vulgar, by the present and ready attendance of the *vayvod*. *Knolles*.

VAJASD, a small town of Transylvania, in the county of Lower Weissenburg, near the Marosch.

VAKE, a small river of England, in the county of Cornwall, which falls into Falmouth harbour.

VAKUP, or AKHISSAR, a fort or castle in the north-west of European Turkey, in Bosnia, situated on the eastern side of the Illyrian mountains; 28 miles west-by-north of Travnik.

VAL DE BAGNES, or BAGNERTHAL, a village and valley near the south-west corner of Switzerland, in the Valais; 13 miles south-south-west of Sion.

VAL CARLOS, a valley in the north-east of Spain, in Navarre, among the Pyrennees, remarkable as the spot where the rear guard of Charlemagne was defeated by the inhabitants of Navarre, in 778.

VAL D'ISÈRE, a village in Savoy, county of Tarantaise, near the source of the river Isere.

VAL-OMBROSA, a celebrated monastery in the north of Italy, in Tuscany, situated among the Appennines; 20 miles east of Florence.

VAL DE PENNAS, a town of the south of Spain, in the province of La Mancha; 90 miles south-south-east of Toledo, and 113 south of Madrid.

VAL SUGANA, a large and fruitful valley, in the south of Tyrol, on the borders of the Venetian territory.

VALAIS, a canton in the south of Switzerland, bounded by the cantons of Uri, Bern, and Friburg, and in another direction by Savoy and the lake of Geneva; its length being about 100 miles, and its medium breadth from 25 to 30. The capital is the small town of Sion.

VA'LANCE, *s.* [from *Valencia*, whence the use of them came. *Skinner*, and *Dr. Johnson*.—The word should therefore be written *valence*; as, indeed, anciently it was; it was also not confined to the ornaments of a bed: "Before him he had his two great crosses of silver,—his cardinall's hat, and a gentleman carrying his *valence* (otherwise called his cloak-bag), which was made of fine scarlet, altogether embroidered very richly with gold, having in it a cloake." *Cavendish, Life of Card. Wolsey*.—"Like gold *valence*," *Vol. XXIV. No. 1638*.

let some curls hang dangling, &c." *Fanshaw Tr. of Past. Fido*.] The fringes or drapery hanging round the tester and stead of a bed.

My house
Is richly furnished with plate and gold:
Valance of Venice, gold in needlework. *Shakspeare*.

To VA'LANCE, *v. a.* To decorate with drapery. *Not in use*.—Old friend, why thy face is *valanc'd* since I saw thee last; com'st thou to beard me? *Shakspeare*.

VALANTIA [so named by Tournefort, in honour of Sebastian Vaillant, an eminent French Botanist, demonstrator at the botanic garden at Paris], in Botany, a genus of the class polygamia, order monoecia, tetrandria monogynia, natural order of stellatæ, rubiaceæ (*Juss.*)—Generic Character. Calyx scarcely any, in place of it the germ. Corolla one-petalled, flat, four-parted; segments ovate, acute. Stamina: filaments four, length of the corolla. Anthers small. Pistil: germ large, inferior. Style length of the stamens, semibifid. Stigmas headed. Pericarp coriaceous, compressed, reflexed. Seed single, globular.—Male flower, one on each side of the hermaphrodite. Calyx scarcely any, in place of it the germ. Corolla one-petalled, flat, three-parted, or four-parted; segments ovate, acute. Stamina: filaments four or three, length of the corolla. Anthers small. Pistil: germ small, inferior. Style and stigmas obsolete, and scarcely to be observed. Pericarp abortive: but a slender oblong rudiment adheres to the side of the hermaphrodite. Seeds none.—*Essential Character*. Hermaphrodite: calyx none. Corolla four-parted. Stamina four. Style bifid. Seed one.—Male: calyx none. Corolla three or four-parted. Stamina four or three. Pistil obsolete.

1. *Valentia muralis*, or wall cross-wort.—Male flowers trifid, placed upon the smooth germ of the hermaphrodite. Root Annual.—Native of the South of France.

2. *Valantia hispida*, or bristly cross-wort.—Male flowers trifid, placed upon the hispid germ of the hermaphrodite. Root annual.—Native of the South of Europe, and of Barbary about Algiers.

3. *Valantia filiformis*, or least cross-wort.—Capsules longer than the pedicel, cylindrical, hairy, unarmed; leaves lanceolate, smooth, subciliate.—Native of the Canary Islands.

4. *Valantia cucullaria*, or hooded cross-wort.—Each of the fructifications covered with an ovate bracte, which is bent down.—Native of the Levant.

5. *Valantia aparine*, or smooth-seeded cross-wort.—Male flowers trifid pedicelled, placed on the peduncle of the hermaphrodite.—Native of Germany, France, Sicily and Barbary.

6. *Valantia articulata*, or jointed cross-wort.—Male flowers quadrifid; peduncle dichotomous, leafless; leaves cordate. Root annual.—Native of Egypt, Syria and Barbary.

7. *Valantia cruciata*, or common cross-wort.—Male flowers quadrifid; peduncles lateral, two-leaved.

8. *Valantia glabra*, or smooth cross-wort.—Male flowers quadrifid; peduncles dichotomous, leafless; leaves oval, ciliate.—Native of the South of Europe.

9. *Valantia hypocarpia*.—All the flowers quadrifid below the germ; peduncles naked, one-flowered.—Native of Jamaica, in the cool mountains.

Propagation and Culture.—If the annual sorts are permitted to scatter their seeds in autumn, the plants will come up, and require no farther care but to thin them, and keep them clean from weeds.

The roots of the seventh and eighth spread greatly, and may be easily increased by dividing them. They are all hardy plants, except the third and last.

VALBERT, a large village of Prussian Westphalia, in the county of Mark; 36 miles east of Cologne.

VALCARES, a considerable lake in the south-east of France, department of the Mouths of the Rhone, arondissement of Tarascon, near the sea.

VALDAGNA, a small town of Austrian Italy, in the delegation of Vicenza, on the river Gua; 20 miles north-north-west of Verona.

VALDAI MOUNTAINS OF, an elevated tract of country in the central part of European Russia, lying between Moscow, Toropez, Smolensk, and Tula.

VALDAI, a small town in the north of European Russia, in the government of Novgorod; 170 miles south-south-east of Petersburg.

VALDEMORO, a small town of the interior of Spain, in New Castile; 13 miles south of Madrid.

VALDERAGUAY, a river of the north of Spain, in the province of Toro, which joins the Douro.

VALDERIES, a small town in the south-west of France, department of the Tarn; 6 miles north-north-east of Albi.

VALDIVIA, a province of Chili, separated from all the others possessed by the Spaniards, being situated in the midst of the country occupied by the Araucanians, which comprehends a track of about 70 leagues in length.

VALDIVIA, the capital of the above province, a celebrated city, and strong fortress, situated on the southern shore of the river of its name, at three leagues distance from the sea; 183 miles south from La Concepcion. Lat. 40. 5. S. long. 80. 5. W.

VALDIVIA, a river of Chili, on which the aforesaid place is situated. It has its rise eastward in the Andes, and it runs into the Pacific ocean.

VALE, *s.* [*val*, Fr.; *vallis*, Latin.] A low ground; a valley; a place between two hills.—A wide open space between hills is called a *vale*. If it be of smaller dimensions, we call it a *valley*. But when the space is contracted to a chasm, we call it a *glen*. *Gilpin*.—[From *avail*, profit.] Money given to servants.

Since our knights and senators account
To what their sordid, begging *vails* amount;
Judge what a wretched share the poor attends,
Whose whole subsistence on those alms depends. *Dryden*.

VALE OF WHITE HORSE, a fertile track of land in England, in the county of Berks, extending from Farringdon to Abingdon, so called from the representation of a horse, cut on the side of a hill, and occupying nearly an acre. The chalky soil, which is thus laid bare, is of a bright white, and forms so striking a contrast to the strong green turf of the hill, that the figure may be sometimes seen at the distance of twelve miles.

VALEDIA, a small sea-port of the province of Duquella, in Morocco. The coast is very rocky, and though it has a spacious natural harbour, capable of containing a thousand vessels, it is little frequented, on account of its difficult and dangerous entrance; 27 miles south-south-west of Mazagan.

VALEDICTION, *s.* [*valedico*, Latin.] A farewell.—A *valediction* forbidding to weep. *Donne*.—Letters were read, together with a form of *valediction* and farewell. *Hales*.

VALEDICTORY, *adj.* [from *valedico*, Latin.] Bidding farewell.—The shore was thronged with crowds of people, that followed him to the water's edge,—studious to pay to their popular chief governor every *valedictory* honour that their zeal and attention could devise. *Cumberland*.

VALENCA, a small town and fortress of the north of Portugal, in the province of Entre Douro e Minho, on the Minho, almost within cannon shot of the fortress of Tuy in Spain. It is very old, being supposed to have been founded by the soldiers of Viriatus; 56 miles north of Oporto, and 72 west-north-west of Braganza.

VALENCA DO DOURO, a small town of the north of Portugal, in the province of Beira; 9 miles west of St. Joao de Pesqueira.

VALENCAY, a small town in the central part of France, department of the Indre, with 2300 inhabitants. It has a fine castle, where Ferdinand VII. of Spain resided from 1808 to 1813; 27 miles north-north-west of Chateauroux.

VALENCE, a town in the south-east of France, the capital of the department of the Drome, agreeably situated on the declivity of a small hill, on the left bank of the department of the Rhone. Population 8000. Olives grow

in the neighbourhood, and the town contains a number of oil mills. Valence was occupied by the royalists in April 1815, after the return of Buonaparte from Elba, but soon relinquished by them; 42 miles south-west of Grenoble, and 55 south-by-east of Lyons. Lat. 44. 55. N. long. 4. 59. E.

VALENCE, a petty town in the south-west of France, department of the Gers, on the small river Blaise; 6 miles south of Condom.

VALENCE D'AGENOIS, a small town in the south-west of France, department of the Lot and Garonne, with 2200 inhabitants; 14 miles south-east of Agen.

VALENCE EN ALBIGEOIS, a pretty place in the south-west of France; 14 miles north-east of Albi.

VALENCIA, a large province in the east of Spain, extending in an oblong form from north to south, with the sea on one side, and the Castilian provinces on the other. It lies between lat. 37. 52. and 40. 50. N., and its length no less than 250 miles, but its breadth seldom exceeds 50. Its area is about 8000 square miles: its population, though not exactly ascertained, is stated by Antillon and others, at nearly 1,200,000.

Valencia contains in some parts a number of mountains, but in others, its surface is composed of plains and fertile vallies. The plain adjacent to the capital is above 80 miles in length; and those to the southward, which adjoin the towns of Alicant and Orihuela, if inferior in extent, may challenge a comparison in beauty and fertility. This province is watered by three great rivers, the Xucar, the Segura, and the Guadalaviar: also by the Murviedro, the Palencia, the Mejares, and others of less size, all flowing from the mountains of the interior to the Mediterranean. The temperature of the province is mild, the thermometer in winter varying from 40° to 60°, in summer from 70° to 80°. The chief export is of wine, silk, olive oil, and raisins. The white wine of Alicant is in high repute.

VALENCIA, a large city in the east of Spain, the capital of the province, formerly the kingdom, of Valencia. It is situated only two miles from the sea, in an open plain, on the banks of the Guadalaviar, a large river which flows from the mountains of Arragon, through a beautiful country called; in the vicinity of Valencia, La Huerta, or the Garden, from the richness of its soil, and the variety of its fruits. This fertility is the result of a warm climate, and of irrigation judiciously applied; 170 miles east-south-east of Madrid. Lat. 39. 28. 45. N. long. 0. 23. 3. W.

VALENCIA, a city of South America, in the government of the Caraccas, and province of Venezuela, situated half a league west of the lake of the same name, in a beautiful plain, where the air is pure, and the soil fertile. The houses are in general low and irregular, though some of the streets are broad and well built; 115 miles south-east of Coro, and 77 south-west of Caraccas. Lat. 10. 9. N. long. 68. 15. W.

VALENCIA, a beautiful lake of South America, in the government of Caraccas, and province of Venezuela, which stretches thirteen leagues and a half from east-north-east to west-south-west, and its greatest breadth is four. It has an oblong form. There is much greater quantity than variety of fish in this lake. Upon its borders, many reptiles are to be seen, among which are two kinds of lizards, which the Spaniards use for food, and think it delicious.

VALENCIA, a small town of the Caraccas, in the province of Maracaibo.

VALENCIA, PUNTA DE, a cape on the coast of Mexico, on the Spanish Main. Lat. 9. N. lon. 18. 40. W.

VALENCIA DE ALCANTARA, a small but strong town in the west of Spain, in the province of Estremadura, on the frontiers of Portugal; 25 miles south-west of Alcantara.

VALENCIANA, a celebrated mine of Mexico, in the intendancy of Guanaxuato. In this mine the great vein is twenty-two feet in breadth; and as the chasm is entirely dry, it is easier worked than almost any other American mine. The pits extend to the breadth of 4900 feet, and the lowest is 1640 feet in depth.

VALENCIENNES,

VALENCIENNES, a fortified town of French Flanders, situated on the Scheldt, which becomes here a navigable river, though small in its volume of water, and sluggish in its course. The form of the town is circular; its streets are narrow and crooked; its houses are in general ill built, many of them being of wood; 27 miles south-east of Lisle.

VALENS (Flavius), a Roman emperor. See **ROME**.

VALENSOLLES, a small town in the south-east of France, in Provence, department of the Lower Alps; 14 miles south-east of Forcalquier, and 25 south-west of Digne. Population 3100.

VALENTIA, an island in the Atlantic, near the south-west coast of Ireland, about five miles in length, and two in breadth, with a village of the same name, separated from the county of Kerry by a strait scarcely a mile wide. It lies to the south of Dingle bay. Lat. 51. 52. N. long. 10. 11. W.

VALENTIA HARBOUR, a bay of Ireland, on the east of Dingle bay, between the isle of Valentia and Dowlas Head.

VALENTIA ISLAND, an island off the coast of Abyssinia, about 25 miles long, and from 2 to 6 broad.

VALENTINE, s. A sweetheart, chosen on Valentine's day.

Now all nature seem'd in love,
And birds had drawn their *valentines*. *Wotton*.

A letter sent by one young person to another on Valentine's day; a *billet doux*.—Many allurements there are; nods, jests, winks,—tokens, favours, symbols, letters, *valentines*, &c. For which cause, belike, Godfridus would not have women learn to write! *Burton*.

VALENTINE, a small town in the south of France, on the Garonne, with 1000 inhabitants; 3 miles south-west of St. Gaudens, and 55 south-west of Toulouse.

VALENTINE, a cape or point of land on the east coast of the straits of Magellan, between the bay of Papagayou and the point of Boqueron.

VALENTINE'S BAY, a bay on the south-east coast of Terra del Fuego, to the west of Cape Success.

VALENTINI (Michael Bernhard), a native of Giessen, in Germany, where he was born in 1657, and became a medical professor, and where he died in 1729. The subjects of his writings, which are numerous, chiefly comprehend botany and the materia medica: of these we shall here mention his "Letters from the East Indies;" "Praxis Medica," in two parts; "Amphitheatrum Zootomicum," fol. *Haller*.

VALENTINIA [so named by Swartz, probably in honour of Mich. Bernh. Valentini, professor of medicine at Giessen], in Botany, a genus of the class octandria, order monogynia.—Generic Character. Calyx: perianth one-leaved, spreading, concave, coloured, five-parted; segments obtuse, concave, entire. Corolla none, unless the calyx be taken for it. Stamina: filaments eight, awl-shaped, erect, a little shorter than the calyx; anthers roundish. Pistil: germ roundish; superior; style length of the stamens, round; thick; stigma headed. Pericarp: capsule berried, roundish, opening into three or four parts which afterwards roll back, one-celled, pulpy within. Seeds four, oblong.—*Essential Character*. Calyx five-parted, coloured, spreading. Corolla none. Capsule berried, four-seeded, pulpy.

Valentinia ilicifolia.—This is a branching shrub, two or three feet high. Leaves alternate, ovate-lanceolate, an inch and half long, waved and spiny at the edge, smooth and very stiff; flowers terminating in a sort of umbel, scarlet.—Native of Hispaniola, on the most barren rocks towards the ocean, and in Cuba about the Havanna.

VALENTINO, a royal but now decayed castle, situated on the banks of the Po, in the vicinity of Turin, and surrounded by a number of villas, and by the botanical garden of the university of Turin.

VALENZA, a town in the north-west of Italy; in the province of Alessandria, situated on an eminence near the Po; 12 miles south-east of Casale, and 40 east-by-south of Turin.

VALENZA, a small town in the north-west of Spain, in the province of Leon, with 3700 inhabitants; 18 miles south-south-west of Leon.

VALERA DE Ariba, and **VALERA DE ABAJO**, two small towns or rather villages, in the east of Spain, in the province of Cuenca; 133 miles east-south-east of Madrid.

VALERIAN, s. [*valeriana*, Latin; *valerian*, Fr.] A plant.

Valerian then he crops, and purposely doth stamp,
T' apply unto the place, that's haled with the cramp.

Drayton.

VALERIANA [according to some, named from one Valerius, who is said to have used this plant in medicine: or as others, from valor or valentia, or from valere. But all this is uncertain], in Botany, a genus of the class triandria, order monogynia, natural order of aggregatæ, dipsacæ (*Juss.*)—Generic Character. Calyx scarcely any; a superior margin. Corolla: tube nectariferous on the lower side, gibbous; border five-cleft; segments obtuse. Stamina three or fewer, (in one species four;) filaments awl shaped, erect, length of the corolla; anthers roundish. Pistil: germ inferior; style filiform, length of the stamens; stigma thickish. Pericarp: a crust not opening, deciduous, crowned. Seeds solitary, oblong. A wonderful diversity of the parts of fructification is observed in this genus.—*Essential Character*. Calyx none. Corolla one-petalled, gibbous on one side of the base, superior. Seed one.

I.—Valerians with a single downy Seed.

1. *Valeriana rubra*, common or broad-leaved red valerian.—Flowers one-stamened, tailed; leaves lanceolate, quite entire. Roots perennial, woody, as thick as a man's finger, spreading very wide; stems about three feet high, round, smooth, grayish, hollow.—Native of France, Switzerland, Italy, the Levant, Barbary, and England.

2. *Valeriana angustifolia*, or narrow-leaved red valerian.—Flowers one-stamened, tailed; leaves linear, quite entire.—Native of the mountains of France, Switzerland, Italy, and Barbary.

3. *Valeriana calcitrapa*, or cut-leaved valerian.—Flowers one-stamened; leaves pinnatifid.—Native of the South of France, Italy, Portugal, the Levant, and Barbary.

4. *Valeriana dioica*, or small marsh valerian.—Flowers three-stamened, dioecious; radical-leaves ovate; stem-leaves pinnate. Root perennial, jointed, creeping, the thickness of a crow-quill, white, but sometimes tinged with red; stems from a span to a foot or a foot and a half in height, upright, grooved, smooth.—Native of Europe and the Levant, in wet meadows and marshes.

5. *Valeriana Capensis*, or Cape valerian.—Flowers three-stamened; leaves pinnate; leaflets ovate, toothed.—Found at the Cape of Good Hope.

6. *Valeriana officinalis*, officinal or great wild valerian.—Flowers three-stamened; all the leaves pinnate; leaflets lanceolate, nearly uniform. Root perennial, composed of long fleshy slender fibres, uniting in heads, and sending out from its crown one or more long-extended creeping shoots.—Native of Europe and Siberia, in woods, hedges, marshes, and near rivers.

7. *Valeriana phu*, or garden valerian.—Flowers three-stamened; stem-leaves pinnate; root-leaves undivided.—Native of Alsace, Silesia, Dauphiné, and Barbary near La Calle.

8. *Valeriana tripteris*, or three-leaved valerian.—Flowers three-stamened; leaves toothed; root-leaves cordate; stem-leaves ternate, ovate-oblong.—Native of the Alps of Switzerland, Austria, Carniola, Dauphiné, and Piedmont; flowering all the summer. There are besides in this section *Valeriana montana*, *Valeriana celtica*, *Valeriana tuberosa*, *Valeriana saxatilis*, *Valeriana elongata*, *Valeriana pyrenaica*, *Valeriana scandens*, *Valeriana mixta*, and *Valeriana supina*.

II.—With a three-celled crowned Fruit.

18. *Valeriana villosa*, or hairy valerian.—Flowers four-stamened, equal; lower leaves eared; upper toothed, villose.—Native

—Native of Japan, in Jedo, Nagasaki, &c., flowering in September and October.

19. *Valeriana polystacha*.—Flowers three-stamened; leaves pinnate; spike compound, whorled.—Found in watery places at Buenos Ayres in America.

20. *Valeriana Sibitica*, or Siberian valerian.—Flowers four-stamened, equal; leaves pinnatifid; seeds fastened to an oval chaff.—Native of Siberia.

21. *Valeriana ruthenica*, or Russian valerian.—Flowers four-stamened; leaves ovate, fleshy, pinnatifid-toothed; seeds fastened to an oval chaff.—Native of Siberia.

22. *Valeriana carnosia*, or fleshy valerian.—Flowers three-stamened; leaves oval, toothed, fleshy, glaucous.—Found in the Straits of Magellan.

23. *Valeriana cornucopiæ*, or purple valerian.—Flowers two-stamened, ringent; leaves ovate, sessile.—Native of Spain, Italy, Sicily, Armenia, and Barbary.

24. *Valeriana echinata*.—Flowers three-stamened, regular; leaves toothed; fruit linear, three-toothed, outmost larger, recurved.—Native of Italy, the south of France, and Barbary, in shady places.

25. *Valeriana olitoria*, common corn salad, or lamb's lettuce.—Flowers three-stamened; stem dichotomous; leaves lanceolate (linear-tongue-shaped), obtuse, entire (or the upper ones toothed.) Root small, annual, fibrous, pale brown; stem dichotomous, somewhat spreading, from four inches to a span and even a foot or more in height, (in gardens;) round, grooved or angular, tender, often tinged with purple on one side.—Native of Europe and Barbary, in corn-fields, on banks, and under hedges.—There remains in this section *Valeriana dentata*, *Valeriana vesicaria*, *Valeriana coronata*, *Valeriana discoidea*, *Valeriana radiata*, and *Valeriana pumila*.

Propagation and Culture.—Part the roots in autumn; or sow the seeds soon after they are ripe, in a shady border; where they will sometimes come up the same autumn, especially if the season prove moist, otherwise they will not appear till the following spring. When the plants are fit to remove, transplant them into beds, at about nine inches or a foot asunder; water them, and keep them clean; and in autumn transplant them where they are to remain.

VALERIANO BOLZANI (Pierio), was born at Belluno, in 1477, in such a low condition, that he had no opportunity of acquiring the first elements of literature till he attained the age of fifteen years. The work by which he is principally known, is his treatise "De Infelicitate Literatorum," first printed at Venice in 1620, and often reprinted. *Gen. Biog.*

VALERIEN, a small town in the central part of France, department of the Yonne, with 900 inhabitants; 9 miles west of Sens.

VALERIUS MAXIMUS, a writer whose history is little known. The work which has been ascribed to him, and entitled "De Dictis et Factis Memorabilibus Antiquorum, Lib. IX." appears to have been written in the reign of Tiberius, probably after the death of Sejanus, and dedicated with high eulogy to Tiberius. It is cited by Pliny the elder, Plutarch, and A. Gellius; and it was much read and quoted at the revival of literature in Europe.

VALERIUS (Lucas), an eminent mathematician, acquired great celebrity at Rome as professor of geometry, and was honoured by Galileo with the appellation of the Archimedes of his time. He died in this city in 1618. He prosecuted the discovery of the centres of gravity of solids, and shewed how to determine them in all the conoids and spheroids, and their bases. The result of his investigation was published in 1604, in a work entitled "De Centro Gravitatis Solidorum." He also proposed a quadrature of the parabola different from that of Archimedes. His method was published in 1606, and annexed to the fore-mentioned treatise. *Montucla*.

VALERIUS PUBLICOLA. See ROME.

VALERY, Sr., a small seaport in the north of France, situated on the left bank of the Somme, near its mouth. It was here that, in 1066, William the Conqueror embarked for the conquest of England; 12 miles north-west of

Abbeville, and 50 north-west of Amiens. Lat. 50. 11. 21. N. long. 1. 37. 51. E.

VALERY EN CAUX, Sr., a town in the north of France, department of the Lower Seine, situated on the shores of the channel. It has a population of 5000, and a small but tolerably good harbour; 20 miles north of Yvetot, and 33 north-by-west of Rouen. Lat. 49. 52. N. long. 0. 40. E.

VALESIANS, or VALESIANI, ancient sectaries, so called from one Valesius. They admitted none into their society but eunuchs. Whiston says of them, that they sprung up about the year 240.

VALET, s. A. waiting servant. See VARLET.—Giving cast-clothes to be worn by *valets*, has a very ill effect upon little minds. *Addison*.

VALET, a small town in the west of France, department of the Loire Inferieure, containing, with its parish, about 3100 inhabitants; 6 miles north of Clisson, and 14 south-east of Nantes.

VALETTA, LA, the capital of the island of Malta, stands on the east side of the island, in lat. 35. 53. 4. N. long. 14. 30. 45. E. It consists of five parts, which are distinguished by particular names, and are often considered as separate towns: 1st, Citta Nuova, or La Valetta properly, so called: 2d, Citta Vittoriosa: 3rd, Senylea, or the isle of St. Michael, is separated from Citta Vittoriosa by a canal called Porto delle Galere: 4th, Barmola: 5th, Cottonera, which forms a kind of suburb to it. This last contains the castle of Santa Margaretha. Of these, Citta Nuova, Barmola, and Cottonera, contain in all about 2300 inhabitants; Citta Vittoriosa about 4000, and Senylea between 4000 and 5000.

VALETTE, a petty town in the west of France, department of the Charente, situated on a mountain, and containing about 800 inhabitants; 14 miles south-east of Angoulême.

VALETTE, LA, a small town and fort in the south-east of France, department of the Var, about a mile from Toulon.

VALETUDINARIAN, or VALETUDINARY, *adj.* [*valetudinaire*, Fr.; *valetudo*, Latin.] Weakly; sickly; infirm of health.—Physic, by purging noxious humours, prevents sickness in the healthy, or recourse thereof in the *valetudinary*. *Browne*.—Some patients have been liable to this symptom, and reduced by it to a *valetudinary* and very unequal state of health. *Blackmore*.—Cold of winter, by stopping the pores of perspiration, keeps the warmth more within; whereby there is a greater quantity of spirits generated in healthful animals, for the case is quite otherwise in *valetudinary* ones. *Cheyne*.

VALETUDINARIAN, s. One who is weakly, sickly, or infirm of health.—*Valetudinarians* must live where they can command and scold. *Swift*.

VALEZO, or VALEGGIO, a town of Austrian Italy, in the government of Milan, situated on the top of a steep hill on the bank of the Mincio, with 4800 inhabitants; 12 miles west-by-south of Verona, and 14 north of Mantua.

VALGORGE, a petty town in the south-east of France, department of the Ardeche, on the small river Baune. Population 1200; 25 miles south-east of Privas.

VALGRANO, a small town in the north-west of Italy, in Piedmont, province of Coni; 8 miles west of Coni.

VALHUEC, a small island on the north-west coast of France, department of Morbihan.

VALIANCE, or VALIANCY, s. [*vaillance*, Fr.] Valour; personal puissance; fierceness; bravery. *Not in use*.

With stiff force he shook his mortal lance,

To let him weet his doughty *valiaunce*. *Spenser*.

VALIANT, *adj.* [*vaillant*, Fr.] Stout; personally puissant; brave. We say a *valiant* man; a *valiant* action.—Only be *valiant* for me, and fight the Lord's battles. 1 *Sam.*

VALIANT, s. A valiant person. *Not in use*.—Four battles against the Philistines, wherein four *valiants* of David slay four giants. 2 *Sam.*

VALIANTLY,

J. Pass sc

1 *Va. officinalis*. 2 *Vera. Album*. 3 *Verb. thapsus*. 4 *Vi. odorata*.

VALIANTLY, *adv.* Stoutly; with personal strength; with personal bravery.

Farewell, kind lord; fight *valiantly* to-day:
Thou art fram'd of the firm truth of valour. *Shakspeare.*

VALIANTNESS, *s.* Valour; personal bravery; puissance; fierceness; stoutness.—Thy *valiantness* was mine; thou suck'dst it from me. *Shakspeare.*

VALID, *adj.* [*valide*, French; *validus* Latin.] Strong; powerful; efficacious; prevalent.

Perhaps more *valid* arms,
Weapons more violent, when next we meet,
May serve to better us, and worse our foes. *Milton.*

Having intellectual force; prevalent; weighty; conclusive.—A difference in their sentiments as to particular questions, is no *valid* argument against the general truth believed by them, but rather a clearer and more solid proof of it. *Stephens.*

VALIDITY, *s.* [*validité*, Fr.] Force to convince; certainty.

You are persuaded of the *validity* of that famous verse,
'Tis expectation makes a blessing dear. *Pope.*

Value. *A sense not used.*

To thee, and thine,
Remain this ample third of our fair kingdom;
No less in space, *validity*, and pleasure,
Than that conferr'd on Goneril. *Shakspeare.*

VALINCOURT (John Baptist du Troussel de), was born of a noble family at St. Quintin, in Picardy, in 1653, educated at the Jesuits' college in Paris, and distinguished himself as a man of letters. In 1685 he was appointed, by the count of Toulouse, admiral of France, his secretary-general, and afterwards secretary of the marine; but through life he cultivated polite literature. His writings are few: they consist of a critique on the celebrated novel of "The Princess of Cleves;" "A Life of Francis Duke of Guise, surnamed Le Balafré;" "Critical Observations on the Œdipus of Sophocles," and a few poems. He died at Paris, generally esteemed, in 1730, aged 77 years. *Moreri.*

VALINCOURT, a small town in the north-east of France, department of the North; 9 miles south-east of Cambrai, and 23 south-east of Douay.

VALKI, a considerable town in the south of European Russia, situated on the river Mscha, in the province or government called Slobodsk Ukraine. It is the chief place of a circle; 27 miles west-by-south of Charkov.

VALLADOLID, an inland province of Spain, forming part of the kingdom of Leon, and lying between 41. 10. and 42. 40. of north lat. It consists of several scattered tracks, the two largest of which lie in the west and south-east of Leon. The area of the whole is 3400 square miles; the population about 190,000. It is divided into 22 districts.

VALLADOLID, an ancient city in the interior of Spain, in Leon, situated on the banks of the Esgueva, which divides it into two, and of the larger stream of the Fisuerga, which bathes its walls. The former flows from the east, the latter from the north. The town stands in the midst of an extensive plain, which might be rendered far more productive, were the streams that traverse it made to serve effectually for the purpose of irrigation; 100 miles north-north-west of Madrid.

VALLADOLID, a province of Mexico. The most elevated summit of this province is the Pic de Tancitaro, to the east of Tuspan. To the east of this peak is the extraordinary volcano of Jurullo, which was formed in the night of the 29th September, 1759. The great catastrophe by which this mountain rose from the earth, and by which a considerable extent of ground totally changed its appearance, is perhaps one of the most extraordinary physical revolutions on record. A vast plain extends from the hills of Aguasarco to near the villages of Teipa and Petatlan. This plain is only from 2460 to 2624 feet above the level of the sea. In the middle of this space basaltic cones appear, the

summits of which are crowned with ever-green oaks of a laurel and olive foliage, intermingled with palm trees. This beautiful vegetation forms a singular contrast with the aridity of the plain which was laid waste by volcanic fire. In the month of June 1759, a subterranean noise was heard. Hollow noises of a most alarming nature were accompanied by frequent earthquakes, which succeeded one another for from 50 to 60 days, to the great consternation of the neighbouring inhabitants. From the beginning of September every thing seemed to announce the complete re-establishment of tranquillity, when in the night between the 28th and 29th, the horrible subterranean noise re-commenced. The affrighted Indians fled to the mountains for safety. A track of ground from three to four square miles in extent, which goes by the name of Malpays, rose up in the shape of a bladder. The bounds of this convulsion are still distinguishable in the fractured strata. The ground thrown up near its edges is 39 feet in height above the old level of the plain; but it rises progressively towards the centre, to an elevation of 500 feet. Those who witnessed this great catastrophe from the top of the mountain of Aguasarco, assert, that flames were seen to issue forth for an extent of more than half a square league; that fragments of burning rocks were thrown up to prodigious heights; and that through a thick cloud of ashes, illumined by volcanic fire, the softened surface of the earth was seen to swell up like an agitated sea. The rivers of Cuitamba and San Pedro rushed into the burning chasms, and contributed to exasperate the flames, which were distinguishable at the city of Pascuaro, though situated on a very extensive table land, 4500 feet above the plains of Jurullo. Thousands of small cones, from 6 to 9 feet in height, called by the natives ovens, issued from the ground while it was under the influence of this confusion; and although the heat of these volcanic ovens has suffered a great diminution, Humboldt mentions that he has seen the thermometer rise to 202 degrees of Fahrenheit, on being plunged into fissures, which exhale an aqueous vapour. From each small cone the vapour arises to the height of 40 or 50 feet. In many of them a subterranean noise is heard, resembling that occasioned by the boiling of a fluid. In the midst of the ovens six large masses, elevated from 1300 to 1600 feet above the old level of the plains, sprung up from the chasm. The most elevated of these masses is the great volcano of Jurullo. It is continually burning, and has thrown up an immense quantity of lavas. These great eruptions of the central volcano continued till the month of February 1760. In the following years they became less frequent: and the Indians having been gradually accustomed to the terrific noises of the new volcano, had advanced towards the mountains to admire the streams of fire discharged from an infinity of great and small volcanic apertures. At the first explosion of this volcano, the roofs of the houses of Queretaro were covered with ashes, though distant more than 48 leagues. The subterraneous fire appears now far from violent; and the desolate ground as well as the great volcano, begin to be covered with vegetables. The air, however, is still heated to such a degree by the ovens, as to raise the thermometer to 109 degrees of Fahrenheit.

In extent, Valladolid is nearly equal to Ireland. It contains three cities, three towns, 263 villages and 205 parishes. The population is 376,400; the extent of surface 3446 square leagues, which allows 109 inhabitants to each square league.

VALLADOLID, or **MECHOACAN**, an episcopal city of Mexico, and capital of the province of that name. It contains 18,000 inhabitants.

VALLADOLID, a small town of Mexico or New Spain, in the province of Merida or Yucatan.

VALLANCER POINT, the north-west cape of the island of Gravina, in the North Pacific ocean. Lat. 55. 26. N. long. 228. 24. E.

VALLA'NCY, *s.* A large wig that shades the face.
But you, loud Sirs, who through your curls look big,
Critics in plume, and white *vallancy* wig. *Dryden.*

VALLATA, a small town of Italy, in the central part of the kingdom of Naples, in the Principato Ultra. Population 3800.

VALLATION, *s.* [*vallatus*, Latin.] An intrenchment.—The *vallation* south-west of Dorchester in this county, called Dyke-hills, consisting of two ridges or borders with an intermediate trench, although so near a Roman town and road, is not Roman, but I imagine Saxon or Danish. *Warton.*

VALLATORY, *adj.* [*vallatus*, Latin.] Enclosing as by measure. *Not in use.*—Mention is made in Ezekiel of a measuring reed of six cubits:—with such difference of reeds, *vallatory*, sagittary, scriptory, and others, they might be furnished in Judea. *Sir T. Brown.*

VALLAY, an island of the Hebrides, lying to the north of North Uist, from which it is separated by a narrow sound, dry at low water. It is $1\frac{1}{2}$ mile long, and half a mile broad, with a light sandy soil, exceedingly fertile.

VALLE (Pietro Della), a Roman patrician, who, in the year 1614, commenced his travels into Egypt, Turkey, Persia and India. At Bagdat he fell in love with a young female of the Maronite sect of Christians, and married her. She accompanied him in his journey, and on his return towards Italy, she died near the Persian Gulph. The loss so much affected him, that he had her remains embalmed, and carried them with him during his subsequent travels, and on his return to Rome, they were magnificently interred in the church of Ara Cœli; and he himself pronounced her funeral eulogy, which was printed. The account of his travels, written by himself in Italian, and contained in fifty-four letters, was published at Rome in 1650. They have been often cited as authority, though not destitute of marks of credulity, and still bear a respectable rank among books of travels. The style is pure and elegant, though the narration is prolix. Doni has spoken of him in terms of high commendation, and represents him as well acquainted with the Oriental languages, and with music. He wrote on other subjects besides his travels, and was a member of the Academy degli Umoristi. His second wife was a Georgian, attached to his first wife, and the companion of his travels. *Moreri.*

VALLE, a small town of Italy; 35 miles north of Naples.—2. A small town in the north of Italy; 5 miles west of Lumello.—3. A small town of Austrian Illyria, in Istria; 42 miles south of Trieste.

VALLE, SAN JUAN DE, a settlement of Quito, in the province of Loxa.

VALLE, NUESTRA SENORA DE, a settlement of New Granada, in the province of San Juan de los Llanos, on the shore of the river Apure. It is the name of several other inconsiderable settlements in South America.

VALLE, a river of South America, in the province of Tucuman, which runs south-east, and enters the Vermeio.

VALLE CASTELLANA, a small town of Italy, in the north of the kingdom of Naples, in the Terra di Lavoro; 30 miles north-north-west of Capua.

VALLE-FERTIL, a settlement of Chili, now in the viceroyalty of Buenos Avres.

VALLE DE MAIZE, EL, a town of Mexico, in the province of San Luis Potosi, situated near the river Panuco, and not far from the town of that name.

VALLE ROTONDA, a small town of Italy, in the north-west of the kingdom of Naples, in the Terra di Lavoro; 30 miles north-north-west of Capua.

VALLE E SPIO, a small town of Italy; 36 miles south-east of Salerno.

VALLEJUELO, a small river of St. Domingo, which runs north, and unites itself with that of Canas, to enter the Artibonito.

VALLÉN, a small island on the north-west coast of France, belonging to the department of Finisterre.

VALLENDAR, a small town of the Prussian province of the Lower Rhine, in the government of Coblenz, near the Rhine.

VALLERAUGUE, a small town in the south-east of France, department of the Gard, on the river Herault; 40 miles north-west of Nîmes.

VALLÉS, a town of Mexico, and capital of a district of the same name, situated in a beautiful plain, on the shore of a river flowing down from the lofty ridge of mountains. Lat. 21. 45. N. long. 99. W.

VALLEY, *s.* [*vallée*, Fr.; *vallis*, Lat.] A low ground; a hollow between hills.—Sweet interchange of hill and *valley*. *Milton.*

VALLEY CREEK, a river of the United States, in Pennsylvania, which runs into the Schuylkill. Lat. 40. 7. N. long. 75. 30. W.

VALLEY FORGE, a place of the United States, in Pennsylvania, near the union of Valley Creek with the Schuylkill; 15 miles north-west of Philadelphia.

VALLIER, ST., a small town in the south-east of France, department of the Drome, on the Rhone. It has 1600 inhabitants, and some small manufactures of silk and olive oil. It has a fine Gothic castle; 20 miles north of Valence.

VALLIOVA, a small town in the north of European Turkey, in the province of Semendria, on the river Kolubra; 35 miles south-south-west of Belgrade.

VALLIQUIERVILLE, a small town in the north of France, department of the Lower Seine; 3 miles west of Yvetot.

VALLISE, *s.* [*valleys*, Dutch.] A portmanteau; a wallet.

I promise

To keep my master's privities lock'd up
In the *vallise* of my trust, lock'd close for ever.

B. Johnson.

VALLISNERI (Anthony), a celebrated Italian naturalist, was born in 1661. He was first instructed in the rudiments of the learned languages by the Jesuits, at Modena, and was afterwards taught rhetoric, and the Aristotelian philosophy, under the same auspices, at Reggio. Nevertheless he began, even at this period, to be dissatisfied with the prevailing system, which he called a philosophy of words; and happening to have a more liberal and enlightened preceptor than usual, his attention was directed to natural and experimental philosophy, and the then prevalent hypotheses of Des Cartes. His tutor Biagi, a Jesuit, had the good sense and honesty to avow, that the philosophy of Aristotle might suit theologians and monks, but that he himself knew many able and distinguished men, at Bologna and elsewhere, who, so far from being indebted to that great person, never thought of his doctrines but to refute them. Vallisneri therefore removed to Bologna in 1683, and very soon gave up theories and hypotheses for the observation of nature. Here the great Malpighi, to whose particular favour he was recommended by the princes of the house of Este, directed his anatomical enquiries. The first particular object of investigation to which this ingenious philosopher devoted his attention, was the anatomy of the Silk-worm, by which he was led to the study of the metamorphoses and generation of other insects. He gave his discoveries to the world in the form of two Dialogues in Italian, supposed to take place between Pliny and Malpighi, on the arrival of the latter in another world. These brought great reputation to their author, both for the value of their contents, and the elegance of their language and composition.

On the 12th of January, 1730, he died. The younger Vallisneri accomplished a lasting memorial for his distinguished parent, in a complete and splendid edition of all his works, making three folio volumes, printed at Venice in 1733, and illustrated with plates, in one of which the fructification of the *Lenaxa* is exhibited. Vallisneri is certainly entitled to rank with Redi, Malpighi, Reaumur, and Swammerdam, as an original observer of the intricate and obscure physiology of insects, and the lower tribes of the animal kingdom. He co-operated with those philosophers in clearing away the theory of equivocal generation, and other rubbish

rubbish of the schools. In medicine his merit is of a very high order, and his name marks an epocha in the history of that science in Italy.

VALLISNERIA [so named by Micheli, in honor of Antonio Vallisneri, professor of medicine at Padua, Archiater to the Emperor Charles VI.], in Botany, a genus of the class dioecia, order diandria, natural order of palmæ, hydrocharides (*Juss.*)—Generic Character. Male—Calyx: common spathe two-parted; segments oblong, bifid, reflexed; common spadix compressed, covered all over with flowers, digested into a spike. Corolla one-petalled, three-parted. Tube none; segments obovate, spreading very much and bent back. Stamina: filaments two, upright, length of the corolla. Anthers simple. Female—Calyx: spathe one-flowered, cylindrical, long; with the mouth bifid, erect. Perianth three-parted, spreading, superior; segments ovate. Corolla: petals three, linear, very narrow, truncate, shorter than the calyx. Nectary a spreading cusp placed under each of the stigmas. Pistil: germ cylindrical, inferior, long. Style scarcely any. Stigma three-parted; segments semi-bifid, oval, convex, longer than the calyx, spreading, pubescent above. Pericarp: capsule cylindrical, long, one-celled. Seeds numerous, ovate, fastened to the side of the capsule.—*Essential Character.* Male—Spathe two-parted. Spadix covered with floscules. Corolla three-parted. Female—Spathe bifid, one-flowered. Calyx three-parted, superior. Stigma three-parted. Capsule one-celled, many-seeded.

1. *Vallisneria spiralis*, or two-stamened *vallisneria*.—Flowers two-stamened. This is an aquatic plant, with long, thin, almost transparent leaves, with parallel nerves and plaits dividing it transversely, very finely serrate at the end and floating on the water. The male flower is very small and white, and is borne on a very short scape at the bottom of the water; when it is mature it breaks loose, and floats on the surface. The female-flower, which is larger and purple, grows on a spiral scape.—It grows in the Rhone near Orange.

2. *Vallisneria octandra*, or eight-stamened *vallisneria*.—Flowers eight-stamened. Root annual, fibrous. Leaves radical, linear, tapering to a fine point, smooth, from nine to twelve inches long, and half an inch or less broad.—Native of the East Indies, in stagnant shallow sweet water.

VALLOIRES, a small town in Savoy, province of Maurienne, situated on the small river Neuvanchette.

VALLON, a small town in the north-west of France, department of the Sarthe; 15 miles south-west of Le Mans.

VALLON, a small town in the South of France, department of the Ardeche, situated between the rivers Ardeche, and Ibie; 12 miles south-east of Argentiere, and 25 south-west of Privas.

VALLOPIT, a hamlet of England, in the parish of East Allington, Devonshire.

VALLORBE, or **VAL D'ORBE**, a large village and valley in the west of Switzerland, in the Pays de Vaud, near the source of the small river Orbe. It has 2700 inhabitants, and considerable iron manufactures.

VALLS, a considerable town in the north-east of Spain, in Catalonia; 8 miles north of Tarragona.

VALLUM, *s.* [Latin.] A trench; a fence; a wall.—Another *vallum* between the two seas more southward, and of a much greater length. *Temple.*

VALMONT DE BOMARE (James Christopher), was born at Rouen, in September, 1731. He was intended for the bar, but his inclination to natural history induced him to devote himself entirely to that pursuit; and having obtained an order from the duke d'Argenson, the minister at war, to travel for the improvement of science, with sufficient funds for the purpose, he spent several years in visiting the principal cities of Europe, and examining the most famous collections in natural history. His works are as follow: viz. "Catalogue d'un Cabinet d'Histoire Naturelle," 1758, 12mo.; "Extrait Nomenclature du System complet de Mineralogie," 1759, 12mo.; and "Nouvelle Exposition du Regne Mineral," 1761, 1762, 2 vols. 8vo. But his capital work was his

"Dictionnaire raisonné Universel d'Histoire Naturelle," in 6 vols. 8vo. This has passed through several editions in 8vo. and 4to., and being the first of its kind, served as the basis of all the dictionaries of natural history that have appeared since that time. One of the latest editions appeared at Lyons in 1800, 15 vols. 8vo. This celebrated naturalist died at Paris, in August, 1807.

VALMONTONE, a small town of Italy; 22 miles east-by-south of Rome.

VALMY, a village in the north-east of France, department of the Marne; 5 miles west-by-south of St. Menehould.

VALOE, an island in the south of Norway; 7 miles south-south-east of Tonsberg.

VALOGNES, a town of Normandy, in the north-west of France, in the department of La Manche; 10 miles south-east of Cherbourg, and 32 north-west of St. Lo. Lat. 49. 22. N. long. 1. 33. W.

VALOIS (Adrian de), was born at Paris in 1607, and studied in the Jesuits' college. Although he acquired a competent knowledge of the Greek and Latin languages, he attached himself principally to the study of French history; and in 1646 appeared the first volume in folio of his "Gesla Francorum," which was followed by two more in 1658. He began with the reign of the Emperor Valerian, and traced the history of the Franks to the deposition of Childeric, and his work was generally admired. In 1675 he published "Notitiæ Gallorum," fol., comprising, in alphabetical order, an account of the geography, towns, monasteries, &c. of France, deduced from its early records and histories. He died in 1747. *Moreri.*

VALOIS, a small district and duchy in the north of France, now forming the eastern part of the department of the Oise.

VALOROUS, *adj.* Brave; stout; valiant.—Captain Jany is a marvellous *valorous* gentleman. *Shakspeare.*

VALOROUSLY, *adv.* In a brave manner.—I'll pay it as *valourously* as I may. *Shakspeare.*

VALOUR, *s.* [*valor*, Lat. *Ainsworth.*] Personal bravery; strength; prowess; puissance; stoutness.

That I may pour the spirits in thine ear,
And chastise, with the *valour* of my tongue,
All that impedes thee. *Shakspeare.*

VALPARAISO, a city and port of Chili, in the province of Quillota, situated on a bay in the South Pacific ocean. It was formerly a very small village, with a few warehouses, which the merchants of the metropolis erected for their goods, in order to ship them for Callao. It is inhabited chiefly by whites, mestizoes, and mulattoes, who are engaged in the trade carried on with Peru and Europe; and the governor of this city is nominated by the king, being dependent only on the captain-general of Chili. The inhabitants of Valparaiso joined keenly in the revolution by which the South American provinces were emancipated from the dominion of the mother country; and it is now completely independent of Spain; 225 miles north of Concepcion, and 60 north-west of Santiago. Lat. 33. 2. 36. S. long. 71. 44. 30. W.

VALPERGA, a small town in the north-west of Italy, in Piedmont; 16 miles north of Turin.

VALREAS, a small inland town in the south-east of France, department of the Vaucluse; 20 miles north-east of Orange, and 32 north-east of Avignon.

VALS, a small town in the south-east of France, department of the Ardeche, with 2000 inhabitants; 55 miles south-west of Privas.

VALSALVA (Anton-Maria), an eminent anatomist, physician, and surgeon, was born in 1666, at Imola, in Romagna. Having received the first elements of literature in the Jesuits' seminary, he was sent to the university of Bologna, and placed under the immediate tuition of the celebrated Malpighi, and here he pursued his various studies with an assiduity which impaired his health. He graduated at Bo-

logna in 1687, and connecting surgery with physic, acquired high reputation. The principal of his works is a treatise "De Aure Humana." After his death, Morgagni published three of his "Dissertations" on anatomical subjects, which had been read before the Institute. This great anatomist's work "De Sedibus et Causis Morborum," contains a number of dissections by Valsalva. *Gen. Biog.*

VALSASSINA, a country or district in the north of Austrian Italy, adjoining the lake of Como, between the Grisons and the Valteline.

VALTELINE, a lordship of Austrian Italy, in the government of Milan, now forming the greater part of the delegation or district of Sondrio. Its superficial extent is about 1270 square miles; its population about 81,000. Their chief town is Sondrio.

VALTIERA, a village in the north-east of Spain, in Navarre, with large mines of rock salt; 8 miles north-west of Tudela, and 41 south of Pampeluna.

VALTRI, a small town in the north-west of Italy, subject to the king of Sardinia.

VALTRIE, LA, a small stream in Lower Canada, which falls into the St. Lawrence from the north; 40 miles below Montreal.

VALUABLE, *adj.* [*valable*, Fr.] Precious; being of great price.—Remote countries cannot convey their commodities by land to those places, where on account of their rarity they are desired and become *valuable*. *Robertson*.—Worthy; deserving regard. A just account of that *valuable* person, whose remains lie before us. *Atterbury*.

VALUABLENESS, *s.* Preciousness; worth. *Johnson*.

VALUATION, *s.* The act of setting a value; appraisement.—Humility in man consists not in denying any gift that is in him, but in a just *valuation* of it, rather thinking too meanly than too highly. *Ray*.—Value set upon any thing.

No reason I, since of your lives you set
So slight a *valuation*, should reserve
My crack'd one to more care.

Shakspeare.

VALUATOR, *s.* An appraiser; one who sets upon any thing its price.—What *valuators* will the bishops make use of? *Swift*.

VALUE, *s.* [*valor*, Latin.] Praise; worth.—Ye are physicians of no *value*. *Job*.—High rate.

Cæsar is well acquainted with your virtues,
And therefore sets this *value* on your life:
Let him but know the price of Cato's friendship,
And name your terms.

Addison.

Rate; price equal to the worth of the thing bought.—He sent him money; it was with this obliging testimony, that his design was not to pay him the *value* of his pictures, because they were above any price. *Dryden*.

To VALUE, *v. a.* [*valoir*, Fr.] To rate at a certain price.—When the country grows better inhabited, the tithes and other obventions will be more augmented, and better *valued*. *Spenser*.—To rate highly; to have in high esteem.—Some of the finest treatises in dialogue, many very *valued* pieces of French, Italian, and English, appear. *Addison*.—To appraise; to estimate.—If he be poorer than thy estimation, the priest shall *value* him. *Lev.*—To be worth; to be equal in worth to.

The peace between the French and us not *values*
The cost that did conclude it.

Shakspeare.

To take account of.—If a man be in sickness, the time will seem longer without a clock than with; for the mind doth *value* every moment. *Bacon*.—To reckon at, with respect to number or power.

The queen is *valued* thirty thousand strong:
Her faction will be full as strong as ours.

Shakspeare.

To consider with respect to importance; to hold important.

The king must take it ill,
So slightly *valued* in his messenger.

Shakspeare.

Neither of them *valued* their promises, according to rules of honour or integrity. *Clarendon*.—To compare with respect to price or excellence.—It cannot be *valued* with the gold of ophir. *Job*.—To raise to estimation. This is a sense not now in use.—She ordered all things, resisting the wisdom of the wisest, by making the possessor thereof miserable; *valuing* the folly of the most foolish, by making the success prosperous. *Sidney*.

VA'LUELESS, *adj.* Being of no value.

A counterfeit

Resembling majesty; which, touch'd and tried,
Proves *valueless*.

Shakspeare.

VA'LUER, *s.* One that values.—Hammond was no *valuer* of trifles. *Fell*.

VALVE, *s.* [*valva*, Latin.] A folding door.

Swift through the *valves* the visionary fair
Repass'd.

Pope.

Any thing that opens over the mouth of a vessel.—This air, by the opening of the *valve*, and forcing up of the sucker, may be driven out. *Bayle*.—[In Anatomy.] A kind of membrane, which opens in certain vessels to admit the blood, and shuts to prevent its regress. The arteries, with a contractile force, drive the blood still forward; it being hindered from going backward by the *valves* of the heart. *Arbuthnot*.

VALVERDE, a small town of the west of Spain, in Estremadura, situated in a pleasant valley; 19 miles south-east of Elvas, and 14 south of Badajos. There are three other small towns of the same name in Spain.

VA'LVULE, *s.* [*valvule*, Fr.] A small valve.

VAMBA, a river of Congo, which falls into the Coanza.

VAMKAOSE, a small island in the Chinese archipelago, where the celebrated St. Francis Xavier was buried; 62 miles south-west of Macao.

VAMP, *s.* [*avampies*, old Span. See *To VAMP*.] The upper leather of a shoe, according to Ainsworth; a sock, according to Coles.

To VAMP, *v. a.* [Of uncertain etymology.] To piece an old thing with some new part.

You wish

To *vamp* a body with a dangerous physic,
That's sure of death without.

Shakspeare.

[In Music.] To play a part extemporary.

VAM'PER, *s.* One who pieces out an old thing with something new.

To VAM'PER, *v. n.* To vapour or swagger. *North*. *Grose*.

VAMPIRE, *s.* [*vampur*, German, bloodsucker.] A pretended demon, said to delight in sucking human blood, and to animate the bodies of dead persons, which, when dug up, are said to be found florid and full of blood. Of these imaginary beings many stories are told in Hungary. Those who were killed by vampyres were said to become vampyres themselves. The way to destroy them was to drive a stake through them, at which time they would give a horrid groan; and to burn the body to ashes. This species of superstition occasioned, some years ago, great disturbances in Hungary and other places.

Can Russia, can the Hungarian *vampire*,
With whom call in the Swedes and empire;
Can four such powers, who one assail,
Deserve our praise should they prevail?

Mallet.

A kind of bat.—This is the bat to which Linnæus assigned the title of *vampyre*, on the supposition of its being the species of which so many extraordinary accounts have been given, relative to its power of sucking the blood both of men and cattle. *Dr. Shaw*.—See VESPERTILIO VAMPYRUS.

VAN, *s.* [from *avant*, French.] The front of an army; the first line.—Before each *van* prick forth the airy knights.

Milton.

Milton.—[*van*, Fr.; *vannus*, Latin.] Any thing spread wide by which a wind is raised; a fan.—The other token of their ignorance of the sea was an oar, they call it a corn-*van*.
Broome.—A wing with which the air is beaten.

His sail-broad *vans*

He spreads for flight, and in the surging smoke
Up-lifted, spurns the ground.

Milton.

To VAN, *v. a.* [from *vannus*, Latin.] To fan; to winnow. *Not in use*—The corn, which in *vanning* lieth lowest, is the best. *Bacon.*

VAN, a large and fortified city of Turkish Armenia, situated on a lake of the same name; 160 miles south-east of Erzerum.

VANBRUGH (Sir John), a dramatic writer and an architect, was a descendant of an ancient family in Cheshire. The first play which he finished was "The Relapse;" and it was acted with great success in 1697. This was followed in the succeeding year by "The Provoked Wife;" and in the same year appeared his "Æsop." In 1702 appeared his "False Friend;" and he was now knighted, and advanced to the post of Clarencieux king-at-arms. When a theatre was erected in the Haymarket, it was placed under the management of Vanbrugh and Congreve by Betterton and the other patentees; and it was opened in October, 1705, with a comedy by Vanbrugh, entitled "The Confederacy," which, though the best written, is the most licentious of this author's dramatic productions, besides three more pieces, imitated from the French; but finding the concern irksome, he disposed of his share. The popular comedy of "The Journey to London" was begun by him, but finished by Cibber.—His taste and talents as an architect were first exhibited in the theatre in the Haymarket, for which he obtained subscriptions; and to him was committed the erection of the palace of Blenheim, voted by the nation to the Duke of Marlborough. In 1716, King George II. appointed him surveyor of the buildings at Greenwich Hospital, comptroller-general of the royal works, and surveyor of the gardens and waters. But in this capacity he has unfortunately been transmitted to posterity rather as an object of ridicule than of admiration. Mr. Walpole has passed upon him a severe censure, when he says that "he wanted all ideas of proportion, convenience and propriety. He undertook vast designs, and composed heaps of littleness. The style of no age, no country, appears in his works: he broke through all rule, and compensated for it by no imagination. He seems to have hollowed quarries, rather than to have built houses; and should his edifices, as they seem formed to do, outlast all record, what architecture will posterity think was that of their ancestors?"

Notwithstanding this obloquy, some modern amateurs have vindicated the character of Vanbrugh's architecture, particularly that of Blenheim, admiring its grandeur, and the magnificence of the whole, as well as the picturesque variety displayed in this and in other of his buildings.

VANCEBURG, a post village of the United States, in Lewis county, Kentucky.

VANCOURIER, *s.* [*avantcourier*, French.] A harbinger; a precursor.—Fearful sights, and great signs, as the *van-carriers* and out-guard to that more terrible desolation which was to follow them. *Spencer.*

VANCOUVER'S FORT, a fort of the United States, in Kentucky, at the union of the two branches of Sandy river.

VANCOUVER, POINT, a cape on the west coast of North America, in the river Columbia. Lat. 45. 7. N. long. 237. 50. E.

VANDAL, a small river in England, in Surrey, which runs into the Thames at Windsor.

VANDALE (Antony), was born in Holland in 1638, and though he manifested an inclination for study in his youth, his parents placed him in the department of commerce. At

the age of 30, however, he resumed his literary pursuits, and graduated as a physician; and he was also for some time a preacher among the Mennonites. His attachment to study prevailed at length over every other occupation, and his literary character was established by many valuable works. Of these the most noted was "Dissertationes duæ de Oraculis Ethnicorum," first printed in 1683, 12mo., and afterwards in 1700, 4to. His death happened at Haerlem, in 1708.—*Le Clerc.*

VANDALS, a people of antiquity who overran many parts of the Roman empire. They were originally Goths. See ROME and GOTH.

VANDAL TOWNS, six small towns of Upper and Lower Lusatia, so called because their inhabitants are chiefly descended from the ancient Vandals, and speak the language of that people, which is also used in the churches. The names of these petty places are Muska, Beskow, Strikow, Wetschow, Whittichenaw, and Dreyocke.

VANDALIC, *adj.* [from the *Vandals*.] Barbarous; resembling the character of the Vandals.—From what hath past, rash divines might be apt to charge this holy man, so meek of spirit, with enthusiasm, with a brutal spite to reason, and with more than *Vandalic* rage against human learning. *Warburton.*

VANDALISM, *s.* The rude and barbarous state or character of the Vandals.—I regard all the conquests of France as so many epochas, and stages, in the career of a new *vandalism* and darkness, which are preparing to involve all human society. *Ld. Auckland.*

VANDELLIA [so named by Browne in honour of Dominico Vandelli, professor of natural history at Lisbon], in Botany, a genus of the class didynamia, order angiospermia, natural order of personatæ, scrophulariæ (*Juss.*)—Generic Character. Calyx: perianth one-leaved, tubulose, four-parted; parts subovate, equal, the uppermost subbilid; permanent. Corolla one-petalled, ringent; tube length of the calyx; border small; upper-lip ovate, entire, lower dilated, two-lobed. Stamina: filaments four; two outer from the disk of the lower lip, bowed upwards; two from the throat higher. Anthers ovate, connected by pairs. Pistil: germ oblong. Style filiform, length of the stamens. Stigmas two, ovate, membranaceous, reflexed. Pericarp: capsule oblong, one-celled. Seeds numerous.—*Essential Character.* Calyx four-parted. Corolla ringent. Filaments: the two outer from the disk of the lip of the corolla. Anthers connected by pairs. Capsule one-celled, many-seeded.

1. *Vandellia diffusa*.—Leaves roundish, subsessile. Stem herbaceous, four-cornered, brachiata. Leaves ovate, sessile, crenate, bluntish. Flowers axillary, opposite, solitary.—Native of the islands of Montserrat and Santa Cruz.

2. *Vandellia pratensis*.—Leaves petioled, oblong, acute, crenate. Root annual. Stem herbaceous, erect, four-cornered with the corners acute, brachiata.—Found in America from the island of Trinidad to Brazil; very frequent by way sides.

VANDEPUT, CAPE, a cape on the west coast of North America, and east point of Prince Frederick's sound. Lat. 57. 5. N. long. 227. 12. E.

VANDERLIN ISLAND, an island on the coast of New Holland, in the gulph of Carpentaria. Vanderlin cape, the north point of the island, is in lat. 15. 34. S. long. 137. 8. E. It forms one of the cluster of islands called by Flinders Sir Edward Pellew's group.

VAN DIEMAN'S LAND, an island in the Southern ocean, separated from New Holland by a navigable canal called Bass's Straits. The country was first discovered by Tasman in 1633.

It is situated between 40. 42. and 43. 43. S. lat. and between 145. 31. and 148. 22. E. long. It has not so discouraging and repulsive an appearance from the coast as New Holland. Many fine tracks of land are found on the very borders of the sea, and the interior is almost invariably possessed of a soil admirably adapted to all agricultural and horticultural purposes. On the summits of many of

the mountains there are large lakes, some of which are the sources of considerable rivers. Of these the Derwent, Huon, and Tamar, rank in the first class. There is perhaps no island in the world of the same size which can boast of so many fine harbours: the best are the Derwent, Port Davy, Macquarie harbour, Port Dalrymple, and Oyster bay; the first is on its southern side; the second and third on its western, the fourth on its northern, and the fifth on its eastern; so that it has excellent harbours in every direction. This circumstance cannot fail to be productive of the most beneficial effects, and will most materially assist the future progress of colonization. There is almost a perfect resemblance between the animals and vegetables found here and in New Holland.

The climate of this island is equally healthy, and much more congenial to the European constitution than that of Port Jackson.

The orange, citron, guava, loquet, pomegranate, and many other fruits which attain the greatest perfection at Port Jackson, cannot be produced here at all without having recourse to artificial means; while many more, as the peach, nectarine, grape, &c. only arrive at a very inferior degree of maturity. On the other hand the apple, currant, gooseberry, and indeed all those fruits for which the climate of the parent colony is too warm, are raised here without difficulty. The system of rearing and fattening cattle is perfectly analogous to that which is pursued at Port Jackson. The natural grasses afford an abundance of pasturage at all seasons of the year; and no provision of winter provender, in the shape either of hay or artificial food, is made by the settler for his cattle; yet, notwithstanding this palpable omission, and the greater length and severity of the winters, all manner of stock attain there a much larger size than at Port Jackson. Oxen from three to four years old average here about 700 lbs., and wethers from two to three years old, from 80 to 90 lbs.; while there, oxen of the same age do not average more than 500 lbs., and wethers not more than 40 lbs.

The British colonies in Van Dieman's Land have of late received a great accession of settlers from Great Britain. According to the last accounts, they were gradually improving, and assuming more and more the appearance of a civilized community. From an account of a tour of inspection by governor Macquarie, it appears that in July, 1821, the population of the island amounted to 6372, exclusive of the civil and military officers; and that it contained 28,838 head of horned cattle, 182,468 sheep, 421 horses, and 10,683 acres of land in cultivation.

VANDIEMAN CAPE, a cape on Mornington isle, in the gulph of Carpentaria. Lat. 16. 32. S. long. 139. 49½. E.

VANDŒUVRES, a small town in the north-east of France, department of the Aube; 9 miles west of Bar sur Aube, and 22 east-south-east of Troyes.

VANDSHELLING ISLANDS, a cluster of small islands in a bay of the Pacific ocean, on the north coast of New Guinea. Lat. 3. 32. S. long. 136. 15. E.

VANDYKES, **JOST** and **LITTLE**, two of the smaller Virgin islands, situated to the north-west of Tortola. Lat. 18. 25. N. long. 63. 15. W.

VANE, *s.* [*vaene*, Dutch.] A plate hung on a pin to turn with the wind.

A man she wou'd spell backward;
If tall, a lance ill-headed;
If speaking, why a *vane* blown with all winds.

Shakspeare.

VANGAC, a river of the island of Lucon, which runs into the Chinese sea. Lat. 18. 45. N.

VANGE, a parish of England, in the county of Essex, 4 miles north-east-by-east of Horndon on the Hill. The water of the Old Haven creek comes up to this village, on which it has a wharf.

VANGEVILLE, a town of the United States, in

Kentucky, on the Ohio, at the mouth of Salt Lick Creek, 36 miles above Maysville.

VANGUARD, *s.* [*avant garde*, French.] The front, or first line of the army.—The king's *vant-guard* maintained fight against the whole power of the enemies. *Bacon.*

VANGUERIA [from the vernacular name], in Botany, a genus of the class pentandria, order monogynia, natural order of aggregata, rubiaceæ (*Juss.*)—Generic Character. Calyx very small, five-toothed, spreading. Corolla small, campanulate-globular, five-cleft, hairy at the throat. Stamina five, with oblong anthers scarcely standing out. Pistil one, with a bilamellate stigma. Pericarp: berry inferior, pome-shaped, umbilicate, not crowned, five-celled. Seeds four or five, like almonds.—*Essential Character.* Calyx five-toothed. Corolla: tube globular, with a hairy-throat. Stigma bilamellate. Berry inferior, four or five-seeded.

Vangueria edulis.—A tree with round smooth branches. Leaves petioled, opposite, ovate, attenuated to both ends, smooth, quite entire. Flowers pedicelled. Fruit esculent.—Supposed to be a native of China.

VANI, a cape on the north coast of the island of Milo. Lat. 36. 46. N. long. 24. 20. E.

VANISSA, or **DEVIL'S KEY**, a small island in the Spanish Main, near the Mosquito shore. Lat. 14. 5. N. long. 82. 35. W.

VANIERE (James), a learned Jesuit, was born in 1664, at Causses, in the diocese of Beziers, Languedoc, and having studied at the Jesuits' college at Beziers, entered into the society in 1680. His chief work was a "Dictionary of Poetry," in Latin, quarto, a work in high estimation, and abridged for the use of students. *Moreri. Gen. Biog.*

VANILLA, *s.* [*vanille*, Fr.] A plant. The fruit of those plants is used to scent chocolate. *Miller.*—When mixed with *vanillios*, or spices, chocolate acquires the good and bad qualities of aromatic oils. *Arbuthnot.*

VANINI (Lucilio), a reputed atheist, was born about the year 1585, at Taurozano, in the district of Otranto, and kingdom of Naples. He studied philosophy and theology at Rome, where he changed his baptismal name for "Julio Cesare," and completed his education at Naples and Padua, comprehending medicine, law, and astronomy. In 1615 he published at Lyons his "Amphitheatrum æternæ Providentiæ, Divino-magicum, Christiano-physicum, Astrologico-catholicum, adversus veteres Philosophos, Atheos, Epicureos, Peripateticos et Stoicos," which was not suspected of atheism, and which indeed contains every thing incompatible with atheistical principles. In the following year he published at Paris another work, entitled "De admirandis Naturæ Regiæ Deæque Mortalium Arcanis," which was printed with a privilege; but on a closer examination of its tendency, was publicly burnt by a decree of the Sorbonne. He was condemned to have his tongue cut out, and then to be burnt alive. He suffered death in 1619, at the age of 34, and on his memory has been entailed every kind of reproach which could have been suggested by a detestation of his doctrines.

To **VANISH**, *v. n.* [*vanesco*, Latin.] To lose perceptible existence.—High honour is not only gotten and born by pain and danger, but must be nursed by the like, or else *vanisheth* as soon as it appears to the world. *Sidney.*—To pass away from the sight; to disappear.

Whither are they *vanish'd*?

—Into the air; and what seem'd corporal
Melted as breath into the wind.

Shakspeare.

To pass away; to be lost.—All these delights will *vanish*.
Milton.

VANISHED, *part. adj.* Having no perceptible existence. Fancy brings the *vanish'd* piles to view,
And builds imaginary Rome anew.

Pope.

VANITY, *s.* [*vanitas*, Lat.; *vanité*, Fr.] Emptiness; uncertainty; inanity.—*Vanity* of *vanities*, all is *vanity*. *Eccl.*—Fruitless desire; fruitless endeavour.

Thy

Thy pride,

And wandering *vanity*, when least was safe,
Rejected my forewarning.

Milton.

Trifling labour.—To use long discourse against those things which are both against Scripture and reason, might rightly be judged a *vanity* in the answerer, not much inferior to that of the inventor. *Ralegh.*—Falsehood; untruth.—Here I may well shew the *vanity* of that which is reported in the story of Walsingham. *Davies.*—Empty pleasure; vain pursuit; idle shew; unsubstantial enjoyment; petty object of pride.

I must

Bestow upon the eyes of this young couple
Some *vanity* of mine art.

Shakspeare.

Ostentation; arrogance.—The ground-work thereof is true, however they, through *vanity*, whilst they would not seem to be ignorant, do thereupon build many forged histories of their own antiquity. *Spenser.*—Petty pride; pride exerted upon slight grounds; pride operating on small occasions.

Can you add guilt to *vanity*, and take

A pride to hear the conquests which you make.

Dryden.

VAN-MANDER, a painter and author, was born at Meulebeke, near Courtray, in 1548. Van-Mander united with the talent of a painter that of a poet, and composed tragedies and comedies, several of which were acted with success, with decorations painted by himself; and we are indebted to him for a very useful history of the painters of antiquity and of his own country. He died at Amsterdam, in 1606.

VANNACHOIR, or VENNOCHAR, a lake of Scotland, in Perthshire, about four miles long, and in general about one broad.

VANNES, a considerable town in the north-west of France, in Brittany, the see of a bishop, and the chief place of the department of the Morbihan. It is advantageously situated at the bottom of a bay, interspersed with islets, about two miles and a half from the sea; 60 miles south-west of Rennes, and 70 west-by-north of Nantes. Lat. 47. 39. 29. N. long. 2. 45. W.

VANNES, ISLES OF, several small islands on the west coast of France, in Gascony, between Belle-isle and the mouth of the Loire.

VANNI (Francesco, Cavaliere), was the son of a painter of little celebrity at Vienna, who died whilst he was very young, and was born in 1563. He went to Rome when he was about sixteen, and entered the school of Giovanni de Vecchi, and became an imitator of Baroccio. His best performances are at Sienna, as his Marriage of St. Catharine, in the church of Il Refugio; and S. Raimondo walking on the Sea, in the Dominicans; which is considered the finest work in the city. He died at Sienna, in 1610.

To VANQUISH, *v. a.* [*vaincre*, Fr.] To conquer; to overcome; to subdue.

Wer't not a shame, that, whilst you live at jar,
The fearful French, whom you late *vanquished*,
Should make a start o'er seas, and *vanquish* you?

Shakspeare.

To confute.—This bold assertion has been fully *vanquished* in a late reply to the bishop of Meaux's treatise. *Atterbury.*

VANQUISHABLE, *adj.* Conquerable; that may be overcome.—That great giant was only *vanquishable* by the knights of the Wells. *Gayton.*

VANQUISHER, *s.* Conqueror; subduer.

He would pawn his fortunes

To hopeless restitution, so he might

Be call'd your *vanquisher*.

Shakspeare.

VANS, a small town in the south of France, department of the Ardeche; 14 miles south-by-west of Argentiere, and 33 south-west of Privas.

VANSVILLE, a post township of the United States, in Prince George county, Maryland. Lat. 39. 2. N. long. 76. 55. W.

VANTAGE, *s.* Gain; profit.—What great *vantage* do we get by the trade of a pastor? *Sidney.*—Superiority; state in which one had better means of action than another.

With the *vantage* of mine own excuse,
Hath he excepted most against my love.

Shakspeare.

Opportunity; convenience.

Be assur'd, Madam, 'twill be done,

With his next *vantage*.

Shakspeare.

To VANTAGE, *v. a.* To profit. *Not in use.*

We yet of present peril be afraid;

For needless fear did never *vantage* none.

Spenser.

VANTAGE-GROUND, *s.* Superiority; state in which one has better means of action than another.—Let him expect a battle, and know that he is to combat a prepared enemy, who has prevented him, and comes to fight him upon the *vantage-ground*. *South.*

VA'NTBRACE, or VA'NTBRASS, *s.* [*avant bras*, Fr.] Armour for the arm.

I'll hide my silver beard in a gold beaver,

And in my *vantbrace* put this wither'd brawn.

Shakspeare.

VANTCHIN, a city of China, of the second rank, in Quangsee. Lat. 23. 1. N. long. 106. 51. E.

VANTIEN, a city of China, of the second rank, in Yunan. Lat. 24. 29. N. long. 109. 14. E.

VAPID, *adj.* [*vapidus*, Lat.] Dead; having the spirit evaporated; spiritless; mawkish; flat.

Thy wines let feed a-while

On the fat refuse; lest too soon disjointed,

From spritely it to sharp or *vapid* change.

Philips.

VAPIDNESS, *s.* The state of being spiritless or mawkish; mawkishness.

To VAPORATE, *v. n.* To emit vapours. *Cockeram.*

VAPORATION, *s.* [*vaporatio*, Lat.] The act of escaping in vapours.—By conflagration and congelation, according to certain respects; by *vaporation* and evaporation; by sublimation. *Biblioth.*

VAPORER, *s.* A boaster; a braggart.—This shews these *vaporers*, to what scorn they expose themselves. *Government of the Tongue.*

VAPORINGLY, *adv.* In a bullying or bragging manner.

VAPORISH, *adj.* Vaporous; full of vapours.—It proceeded from the nature of the *vaporish* place. *Sandys.*—Splenetic; peevish; humoursome.

Pallas grew *vap'rish* once and odd,

She would not do the least right thing.

Pope.

VAPOROUS, *adj.* Full of vapours or exhalations; fummy.—The *vaporous* night approaches. *Shakspeare.*—Windy; flatulent.—If the mother eat much beans, or such *vaporous* food, it endangereth the child to become lunatic. *Bacon.*

VAPOROUSNESS, *s.* State or quality of being vaporous.—The warmth and *vaporousness* of the air. *Hist. R. S.*

VAPORY, *adj.* Vaporous; abounding with vapours.

Congregated clouds.

And all the *vapory* turbulence of heaven,

Involve the face of things.

Thomson.

Peevish; humoursome.

Their only labour was to kill the time;

And labour dire it is, and weary woe!

They sit, they loll, turn o'er some idle rhyme;

Then rising sudden, to the glass they go,

Or saunter forth with tottering step and slow;

This soon too rude an exercise they find:

Strait on the couch again their limbs they throw,

Where hours on hours they sighing lie reclu'd,

And court the *vapoury* god soft-breathing in the wind.

Thomson.

VAPOUR, *s.* [*vapor*, Lat.] Any thing exhalable; any thing that mingles with the air.—*Vapour*, and mist, and exhalation

exhalation hot. *Milton*.—Fume; steam.—The morning is the best, because the imagination is not clouded by the *vapours* of meat. *Dryden*.—Wind; flatulence.—In the Thessalian witches, and the meetings of witches that have been recorded, great wonders they tell, of carrying in the air, transforming themselves into other bodies. These fables are the effects of imagination; for ointments, if laid on any thing thick, by stopping of the pores, shut in the *vapours*, and send them to the head extremely. *Bacon*.—Mental fume; vain imagination; fancy unreal.—If his sorrow bring forth amendment, he hath the grace of hope, though it be clouded over with a melancholy *vapour*, that it be not discernible even to himself. *Hammond*.—[In the plural.] Diseases caused by flatulence, or by diseased nerves; hypochondriacal maladies; melancholy; spleen.—To this we must ascribe the spleen, so frequent in studious men, as well as the *vapours* to which the other sex are so often subject. *Addison*.

To VA'POUR, *v. n.* [*vaporo*, Lat.] To pass in a vapour or fume; to fly off in evaporations.

When thou from this world wilt go,
The whole world *vapours* in thy breath.

Donne.

To emit fumes.—Swift running waters *vapour* not so much as standing waters. *Bacon*.—To bully; to brag.

Not true, quoth he? Howe'er you *vapour*,
I can what I affirm make appear.

Hudibras.

To VA'POUR, *v. a.* To effuse, or scatter in fumes or vapour.

Break off this last lamenting kiss,
Which sucks two souls, and *vapours* both away.

Donne.

VA'POURED, *adj.* Moist.

From mine eyes

The *vapour'd* tears down stilled here and there.

Sackville.

Splenetic; peevish.

The want of method pray excuse,
Allowing for a *vapour'd* muse.

Green.

VAPRIA, a village of Austrian Italy, in the Milanese.

VAPRINITZ, a small town of Austrian Illyria, in Istria, on the Adriatic; 4 miles from Friume.

VAR, a considerable river in the south-east of France, which rises in Mount Cemelione among the Alps, flows southward, forms the boundary between France and Piedmont, and falls into the Mediterranean not far from Antibes.

VAR, a department of France, forming the south-east extremity of the kingdom, and bordered by the county of Nice on the east, by the Mediterranean on the south, and by a part of the Alps on the north. This department forms part of Provence, has an extent of about 2900 square miles, and a population of 285,000.

VARADES, a town in the west of France, near the Loire, with 3000 inhabitants.

VARAD OLASZI, a small town in the east of Hungary, in the immediate neighbourhood of Great Waradein.

VARAGGIO, a small town in the north of Italy, in the duchy of Genoa, on the coast; 5 miles north-east of Savona, and 18 west south-west of Genoa.

VARALLO, a small town in the north-west of Italy, in the Piedmontese states, situated at the influx of the small river Mastallone into the larger stream of the Sesia; 20 miles south of Domo d'Ossola, and 57 north-north-east of Turin.

VARALLYA, SZENYER, a small town in the north-east of Hungary, on the river Szenyer, with 3000 inhabitants. Lat. 47. 43. 25. N. long. 23. 17. 35. E.

VARANA, a small lake of Italy, in the east of the kingdom of Naples, in the Capitanata, near Monte Gargano.

VARANACO, a small river of New Granada, in the province of San Juan de los Llanos, which rises near the source of the Paucana, runs east, and enters the Orinoco.

VARANO, or WRANO, a small town of the north of Hungary; 53 miles north of Tokay. It is inhabited by Slowacks.

VARARI, a river of South America, in the plain country

through which the river Amazons flows, which enters the Negro.

VARCA, a large river of the province of Cayenne, in South America, which runs east into the Atlantic ocean. On its shores are some fine plantations of sugar.

VARCHI (Benedetto), was born at Florence in the year 1502, and destined to trade; but manifesting an inclination for literature, he was sent to the university of Padua. In the Florentine academy, of which he was one year consul, he delivered lectures. Cosmo recompensed his services with the provostship of Monte Varchi, on which occasion he took holy orders; but before he could remove thither, he died of an apoplexy in 1565, at the age of sixty-three; and his eulogy was delivered, at his funeral, by Lionardo Salvati.

Varchi was a man of general literature. He wrote a Florentine history, comprising the period from 1527 to 1538, in which he was chargeable with gross adulation to the house of Medici. He also published several harangues, academical and funeral; poetical pieces, and a comedy in Italian. As a grammarian, he gained reputation by his dialogue "Ercolano," treating particularly of the Tuscan language.

VARDA, or KIS-VARDA, a small town in the east of Hungary, on the Theiss; 53 miles north-by-east of Debreczin.

VARDAC, a small town in the south-west of France, department of the Lot and Garonne, on the small river Bayse.

VARDAR (the *Arius* of the ancients), a large river of European Turkey, which rises from Mount Schartag, flows from north-west to south through Macedon, and empties itself into the gulf of Salonica; 10 miles west-by-south of that city.

VARE, *s.* [*vara*, Spanish.] A wand or staff of justice. *Malone*.—His hand a *vare* of justice did uphold. *Dryden*.

VAREL, a town of the north-west of Germany, in the grand duchy of Oldenburg, on the small river Hase; 17 miles north of Oldenburg.

VARENA, a small town of Austrian Italy, situated on the eastern side of the lake of Como; 30 miles north-by-east of Milan.

VARENNE, a small town in the central part of France, situated on the river Allier; 14 miles west-north-west of La Palisse, and 20 south of Moulins.

VARENNES, a petty town in the north-east of France, department of the Meuse, on the small river Aire; 18 miles north-west of Verdun.—2. Another small town in the north-east of France, department of the Upper Marne; 14 miles north-east of Langres.—3. A post village of the United States, in Pendleton county, South Carolina.

VARENT, *St.*, a small town in the west of France, department of the Two Seves, on the small river Thouaret; 14 miles east of Bressuire.

VARESE, an inland town of Austrian Italy, in the government of Milan, situated on the small river Verbano, near a lake called from it lake of Varese. It is 27 miles west-north-west of Milan.

VARGAS (Luis de), a Spanish painter of celebrity, was born at Seville in 1528. He went to Italy to improve his talents, and passed seven years in Rome, where he principally directed his attention to Raffaele and P. Perugino's works. When he returned to Seville, he found a formidable rival in Pedro Campagna, and he therefore returned to Italy to cultivate his powers still farther; and on returning a second time to his native city, obtained reputation and employment. He painted for the cathedral two pictures, viz., Christ bearing his Cross, and Adam and Eve; the latter of which is regarded as his master-piece. He executed several other works for the churches in Seville, both in oil and fresco; and he was no less distinguished for his skill in portraiture, particularly in his portrait of Donna Juana Cortes, duchess of Alcala. He died at Seville in 1590, aged 62.

VARGAS MEXIA (Francesco de), a Spanish lawyer, who

who occupied several posts in the judicature under Charles V. He was author of several works; particularly "De Episcoporum Jurisdictione, et Pontificis Maximi Auctoritate," Venet. 4to. 1563; "Commentaries upon War against the Infidels," &c. &c.

VARGEL, VARGULA, or GREAT VARGULA, a small town of Prussian Saxony, in Thuringia, on the Unstrut; 14 miles north-west of Erfurt.

VARIABLE, *adj.* [*variabilis*, Lat.] Changeable; mutable; inconstant.

O swear not by th' inconstant moon,
That monthly changes in her circled orb;
Lest that thy love prove likewise *variable*. *Shakspeare.*

VARIABLENESS, *s.* Changeableness; mutability.—Every good gift, and every perfect gift, is from above, and cometh down from the Father of lights, with whom is no *variableness*, neither shadow of turning. *James*.—Levity; inconstancy.—Censurers subject themselves to the charge of *variableness* in judgment. *Richardson.*

VARIABLY, *adv.* Changeably; mutably; inconstantly; uncertainly.

VARIANCE, *s.* Discord; disagreement; dissension.

She runs, but hopes she does not run unseen:
While a kind glance at her pursuer flies,
How much at *variance* are her feet and eyes? *Pope.*

To VARIATE, *v. a.* [*variatus*, Lat.] To change; to alter.—What was the cause of their multiplied, *varied* complotments against her; like the mousturs in Afric, every day almost a new conspiracy? *Dean King.*

VARIATION, *s.* [*variatio*, Lat.] Change; mutation; difference from itself.—The fame of our writers is confined to these two islands, and it is hard it should be limited in time as much as place, by the perpetual *variations* of our speech. *Swift*.—Difference; change from one to another.—In some other places are more females born than males; which, upon this *variation* of proportion, I recommend to the curious. *Graunt*.—Successive change.

Sir Walter Blunt,
Stain'd with the *variation* of each soil
Betwixt that Holmedon and this seat of ours. *Shakspeare.*

[In grammar.] Change of termination of nouns.—The rules of grammar, and useful examples of the *variation* of words, and the peculiar form of speech, are often appointed to be repeated. *Watts*.—Change in natural phenomena.—The duke ran a long course of calm prosperity, without any visible eclipse or wane in himself, amidst divers *variations* in others. *Wotton*.—Deviation.—I may seem sometimes to have varied from his sense; but the greatest *variations* may be fairly deduced from him. *Dryden*.—*Variation of the compass*; deviation of the magnetic needle from an exact parallel with the meridian.

VARICELLA, a diminutive of *Variola* (the small pox,) signifying a vesicular eruption, accompanied with slight febrile symptoms, occurring but once in the period of human life, and is popularly termed chicken-pox and swine-pox. See *PATHOLOGY*.

VARICOUS, *adj.* [*varicosus*, Lat.] Diseased with dilatation.—There are instances of one vein only being *varicous*, which may be destroyed by tying it above and below the dilatation. *Sharpe*.—For varicous veins, see *SURGERY*.

To VARIEGATE, *v. a.* [*variegatus*, school Latin.] To diversify; to stain with different colours.

Ladies like *variegated* tulips show;
'Tis to the changes half the charms we owe:
Such happy spots the nice admirers take,
Fine by defect, and delicately weak. *Pope.*

VARIEGATION, *s.* Diversity of colours.—Plant your choice tulips in natural earth, somewhat impoverished with very fine sand; else they will soon lose their *variegations*. *Evelyn*.

VARIETY, *s.* [*varietas*, Lat.] Change; succession of one thing to another; intermixture of one thing with another. Vol. XXIV. No. 1639.

All sorts are here that all th' earth yields;
Variety without end. *Milton.*

One thing of many by which *variety* is made. In this sense it has a plural.—The inclosed warmth, which the earth hath in itself, stirred up by the heat of the sun, assisteth nature in the speedier procreation of those *varieties*, which the earth bringeth forth. *Raleigh*.—Difference; dissimilitude.—There is a *variety* in the tempers of good men, with relation to the different impressions they receive from different objects of charity. *Atterbury*.—Variation; deviation; change from a former state.—It were a great vanity to reject those reasons drawn from the nature of things, or to go about to answer those reasons by suppositions of a *variety* in things, from what they now appear. *Hale*.—Many and different kinds.—He now only wants more time to do that *variety* of good which his soul thirsts after. *Law*.

VARIETY, a post village of the United States, in Nelson county, Virginia.

VARIGNANO, a small town in the north of Italy, in the States of the Church, delegation of Bologna.

VARILHES, a small town in the south of France, near the Eastern Pyrenees; 6 miles south of Pamiers, and 6 north of Foix.

VARIN KEY, a small island in the Spanish Main. Lat. 11. 10. N. long. 83. W.

VARINAS, a province of the Caraccas, bounded on the north by the provinces of Maracaibo and Venezuela, east by the plains of Caraccas and the Orinoco, west by Merida and New Granada, and south by Juan de los Llanos, or Casanare. The chief has the title of governor, and his functions are the same as those of Cumana and Maracaibo, in the civil, military, and ecclesiastical departments. The most remarkable features of this country are the extensive plains, of which it is mostly composed, and which are covered with a luxuriant herbage, feeding innumerable herds of cattle, flocks of sheep, and droves of mules and horses. Varinas is intersected by numerous large and navigable rivers, which occasionally inundate and fertilize its plains. Of these, the Apure, the Portuguesa, the Guanarito, the Bocono, Guanapalo, the Arauca, the Capanaparo, the Sinaruco, and the Meta, are the most noted.

VARINAS, the capital of the above province, situated about 300 miles south-east of Caraccas. Lat. 7. 40. N.

VARIOLA, [from *Variolæ*.] The small-pox. See *PATHOLOGY*.

VARIOLOUS, *adj.* [from *variola*, Lat., *small pustules*.] Relating to the disease called the small-pox.

VARIOUS, *adj.* [*varius*, Lat.] Different; several; manifold.

Then were they known to men by *various* names,
And *various* idols, through the heathen world. *Milton.*

Changeable; uncertain; unfixed; unlike itself.—The names of mixed modes want standards in nature, whereby to adjust their signification; therefore they are very *various* and doubtful. *Locke*.—Unlike each other.

He in derision sets
Upon their tongues a *various* spirit,
To rase quite out their native language. *Milton.*

Variegated; diversified.
Herbs sudden flower'd,
Opening their *various* colours. *Milton.*

VARIOUSLY, *adv.* In a *various* manner.
Various objects from the sense,
Variouly representing. *Milton.*

VARIRIN, a river of Brazil, in the province of Seara, which rises from the mountains in the interior, and enters the Paranas.

VARIX, *s.* [Lat.; *varice*, Fr.] A dilatation of the vein.—In ulcers of the legs, accompanied with *varices* or dilatations of the veins, the *varix* can only be assisted by the bandage. *Sharpe*.

VARLET, *s.* [*varlet*, old French, now *valet*.]—The old French word signifies a *youth*, as well as a *groom*, or *yeoman*; and accordingly Cotgrave says, "in old time it

was a more honourable title; for all *young gentlemen*, until they came to be eighteen years of age, were termed so; besides those that waited in the king's chamber, and who were for the most part *gentlemen*, [who] had no other title than of '*valets de chambre*,' until that Francis the first, perceiving such as attended him to be no better than '*roturiers*,' brought in above them another sort, and caused them to be styled '*gentilhommes de la chambre*,' presently after which the title of *valet* grew into disesteem, and is at the length become opposite to that of *gentilhomme*." The word is from *vassalletus*, low Lat. dimin. of *vassallus*.] A page or knight's follower; any servant or attendant. [Pages, *varlets*, ou *damoiseaux*; noms quelquefois communs aux *ecuyers*. *De St. Palaye, Mem.*]

They spyde

A *varlet* running towards hastily:—
Behind his back he bore a brassen shield;

Right well besemed it

To be the shield of some redoubted knight. *Spenser.*

A term of reproach; as in some parts of the north a vile person is still called a *varlet*; a scoundrel. This word has deviated from its original meaning, as *fur* in Latin.—I am the veriest *varlet* that ever chew'd. *Shakspeare.*

VARLETRY, *s.* Rabble; croud; populace.

Shall they hoist me up,

And shew me to the shouting *varletry*
Of cens'ring Rome?

Shakspeare.

VARNA, or WARNA (the ancient *Odessus*), a large town of European Turkey, in Bulgaria, situated at the bottom of a bay of the Black sea, at the mouth of the river Varna, which here forms a considerable lake; 120 miles north-north-east of Adrianople, and 150 north-by-west of Constantinople. Lat. 43. 6. 56. N. long. 27. 59. 7. E.

VARNISH, *s.* [*vernix*, Lat. Accordingly Chaucer, and our old lexicographers, write it *vernish*. *Prompt. Parv.* and *Barret.*] A matter laid upon wood, metal, or other bodies, to make them shine.

We'll put on those shall praise your excellence,
And set a double *varnish* on the fame. *Shakspeare.*

Cover; palliation.

To VARNISH, *v. a.* [*vernisser*, *vernir*, Fr.] To cover with something shining.

O vanity!

To set a pearl in steel so meanly *varnished* *Sidney.*

To cover; to conceal or decorate with something ornamental.

Specious deeds on earth, which glory excites;
Or close ambition *varnish'd* o'er with zeal. *Milton.*

To palliate; to hide with colour of rhetoric.

Cato's voice was ne'er employ'd
To clear the guilty, and to *varnish* crimes. *Addison.*

VARNISHER, *s.* One whose trade is to varnish.—An oil obtained of common oil, may probably be of good use to surgeons and *varnishers*. *Boyle.*—A disguiser; an adorer.

Modest dulness lurks in thought's disguise;
Thou *varnisher* of fools, and cheat of all the wise. *Pope.*

VARNITZA, a small town of Lower Moldavia, near Bender, remarkable as the residence of Charles XII. of Sweden, from 1709 till 1713.

VAROLI (Costanzo), was born at Bologna in 1542, and became a professor of physic and surgery in his native city. In 1572, he was invited by pope Gregory XIII. to settle at Rome as his first physician, and professor in the college of Sapienza. He was advancing in reputation by his anatomical discoveries, as well as in his practice of medicine and surgery, when a premature death cut him off in 1575, in the 33d year of his age. He was particularly distinguished in the anatomy of the brain, which he described in his work, "De Nervis Opticis nonnullisque aliis præter communem Opinionem in Humano Capite observatis Epistola ad Hiero-

nymum Mercurialem," Patav. 1570. Among the parts of the brain which he discovered, or more accurately described, was that known by his name, the "Pons Varoli," formed by the union of the crura cerebri and cerebelli, and the place whence several nerves originate.

VARPA, an island near the north-east coast of Sumatra, about 30 miles in circumference. Lat. 0. 36. S. long. 103. 25. E.

VARRO (Marcus Terentius), the most learned of the ancient Romans, received from Pompey the Great, in the piratical war, a naval crown, and joined this chief in the civil war against Cæsar; but afterwards submitting to the latter, he was employed by him in making a collection of books for the public library which he proposed to establish at Rome. The death of Cæsar prevented the accomplishment of this design; and Varro, being involved in the prosecution by the triumvirates, escaped with his life, but with the loss of his library. After the restoration of tranquillity, he retired for the prosecution of his studies, and composed books till his 88th year. His life was prolonged to the age of 90, and he died about the year B. C. 27. He is highly extolled for his various talents and literary performances by ancient writers, and particularly by Cicero, in his "Academicus." Aulus Gellius cites a passage from Varro, in which he declares of himself, that to the 78th year of his life he had composed 490 books, and he continued to write to his 90th year. The subjects on which he wrote, as we learn from Fabricius, were grammar, eloquence, poetry, the drama, history, antiquities, philosophy, politics, agriculture, nautical affairs, architecture, and religion. He was also the first Latin author of that species of satire called the Menippean; from Menippus, a Greek, its inventor, which was written in prose, with a mixture of verse in different measures.

VARRONIA [so named by Browne, from Marcus Terentius Varro], in Botany, a genus of the class pentandria, order monogynia, natural order of asperifoliae, borraginæ (*Juss.*)—Generic Character. Calyx: perianth one-leafed, tubular, five-toothed, with recurved teeth, permanent. Corolla one-petalled, tubular, cylindrical; border five-parted, spreading. Stamina: filaments five, awl-shaped, length of the corolla; anthers incumbent, oblong. Pistil: germ ovate; style filiform, length of the corolla; stigmas four, bristle-shaped. Pericarp: drupe ovate, one-celled, inclosed by the calyx, free. Seed: nut four-celled, roundish.—*Essential Character.* Corolla five-cleft; drupe with a four-celled nut.

1. *Varronia lineata*.—Leaves lanceolate, marked with lines; peduncles lateral, growing to the petiole; spikes globular.—Native of the West Indies.

2. *Varronia bullata*.—Leaves ovate, veined and wrinkled; spikes globose. This is a shrub a fathom in height, warted, with rough-haired branches.—Native of Jamaica, in dry coppices near the sea.

3. *Varronia mirabiloides*.—Leaves ovate, wrinkled, serrate; flowers racemed, directed one way; corolla salver-shaped. Stem from two to three feet high, frutescent, branched, erect, rough-haired.—Native of St. Domingo, where the French call it Dent de Chien blanc.

4. *Varronia Martinicensis*.—Leaves ovate, acuminate; spikes oblong. This shrub is the height of a man.—Native of Martinico, on the borders of woods.

5. *Varronia globosa*, or globular-spiked *varronia*.—Leaves lanceolate-oblong; stem dichotomous; peduncles axillary, elongated, naked; spikes globular.—Native of the West Indies, on the coast.

6. *Varronia Curassavica*, or long-spiked *varronia*.—Leaves lanceolate; spikes oblong. Stem shrubby, a fathom in height.—It grows in Curaçao.

7. *Varronia angustifolia*, or narrow-leaved *varronia*.—Leaves linear, rugged, somewhat toothed; spikes linear-oblong.—Native of the island of Santa Cruz.

8. *Varronia alba*, or white-fruited *varronia*.—Leaves cordate; flowers cymed. This is a tree, often thirty feet in height, with a large head, and a trunk half a foot in diameter.—Native of Carthage and Curaçao, where the nut is eaten.

9. *Varronia monosperma*, or one-seeded *varronia*.—Leaves ovate, rugged, quite entire at the base; spikes cymed.—Native of the Caraccas. Loureiro has a species which he names *Varronia sinensis*. He describes it as a middle-sized tree with spreading branches: the leaves ovate-lanceolate, quite entire, shining, opposite and alternate, subpetioled; flowers white, on many-flowered peduncles, lateral and terminating; calyx subcampanulate, short; corolla campanulate, with a short thick tube, and the segments of the border ovate, spreading, equal; filaments inserted into the mouth of the tube, nearly equal to the corolla; drupe small, smooth, red, acid, eatable; nut four-celled.—Native of China. The pulp of the tree is in frequent use among the Chinese, as astringent.

VARS, a small town in the west of France, near the river Charente; 6 miles north of Angouleme.

VARU, an island on the coast of South America, and province of Carthagena. Its length is about 16 miles, and its breadth 3. Lat. 10. 12. N. long. 75. 25. W.

VA'RVELS, *s.* [*vervelles*, French.] Silver rings about the leg of a hawk, on which the owner's name is engraved. See *VERVELS*.

To *VA'RY*, *v. a.* [*varior*, Latin.] To change; to make unlike itself.

Let your ceaseless change

Vary to our great Maker still new praise.

Milton.

To change to something else.—We are to *vary* the customs, according to the time and country where the scene of action lies. *Dryden*.—To make of different kinds.—God hath divided the genius of men according to the different affairs of the world; and *varied* their inclinations, according to the variety of actions to be performed. *Brown*.—To diversify; to variegate.

God hath here

Vary'd his bounty so with new delights.

Milton.

To *VA'RY*, *v. n.* To be changeable; to appear in different forms.

Darkling stands

The *varying* shore o' th' world.

Shakspeare.

To be unlike each other.—Those who made laws, had their minds polished above the vulgar; and yet unaccountably the public constitutions of nature *vary*. *Collier*.—To alter; to become unlike itself.

So *varied* he, and of his tortuous train

Curld many a wanton wreath.

Milton.

To deviate; to depart.—The crime consists in violating the law, and *varying* from the right rule of reason. *Locke*.—To succeed each other.

While fear and anger, with alternate grace,
Pant in her breast, and *vary* in her face.

Addison.

To disagree; to be at variance.

In judgment of her substance thus they *vary*,
And *vary* thus in judgment of her seat;
For some her chair up to the brain do carry,
Some sink it down into the stomach's heat.

Davies.

To shift colours.

Will the falcon, stooping from above,
Smit with her *varying* plumage, spare the dove?
Admires the jay the insect's gilded wings?
Or hears the hawk when Philomela sings?

Pope.

VA'RY, *s.* Change; alteration. *Not in use.*

Such smiling rogues as these sooth every passion;
Renege, affirm, and turn their halcyon beaks,
With every gale and *vary* of their masters.

Shakspeare.

VARU, a small but well peopled and thriving town in the north-east of Hungary; 11 miles south of Munkacs.

VARZI, a small town in the north of Italy, in Piedmont, on the small river Staffora; 9 miles north of Bobbio.

VARZY, a small town in the central part of France, department of the Nievre; 9 miles south-west of Clamicy, and 28 north-east of Nevers.

VAS, a hamlet of Brazil, in the province of Rio Janeiro, a very short distance to the north of Villa de Principe.

VAS ANTON, an island of Brazil, in the province of Pernambuco.

VAS MARTIN, an island of the Atlantic sea, between the coast of Brazil and the island of Caferia.

VASARHELY, a town in the south-east of Hungary, in the county of Czongrad, on the lake of Hold; 21 miles south-south-east of Czongrad, and 83 south-east of Pest.

VASARHELY, SANTO, a small town of Hungary, on the river Torna; 72 miles south-by-east of Presburg.

VASARVAKSI, a small town in the north-west of European Turkey, in the sandgiacat of Bosnia.

VASARUT, a small town of the west of Hungary, in the isle of Schutt, an island formed by the Danube.

VASCONAS, PROVINCIAS VASCONGADAS, or the *BASQUE PROVINCES*, is a general term for the three provinces of Biscay, Guipuscoa and Alava, in Spain.

VASCULAR, *adj.* [*vasculum*, Latin.] Consisting of vessels; full of vessels.—Nutrition of the solids is performed by the circulating liquid in the smallest *vascular* solids. *Arbutnot.*

VASCULARITY, *s.* State or quality of being vascular.—As a further proof of the *vascularity* of the teeth, nodes sometimes form on them. *Outlines of Anat.*

VASCULIFEROUS, *adj.* [*vasculum* and *fero*, Latin.] Such plants as have, besides the common calyx, a peculiar vessel to contain the seed, sometimes divided into cells; and these have always a monopetalous flower, either uniform or difform. *Quincy.*

VASE, *s.* [*vasa*, Latin.] A vessel; generally a vessel rather for show than use.

The toilet stands unveil'd,

Each silver *vase* in mystic order laid.

Pope.

It is used for a solid piece of ornamental marble.

VASE, or *VASE RIVER*, a river of North America, which empties into the Mississippi from the north-east, 3 miles below the Great Rock, about 55 miles north-west-by-north of the mouth of the Ohio.

VASEUX, a river of the United States, in the state of the Illinois.

VASHON'S ISLAND, an island near the west coast of America, at the bottom of Admiralty inlet, and eastern branch of the gulph of Georgia. Lat. 47. 10. N. long. 237. 25. E.

VASICA, a river of Florida, which runs north, and enters the sea between the settlement of San Marcos and the river Vilches.

VASIETTA, a river of America, which runs into lake Michigan. Lat. 44. 38. N. long. 85. 18. W.

VASIL, a small town of the interior of European Russia, near the confluence of the Sura and the Wolga; 87 miles east-south-east of Niznei-Novgorod.

VASILIKO, or *BASILICO*, a village of European Turkey, in the Morea, about 9 miles west-north-west of Corinth, situated on the angle of a rocky ascent, on the site of the ancient Sicyon.

VASILKOV, a small town of the west of European Russia, in the government of Kiev; 24 miles south-south-west of Kiev.

VASQUEZ, a settlement of the island of Cuba; 66 miles north-west of Villa del Principe.

VASQUEZ, a river of Mexico, which runs into the Spanish Main. Lat. 11. 30. N.

VA'SSAL, *s.* [*vassal*, French; *vassallo*, Ital.; a diminutive of *vassus*, low Latin; a dependant, according to Wachter, which he refers to the Welch *gwas*, a servant.] One who holds of a superior lord.—The *vassals* are invited to bring in their complaints to the viceroy, who imprisons and chastises their masters. *Addison*.—A subject; a dependant.—She cannot content the lord with performance of his discipline, that hath at her side a *vassal*, whom Satan hath made his vice-gerent, to cross whatsoever the faithful should do. *Hooker*.

Vassals of his anger, when the scourge

Inexorable

Inexorable, and the torturing hour
Calls us to penance.

A servant; one who acts by the will of another.
I am his fortune's *vassal*, and I send him
The greatness he has got.

A slave; a low wretch.
Thou swear'st thy Gods in vain,
O *vassal*! miscrant!

To VA'SSAL, *v. a.* To subject; to enslave; to exercise
command over.

Thou couldst not make my mind go less, nor pare
With all their swords one virtue from my soul:
How am I *vassal'd* then? Make such thy slaves
As dare not keep their goodness past their graves.

VA'SSALAGE, *s.* [*vasselage*, French.] The state of a
vassal; tenure at will; servitude; slavery; dependance.
All my pow'rs do their bestowing lose,
Like *vassalage* at unawares encount'ring
The eye of majesty.

VASSALBOROUGH, a post township of the United
States, in Kennebeck county, Maine, on the east side of the
Kennebeck, opposite Sidney; 8 miles north of Augusta, and
180 north-north-east of Boston.

VASSELONNE, a small town in the north-east of France,
in Alsace; 14 miles west-by-north of Strasburgh.

VASSY, a small town in the north-east of France, depart-
ment of the Upper Marne.

VASSY, a small town in the north of France, department
of Calvados; 28 miles south-west of Caen.

VAST, *adj.* [*vastus*, Latin.] Large; great.—What the
parliament meant to attempt with those *vast* numbers of
men, every day levied. *Clarendon*.—Viciously great;
enormously extensive or capacious.—They view'd the *vast*
unmeasurable abyss. *Milton*.

VAST, *s.* [*vastum*, Latin.] An empty waste.—They
shook hands, as over a *vast*; and embraced, as from the ends
of the opposed winds. *Shakspeare*.

VASTA'TION, *s.* [*vastatio*, from *vasto*, Lat.] Waste;
depopulation.—The miseries of war, and the *vastations*
that follow upon it, may be a good preparative to us for
setting a true value upon the benefit of peace. *Bp. Hall*.

VASTI'DITY, *s.* [*vastitas*, Lat.] Wideness; immensity.
A barbarous word.

Perpetual durance,
Through all the world's *vastidity*.

VA'STILY, *adv.* Greatly; to a great degree.—Holland's
resolving upon its own defence, without our share in the
war, would leave us to enjoy the trade of the world, and
thereby grow *vastly* both in strength and treasures. *Temple*.

VA'STNESS, *s.* Immensity; enormous greatness.
She by the rocks compell'd to stay behind,
Is by the *vastness* of her bulk confin'd

VASTO, or VASTO D'AMMONE, a town of Italy, in the
north-east of the kingdom of Naples, in Abruzzo Citra,
situated on the coast of the Adriatic. This place, blessed
with a fine climate and productive territory, stands unfortu-
nately in a country undermined by volcanic fire. It was
severely damaged by an earthquake in 1706; and in 1816,
the ground giving way beneath, many of the buildings
sunk suddenly into the earth, and nearly disappeared. Its
population, before this dreadful calamity, was about 5000.
A track of considerable extent and fertility was at the same
time precipitated into the sea; and the total loss of property
was estimated at £400,000 sterling; 18 miles west-north-
west of Termoli.

VASTO, a small town in the south-east of the kingdom
of Naples, in the Terra d'Otranto.

VA'STY, *adj.* Large; enormously great.—I can call
spirits from the *vasty* deep. *Shakspeare*.

VAT, *s.* [*vut*, Dutch; *vat*, Saxon.] A vessel in which
liquors are kept in the immature state.

Milton.

Shakspeare.

Shakspeare.

Beaum. and Fl.

Shakspeare.

Shakspeare.

Shakspeare.

Waller.

Plumpy Bacchus, with pink eyen,
In thy *vats* our cares be drown'd.

VATAN, a small town in the central part of France,
department of the Indre; 14 miles north-west of Issouldun.

VATERIA [so named by Linnæus from Abrah. Vater,
professor of medicine and botany at Witteberg], in Botany,
a genus of the class polyandria, order monogynia, natural
order of guttiferæ (*Juss.*)—Generic Character. Calyx:
perianth five-cleft, acute, small, permanent. Corolla: petals
five, ovate, spreading. Stamina: filaments numerous,
shorter than the corolla; anthers simple. Pistil: germ
roundish; style simple, short; stigma capitate. Pericarp:
capsule turbinate, coriaceous, placed on the reflexed calyx;
marked with three sutures, one-celled, three-valved. Seed
one, ovate.—*Essential Character*. Calyx five-cleft. Co-
rolla five-petalled. Capsule three-valved, one-celled, three-
seeded.

Vateria Indica.—A handsome tree sixty feet high, with
wide branching head; bark thick, which when wounded
discharges a clear fragrant resin, bitter to the taste, and dries
yellow, and brittle like glass.—Native of Ceylon and Ma-
labar.

VATERNISH, or WATERNISH POINT, a remarkable
promontory on the north-west coast of the isle of Sky.

VATHI, a small seaport of the Ionian republic, the chief
place of the island of Ithaca, situated at the extremity of
a spacious bay, and containing 3000 inhabitants. It occu-
pies the site of the ancient capital of Ithaca.

VATHI, or VAHTI, a seaport of the island of Samos,
containing about 500 houses, the inhabitants of which
support themselves by fishing, and by the export of a very
good wine, produced in the neighbourhood.

VATHY, a small town of European Turkey, in the Morea,
built on the site of the ancient Hypsus.

VATICA [perhaps from Vaticinium; if it be in esteem
among the Chinese for the purposes of divination], in Bo-
tany, a genus of the class dodecandria, order monogynia,
natural order of guttiferæ (*Juss.*)—Generic Character. Ca-
lyx: perianth one-leaved, five-parted, obtuse at the base, erect;
segments lanceolate, shorter than the corolla. Corolla:
petals five, sessile, elliptic, large. Stamina: filaments none;
anthers fifteen, sessile, very short, four-celled; the two outer
cells terminated by a spine interposed between them;
the two inner shorter by half, without any spine. Pistil:
germ conical, five-cornered; style cylindrical, five-striated;
stigma obtuse. Pericarp: capsule three-celled. Seed one
in each cell.—*Essential Character*. Calyx five-cleft. Pe-
tals five; anthers fifteen, sessile, four-celled.

Vatica Chinensis.—This is a tree having the same ap-
pearance with Vateria Indica, and nearly allied to it, but
differing in the anthers and perhaps in the fruit. Branchlets
indistinctly angular, hoary with meal, leafy, many-flowered;
leaves alternate, ovate-oblong, bluntly acuminate, quite en-
tire, smooth, with the veins standing out on both sides and
alternate, and the veinlets netted and anastomosing.—Native
of China. A very rare plant.

VATIBAI, a small river of Quito, in the province of
Mainas, which runs east, and enters the Napo.

VATICAN, or VATICANUS, is properly the name of one of
the seven hills on which Rome stands; on the foot of this
is the famous church of St. Peter, hence called the Vatican;
and a magnificent palace of the pope, which has the same
denomination.

The word, according to Aulus Gellius, is derived from
vaticinium, prophecy; by reason of the oracles and predic-
tions which were used to be delivered there by the inspira-
tion of an ancient deity, called *Vaticanus*; who was sup-
posed to unbind the organs of speech in new-born children;
and whom others will have to be no other than Jupiter, con-
sidered in that capacity.

The Library of the Vatican is one of the most cele-
brated in the world: it is particularly remarkable for its
manuscripts. It was first erected, according to Petavius
(*Rat. Temp. lib. ix. cap. 9.*), by pope Nicholas V., who suc-
ceeded to the papal chair in 1447. It was re-established,
after the books had been dispersed, under the pontificate of
Calixtus

Calixtus

Calixtus III., by Sixtus IV.; and after having been almost entirely destroyed by the army of Charles V., it was not only restored to its former state by Sixtus V., but greatly enriched with books and manuscripts. It was finally fixed in the Vatican, under the pontificate of Martin V.

VATICANO, a cape on the west coast of Calabria Ultra. Lat. 38. 40. N. long. 16. 52. E.

VATICIDE, *s.* [*vates* and *cædo*, Latin.] A murderer of prophets.—The caitiff *vaticide* conceiv'd a prayer. *Pope.*

VATICINAL, *adj.* [*vaticinans*, Latin.] Containing predictions.—He has left *vaticinal* rhymes, in which he predicted the union of Scotland with England. *Warton.*

To VATICINATE, *v. n.* [*vaticinor*, Latin.] To prophesy; to practise prediction.—The most admred of all prophane prophets, whose predictions have been so much cried up, did *vaticinate* here. *Howell.*

VATICINATION, *s.* [*vaticination*, old French; *vaticinatio*, Latin.] Prediction; prophecy.—Unless we dare ascribe to the tyrant a spirit of *vaticination*, we cannot acquit the author of the letters of so manifest a cheat. *Bentley.*

VATISA, or FATSA, a small seaport of Asia Minor, in the Black sea, at the west end of a fine bay; 10 miles south-east of Unieh.

VATTIER (Peter), an Arabic scholar, was born at Lizieux, in Normandy, and having been educated for the medical profession, was appointed physician and counsellor to Gaston, duke of Orleans, brother of Lewis XIII. To an extensive acquaintance with the ancient naturalists and physicians, both Greek and Latin, he added a peculiar attachment to Arabic writers, and translated many of their works. Among these are "The Mahometan History, or the Forty-nine Caliphs of Elmacin;" "The History of the Great Tamerlane, from the Arabic of Achamed, Son of Guerasp;" "The Egypt of Murtadi;" "The Elegy of Tograi, with some Sentences from the Arabian Poets," &c. He also wrote a work, entitled "Nouvelles Pensées sur la Nature des Passions," 1659, 4to. The time of his death is not known. *Moreri.*

VAVAGO, or VAVOU, one of the Friendly islands, in the South Pacific ocean; it has the advantage of a plentiful supply of water, with a good harbour. Lat. of the western point, 18. 34. S.

VAVASOR, VALVASOR, VAVASOUR, or VALVASOUR, in our ancient customs, a diminutive of *vassal*, or *vassour*; signifying a *vassal* of a *vassal*, or one who held a fee of another vassal.

VAVA'SOUR, *s.* [*vavasseur*, French.] One who himself holding of a superior lord, has others holding under him.—Names have been taken of civil honours, as king, knight, valvasor, or *vavasor*, squire. *Camden.*

Vauban (Sebastian le Prestre), Seigneur de, marshal of France, and an eminent engineer, was born in 1633, and began to bear arms at the age of seventeen, under the prince of Condé, general of the Spanish army. During the war in 1667, he conducted several sieges, at which Lewis XIV. attended in person, and commissioned to fortify several places, and in 1668, he was nominated governor of the citadel of Lille, which he had constructed. Upon the whole, he fortified one hundred old places, constructed thirty-three new fortresses, and had the principal direction of fifty-three sieges. In recompence of his various exertions he was advanced to several posts of honour, and in 1703 appointed marshal of France. At Dunkirk, whither he was sent in a state of great alarm, he died of a fluxion in his lungs, in March 1707, at the age of seventy-four years. He composed twelve large MS. volumes, which he modestly denominated "Mes Oisivetés;" and Fontenelle observes of him in relation to these, that if all his projects could be executed, his "idleness" would be more useful than his labours. The following works were also either written by himself, or in consequence of ideas which he suggested: viz. "Manière de Fortifier, par M. de Vauban, mise en

Vol. XXIV. No. 1640.

ordre par le Chevalier de Cambrai," Amst. 1689 and 1692. A work printed at Paris under the title of "L'Ingenieur François," with notes by Herbert, professor of Mathematics; and afterwards with notes by the Abbé du Fay; "Nouveau Traité de l'Attaque et de la Défence de Places suivant le Systeme de M. de Vauban, par M. Desprez de Saint-Sevin," Paris 1736; "Essais sur la Fortification, par M. de Vauban," Paris, 1740; "Project d'un Dîme Royale," Rouen 1707, often reprinted. This last work is attributed by Voltaire to Bois-Guillebert. *Moreri.*

Vaubecourt, a small town in the north-east of France, department of the Meuse, on the Aisne; 12 miles north of Bar.

Vaucluse, a department in the south-east of France, in Provence, bounded on the south by the department of the Mouths of the Rhone. Its extent, small for a French department, but similar to that of one of the larger counties of Britain, is about 1400 square miles; its population about 210,000. Its surface in the north-east is mountainous, being traversed by branches of the Alps. It is divided into four arrondissements, viz. Avignon, the capital, Orange, Carpentras, and Apt. A remarkable fountain gives name to the department of the Vaucluse. It issues from an immense cavern, overhung and surrounded by huge rocks and mountains, and is remarkable chiefly for the quantity of water discharged, which forms at once a river, the Sorgues, capable of driving mills and bearing boats. In summer, and during dry seasons, the waters of the fountain issue tranquilly from the cavern by subterraneous channels; but in spring, and after heavy falls of rain, they overflow the basin, and precipitate themselves among the rocks in a number of cascades. The water is pure and limpid. This fountain is celebrated for the ill fated loves of Petrarch and Laura, whose residence was in the vicinity. The village of Vaucluse is a miserable place.

Vaucouleurs, a small town in the north-east of France, department of the Meuse, situated on the declivity of a hill on the river Meuse; 14 miles south-east of Commercy.

Vaud, Pays de, a canton in the west of Switzerland, bounded on the west by France, on the south by the lake of Geneva, while on the north it includes part of the lake of Neufchatel. Its superficial extent is nearly 1500 square miles, equal to one of the larger counties of Britain; and its population is about 150,000. It is in general less mountainous than other parts of Switzerland, consisting of beautiful valleys and plains, intersected by small cultivated hills.

The inhabitants of the Pays de Vaud are strict Calvinists, and remarkable for the careful education given to their youth. Geneva is in its vicinity; and its chief town, Lausanne, is a seminary for theological study. At another of its towns, Yverdon, is the well known institution of Pestalozzi.

Vaudemont, a small town in the north-east of France, department of the Meurthe, situated in a fertile country. Roman antiquities are occasionally found here; 22 miles south-south-west of Nancy.

Vaudevil, *s.* [*vaudeville*, French.] A song common among the vulgar, and sung about the streets. *Trevour.* A ballad; a trivial strain. The French *vaudeville* is now applied to short dramatic pieces.

Vaudreuil, a seigniory of Lower Canada, in the district of Montreal, situated on the south side of the Ottawa river.

Vaugenray, a small town in the east of France, department of the Rhone; 9 miles south-west of Lyons.

Vaughan, a township of Upper Canada, in the county of York.

Vaugirard, a small town of France, about 3 miles from Paris.

Vaujour, a small town and district in the north-east of France, in the department of the Seine and Marne, between Paris and Meaux.

Vaulde, a village of England, in the county of Hereford; 5½ miles north-north-east of Hereford.

Vaulry, a town in the central part of France, department of the Creuse, with 2300 inhabitants; 7 miles north-west of Guercy.

VAULT, *s.* [*voulte*, French; *volta*, Italian; *voluta*, low Latin.] A continued arch.

O, you are men of stone :
Had I your tongues and eyes, I'd use them so
That heaven's *vault* should crack.

Shakspeare.

A cellar.

Creep into the kill-hole.
He will seek there : neither press, well, *vault*, but he hath
an abstract for the remembrance of. *Shakspeare.*—A cave;
a cavern.

The silent *vaults* of death, unknown to light,
And hell itself, lie naked to his sight.

Sandys.

A repository for the dead.
Shall I not be stifled in the *vault*,
To whose foul mouth no healthsome air breathes in ?

Shakspeare.

To VAULT, *v. a.* [*voûter*, Fr.] To arch; to shape to
a vault.

Hath nature given them eyes
To see this *vaulted* arch, and the rich cope
Of sea and land, which can distinguish 'twixt
The fiery orbs above, and the twinn'd stones
Upon th' humbl'd beach.

Shakspeare.

To cover with an arch.

Over-head the dismal hiss
Of fiery darts in flaming volleys flew;
And flying *vaulted* either host with fire.

Milton.

To VAULT, *v. n.* [*volteggiare*, Ital.] To leap; to jump.
Vaulting ambition, which o'erleaps itself,
And falls on th' other.

Shakspeare.

To play the tumbler, or posture-master.

VAULT, *s.* A leap; a jump.

VAULTAGE, *s.* Arched cellar. *Not in use.*

He'll call you to so hot an answer for it,
That caves and wombly *vaultages* of France
Shall chide your trespass, and return your mock
In second accent to his ordnance.

Shakspeare.

VAULTED, *adj.* Arched; concave.

Restore the lock! she cries, and all around
Restore the lock! the *vaulted* roofs rebound.

Pope.

VAULTER, *s.* A leaper; a jumper; a tumbler.

They would leap to reach 'em,
And leap aloft too.—Such are light enough:
I am no *vaulter*,

Beaum. and Fl.

VAULTY, *adj.* Arched; concave. *A bad word.*

I will kiss thy detestable bones,
And put my eye-balls in thy *vaulty* brows,
And ring these fingers with thy household worms.

Shakspeare.

VAULX, a small town in the north-east of France, department of the Pas de Calais; 4 miles north-east of Ba-paume.

VAUMARCUS, a large and well built village in the west of Switzerland, canton of Neufchatel; 11 miles south-west of Neufchatel.

To VAUNT, *v. a.* [*vanter*, Fr.] To boast; to display with ostentation.—My vanquisher spoil'd of his *vaunted* spoil. *Milton.*

To VAUNT, *v. n.* To play the braggart; to talk with ostentation; to make vain show; to boast.

You say, you are a better soldier;

Let it appear so; make your *vaunting* true. *Shakspeare.*

VAUNT, *s.* Brag; boast; vain ostentation.

Him I seduc'd
With other promises and other *vaunts*.

Milton.

VAUNT, *s.* The first part. *Not used.*

Our play

Leaps o'er the *vaunt* and firstlings.

Shakspeare.

VAUNT-COURIER, *s.* [*avant courier*, Fr.] A precursor. See VANCOURIER.

You sulphurous and thought-executing fires,
Vaunt-couriers to oak-cleaving thunderbolts,
Singe my white head!

Shakspeare.

VA'UNTER, *s.* [*vanteur*, Fr.] Boaster; braggart; man given to vain ostentation.

Some feign

To menage steeds as did this *vaunter*; but in vain. *Spenser.*

VA'UNTFUL, *adj.* Boastful; ostentatious.

Whiles all the heavens on lower creatures smil'd,
Young Clarion, with *vauntful* lustihed,
After his guise did cast abroad to fare.

Spenser.

VA'UNTINGLY, *adv.* Boastfully; ostentatiously.

I heard thee say, and *vauntingly* thou spak'st it,
That thou wert cause of noble Gloster's death. *Shakspeare.*

VA'UNTMURE, *s.* [*avant mur*, Fr.] A false wall; a work raised before the main wall.—With another engine named the warwolfe, he pierced with one stone, and cut, as even as a thread, two *vauntmures*. *Camden.*

VAUQUELIN. See IVETEAUX.

VAURENARD, a small town in the south-east of France, department of the Rhone, with 1100 inhabitants.

VAUS, a river of West Florida, which runs into the St. Mark. Lat. 30. 10. N. long. 84. 36. W.

VAUVERT, a town in the south-east of France, department of the Gard, with 3400 inhabitants; 11 miles south-west of Nimes.

VAUVILLERS, a small town in the east of France, department of the Upper Saone; 22 miles north of Vezoul.

VAUVINCOURT, a small town in the north-east of France, department of the Meuse; 6 miles north-east of Bar-sur-Ornain.

VAUXHALL, a hamlet of England, in the parish of Lambeth, county of Surrey. Here is the celebrated Vauxhall gardens, originally opened under the name of Spring gardens, in 1730, by Mr. Jonathan Tyers. Till of late years, the gardens were opened every evening during summer, for the reception of company; but they are now only admitted three times a week. The entertainment consists of music, vocal and instrumental, illuminations, and fire works; and all kinds of refreshments may be procured.

VA'WARD, *s.* Fore part. *Obsolete.*

Since we have the *vaward* of the day,
My love shall hear the music of my hounds. *Shakspeare.*

Marcius,

Their bands i' the *vaward* are the Antiates
Of their best trust.

Shakspeare.

VAYA, an island of the Orinoco, one of those which form the entrance of the bay of Charaguanas with the point of Galera, off the island of Trinidad.

VAYNOR, a parish of Wales, in Breconshire, near Brecon. Population 1616.

VAYRAC, a small town in the south of France, department of the Lot; 22 miles north-east of Gourdon.

VAZABARIS, a river of Brazil, in the province of Sergippe, which rises near the coast, runs south-south-east, and enters the bay of Sergippe.

VAZSECH, a large village of the north-west of Hungary, in the palatinate of Lyptau, with 1600 inhabitants.

UAIGHMOR, a hill of Scotland, in Perthshire, in the parish of Kilmadock, of considerable elevation, but principally noticed for a large natural cave in the south side, from whence it derives its name, Uaighmor signifying "great cave."

UBALDI (Guido), an eminent mathematician of noble extraction from a branch of the family of Bourbon, studied under Condamine, and made early as well as rapid proficiency. Mathematics and mechanics were his favourite objects; but in the latter science he published a work entitled

entitled "Mecanicorum Liber in quo hæc continentur:—de Libra, Vecte, Trochlea, Axe in Peritrochio, Cuneo, Cochlea," Venetiis, 1615, folio. In this work he reduces all machines to the lever, applying the same principle with advantage to some of the other mechanical powers, and particularly to the pulley and its combinations.

UBAQUE, a settlement of New Granada, 7 leagues from Santa Fe.

UBARANA, a bay of Brazil, on the coast of the province of Seara.

UBARCO, a cape on the north-west coast of the island of Iviça. Lat. 39. 5. N. long. 1. 18. E.

UBATUBA, a town of Brazil, in the province of San Vicente, situated on a neck of land, opposite the isle of Puercos.

UBATUBA, a river of Brazil, which runs into the Atlantic. Lat. 23. 20. S.

UBAY, a large and copious river of Peru. It takes its source from a lake which is formed by the river Parapiti, or Apere, in the country and territory of Isozo, and runs to the north, always inclining to the north-west more than 70 leagues. It crosses the country of the Chiquitos Indians, and the province of Los Moxos in the kingdom of Quito, in which it enters, much increased by the waters it has received from that of Itenes, opposite the entrenchment of Santa Rosa. This river is also called Magdalena San Miguel, and formerly Los Chiquitos. Its mouth is in lat. 11. 57. S.

UBAYE, a river in the south-east of France, department of the Lower Alps. It falls into the Durance.

UBAZU, a river of Brazil, in the captainship of San Vicente, which enters the sea opposite the island San Sebastian.

UBBESTON, a parish of England, in Suffolk; 6 miles west-south-west of Halesworth.

UBEDA, a large inland town of the south of Spain, in Andalusia, in the province of Jaen. It is situated on a hill, in the midst of a finely diversified country, at a sufficient distance from the Sierra Morena to be free from the inconveniences of a mountainous country, while it enjoys in that extensive range a shelter from the north winds. Hence all kinds of fruit, grapes, olives, and, above all, figs of excellent quality, abound. The fields are well cultivated and fertile. The population of the town amounts to 16,000; 30 miles north-east of Jaen, and 58 north-north-east of Granada. Lat. 38. 3. N. long. 3. 17. W.

UBERLINGEN, a small town of the west of Germany, in Baden, situated on a bay of the lake of Constance. The inhabitants are chiefly Catholics, and the town ancient. It has several churches, and other buildings which formerly belonged to religious orders.

UBERO, a point of land in Venezuela, opposite the island of Curacao.

UBEROUS, *adj.* [uber, Lat.] Fruitful; copious; abundant.—Here the women give suck, the *uberous* dug being stretched over their naked shoulder. *Sir T. Herbert.*

UBERTY, *s.* [ubertas, Lat.] Abundance; fruitfulness.—They enjoy that natural *uberty*, and fruitfulness, which, without labouring toil, doth in such plenteous abundance furnish them with all necessary things. *Florio.*

UBIA, a river of the New Kingdom of Granada, in the province of San Juan de los Llanos, which is formed by the junction of several streams, and enters Guayavero.

UBICATION, or UBERTY, *s.* [from *ubi*, Lat.] Local relation; whereness. *A scholastic term.*—Relations, *ubications*, duration, the vulgar philosophy admits to be something; and yet to inquire in what place they are, were gross. *Glanville.*

UBIQUISTS, UBIQUITARIES, or UBIQUITARIANS, formed from *ubique*, everywhere, in Ecclesiastical History, a sect of Lutherans, which rose and spread itself in Germany, and whose distinguishing doctrine was, that the body of Jesus Christ is every where, or in every place.

UBIQUITARY, *adj.* [from *ubique*, Lat.] Existing everywhere.—For wealth and an *ubiquitary* commerce, none can exceed her. *Howell.*

UBIQUITARY, *s.* [from *ubique*, Lat.] One that exists everywhere.—There is a nymph of a most curious and ela-

borate strain, light, all motion, an *ubiquitary*, she is every where, Phantaste! *B. Jonson.*—One who asserts the corporal ubiquity of Christ.—A parity of dignity—really communicated to the humanity in itself, as the *ubiquitaries* contend and plead for. *Bp. Richardson.*

UBIQUITY, *s.* [from *ubique*, Lat.] Omnipresence; existence at the same time in all places.

Pem she hight,
A solemn wight,
As you should meet,
In any street,
In that *ubiquity*.

B. Jonson.

UBLEY, a parish of England, in Somersetshire; 9 miles north-by-west of Wells.

UBOCA, a river of the Caraccas, which enters the Apure.

UBSTADT, a village of the west of Germany, in Baden. Population 900; 2 miles north-east of Bruchsal.

UBZAQUEN, an ancient city of New Granada, now almost in a state of ruin. Its population consists of 100 housekeepers, and some Indians; 11 miles north-east of Santa Fe.

UCAYALE, a large and navigable river of South America, which enters the Amazons by the south side, in lat. 4. 25. S. It receives on every side along its majestic course streams which are themselves longer and deeper than most of the great rivers of Europe; the Beni, the Lauricocha or Tunguragua, the Madera or Llavari, and the Negro, are all of this description; besides which, it receives thousands of other minor streams into its bosom. The native tribes on its shores were generally of a pacific nature; and in the course of 300 leagues are found 132 islands. From the confluence of the Ucayale and Tunguragua, the river decidedly receives the name of Amazons or Maranon; which see.

UCEDA, a small town of the central part of Spain, in New Castile, on the Xarama; 30 miles north-by-east of Madrid.

UCHANYE, a small town of Poland; 136 miles south-east of Warsaw, and 21 north-east of Zamosk.

UCHIRE, a river of the Caraccas, in the province of Cumana, which enters the sea.

UCHLAWRÇOED, a hamlet of England, in the parish of Bedwelly, Monmouthshire. Population 2728.

UCHOS, a settlement of Peru, in the province of Caxamarquilla, which has a good port in the river Amazons.

UCHTE, a river of Prussia, in the government of Magdeburg, which passes by Stendal, and joining the river Biese below Osterburg, flows into the Elbe at Schnocken-berg.

UCHTE, a small town of the north of Germany, in Hanover. It was one of the petty cessions made to Hanover by Hesse-Cassel in 1815. Population 1300; 35 miles west-north of Hanover, and 15 south-west of Nienburg.

UCITA, a river of Guiana, which enters the Ventuani.

UCKER, a river of Brandenburg, which issues from the lake of Ucker, and falls into the Frische-Haff in Pomerania, near Uckerunde.

UCKER, LAKE, a lake of Brandenburg, to the south of Prenzlau. It is about nine miles long, and one broad.

UCKERADT, a small town of the Prussian states, province of Cleves and Berg, government of Cologne, with 2100 inhabitants.

UCKERBY, a township of England, North Riding of Yorkshire; 3 miles north of Catterick.

UCKER MARK, that part of the electorate of Brandenburg which bordered on Pomerania, between the Oder and the duchy of Mecklenburg; 1314 square miles in extent, with about 90,000 inhabitants.

UCKERMUNDE, a small town of the Prussian states, in Pomerania, on the Ucker, about a mile above the Frische-Haff. Population 1800; 31 miles north-west of Stettin, and 16 east-north-east of Anclam.

UCKEWALLISTS, a sect of rigid Anabaptists, so called after its founder Uke Wallis, a native of Friesland.

UCKFIELD,

UCKFIELD, a parish of England, in Sussex. Population 916; 46 miles east-north-east of Chichester, and 42½ south-south-east of London.

UCKINGTON, a hamlet of England, in Gloucestershire; 3 miles north-west of Cheltenham.—2. A hamlet of Salop; 7 miles east-south-east of Shrewsbury.

UCLE, a small inland town of the Netherlands, in South Brabant, with 1000 inhabitants; 3 miles south of Brussels.

UCLES, a petty town of the interior of Spain; 53 miles east-south-east of Madrid, and 15 south-by-west of Huete. Population 1000.

UCUBAMBA, a river of Peru, which rises in the province of Caxamarquillo, passes through the province of Chachapayas, and united with the Taubia, enters the Amazons.

UDBINA, a strong fortress of Austrian Croatia, in the military province of Carlstadt, district of Liken, near the Turkish frontier.

U'DDER, *s.* [ubep, Saxon; *uder*, Dutch; *uber*, Lat.] The breast or dugs of a cow, or other large animal.

A lioness, with *udders* all drawn dry, Lay couching head on ground.

Shakspcare.

U'DDERED, *adj.* Furnished with udders.—Marian soft could stroke the *udder'd* cow. *Gay.*

UDDEVALLA, a town of the south-west of Sweden, in the province of Bahus, situated on both sides of a deep bay or arm of the sea. It has a port and a convenient harbour; 205 miles west-south-west of Stockholm, and 40 east of Gotheborg. Lat. 58. 21. 15. N. long. 11. 56. 30. E.

UDDINGSTONE, a small village of Scotland, in Lanarkshire; 7 miles south-east of Glasgow, and 4 north-west of Hamilton. The road from Glasgow to Carlisle passes through it.

UDENHOUT, a large inland village of the Netherlands, in North Brabant, with 1700 inhabitants; 15 miles east of Breda.

UDIMERE, or DADIMERE, a parish of England, in Sussex; 3 miles west-north-west of Winchelsea.

UDINA, a delegation or district of Austrian Italy, in the government of Venice. It has a superficial extent of 2900 square miles, and a population of nearly 270,000.

UDINA, a considerable town of Austrian Italy, in the government of Venice, the capital of the foregoing delegation, situated in the middle of an extensive plain, on the banks of the Lisonzo, and the canal of Roja. In the neighbourhood is situated the castle and village of Campo Formio, where a treaty of peace was concluded between the French and the Austrians in 1797; 38 miles north-west of Trieste, and 58 north-east of Venice. Lat. 14. 10. N. long. 13. 14. E.

UDIPU, a town of the south of India, province of Canara. It contains about 300 houses and three Hindoo temples, the roofs of which are covered with copper. Lat. 13. 16. N. long. 74. 48. E.

UDO, a town of Niphon, in Japan; 60 miles west-north-west of Jedo.

UDORIA, a district of the north of European Russia, in the government of Archangel, which takes its name from the river Udor.

UDRIGILL-HEAD, a promontory of Scotland, on the west coast of Ross-shire. Lat. 57. 55. N. long. 2. 17. W. from Edinburgh.

UDVARHELY, or ODDERHALLEN, a district of Transylvania, in the land of the Szeklers, lying on the banks of the Great Kokel, to the north-west of the district of Haromszek. Its extent, including the two districts of Keresztur and Bardotz, which have been annexed to it, is 1080 square miles, and its population 40,000, mostly Szeklers, with but few Wallachians.

UDVARHELY, or SZEKELI-UDVARHELY, the chief town of a district in Transylvania, situated in the territory of the Szeklers, on the banks of the Great Kokel. Population 6000; 22 miles east-north-east of Schœsburg, and 78 south-east of Clausenburg.

VEAL, *s.* [*veel*, a calf, *veeler*, *vesler*, to bring forth a calf, old French; *vitellus*, Lat.] A calf.—A Scotch runt without horns, or else with very short horns, scarce exceeding a south-country *veal* in height. *Ray.*—The flesh of a calf killed for the table.

Would'st thou with mighty beef augment thy meal, Seek Leadenhall; St. James's sends thee *veal*. *Gay.*

VEAL TOWN, a township of the United States, in New Jersey; 14 miles north-north-west of New Brunswick.

VEARN, a village of England, in the county of Hereford; 6 miles north-north-east of Hereford.

VEAU, ANCE DU, a settlement and parish of St. Domingo, in the part formerly possessed by the French.

UBERAU, a small town in the west of Germany, in Hesse-Darmstadt. Population 1200; 6 miles south-east of Darmstadt.

VECCHIA (Pietro), born at Venice in 1605, was a painter, educated in the school of Paduanino, but more an imitator of Giorgione and Pordenone; and some of his pictures have been mistaken for works of those masters. Sandrardt relates a story of his having been deceived by a picture of Vecchia, which he mistook for one by Giorgione. From his talent of imitating others, the doge and senate of Venice employed him to copy the ancient works in mosaic which are preserved in the church of Saint Marc. And in that church are also two original and very able pictures by him, representing the Crucifixion, and Christ driving the money-changers from the temple. His colouring is rich and warm, and his execution free and full, but sometimes apt to be incorrect. He died in 1678, aged seventy-three.

VECHEL, a very large village of the Netherlands, in the province of North Brabant; 12 miles east-south-east of Bois le Duc.

VECHT, an arm of the Rhine, in the Netherlands, which separates from that river near Utrecht, flows northward, and falls into the Zuyder Zee at Muydea.

VECHTA, a small town of the north-west of Germany. It is situated on a river of the same name; 28 miles south of Oldenburg.

VECHTE, a river of the Netherlands, which rises in the Prussian government of Munster, and falls into the Zuyder Zee above Swarte Sluys.

VECK, *s.* [*vecchia*, Ital.; *vetula*, Lat.] An old woman. *Obsolete.*—A rimpled *vecke* farre ronne in age. *Chaucer.*

VECKERHAGEN, a large village in the west of Germany, in Hesse-Cassel, on the Weser; 13 miles north-by east of Cassel.

VECTION, or VECTITATION, *s.* [*vectio*, *vectito*, Lat.] The act of carrying, or being carried.—Enervated lords are softly lolling in their chariots; a species of *vectitation* seldom used amongst the antients. *Arbuthnot*, and *Pope.*

VECTURE, *s.* [*vectura*; Lat.] Carriage.—There are but three things which one nation selleth unto another; the commodity as nature yieldeth it; the manufacture; and the *vechure*, or carriage. *Bacon.*

VEDEM, a small town of Prussian Westphalia, in the duchy of Cleves; 9 miles south-south-east of Cleves.

VEDEN, a town of the Netherlands, situated in North Brabant, and containing 3000 inhabitants.

VEDRA, a cape in the north-west of Spain, on the coast of Galicia. Lat. 42. 19. N. long. 8. 51. W.

VEDRENE, or VEDRIN, a large village of the Netherlands, in the province of Namur; 3 miles north of Namur.

VEENDAM, an inland town of the Netherlands, in the province of Gelderland, with 5500 inhabitants.

VEENENDAEL, a large village of the Netherlands, in the province of Utrecht; 20 miles east-by-south of Utrecht.

VEEP, ST., a parish of England, county of Cornwall; 8 miles west-by-north of West Looe. Population 1511.

To VEER, *v. n.* [*vireo*, Fr. *Dr. Johnson.*—Germ. *wirren*, in gyrum vertere; Suet. *wira*, circumolvere; ab antiquiss.

antiquiss. *gra, hurra*, in *gyrum agitare*. *Serenius.*] To turn about.

Nigh river's mouth, where wind

Veers oft, as oft he steers and shifts her sail.

Milton.

To VEER, *v. a.* To let out.—As it is a great point of art, when our matter requires it, to enlarge and *veer* out all sail; so to take it in and contract it, is of no less praise when the argument doth ask it. *B. Jonson.*—To turn; to change.

I see the haven nigh at hand,

To which I mean my weary course to bend;

Veer the main-sheet, and bear up with the land. *Spenser.*

VEERE, or TER VEERE (in English *Campvere*), a small town of the Netherlands, in the province of Zealand, situated on the north-east side of the island of Walcheren, on a narrow channel between the two arms of the Scheldt, near their mouth; 4 miles north-north-east of Middleburg.

VEERING, *s.* Act of turning or changing.—It is a double misfortune to a nation given to change, when they have a sovereign that is prone to fall in with all the turns and *veerings* of the people. *Addison.*

VEGA (Lopez de la, or Lope-Felix de Vega-Carpio), a celebrated and voluminous Spanish poet, was born of a noble family at Madrid, in the year 1562. Having been educated in the university of Alcalá, he occupied several honourable posts, and served on board the grand armada destined against England. After the death of his second wife, he took holy orders at Toledo, and obtained admission into the congregation of priests at Madrid; acting as president, and professing himself as one of the third order of Franciscans. By favour of Pope Urban VIII. he was honoured with the insignia of the knights of Malta, and with the title of doctor of theology. He died in 1635, at the age of 73. He was eminently distinguished as a poet, and regarded as the father of the Spanish drama, excelling, as some have asserted, all poets, ancient and modern, in this kind of composition. His "Theatre" occupies twenty-five volumes, each of which contains twelve plays of various descriptions. One of his biographers says of him, that "the inundation of Vega's fancy seems to have been no more than a deluge of very ordinary matter, in which there is little to be praised but an easy eloquence of language, and a faculty of dramatising, after a manner, stories of every kind. Three hundred pieces could not possibly have been composed otherwise. Nor was this the principal portion of literary labour; for he has himself affirmed, that upon a calculation it would appear, that he wrote five leaves of MS. for every day of his life." The high degree of admiration he inspired in his own country appeared from the numerous eulogies of which he was the subject after his death. *Moreri.*

Gen. Biog.

VEGA, a small town of the north-west of Spain, in Leon; 45 miles west of Astorga.—2. A settlement of New Granada, in the government of Mariquita; 12 leagues west of Santa Fé.—3. A settlement of Mexico, in the intendency of Valladolid. There are several other insignificant settlements of this name.

VEGA LA, REAL, a large and fertile valley in the island of St. Domingo. It is watered by the Yaque on the west side, and by the Yuna to the east, and it projects to the head of the bay of Samana.

VEGA, CONCEPTION DE LA, an ancient city and bishopric of St. Domingo, in the north-east part of the island on the road from St. Domingo city to Daxabon.

VEGEL, a small town in the south-west of Spain, in the province of Seville, between Cadiz and Gibraltar, near the mouth of the Barbato; 27 miles south-south-east of Cadiz.

VEGESACK, a small town in the north-west of Germany in the territory of the imperial town of Bremen; 10 miles north-west of Bremen.

VEGETABILITY, *s.* Vegetable nature; the quality of growth without sensation.—The coagulating spirits of salts, and lapidiferous juice of the sea, entering the parts of the plant, overcome its *vegetability*, and convert it into a lapideous substance. *Brown.*

Vol. XXIV. No. 1640.

VE'GETABLE, *s.* [*vegetabilis*, school Lat.; *vegetable*, Fr.] Any thing that has growth without sensation, as plants.—*Vegetables* are organized bodies, consisting of various parts, containing vessels furnished with different juices, and taking in nourishment from without, usually by means of a root fixed to the earth, or to some other body, as in the generality of plants; sometimes by means of pores distributed over the whole surface, as in sub-marine plants. *Hill.*

VE'GETABLE, *adj.* [*vegetabilis*, Lat.] Belonging to a plant.

The *vegetable* world, each plant and tree,

From the fair cedar on the craggy brow,

To creeping moss.

Prior.

Having the nature of plants.

Amidst them stood the tree of life,

High eminent, blooming ambrosial fruit

Of *vegetable* gold.

Milton.

VE'GETAL, *adj.* [*vegetal*, Fr.] Having power to cause growth. *Obsolete.*—Necessary concomitants of this *vegetal* faculty are life, and his privation death. *Burton.*

VE'GETAL, *s.* A vegetable.—Your minerals, *vegetals*, and animals. *B. Jonson.*

To VE'GETATE, *v. n.* [*vegeto*, Latin.] To grow as plants; to shoot out; to grow without sensation.

See dying vegetables life sustain;

See life dissolving *vegetate* again.

Pope.

VEGETA'TION, *s.* [from *vegeto*, Lat.] The power of producing the growth of plants.

The sun, deep-darting to the dark retreat

Of *vegetation*, sets the steaming power

At large.

Thomson.

The power of growth without sensation.—These pulsations I attribute to a plastic nature, or vital principle, as the *vegetation* of plants must also be. *Ray.*

VE'GETATIVE, *adj.* [*vegetatif*, Fr.] Having the quality of growing without life.—Creatures *vegetative* and growing, have their seeds in themselves. *Raleigh.*—Having the power to produce growth in plants.—The nature of plants doth consist in having a *vegetative* soul, by which they receive nourishment and growth, and are enabled to multiply their kind. *Wilkins.*—Homer makes deities of the *vegetative* faculties, and virtues of the field. *Broome.*

VE'GETATIVENESS, *s.* The quality of producing growth.

VE'GETE, *adj.* [*vegetus*, Latin.] Vigorous; active; spritely.—He had lived a healthful and *vegete* age till his last sickness. *Bp. Taylor.*

VE'GETIVE, *adj.* [*vegeto*, Lat.] Vegetable; having the nature of plants.

Nor rent off, but cut off ripe bean with a knife,

For hindering stalke of hir *vegetive* life.

Tusser.

Capable of growth; growing.

Man —

First *vegetive*, then feels, and reasons last.

Dryden.

VE'GETIVE, *s.* A vegetable.

Hence *vegetives* receive their fragrant birth,

And clothe the naked bosom of the earth.

Sandys.

The tree still panted in th' unfinish'd part,

Not wholly *vegetive*; and heav'd her heart.

Dryden.

VE'GETOUS, *adj.* [*vegetus*, Lat.] Lively; spritely; *vegete*.—If she be fair, young, and *vegetous*, no sweetmeats ever drew more flies. *B. Jonson.*

VEGJAH, or BAYJAH, a town of Tunis, in Africa, supposed by Shaw to be the ancient Vacca. It carries on a considerable trade with the interior; 45 miles west of Tunis.

VEGLIA, an island in the Adriatic, at the north-west corner of the gulf of Quarnero, now belonging to Austria, and included in the government of Trieste, circle of Fiume. Its area is about 210 square miles; its population about 10,000.

VEGLIA, the chief town of the above island. It stands on the south-west coast of the island; 22 miles south-south-east of Fiume. Lat. 45. 3. 20. N. long. 14. 38. 45. E.

VEHEMENCE, or VEHEMENCY, *s.* [*vehementia*, Lat.] Violence; force.

Universal hubbub wild,
Of stunning sounds and voices all confus'd,
Assaults his ear with loudest *vehemence*.

Milton.

Ardour; mental violence; fervour.

The best persuasions
Fail not to use; and with what *vehemency*,
Th' occasion shall instruct you.

Shakespeare.

VEHEMENT, *adj.* [*vehemens*, Lat.] Violent; forcible.—A strong imagination hath more force upon light and subtle motions, than upon motions *vehement* or ponderous. *Bacon*.—Ardent; eager; fervent.

I find
In all things else delight indeed; but such
As us'd or not, works in the mind no change,
Nor *vehement* desire.

Milton.

VEHEMENTLY, *adv.* Forcibly; pathetically; urgently.—The Christian religion inculcates kindness more *vehemently*, and forbids malice and hatred more strictly than any religion did before. *Tillotson*.

VEHICLE, *s.* [*vehiculum*, Lat.] That in which any thing is carried.—Evil spirits might very properly appear in *vehicles* of flame, to terrify and surprise. *Addison*.—That part of a medicine which serves to make the principal ingredient potable.—That the meat descends by one passage; the drink, or moistening *vehicle*, by another, is a popular tenet. *Brown*.—That by means of which any thing is conveyed.—The gaiety of a diverting word, serves as a *vehicle* to convey the force and meaning of a thing. *L'Estrange*.

VEHICULAR, *adj.* [*vehiculum*, Lat.] Belonging to a vehicle. *Coles*.

VEIL, *s.* [*velum*, Lat.] A cover to conceal the face.

She accepts the hero, and the dame
Wraps in her *veil*, and frees from sense of shame.

Pope.

A cover; a disguise.

Knock on my heart; for thou hast skill to find
If it sound solid, or be fill'd with wind;
And thro' the *veil* of words thou view'st the naked mind.

Dryden.

To VEIL, *v. a.* [*velo*, Lat.] To cover with a veil, or any thing which conceals the face.

Her face was *veil'd*; yet to my fancied sight,
Love, sweetness, goodness, in her person shin'd.

Milton.

To cover; to invest.

I descry,
From yonder blazing cloud that *veils* the hill,
One of the heavenly host.

Milton.

To hide; to conceal.

Of darkness visible so much be lent,
As half to shew, half *veil* the deep intent.

Pope.

VEILE, a petty town of Denmark, in Jutland, on a deep inlet of the Cattegat, near the entrance of the Little Belt; 13 miles west-north-west of Fridericia.

VEIN, *s.* [*veine*, Fr.; *vena*, Lat.] Continuations of the extreme capillary arteries reflected back again towards the heart, and uniting their channels as they approach it.

When I did first impart my love to you,
I freely told you all the wealth I had
Ran in my *veins*; I was a gentleman.

Shakespeare.

Hollow; cavity.

Found where casual fire
Had wasted woods, on mountains, or in vale,
Down to the *veins* of earth.

Milton.

Course of metal in the mine.

Part hidden *veins* digg'd up, nor hath this earth
Entrails unlike, of mineral and stone.

Milton.

Tendency or turn of the mind or genius.—We ought to attempt no more than what is in the compass of our genius, and according to our *vein*. *Dryden*.—Favourable moment: time when any inclination is predominant.—Artizans have not only their growths and perfections, but likewise their *veins* and times. *Wotton*.—Humour; temper.

I put your grace in mind
Of what you promis'd me.
I am not in the giving *vein* to-day.

Shakespeare.

Continued disposition.—The *vein* I have had of running into speculations of this kind, upon a greater scene of trade; have cost me this present service. *Temple*.—Current; continued production.—He can open a *vein* of true and noble thinking. *Swift*.—Strain; quality.—My usual *vein*. *Oldham*.—Streak; variegation: as, the *veins* of the marble.

VEINED, or VEINY, *adj.* [*veineur*, Fr.] Full of veins; streaked; variegated.—The root of an old white thorn will make very fine boxes and combs, and many of them are very finely *veined*. *Mortimer*.

VEIROS, a small town and castle in the east of Portugal, in the province of Alentejo; 99 miles east of Lisbon.

VEIT, ST., a small town of Austrian Illyria, in Carinthia, near the Glan. It was formerly the residence of the dukes of Carinthia.

VEIT, ST., a village 5 miles west of Vienna, near Schonbrun, on the small river of Wien.

VEITA, a small island in the Mediterranean, near the east coast of Tunis. Lat. 35. 1. N. long. 11. 12. E.

VEITSHOCHEIM, a village of Germany, in Franconia; 5 miles north of Wurzburg.

VELA, CAPE OF, a point or promontory on the coast of the province and government of Santa Martha, and the New Kingdom of Granada, on the confines of the province of the Rio del Hacha, to the east. It is nearly opposite to Cape Horn, in lat. 12. 13. N. long. 72. 12. W.

VELA, a rocky shoal in the Spanish Main. Lat. 15. 16. N. long. 75. W.

VELA, CAPE DE LA, a cape on the north coast of South America. Lat. 11. 50. N. long. 71. 46. W.

VELAN, MOUNT, the highest summit of the great St. Bernard, situated in the Swiss canton of the Valais. Its elevation is about 11,000 feet above the sea.

VELAS, PORT OF THE, on the coast of the province and government of Costa Rica, and kingdom of Guatimala, between the cape of Santa Catalina and the Morro Hermoso.

VELASCO (Don Antonio Palomino), was a Spanish painter and historian of the artists of his country. He was a native of Valencia, where he flourished about 1700. He was painter to Philip V., and painted many pictures for the churches and convents of Valencia, Salamanca, and Granada; but is much better known to us as an author. He published an elaborate treatise on the art of painting, in two folio volumes, in which he notices 250 painters and sculptors who had flourished in Spain previous to the conclusion of the reign of Philip IV. Of this work, there was an abridgement published in London in 1742, entitled "Las Vidas de los Pintores y Statuarios eminentes Espanoles."

VELASQUEZ (De Silva, Don Diego), the most distinguished painter of the Spanish school, was born at Seville in 1594. His parents, though confined in fortune, gave him a liberal education, and, as he had evinced much inclination for drawing, placed him with Francesco de Herrera, the elder; but he afterwards became the disciple of F. Pacheco, an artist of very considerable ability, and a scholar then residing at Seville. With him Velasquez studied attentively, and his talents displayed themselves in a variety of imitations of natural objects, particularly of peasantry in their peculiar habits and occupations. In 1662, Velasquez left Seville, to visit the metropolis of Spain and the Escorial, and there his talents recommended him to the notice of the count de Olivarez, the favourite minister of Philip IV., who patronized and befriended him; taking him into his own palace to dwell. Soon after he introduced him to the king, who immediately ordered him to paint his portrait,

portrait. From the completion of this picture, which was upon a grand scale in armour, and on horseback, the reputation of Velasquez was established.

After this successful commencement of his public career, he was employed to paint the portraits of the infants Don Carlos and Don Fernando; and that of the minister his patron, mounted, like his royal master, on a noble Andalusian charger richly caparisoned. He now, therefore, began to enjoy the blessings of fortune as well as those of fame. He was appointed principal painter to the king, with a liberal salary, besides receiving munificent remuneration for his pictures, and being busily occupied in portraits.

He now also, in emulation of other Spanish painters, determined to undertake a work upon a more extended scale than he had before done, and took for his subject the expulsion of the Moors from Spain by Philip III. But, if we may judge by the description given of the picture, it does not appear to have possessed much interesting matter of a high historic quality; however he gained great reputation from the skill with which he executed it.

He, in 1692, went to Venice, where he was received and entertained by the Spanish ambassador. In this delightful birth-place of colouring, the works of its great master Titian, in the palace of St. Marc, excited his warmest admiration, and he made several copies of them; and no one ever more thoroughly imbibed the principles upon which they are constructed. But perhaps it is of Tintoretto that Velasquez is more the imitator, than of Titian. His freedom of pencil appears to have been more congenial with the taste of the Spaniard, than the sober and more correct hand of the former. After remaining at Venice few months, he went to Rome, where he was most graciously received by the cardinal Barberini, nephew to Urban VIII., who procured for him apartments in the Vatican, and access at all times to the works of Raffaele and M. Angelo. During his residence at Rome, he painted his celebrated history of Joseph's coat brought to Jacob; and also another very able work, of Apollo informing Vulcan of the infidelity of Venus, in which he had an opportunity of displaying his power of handling, and his admirable skill in colouring. Vulcan is at his forge, the light and shadow proceeding from which are most skilfully conducted; the strong and muscular form of the Cyclops gracefully contrasted with the pure form of the Apollo; and the whole composition arranged with infinite judgment. Both these pictures were sent to Spain, and honoured by having distinguished places assigned to them in the palace of the king.

In 1638, Velasquez painted his most celebrated picture of our Saviour on the Cross, for the convent of St. Placido, at Madrid; and about the same time, that of the general Pescara receiving the keys of a Flemish citadel from the governor of the place. The management of all the different characters, the officers, &c. and the effect of the fortification, &c. of the town and landscape in the back ground, is altogether eulogised by Mengs as the chef-d'œuvre of Velasquez.

He lived in honour and riches till 1660, when death put an end to his labours and enjoyments. He was buried with great funeral pomp, in the church of San Juan.

VELAUX, a small town in the south-east of France, department of the Mouths of the Rhone; 12 miles west of Aix.

VELAY, a small and mountainous district in the south of France, in the Cevennes, lying between the Vivarais, Gévaudan, Auvergne, and Forez, and now forming part of the department of the Upper Loire.

VELAZGHERD, a small town of Kerman, in Persia, on the river Karoon; 54 miles north-east of Gombroon.

VELBERT, a village and parish of the Prussian province of Cleves and Berg, in the duchy of Berg; 14 miles east-north-east of Dusseldorf.

VELBURG, or VILDBURG, a small town of Germany, in Bavarian Franconia, on the Laber, with 900 inhabitants.

VELDEN, a small town of Austrian Illyria, in Carinthia, on the lake of Wordt; 13 miles west of Klagenfurth.

VELDENZ, or THAL VELDENZ, a petty town of the

Prussian province of the Lower Rhine; 19 miles east-north-east of Treves.

VELDES, a large village of Austrian Illyria, in Carinthia, on the lake of Frauen; 20 miles south-by-west of Klagenfurth.

VELDHOVEN, a petty town of the Netherlands, in North Brabant; 4 miles west of Eindhoven.

VELDSCHTERIN, or USITERNA, an inland town of European Turkey, in Romania, the capital of a sandgiacat or province, which comprises the upper valleys at the source of the Eastern Morawa, and those of the Ibar, a river which flows into the Western Morawa.

VELENCZE, or VARAD VELENCZE, a small town in the east of Hungary; 2 miles east of Great Wardein.

VELENRYD, a river in Wales, in Merionethshire, which falls into the Irish sea at Traeth-Richa.

VELE RETE, a cluster of rocks in the Eastern seas, situated to the south of the island of Formosa, which may be seen from hence. The largest of these rocks is about the height of a small ship's hull out of the water, and in clear weather may be discerned at the distance of 8 miles. It is surrounded by many smaller ones, making a circumference of about two miles. Lat. 21. 55. N. long. 121. 30. E.

VELEZ, a city of New Granada, in the province of Tunja, situated on the river Saarez, at the foot of a ridge of mountains; 68 miles north of Santa Fè, and 25 north-west of Tunja. Lat. 5.40 N. long. 74. 6. W.

VELEZ EL BLANCO, a small town of the south-east of Spain, in the province of Granada, on the borders of Murcia; 4 miles north-north-west of Velez el Rubio.

VELEZ MALAGA, a considerable town in the south of Spain, in Granada; 14 miles north-east of the present city of Malaga. It stands on the slope of a high hill, amidst vineyards and plantations, the products of which, raisins, olive oil, lemons, oranges, citrons, and almonds, are extremely rich, and form the chief articles of its trade. Raisins in particular are exported in great quantities. The town is at two miles distance from the sea, and takes its name from the river Velcz, which passes its walls, flowing southward from the Sierra or chain of mountains separating Granada from Andalusia. Nothing can surpass the beauty of this country, with its groves and its mountain streams.

VELEZ EL RUBIO, an inland town in the south-east of Spain, in the province of Granada, but situated within a few miles of that of Murcia. Its population amounts to 7000; 22 miles west-by-south of Lorca.

VELEZIA [so named by Linnæus, from Christoval Velezius, examiner, first physician, and demonstrator of Botany in the College of Apothecaries at Madrid], in Botany, a genus of the class pentandria, order digynia, natural order of caryophyllei, caryophylleæ (*Juss.*)—Generic Character. Calyx: perianth one-leafed, filiform, five cornered, permanent; mouth five-toothed, acuminate, erect, very small. Corolla: petals five, very short, emarginate-two-toothed; claws filiform, length of the calyx. Stamina: filaments five, often six, capillary, scarcely the length of the calyx; anthers cordate. Pistil: germ cylindrical, short, terminated by the receptacle of the styles; styles two, filiform, length of the stamens; stigma simple. Pericarp: capsule cylindrical, covered, one-celled. Seeds numerous, in a single row.—*Essential Character.* Calyx five-toothed. Corolla five-petalled, small. Capsule one-celled. Seeds numerous, in a single row.

Velezia rigida.—Root annual; stem very much branched; calyxes sessile, cylindrical, very narrow; border of the petals very small, marked at the base with a purple crescent, as in the natural order of caryophylleæ, to which this belongs.—Native of the south of Europe; and of Barbary, near Mascar.

VEL HAS, RIO DAS, a river of Brazil, in the province of Espiritu Santo, which runs north, and enters into the Rio Francisco.—There is another river of the same name, which enters the Paranaiba.

VELICA, a small town of the Austrian states, in Sclavonia, between Gradiska and Zagrab.

VELIKALA,

VELICALA, a town on and near the head of the peninsula of California, near the coast of the North Pacific ocean, and northerly from Anclote point. Lat. 20. 35. N. long. 115. 50. N.

VELICSKA, or NAGY-FALU, or WELKA WES, a village in the north-west of Hungary, on the Arva, with 1400 inhabitants; 32 miles north of Neusohol.

VELIFEROUS, *adj.* [*velum* and *fero*, Lat.] Carrying sails.—*Veliferous* chariots. *Evelyn*.

VELIKA GUBAVIZA, a village of Austrian Dalmatia, on the river Cettina, which forms here a cataract nearly 150 feet in height.

VELIKIJA LUKI, a town of the west of European Russia; 130 miles south-east of Pskov.

VELIKOJE, a lake of the interior of European Russia, in the government of Riasan.—Also a large village of the interior of European Russia, in the government of Jaroslav.

VELILLA, a petty town of the north-east of Spain, in Arragon, on the Ebro; 34 miles south-south-east of Saragossa.

VELINO, MONTE VELINO, a mountain in the central part of Italy, among the Appennines, in the States of the Church. Elevation nearly 8000 feet above the level of the sea.

VELINO, a small river of Italy, in the north of the kingdom of Naples, in Abruzzo. It falls into the Narva.

VELISH, a town of the north-west of European Russia, in the government of Vitepsk, where the Velishka joins the Dwina; 46 miles east-north-east of Vitepsk.

VELITATION, *s.* [*velitatio*, Lat.] A skirmish; a light contest; a dispute. *Bullockar*.—Let him but read those Pharsalian fields fought of late in France for their religion, their massacres, wherein by their own relations in 24 years I know not how many millions have been consumed, and he shall find ours to have been but *velitations* to theirs. *Burton*.

VELITZA, a village of Greece, on the ascent of Parnassus, near which are considerable ruins, supposed to be those of the ancient Thithorea.

VELKAPOLYA, or HOCHWIES, a small town in the north-west of Hungary; 27 miles north-east of Neutra.

VELLA [of Galen. Derivation unknown], in Botany, a genus of the class tetradynamia, order siliculosa, natural order of siliquosa or cruciformes, cruciferæ (*Juss.*)—Generic Character. Calyx: perianth four-leaved, erect, cylindrical; leaflets linear, obtuse, deciduous. Corolla four-petalled, cruciform. Petals obovate, spreading; claws length of the calyx. Stamina: filaments six, length of the calyx; of these two opposite a little shorter. Anthers simple. Pistil: germ ovate. Style conic. Stigma simple. Pericarp: silicle globose, entire, two-celled, with a partition twice as large as the silicle; ovate beyond it and erect. Seeds few, roundish.—*Essential Character*. Silicle with a partition twice as large as the valves, ovate on the outside.

1. Vella annua, annual vella, or cress-rocket.—Leaves pinnatifid; silicles pendulous. Root annual, small, fibrous. Cotyledons obovate, smooth. Stem branched, leafy, hispid, with bristles bent down. Seeds three or four in each cell, subglobular, angular, of a dark ferruginous colour, and mucilaginous.

First observed in the kingdom of Valencia, in Spain, byCLUSIUS. Mr. Lawson found it on Salisbury Plain, not far from Stonehenge. It flowers in June.

2. Vella pseudo-cytisus, or shrubby vella.—Leaves entire, obovate, ciliate; silicles erect. Stems shrubby, two feet high, somewhat rugged, very much branched. Flowers in spikes terminating the stem and branches.—Native of Spain.

Propagation and Culture.—If the seeds be permitted to scatter, the plants will come up and thrive very well. These plants should not be transplanted; the seeds, therefore, should be sown where they are to remain, and require only to be kept clean and thinned.

VELLACH, or FELLACH, a small town of Austrian Illyria, in Carinthia, on the river Moll; 11 miles north-north-west of Saxenburg.

VELLEITY, *s.* [*velleitas*, from *velle*, Lat.] *Velleity* is the school term used to signify the lowest degree of desire. *Locke*.

VELLEKAT, rocks in the Eastern seas, about 15 miles east from the island of Mysol. Lat. 2. 1. S. long. 131. 2. E.

VELLETRI, a considerable town in the central part of Italy, in the States of the Church, delegation of Rome, built on the declivity of Mount Artimisio, and commanding a delightful view of the surrounding country. Its population amounts to about 12,000; 20 miles south-east of Rome.

To VELLICATE, *v. a.* [*vellico*, Lat.] To twitch; to pluck; to act by stimulation.—Those smells are all strong, and do pull and *vellicate* the sense. *Bacon*.

VELLICATION, *s.* [*vellicatio*, Lat.] Twitching; stimulation.—All purges have a kind of twitching and *vellication*, besides the griping, which cometh of wind. *Bacon*.

VELLO, a small town of Austrian Italy, in the government of Milan, delegation of Sondrio, belonging to the district called the Sette Comuni.

VELLUM, *s.* [*velamen*, Latin; rather *vitulinum*, low Latin.] The skin of a calf dressed for the writer; a fine kind of parchment.

Like a child that some faire booke doth find,
With gilded leaves or colour'd *velume* plays. *Sidney*.

VELLET, and VELLUTE. See VELVET.

VELO'CIDY, *s.* [*velocité*, Fr.; *velocitas*, Lat.] Speed; swiftness; quick motion.—Had the *velocities* of the several planets been greater or less than they are now, at the same distances from the sun; or had their distances from the sun, or the quantity of the sun's matter, and consequently his attractive power, been greater or less than they are now, with the same *velocities*; they would not have revolved in concentric circles, but moved in hyperbolas, or parabolas, or in ellipses very eccentric. *Bentley*.

VELSEN, a small town of the Netherlands; 5 miles north of Haarlem, and 10 west-north-west of Amsterdam.

VELVET, *s.* [*velous*, *velours*, Fr. the same; *velouté*, made of velvet; *veluto*, Ital. "a stuff of silk called velvet;" *velutare*, "to make soft or woolly, to work velvet-wise;" Florio; *vellutum*, low Lat. *villus* from *vellus*, Lat.—Our old word appears to have been written *vellet*, and *vellute*. "His *vellet* head began to shoot out." *Spenser*, *Shep. Cal. May*.—"Charges of coaches, *vellute* gowns," &c. *B. Jonson*, *Magn. Lady*.] Silk with a short fur or pile upon it.

Clad in white *velvet* all their troop they led,
With each an oaken chaplet on his head. *Dryden*.

VELVET, *adj.* Made of velvet.

This was moulded on a porringer,
A *velvet* dish. *Shakspeare*.

Soft; delicate.

Through the *velvet* leaves the wind,
All unseen, 'gan passage find. *Shakspeare*.

To VELVET, *v. n.* To paint velvet.—Verditure, ground with a weak gum-arabic water, is the palest green that is, but good to *velvet* upon black in any drapery. *Peacham*.

VELVETE'EN, *s.* [Ital. *velutino*, "slender, coarse velvet," Florio.] A kind of stuff, made in imitation of velvet.

VELVURE, *s.* [*velours*, Fr.] Velvet. *An old word*.—His horse with one girt, six times pieced, and a woman's crupper of *velure*, pieced with packthread. *Shakspeare*.

VELZEN, a small town of Germany, in Hanover, province of Luneburg, situated on an island in the river Ilmerau, and surrounded by a heath; 22 miles south of Luneburg. Population 2600.

VENA, or MONTE DELLA VENA, a mountain of Austrian Illyria, in Carniola, on the confines of Istria.

VENADILLO, a settlement of South America; 14 leagues south-west of Santa Fé.

VENADO, an island of the Pacific ocean, in the province and government of Veragua, close to the coast.

VENADOS, PUNTA DE, a point of land on the coast of South America, and province of Carthagena, on a long strip of

of land formed by the mouths of the river Zinu, between the points Piedras and Mestizos.

VENAFRO, a small town of Italy, in the north-west of the kingdom of Naples; 30 miles north-east of Gaeta, and 42 north-by-west of Naples.

VENAISSIN, a district in the south-east of France, situated between Provence and Dauphiny.

VENAL, *adj.* [*venalis*, Latin.] Mercenary; prostitute.

This verse be thine, my friend, nor thou refuse
This, from no *venal* or ungrateful muse.

Pope.

Contained in the veins. *A technical word.*—It is unreasonable to affirm, that the cool *venal* blood should be heated so high in the interval of two pulses. *Ray.*

VENALITY, *s.* [*venalité*, Fr.] Mercenariness; prostitution.

VENANGO, a county of the United States, in the north-west part of Pennsylvania, bounded north by Crawford and Warren counties, east by Jefferson county, south by Armstrong and Butler counties, and west by Mercer county. Population 3060. Chief town, Franklin.

VENANGO, a post township of the United States, in Armstrong county, Pennsylvania.

VENANGO, a township of the United States, in Crawford county, Pennsylvania.

VENANT, *St.*, a small town in the north-east of France, department of the Pas de Calais, situated in a marshy district on the Lys; 6 miles north-north-west of Bethune, and 6 east of Aire.

VENARY, *adj.* [*venarium*, low Lat.] Relating to hunting. See an example of the word under *venatical*.

VENASCA, a town in the north-west of Italy, in Piedmont, situated on the river Vraita. Population 2400; 9 miles south of Saluzzo.

VENASQUE, a small town in the south-east of France, department of the Vaucluse, near the river Nasque; 18 miles north-east of Avignon.

VENASQUE, VENASCA, or BENASCA, a small town and fortress of the north-east of Spain, in Arragon, among the Pyrenees, near the source of the river Esuera; 50 miles north-by-east of Balbastro, and 53 east-north-east of Jaca.

VENATICAL, or VENA'TIC, *adj.* [*venaticus*, Latin.] Used in hunting.—There be three for *venary* or *venatical* pleasure, in England, viz. a forest, a chase, and a park. *Howell.*

VENATION, *s.* [*venatio*, Latin.] The act or practice of hunting.—The manner of their *venation* we shall find to be otherways than by sawing away of trees. *Brown.*

VENBAQUI, a river of South America, in the province of Darien, which runs into the Atlantic.

VENCE, a small town in the south-east of France, department of the Var, situated on the borders of Piedmont, about 6 miles from the sea; 12 miles west-by-north of Nice.

To VEND, *v. a.* [*vendo*, Lat.] To sell; to offer to sale.—He had a great parcel of glasses packed up, which not having the occasion he expected to *vend* and make use of, lay by him. *Bayle.*

VENDE'E, *s.* One to whom any thing is sold.—If a vicar sows his glebe, or if he sells his corn, and the *vendee* cuts it, he must pay the tithes to the parson. *Ayliffe.*

VENDEE, a department in the west of France, comprising a part of Poitou, and bounded on the east by the department of the Two Sevres, and on the west by the Atlantic. Its extent, 2600 square miles, is equal to two of the largest counties in Britain; its population, rather thinly scattered, does not exceed 270,000. Its surface is almost entirely level, the department containing no eminence whose elevation exceeds 450 feet. It is divided into three parts; the wood, the marsh, and the plain. The department, large as it is, is divided into only three arrondissements, viz. Bourbon Vendee (the chief town), Sables d'Olonne, and Fontenay. It will be for ever memorable in the history of the French revolution, for the resistance made to the republican army in 1793, 1794, and 1795; a resistance singularly favoured by the localities; by the woods, the thickets, and

the ditches of the country. It was attended for a time with great success, though commenced without any concert with the other royalists of France, and carried on for a season with very limited support from England.

VENDEE, a river in the west of France, which rises in the department of the Two Sevres, traverses the department of La Vendee, and discharges itself into the Sevre Noirtoise, above Marans.

VENDEN, a small town of the west of European Russia, in Livonia, near the Aa; and 33 miles east-by-north of Riga.

VENDENHEIM, a small town in the north-east of France, in Alsace, with 1100 inhabitants.

VENDER, *s.* A seller.—Those make the most noise who have the least to sell, which is very observable in the *venders* of card-matches. *Addison.*

VENDIBLE, *adj.* [*vendibilis*, Latin.] Saleable; marketable.

Silence only is commendable

In a neat's tongue dried, and a maid not *vendible*.

Shakspeare.

VENDIBLE, *s.* Any thing offered to sale.—The prices of all *vendibles* for the body of man and horse were stuck up in public places. *Life of Wood.*

VENDIBLENESS, *s.* The state of being saleable.

VENDIBLY, *adv.* In a saleable manner.

VENDITATION, *s.* [*venditatio*, from *vendito*, Lat.] Boastful display.—Some, by a cunning protestation against all reading, and false *venditation* of their own natural, think to divert the sagacity of their readers from themselves, and cool the scent of their own fox-like thefts; when yet they are so rank as a man may find whole pages together usurped from one author. *B. Jonson.*

VENDITION, *s.* [*venditio*, Latin.] Sale; the act of selling.

VENDOLA, one of the Admiralty islands, of which it is the most eastern. It is about 3 miles in circuit, covered with cocoa trees, and very populous for its soil. The inhabitants have open and agreeable countenances, and are of considerable stature. Lat. 2. 14. S. long. 148. 9. 47. E.

VENDOME, a town in the central part of France, the capital of the department of the Loir and Cher, situated on the right bank of the Loir. Its environs are fertile, and in some parts picturesque; 30 miles north-east of Tours.

VENDRES, ETANG DE, a bay on the south coast of France, in the department of the Herault. Lat. 43. 12. N. long. 3. 19. E.

VENDUTENA, or VENDOTENA, the *Pandaloria* of the ancients, a small island of the Mediterranean, belonging to Naples, situated between the island of Ischia and Ponza, about 20 miles from the coast of Italy. Its circumference is little more than 3 miles; but it is interesting from the remains of antiquity, having been used by the Romans as a place of banishment.

To VENE'ER, *v. a.* [among cabinet-makers.] To make a kind of marquetry or inlaid work, whereby several thin slices of fine woods of different sorts are fastened or glued on a ground of some common wood. *Bailey.*

VENE'FICE, *s.* [*veneficium*, Lat.] The practice of poisoning.

VENE'FICAL, *adj.* [from *veneficium*, Latin.] Acting by poison; bewitching.—The magical virtues of misselto, and conceived efficacy unto *venefical* intentions, seemeth a Pagan relique derived from the antient Druides. *Brown.*

VENE'FICIOUSLY, *adv.* [from *veneficium*, Lat.] By poison or witchcraft.—Lest witches should draw or prick their names therein, and *veneficiously* mischief their persons, they broke the shell. *Brown.*

VENEGONO, UPPER and LOWER, two adjoining small towns of Austrian Italy, in the Milanese, between the rivers Sevese and Olona.

VENEMOUS, *adj.* [from *venen*, Fr.] Poisonous; commonly, though not better, *venomous*.—The barbarians saw the *venemous* beast hang on his hand. *Acts.*

3 R

VENENATE,

To **VENENATE**, *v. a.* [*veneno*, Latin.] To poison; to infect with poison.—These miasms entering the body, are not so energetic, as to *venenate* the entire mass of blood in an instant. *Harvey.*

VENENATE, *part. adj.* Infected with poison.—By giving this in fevers after calcination, whereby the *venenate* parts are carried off. *Woodward.*

VENENATION, *s.* Poison; venom.—This *venenation* shoots from the eye; and this way a basilisk may impoison. *Brown.*

VENENE, or **VENENOSE**, *adj.* Poisonous; venomous.—Dry air opens the surface of the earth, to disincarcerate *venene* bodies, or to attract or evacuate them hence. *Harvey.*

VENERABILITY, *s.* State or quality of being venerable.—According to the excellency and *venerability* of their prototypes. *More.*

VENERABLE, *adj.* [*venerabilis*, Lat.] To be regarded with awe; to be treated with reverence.

Ye lamps of heaven he said, and lifted high
His hands, now free. Thou *venerable* sky!
Inviolable pow'rs, ador'd with dread,
Be all of you adjured.

Dryden.

VENERABLENESS, *s.* State or quality of being venerable.—The innocence of infancy, the *venerableness* of old age. *South.*

VENERABLY, *adv.* In a manner that excites reverence.

The Palatine, proud Rome's imperial seat,
An awful pile! stands *venerably* great.
Thither the kingdoms and the nations come.

Addison.

To **VENERATE**, *v. a.* [*veneror*, Lat.] To reverence; to treat with veneration; to regard with awe.

The lords and ladies here approaching paid
Their homage, with a low obeisance made:
And seem'd to *venerate* the sacred shade.

Dryden.

VENERATION, *s.* [*veneratio*, Lat.] Reverend regard; awful respect.—Theology is the comprehension of all other knowledge, directed to its true end, i. e. the honour and *veneration* of the Creator, and the happiness of mankind. *Locke.*

VENERATOR, *s.* Reverencer.—Those times were high *venerators* of vowed virginity. *Bp. Taylor.*

VENERE, **CAPO DI**, a cape on the coast of the territory of Genoa. Lat. 44. 4. N. long. 9. 40. E.

VENEREAL, *adj.* [*venereus*, Latin.] Relating to love.

These are no *venereal* signs;
Vengeance is in my heart, death in my hand. *Shakspeare.*

Consisting of copper, called *venus* by chemists.—Blue vitriol, how *venereal* and unsophisticated soever, rubbed upon the whetted blade of a knife, will not impart its latent colour. *Boyle.*

VENEREAN, *adj.* Venereal. *Not now in use.*—Others fall in love with light wives; I do not mean *venerean* lightness, but in reference to portion. *Howell.*

VENEREOUS, *adj.* Libidinous; lustful.—The male is lesser than the female, and very *venereous*. *Derham.*

VENEROUS, *adj.* Venereous. *Obsolete.*—A remedy for *venereous* passions. *Burton.*

VENERGUE, a small town in the south of France, situated at the influx of the small river Hisse, into the Arriego; 10 miles south of Toulouse.

VENERY, *s.* [*venerie*, from *vener*, Fr.] The sport of hunting.

To the woods she goes to serve her turn,
And seek her spouse, that from her still does fly,
And follows other game and *venery*.

Spenser.

[from *Venus*.] The pleasures of the bed.—Contentment, without the pleasure of lawful *venery*, is continence; of unlawful, chastity. *Grew.*

VENEV, a town of the interior of European Russia, in the government of Tula. It stands on the river Venevka; 30 miles east of Tula.

VENEY, or **VE'NEW**, *s.* [*venez*, French.] A bout; a turn at fencing; a thrust; a hit.—I bruis'd my shin with playing at sword and dagger, three *veney*s for a dish of stew'd prunes. *Shakspeare.*

VENESE'CTION, *s.* [*vena* and *sectio*, Latin.] Blood-letting; the act of opening a vein; phlebotomy.—If the inflammation be sudden, after evacuation by lenient purgatives, or a clyster and *venesection*, have recourse to anodynes. *Wiseman.*

VENEZIANO (Domenico), was born at Venice in 1420, and was a disciple of Antonio da Messina, after he had, as Vasari relates, learned the secret of oil painting from J. V. Eyck; and to him Messina communicated his secret. He painted several pictures at Loretto and Perugia, and afterwards settled at Florence; where the novelty of his manner, and the ability with which he executed it, acquired for him considerable renown. Unfortunately for him, he formed an intimacy with Andrea Castagno, an eminent Tuscan painter, and taught him the management of oil colours; when his treacherous friend conceived the horrible design of assassinating him, that he might remain sole possessor of the secret, and effected his detestable purpose in 1476, when Domenico had attained his 56th year.

VENEZUELA, a province of South America, bounded on the north by the Caribbean sea, on the west by Maracaibo and Varinas, and south by the great plains of Varinas and the Orinoco. This province was named Venezuela, from the towns inhabited by Indians which were seen by the Spaniards, on the lake of Maracaibo, having a resemblance to Venice. The soil of Venezuela is fertile, and yields in abundance all the products of the West Indies, besides many others, which those islands do not possess. Its most noted article is cacao, which is inferior to none in the Americas; vanilla, maize, indigo, cotton, sugar, tobacco, and coffee, are a few of the richest objects of cultivation; wild cochineal, dyewoods, medicinal drugs, gums, resins, balsams, sarsaparilla, sassafras, liquorice, squills, storax, cassia, and aloe, here find that climate the most favourable to their growth; and the immense plains in the interior feed multitudes of cattle, horses, and mules, and in the valleys and mountains, sheep and deer are numerous. All kinds of game are found in this country, the rivers of which also abound with fish.

The climate of Venezuela is modified according to the situation of its districts in the mountains, on the coast or in the plains. On the coast and in the plains a scorching heat prevails, accompanied in the latter with deluges of rain. In the mountain valleys the air is in general pure and mild, and in some elevated parts even cold. These mountains, which form a part of the great branch extending from the west to the gulf of Paria, divide the lands of the coast from the plains of the valley of the Orinoco. Their surface is rent in every direction, by the force of subterraneous convulsions. It is on these mountains that the climate is so singularly altered, that a traveller may observe the fruits of the tropics luxuriating at a short distance from those of Europe. To the south of this chain, the llanos or plains, which stretch to the Orinoco, are inhabited solely by herds of cattle, tended by mulattoes, who are as nearly in a state of nature as the beasts they guard.

The rivers of Venezuela are more numerous than in any other part of Spanish America. Every valley has its stream, and though many of them are not of sufficient size to be navigable, yet all afford ample supplies of water to irrigate the plantations on their banks. The principal of these, which run from the mountains of Caraccas and Coro, into the Caribbean sea, are the Guiges, Tocuyo, Aroa, Yaracuy, and the Tuy. The rivers which rise on the southern side of the chain, and flow to the Orinoco, are the Guarico, which receives some of the branches of the Apure, and then following a course parallel to that river, enters the Orinoco a short distance eastward of it. The Guarico, which is a very fine river, is joined, near its confluence with the Orinoco, by the Rio Maneapra, which flows through the plains of Calabozo. The Iguane, the Cachivamo; and several others, which fertilize the vast uninhabited plains of the Orinoco, flow into that river, west of the junction of the great Apure. Most of these

these

these swell in the month of April, and continue to overflow their banks during three or four months, covering the lowlands in their neighbourhood. They abound in alligators and fish. The Portuguesea, which is formed by the union of the two rivers, the Pao and the Barquisimeto, flows through the greater part of Venezuela, and joins the Apure; 40 miles north-west of its mouth.

To VENGE, *v. a.* [*venger*, Fr.] To avenge; to punish.

Plight your honourable faiths to me,
With swift pursuit to *venge* this wrong of mine.

Shakspeare.

VENGEABLE, *adj.* Revengeful; malicious.—She was not *vengeable*, ne cruel. *Bp. Fisher.*

VENGEANCE, *s.* [*vengeance*, French.] Punishment; penal retribution; avengement.

All the stor'd *vengeances* of heav'n fall
On her ingrateful top!

Shakspeare.

It is used in familiar language. *To do with a vengeance*, is *to do with vehemence*. This phrase was formerly solemn and dignified; *what a vengeance*, emphatically *what?*—When the same king adventured to murmur, the pope could threaten to teach him his duty with a *vengeance*. *Raleigh.*

VENGEFUL, *adj.* Vindictive; revengeful; retributive.

Doubt not but God

Hath wiselier arm'd his *vengeful* ire.

Milton.

VENGEMENT, *s.* [*vengement*, old Fr.] Avengement; penal retribution.

Witness thereof he shewed his head there left,
And wretched life forlorn for *vengement* of his theft.

Spenser.

VENGER, *s.* An avenger; one who punishes. *Prompt.*

Him booteth not resist, nor succour call,
His bleeding hart is in the *venger's* hand,
Who straight him rent in thousand peeces small. *Spenser.*

VENIABLE, or VENIAL, *adj.* [from *venia*, Latin.] Pardonable; susceptible of pardon; excusable.—If they do nothing 'tis a *venial* slip. *Shakspeare.*—Permitted; allowed.

No more of talk where God, or angel-guest,
With man, as with his friend familiar us'd
To sit indulgent, and with him partake
Rural repast; permitting him the while

Venial discourse unblam'd.

Milton.

VENIALNESS, *s.* State of being excusable.

VENICE, a large and celebrated city in the north-east of Italy, situated near the northern extremity of the Adriatic. It is built on an island, or rather collection of small islands, separated from the mainland by shallows, of a depth of three, four, five, or six feet. These shallows have been formed in the course of ages, by the vast quantities of sand carried down by the rivers flowing from the Tyrolese alps into the Adriatic. This position of Venice in the midst of waters, gives it a singular appearance from a distance. Its domes and spires, its churches and public buildings, appear to the spectator, particularly in approaching by sea, to float on the surface of the waves. This appearance is particularly striking at night, when the town is lighted.

The length of the city is somewhat more than two miles, its breadth a mile and a half, its circuit six miles; so that its form, without being either square or circular, is compact. It is divided into two parts, nearly equal, by a great canal which winds through its whole length in a serpentine form. This canal is above 100 feet in width, and is crossed on one part by a bridge of a single arch, the celebrated Rialto. Every part almost of the town is intersected by smaller canals, navigated by gondolas, or by small barks. Merchandise is thus conveyed by water to the door of the warehouses. The gondolas are 5 feet in width, and 20 in length. The usual hire of one is a shilling an hour; but it is customary among the fashionable families to keep a gondola, as in other towns they would keep a carriage.

Exclusive of the general division into North and South by the great canal, Venice is separated for the purpose of police, into six parts, of which the most eastern adjoins the castle, and bears the name of Sestiere de Castello; the Sestiere de St. Marco lies more towards the centre of the city, and that of Canareggio comprises the north-west division. These three are to the north of the great canal; the remaining quarters are situated to the south of it. That of St. Paolo is in the south-east; that of St. Croce in the west, including several small gardens; and lastly, that of Dorso Duro forms the most southern division of the city, bordering on the arm of the sea called Canale della Giudeca.

The aspect of Venice is stately, and even magnificent, whether we look to public or private edifices; for though few of the buildings are in a pure style of architecture, or exhibit judicious decoration, the general effect is grand and imposing. In regard to the streets, as they are termed, it will hardly be credited, that their breadth is in general only four, five, or six feet: in many places still less. The only exception is in the street called the Merceria, situated near the centre of the town, and containing shops of all kinds; but even of that the breadth is insignificant, varying only from 12 to 20 feet. The only open place entitled to the name of square is the Piazza di San Marco, an oblong of 280 feet in length, by nearly 100 in breadth, bordered by several handsome buildings, singularly contrasted in their outward decorations. Of these, the principal are the churches of St. Marco and Geminiano; the palace formerly occupied by the doge, and the buildings fronted in the Grecian style, called the Procureria. This small but elegant square, a miniature of the Palais Royal of Paris, is bordered by arcades, containing elegant shops and coffee-rooms, which, when lighted at night, have a splendid appearance. It forms the central point of the gaiety and amusements of Venice, the resort of foreigners, and of loungers of every description. The Piazzetta is a smaller opening, leading from the square of St. Marco to the sea, and having on the one side the palace of the doge, on the other the public library, with its pillars of granite. This spot presents, from the concourse of people, an animated and interesting scene. The only other open spaces in the city are in the front of some of the churches, and at each end of the Rialto. To ride either in a carriage, or on horse-back, is wholly out of the question in Venice. Accordingly, the streets, or rather lanes, are paved, not with round stones, but flags or marble slabs, having small sewers for carrying off the filth. The ordinary dwellings are built of brick, and in general covered with wood. Without having arcades, as is the case in many towns in the north of Italy, they are in general provided with balconies. From the extreme narrowness of the streets, the houses are in general gloomy, and in the inside are miserably deficient in that commodious distribution of parts which marks the dwellings of Britain, the Netherlands, and the improved parts of France and Germany. The rooms are often wretchedly small. Personal accommodation, and in a great measure the enjoyment of good air, are sacrificed, that space may be found for magnificent statues, and other works of art. The general height is three or four stories. The larger houses are commonly of a square form, with an inside court, containing a cistern, into which, after rain, water flows from the roof; and after being filtrated, serves for domestic purposes. Such houses have in general one door to a canal, and another to a street. A number of them are built of marble, either hewn or polished. The line of the great canal presents on each side a rich and varied spectacle of such buildings.

Several of the churches of Venice were built or designed by Palladio, and bear witness to the taste and genius of that distinguished architect. Others, and indeed the greater number, are in the Saracenic, or, as it is currently termed, the Gothic style, and are less distinguished by elegance of structure, than by richness of interior decoration. The church of St. Martin, Mark, or Marco, the most entitled to notice of any in Venice, stands at one end of the Piazza di St. Marco, but is so loaded with ornaments, as to bear some

some resemblance to an eastern pagoda. It is partly of stone, partly of marble, and surrounded, like a Greek temple, with a portico of no less than 288 pillars of marble, porphyry, or other valuable materials. Its inside is ornamented with the spoils of Constantinople, and displays a profusion of marble, alabaster, emeralds, &c. Its mosaics are surpassed only by those of St. Peter at Rome. Its paintings are numerous and splendid. It is on the portico facing the piazza, that the Venetians once more see the bronze horses which, during 18 years (from 1797 to 1815), crowned the triumphal arch in the *Place du Caroussel* at Paris. The church of Santa Maria della Salute, the work of Palladio, is an elegant structure, open to the great canal, and built outside and in, of marble, with a moderate share of ornament. It was built by the government, on the cessation of a dreadful pestilence. The church *il Redemptore* is also an elegant building, and was built after a similar deliverance, at a different period. The cathedral of Venice, dedicated to St. Peter, stands on an island at the eastern end of the city. It is built of Istrian marble, and adjoins the former residence of the patriarch of Venice. The church of St. Georgia is remarkable for its front of marble and its cupola; that of St. Giovanni and St. Paolo is a large Gothic edifice, surmounted by a cupola, and is the Westminster abbey of Venice, containing the tombs of many of its defenders and doges.

Of the other public buildings, the most conspicuous is the palace of the doges, the place of assemblage for the senate and different councils of state, during the independence of the republic. It is an ancient fabric in the Gothic style, vast in its extent, and venerable in its appearance. Its lofty apartments are ornamented with paintings by the first masters of the Venetian school; its court and staircases with elegant statues. Of the other palaces or mansions of the great families, the most conspicuous are those of Goiniani, Tiopolo, Balbi, Cornaro, &c. all more remarkable for their size than for elegance or symmetry. The arsenal of Venice is a commodious, and even a magnificent building, situated on an island near the eastern end of the city. It is defended by a rampart, as well as by the surrounding water; and has before its gates two great pillars, with the two gigantic lions in granite, which stood formerly on the Piræus at Athens. Its halls are lofty and commodious. Its stores, once so abundant, have been greatly diminished since Venice lost its liberty in 1797:

The Rialto consists of one great arch, of 90 feet span, equally remarkable by its height, its boldness, and solidity. It is wholly of marble, and is ascended at each end by a flight of steps. Its height would afford the passenger a beautiful view of the city, were not the prospect impeded by a row of shops which run across it at each side. The public library stands in a fine marble structure, near the square of St. Mark. Adjoining it is the mint, also an elegant building, with arcades. On the great canal, not far from the Rialto, stands the *Fondaco di Tedeschi*, long a depot for the goods of German merchants, now the council-house of the city. Of theatres, Venice has no less than eight, great and small; but several of them are open only during the carnival. In regard to the state of its hospitals and prisons, Venice is not entitled to favourable notice. In both, its apartments are ill contrived, and in general devoid of a free circulation of air. In the prisons, the roof being of lead, the degree of heat in summer is intolerable.

Trade and Manufactures.—The commercial greatness of Venice dates, like that of Bruges, Antwerp, and Pisa, from the middle ages; the time when navigation was comparatively little followed, and when the merchandise of India was conveyed to Europe by the medium of the Levant. The crusades opened an additional field to Venetian enterprise, augmenting their wealth by the sums paid for transports and military stores, and by giving them possession of several portions of the Greek empire, desirable for a maritime power. The trade of Venice, in its best days, in the 12th, 13th, and 14th centuries, was certainly far inferior to that of Amsterdam in the last age, perhaps not equal to that of

Liverpool in the present. Still, in these times of national indolence and limited intercourse, it sufficed to give this republic a superiority in the Mediterranean, to obtain for it possession of the Ionian isles, the Morea, and the more distant settlements of Candia and Cyprus: farther, it enabled the Venetians to maintain maritime contests with the Turks, not unworthy of being compared to those of the Dutch with the Spaniards. Since the discovery of the passage to India by the Cape of Good Hope, the trade from Venice to the east has gradually diminished: at present the mercantile transactions of this city are less active than those of Trieste, and are confined to intercourse with the Levant and other parts of the Mediterranean; to the import of hardware, linen, and other manufactures from the north of Europe; of East and West India goods, direct or through the medium of Malta; and finally, of salt fish from Newfoundland or England, for the consumption of the Catholics during fast days and Lent. Vessels arriving at Venice, after surmounting the intricacy of the approach, find a spacious and commodious harbour: it contains four separate quays or landing places; but most of the shipping lie near the mouth of the great canal, or along the shore from that spot to the westward.

The manufactures of Venice, if not extensive in any one branch, are of considerable diversity: they consist of woollens, serges, canvas, and ropes; gold and silver stuffs, velvet, and silk stockings; and of lace, which is made chiefly on the adjacent island of Murano. Venice contains also various petty manufactures, such as imitations of pearls and other precious stones, ornamental glass works, jewellery and wax work. Printing is carried on here more extensively than in any other town in Italy; and books are supplied by wholesale to the Grecian islands, Constantinople, Spain, and Portugal. The price is as low as that of books in France; the type is usually good, but the quality of the paper inferior.

Education and Literature.—Venice cannot boast of many literary institutions. It is, however, the seat of an academy of the fine arts, of an athenæum, or seminary forming a medium between a great school and an university; and it contains, moreover, one of the five sections of the imperial institute for the kingdom of Italy. It contains also a navigation school, and a female establishment called the *conservato*: the *Rio de Pietà*, where education is given gratuitously to more than one hundred young women. The public library of Venice is extensive; and there are a number of private collections of curiosities and objects of art. At some distance from the town, on the small island of Lazarus, there is a seminary of Armenians, who have an extensive library and printing office; they educate young Armenians, and publish a newspaper, circulated, under certain restrictions from the Turkish government, in their own country.

Venice has by many been represented as a delightful residence; but an attentive consideration of its merits and demerits will lead to a very different result. If at first it surprises and gratifies by its novelty, it soon becomes tiresome from the appearance of so much water, the narrowness of the streets, the small size and want of air in many of the rooms, and, finally, from the general monotony of the situation. Such a position would, in fact, not be habitable were the water fresh: its insalubrity is lessened by the saltness of the water, and by the flux and reflux of the tide; but these changes, at all times much smaller in the Mediterranean than on the British shores, become in summer so inconsiderable as to render the canals stagnant, offensive, and unhealthy. The characteristics of the climate of Venice are a summer heat, much greater than is experienced in England; a winter not of great length, but sharp, particularly during the prevalence of a north-west wind, which blows across the interior of Switzerland and the Alps. Rains are frequent in Venice, particularly in spring; and there being no springs or wells, the inhabitants are supplied, as in many towns of Holland, with water collected in cisterns, from the tops of the houses. This frequently wants the freshness of running water. But the chief privation to a Venetian, is an exclusion from fields
and

and gardens, the inconvenience of walking in narrow lanes, and the ascending and descending steps at every bridge which crosses a canal. On the other hand, Venice is not an expensive city: the abundance and cheapness of its markets exhibit a striking proof of the ease of supplying a city by water. Its population does not at present much exceed 120,000; in former times it was much more.

History.—A small band of fugitives, escaping from the devastations of the Goths, first peopled the lagunes of the Adriatic gulf, in the year 420, and were governed by magistrates sent from Padua. In the lagunes, which are navigable at high water, but are left partially dry in the ebb, the fugitives found numerous spots among the rocks and little islands, sufficiently extensive to admit of cultivation. Their natural produce and aliment was, however, fish; and their only marketable commodities, the salt which they collected in their lagunes, and the fish which they cured with it. Their occupations consisted in building and navigating small boats for their neighbours. Such was their first acquaintance with that element which was afterwards to bear the proud fleets of their daring navigators, victorious warriors, and enterprising merchants. The greater number of the islands were marshes. The most elevated of them, called Rialto, was situated nearly in the middle. In progress of time, several of them were united by bridges, and formed the scite of the city of Venice. Meanwhile, Padua was still the metropolis; but having been devastated by the incursions of barbarians between the years 450 and 460, her little colonies were emancipated from her guardianship, and left to maintain, as they could, their independence. From that time, each island elected a tribune; and it appears, that the assembly of these magistrates constituted a national council. But as the necessity of carrying on offensive and defensive wars with their neighbours increased, the executive power, not very precisely separated indeed from the legislative and judicial, was vested in a single tribune. (503.) Though, however, this functionary was elective, and bound in most things by the deliberations and decrees of the other tribunes, his authority was too extensive to be viewed without jealousy and apprehension; and was soon distributed among ten, and afterwards among twelve, though occasionally this number was reduced to seven. They were chosen annually, and were bound to govern the republic with the concurrence of a popular assembly, and the assistance of a council of forty persons, both chosen by the people, and who also performed the functions of judges. After many and various dissensions, the Venetians, in the year 690, elected a chief magistrate, called a *Doge*, who was invested for life with sovereign power. A council still, however, remained in power, and used to curtail any abuse on the part of the head of government. Three *Doges* were successively elected, but in the year 737, the post was abolished, and an annual leader elected under the title of *Maestro di Milizia*. This dignity lasted only until 742, when the office of *Doge* was restored. Sovereign power was again entrusted to one man, and the council of forty still continued, without mixing much in the executive government, to rule over him. The rights of the people were still further protected by the *Avvogadori*, who had a power to suspend all decrees, whether emanating from the *Doge*, the council of forty, or the people: and then he could choose which of those estates should decide on the validity of his reasons for the suspension. Thus constituted, Venice flourished alike in arms and in commerce. The *Doges* were frequently assassinated by the mob, or condemned to death by the Forty; and this, as well as the circumstances before mentioned, serve to show how jealous the Venetians were of the despotic sway of an individual. They fell, unhappily, under the far more dangerous despotism of several. The middling classes feared the excesses of the lowest orders, and placed themselves under the protection of the grandees, and a system of encroachment on the part of these commenced, which ended in placing Venice under the dominion of a small number of aristocrats. The council of forty had always been allowed to appoint a *Doge* during an

interregnum, and the people either confirmed or annulled this nomination at their leisure. In the year 1172, after 43 successive *doges* had been assassinated, and much clamour thereby created, the council proceeded to make a law, that the people might annul the election the forty had made, but could not themselves elect another. The same body crippled very much the power of the *doge*, by depriving him of the right to choose his own councillors. Sixty fresh members were added to the forty, and denominated the senate, and these chose from themselves 6 councillors of state, called the *signoria*.

Towards the middle of the 13th century (about 1247), the government became a settled aristocracy, the families of wealth and rank assuming and conferring to their own body the management of public affairs. This era, that of the 12th, 13th, and 14th centuries, was the period of the greatest relative power of the Venetians. Though their chief hostilities were with the Turks, they took also a part in European politics, particularly in the contests between Austria, France, and the court of Rome, for a political ascendancy in the north of Italy. It was in the beginning of the 16th century (in 1508), that the territorial possessions of the republic were threatened by the formidable coalition, so well known under the name of "the league of Cambray." The storm was weathered with difficulty; and, for a long time back, the policy of Venice has been decidedly pacific, the care of its government being to preserve its remaining trade, and to prevent any addition to its public debt. It has kept up no naval force, except for resistance to Barbary corsairs; and hardly any military but what were required for the purpose of police. In the political storm which followed the French revolution, and which brought Buonaparte, with his army, into the Venetian territory, the republic observed a cautious neutrality, and allowed its continental provinces to be overrun without resistance, at one time by the French, at another by the Austrians. But all this caution could not secure the independence of the state; it was overturned in 1797, when it suited France to throw the city and territory of Venice into the scale, in the treaty of Campo Formio. They remained subject to Austria till 1805, when, after the disaster of Austerlitz, they were annexed to the French kingdom of Italy; but in 1814 they returned definitively under the power of Austria.—For the military adventures of the Venetian *doges*, see *TURKEY, ROME, ITALY, &c.*; 150 miles east of Milan, and 246 north of Rome. Lat. 5. 25. 32. N. long. of St. Marco, 12. 20. 59. E.

VENICE, a township of the United States, in Huron county, Ohio, on the south side of Sandusky bay; 4 miles west of the new town of Sandusky.

VENISON, *s.* [*venaison*, French.] Game; beast of chase; the flesh of deer. Chapman writes it as it is spoken, *venzon*.

Shall we kill us *venison*?

And yet it irks me, the poor dappled fools

Shoud have their round haunches gor'd.

Shakspeare.

VENLOO, a town of the Netherlands, in the province of Limburg, on the east side of the Maese. It is a place of some antiquity, having been one of the Hanse towns; 40 miles north-north-east of Maestricht. Population 5000.

VENLOON, or **LOON**, or **ZAND**, a small town of the Netherlands, in North Brabant, with 3500 inhabitants; 12 miles west-by-north of Breda.

VENNINGEN, a small town of the Bavarian circle of the Rhine, near Spire.

VENNINGTON, a hamlet of England, in the parish of Westbury, Salop, near Shrewsbury.

VE'NOM, *s.* [*venin*, French.] Poison.

Your eyes, which hitherto have borne in them

The fatal balls of murdering basilisks:

The *venom* of such looks we fairly hope

Have lost their quality.

Shakspeare.

To **VE'NOM**, *v. a.* To infect with venom; to poison; to envenom.

This marble *venom'd* seat,
Smear'd with gums of glutinous heat.

VE'NOMOUS, *adj.* Poisonous.

Thy tears are saller than a younger man's,
And *venomous* to thy eyes,

Shakspeare.

Malignant; mischievous.—A posterity not unlike their majority of mischievous progenitors; a *venomous* and destructive progeny. *Brown.*

VENOMOUSLY, *adv.* Poisonously; mischievously; malignantly.

His unkindness,
That stripp'd her from his benediction, turn'd her
To foreign casualties. These things sting him
So *venomously*, that burning shame detains him
From his Cordelia.

Shakspeare.

VE'NOMOUSNESS, *s.* Poisonousness; malignity.
VENOSA, a small town of Italy, in the south of the kingdom of Naples, province of Basilicata, situated on the river Ofanto (Aufidus), not far from its source; 86 miles north of Naples.

VENOTERY, a parish of England, in Devonshire; 6 miles from Topsham.

VENT, *s.* [*fente*, French.] A small aperture; a hole; a spiracle; passage at which any thing is let out.

On her breast
There is a *vent* of blood, and something blown;
The like is on her arm.

Shakspeare.

Passage out of secrecy to public notice.—It failed by late setting-out, and some contrariety of weather, whereby the particular design took *vent* beforehand. *Wotton.*—The act of opening.

The farmer's cades mature,
Now call for *vent*; his lands exhaust, permit
T' indulge awhile.

Philips.

Emission; passage.
The smother'd fondness burns within him;
When most it swells and labours for a *vent*,
The sense of honour, and desire of fame,
Drive the big passion back into his heart.

Addison.

Discharge; means of discharge.
Had, like grief, been dew'd in tears,
Without the *vent* of words.

Milton.

[*vente*, Fr.; *venditio*, Lat.] Sale.—He drew off a thousand copies of a treatise, which not one in threescore can understand, can hardly exceed the *vent* of that number. *Pope.*

[*venta*, Spanish.] An inn; a baiting-place. *Not in use.*—He perceived an inn near unto the highway; forthwith, as soon as he espied the *vent*, he feigned to himself that it was a castle with four turrets. *Shelton.*

To VENT, *v. a.* [*venter*, Fr.; *sventare*, Ital.] To let out at a small aperture; to give a vent or opening to.
But the brave mayd would not disarmed be,
But only *vented* up her umbriere,
And so did let her goodly visage to appere.

Spenser.

To let out; to give way to.
Hunger broke stone walls; that the gods sent not
Corn for the rich men only: with these shreds
They *vented* their complainings.

Shakspeare.

To utter; to report.—Had it been *vented* and imposed in some of the most learned ages, it might then, with some pretence of reason, have been said to be the invention of some crafty statesman. *Stephens.*

To emit; to pour out.
Revoke thy doom,
Or whilst I can *vent* clamour from my throat,
I'll tell thee thou dost evil.

Shakspeare.

To publish.—Their sectators did greatly enrich their in-

ventions, by *venting* the stolen treasures of divine letters, altered by profane additions, and disguised by poetical conversions. *Raleigh.*—To sell; to let go to sale.—This profitable merchandize not rising to a proportionable enhancement with other less beneficial commodities, they impute to the owners not *venting* and venturing the same. *Carew.*
To VENT, *v. n.* To snuff: as, he *venteth* into the air.

Seest how brag yon bullocke bears?—

See how he *venteth* into the wind.

Spenser.

VENT, a river of England, in the county of Cumberland, which falls into the South Tyne at Austin Moor.

VENTA, a small hamlet or inn of the province and government of Venezuela, well known upon the road, as being about half-way between Caraccas and the Port.

VENTA DE CRUZ, a sea-port town of America, on the Isthmus of Darien, on the river Chagre; 20 miles north of Panama. Lat. 9. 26. N.

VENTA DE EN MEDIO, a settlement of Peru, in the province of Paria.

VENTA SIERRA, mountains of South America, in the province or Venezuela.

VENTABREN, a small town in the south-east of France, department of the Mouths of the Rhone; 9 miles south-west of Aix.

VENTADOUR, a small town and castle in the central part of France, department of the Correze; 14 miles north-east of Tulle.

VENTAGE, *s.* A small hole. *Not in use.*—Govern these *ventages* with your fingers and thumb, give it [the pipe] breath with your mouth. *Shakspeare.*

VENTAIL, *s.* [*ventaille*, old Fr.] That part of the helmet made to lift up; the breathing part of the helmet.

Elftoones they gan their wrathfull hands to hold,
And *ventails* reare, each other to behold.

Spenser.

VENTANNA, *s.* [Spanish.] A window.

What after pass'd
Was far from the *ventanna*, where I sate;
But you were near, and can the truth relate.

Dryden.

VEN'TER, *s.* [Latin.] Any cavity of the body, chiefly applied to the head, breast, and abdomen, which are called by anatomists the three *venters*. Womb; mother.—*A.* has issue *B.* a son, and *C.* a daughter, by one *venter*; and *D.* a son by another *venter*. If *B.* purchases in fee, and dies without issue, it shall descend to the sister, and not to the brother of the half blood. *Hale.*

VENTER, *s.* One who utters, reports, or publishes.—What do these superfluities signify, but that the *venter* of them doth little skill the use of speech, or the rule of conversation, but meaneth to prate any thing without judgment or wit. *Barrow.*

VENTHIE, a small town in the north-east of France, department of the Pas de Calais; 9 miles north-east of Bethune.

VENTIDUCT, *s.* [*ventus* and *ductus*, Lat.] A passage for the wind.—Having been informed of divers *ventiducts*, I wish I had had the good fortune, when I was at Rome, to take notice of these organs. *Boyle.*

VENTILAGO [from *ventus*; on account of its exposure to the winds, from its mountainous situation], in Botany, a genus of the class pentandria, order monogynia.—Generic Character. Calyx one-leaved, tubular, indistinctly ten-striated within the margin, which is quite entire and toothless. Corolla: scales protecting the stamens. Stamina: filaments five, inserted into the calyx. Pistil one. Pericarp: capsule superior, globular, surrounded near the middle with the remaining nectary, and terminating in a long linear, membranous wing; one-celled, not opening of itself. Seed solitary, round.—*Essential Character.* Calyx tubular. Corolla: scales protecting the stamens which are inserted into the calyx. Samara winged at the top and one-seeded.

Ventilago maderaspatana.—This is a large climbing shrub.

shrub. Leaves alternate, on short petioles, two-faced, ovate, slightly serrate, smooth, three or four inches long. Panicle terminating. Flowers very numerous, small, of a dirty greenish colour, smelling very strong and offensive, not unlike that of *Sterculia foetida*.—Native of the East Indies.

To VENTILATE, *v. a.* [*ventilo*, Lat.] To fan with wind.—In close, low, and dirty alleys, the air is penned up, and obstructed from being ventilated by the winds. *Harvey*.—To winnow; to fan. *Cockeram*.—To examine; to discuss.—Nor is the right of the party, nor the judicial process in right of that party so far peremptory; but that the same may be begun again, and ventilated de novo. *Ayliffe*.

VENTILATION, *s.* [*ventilatio*, Latin.] The act of fanning; the state of being fanned.—The soil, worn with too frequent culture, must lie fallow, till it has recruited its exhausted salts, and again enriched itself by the ventilations of the air. *Addison*.—Vent; utterance. *Not in use*.—To his secretary Doctor Mason, whom he let lie in a pallet near him, for natural ventilation of his thoughts, he would break out into bitter eruptions. *Wotton*.—Refrigeration.—Procure the blood a free course, ventilation and transpiration by suitable and ephractic purges. *Harvey*.—Examination; discussion.—Nor doth the victor commonly permit any ventilation of his dictates; for when the body is a slave, why should the reason be free? *Abp. Sancroft*.

VENTILATOR, *s.* An instrument contrived to supply close places with fresh air.

VENTNOR, a hamlet of England, in the isle of Wight, county of Southampton, on the southern coast of the island, near Steephill.

VENTOSITY, *s.* [from *ventosus*, Lat.] Windiness. *Cotgrave*, and *Bullokar*.—Without ventosity or popularity. *Bacon*.

VETOSO, CAPE, a promontory on the north-east coast of the island of Cabrera, in the Mediterranean. Lat. 39. 10. N. long. 2. 55. E.

VENTOTIENE, an island in the Mediterranean, near the coast of Naples, anciently called *Pandataria*; according to Sir William Hamilton, composed of volcanic matter thrown up by fire. It is now, as it seems to have been for ages, used as a place of banishment for criminals of a superior rank. Hither Julia, the daughter of Augustus, was sent, accompanied by her mother Scribonia. Some years the virtuous Agrippina was also confined here; and Octavia, wife of Nero, and daughter of Claudius, was at the instigation of Poppæa banished and murdered in this island; 17 miles west of Ischia. Lat. 40. 53. N. long. 13. 19. E. See *PENZA*, vol. xxi. p. 169.

VENTOUX, MONT, a lofty mountain in the south-east of France, department of the Vaucluse. Elevation 6800 feet.

VENTRAL, *adj.* Belonging to the belly.—It is said, that the young of the viper, when terrified, will run down the throat of the parent, and seek shelter in its belly, in the same manner as the young of the opossum retire into the ventral pouch of the old one. *Chambers*.

VENTRICLE, *s.* [*ventriculus*, Lat.] The stomach.—Whether I will or not, while I live, my heart beats, and my ventricle digests what is in it. *Hale*.—Any small cavity in an animal body, particularly those of the heart.

Know'st thou how blood, which to the heart doth flow,
Doth from one ventricle to the other go? *Donne*.

VENTRILLOQUISM, or VENTRI'LOQUY, *s.* [*ventriologue*, Fr.; *ventriologus*, Lat., *venter* and *loquax*, Lat.] The act of speaking inwardly, so that the sound seems to issue from the belly; the art of forming speech, by drawing the air into the lungs, so that the voice, proceeding out of the thorax, to a by-stander seems to come from some distance, or in any direction.

This art does not depend on a particular structure peculiar to a few individuals, and very rarely occurring, but may be acquired by almost any ardently desirous of attaining it, and determined to persevere in repeated trials. The judgments

we form concerning the situation and distance of bodies, by means of the senses mutually assisting and correcting each other, seem to be entirely founded on experience, and we pass from the sign to the thing signified by it immediately, or at least without any intermediate steps perceptible to ourselves. Hence it follows, that if a man, though in the same room with another, can produce a sound, which in faintness and tone perfectly resembles a sound delivered from the roof of an opposite house, the ear will naturally, without examination, refer it to that situation and distance; the sound which the person hears being only a sign, which from infancy he has been accustomed, by experience, to associate with the idea of a person speaking from a house-top. A deception of this kind is practised with success on the organ, and other musical instruments; and there are many similar optical deceptions.

For some facts and observations tending to explain the curious phenomena of ventriloquism by Mr. John Gough, we refer to the Manchester Memoirs, vol. v. part 2. p. 622. London, 1802, in which the ingenious author investigates the method whereby men judge by the ear of the position of sonorous bodies relative to their own persons. This author observes in general, that a sudden change of direction in sound, our knowledge of which, as he conceives, does not depend on the impulse in the ear, but on other facts, will be perceived, when the original communication is interrupted, provided there be a sensible echo. He thinks that the echo reaches the ear, while the original sound is intercepted by the art of the ventriloquist. This is the reason why people, who speak in the usual way, cannot conceal the direction of their voices, which in reality fly off towards all points at the same instant. The ventriloquist, therefore, by some means or other, acquires the difficult habit of contracting the field of sound within the compass of his lips, which enables him to confine the real path of his voice to narrow limits. For he, who is master of the art, has nothing to do but to place his mouth obliquely to the company; and to dart his words, if the expression may be used, against an opposing object, whence they will be reflected immediately, so as to strike the ears of the audience from an unexpected quarter, in consequence of which the reflector will appear to be the speaker. Nature seems to fix no bounds to this kind of deception, only care must be taken not to let the path of the direct pulses pass too near the head of the person who is to be played upon; for, if a line, joining the exhibitor's mouth and the reflecting body, approach one of his ears too nearly, the divergency of the pulses will make him perceive the voice itself, instead of the reverberated sound.

VENTRILLOQUIST, *s.* [*ventriologue*, Fr.; *ventriologus*, Lat.] One who speaks in such a manner as that the sound seems to issue from his belly.—It appears from Plutarch, Suidas, (in *V. Ἐγλαστριμβος*) and Josephus, that those who were anciently called *ventriloquists*, had afterwards the name of *pythonesses*. Of course the factitious voice, produced by a *ventriloquist*, does not (as the etymology of the word imports) proceed from the belly, but is formed in the inner parts of the mouth and throat.

VENTRILLOQUOUS, *adj.* [*ventriologue*, French; *ventriologus*, Latin.] Emitting sound as a ventriloquist.—Whether the bleating or humming of cock-snipes in breeding time is *ventriloquous*, or proceeds from the motion of their wings, I cannot say. *White*.

VENTUVAI, an abundant river of Guiana, which rises in the mountains of the interior, and turning to the south, enters by a very wide mouth into the Orinoco, opposite the fort of St. Barbara, in lat. 4. 20. N.

VENTURA, a river of the province of Buenos Ayres, which runs west, and enters the Jazegua.

VENTURE, *s.* [*aventure*, Fr.] A hazard; an undertaking of chance and danger.

When he reads
Thy personal venture in the rebel's fight,
His wonders and his praises do contend
Which should be thine or his.

Shakspeare.
Chance;

Chance; hap.—The king resolved with all speed to assail the rebels, and yet with that providence and surety, as should leave little to *venture* or fortune. *Bacon*.—The thing put to hazard; a stake.

My *ventures* are not in one bottom trusted,
Nor to one place.

Shakspeare.

At a *VENTURE*. At hazard; without much consideration; without any thing more than the hope of a lucky chance.—You have made but an estimate of those lands at a *venture*, so as it should be hard to build any certainty of charge upon it. *Spenser*.

To *VENTURE*, *v. n.* To dare.—A man were better rise in his suit; for he that would have *ventured* at first to have lost the suitor, will not in the conclusion lose both the suitor and his own former favour. *Bacon*.—To run a hazard.

Nor is indeed that man less mad than these,
Who freights a ship to *venture* on the seas,
With one frail interposing plank to save
From certain death, roll'd on by every wave.

Dryden.

To *VENTURE* at, or To *VENTURE* on or upon. To engage in; or make attempts without any security of success, upon mere hope.

That slander is found a truth now; and held for certain,
The king will *venture* at it.

Shakspeare.

To *VENTURE*, *v. a.* To expose to hazard.

In my school-days, when I had lost one shaft,
I shot his fellow of the self-same flight;
By *vent'ring* both, I oft found both.

Shakspeare.

To put or send on a *venture*.—The fish *ventured* for France, they pack in staunch hogsheads, so as to keep them in their pickle. *Carew*.—To trust; to rely on. *Not proper*. *Hurd*.—A man would be well enough pleased to buy silks of one, whom he would not *venture* to feel his pulse. *Addison*.

VENTURER, *s.* One who ventures.

Remember, you're all *venturers*, and in this play
How many twelve-pences ye have 'stow'd this day.

Beaum. and Fl.

VENTURESOME, *adj.* Bold; daring.

VENTURESOMELY, *adv.* In a bold or daring manner.

VENTURING, *s.* The act of putting to hazard; the act of running risk.—Wise *venturing* is the most commendable part of human prudence. *Id. Halifax*.

VENTUROUS, *adj.* Daring, bold, fearless; ready to run hazards.

He paus'd not, but with *vent'rous* arm
He pluck'd, he tasted.

Milton.

VENTUROUSLY, *adv.* Daringly; fearlessly; boldly.—Siege was laid to the fort by the Lord Gray, then deputy, with a smaller number than those were within the fort; *venturously* indeed; but haste was made to attack them before the rebels came in to them. *Bacon*.

VENTUROUSNESS, *s.* Boldness; willingness to hazard.—Her coming into a place where the walls and cieling were whited over, much offended her sight, and made her repent her *venturousness*. *Boyle*.

VENUE, *s.* [*vicinium*, Lat.] [In law.] A neighbouring place.—Twelve of the assise ought to be of the same *venue* where the demand is made. *Cowel*.—A thrust; a hit. See *VENEY*.

VENUS, *s.* [Latin.] One of the planets.

Yet you, the murderer, look as bright, as clear,
As yonder *Venus* in her glimmering sphere.

Shakspeare.

VENUS' BASIN, [*diasacus major*, Lat.] *VENUS' COMB* [*pecten Veneris*, Lat.], *VENUS' HAIR* [*adiantum*], *VENUS' LOOKING-GLASS*, *VENUS' NAVEL-WORT*, *s.* Plants.—Botanists show a very particular regard to the fair sex;—as we may well conclude from so many names they give to plants; ladies' fingers, ladies' traces, ladies' linen, *Venus' glass*, *Venus' basin*, &c. *Stukeley*.

VENUS, CAPE, a cape on the coast of Otaheite. Lat. 17. 29. N. long. 149. 36. W.

VENUS, POINT, a cape on the west coast of the island of Otaheite, so called by Captain Cook, being the spot chosen to obtain the transit of Venus on the 3d of June 1769.

VENUST, *adj.* [*venustus*, Lat.] Beautiful; amiable.—As the infancy of Rome was *venust*, so was its manhood notably strenuous. *Waterhouse*.

VENZONE, a town of Austrian Italy, in the government of Venice, situated on the Tagliamento; 18 miles north-west of Udina.

VEPRINITZ, a small town of Austrian Illyria, on the coast of Istria. It stands in a quarter which, though rocky, produces very good wine, olives, and chesnuts; 9 miles west of Fiume.

VERA, a small town of the Austrian states, in Sclavonia; 9 miles south of Essek.

VERA, a sea-port town in the south of Spain, on the coast of Granada; 40 miles south-by-west of Lorca.

VERA, a town in the north-east of Spain, in Navarre, on the borders of France; 6 miles south-south-east of Fontarabia.

VERA CRUZ, a province of Mexico, situated under the burning sun of the tropics, and extending along the Mexican gulf, from the Rio Baraderas (or de los Lagartos) to the great river of Panuco, which rises in the metalliferous mountains of San Luis Potosi. Hence this intendency includes a very considerable part of the eastern coast of New Spain. Its length, from the bay of Terminos near the island of Carmen, to the small port of Tampico, is 210 leagues; while its breadth is only in general from 25 to 28 leagues. It is bounded on the east by the peninsula of Merida; on the west by the intendancies of Oaxaca, Puebla, and Mexico; and on the north by the colony of New Santander.

There are few regions in the new continent where the traveller is more struck with the assemblage of the most opposite climates, than in this province. All the western part of the province of Vera Cruz forms the declivity of the Cordilleras of Anahuac. In the space of a day the inhabitants descend from the regions of eternal snow, to the plains in the vicinity of the sea, where the most suffocating heat prevails. The admirable order with which different tribes of vegetables rise above one another by strata, as it were, is nowhere more perceptible than in ascending from the port of Vera Cruz to the table-land of Perote. We see there the physiognomy of the country, the aspect of the sky, the form of plants, the figures of animals, the manners of the inhabitants, and the kind of cultivation followed by them; assume a different appearance at every step of our progress. As we ascend, nature appears gradually less animated, the beauty of the vegetable forms diminishes, the shoots become less succulent, and the flowers less coloured. The inferior limit of the Mexican oak warns the colonist who inhabits the central table-land, how far he may descend towards the coast, without dread of that mortal disease the yellow fever. Forests of liquid amber, near Xalapa, announce by the freshness of their verdure that this is the elevation at which the clouds suspended over the ocean come in contact with the basaltic summits of the Cordillera. A little higher, near La Banderilla, the nutritive fruit of the banana tree comes no longer to maturity. At the height of San Miguel, pines begin to mingle with the oaks, which are found by the traveller as high as the elevated plains of Perote, where he beholds the delightful aspect of fields sown with wheat. Twenty-six hundred feet higher, the coldness of the climate will no longer admit of the vegetation of oaks; and pines alone there cover the rocks, whose summits enter the limit of eternal snow. Thus, within the compass of not many miles, the naturalist in this miraculous country ranges through the whole scale of vegetation.

The smilax, of which the root is the true sarsaparilla, grows in the humid and umbrageous ravines of the Cordillera. The cotton of the coast of Vera Cruz is celebrated for its fineness and whiteness. The sugar-cane yields nearly as

much

much sugar as in the island of Cuba, and more than in the plantations of St. Domingo. This province alone would keep alive the commerce of the port of Vera Cruz, if the number of the colonists were greater, and if their laziness, the effect of the bounty of nature, and the facility of providing without effort for the most urgent wants of life, did not impede the progress of industry. The province of Vera Cruz contains within its limits two colossal summits, of which one, the volcano of Orizaba, is, after the Popocatepetl, the most elevated mountain of Mexico. The other summit, the Coffre de Perote, according to the measurement of Humboldt, is nearly 1312 feet higher than the Peak of Teneriffe. It serves as a signal to the sailors who put in at Vera Cruz.

In the northern part of the province, at two leagues distance from the great Indian village of Papantla, there is a pyramidal edifice of great antiquity. This pyramid remained unknown to the first conquerors, being situated in the midst of a thick forest, and concealed by the Indians, who held it in great veneration. It is constructed of immense stones of a porphyritical shape. Mortar is distinguishable in the seams. The edifice, however, is not so remarkable for its size, as for its symmetry, the polish of the stones, and the great regularity of their cut. The base of the pyramid is an exact square, each side being 82 feet in length. The perpendicular height appears not to be more than from 52 to 65 feet. This monument, like all the other Mexican monuments, is composed of several stages. Six are still distinguishable, and a seventh appears to be concealed by the vegetation with which the sides of the pyramid are covered. A great stair of 57 steps conducts to the top, where the human victims were sacrificed. On each side of the great stair is a small stair. The facing of the stones is adorned with hieroglyphics, in which serpents and crocodiles, carved in relievo, are discernible. Each story contains a great number of square niches, symmetrically distributed. In the first story there are 24 on each side, in the second 20, and in the third 16. The number of these niches in the body of the pyramid is 366, and there are 12 in the stairs towards the east. According to the latest enumeration, Vera Cruz contains 156,000 inhabitants. The extent of its surface is 4141 square leagues, and there are 38 inhabitants to each league.

VERA CRUZ, the grand sea-port of Mexico. It fronts the sea in a semicircle, and is inclosed with a simple wall or parapet, six feet high and three feet broad, surmounted by a wooden palisade in great decay. On the shore to the south-east and north-west, are two redoubts, with some cannon to defend the port, which is not commodious, being merely a bad anchorage among shallows. The habitual population, without including the militia and seafaring people, is 16,000. The fair lasts many weeks, and during this period there is a great resort of strangers to the place; 150 miles east-south-east of Puebla. Lat. 19. 11. 52. N. long. 100. 49. 15. W.

VERA CRUZ, a small island in the Atlantic ocean, on the coast of Brazil, at the entrance of the bay of Todos Santos.

VERA CRUZ, a port in the bay of St. Philip and St. Jago, in Terra Australis del Espiritu Santo, discovered by Quiros in 1606, capable of containing 1000 ships, with clear soundings of black sand, and water from three feet to forty fathoms.

VERA CRUZ, OLD, a sea-port of Mexico, in the province of Tlascalala. This is the port where Cortez landed in 1518; 15 miles north of Vera Cruz. Lat. 19. 20. N. long. 97. 40. W.

VERA PAZ, a province of Guatimala, bounded on the north by the provinces of Chiapa and Yucatan; on the east by Honduras and the bay or gulf of Honduras; on the south by Guatimala; and on the west by the same and Chiapa. It is about 120 miles in length, and 74 in extreme breadth. The country is rough and broken, full of deep ravines, with a plain, which is half a league in extent, and covered with thick and impenetrable woods. Half of this province is of a mild and benign temperature, and the other half is hot, and

VOL. XXIV. No. 1641.

abounding in mosquitoes of various kinds. The woods of this province are thronged with animals and wild beasts; the largest of these is the *danta*, as big as a calf, though somewhat short, and thicker set in all its joints, which on the whole resembles those of the elephant. This animal is ferocious and terrible when irritated, and with its tusks destroys every thing it meets in its course, not excepting trees of considerable strength. Here are likewise lions, tigers, bears of an enormous size, cats and mountain goats, monkeys of various kinds, wild boars, porcupines, squirrels, and a variety of other animals. Also amongst the birds are eagles, small eagles, sea-crows, bitterns, storks, parrots, and others esteemed for their plumage and their song. This province is also filled with vipers, and snakes of various kinds. The fountains and rivers are so numerous, that there are 30 of the latter to be met with in the space of three leagues, and all of them run to disembogue themselves into the sea, at the gulf. The trade of the province consists chiefly in drugs, cotton, cacao, honey, wool, &c.

VERA PAZ, the chief town of the above province, is situated on the Rio Coban, which falls into the gulf or lake of Dulce; 600 miles south-east of Mexico. Lat. 15. 50. N. long. 91. 14. W.

VERA'CIOUS, *adj.* [*verax*, Lat.] Observant of truth.—The Spirit is most perfectly and absolutely *veracious*. *Barrow*.

VERA'CITY, *s.* [*verax*, Latin.] Moral truth.—What can we say? Even that, which the man in Terence said to a person whose *veracity* he suspected. *Bryant*.—Physical truth; consistency of report with fact. *Less proper*.—When they submitted to the most ignominious and cruel deaths, rather than retract their testimony, there was no reason to doubt the *veracity* of those facts which they related. *Addison*.

VERAGUA, a province of Terra Firma, in South America, bounded on the north by the Caribbean sea; east by the province of Darien in South America, which is separated from Veragua by the ridge of Canatagua; on the west by Costa Rica; and on the south by the great Pacific ocean. Veragua is a mountainous rugged country, covered with vast forests, beautifully interspersed with luxuriant and fertile valleys, wherein are found various estates and grazing farms, well stocked with cattle, from the abundance of excellent pastures. The woods abound with monkeys and wild animals. There is one kind of monkey, of a delicate form and yellow colour, with a white head; and it is said they never live when removed from their native climate.

The gold and silver mines of Veragua are not much wrought, owing to the rugged nature of the country in which they are situated; the natives being the only means they have to transport the produce over the mountains, which, when a mine is worked, they do on their backs. The labour and expense attendant on this mode of carrying the ores to be smelted, render the working of the mines, though they are very rich, almost impracticable.

VERAGUA, ST. JAGO DE, the capital of the above province, is a handsome town, situated in a moist and warm climate, and surrounded by a small district, which produces Indian corn, a root called yucca, of which they make bread, and plantains. Cattle and hogs are here also very numerous.

VERA'NDA, *s.* A word adopted from the East, where it means the covering of a house extended beyond the main pile of building, and forming, by a sloping roof, external passages; a kind of open portico.

VERATRUM [of Pliny. Derivation unknown], in Botany, a genus of the class polygamia, order monoecia, natural order of coronariz, junci (*Juss.*)—Generic Character. Hermaphrodite.—Calyx none, unless the corolla be considered as such. Corolla: petals six, oblong, lanceolate, thinner at the edge, serrate, permanent. Stamina: filaments six, awl shaped, pressing the germs, more spreading at the tips, shorter by half than the corolla. Anthers quadrangular. Pistil: germs three, erect, oblong, ending in scarcely apparent styles. Stigmas simple, patulous. Pericarp:

carp: capsules three, oblong, erect, compressed, one-celled, one-valved, gaping inwards. Seeds many, oblong, blunter at one end, compressed, membranaceous, fastened in a double row.—Male flower on the same plant, below the hermaphrodite. Calyx, corolla, stamina as in the hermaphrodite: Pistil an indistinct, vain rudiment.—*Essential Character.* Calyx none. Corolla six-petalled. Stamina six. Hermaphrodite: pistil three. Capsule many-seeded. Male: rudiment of a pistil.

1. *Veratrum album*, white-flowered veratrum, or white hellebore.—Raceme superdecompound, corollas erect. Root perennial, composed of many thick fibres gathered into a head. Leaves oblong-obovate, ten inches long, and five broad in the middle, rounded at the end, and having many longitudinal plaits like those of Gentian. Native of Greece, Italy, Switzerland, Austria, the south of France, and Russia.

2. *Veratrum viride*, or green-flowered veratrum.—Raceme superdecompound; corollas bell-shaped, with the claws thickened at the side within.—Native of North America.

3. *Veratrum nigrum*, or dark-flowered veratrum.—Raceme compound; corollas spreading very much. This has a perennial root like the first sort.—Native of Austria and Siberia.

4. *Veratrum luteum*, or yellow-flowered veratrum.—Racemes quite simple; leaves sessile.—Native of North America.

Propagation and Culture.—Sow the seeds as soon as ripe, either in a bed or box filled with fresh light earth, and keep the ground constantly clean from weeds.

When these plants are once obtained, they may be increased by parting their roots in autumn, when their leaves decay; but they should not be parted too small, for that will prevent their flowering in the following summer. Plant them in a light, fresh, rich soil; and do not remove them oftener than once in three or four years. They are pretty ornaments, when planted in the middle of open borders of the pleasure garden: if they be planted near fences which harbour snails, these will eat the leaves, especially of the third sort, and deface the plants very much.

VERB, *s.* [*verbum*, Lat.] A part of speech signifying existence, or some modification thereof, as action, passion.—And without some disposition or intention of the mind relating thereto, as of affirming, denying, interrogating, commanding. *Clarke.*—Men usually talk of a noun and a *verb*. *Shakspeare.*—A word. *Not in use.*—That so it might appear, that the assistance of the Spirit promised to the church, was not a vain thing, or a mere *verb*. *South.*

VERBAL, *adj.* [*verbalis*, Lat.] Spoken, not written. Oral; uttered by mouth.

Made she no *verbal* quest?—

—Yes; once or twice she heav'd the name of father
Pantingly forth, as if it prest her heart. *Shakspeare.*

Consisting in mere words.

If young African for fame,
His wasted country freed from Punic rage,
The deed becomes unprais'd, the man at least;
And loses, though but *verbal*, his reward. *Milton.*

Verbose; full of words. *Out of use.*

I'm sorry
You put me to forget a lady's manners,
By being so *verbal*. *Shakspeare.*

Minutely exact in words.

Neglect the rules each *verbal* critic lays,
For not to know some trifles is a praise. *Pope.*

Literal; having word answering to word.—The *verbal* copier is incumbered with so many difficulties at once, that he can never disentangle himself from all. *Dryden.*—[*verbal*, Fr. in grammar.] A *verbal* noun is a noun derived from a verb.

VERBALITY, *s.* Mere words; bare literal expression.—

Sometimes he will seem to be charmed with words of holy Scripture, and to fly from the letter and dead *verbality*, who must only start at the life and animated materials thereof. *Brown.*

To VERBALIZE, *v. a.* To make a verb; to turn into a verb.—Nouns, for brevity, are sometimes *verbalized*: as, to complete, to contrary, to experience. *Instruct. for Orat.*

VERBALLY, *adv.* In words; orally.—The manner of our denying the deity of Christ here prohibited, was by words and oral expressions *verbally* to deny it. *South.*—Word for word.—'Tis almost impossible to translate *verbally*, and well, at the same time. *Dryden.*

VERBAS, a river in the north-west of European Turkey, in Bosnia, which falls into the Save; 25 miles north-north-east of Banjaluka.

VERBASCUM [of Pliny, who deduces it from *Verbenæ*], in Botany, a genus of the class pentandria, order monogynia, natural order of *luridæ, solanæ* (*Juss.*)—*Generic Character.* Calyx: perianth one-leaved, five-parted, small, permanent; segments erect, acute. Corolla one-petalled, wheel-shaped, a little unequal; tube cylindric, very short; border spreading, five-parted; segments ovate, obtuse. Stamina: filaments five, awl-shaped, shorter than the corolla. Anthers roundish, compressed, erect. Pistil: germ roundish. Style filiform, length of the stamens, inclined. Stigma thickish, obtuse. Pericarp: capsule roundish, two-celled, two-valved, opening at top. Receptacles half-ovate, fastened to the partition. Seeds numerous, angular. In most of these species the stamens are inclined and unequal, and clothed at bottom with coloured villose hairs.—*Essential Character.* Corolla wheel-shaped, a little unequal. Capsule two-celled, two-valved.

1. *Verbascum thapsus*, or great mullein.—Leaves decurrent; tomentose on both sides. Root biennial, spindle-shaped. Stem erect, simple, and straight, from three to five feet high, leafy, woolly, angular, winged.—Native of Europe and Siberia, on banks, in hedges and on waste ground, especially on a gravelly or calcareous soil, flowering in July and August.

It has many names in English. Mullein or rather Woolen, Hig-taper or Hag-taper, Torches, long Woort and Bullockes Longwoort and Hares Bearde, ladies Foxglove.

2. *Verbascum thapsoides*, or bastard mullein.—Leaves decurrent, stem branched. This is supposed by Linnæus to be a mule plant, produced from *Verbascum Lychnitis* as the mother, and *Verbascum Thiapsus* as the father. It appeared in the botanic garden at Upsal in 1761, in the same bed with its parents, and was barren.

3. *Verbascum Boerhaavii*, or annual mullein.—Leaves sublyrate, flowers sessile. Root annual.—Native of the South of Europe.

4. *Verbascum hæmorrhoidale*, or Madeira mullein.—Leaves ovate-oblong, attenuated at the base, tomentose, indistinctly crenulate; racemes spike-form, elongated; bundles of flowers without bractes.—Native of the island of Madeira.

5. *Verbascum phlomoides*, or woolly mullein.—Leaves ovate, tomentose on both sides, the lower ones petioled. Root biennial.—Native of Italy, Germany, and the south of France.

6. *Verbascum lychnitis*, or white mullein.—Leaves wedge-oblong, denudated above; stem angular, panicled. Root biennial.—Native of Europe. With us found chiefly in Kent, and there plentifully.

7. *Verbascum pulverulentum*, or yellow hoary mullein.—Leaves ovate-oblong, subserrate, mealy on both sides; stem round, panicled. Root biennial. The whole herb is covered with a mealy down which easily rubs off, and when seen in a microscope is found to consist of numerous starry entangled tufts.—Native of Europe. It is one of the most magnificent of British herbaceous plants. A singular instance of irritability in this and some other species of *Verbascum* has been pointed out by Mr. Correa. In still warm weather, if two or three smart blows be given to the stem with a stick, all the corollas which are then open, though

not

not immediately loosened, fall off in a few minutes, separating one after another from their base, and the calyx closes round the germ, seeming as it were to push the blossom off.

8. *Verbascum ferrugineum*, or rusty mullein.—Leaves subvillose, wrinkled; stem-leaves sub-sessile, equally crenate; root-leaves oblong, cordate, doubly crenate. Root perennial.—It is a native of the south of Europe.

9. *Verbascum nigrum*, or dark mullein.—Leaves oblong-cordate, petioled, waved, crenate, subpubescent. Root perennial. Flowers in bundles, (about seven in a set,) pedicelled. The beauty of its golden-coloured corolla is much enriched by the tints of purplish brown at the mouth of the tube, the purple-haired filaments, and the saffron-coloured anthers.—Native of Europe in a calcareous or gravelly soil; flowering about Midsummer, and lasting till September. Common in England.

10. *Verbascum virgatum*, or large flowered mullein.—Leaves oblong, lanceolate, toothed, sessile; root-leaves sublyrate, pubescent; stem branched, flowers aggregate, subsessile. Root biennial.—First noticed near Worcester.

11. *Verbascum Phœniceum*, or purple mullein.—Leaves ovate, naked, crenate, radical; stem almost naked, racemed. Root biennial.—Native of the south of Europe and of Germany.

12. *Verbascum blattaria*, or moth mullein.—Leaves embracing, oblong, smooth, serrate; peduncles one-flowered, solitary. Root annual, fusiform.—Native of the south of Europe, Germany, Switzerland and England, in clayey and gravelly soils.

13. *Verbascum Gallicum*, or French mullein.—Leaves subvillose, cordate, petioled, toothed; root-leaves pinnatifid at the base. Root biennial.—Native of Dauphiné.

14. *Verbascum sinuatum*, or scollop-leaved mullein.—Root-leaves pinnatifid-repand, tomentose; stem-leaves embracing, almost naked; first branch-leaves opposite. Root biennial.—Native of the south of France, Italy and Barbary.

15. *Verbascum pinnatifidum*.—Leaves linear-lanceolate, pinnatifid; segments obtuse, toothed; flowers sessile, glomerate.—This was found in the islands of the Archipelago by Forskahl.

16. *Verbascum Barnadesii*.—Stem almost naked; leaves lanceolate, tooth-sinuate, smooth; peduncles one-flowered.—Native of Spain, on hills towards Ortaleza; where it was found by Barnades.

17. *Verbascum Osbeckii*.—Leaves gashed, naked; stem leafy; calyxes woolly; peduncles two-flowered.—Native of Spain.

18. *Verbascum spinosum*.—Stem leafy, spiny, frutescent.—Native of Candia or Crete.

19. *Verbascum myconi*, or borage-leaved mullein.—Leaves woolly, radical; scape naked.—It grows spontaneously on the Pyrenees.

Propagation and Culture.—Most of the sorts are biennial, and may be increased by sowing their seeds in August, on a bed of light earth, in an open situation, where the plants will sometimes come up the succeeding month, and will endure the winter's cold very well, provided they have a dry soil.

VERBA'TIM, *adv.* [Latin.] Word for word.

Think not, although in writing I prefer'd
The manner of thy vile outrageous crimes,
That therefore I have forg'd, or am not able
Verbatim to rehearse the method of my pen. *Shakspeare.*

VERBENA [of Pliny, q. Herberna. Being the favourite herb used in the sacred rites of the heathen. In Greek it is *Ἱεροβοτάνη*, the sacred herb, because bunches of it were suspended in lustrations], in Botany, a genus of the class diandria, order monogynia, natural order of personate, vitices (*Juss.*) —Generic Character. Calyx: perianth one-leafed, angular, tubular, linear, five-toothed, the fifth toothlet truncate, permanent. Corolla one-petaled, unequal; tube cylindrical, straight for the length of the calyx, then widening, and curved in; border spreading, half-five-cleft; segments rounded, almost equal. Stamina: filaments two or four, bristle-shaped, very short, lying within the tube of the corolla; two of

them shorter (when there are four.) Anthers curved in, as many as there are filaments. Pistil: germ four-cornered. Style simple, filiform, length of the tube. Stigma obtuse. Pericarp very slender, and scarcely manifest, or almost none. Calyx containing the seeds. Seeds two or four, oblong.—*Essential Character*. Corolla funnel-shaped, almost equal, curved. Calyx: one of the teeth truncate. Seeds two or four, naked or very thinly arilled. Stamina two or four.

I.—Two-stamened, two-seeded.

1. *Verbena orubica*, or betony-leaved vervain.—Spikes very long, leafy. This arises with a shrubby stalk near three feet high, divided into three or four branches.—It is biennial, and a native of South America.

2. *Verbena Indica*, or Indian vervain.—Spikes very long, fleshy, naked; leaves lanceolate-ovate; obliquely-toothed; stem even.—Native of Ceylon.

3. *Verbena Jamaicensis*, or Jamaica vervain.—Spikes very long, fleshy; naked, leaves spatulate-ovate, serrate; stem rough-haired. Stem three or four feet high.—Native of Jamaica, Barbadoes, and other islands of the West Indies.

4. *Verbena mutabilis*, or changeable vervain.—Spikes very long, fleshy, naked; leaves ovate, produced at the base; toothed, rugged, tomentose beneath; stem shrubby.—This is an upright branchy shrub with a somewhat square trunk of about six feet high.—Native of South America.

5. *Verbena aristata*, or awn-bracted vervain.—Leaves oblong, serrate; spikes elongated; bractes ovate, acuminate, longer than the seed; stem shrubby. This is a shrub, with four-cornered branches, of a somewhat ash-coloured purple colour.—Found in South America.

6. *Verbena prismatica*, or prism-calyxed vervain.—Spikes loose; calyxes alternate, prismatic, truncate, awned; leaves ovate-obtuse.—Native of Jamaica.

7. *Verbena Mexicana*, or Mexican vervain.—Spikes loose, calyxes of the fruit reflexed, rounded-twin, hispid. This has a shrubby stalk, which rises five or six feet high, and divides into several branches.—Native of Mexico.

8. *Verbena stoechadifolia*.—Spikes ovate; leaves lanceolate, serrate-plaited; stem shrubby. This rises with a shrubby branching stalk five or six feet high.—Native of Jamaica, and the continent of America.

9. *Verbena globiflora*, or globe-flowered vervain.—Spikes in globular heads; leaves lanceolate, crenate, wrinkled, rugged; stem shrubby. This is a fragrant shrub.—Native of South America.

10. *Verbena Javanica*, or Java vervain.—Spikes cylindrical; leaves rhomb-ovate, crenate; stem erect.—Native of Java.

11. *Verbena nodiflora*, or creeping vervain.—Spikes conical-headed; leaves wedge-shaped, toothed; stem creeping. Roots simple, filiform.—Native of the four continents.

12. *Verbena bonariensis*, or cluster-flowered vervain.—Spikes in bundles; leaves lanceolate, embracing. Flowers blue, appearing late in summer, and not often succeeded by good seeds in England.—Native of Buenos Ayres.

13. *Verbena hastata*, or halberd-leaved vervain.—Spikes long, acuminate, leaves hastate.—Native of Canada.

14. *Verbena triphylla*, or three-leaved vervain.—Flowers panicled; leaves in threes; stem shrubby. This a very sweet-smelling under-shrub.—Native of South America.

15. *Verbena lappulacea*, or burry vervain.—Fruiting calyxes roundish, inflated; seeds echinate.—Native of the West Indies, in stony waste places.

16. *Verbena forskkælii*, or Arabian vervain.—Fruiting calyxes roundish, beak-acuminate, reflexed; seeds rounded, wrinkled.—Native of Arabia Felix.

17. *Verbena Carolina*, or Carolina vervain.—Spikes filiform; leaves undivided, lanceolate, serrate, bluntish, subsessile. Root perennial.—Native of Carolina.

18. *Verbena urticifolia*, or nettle-leaved vervain.—Spikes filiform, panicled; leaves undivided, ovate, serrate, acute, petioled.—Native of most parts of North America.

19. *Verbena scabra*, or rugged-leaved vervain.—Spikes filiform; fruiting calyxes patulous, ovate; leaves ovate, very rugged,

rugged, serrate; uppermost alternate.—Native of South America.

20. *Verbena aubletia*, or cut-leaved rose vervain.—Spikes loose, solitary; leaves trifid, gashed.—Native of America.

21. *Verbena spuria*, or Canadian vervain.—Spikes filiform; leaves multifid-laciniate; stems numerous. Root biennial.—Native of America.

22. *Verbena officinalis*, or common vervain.—Spikes filiform, paniced; leaves multifid-laciniate; stem subsolitary.—Native of Europe, Barbary, China, CochinChina and Japan. The Portugal variety, noticed by Tournefort, is taller, the leaves broader, and the flowers larger. Mr. Miller does not think it specially different from the common sort.

23. *Verbena supina*, or trailing vervain.—Spikes filiform, solitary; leaves bipinnatifid.—Native of Spain, Portugal and Algiers.

24. *Verbena Americana*, or Panama vervain.—Spikes fleshy, almost naked; leaves ovate, obtuse, indistinctly crenate, petioled. Annual.

25. *Verbena Senegalensis*, or Senegal vervain.—Spikes shorter; leaves ovate, serrate, hoary underneath. Perennial.

26. *Verbena fruticosa*, or shrubby vervain.—Spikes round; leaves ovate, serrate; stem shrubby, branched; three or four feet high.

27. *Verbena angustifolia*, or narrow-leaved vervain.—Spikes fleshy, almost naked; leaves linear-lanceolate, indistinctly serrate. Annual.

28. *Verbena rugosa*, or wrinkle-leaved vervain.—Spikes ovate; leaves roundish, serrate and wrinkled; stem shrubby, branched. This and the four preceding are from America.

Propagation and Culture.—Those being natives of hot climates (chiefly South America and the West Indian islands), require care and protection. The seeds should be sown upon a hot-bed early in the spring, and when the plants are fit to move, they should be each transplanted into a separate small pot, and plunged into a fresh hot-bed, to bring them forward, shading them in the day-time with mats until they have taken new root, and then treating them as other tender plants from the same countries. All the others may be treated as hardy annuals or biennials, except *Verbena triphylla*, which is increased by cutting.

VERBENICO, a small town of Austrian Illyria, in the island of Veglia, on the canal of Morlachia; 22 miles south-east of Fiume.

VERBESINA [corrupted or distorted from *forbesina*, which I suppose is from $\phi\epsilon\phi\eta\eta$, *food*, from $\phi\epsilon\phi\omega$, *to feed* or *nourish*], in Botany, a genus of the class syngenesia, order polygamia superflua, natural order of compositæ oppositifoliae, corymbiferae (*Juss.*)—Generic Character. Calyx: common concave; leaflets oblong, channelled-concave, erect, common equal, in a double row. Corolla: compound, radiate; corollets hermaphrodite, many, in the disk; females about five in the ray. Proper of the hermaphrodite funnel-form, five-toothed, erect. Female ligulate, trifid and wide or simple and very narrow. Stamina in the hermaphrodites: filaments five, capillary, very short. Anthers cylindrical, tubular. Pistil of the hermaphrodite: germ somewhat oblong. Style filiform, length of the stamens. Stigmas two, reflexed. In the females: germ somewhat oblong; style filiform, length of the hermaphrodite; stigmas two, reflexed, Pericarp none; calyx unchanged. Seeds in the hermaphrodites solitary, thickish, angular; pappus of two awl-shaped unequal awns. In the females very like the others. Receptacle chaffy.—*Essential Character.* Calyx in a double row. Florets of the ray about five. Pappus awned. Receptacle chaffy.

1. *Verbesina alata*, or wing-stalked verbesina.—Leaves alternate, decurrent, waved, obtuse. This is an herbaceous plant, with an upright stem about two feet high, subdivided, winged, rough-haired. Branches alternate, erect, axillary.—Native of South America, and the islands; common in Jamaica, Curassao, Surinam, &c.

2. *Verbesina Chinensis*, or Chinese verbesina.—Leaves alternate, petioled, ovate-lanceolate, serrate. This is a shrub.—Found in China by Osbeck.

3. *Verbesina Virginica*, or Virginian verbesina.—Leaves alternate, lanceolate, petioled; flowers corymbed.—Native of Virginia.

4. *Verbesina pinnatifida*, or pinnatifid-leaved verbesina.—Leaves alternate, pinnatifid.—Native of Jamaica.

5. *Verbesina dichotoma*, or forked verbesina.—Leaves opposite, ovate, tomentose, petioled; stem dichotomous at top; the outmost internode compressed.

6. *Verbesina biflora*, or two-flowered verbesina.—Leaves opposite, oblong-ovate, triple-nerved, acuminate, serrate; peduncles double, two-flowered.—Native of the East Indies.

7. *Verbesina calendulacea*.—Leaves opposite, lanceolate, bluntish; peduncles long, one-flowered; calyxes simple.—Native of the East Indies, and China near Canton.

8. *Verbesina nodiflora*, or sessile-flowered verbesina.—Leaves opposite, ovate, serrate; calyxes oblong, sessile; cauline lateral. Root annual.—Native of the West Indies.

9. *Verbesina fruticosa*, or shrubby verbesina.—Leaves opposite, ovate, serrate, petioled; stem shrubby. This rises with a shrubby stalk seven or eight feet high. Leaves deeply serrate and cut somewhat like those of the ilex or evergreen oak.—Native of the West Indies.

10. *Verbesina gigantea*, or tree verbesina.—Leaves alternate, deeply pinnatifid; stem shrubby.—Native of the West Indies.

11. *Verbesina mutica*.—Leaves trifid-laciniate, serrate; stem creeping. Root annual.—Native of the West Indies, in moist pastures.

12. *Verbesina Bosvallea*.—Leaves multifid-capillary; stems prostrate; florets six; female one.—Native of the East Indies.

Propagation and Culture.—Sow the seeds upon a moderate hot bed in the spring, and when the plants are fit to remove, transplant them on to a fresh hot-bed to bring them forward; shading them till they have taken new root, and then treating them in the same way as other tender annual plants; taking care not to draw them up too weak.

To VERBERATE, *v. a.* [*verbero*, Latin.] To beat; to strike.—Bosom-quarrels that *verberate* and wound his soul. *Abp. Saneroff.*

VERBERATION, *s.* Blows; beating.—Riding or walking against great winds is a great exercise, the effects of which are redness and inflammation; all the effects of a soft press or *verberation*. *Arbutnot.*

VERBERIE, a small town in the north of France, situated on the Oise; 9 miles south-west of Compeigne.

VERBIAGE, *s.* Verbosity; much empty writing or discourse.—I thought what I read of it *verbiage*, but upon Mr. Harris's recommendation, I will read a play. *Johnson.*

VERBICZE, a small town of Hungary, on the Waagg; 31 miles north-north-east of Neusohl.

VERBO, or WERBOWE, or URBAU, a small town of the north-west of Hungary; 17 miles north of Tyrnau, and 40 north-north-east of Presburg.

VERBOUSE, *adj.* [*verbosus*, Latin.] Exuberant in words; prolix; tedious by multiplicity of words.

Let envy

Ill-judging and *verbose*, from Leth's lake,
Draw tuns unmeasurable.

Prior.

VERBOSITY, *s.* [*verbosité*, French.] Exuberance of words; much empty talk.

He draweth out the thread of his *verbosity*
Finer than the staple of his argument.

Shakspeare.

VERCEL, a small town in the east of France, department of the Doubs; 14 miles west of Bauwe, and 20 east of Besançon.

VERCELLI, a district or province in the north-west of Italy, in Piedmont, with an extent of nearly 600 square miles, and a population of about 100,000. The chief rivers are the Sesia, the Elvo, and the Cervo.

VERCELLI, a considerable town in the north-west of Italy, the capital of the Piedmontese district of the same name. Its fortifications, at one time considerable, were destroyed by the French in 1704; 12 miles north of Casale, and 40 east-north-east of Turin.

VERCHALURIA,

VERCHALURIA, a town in the western frontier of Siberia, the first which occurs after passing the great chain of the Ural, the boundary between European and Asiatic Russia. It forms, therefore, the custom-house of Siberia; and an impost of ten per cent. is levied on all goods passing through it. The adjacent country is fertile. In the neighbourhood are extensive mines; 120 miles north of Catharinenburg. Lat. 53. 45. N. long. 60. 14. E.

VERCHNEY-LOMOV, a town of the central part of European Russia, in the government of Penza; 60 miles west-by-north of Penza.

VERCHOLENSK, a small town of Asiatic Russia, in the government of Irkoutsk, on the Lena; 120 miles north of Irkoutsk.

VERCHOURALSK, a small town of Asiatic Russia, in the province of Oufa, on the Oural; 120 miles south-east of Oufa.

VERCY, a small town in the north-east of France, in Champagne.

VERDANCY, *s.* Greenness. Norris somewhere uses it in his Miscellanies.

VERDANT, *adj.* [*viridans*, Latin.] Green. This word is so lately naturalized, that Skinner could find it only in a dictionary.

Each odorous bushy shrub
Fenc'd up the verdant wall.

Milton.

VERDAS NOVAS, a village in the north of Portugal; 4 miles north-east of Oporto.

VERDE, a cape on the coast of the territory of Genoa. Lat. 43. 50. N. long. 7. 50. E.

VERDE, a river of New Granada, in the province of San Juan de los Llanos.—2. A river of Quito, in the province of Esmeraldas, which runs into the Pacific ocean in the bay of Tola.—3. A river of Quito, in the province of Esmeraldas, which runs north to enter the Guallabamba.—4. A river of Peru, in the province of Tacunga, which runs south, and enters the Pastaza, near its source.—5. A river of the country of the Amazons, in the province of the Chiquitos, which runs north, and enters the Itenes.—6. A river of Mexico, in Durango, which runs south, and enters the Salado.—7. A river of Paraguay, which runs south-east and enters the Paraguay.—8. A river of Brazil, in the province of Porto Seguro, which rises in the mountains near the coast, and turning afterwards to the north, enters the Rio Francisco.—9. A river of St. Domingo, which rises near the north coast, between the towns of La Vega and Santiago, and running west, enters the Yaque.—10. A river of Brazil, in the province of Sergippe, which runs south-south-east, and enters the Parana on the north.—11. A river of the province of Buenos Ayres, which runs west, and enters the Parana.—12. A river of Paraguay, which runs south-south-east, to enter the Paraguay.—13. A river of Paraguay, which runs south-east, and enters the Amamby.—14. A river of Quito, in the province of Tacunga.—15. A small island of the Pacific ocean, opposite the coast of Terra Firma.—16. A small island of New Granada, on the coast of the province of Cartlegena, at the mouth of the river Magdalena.—17. A small island of the Atlantic ocean, near the coast of the province and government of Vera Cruz, and not far distant from the island of Sacrifices.—18. A small island of the Atlantic, near the coast of Cumana, between the islands of Testigos and Frayles.—19. A cape on the coast of Peru, in the province of Truxillo.—20. A cape on the east coast of the straits of Magellan, between the river of Agua Buena and the port of Papagayos.

VERDE, CAPE, a mountainous cape on the coast of Peru. Lat. 6. 20. S.

VERDE, CAPE, a considerable cape of Africa, stretching out into the Atlantic, and forming the most westerly point of that continent.

VERDE, ISLANDS OF CAPE, a groupe situated in the Atlantic, about 80 miles west of the cape, on the coast of Africa, whence they derive their name. It consists of ten islands, of which the largest are, St. Jago, St. Antonio, and

St. Nicholas; the small Mayo, Bonavista, Sal, St. Vincent, St. Lucia, Brava, and Fogo. The large islands rise in the interior into very lofty mountains, from which they derive a copious supply of water. Fogo also, as its name expresses, is composed of a very formidable volcano, in a state of perpetual activity. The rest of the smaller islands, though rocky, are destitute of very considerable elevations, and are thus at once deprived of good water, and rendered highly unproductive. Even the most fertile districts of this little archipelago cannot rival the rich soil of Madeira and the Canaries. These islands, notwithstanding their situation, are not much frequented by European vessels proceeding to the East Indies or America. These vessels, after passing the Canaries, usually stand across towards the coast of Brazil, in order to obtain the benefit of the trade winds. The navigation among the islands themselves is difficult, being much obstructed by tides and currents.

VERDE ISLAND, or **VERDE KEY**, one of the small Bahamas. Lat. 22. 54. N. long. 75. 26. W.

VERDE, RIO, a river of South America, in the republic of Buenos Ayres, which has its rise in the Cordilleras, and traverses the plains of the Gran Chaco, to fall into the Paraguay above Assumption.

VERDEN, a district or small province in the north-west of Germany, in Hanover, bearing the title of duchy, and adjacent on one side to Luneburg, on the other to Bremen. Its area is about 520 square miles; its population only 23,000, all Lutherans.

VERDEN, the chief town of the above district, is situated on the river Aller; 53 miles south-west of Hamburg.

VERDERER, *s.* [*viridarius*, low Latin.] An officer in the forest.—A forest hath peculiar officers, as foresters, *verderers*, &c. *Howell*.

VERDERONE, or **LA BOURLARDERIE**, an island on the east coast of Cape Breton island.

VERDICT, *s.* [*verdict*, old French, Lacombe; *verbum dictum*, Latin.] The determination of the jury declared to the judge.—Before the jury go together, 'tis all to nothing what the *verdict* shall be. *Spenser*.—Declaration; decision; judgment; opinion.—Deceived greatly they are, who think that all they whose names are cited amongst the favourers of this cause, are on any such *verdict* agreed. *Hooker*.

VERDIGRIS, a river of the United States, in the Missouri territory, which joins the Arkansaw, 15 or 20 miles above Canadian river. It is navigable 150 miles, and is 100 yards wide at its mouth.

VERDIGRISE, *s.* The rust of brass, which in time being consumed and eaten with tallow, turneth into green; in Latin *æruugo*; in French *vert de gris*, or the hoary green. *Peacham*.—Brass turned into green, is called *verdigrise*. *Bacon*.

VERDITER, *s.* Chalk made green.—*Verditure* ground with a weak gum Arabic water, is the faintest and palest green. *Peacham*.

VERDON, a river in the south-east of France, department of the Lower Alps, which falls into the Durance.

VERDUN, a town in the north-east of France, department of the Meuse. It is traversed by that river, which is here in a comparatively early part of its course, and has extensive meadows along its banks. The population of Verdun somewhat exceeds 9000; and the town, though not large, is divided into three parts, the Upper, the Lower, and the New town. It is the see of a bishop, and stands 35 miles west of Metz, and 55 north-west of Nancy. Lat. 49. 9. 31. N. long. 5. 22. 17. E.

VERDUN, a small town in the east of France, situated at the confluence of the rivers Saone and Doubs; 12 miles north-by-east of Chalons sur Saone, and 45 north-by-east of Macon.

VERDUN, a small inland town in the south-west of France, on the Garonne; 20 miles north-west of Toulouse.

VERDURE, *s.* [*verdure*, Fr.] Green; green colour.

Its verdure clad
Her universal face with pleasant green.

Milton.

VERDUROUS, *adj.* Green; covered with green; decked with green.—The scented camomile, the *verdurous* costmary. *Drayton*.

Higher than their tops
The *verd'rous* wall of paradise up-sprung;
Which to our general sire gave prospect large. *Milton*.

VERE (Sir Francis), an English officer in the reign of Queen Elizabeth, was a descendant from a branch of the De Veres, earls of Oxford, and born in 1554. Being sent with a body of troops, under the command of the earl of Leicester, to the assistance of the United Provinces, in 1585, he distinguished himself first in the defence of Sluys, and in 1588 at Bergen-op-Zoom, by resisting the arms of the duke of Parma. Afterwards, in the expedition against Cadiz, he acquitted himself with skill and courage, and was principally instrumental in the capture of the town. On his return from an expedition with the earl of Essex to the Azores, he was appointed governor of Brill, one of the towns assigned to Queen Elizabeth as security for money advanced to the States. At the battle of Nieuport, in 1600, his conduct, and the valour of the English whom he commanded, contributed very essentially to the success of the day. The States, duly apprized of his merit, appointed him, in 1601, governor of Ostend, which was besieged by a powerful army under the command of archduke Albert. Sir Francis was afterwards governor of Portsmouth, and remained at home till his death, in 1608, the 54th year of his age. His exploits have been recorded by himself, in a work entitled "The Commentaries of Sir Francis Vere, being diverse Pieces of Service wherein he had Command, written by Himself in way of Commentary."

VERE, a river of England, in Hertfordshire, which falls into the Coln, about 2 miles south-east of St. Albans.

VERE, a parish on the south side of the island of Jamaica.

VERE, CAPE, a promontory on the west coast of Calabria. Lat. 39. 20. N. long. 16. 10. E.

VE'RECUND, or **VERECUN'DIOUS**, *adj.* [*verecund*, old French; *verecundus*, Latin.] Modest; bashful. *Diet*.

VERECUN'DITY, *s.* [*verecundia*, Latin.] Bashfulness; modesty; blushing. *Lemon*.

VEREJA, a town of European Russia, in the government of Moscow, on the river Protva; 60 miles west-south-west of Moscow.

VERELIUS (Olof), a Swedish antiquary and librarian in the academy of Upsal. Having commenced his education in the gymnasium at Linköping, he pursued it for five years at the academy of Dorpt, and in 1638 removed to Upsal. He was a good Latin scholar, and well skilled in Swedish antiquities. He was a zealous advocate for the ancient origin of the Swedes, inasmuch as to contend that the Goths who took Rome issued from Sweden, and to assert, "that those who deny their antiquity ought to have their brains knocked out with Runic stones."

Among his principal works are, "Gothrici et Rolfi, Vestro-Gothiæ Regum, Historia lingua antiqua Gothica conscripta, quam é Manuscripto vetustissimo edidit, Versione et Notis illustravit," Upsal, 1664, 8vo. and several publications relating to Gothic literature and Swedish history. *Gen. Biog.*

VERELST (Simon), born at Antwerp in 1604, and was an admirable painter of fruit and flowers. He came to England in the time of Charles II., and obtained very considerable practice.

VERENGUELA, a settlement of Peru, in the province of Pacajes.

VERESTO, a small river in the States of the Church, delegation of Rome. It falls into the Teverone, the ancient *Anio*.

VERETO, a small town of Italy, in the south-east of the kingdom of Naples, province of Otranto.

VEREZZO, a small town in the north of Italy, in the Piedmontese states, duchy of Genoa.

VERFEIL, a small town in the south of France, depart-

ment of the Upper Garonne, on the river Giron; 12 miles north-east of Toulouse.

VERGARA, a small town of the north-east of Spain, in the province of Guipuzcoa; 24 miles south-west of St. Sebastian, and 13 west-by-south of Tolosa.

VERGARA, a river of Chili, which runs west, and turning to the north-north-west, enters the Biobbio in a large stream.

VERGATO, a small town in the north-east of Italy, in the States of the Church, with 2800 inhabitants. It stands on the river Reno; 15 miles south-west of Bologna.

VERGAVILLE, a small town in the north-east of France, department of the Meurthe, with 800 inhabitants; 4 miles north-west of Dieuze.

VERGE, *s.* [*verge*, French; *virga*, Latin.] A rod, or something in form of a rod, carried as an emblem of authority. The mace of a dean.

Suppose him now a dean compleat,
Devoutly lolling in his seat;
The silver *verge*, with decent pride,
Stuck underneath his cushion side. *Swift*.

[*vergo*, Latin.] The brink; the edge; the utmost border.

Would the inclusive *verge*
Of golden metal, that must round my brow,
Were red hot steel to sear me to the brain. *Shakspeare*.

[In law.]—*Verge* is the compass about the king's court, bounding the jurisdiction of the lord steward of the king's household, and of the coroner of the king's house, and which seems to have been 12 miles round. *Verge* hath also another signification, and is used for a stick, or rod, whereby one is admitted tenant, and, holding it in his hand, sweareth fealty to the lord of the manor; who, for that reason, is called tenant by the *verge*. *Cowel*.

Fear not; whom we raise,
We will make fast within a hallow'd *verge*. *Shakspeare*.

To **VERGE**, *v. n.* [*vergo*, Latin.] To tend; to bend downwards.

Man,
Perhaps acts second to some sphere unknown;
Touches some wheel, or *verges* to some goal;
'Tis but a part we see, and not the whole. *Pope*.

VERGENNES, a city of the United States, in Addison County, Vermont; 11 miles below Middlebury, and 20 south of Burlington.

VERGER, *s.* [*verger*, old French, "bedeau d'église," Lacombe.] He that carries the mace before the dean.—I can tip the *verger* with half-a-crown, and get into the best seat. *Farquhar*.

VERGERIO (Pier-Paolo), a reviver of literature, was born about the year 1349, at Justinopolis, now Capo d'Istria. Having studied at Padua and Florence, he passed some years in different towns of Italy, particularly at Padua, where he officiated as professor of dialectics. His works were an "History of the Princes of the House of Carrara, from its Origin to the Year 1355," published in Muratori's Collection of Italian Historians; a treatise "De ingenius Moribus et liberalibus Adolescentiæ studiis," addressed to one of the princes of Carrara, was very popular at the time of its publication.

VERGILIO (Polydoro), an historian, was born at Urbino in the 15th century, and became first known to the learned by a Latin collection of Proverbs, preceding that of Erasmus, and the occasion of some bickering between them. It was first printed in 1498, and frequently republished. In the following year appeared his work "De Rerum Inventoribus," a very learned performance, but exhibiting many evidences of the credulity of the author. About the commencement of the following century, pope Alexander VI. deputed him on a commission to England, for the purpose of collecting the papal tribute called Peter-pence. As he was admired in this country for his learning and Latin style, he was promoted to the archdeaconry of Wells, and engaged by Henry VII. to write

write a History of England. This work was begun in 1505, and printed at Basil in 1548; with a dedication to Henry VIII. Of his History of England, contained in twenty-six books, and extending to the reign of Henry VIII., it is sufficient to observe, that its style is clear and elegant, but that the matter of it has been censured by various writers. He has been represented, on the one hand, as a calumniator of our country, and an enemy to its glory; whilst, on the other hand, the French and Scotch have accused him of partiality to England in those instances with regard to which their transactions have been blended with its history. Besides, it is said that he destroyed many MSS. with which he was intrusted, in order to prevent a detection of his errors: by others it has been reported, that he sent off a whole ship-load of MSS. to Rome. Both these stories are destitute of proof. Polydore also published, in 1526, a book "De Prodigiiis," in which he strongly contends against the divinations of the ancients. *Vossius. Tiraboschi. Gen. Biog.*

VERGORAZ, a small town of Austrian Salmatia, on the lake Jesero. It is said to have been formerly thriving, but is now a poor place; 50 miles north-west of Ragusa.

VERIA, or KARA VERIA (the ancient *Beræa*), a town of European Turkey, in Macedon, a few miles from the coast of the gulf of Salonica; 48 miles south of Salonica, and 116 east of Valona. Lat. 40. 43. N. long. 21. 38. E.

VERIDICAL *adj.* [*veridicus*, Latin.] Telling truth. *Dict.*

VERIFIABLE, *adj.* That may be verified; that may be confirmed by incontestable evidence.—All this by a very easy, but yet certain and true analogy, is applicable to the eye of the soul, the conscience, and the instance is *verifiable* upon it, in every one of the alleged particulars. *South.*

VERIFICATION, *s.* Confirmation by argument or evidence.—In *verification* of this we will mention a phenomenon of our engine. *Boyle.*

VERIFIER, *s.* One who assures a thing to be true.

To VERIFY, *v. a.* [*verifier*, French.] To justify against charge of falsehood; to confirm; to prove true.

So shalt thou best fulfil, best *verify*
The prophets old who sung thy endless reign. *Milton.*

VERILY, *adv.* In truth; certainly.

Verily 'tis better to be lowly born,
Than to be perk'd up in a glist'ring grief. *Shakspeare.*

With great confidence.—It was *verily* thought, that had it not been for four great disfavours of that voyage, the enterprize had succeeded. *Bacon.*

VERINA, a settlement of the Caraccas, in the province of Cumana, from which city it is 30 leagues east-south-east.

VERISIMILAR, or VERISIMILOUS, *adj.* [*verisimilis*, Latin.] Probable; likely.—Many erroneous doctrines of Pontificians are, in our days, wholly supported by *verisimilous* and probable reasons. *White.*

VERISIMILITUDE, or VERISIMILITY, *s.* [*verisimilitudo*, Latin.] Probability; likelihood; resemblance of truth.—The plot, the wit, the characters, the passions are exalted as high as the imagination of the poet can carry them, with proportion to *verisimilitude*. *Dryden.*

VERISIMO, a river of Brazil, in the province of Espiritu Santo, which runs south in a full stream, and enters the Parana.

VERJA, a small but ancient town of the south of Spain, in Granada, near the coast of the Mediterranean, anciently called *Baria*; 40 miles east of Motril.

VERITABLE, *adj.* [*veritable*, French.] True; agreeable to fact.

Indeed! is't true?

—Most *veritable*; therefore look to't well. *Shakspeare.*

VERITABLY, *adv.* In a true manner.

VERITY, *s.* [*veritas*, Latin.] Truth; consonance to the reality of things.

I saw their weapons drawn; there was a noise;
That's *verity*. *Shakspeare.*

A true assertion; a true tenet.

If there come truth from them,
Why by the *verities* on thee made good,
May they not be my oracles as well? *Shakspeare.*

Moral truth; agreement of the words with the thoughts.
VERJUICE, *s.* [*verjus*, French.] Acid liquor expressed from crab-apples. It is vulgarly pronounced *varges*:—Hang a dog upon a crab-tree, and he'll never love *verjuice*. *L'Estrange.*

VERMAND, a small town in the north-east of France, department of the Aisne, near the small river Auvignon; 9 miles north-west of St. Quentin, and 25 north-west of Laon.

VERMANTON, a small town in the central part of France, department of the Yonne; 12 miles south-east of Auxerre.

VERMEIL. See VERMIL.

VERMEJA, a river of Quito, in the province of Quixos and Macas, which enters the San Miguel, and has a good port, from which vessels drop down to enter the Putumayo.

VERMEJAS, a river of Brazil, in the province of Rio Grande, which runs north-north-west, and enters the Atlantic close to the point of Tiburon.

VERMEJAS, some small islands of Brazil, on the coast of the province of Espiritu Santo.

VERMEJO, a small town of the north-east of Spain, on the coast of Biscay; 13 miles north-north-east of Bilbao.

VERMEJO, or RED RIVER, a river of South America, in the republic of Buenos Ayres. It rises in Tarija, a mountainous district to the south of Potosi, and branches of it run from the towns of Jujui and Salta. It is called Rio Grande where it joins the Paraguay.

VERMICE'LLI, *s.* [Italian.] A paste rolled and broken in the form of worms.

With oysters, eggs, and *vermicelli*,
She let him almost burst his belly. *Prior.*

VERMICULAR, *adj.* [*vermiculus*, Lat.] Acting like a worm; continued from one part to another of the same body.—By the *vermicular* motion of the intestines, the grosser parts are derived downwards, while the finer are squeezed into the narrow orifices of the lacteal vessels. *Cheyne.*

To VERMICULATE, *v. a.* [*vermiculatus*, Latin.] To inlay; to work in chequer work, or pieces of divers colours. *Bailey.*

VERMICULATION, *s.* Continuation of motion from one part to another.—My heart moves naturally by the motion of palpitation; my guts by the motion of *vermiculation*. *Hale.*

VERMICULE, *s.* [*vermiculus*, *vermis*, Latin.] A little grub, worm.—I saw the shining oak-ball ichneumon strike its terebra into an oak-apple, to lay its eggs therein: and hence are many *vermicules* seen towards the outside of these apples. *Derham.*

VERMICULOUS, *adj.* [*vermiculosus*, Lat.] Full of grubs; resembling grubs.

VERMI'FORM, *adj.* [*vermis* and *formo*, Latin.] Having the shape of a worm.

VERMI'FUGE, *s.* [from *vermis* and *fugo*, Lat.] Any medicine that destroys or expels worms.

VERMIL, VERMI'LION, or VE'RMILY, *s.* [*vermeil*, *vermillion*, Fr.] The cochineal; a grub of a particular plant. Factitious or native cinnabar; sulphur mixed with mercury. This is the usual though not primitive signification.

The same she temper'd with fine mercury,
And virgin wax that never yet was seal'd,
And mingled them with perfect *vermily*,
That like a lively sanguine it seem'd to the eye. *Spenser.*

Any beautiful red colour.

How the red roses flush up in her cheeks,
And the pure snow with goodly *vermil* stain,
Like crimson dy'd in grain. *Spenser.*

To VERMI'LION, *v. a.* To die red.

A sprightly red *vermillions* all her face,
And her eyes languish with unusual grace. *Granville.*
VERMILLION,

VERMILLION, a river of the United States, in Louisiana, which rises in some high provinces in the district of the Opelousas, and after running a southerly course, discharges itself into Vermillion bay, in the gulf of Mexico, about 200 miles west of the mouth of the Mississippi, with whose stream, however, and with that of Red river, it is connected by the different channels with which the country is here everywhere intersected.—2. A river of the United States, in Louisiana, which runs into the Osage, one of the tributary branches of the Missouri.—3. A river of the United States, in Ohio, which falls into Lake Erie; 9 miles east of Huron river.—4. A river of the United States, in the state of Illinois, which runs into the Illinois river; 150 miles from the Mississippi.—5. A bay of the coast of Louisiana, in the gulf of Mexico, in the district of Attakapas.—6. A post township of the United States, in Huron county, Ohio, on Lake Erie, at the mouth of the Vermillion, about 40 miles west of Cleveland.—7. A river of the United States, in Louisiana, which joins the Arkansaw.

VERMILLION BRIDGE, a post village of the United States, in Attakapas district, Louisiana.

VERMILLION POINT, or CAPE TOWNSEND, a peninsula of the United States, in Lake Michigan, which separates Green bay from the other part of the lake; 23 leagues long, and from 1 to 3 broad.

VERMIN, *s.* [*vermis*, Latin.] Any noxious animal. Used commonly for small creatures.

What is your study;—

—How to prevent the fiend, and to kill *vermin*.

Shakspeare.

It is used in contempt of human beings.

The stars determine

You are my prisoners, base *vermin*.

Hudibras.

To VERMINATE, *v. n.* To breed vermin.—The seed of the serpent, and its *verminating* principle. *Biblioth.*

VERMINATION, *s.* Generation of vermin.—Redi discrediting anomalous generation, tried experiments relating to the *vermination* of serpents and flesh. *Derham.*

VERMINOUS, *adj.* Tending to vermin; disposed to breed vermin.—A wasting of children's flesh depends upon some obstruction of the entrails, or *verminous* disposition of the body. *Harvey.*

VERMIPAROUS, *adj.* [*vermis* and *pario*, Latin.] Producing worms.—Hereby they confound the generation of *vermiparous* animals with *oviparous*. *Brown.*

VERMO, a small town of Austrian Illyria, in the province of Istria, and district of Mitterburg; 21 miles west-south-west of Fiume.

VERMONT, one of the United States, situated between 42° 44' and 45° degrees of north latitude, and 3° 38' and 5° 27' east longitude from Washington, is a mountainous and inland country. The boundary line that separates it from Canada on the north, is 90 miles long, and from Massachusetts on the south, 40 miles. It has New York on the west, and New Hampshire on the east; and its mean length from north to south is 157 miles. The distance from the ocean to the nearest point of this state, is about 80 miles. Area 10,237 square miles, or 6,551,680 acres. Contains the following counties:—Addison, Bennington, Caledonia, Chittenden, Essex, Franklin, Grand Isle, Orange, Orleans, Rutland, Washington, Windham, Windsor. The Green mountains, from 10 to 15 miles in breadth, traverse the whole length of this state. These mountains begin in the province of Canada; from thence they extend through the states of Vermont, Massachusetts, and Connecticut, and terminate within a few miles of the sea-coast. Their general direction is from north-north-east to south-south-west; and their extent is through a track of country not less than 400 miles in length. They run nearly parallel with the course of Connecticut river, are intersected by numerous valleys, the soil of which is deep, rich and loamy. That of the hilly parts is also well adapted to pasturage, and other agricultural purposes. The most level track is on the borders of Canada. Adjoining the rivers are fine plains and meadows; and

between the banks of Lake Champlain and the mountains, there is a valuable track of arable land, extending 100 miles in length, and 30 in breadth. The whole surface in its natural state is thickly wooded. Along the banks of the rivers, the white oak, beech, and elm are abundant. The higher parts are covered with white oak, sugar-maple, butternut, ash, birch, &c.; and the mountains are clothed with evergreens to their highest summit.

Near Lake Champlain, large trunks of trees have been found at the depth of 30 feet. In digging a well on a high ground near Onion river, frogs were discovered at nearly the same depth; circumstances which indicate a change in the beds of these rivers, produced by some violent convulsion of nature. The highest summits of the Green mountains in Vermont, are Killington Peak, Camel's Rump, and Mansfield mountains. Ascutney is a noted mountain on the east side of the state, south of Windsor.

All the streams and rivers of Vermont have their origin among the Green mountains. About 35 of them have an easterly direction, and fall into Connecticut river. About 25 run westerly, and discharge themselves into Lake Champlain. Two or three running in the same direction, fall into Hudson's river. In the north-easterly parts of the state, there are four or five streams which have a northerly direction, and run into the Lake Memphremagog; and thence through the river St. Francis, they are emptied into the river St. Lawrence. The most considerable streams on the west side of the Green mountains are Otter creek, Onion river, the river Lamoille, and Michiscoui. On the east side of the Green mountains, the rivers are not so large as those on the west; but they are more numerous.

The climate is healthy, but subject to great extremes of heat and cold. The snow lies from the middle of December to the middle of March, during which period it is customary to travel in sledges. On the sides of the hills, it is often from two to four feet in depth. It disappears about the middle of April, except on the highest parts of the mountains, where it lies till May. It is generally permanent from the 10th or 12th of December, to the beginning of April, when it suddenly dissolves by the influence of a warm sun. In the low grounds, it is from one to two and a half feet deep, and remains till about the 20th of March. The temperature of deep wells is about 43¹/₁₀ throughout the year, which corresponds with the mean degree of heat deduced from thermometrical observations. The trees and shrubs put forth their buds from the 6th to the 20th April, and flower from the 1st to the close of May. Wheat and oats are sown about the middle of April, and are reaped about the middle of August. The frosts commence from the middle of September to the 1st of October, and cease about the 20th of April or beginning of May. Notwithstanding the severity of winter, which is ten or eleven degrees colder than in the same latitude in Europe, young trees are seldom killed by the frost; and the cattle live in the woods. The weather during this season is generally fair and constant, and rain seldom falls, though hail is not unfrequent. Thunder and lightning are common in the months of May, June, July, and August; but seldom in the other months. The Aurora Borealis is the most common in the months of March, September, and October; but it is not unusual at other times of the year.

Iron ore exists in great abundance on the west side of the Green mountains, and near Lake Champlain. The mines are worked at Timmonth, Shaftesbury, Rutland, Shoreham, Monkton, and Milton. The Bog ore at the north end of Lake Champlain, the brown hematites at Monkton, and the magnetic ore on the west side of the lake, are worked at the Vergennes furnaces. There are ores of lead at Thetford, and at Sunderland of copper, and of ochre red and yellow. Jasper of a beautiful red colour has been lately discovered. Porcelain clay is found, which retains its white colour in the fire; also soapstone, slate, whinstone, clay for bricks, pipe-clay, and mill-stones, and marl in several places. There are two chalybeate springs, one at Orwee, near Mount Independence; another at Bridport, the waters of which are said to contain Epsom salt in great quantity; another was discovered in

1770, in the low lands, near the great Ox bow, or bend of the Connecticut river. It has a strong sulphureous smell; and the surface, when not agitated, is covered with a thick yellow scum. It throws up continually a whitish sand; and is said to disappear in one place, and spring up in another, at intervals of two or three years.

There are 36 species of quadrupeds, of which the most remarkable are the bear, black-cat, wild-cat, catamount, deer; fox, red, grey, cross, and black; hare, martin, ermine, mole, mouse, porcupine, rabbit, racoon, skunk; squirrel, grey, black, red, striped, and flying; weasel, wolf, and wood chuck. In the rivers, ponds and lakes, are the beaver, mink, musk-rat, and otter. Among the early settlers of this state, these animals were so valuable for their flesh or fur, that they were constantly pursued, and in many parts several of them have entirely disappeared. The right of hunting, fishing, and fowling, is common to all, and at all seasons. The deer, which cannot be pursued during the two last months of the year, is the only animal that finds protection.

A great variety of fishes are found in the lakes. The pike or pickerel grows to so great a size, that some have measured six feet in length, and weighed forty pounds. The largest trout, perch, and sucker, weigh from two to three pounds. A fish of a delicate quality, called the lake bass, weighing from ten to thirty pounds, is found in great plenty in Lake Willoughby, and other waters.

The people of Vermont being chiefly devoted to agriculture, are of robust habits, and of simple manners. Early marriages are common here, as in other parts of America, which greatly conduces to pure morals.

There are two colleges in Vermont, one at Burlington, and the other at Middlebury.

The legislative power is vested in a house of representatives. Every town has the right to send one representative. The executive power is vested in a governor, lieutenant-governor, and 12 counsellors. All these officers, together with the representatives, are chosen annually on the first Tuesday in September. The legislature meets on the second Thursday in October. Judges and other officers are appointed for one year. The revenue of the state arises from taxes on persons, lands, and cattle, assessed in proportion to their value. The militia, consisting of all the able-bodied males from 16 to 45 years of age, with certain exceptions, amounts to 20,000.

VERNACULAR, *adj.* [*vernaculus*, Latin.] Native; of one's own country.—The histories of all our former wars are transmitted to us in our *vernacular* idiom. I do not find in any of our chronicles, that Edward the Third ever reconnoitred the enemy, though he often discovered the posture of the French, and as often vanquished them. *Ad-dison*.

VERNACULOUS, *adj.* [*vernaculus*, Lat.] Vernacular. *Obsolete*.—Beside their *vernaculous* and mother tongues. *Sir T. Brown*.—Scoffing; a Latinism. *Not in use*.—Men, subject to the petulancy of every *vernaculous* orator. *B. Jonson*.

VERNAISON, a village in the east of France, containing 900 inhabitants.

VERNAL, a small island in the Pacific ocean, near the coast of Mexico. Lat. 16. 35. N. long. 95. 50. W.

VE'RNAL, *adj.* [*vernus*, Latin.] Belonging to the spring.

With the year
Seasons return; but not to me returns,
Or sight of *vernal* bloom, or summer's rose. *Milton*.

VERNANT, *adj.* [*vernans*, Lat.] Flourishing as in the spring.

Else had the spring
Perpetual smil'd on earth, with *vernant* flow'rs,
Equal in days and nights. *Milton*.

VERNANTE, a small town in the north-west of Italy, in the Piedmontese province of Tenda, with 2700 inhabitants. It stands on the great road from Nice to Turin, about 11 miles south of Coni.

Vol. XXIV. No. 1642.

VERNANTES, a small town in the west of France, department of the Maine and Loire, with 1800 inhabitants.

To VE'RNATE, *v. n.* [*verno*, Lat.] To be vernant; to become young again. *Cockeram*.

VERNAZZO, a small town in the north-west of Italy, in the duchy of Genoa; 5 miles south-west of Spezzio.

VERNET, a small town in the south of France, department of the Eastern Pyrenees, with 1000 inhabitants; 4 miles south of Prades.

VERNEY (Guichard-Joseph du), an eminent anatomist, was the son of a physician at Feurs in Forez, and born in 1648. From Avignon, where he studied medicine for five years, he removed to Paris in 1667, and there acquired high reputation, not only as an anatomical demonstrator, but as an eloquent lecturer. His work, entitled "Traité de l'Organe de l'Ouïe, contenant le Structure, les Usages, et les Maladies de toutes les Parties de l'Oreille," was published in 1683, and translated into various languages. In his anatomical researches he was indefatigable and he made many discoveries, the honour of which has been claimed by others. Having absented himself for a long time from the meetings of the Academy, of which he was early a member, he returned to it again, in his 80th year, on the republication of his History of Animals, and entered into its business with his former vivacity. In advanced age he undertook a work on insects and reptiles; and though he was afflicted with a pulmonary complaint, he exposed himself to the injurious effects of the damp and night air, in order to observe the actions of snails, with a view to the perfection of the work in which he was engaged. Although his health could not but be impaired by this practice, his life was prolonged to his 82d year, as he died in September 1730. He bequeathed his valuable anatomical preparations to the Academy, leaving a character held in high estimation by contemporary anatomists and physiologists, and by all who had enjoyed the benefit of his instruction in their youth. After his death, Senac published from his MSS. "Traité des Maladies des Os," in 2 vols. 12mo.; and all his memoirs and posthumous papers were collected in his "Œuvres Anatomiques," 2 vols. 4to. Paris, 1761, published by Bertin, to whom his MS. remains were entrusted by Senac. *Haller*.

VERNEUIL, an inland town in the north of France, department of the Eure, situated on the small river Arve. It is still surrounded with a wall, and contains 5300 inhabitants; 18 miles west of Dreux, and 21 south of Evreux.

VERNHAM'S DEAN, a parish of England, in South-amptonshire; 8 miles west-by-north of Andover. Population 453.

VERNIER, is a graduated index which subdivides the smallest divisions on any straight or circular scale, in the reading of which greater accuracy is required, than can be obtained by simple estimation of a fractional part, as indicated by a pointer, or fiducial edge. The vernier was first invented by Pierre Vernier of Franche Comté, and made known to the world at Bruxelles (or Brussels) in the year 1631, through the medium of a pamphlet, entitled "La Construction, l'Usage, et les Propriétés du Quadrant nouveau de Mathématique," &c. It soon gained the preference over the scale of Nonius, which was a circular diagonal scale, and which by some writers is yet confounded with a Vernier's index, though there is no greater resemblance between the two, than exists between the dial of a clock and the hand that points to it. The vernier is applicable to any straight or circular line, provided the divisions be equal; but the contrivance of Nonius was in the graduated line or scale itself, and required the aid of a fiducial edge as an index.

VERN'LITY, *s.* [*verna*, Latin.] Servile carriage; the submissive fawning behaviour of a slave. *Bailey*.

VERNON, a small town in the north of France, department of the Eure, pleasantly situated on the left bank of the Seine. It has an old castle, two churches, an hospital, and above 4000 inhabitants; 28 miles south-by-east of Rouen, and 55 west-by-north of Paris.—2. A post township of the United States, in Tolland county, Connecticut; 6 miles west-south-west of Tolland.—3. A post township of the United

States, in Oneida county, New York; 17 miles west of Utica. Population 1519.—4. A post township of the United States, in Sussex county, New Jersey. Population 1708.—5. A post township of the United States, in Trumbull county, Ohio; 20 miles north-east of Warren. Population 606.—6. A township of the United States, in Clinton county, Ohio. Population 637.—7. NEW, a post village of the United States, in Morris county, New Jersey.—8. A township of the United States, in Jennings county, Indiana; 25 miles north-west of Maddison.

VERNON, MOUNT, a village of the United States, in Knox county, Ohio.

VERNONIA [it is so named from William Vernon, fellow of St. Peter's College in Cambridge. He was skilful and assiduous in the pursuit of English plants, especially of the class cryptogamia]. *Essential Character*.—Calyx ovate, imbricate, with ovate-lanceolate, acuminate, coloured scales. Down capillary, coloured, sessile, longer than the calyx, surrounded at the base by a very short, chaffy, many-bristled crown. Receptacle naked.

The species which Schreber has separated under this title, have been already described under *Serratula*. See *SERRATULA noveboracensis*, *præalta*, and *glauca*.

VERNOUX, a small town in the south of France, department of the Ardeche, with 2200 inhabitants; 12 miles north-east of Privas, and 17 south-west of Tournon.

VEROCZA, a county of Slavonia, including the north-west of the province, and bounded by the Drave on the north, and the Danube on the east. It has a territorial extent of nearly 1800 square miles, and a population of 130,000. Its surface is in general level, and covered in many parts with extensive marshes, which are attended with the usual bad effects on health. In general, however, the soil is fertile, and well adapted either to tillage or pasturage. The export of cattle forms a principal branch of trade. The capital of this district or country is Esseck, a town containing between 9000 and 10,000 inhabitants.

VEROCZA, or VEROVITICZA, a small town of the Austrian states, in Slavonia, formerly the capital of the preceding palatinate; 63 miles west-north-west of Esseck.

VEROLA-ALGHISE, a small town of Austrian Italy, in the government of Milan, delegation of Brescia. It stands on the river Savorola, and contains 3000 inhabitants.

VEROLENGO, an inland town in the north of Italy, in Piedmont, district of Turin, with 4000 inhabitants.

VEROLI, a small town in the central part of Italy; 55 miles east-by-south of Rome.

VERON, a small town in the interior of France, department of the Yonne, with 900 inhabitants; 6 miles south of Sens.

VERONA, a delegation or province of Austrian Italy, in the government of Venice, with a superficial extent of 1330 square miles, and a population of 285,000.

VERONA, a large city of Austrian Italy, the capital of the preceding delegation or province. It stands in a pleasant and picturesque situation, partly on a declivity, partly on the border of a large plain, which stretches far to the southward. In that direction are the rich tracks extending along the banks of the Mincio and the Po; to the north the Tyrolean Alps, the first step to the ascent of which may be said to take place in this city.

The interior of Verona does not correspond with the beauty of its position, several of the streets being narrow and dirty; others, however, are spacious and well paved; in particular that which leads to the Mantua gate, and the Corso, or street where horse-races are held. The houses, though built in general in an antique style; are of good appearance, from the quantity of marble employed in their construction; a consequence of the abundant quarries in the neighbourhood. The best buildings are in the principal square.

The population of Verona is about 45,000. Its principal manufacture is that of silk. The lesser manufactures are woollens, leather, gloves, and shoes.

The date of the foundation of Verona is not known; but Julius Cæsar established a colony here. On the decline of

the empire, it experienced the fate of other towns in the north of Italy. It was taken by Charlemagne in 774; became subsequently a free town; fell, in the course of time, under the sway of leading families; and in 1405, was united to the territorial possessions of Venice. With these it enjoyed many ages of peace and tranquillity, until the year 1796, when Italy was invaded by the French. It was then added to the kingdom of Italy. In 1814 it again fell into the hands of Austria; 20 miles north-east of Mantua, 60 west of Venice, and 90 east of Milan. Lat. 45. 26. 7. N. long. 11. 1. 15. E.

VERONA, a post township of the United States, in Oneida county, New York, on Wood Creek, and east of Oneida lake; 20 miles west of Utica.

VERONICA [derivation uncertain], in Botany, a genus of the class diandria, order monogynia, natural order of personate, pediculares (*Juss.*)—*Generic Character*. Calyx: perianth four-parted, permanent; segments lanceolate, acute. Corolla one-petalled, wheel-shaped; tube length almost of the calyx; border four-parted, flat with ovate segments; the lowest narrower, the segment opposite to this wider. Stamina: filaments two, narrower at bottom, ascending. Anthers oblong. Pistil: germ compressed. Style filiform, length of the stamens, declined. Stigma simple. Pericarp: capsule obcordate, compressed at the top, two-celled, four-valved. Seeds numerous, roundish. Tube of the corolla different in the several species, but in most very short, in the spiked ones long. Calyx five-cleft in *Veronica Sibirica*, *teucrium*, *prostrata*, *pectinata*, *Austriaca*, *multifida*, *latifolia*. Capsule of *Veronica pinnata* oval. Fruit of *Veronica montana* orbicular, emarginate at top and bottom. Capsule of *Veronica biloba* compressed, two-parted, with diverging semiorbicular lobes.—*Essential Character*. Corolla four-cleft, wheel shaped, with the lowest segment narrower. Capsule superior, two celled.

I.—Spiked.

1. *Veronica Sibirica*, or Siberian speedwell.—Spikes terminating; leaves seven, in whorls; stem somewhat rough-haired. Root perennial.—Native of Siberia.

2. *Veronica Virginica*, or Virginian speedwell.—Spikes terminating; leaves in fours or fives. It varies with bluish-coloured flowers.—Native of Virginia and Japan.

3. *Veronica spuria*, or bastard speedwell.—Spikes terminating; leaves lanceolate, equally serrate. There is a variety of this also, with a flesh-coloured flower.—Native of Siberia and Germany.

4. *Veronica maritima*, or sea speedwell.—Spikes terminating; leaves subcordate-lanceolate, unequally serrate.—Native of the sea-coasts of Europe.

5. *Veronica longifolia*, or long-leaved speedwell.—Spikes terminating; leaves lanceolate, acuminate, serrate, ending in the petiole.—Native of Germany, Austria and Russia.

6. *Veronica incana*, or hoary speedwell.—Spikes terminating; leaves opposite, crenate, obtuse; stem erect, tomentose.—Native of Russia.

7. *Veronica spicata*, or spiked speedwell.—Spikes terminating; leaves opposite, bluish, crenate-serrulate, quite entire at the tip; stem ascending, quite simple. It varies with linear almost entire leaves; with flesh-coloured and white flowers.—Native of Europe and Siberia, in dry calcareous pastures.

8. *Veronica hybrida*, or Welsh speedwell.—Spikes terminating; leaves opposite, elliptic, obtuse, unequally crenate-serrate; stem nearly upright.—Native of England and Wales.

9. *Veronica pinnata*, or winged-leaved speedwell.—Spikes terminating; leaves linear, pinnatifid, subfascicled; segments filiform, divaricating.—Native of Siberia.

10. *Veronica laciniata*, or jagged-leaved speedwell.—Raceme subspiked, terminating; leaves pinnatifid, lacinate.—Native of Siberia.

11. *Veronica incisa*, or cut-leaved speedwell.—Spikes terminating; leaves lanceolate, gash-pinnatifid, smooth.—Native of Siberia.

12. *Veronica*

12. *Veronica Cataractæ*.—Racemes terminating, flexuose; stem suffruticose; leaves lanceolate, serrate.—Native of New Zealand.

13. *Veronica elliptica*, or elliptic-leaved speedwell.—Racemes lateral; stem shrubby; leaves elliptic, quite entire.—Native of New Zealand.

14. *Veronica macrocarpa*, or long-fruited speedwell.—Racemes subterminating, erect; leaves lanceolate, quite entire, smooth, flat; stem shrubby.—Native of New Zealand.

15. *Veronica salicifolia*, or willow-leaved speedwell.—Racemes lateral, nodding; leaves lanceolate, quite entire; stem shrubby.—Native of New Zealand.

16. *Veronica parviflora*, or small-flowered speedwell.—Racemes subterminating; leaves linear-lanceolate, quite entire, smooth, mucronate; stem shrubby.—Native of New Zealand.

17. *Veronica officinalis*, or common speedwell.—Spikes lateral, peduncled; leaves opposite, rugged; stem procumbent. Root perennial, fibrous.—Native of Europe, on dry sandy pastures and heaths. In England not uncommon.

18. *Veronica Allionii*, or shining-leaved speedwell.—Spikes lateral, peduncled; leaves opposite, roundish; shining, rigid; stem smooth, creeping.—It is plentiful on the Alps of Switzerland, France and Italy; also on the Pyrenees.

19. *Veronica decussata*, or cross-leaved speedwell.—Racemes axillary, few-flowered; leaves elliptic, perennial, quite entire; stem shrubby.—Native of Falkland Islands.

II.—Corymb-racemed.
